1. Prepare for handling alpacas	<p>1.1. Alpaca handling areas, gates and access routes are identified, prepared and maintained according to enterprise requirements.</p> <p>1.2. Alpacas are located and identified for handling according to supervisor instructions.</p> <p>1.3. Behavioural characteristics of alpacas are observed and anticipated, and appropriate handling methods are selected.</p> <p>1.4. Handling equipment is selected, checked for soundness and prepared for use according to manufacturer and supervisor instructions.</p> <p>1.5. Occupational Health and Safety (OHS) hazards in the workplace are recognised and reported to supervisor, and action is taken to minimise risks to self and others.</p> <p>1.6. Hazards to animals are recognised and reported to supervisor, and action is taken to minimise risks to animals.</p> <p>1.7. Site quarantine and other biosecurity protocols are observed.</p>
2. Handle alpacas	<p>2.1. Suitable Personal Protective Equipment (PPE) is selected, used and maintained according to OHS requirements.</p> <p>2.2. Procedures to control and sort alpacas are followed according to OHS and animal welfare requirements.</p> <p>2.3. Alpacas are classified according to age, sex and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>husbandry tasks to be performed.</p> <p>2.4. Restraint procedures are carried out with minimum stress and discomfort to alpacas, and according to OHS and animal welfare requirements.</p> <p>2.5. Alpacas are transported when required according to animal welfare requirements.</p> <p>2.6. Alpaca behaviour is continually monitored and anticipated during moving and handling processes to ensure wellbeing of alpacas and safety of handlers.</p> <p>2.7. Alpaca count is conducted and recorded according to enterprise requirements.</p> <p>2.8. Environmental impacts of alpaca handling and husbandry tasks are recognised and reported to supervisor.</p>
3. Carry out basic alpaca husbandry tasks	<p>3.1. All basic alpaca husbandry is carried out according to enterprise, OHS and animal welfare requirements.</p> <p>3.2. Unhealthy stock and abnormal conditions and/or behaviour are identified and reported to supervisor.</p> <p>3.3. Stock is fed and adequate clean water is provided.</p> <p>3.4. Plants poisonous to alpacas are recognised and reported to supervisor.</p>
4. Complete alpaca handling activities	<p>4.1. Alpaca husbandry tasks are completed as instructed, and gates and access routes are prepared for alpacas' departure according to enterprise requirements</p> <p>4.2. Handling areas and equipment are cleaned and maintained and surplus materials are stored according to OHS and enterprise requirements.</p> <p>4.3. Handling area maintenance requirements and equipment faults or malfunctions are detailed and reported according to enterprise requirements.</p> <p>4.4. Alpaca residues and waste are disposed of according to OHS and enterprise environmental practices.</p> <p>4.5. Relevant information about particular animals and the husbandry tasks performed is recorded and reported according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- identify hazards and apply safe work practices
- assessing and calculating alpaca numbers
- carrying out typical basic alpaca husbandry tasks
- controlling environmental impacts associated with alpaca handling and husbandry
- feeding and providing adequate clean water to alpacas
- identifying a range of plants poisonous to alpacas
- providing due care in the handling of alpacas
- reading and comprehending oral and written information and instructions, writing basic statements and maintaining alpaca handling records
- recognising abnormal behaviour and signs of ill health in alpacas
- using enterprise alpaca identification systems
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- alpaca behavioural characteristics and movement in handling areas
- classes of alpacas and their basic nutritional and welfare requirements
- components and functions of handling equipment
- enterprise identification systems for alpacas
- environmental codes of practice with regard to alpaca production
- handling techniques and restraint methods
- OHS, environment and animal welfare legislative and enterprise requirements
- plants poisonous to alpacas
- range of typical basic alpaca husbandry tasks and why they are carried out
- regulatory controls relating to the transport of animals on public roads.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

<b>EVIDENCE GUIDE</b>	
performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• prepare handling areas, gates and access routes for alpaca movement</li> <li>• monitor and anticipate alpaca behaviour in handling operations</li> <li>• identify, sort, move and control alpacas for handling and husbandry operations</li> <li>• use correct equipment, and calming and humane methods to minimise undue stress and risk to alpacas or handlers</li> <li>• recognise and report signs of unusual behaviour, unhealthy animals or abnormal conditions.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Alpacas may include:	<ul style="list-style-type: none"> <li>• all types and strains.</li> </ul>

## Unit Sector(s)

<b>Unit sector</b>	Livestock

## AHCLSK301A Administer medication to livestock

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of applying preventative health treatments and other medications to livestock and defines the standard required to: select, use and maintain specialised animal health equipment; muster, move and handle livestock for health treatments; prepare treatment site; facilities and equipment; carry out livestock treatments; monitor effectiveness of treatments and provide follow up if required; maintain records of treatments.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in livestock enterprises that operate with some judgement and discretion, and would normally be carried out under minimal supervision within enterprise requirements and procedures.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for treatment of livestock	<p>1.1. Equipment and materials for treating livestock are selected, checked for safe and sound operation and confirmed against work plan.</p> <p>1.2. Livestock treatment site and facilities are prepared to industry standards in line with enterprise requirements.</p> <p>1.3. Livestock treatments are prepared and confirmed against work plan</p> <p>1.4. Occupational Health and Safety (OHS) hazards in the workplace are identified, risk assessed and risk controls are implemented.</p>
2. Treat livestock	<p>2.1. Livestock are mustered safely, yarded, controlled, inspected and identified for treatment in line with enterprise requirements.</p> <p>2.2. Low risk operating procedures with regard to livestock handling are observed and implemented in line with enterprise requirements.</p> <p>2.3. Dose rates are calculated and equipment calibrated and checked</p> <p>2.4. Treatment is administered in accordance with manufacturer's specifications and enterprise requirements including animal welfare.</p> <p>2.5. Environmental impacts associated with livestock husbandry practices are identified and minimised according to enterprise procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Complete treatment process	<p>3.1.Livestock are prepared and moved along planned route without damage to person, property or environment.</p> <p>3.2.Equipment, materials and facilities used for treatments are cleaned, maintained and stored in line with manufacturer's specifications, OHS and enterprise requirements.</p> <p>3.3.Livestock residues and waste are disposed of in line with enterprise requirements for OHS and environmental management.</p>
4. Monitor effectiveness of treatment	<p>4.1.Livestock are monitored post-treatment for signs of treatment effectiveness.</p> <p>4.2.Abnormalities in livestock health and condition are recognised and treated appropriately.</p> <p>4.3.Livestock treatment process and outcomes including withholding periods are detailed and recorded in line with enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- select and utilise equipment and materials appropriate for treating requirements and match to work tasks
- assess and calculate herd/flock numbers, measure dosage and quantities.
- monitor livestock behaviour and recognise abnormalities
- administer preventative health treatments in accordance with work plan
- prepare, clean and maintain treatment site, facilities and equipment to industry standards
- muster, move and control livestock
- apply contingency measures for administering treatments in the event of adverse weather conditions
- carry out animal husbandry procedures
- provide due care and handle livestock humanely
- clean and maintain treatment equipment, site and facilities to industry standards

## REQUIRED SKILLS AND KNOWLEDGE

- communicate abnormalities, equipment faults and workplace hazards, report and maintain treatment records
- read and interpret manufacturers specifications, work and maintenance plans, and Material Safety Data Sheets (MSDSs)
- monitor and minimise impacts to the environment associated with livestock production, and the use and disposal of hazardous substances
- comply with OHS and animal welfare requirements
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- equipment and materials for treating livestock, their components and functions
- livestock health treatments, procedures and methods
- livestock identification methods
- mustering and moving techniques
- livestock husbandry practices
- withholding periods for residues in meat, milk or wool
- livestock behaviour and basic health and nutritional requirements
- environmental impacts and minimisation measures associated with livestock production, and the use and disposal of hazardous substances
- hazards associated with handling livestock and veterinarian medicines and chemicals
- personal protective clothing and equipment and when and how it should be used and maintained
- enterprise policies with regard to treating livestock, recording and reporting routines relevant State/Territory legislation, regulations and codes of practice with regard to workplace OHS, animal welfare, and the use and control of hazardous substances
- procedures for cleaning and maintaining treatment equipment and materials.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

<b>EVIDENCE GUIDE</b>	
Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• select, use and maintain specialised animal health equipment</li> <li>• muster, move and handle livestock for health treatments</li> <li>• prepare treatment site, facilities and equipment</li> <li>• carry out livestock treatments</li> <li>• monitor effectiveness of treatments and provide follow up if required</li> <li>• maintain records of treatments.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Livestock may include:	<ul style="list-style-type: none"> <li>• all types and breeds of livestock.</li> </ul>
Treatments may include:	<ul style="list-style-type: none"> <li>• medication including drenches, vaccines, supplements and prescribed medicines.</li> </ul>
These may be administered by	<ul style="list-style-type: none"> <li>• pour on liquids</li> <li>• oral drenching</li> <li>• bolus or capsule injection</li> <li>• vaccinating</li> <li>• injection with syringe.</li> </ul>

## AHCLSK302A Mate and monitor reproduction of alpacas

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of mating and monitoring the reproduction of alpacas and defines the standard required to: monitor the condition of female and male alpacas; recognise ovulation and detect oestrus in females; supervise mating; conduct and commission pregnancy tests; identify and implement action required as a result of pregnancy tests.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to alpaca farm or stud workers and is likely to be carried out with limited supervision within enterprise guidelines. It may require working with or under the direction of more experienced personnel, including veterinarians.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare animals for mating	<p>1.1. Male and female animals to be mated are selected according to stud's mating plan.</p> <p>1.2. Condition of animals selected for mating is accurately determined and body scores are recorded according to recognised industry practices.</p> <p>1.3. Nutritional program is adjusted where required and monitored to produce optimum condition for mating.</p> <p>1.4. Where females are over-fleeced, preparations are made to ensure that tail and vulva area are clean and free of fleece.</p> <p>1.5. Animals are checked for any signs of infection or other reason not to proceed with the planned mating and remedial action is taken as appropriate.</p>
2. Facilitate mating	<p>2.1. Receptive females are identified according to industry practice.</p> <p>2.2. Paddock or pen mating areas are secure and provide access for handlers during joining.</p> <p>2.3. Mating procedures and handling techniques are used that minimise stress and discomfort to animals and meet Occupational Health and Safety (OHS) and animal welfare requirements.</p> <p>2.4. Pen mating is supervised and, when required, intervention is undertaken or obtained to maximise conception rates.</p>
3. Complete mating procedures	<p>3.1. Pregnancy testing is undertaken or commissioned at earliest opportunity to identify pregnancy status of animals and suitable action is taken as required.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.2. Records of mating are recorded accurately, legibly and according to enterprise and industry requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identifying hazards and implementing safe operating procedures
- accurately scoring alpaca condition
- assisting with ultrasonography and/or blood collection if requested by professional service providers
- cleaning up work site and safely disposing of waste
- communicating effectively with other team members and veterinarians
- conducting a spit off
- employing safe work practices
- supervising alpaca mating and assisting as appropriate
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- alpaca handling and assisted joining techniques
- alpaca health and abnormalities
- alpaca movement and behavioural characteristics
- anatomy and physiology of male and female alpaca reproductive systems
- enterprise and industry identification system for alpaca
- enterprise and industry policies regarding recording and reporting routines for matings
- female and male body conditioning through nutrition programs
- Johne's disease status mating procedures
- mobile mating procedures
- Personal Protective Equipment (PPE) and when and how it should be used

**REQUIRED SKILLS AND KNOWLEDGE**

- pregnancy testing techniques, including detection of ovulation
- relevant state and territory animal welfare legislation and codes of practice
- relevant state and territory legislation, regulations and codes of practice with regard to workplace OHS.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- monitor the condition of female and male alpacas
- recognise ovulation and detect oestrus in females
- supervise mating
- conduct and commission pregnancy tests
- identify and implement action required as a result of pregnancy tests.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

<b>RANGE STATEMENT</b>	
Types may include:	<ul style="list-style-type: none"> <li>mating and monitoring reproduction in all types and strains of alpacas.</li> </ul>

## AHCLSK303A Carry out feedlot operations

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of providing feed for livestock and monitoring their health and welfare in a small scale or opportunity feedlot and defines the standard required to: identify a range of grain and feed types and qualities; identify premixes and weigh out, mix feeds and ingredients and identify basic mixing problems; recognise clinical symptoms (normal vs. abnormal) of disease or injuries; remove sick or injured animals and dispose of or treat in hospital pens; relate herd performance data to ration consistency; and maintain clean feed and water at all times.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit involves working under limited supervision across the full range of feedlot operations. Overall progress may be checked periodically.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to work with livestock feed	1.1. Work to be undertaken is interpreted from work program, where necessary, and confined with supervisor. 1.2. Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented. 1.3. Suitable personal protective equipment (PPE) is selected, used and maintained. 1.4. Tools and equipment suitable for the work to be undertaken are selected, checked and maintained, if necessary. 1.5. Environmental implications of undertaking work are identified, likely outcomes assessed and, if necessary, responsible action taken.
2. Mix feed	2.1. Scales and containers to be used for measurements are calibrated according to manufacturer instructions. 2.2. Ingredients are identified from instructions and obtained from storage locations. 2.3. Ingredients are measured in the specified ratios and quantities. 2.4. Ingredients are blended adequately and hygienically in the manner specified and using the appropriate equipment. 2.5. Where grinding is required, it is done in the manner

ELEMENT	PERFORMANCE CRITERIA
	<p>specified and using the appropriate equipment.</p> <p>2.6.OHS hazards are identified, risk assessed and suitable controls implemented.</p> <p>2.7.Suitable PPE is selected, used and maintained.</p>
3. Feed livestock	<p>3.1.Feed is stored according to organisational procedures and standards.</p> <p>3.2.Feed physical quality, quantity and type are checked on their arrival to the shed.</p> <p>3.3.Livestock are fed at scheduled time, rate and frequency according to organisation plans and procedures and the codes of welfare.</p> <p>3.4.Quality and hygiene of feed is maintained throughout the feeding process.</p>
4. Establish and maintain feedlot hygiene and biosecurity	<p>4.1.Organisational OHS procedures, practices, policies and precautions are observed and followed, including the use of PPE.</p> <p>4.2.Livestock entering feedlot are examined, their documentation checked and quarantined for a period.</p> <p>4.3.Cleanliness and hygiene are maintained by selecting and using appropriate cleaning methods according to organisation practices and relevant regulations.</p> <p>4.4.Thorough personal hygiene practices are maintained in all activities associated with handling livestock, including reducing risks from diseases transmissible to humans.</p> <p>4.5.Equipment and fittings are dismantled, cleaned and replaced correctly.</p> <p>4.6.All waste and debris are placed in allocated areas and disposed of, and run-off is dealt with according to the Feedlot Code of Practice, environmental legislation and public health standards.</p> <p>4.7.Visitors to feedlot are checked and signed in according to protocols.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- identify hazards and implement safe work procedures
- detect possibility of disease through parameters, such as behaviour and appetite
- recognise clinical symptoms (normal vs. abnormal)
- identify a range of grain and feed types and qualities
- identify grain contaminants
- identify premixes and weigh out
- mix feeds and ingredients and identify basic mixing problems
- relate herd performance data to ration consistency
- interpret and apply task instructions, communicate with work team and supervisor, and record and report faults, workplace hazards and accidents
- measure and calculate volumes and consumption requirements
- maintain records for all aspects of livestock on feed
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- relevant OHS legislation, regulations and codes of practice
- environmental and animal welfare codes of practice and procedures
- the organisations livestock production and management plans
- sound management practices and processes to minimise noise, odours and debris from the livestock operations
- relevant legislation and regulations relating to waste and environment management
- organisation and industry guidelines for the preparation of feed and mixes
- raw ingredients (grains, meals, vitamins, minerals and premix formulations).

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## AHCLSK304A Carry out post-mortem examination of livestock

### Modification History

Not Applicable

### Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit covers the process of conducting a post-mortem examination of an animal or bird under limited supervision and following established procedures, and defines the standard required to: use knives and other cutting equipment safely; handle dead animals and birds without risk to self or others; accurately cut open an animal or bird for post mortem examination; collect relevant and useable data and biological samples before and as part of the post mortem to enable an accurate diagnosis of the cause of death; carry out preparation, labelling and packaging of biological and potentially hazardous samples.</p>
-------------------------------	--

### Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit is likely to be carried out under minimal supervision, with further checking required in some cases by a veterinarian. Post-mortems are applied at a basic level and observations are referred on where veterinary advice or a definitive diagnosis is required.</p>
---------------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<p><b>Prerequisite units</b></p>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to conduct post-mortem	<p>1.1.Site for post-mortem is selected, taking into account proximity to other facilities and environmental implications.</p> <p>1.2.The site to be used for the post-mortem is prepared by cleaning, and by ensuring that it is located away from other livestock, and that blood and fluids will not be able to contaminate surrounding areas or facilities.</p> <p>1.3.All relevant preliminary information about the animal or bird to be examined is collated or obtained.</p> <p>1.4.Occupational Health and Safety (OHS) hazards associated with the procedure are identified and appropriate action is taken.</p> <p>1.5.Correct clothing, equipment and resources are obtained and prepared for use</p> <p>1.6.The animal to be examined is moved to the post mortem area using appropriate manual lifting techniques and/or equipment.</p> <p>1.7.Expert assistance is sought if required.</p>
2. Carry out	2.1.External assessment is carried out and outward signs

ELEMENT	PERFORMANCE CRITERIA
post-mortem examination	<p>of disease or injury are noted.</p> <p>2.2. Where unusual symptoms are present, expert advice and assistance is sought before proceeding.</p> <p>2.3. Animal or bird is cut open without cutting stomach cavity or organs using appropriate techniques and equipment.</p> <p>2.4. Organs, tissues and joints are examined.</p> <p>2.5. Samples of organs and other tissues are taken where appropriate, and placed in labelled containers to meet enterprise and laboratory requirements.</p> <p>2.6. Details of all features examined and the possible cause of death are recorded according to enterprise procedures.</p>
3. Prepare samples and maintain hygiene and biosecurity	<p>3.1. Carcass is disposed of using appropriate equipment according to enterprise quarantine and other procedures.</p> <p>3.2. Correctly labelled and packaged samples are sent to the laboratory for analysis.</p> <p>3.3. All preliminary information about the animal or bird examined and the records of observations made during the post-mortem are collated and forwarded to supervisor or veterinarian for analysis and diagnosis.</p> <p>3.4. All equipment used is cleaned and disinfected after use and before putting away.</p> <p>3.5. Area used for the post-mortem is cleaned and, where appropriate, disinfected.</p> <p>3.6. Disposable gloves are disinfected before being disposed of according to enterprise procedures</p> <p>3.7. Hands are thoroughly washed.</p> <p>3.8. Clothing is changed and placed in appropriate bin for laundering and boots are disinfected if appropriate.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

## REQUIRED SKILLS AND KNOWLEDGE

- identify hazards and implement risk controls
- accurately cut open an animal or bird for post mortem examination
- handle and sharpen knives
- handle dead animals and birds without risk to self or others.
- use appropriate Personal Protective Equipment (PPE) and hygiene procedures
- comply with biosecurity protocols
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- typical causes of death for the species being examined
- sequence of actions in conducting a post mortem examination
- requirements for correct preparation, labelling and packaging of biological and potentially hazardous samples
- position and features of major organs in normal animal or bird of the species being examined
- symptoms of exotic and notifiable diseases listed as a threat in the animal health plan
- procedures for OHS, hygiene and biosecurity.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

## AHCLSK305A Maintain livestock water supplies

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the functions required to perform maintenance procedures on a range of water supply systems and equipment where specialist skills of another trade are not warranted or available and defines the work practices required to: carry out routine servicing and minor repairs on a range of water supply systems and equipment; recognise minor and major faults; estimate water requirements based on average and peak demand for water; carry out water quality testing and analysis; test and monitor machinery and equipment for correct operation.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to farm workers.
--------------------------------	------------------------------------

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify maintenance requirements	<p>1.1.Livestock water supplies are checked for quality and inspected for signs of contamination or deterioration, and low or interrupted supply.</p> <p>1.2.Components of water supply systems are checked for wear, deterioration or malfunctions.</p> <p>1.3.Identified maintenance requirements are checked and confirmed according to the maintenance plan.</p>
2. Prepare for maintenance	<p>2.1.Tools, equipment and materials appropriate to the job requirements are selected and checked for serviceability according to manufacturer's specifications.</p> <p>2.2.Faulty or unsafe tools are identified and segregated for repair or replacement and reported according to enterprise requirements.</p> <p>2.3.Existing and potential hazards to health and safety are identified and reported according to Occupational Health and Safety (OHS) requirements.</p>
3. Carry out maintenance procedures	<p>3.1.Suitable personal protective equipment is selected, used and maintained according to OHS requirements.</p> <p>3.2.Maintenance to water systems and equipment are carried out to manufacturer's specifications and according to the maintenance plan.</p> <p>3.3.Maintenance and repair of motors where necessary, including fault finding, is carried out under the supervisor's direction.</p> <p>3.4.More complex faults and repair requirements are reported to the supervisor according to enterprise</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements.
4. Complete maintenance activities	<p>4.1. Worksite, tools and materials are cleaned, returned to operating order and stored according to OHS and enterprise requirements.</p> <p>4.2. Malfunctions, faults, and wear or damage to tools is reported for repair or replacement according to enterprise requirements.</p> <p>4.3. Unwanted materials and waste from maintenance activities is collected, treated and disposed or recycled according to enterprise environmental requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- operate vehicles safely and efficiently
- use hand and power tools safely
- arrange water supply system components and materials
- rectify minor faults and report major faults
- work as part of a contract team as required
- demonstrate safe and positive environmental working practices
- identify the components of a range of water supply systems
- test water quality as directed
- read and interpret a water supply plan
- measure and calculate lubrication requirements
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- livestock requirements and average and peak demand for water
- operational principles of various pumps and pumping systems
- functions and components of a range of water supply systems
- operation and maintenance of diesel and petrol engines
- factors which affect water quality, various water contaminants and remedial action
- advantages and disadvantages of different types of water supply systems
- OHS legislative requirements
- relevant legislative requirements with regard to property water supply systems
- Environmental Code of Practice associated with maintenance activities.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- carry out routine servicing and minor repairs on a range of water supply systems and equipment.
- recognise minor and major faults
- estimate water requirements based on average and peak demand for water
- carry out water quality testing and analysis
- test and monitor machinery and equipment for correct operation.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Maintenance may include:	<ul style="list-style-type: none"> <li>• maintenance procedures on a range of water supply systems and equipment where specialist skills of another trade are not warranted or available.</li> </ul>
Water supply systems may include:	<ul style="list-style-type: none"> <li>• external reticulated water supply</li> <li>• dams or storage tanks</li> <li>• troughs</li> <li>• channel supply</li> <li>• rivers</li> <li>• pumped or flowing bores.</li> </ul>
Water supply components may include:	<ul style="list-style-type: none"> <li>• pumps</li> <li>• windmills and bores</li> <li>• pipes</li> <li>• troughs</li> <li>• timber dividing structures</li> <li>• air bleeders in long lines</li> <li>• line junctions or connections</li> <li>• stone flagged areas around troughs.</li> </ul>

## AHCLSK306A Coordinate and monitor production performance

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of coordinating resources and monitoring the work of others within an intensive production process and defines the standard required to: read and interpret cost sheets, production information, target statistics, quantities of feed and other inputs; prepare and present production and other information in a manner that is readily accessible for both management and operators; prepare, update and amend spread-sheeted information using a software package; plan and implement the activities contained in livestock production plans; recognise when performance standards are not met, and investigate and report findings in written form; provide leadership for staff including feedback on performance.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the coordinating and monitoring intensive production performance is likely to be under management supervision, with checking only related to overall progress.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>	
---------------------------	--

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for work in the production area	<p>1.1. Work to be undertaken is interpreted from work program where necessary, and confirmed with management.</p> <p>1.2. Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.3. Suitable personal protective equipment is selected, used and maintained.</p> <p>1.4. Tools and equipment suitable for the work to be undertaken are selected, checked, and maintained if necessary.</p> <p>1.5. The personal protective equipment and other safety requirements are clearly communicated to staff and contractors, and confirmation of that clear communication is sought.</p>
2. Coordinate work activities	<p>2.1. Work required of staff and contractors is clear, unambiguous and follows the production plans and programs.</p> <p>2.2. Work schedules, plans and priorities are met</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to the needs of the organisation or situation.</p> <p>2.3.The allocation of work optimises resources and the existing competencies of staff.</p> <p>2.4.Feedback is provided to staff and management on request, or as necessary in accordance with established industry standards.</p>
3. Monitor daily operations	<p>3.1.Manure and litter consistency is assessed and treated to prevent deterioration, where appropriate.</p> <p>3.2.The designated lighting and internal environment programs for the unit are implemented.</p> <p>3.3.Checks are made to ensure that effluent storage and disposal systems are operated according to the production program and manufacturer's instructions.</p> <p>3.4.Checks are made to ensure that all rubbish and used consumables are removed from production site according to the requirements of the production program.</p> <p>3.5.Herd/flock and shed conditions are regularly observed for signs of ill health, and changes recorded and reported.</p> <p>3.6.Checks are made to ensure that the OHS requirements are being observed and followed.</p> <p>3.7.Operational staff and any contractors are communicated with regularly to ensure smooth operation and progress.</p>
4. Monitor herd/flock health	<p>4.1.Herd/flock and shed conditions are regularly observed for signs of ill health and changes recorded and reported.</p> <p>4.2.Livestock is examined for evidence of disease through correct post-mortem techniques in line with individual unit standard and veterinary advice.</p> <p>4.3.Disease status of unit stock is assessed and evaluated, and serviceman or veterinary assistance notified when required.</p> <p>4.4.Components of quarantine procedures are regularly checked for compliance.</p>
5. Complete records and documentation	<p>5.1.Information gathered throughout production operations is gathered and collated.</p> <p>5.2.Collated information is graphed where required, and prepared for presentation to supervisor or manager ready for easy recognition and extraction of data.</p>

ELEMENT	PERFORMANCE CRITERIA
	5.3. Information gathering, collation and presentation are undertaken promptly, efficiently and accurately.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- maintain biosecurity procedures and report concerns immediately
- read and interpret cost sheets, production information, target statistics, quantities of feed and other inputs
- prepare and present production and other information in a manner that is readily accessible for both management and operators
- monitor temperature and adjust as required
- prepare, update and amend spread-sheeted information using a software package
- discuss production performance, risk and hazard potential, quality of output, and methods of production with both management and operators
- plan and implement the activities contained in livestock production plans
- observe, identify and react appropriately to OHS hazards and environment risks
- recognise when performance standards are not met and investigate and report findings in written form
- provide supervision of staff including allocating duties and feedback on performance
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- biosecurity procedures and codes of practice
- common livestock diseases and clinical signs
- relevant industry, environmental and quality standards (inc ISO9002:1094)
- animal welfare codes of practice and procedures
- types of sheds and equipment
- costs, depreciation, measuring livestock performance economically

**REQUIRED SKILLS AND KNOWLEDGE**

- interpreting raw data to determine issues and problems
- recording and reporting requirements
- fundamentals of quarantine and control methods
- feed ingredients and additives.
- water reticulation systems and quality.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- read and interpret cost sheets, production information, target statistics, quantities of feed and other inputs
- prepare and present production and other information in a manner that is readily accessible for both management and operators
- prepare, update and amend spread-sheeted information using a software package
- plan and implement the activities contained in livestock production plans
- recognise when performance standards are not met, and investigate and report findings in written form
- provide leadership for staff including feedback on performance.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

## AHCLSK307A Euthanase livestock

### Modification History

Release	TP Version	Comments
2	AHC10v5	Change to broaden application of the unit
1	AHC10	Initial release. Supersedes and is equivalent to RTE3119A

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of destroying livestock without distress or suffering prior to cessation of their vital life functions and defines the standard required to: prepare for euthanasia; carry out euthanasia of animal using method that minimises pain and distress; dispose of carcass; clean and store equipment and materials.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit requires the application of judgment and discretion, and is likely to be carried out independently within own area of responsibility.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

Prerequisite units		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for euthanasia	<p>1.1. Criteria for decision to destroy livestock conform to enterprise euthanasia action plan and approval of supervisor where required.</p> <p>1.2. Method selected to destroy livestock conforms to enterprise euthanasia action plan.</p> <p>1.3. Equipment and materials required to complete the euthanasia are prepared.</p> <p>1.4. Hazards associated with the euthanasia are identified in accordance with Occupational Health and Safety (OHS) standards.</p> <p>1.5. Environmental and public safety risks associated with the euthanasia are identified in accordance with statutory and local authority requirements.</p> <p>1.6. Licences and permits required to complete euthanasia are obtained where necessary.</p> <p>1.7. Equipment and materials for euthanasia are checked and prepared in accordance with statutory requirements and industry practice.</p>
2. Carry out euthanasia of animal	<p>2.1. Personal protective and safety equipment is used in accordance with OHS standards and statutory requirements.</p> <p>2.2. Equipment is handled and transported safely at all times in accordance with statutory requirements and industry practices.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3. Animal is physically restrained in a way that minimises pain and distress.</p> <p>2.4. Animal is killed in a quick and painless way in accordance with animal welfare regulations and statutory requirements.</p> <p>2.5. Animal is checked to ensure it is dead.</p> <p>2.6. Animals that have not been killed immediately are destroyed in a humane manner in accordance with animal welfare regulations and statutory requirements.</p> <p>2.7. Carcasses that are required for research or commercial use are handled as required, in accordance with the animal management strategy and action plan.</p> <p>2.8. Animal carcasses that are not required for research or other purposes are disposed of as required, in accordance with statutory requirements and industry practice.</p>
3. Clean and store equipment and materials	<p>3.1. Carcasses for research or commercial use are cleaned and stored in accordance with relevant policies and procedures and industry practice.</p> <p>3.2. Equipment and materials are cleaned and stored in accordance with relevant standards and policies.</p> <p>3.3. Job completion is reported or recorded in accordance with relevant policies and procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply animal welfare requirements and OHS procedures
- prepare for euthanasia
- carry out euthanasia of animal
- clean and store equipment and materials.
- dispose of animals in line with environmental policies
- use literacy skills to read, interpret and follow organisational policies and

## REQUIRED SKILLS AND KNOWLEDGE

procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- OHS regulations and safe practice in euthanasing animals
- statutory legislation and requirements related to euthanasing livestock
- enterprise euthanasia action plans
- animal handling and behaviour
- anatomy and physical features of the animal
- animal welfare legislation, code of practice and enterprise requirements
- where firearms are used, procedures appropriate to the firearms safety and handling.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare for euthanasia
- carry out euthanasia of animal using method that minimises pain and distress
- dispose of carcass
- clean and store equipment and materials.

<b>EVIDENCE GUIDE</b>	
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Reasons for euthanasing may include:	<ul style="list-style-type: none"> <li>• irreparable fracture limbs causing severe trauma</li> <li>• loss of production</li> <li>• poor quality of life</li> <li>• inability to stand or walk</li> <li>• diagnostic reasons such as potential to cause human disease</li> <li>• debilitating or toxic condition (cost of treatment prohibitive and poor prognosis).</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify animals	<p>1.1.Criteria for animal selection are identified and clarified from production and marketing information and supervisor or management instructions.</p> <p>1.2.Procedures to control and sort livestock are conducted with due care in accordance with Occupational Health and Safety (OHS) and animal welfare requirements.</p> <p>1.3.Animals are identified and separated according to unit selection criteria.</p> <p>1.4.Identification devices are safely and humanely applied and used on animals according to industry practice and the code of welfare.</p> <p>1.5.OHS hazards in the workplace are recognised, risks are assessed and controls implemented.</p>
2. Assess and select animals	<p>2.1.Animals are accurately assessed according to industry and/or enterprise criteria and guidelines.</p> <p>2.2.Procedures to control and sort livestock are conducted with due care in accordance with OHS and animal welfare requirements.</p> <p>2.3.Animals are correctly ranked and selected using performance records, weight, sex or other organisational criteria.</p> <p>2.4.Selection is reliably and accurately recorded and reported to unit management.</p> <p>2.5.Suitable personal protective equipment (PPE) is selected, used and maintained in accordance with OHS requirements.</p> <p>2.6.All accepted guidelines and industry norms for</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>prescribed medication withholding periods are observed when selecting animals.</p> <p>2.7. Records and documentation required by the enterprise are completed clearly, accurately and promptly.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify OHS hazards and implement safe work practices
- recognise animals unfit for transport
- provide due care in the handling of livestock
- recognise livestock abnormalities
- select animals according to criteria
- draft livestock
- read and comprehend oral and written information and instructions, write basic statements and maintain livestock handling records
- read and interpret cost sheets, production information, target statistics, quantities of feed and other inputs, and job performance audits
- prepare and present production and other information in a manner that is readily accessible for both management and operators
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- handling techniques and restraint methods
- animal movement and drafting
- livestock characteristics relevant to drafting
- selection criteria for breeding stock
- livestock identification systems and devices
- livestock behaviour

**REQUIRED SKILLS AND KNOWLEDGE**

- environmental codes of practice with regard to livestock production
- enterprise and industry grading/selection animal identification procedures
- OHS and animal welfare legislative and enterprise requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify criteria for animal selection
- control and sort livestock
- safely and humanely apply identification devices
- appraise and grade animals
- provide due care in the handling of livestock
- recognise livestock abnormalities.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

## AHCLSK309A Implement animal health control programs

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the functions required to implement animal health control programs in animals and defines the standard required to: monitor animal health status and refer to the production plan for intervention strategies; accurately diagnose the type and severity of infection or parasite infestation; determine the type and scope of treatment; administer treatments and observe withholding periods; monitor animals for treatment effectiveness.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in livestock based enterprises that operate under routine supervision within enterprise guidelines.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess animal health status and treatment options	<p>1.1. Information on animal health program is sourced from the livestock production plan.</p> <p>1.2. Animal health status is assessed and potential health issues identified for different mobs and classes of livestock.</p> <p>1.3. Prevention and treatment strategies are identified to resolve health issues, including rotational grazing, exclusion from infected areas, allowing the national development of immunity, genetic selection and treatment with drugs.</p> <p>1.4. Information on parasite immunity to different classes of chemicals is sourced and rotation of chemical families is planned for.</p>
2. Prepare for treatment of animals	<p>2.1. Animals affected by infection or parasites, or requiring treatment under the animal health plan, are identified.</p> <p>2.2. The type and severity of infestation is determined through faecal egg counts or other tests if required.</p> <p>2.3. The need for treatment and the type and scope of treatment is determined and prepared according to manufacturer's specifications or veterinary advice.</p> <p>2.4. Equipment and materials and treatment site are prepared to industry standards according to enterprise requirements.</p> <p>2.5. Occupational Health and Safety (OHS) hazards in the workplace are recognised, risk assessed and controlled according to OHS requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Treat animals	<p>3.1. Suitable personal protective equipment is selected, used and maintained according to OHS requirements.</p> <p>3.2. Animals are safely handled and restrained without causing harm or injury to animal or handler.</p> <p>3.3. Treatment is administered hygienically and consistently according to manufacturer's specifications or veterinary advice.</p> <p>3.4. Withholding periods and other details of treatment are recorded.</p> <p>3.5. Treated animals are identified to ensure WHP compliance and isolation from non-treated animals where required.</p> <p>3.6. Animals are counted out, prepared and moved along a planned route without damage to person, property or environment.</p>
4. Complete treatment process	<p>4.1. Animal health and condition are monitored post-treatment and abnormalities reported according to enterprise requirements.</p> <p>4.2. Environmental implications associated with the treatment of animals are identified, assessed and controlled according to enterprise requirements.</p> <p>4.3. Equipment and worksite are cleaned and waste, including animal residues, is disposed of according to OHS and enterprise requirements.</p> <p>4.4. Health treatments are stored to manufacturers recommendations, industry and enterprise requirements.</p> <p>4.5. Relevant information is documented according to industry and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices for animal health treatment
- collect faecal, tissue or blood samples for laboratory analysis samples

**REQUIRED SKILLS AND KNOWLEDGE**

- identify the symptoms of parasite infestation and other diseases
- select livestock prone to infection for culling
- arrange and co-ordinate equipment and resources
- drench and vaccinate livestock
- select apply chemicals appropriate to treat infections and infestations
- assemble, check and calibrate drenching and vaccinating equipment
- calculate animal numbers and measure treatment dosage and rates demonstrate safe and environmentally responsible workplace practices
- provide due care and humanely handle animals
- return animals to prepared and clean environments
- read and interpret chemical and veterinary health labels, manufacturer's specifications and Material Safety Data Sheets (MSDSs)
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- the relationship between livestock health nutrition
- types of parasite infestation and their symptoms
- the parasite resistance of different classes of livestock
- application procedures and effects of veterinary chemicals
- types of health preparation treatments
- enterprise vaccination program and procedures
- identification of and prescribed treatments for infections and infestations
- livestock health and nutritional requirements
- types of parasite infestation and their symptoms
- grazing management strategies used in internal parasite control
- requirements for the preparation and transportation of faecal samples
- drenching equipment, drenches and their efficiency
- relevant codes of practice with regard to the safe use and handling of hazardous substances
- withholding periods for treated animals
- animal handling and restraint techniques
- OHS and animal welfare legislative and enterprise requirements
- relevant codes of practice with regard to environmental protection.

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of implementing feeding plans in an intensive animal production enterprise and defines the standard required to: measure and calculate volumes and consumption requirements; relate livestock performance data to ration and consistency; interpret and apply task instructions and communicate with work team and supervisor; complete records and documentation of feed use, feed stored and animal health and treatments; take and prepare feed samples for dispatch to the laboratory.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit is likely to be under limited supervision from others with checking only related to overall progress.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for feeding	<p>1.1. Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.2. Livestock condition is assessed and recorded according to industry standards and enterprise requirements.</p> <p>1.3. Livestock production status or stage of production is identified according to enterprise requirements.</p> <p>1.4. Environmental implications of undertaking work are identified, likely outcomes assessed and, if necessary, responsible action taken.</p> <p>1.5. Feed distribution system and feeders are checked and maintained.</p>
2. Carry out feeding and watering	<p>2.1. Automatic/computerised feeders are checked for blockages and correct functioning.</p> <p>2.2. Any abnormalities or irregularities with feed stocks are rectified.</p> <p>2.3. Feed consumption and wastage is monitored and adjustments made.</p> <p>2.4. Watering systems are adjusted for height or position.</p> <p>2.5. Water flow is checked and adjustments are made accordingly.</p> <p>2.6. Watering containers or lines are emptied and cleaned where necessary.</p>
3. Conduct hygiene and administration activities	<p>3.1. Feeding equipment is cleaned according to manufacturer's specifications and organisational procedures to maintain hygiene standards.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Information gathering, collation and presentation is undertaken promptly, efficiently and accurately.</p> <p>3.3. All required records and documentation are completed accurately and promptly according to organisational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify grain contaminants
- mix feeds and ingredients
- relate flock performance data to ration consistency
- recognise and rectify minor operational faults
- read and interpret manufacturers specifications, work and maintenance plans, and Material Safety Data Sheets (MSDSs)
- interpret and apply task instructions, communicate with work team and supervisor, and record and report faults, workplace hazards and accidents
- measure and calculate volumes and consumption requirements
- complete records and documentation of feed use and volumes for the shed
- take and prepare feed samples for dispatch to the laboratory
- take silo readings
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- silo operations and configuration, machinery and operating practices
- cleaning and storage of machinery, equipment and materials
- enterprise recording and reporting procedures
- safe operation of machinery
- contaminants of raws and meals that could reduce performance - seeds, moulds, nutritional and disease factors which can influence product quality
- evidence of spoilage and handling spoiled feeds.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• measure and calculate volumes and consumption requirements</li> <li>• relate livestock performance data to ration and consistency</li> <li>• interpret and apply task instructions and communicate with work team and supervisor</li> <li>• complete records and documentation of feed use, feed stored and animal health and treatments</li> <li>• take and prepare feed samples for dispatch to the laboratory.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole.</p>	
Feeding may include:	<ul style="list-style-type: none"> <li>• the feeding of pigs and poultry in intensive in all production systems</li> <li>• shedded sheep</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>dairy cattle.</li> </ul>
Information relating to feeding plans may include	<ul style="list-style-type: none"> <li>supplementary feeding pattern</li> <li>feed purchases</li> <li>minimum livestock condition levels</li> <li>production requirements.</li> </ul>

# AHCLSK311A Implement feeding plans for livestock

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of monitoring the available pasture for grazing and implementing a feeding plan and defines the standard required to: monitor the availability of pasture; assess herd/flock health and condition; read and implement a feeding plan; identify livestock nutritional requirements and estimate livestock feed requirements; calculate feed requirements.
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	This unit applies to workers on livestock grazing enterprises and requires judgment in monitoring pasture, selecting method of feeding and assessing supplementary feed requirements. Coordinating the feeding of livestock involves responsibility for the welfare of livestock, reporting to management and coordinating feeding with other staff and operations.
--------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine livestock condition and nutritional requirements	<p>1.1.Livestock condition is monitored and reported according to industry standards and enterprise requirements.</p> <p>1.2.Livestock production status is identified according to enterprise requirements.</p> <p>1.3.Livestock nutritional requirements and the nutritional value of feedstuffs are sourced from the feeding plan.</p> <p>1.4.Feeding plan is referred for adjustment in response to the monitoring of livestock condition and pasture growth.</p> <p>1.5.Animals that are in atypical condition, injured or diseased, are reported or separated.</p>
2. Assess pasture feed	<p>2.1.Quantity and quality of available pasture is assessed.</p> <p>2.2.Grazing management is implemented and monitored to ensure the sustainable stocking capacity of pasture.</p> <p>2.3.Grazing behaviour of livestock is monitored and shy or problem feeders identified.</p> <p>2.4.Livestock feeding methods and level of supplementary feeding is determined, according to the feeding plan.</p>
3. Manage the feeding of livestock	<p>3.1.Livestock are grazed on pasture according to the guidelines described in the feeding plan.</p> <p>3.2.Required supplementary feed is obtained according</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>to the guidelines described in the feeding plan.</p> <p>3.3. Supplementary feed is provided to livestock in the manner, and at the times described in the feeding plan.</p> <p>3.4. Indications of any negative environmental impacts are identified and assessed, and amendments are made to the feeding method as required</p> <p>3.5. Condition and liveweight response to feeding is monitored and reported for review of the feeding plan.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- assess pasture health and condition
- assess herd/flock health and condition
- assess livestock condition and liveweight
- respond to or report negative environmental impacts of feeding
- order feed if requested in line with feeding plan
- handle livestock humanely and monitor animal welfare
- identify livestock nutritional requirements
- identify feeding problems and animals that require individual treatment
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the nutrient and feeding requirements of a range of livestock
- indicators to monitor the level of feeding

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• different types of agricultural feeds</li> <li>• the factors that affect feed supply and demand for a farming operation</li> <li>• grazing practices which maximise pasture growth and quality to best match herd/flock feed requirements</li> <li>• the purpose of feed conservation in relation to enterprise feed supply and livestock requirements</li> <li>• different types of pasture grazing systems, e.g. rotation, strip or block grazing</li> <li>• ways of determining a feed surplus</li> <li>• the role of spelling subdivision in effective pasture and animal management</li> <li>• different supplementary feeding options for livestock</li> <li>• environmental controls and codes of practice applicable to the enterprise</li> <li>• nutrient values of pasture and supplementary feedstuffs</li> <li>• nutritive disorders in livestock and preventative measures</li> <li>• enterprise livestock identification systems</li> <li>• OHS legislative requirements</li> <li>• codes of practice with regard to animal welfare and environmental protection.</li> </ul>

## AHCLSK312A Coordinate artificial insemination and fertility management of livestock

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of undertaking the monitoring and mating of animals and defines the standard required to: prepare females for insemination; detect females in oestrus; sterilise equipment and prepare hygienic worksite prior to insemination procedures; arrange for the collection or ordering of semen; coordinate the artificial insemination of animals; store and maintain an inventory of commercial semen; coordinate and record the results of pregnancy testing.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit is likely to be carried out with limited supervision within enterprise guidelines.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify animal condition	<p>1.1. Condition of females is accurately determined and scores are recorded according to recognised industry practices.</p> <p>1.2. Females are ranked according to scores and nutritional requirements adjusted to facilitate optimum condition.</p> <p>1.3. Feeding strategies and supplementation are appropriate to animals' environment and seasonal conditions.</p> <p>1.4. Assessment of animal condition is made accurately and consistently.</p> <p>1.5. Females can be guaranteed not pregnant before commencing the AI program.</p>
2. Facilitate artificial insemination	<p>2.1. Oestrus inducement and detection procedures are carried out according to established industry practice.</p> <p>2.2. Artificial insemination equipment and facilities are prepared, and semen obtained.</p> <p>2.3. Handling techniques that minimise stress and discomfort to livestock and meet Occupational Health and Safety (OHS) requirements are used.</p> <p>2.4. Artificial insemination techniques are carried out, when required, according to recognised industry codes of practice</p> <p>2.5. Hygiene procedures are applied to minimise risk of infection.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Review the process based on pregnancy testing	3.1. Females are monitored for signs of early abortion or return to oestrus. 3.2. Pregnancy detection techniques are applied at earliest opportunities 3.3. Records of mating, insemination and pregnancy status are recorded accurately, legibly and according to enterprise and industry requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- accurately condition score dry females
- supervise animal mating and assist as appropriate
- sterilise equipment and prepare hygienic worksite prior to insemination procedures
- store and thaw commercial semen
- arrange and record the results of pregnancy tests
- clean up work site and safely dispose of waste
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- female conditioning
- oestrus cycles
- anatomy and physiology of male and female reproductive systems in animals
- factors affecting semen viability
- pregnancy testing
- animal health and abnormalities

## REQUIRED SKILLS AND KNOWLEDGE

- semen thawing techniques
- preparation requirements for artificial insemination of animals
- livestock movement and behavioural characteristics
- handling and assisted joining techniques, restraint methods and when to use them
- enterprise and industry identification system for livestock
- personal protective equipment and when and how it should be used
- relevant State/Territory legislation, regulations, codes of practice and enterprise requirements with regard to workplace OHS and animal welfare
- legislative and regulatory controls with regard to artificial insemination
- enterprise and industry policies with regard to artificial insemination and recording and reporting routines.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare females for insemination
- detect females in oestrus
- sterilise equipment and prepare hygienic worksite prior to insemination procedures
- arrange for the collection or ordering of semen
- coordinate the artificial insemination of animals
- store and maintain an inventory of commercial semen
- coordinate and record the results of pregnancy testing.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

<b>EVIDENCE GUIDE</b>	
	enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Animals may include:	<ul style="list-style-type: none"> <li>• beef cattle</li> <li>• dairy cattle</li> <li>• alpacas</li> <li>• sheep</li> <li>• goats.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor livestock health and welfare	<p>1.1. Workplace information is interpreted and clarified with the supervisor.</p> <p>1.2. Slow growing livestock are identified and reported per enterprise requirements.</p> <p>1.3. Animals are assessed for overall health and welfare according to enterprise procedures.</p>
2. Monitor the growing environment	<p>2.1. Environmental parameters are monitored according to the production plan and adjustments made as required.</p> <p>2.2. Hygiene and welfare procedures are monitored and adjusted according to enterprise guidelines.</p> <p>2.3. Disposal of waste and debris is monitored to ensure it follows enterprise guidelines, and with due consideration of the environmental implications.</p>
3. Monitor feed	<p>3.1. Feed is monitored to ensure the correct diet is offered to livestock for optimum growing conditions according to enterprise procedures.</p> <p>3.2. Feed is monitored to ensure fresh palatable feed is available to livestock according to enterprise procedures.</p>
4. Perform routine maintenance checks	<p>4.1. All buildings, structures and production areas are inspected and checked for wear and tear.</p> <p>4.2. Equipment for delivering water and feed is checked according to enterprise guidelines.</p> <p>4.3. Equipment controlling the atmospheric environment is checked according to enterprise guidelines.</p> <p>4.4. Occupational Health and Safety (OHS) hazards are</p>

ELEMENT	PERFORMANCE CRITERIA
	identified, risk assessed and suitable controls implemented according to enterprise guidelines.
5. Complete monitoring activities	5.1. Any significant problems are reported to the manager and/or owner operator. 5.2. All checks are recorded according to enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- monitor livestock health and welfare
- monitor the environment
- monitor feed systems and water supplies
- perform routine maintenance checks
- carry out routine repairs and maintenance
- use of hand held and electrical tools such as welders, grinders and drills
- sampling techniques
- complete monitoring activities
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- code of practices for industry sectors and animal welfare
- equipment used in intensive growing systems
- environmental control mechanisms and ventilation and heating systems
- light programs
- feeding programs for different sexes, classes and types of livestock

**REQUIRED SKILLS AND KNOWLEDGE**

- basic animal anatomy
- methods to analyse results of feed and water sampling
- hygiene practices and awareness
- normal behaviour of animals and symptoms of distress
- enterprise industry and animal welfare codes of practice
- environmental implications of the disposal of chemicals or chemical containers and animal wastes.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- monitor livestock health and welfare
- monitor the environment.
- monitor feed systems and water supplies
- perform routine maintenance checks.

-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify and provide animal nutritional needs	<p>1.1.Nutritional needs of pregnant animals are identified and confirmed against the enterprise feeding plan.</p> <p>1.2.Feed and feed supplements are determined and provided in accordance with the feeding plan and local conditions.</p> <p>1.3.Procedures to minimise feed wastage and spillage, and dispose and recycle feed waste are implemented in line with enterprise requirements.</p> <p>1.4.Existing and potential Occupational Health and Safety (OHS) hazards in the workplace are identified, risk assessed and controlled in line with enterprise requirements.</p>
2. Monitor feeding process	<p>2.1.Grazing and supplementary feeding is monitored to ensure animals are maintained in the required condition.</p> <p>2.2.Feeding abnormalities are recorded and reported in line with enterprise requirements.</p> <p>2.3.Environmental implications associated with animal production are identified, assessed and relevant measures implemented.</p>
3. Maintain a secure environment for animals	<p>3.1.Condition and security of paddocks, shelter and/or housing is monitored and maintained in line with enterprise requirements.</p> <p>3.2.Basic repair work is carried out and reported as required in line with OHS and enterprise requirements.</p> <p>3.3.Risk of predators to newborn animals is assessed and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>reported in line with workplace procedures.</p> <p>3.4.Environmentally responsible measures to eradicate or control identified predators are implemented safely in accordance with relevant legislative requirements.</p>
4. Carry out animal husbandry procedures	<p>4.1.Animals are prepared for birthing in accordance with enterprise requirements.</p> <p>4.2.Preventative health treatments are determined and administered to animals to manufacturer's specifications and recorded in line with enterprise requirements.</p> <p>4.3.Contingency measures are prepared and implemented as required.</p> <p>4.4.Protection from weather is provided for newborn.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- match supply of grazing or predetermined rations to nutritional requirements for pregnant animals
- monitor animal health and condition and recognise abnormalities
- carry out animal husbandry procedures, and provide due care and handle animals humanely
- maintain animal shelter and housing where applicable
- administer preventative health treatments
- collect, store and administer colostrum
- implement contingency measures in the event of adverse weather or birthing difficulties
- employ safe and environmentally responsible systems and procedures with regard to the handling of animals, feed, hazardous substances and firearms
- safely implement predator control strategies
- read and interpret manufacturers specifications, work and feeding plans, and material safety data sheets
- assess and calculate herd/flock numbers, measure feed, assess rate and frequency of feeding, and calculate animal gestation
- use oral communication skills/language competence to fulfil the job role as

**REQUIRED SKILLS AND KNOWLEDGE**

specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required

- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- physiological and behavioural signs of impending birth
- animal behaviour and nutritional requirements of pregnant animals
- pasture and animal grazing management
- feed and feed supplements for pregnant animals and when to provide them
- effects of weather conditions, and inadequate nutrition on pregnant animals and their newborn
- preventative health treatments, procedures and methods
- animal husbandry procedures
- environmental impact of animals on ground cover and minimisation measures
- environmental impact of the use and disposal of hazardous substances and minimisation measures
- hazards associated with handling animals and veterinarian medicines and chemicals
- sustainable land management practices
- State/Territory legislation, regulations and codes of practice with regard to OHS, animal welfare, poisons and firearm safety
- relevant licensing and permit requirements (firearms)
- predators and behaviour patterns, and control and eradication measures
- personal protective clothing and equipment and when and how it should be used
- enterprise policies with regard to birthing animals, recording and reporting routines.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy

<b>EVIDENCE GUIDE</b>	
<b>competency in this unit</b>	<p>holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assess animals health status</li> <li>• provide appropriate nutritional and environmental requirements for pregnant animals</li> <li>• perform husbandry procedures with pregnant animals</li> <li>• implement measures for the survival and health of newborn animals</li> <li>• recognise and report abnormalities.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare paddocks or yards	<p>1.1.Particular livestock mating plan is determined according to supervisor instructions or enterprise procedures.</p> <p>1.2.Paddocks or yards are selected and stocked to appropriate levels.</p> <p>1.3.Predator control program is planned and implemented where appropriate.</p> <p>1.4.Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and safety concerns reported to the supervisor.</p> <p>1.5.Suitable safety and Personal Protective Equipment (PPE) is selected, used and maintained.</p>
2. Prepare dams for joining	<p>2.1.Live weight of dams is monitored through weighing and/or condition scoring.</p> <p>2.2.Nutrition levels are adjusted to achieve targeted joining weights in line with feeding strategy.</p> <p>2.3.Dam health and husbandry operations are carried out according to enterprise procedures.</p> <p>2.4.Mobs are drafted for joining.</p>
3. Prepare sires for joining	<p>3.1.Physical examination of sires is carried out prior to joining.</p> <p>3.2.Veterinary advice is sought where appropriate.</p> <p>3.3.Mating ratios are determined.</p> <p>3.4.Replacement sires are selected in time to allow</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>adjustment to new environment.</p> <p>3.5.Sire health and husbandry operations are carried out in line with individual requirements</p> <p>3.6.Sires are test mated to assess libido and serving capability if required</p> <p>3.7.Sires environment is managed for optimum mating performance.</p>
4. Join sires to dam mobs	<p>4.1.If appropriate, dates are selected for joining according to the mating plan.</p> <p>4.2.Test joinings for new sires are undertaken if appropriate.</p> <p>4.3.Sires are introduced to herds or individual dams to ensure good contact.</p> <p>4.4.Sires are removed from herds at the scheduled time if in line with enterprise requirements.</p>
5. Monitor mating activity	<p>5.1.Mating activity is observed and recorded in line with enterprise standards.</p> <p>5.2.Distribution of sires is observed within each mob.</p> <p>5.3.Remedial action is taken if required.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identifying hazards and implementing safe work practices
- managing dams and sires during joining
- preparing dams and sires for joining
- appraising breeding soundness in animals
- estimating liveweights
- monitoring joining activity
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening,

**REQUIRED SKILLS AND KNOWLEDGE**

- clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
  - use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- mating behaviour of sires and dams
- optimum live weights and condition for mating
- physical abnormalities and mating problems in males and females
- environmental influences on joining
- OHS and animal welfare legislation, codes of practice and enterprise procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare joining paddocks
- assess the serving capacity and fertility of males pre joining
- ensure females are above minimum body weights to exhibit oestrus
- use sufficient males for the number of females to be mated in the group
- use back up sires where single sire mating is practised
- record mating details.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

<b>EVIDENCE GUIDE</b>	
	enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Animals may include:	<ul style="list-style-type: none"> <li>• cattle</li> <li>• sheep</li> <li>• goats</li> <li>• alpacas.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Follow instructions to prepare livestock for showing	<p>1.1.Livestock are identified and prepared for showing according to enterprise instructions.</p> <p>1.2.Feed and water supplies are monitored and replenished, as required and feed records are maintained to enterprise requirements.</p> <p>1.3.Health and welfare status of livestock is monitored and abnormalities are promptly reported according to enterprise requirements.</p> <p>1.4.Facilities are monitored and maintained, and existing and potential Occupational Health and Safety (OHS) hazards are recognised, risk assessed and reported to the supervisor.</p>
2. Handle and groom livestock prior to competition	<p>2.1.Appropriate handling and grooming equipment is selected, checked and used according to instructions and manufacturer's specifications.</p> <p>2.2.Livestock are groomed for showing to competition standard according to instructions and enterprise requirements.</p> <p>2.3.Livestock are conditioned to human handling and trained to the standard required for show handling and performance.</p> <p>2.4.Handling procedures are conducted with minimum stress and discomfort to livestock, and maximum safety for livestock, handlers and other parties according to OHS and animal welfare requirements.</p>
3. Present livestock	<p>3.1.Equipment to be used in showing is checked for correct operation and prepared for presentation requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2.Livestock are presented using handling techniques to exhibit livestock to best advantage according to competition and enterprise requirements.</p> <p>3.3.Instructions and requests from competition officials are complied with.</p> <p>3.4.Relevant information is reported and recorded according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- comply with animal welfare requirements
- calculate livestock numbers and measure feed and water quantities
- demonstrate safe workplace practices
- groom livestock to competition standards
- maintain livestock facilities and handling equipment
- observe and describe the behaviour of livestock
- read and interpret written information, receive and comprehend oral information, write basic statements and maintain livestock records
- restrain, handle and groom livestock using safe and humane methods and procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- competition requirements for grooming, handling and presentation
- components and functions of handling equipment
- handling techniques, restraint methods and when to use them
- livestock grooming and training techniques (to lead and stand correctly)
- livestock health and nutritional requirements
- preparation and maintenance requirements for livestock facilities and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

- livestock movement and behavioural characteristics in handling and confined areas
- OHS and animal welfare legislative requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- plan for and provide livestock feed and water requirements
- prepare livestock to competition standards
- train livestock for showing
- parade and present livestock for show.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Select potential exhibits	<p>1.1. Selection criteria are determined.</p> <p>1.2. Potential exhibits are chosen against selection criteria and according to enterprise and industry exhibit expectations.</p> <p>1.3. Faults in potential exhibits are identified and remedial action taken.</p>
2. Determine preparation requirements	<p>2.1. Preparation requirements are identified.</p> <p>2.2. Resources and facilities are identified and organised to allow for adequate preparation prior to exhibition.</p> <p>2.3. Preparation requirements, including Occupational Health and Safety (OHS) requirements, are communicated clearly and accurately to staff.</p> <p>2.4. Arrangements are made to ensure necessary resources and facilities at the exhibition are available and will be ready.</p>
3. Supervise preparation	<p>3.1. Potential exhibits are checked and progress monitored.</p> <p>3.2. Staff is monitored against established preparation procedures and realistic time-lines.</p> <p>3.3. Contingency plans are implemented to meet preparation shortfalls as required.</p> <p>3.4. Staff are advised of any changes in preparation procedures and instructed accordingly.</p>
4. Present exhibition	<p>4.1. Checks on transport arrangements are made to ensure that transport is suitable and that exhibit will arrive in time.</p> <p>4.2. Entries meet exhibition schedule requirements and</p>

ELEMENT	PERFORMANCE CRITERIA
	procedural rules. 4.3. Exhibits are displayed to their best advantage and according to exhibition guidelines. 4.4. Promotional and sales opportunities are optimised and pursued as required.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- select livestock
- prepare animals for exhibition
- present livestock to best advantage
- promote the product to clients
- pursue sales opportunities
- communicate with staff during preparations, exhibit officials and potential customers
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- criteria for competition judging
- preparation procedures
- requirements for entry of competitors
- transportation requirements
- feeding and nutrition requirements
- supervision techniques
- communication styles
- observation methods
- relevant legislative health and OHS requirements, especially as they relate to livestock and fleece exhibitions, and animal transportation, animal welfare and safe livestock handling techniques

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise and industry policies and codes of practice with regard to livestock exhibitions, sales, livestock transportation, and recording and reporting requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Competency is demonstrated in this standard if the candidate is able to:

- identify potential exhibits against selection criteria to accurately select livestock/fleeces
- train animals to be led and presented in competition
- organise entries, resources and facilities for showing
- arrange and prepare for transport
- present exhibits to best advantage
- promote the product to clients and pursue sales opportunities.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Animals may include:

- beef cattle
- dairy cattle

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• sheep</li> <li>• pigs</li> <li>• poultry</li> <li>• goats.</li> </ul>

## AHCLSK318A Rear newborn and young livestock

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of rearing newborn and young animals and defines the standard required to: weigh and assess condition of newborn and young animals; handle and care for newborn and young animals; recognise signs of stress or ill health in newborn and young animals; provide support as needed to veterinarians attending to sick newborn and young animals; wean animals humanely; provide the necessary feed and shelter.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in livestock industries and is likely to be carried out with minimal supervision within enterprise guidelines.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for care of newborn and young	<p>1.1. Facilities, equipment and supplies needed to provide care are identified selected and prepared.</p> <p>1.2. Needs of newborn and young animals are assessed and prepared.</p> <p>1.3. Feeding routines are implemented and observed.</p> <p>1.4. Hygiene, health and environmental requirements are identified and maintained according to enterprise and legislative requirements.</p> <p>1.5. Newborn and young are appropriately identified and humanely handled as required according to enterprise requirements and industry standards.</p>
2. Provide care for newborn and young	<p>2.1. Feed and feed supplements are provided as required and according to enterprise and nutritional requirements.</p> <p>2.2. Relationship between mother and young is monitored where appropriate and strategies are implemented to address any problems.</p> <p>2.3. Feeding, water and shelter areas are maintained and monitored for correct operation, cleanliness and hygiene.</p> <p>2.4. Routine health and feeding problems, including digestive upsets and infections, are treated promptly.</p>
3. Monitor health of newborn and young	<p>3.1. Newborn and young are monitored against benchmarks for growth, health and development.</p> <p>3.2. Appropriate action is taken for sick, weak, orphaned and injured, newborn and young.</p> <p>3.3. Assistance is sought for more complex health and</p>

ELEMENT	PERFORMANCE CRITERIA
	feeding problems. 3.4. Newborn and young requiring routine husbandry and health procedures are separated, treated and returned. 3.5. Treatments and checks are carried out according to hygiene, enterprise, industry and legislative requirements.
4. Meet ongoing requirements	4.1. Young animals ready for weaning are identified and weaned according to enterprise procedures and weaning programs. 4.2. Feeding requirements are identified and met. 4.3. Animals are handled regularly as required. 4.4. Records are kept and updated to meet enterprise and legislative requirements. 4.5. All work is conducted safely and according to enterprise requirements, Occupational Health and Safety (OHS), industry and animal welfare regulations.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- weigh and assess condition of newborn and young animals
- work within animal welfare legislative requirements and enterprise and industry guidelines
- identify abnormal conditions and report or react promptly
- safely and humanely handle and care for newborn and young animals
- recognise signs of stress or ill health in newborn and young animals
- communicate with other personnel
- provide support as needed to veterinarians attending to sick newborn and young animals
- collect samples
- identify the young and their parent
- use feed, shelter and ventilation equipment
- calculate feed and dose rates

## REQUIRED SKILLS AND KNOWLEDGE

- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- newborn and young animals development and growth
- newborn and young animals feed, shelter and environmental requirements
- common deformities
- infection controls and treatment programs (working knowledge)
- significance of colostrum to livestock
- feeding systems
- shelter requirements
- weaning strategies
- husbandry procedures
- hygiene and cleanliness requirements
- relevant legislative animal welfare health and OHS requirements especially as they relate to safe animal handling techniques, feeding, animal treatments, and rearing and caring for newborn and young animals
- enterprise requirements for rearing of newborn and young animals and recording and reporting requirements.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- weigh and assess condition of newborn and young animals
- handle and care for newborn and young animals
- recognise signs of stress or ill health in newborn and young animals

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• provide support as needed to veterinarians attending to sick newborn and young animals</li> <li>• wean animals humanely and provide the necessary feed and shelter.</li> </ul>

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for slaughter operation	<p>1.1.Reasons for slaughter are identified.</p> <p>1.2.Equipment is prepared and transported to slaughter site.</p> <p>1.3.Livestock to be slaughtered are selected and prepared for slaughter according to enterprise regulatory and animal welfare requirements.</p> <p>1.4.Slaughter method is determined and killing facility identified.</p>
2. Slaughter animal	<p>2.1.Slaughter is conducted humanely, with a minimum of stress to the animal and according to Occupational Health and Safety (OHS) requirements.</p> <p>2.2.Carcass is dressed, hung and protected.</p> <p>2.3.Where necessary, reasons for slaughter are investigated.</p> <p>2.4.All relevant environmental and health requirements and OHS, public health, hygiene and animal welfare legislation are followed and complied with during slaughter operations.</p>
3. Complete slaughter operations	<p>3.1.Offal and waste products are disposed of or destroyed in an environmentally responsible manner and according to State/Territory and local authority health standards.</p> <p>3.2.Equipment and slaughterhouse is hygienically cleaned and stored for re-use.</p> <p>3.3.Intended end-use of slaughtered meat is identified.</p> <p>3.4.Meat is prepared for end-use.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- kill and cut up livestock carcasses
- use equipment in a slaughterhouse
- clean and sterilise facilities and equipment
- store meat
- disposal of offal
- package cuts
- identify and select animals for slaughter
- comply with animal welfare requirements
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the health restrictions and laws applying to the slaughter of livestock for sale, i.e. by registered abattoirs, not by other avenues
- relevant legislative health and OHS requirements, especially as they relate to livestock and slaughter, animal handling and safe livestock handling techniques
- enterprise and industry policies and codes of practice with regard to livestock slaughter, licensing, and recording and reporting requirements
- animal welfare legislation and withholding periods
- offal disposal regulations
- human health and hygiene
- health issues affecting both humans and livestock
- cattle diseases
- carcass hanging methods
- codes of practice for the welfare and husbandry of cattle, sheep and goats.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for the transport of livestock	<p>1.1.Directions for transport are checked and load is calculated.</p> <p>1.2.Transport requirements are determined and a suitable carrier is engaged.</p> <p>1.3.Equipment and resources are identified and livestock are moved to loading facility for transport.</p> <p>1.4.Livestock are assembled and prepared for transport.</p>
2. Load livestock	<p>2.1.Workplace safety policies and procedures are observed and followed according to Material Safety Data Sheets (MSDSs) and enterprise requirements.</p> <p>2.2.Documentation is signed by relevant person and required animal identification is in place.</p> <p>2.3.Prepared livestock are loaded and secured safely and humanely according to animal welfare, OHS and enterprise requirements.</p> <p>2.4.Existing and potential hazards are identified and managed according to OHS, animal welfare and enterprise requirements.</p>
3. Monitor transport and unload livestock	<p>3.1.Carrier is briefed to ensure livestock are transported with minimal stress and discomfort according to animal welfare requirements.</p> <p>3.2.Livestock are regularly checked throughout the journey and unloaded for feeding and watering if necessary.</p> <p>3.3.Livestock are unloaded safely and humanely using appropriate equipment and facilities according to manufacturer's specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Livestock condition and welfare is monitored post transport and appropriate feed and water requirements are provided according to enterprise requirements.
4. Complete transportation operations	4.1. Vehicle, equipment and facilities are cleaned, maintained and secured according to OHS and enterprise requirements. 4.2. Relevant information is documented according to legislative and enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- demonstrate safe and humane handling of livestock according to animal welfare code of practice
- safely, load and unload livestock
- demonstrate safe and environmentally responsible workplace practices
- obtain relevant permits and comply with movement restrictions
- read and comprehend manufacturers specifications, work and maintenance plans, and Material Safety Data Sheets (MSDSs)
- interpret transport plan requirements
- communicate verbally to advise and anticipate conditions
- maintain records
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- industry and legislative requirements for the transport of livestock
- animal welfare and OHS legislative requirements
- environmental codes of practice with regard to vehicle operation and livestock transport
- market requirements in relation to the quality and condition of livestock
- sourcing and costing transportation alternatives

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise policies with regard to the use of vehicles and equipment
- relevant documentation requirements and procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- ensure documentation and livestock identification is in place
- coordinate the transport of livestock
- load and unload animals
- distribute animals on transport to prevent overcrowding and minimise risk of injury
- maintain load within specifications
- review health and condition of livestock after transit.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

## AHCLSK321A Service and repair bores and windmills

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of maintaining bores and windmills and defines the standard required to: maintain all components of bores and windmills; carry out testing procedures to determine correct operation; recognise and rectify mechanical faults; carry out repairs to bore, mill heads and pumps to ensure the full function and flow of water supplies; dismantle and assemble windmills and mechanical components; source and apply specialist direction; and refer to bore histories for troubleshooting.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit is likely to be carried out under routine supervision with intermittent checking within enterprise guidelines. It requires the application of discretion and judgement to assess and determine requirements for specialist direction, and refer more complex faults for specialist advice.
--------------------------------	--

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish bore history and enterprise policy	<p>1.1. Enterprise records are accessed, inspected and bore history is established.</p> <p>1.2. Enterprise policy regarding service and repairs to bores and windmills is established in consultation with the supervisor.</p> <p>1.3. Specialist instructions and assistance are sought as required from recognised industry sources according to enterprise requirements.</p>
2. Prepare to carry out service and repairs	<p>2.1. Tools, equipment and materials appropriate to job requirements are selected and inspected for serviceability.</p> <p>2.2. Dismantling and stripping of windmill is carried out to industry standards and according to enterprise requirements.</p> <p>2.3. Existing and potential Occupational Health and Safety (OHS) hazards in the workplace are identified, and risks assessed and controlled according to enterprise requirements.</p>
3. Carry out service and repairs	<p>3.1. Suitable personal protective equipment (PPE) is selected, used and maintained according to OHS and enterprise requirements.</p> <p>3.2. Service and repairs to bores, windmills, motors and pumps are carried out according to manufacturer specifications, operator manuals and enterprise</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements.</p> <p>3.3. Complex faults and repairs are reported and referred for specialist advice and remedial action according to enterprise requirements.</p> <p>3.4. Lost equipment is safely retrieved according to OHS guidelines and enterprise requirements.</p>
4. Complete service and repair activities	<p>4.1. Bore and windmill components are reassembled and tested for operation according to manufacturer specifications to ensure the restoration of full function and flow.</p> <p>4.2. Work site, tools and equipment are cleaned, returned to operating order and stored according to OHS and enterprise requirements.</p> <p>4.3. Waste from service and repair activities is collected, treated and disposed or recycled according to enterprise environmental requirements.</p> <p>4.4. Relevant information is documented according to industry and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- apply basic diagnostic techniques
- recognise faults and deterioration of components and carry out mechanical repairs
- select and match tools and equipment with work requirements
- apply hand-eye coordination
- apply safe workplace and positive environmental procedures
- read and interpret enterprise policy, maintenance plans, manufacturer specifications and material safety data sheets (MSDS)
- effectively communicate with contractors and supervisor, and record and report maintenance details and outcomes
- calculate volumes, and measure speed, flow rates and distance
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural,

**REQUIRED SKILLS AND KNOWLEDGE**

social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- construction of bores and windmills and maintenance requirements
- diesel engine components, maintenance requirements and repair procedures
- working principles of diesel engines
- drive systems and components
- types and uses of lubricants and other servicing materials
- servicing characteristics of bores and windmills
- types, characteristics, uses and limitations of hand and power tools
- basic diagnostic processes and techniques
- environmental codes of practice with regard to maintenance activities
- OHS legislative requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- maintain all components of bores and windmills
- carry out testing procedures to determine correct operation
- recognise and rectify mechanical faults
- carrying out repairs to bore, mill heads and pumps to ensure the full function and flow of water supplies
- dismantle and assemble windmills and mechanical components
- source and apply specialist direction and refer to bore histories for troubleshooting.

**EVIDENCE GUIDE****Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Service requirements may include:

- the pulling of the bore which includes fitting clamps, removing rods and columns
- the laying out of rods and columns
- replacing worn or faulty parts
- checking rods for straightness and checking spacers for wear
- examining for and noting lime deposits.

Programmed procedures for the checking of the bore head may include:

- checking of the belt condition, glands, pulleys, vibration or noise, slipping, throwing or loose belts, low flows, correct rotation, worn parts and bearings.

The service and repair of windmills may include:

- stripping the windmill, carrying out checks and repairs to mill blades, fan structure, mill head, differential head and gearbox.

## AHCLSK322A Transport farm produce or bulk materials

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of legally, safely, and efficiently operating a truck and its componentry to transport farm produce or bulk materials to a required location according to a specified schedule and defines the standard required to: plan, load, unload and move a range of loads over a full range of road conditions in accordance with Road Traffic Regulations; conduct pre-start and post-operational checks; manoeuvre truck in difficult sites and conditions, load, unload and transport livestock safely and according to industry codes; maintain the quality and integrity of transported produce; complete time sheets and other maintenance records; maintain and store records, reports, and log books.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit is likely to be carried out under limited supervision. Overall progress may be checked periodically. Loading and unloading equipment and procedures are also used. It includes the pre and post-operational checking of the vehicle as well as the basic post-operational maintenance of the vehicle, and of organisational records.
--------------------------------	--

### Licensing/Regulatory Information

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Organise for the transport of farm produce	<p>1.1. Briefing, hand-over details, authorisation and clearances are received, interpreted and clarified in accordance with organisational procedures and regulations.</p> <p>1.2. Equipment and authorised personnel requirements are organised on time according to transportation schedule.</p> <p>1.3. Operational delays are minimised through the adherence to schedule specifications.</p> <p>1.4. Potential risks and hazards are identified and managed according to the work plan and within organisational procedures and regulations, Occupational Health and Safety (OHS) and other relevant legislation.</p> <p>1.5. Equipment pre-operational checks are performed according to manufacturer's specifications, organisational procedures, regulations, OHS and other relevant legislation.</p>

ELEMENT	PERFORMANCE CRITERIA
	1.6.Site environmental concerns are adhered to according to relevant legislation.
2. Load, transport and/or unload farm produce	<p>2.1.Organisational OHS procedures, practices, policies and precautions are observed and followed.</p> <p>2.2.Start-up, park and shutdown procedures for plant and equipment are carried out in accordance with manufacturer's specifications, organisational procedures and regulations.</p> <p>2.3.Load is determined in accordance with manufacturer's specifications to prevent damage to equipment or loss of load.</p> <p>2.4.Farm produce is loaded and secured in accordance with organisational procedures and regulations, manufacturer's specifications, and OHS and other legislation.</p> <p>2.5.Farm produce is transported to specified destination on time, with their condition maintained, in accordance with organisational procedures and regulations, OHS and other relevant legislation.</p> <p>2.6.Vehicles follow approved transport routes and speed limits according to organisational procedures and regulations, and manufacturers specifications.</p> <p>2.7.Transport of farm produce is carried out ensuring the safety of personnel, the vehicle, other vehicles, equipment, and the surrounding environment.</p> <p>2.8.Farm produce or bulk materials are unloaded in accordance with manufacturers specifications, avoiding damage to equipment or personnel.</p> <p>2.9.Where required, transport of farm produce is co-ordinated with harvesting machinery.</p> <p>2.10. Transport of farm produce is completed to plan within the operating capacity of the equipment.</p> <p>2.11. Produce is dispatched and any documentation including weighbills is retained.</p>
3. Protect farm produce quality and integrity	<p>3.1.Hygiene of all surfaces in contact with farm produce is maintained.</p> <p>3.2.Farm produce is protected from loss, contamination, moisture and pests during transport.</p> <p>3.3.Farm produce is stored to prevent loss or deterioration, and in line with safe practice.</p> <p>3.4.Farm produce storage/holding areas are maintained in a clean condition and any potentially</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>hazardous substances are kept at a safe distance in accordance with industry practice and legislation.</p> <p>3.5. Transport environment is monitored using temperature data loggers if applicable.</p> <p>3.6. Quality of farm produce is checked at unloading.</p> <p>3.7. Batches of farm produce are monitored for isolation and product integrity where applicable.</p>
4. Carry out equipment maintenance	<p>4.1. Organisational OHS procedures, practices, policies and precautions are observed and followed.</p> <p>4.2. Visual inspection and fault finding are conducted in accordance with manufacturer's specifications and organisational requirements.</p> <p>4.3. Routine operational servicing is conducted to ensure peak performance of equipment and according to manufacturer's specifications, organisational procedures, regulations, OHS and other relevant legislation</p>
5. Maintain hygiene of equipment	<p>5.1. Equipment is cleaned in accordance with manufacturer's specifications, organisational procedures and regulations.</p> <p>5.2. Attachments and other ancillary equipment are cleaned and stored in accordance with manufacturer's specifications, organisational procedures and regulations.</p> <p>5.3. All required records and documentation are completed accurately and promptly in accordance with organisational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- plan, load, unload and move farm produce over a full range of road conditions
- operate data loggers and provide reports if applicable
- handle and load livestock

## REQUIRED SKILLS AND KNOWLEDGE

- monitor livestock health and welfare
- conduct pre-start and post-operational checks
- manoeuvre truck in difficult sites and conditions
- drive truck safely using all available controls
- clean and store vehicles and equipment
- identify operational faults
- complete time sheets and other maintenance records
- use communication methods to advise and anticipate conditions
- use communications equipment
- interpret plans, reports, maps, specifications
- read and interpret plans and documents
- maintain and store records, reports, and log books
- interpret ground conditions
- select, fit, and use personal and protective equipment
- operate and load a truck in accordance with Road Traffic Regulations
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- manufacturers and work site requirements including property conditions, and hazards on the property and on the open road
- road traffic laws
- organisational procedures for use of vehicles and equipment
- relevant OHS requirements for storage of materials and equipment
- OHS legislation, codes of practice, procedures, and principles, including manual handling
- animal welfare legislation, codes of practice (including transport), and procedures
- emergency procedures
- site safety requirements
- equipment safety requirements
- operational, start up, and shutdown procedures and checks
- equipment processes, technical capability and limitations
- hauling and towing procedures
- defensive driving techniques in varying traffic conditions, including urban, suburban, and rural environments
- receipt and document requirements at both ends of the transport operation
- differences in handling and operation with bagged and bulk loads.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• plan, load, unload and move a range of loads over a full range of road conditions in accordance with Road Traffic Regulations</li> <li>• conduct pre-start and post-operational checks</li> <li>• manoeuvre truck in difficult sites and conditions, load, unload and transport livestock safely and according to industry codes</li> <li>• maintain the quality and integrity of transported produce</li> <li>• complete time sheets and other maintenance records</li> <li>• maintain and store records, reports, and log books.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## AHCLSK323A Maintain and monitor feed stocks

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of maintaining required quantities and quality of livestock feed stocks and defines the standard required to: undertake feed stocktake and update inventory; place orders and receive feed into store; clean and label feed containers and maintain storage area; dispose of spoiled feeds.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit will usually follow set routines, methods and procedures. Overall progress needs to be checked periodically.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine quantities of stockfeed required	<p>1.1. Stocktake of stockfeed is undertaken and inventory updated.</p> <p>1.2. Livestock feed plans are checked and quantities required are compared with quantities in stock.</p>
2. Place orders with suppliers	<p>2.1. Orders for stockfeed are placed with suppliers.</p> <p>2.2. Orders specify quantity, quality, delivery date, delivery site and any special instructions.</p>
3. Receive feed into store	<p>3.1. Delivery manifest is checked and discrepancies reported to supplier and supervisor.</p> <p>3.2. Quality of stockfeed is checked and problems reported to supplier and supervisor.</p> <p>3.3. Stockfeed is transferred into appropriate storage containers.</p> <p>3.4. Records and labels are updated and filed according to enterprise requirements.</p>
4. Prepare and maintain feed storage area and containers	<p>4.1. Occupational Health and Safety (OHS) hazards are identified and action taken to minimise risk.</p> <p>4.2. Feed storage area and containers are cleaned according to enterprise cleaning schedule and procedures.</p> <p>4.3. Stocks of stockfeed are organised according to enterprise inventory management policy.</p> <p>4.4. Stockfeed is correctly labelled.</p> <p>4.5. Feed storage containers are cleaned before refilling.</p> <p>4.6. Feed storage area and containers are checked regularly for signs of pest infestation.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.7. Problems with feed storage facilities are identified, resolved or reported to supervisor for resolution.</p> <p>4.8. Stockfeed that does not meet quality standards are disposed of according to enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- access inventories and update them
- assess quality of stockfeed
- undertake manual lifting safely
- operate relevant machinery
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- enterprise purchasing procedures and arrangements with suppliers
- minimum and maximum quantities required to be held in stock
- quality parameters of feed ingredients
- nutritional values of various feed ingredients and acceptable substitutes
- OHS requirements
- environmental impacts and procedures for maintaining feed stocks.

## Evidence Guide

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify role and select working dog	<p>1.1. Working dog requirements for the enterprise are identified and confirmed.</p> <p>1.2. Suitable working dog breeders and bloodlines are researched and availability determined.</p> <p>1.3. Dogs are inspected for suitability and selected to meet role and enterprise requirements.</p>
2. Develop and implement training program	<p>2.1. Basic commands are taught.</p> <p>2.2. The dog is introduced to a small flock in a confined area.</p> <p>2.3. The dog is asked to handle larger numbers in more open areas.</p> <p>2.4. Specialist skills such as backing and forcing are taught.</p> <p>2.5. Existing and potential animal handling hazards in the workplace are identified, risk assessed and controlled in line with enterprise requirements.</p>
3. Maintain welfare of working dog	<p>3.1. Health, condition and status are monitored and maintained.</p> <p>3.2. Diet is provided to meet nutritional requirements in consideration of work/training program.</p> <p>3.3. Preventative health treatments are arranged and administered.</p> <p>3.4. Facilities and equipment needs are provided and maintained in line with animal welfare requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- select working dog to meet requirements
- develop training programs and apply effective training procedures
- maintain health and welfare requirements and recognise abnormalities
- arrange and administer preventative health treatments
- maintain clean and safe facilities and workplace environment
- assess and calculate work area dimensions, and measure dietary requirements and preventative health treatments.
- demonstrate safe workplace and animal handling practices
- dispose of waste according to enterprise procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- canine breeds and behaviour, health and nutritional requirements
- effective canine training systems and procedures
- safe animal handling methods and techniques
- canine preventative health treatments
- dietary requirements of working dogs
- enterprise policies with regard to working dogs and recording and reporting routines.
- hazards associated with training and caring for working dogs and appropriate control measures
- State/Territory legislative and regulatory requirements with regard to OHS, animal welfare, and the registration and care of domestic dogs.

## AHCLSK325A Castrate livestock

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of castrating young animals and describes the standard required to: handle animals humanely in line with animal welfare codes of practice; perform a recommended method of castration with attention to hygiene; administer pre or post operative treatments; monitor castrated animals.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to farm workers on livestock enterprises. It requires taking responsibility for own work output and using well-developed skills with some discretion and judgement under routine supervision.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for animal castration	<p>1.1. Work to be undertaken is interpreted from work program where necessary, and confirmed with management.</p> <p>1.2. Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of the production process.</p> <p>1.3. Occupational Health and Safety (OHS) hazards are identified, risks assessed, and suitable controls implemented.</p> <p>1.4. Suitable personal protective equipment is selected, used, and maintained.</p> <p>1.5. Castration area is hygienically cleaned to minimise the risk of infection.</p> <p>1.6. Equipment, instruments and resources needed for castration operations are selected and assembled.</p> <p>1.7. Male animals are separated as required to facilitate ease of handling and to minimise stress.</p>
2. Castrate animals	<p>2.1. Individual animals are selected, caught and humanely restrained using industry standard techniques.</p> <p>2.2. Animals are checked for health and soundness according to organisation guidelines.</p> <p>2.3. Restrained animals are castrated in a humane and hygienic manner according to organisational guidelines, industry standards, and the code of animal welfare.</p> <p>2.4. Records are completed as instructed by</p>

ELEMENT	PERFORMANCE CRITERIA
	organisational guidelines.
3. Complete hygiene and administration activities	3.1. All debris, waste material and animal residues are removed from the site and disposed of in an environmentally aware and safe manner according to organisation work procedures. 3.2. Instruments and equipment are hygienically cleaned, maintained and stored according to organisation work procedures. 3.3. A clean and safe area is maintained throughout and on completion of work. 3.4. Work outcomes are documented or reported to the supervisor according to organisation work procedures.
4. Monitor castrates	4.1. Animals are monitored to identify post-castration complications. 4.2. Animals exhibiting signs of ill health or infection are identified and treated.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- carry out animal husbandry tasks in hygienic manner
- record the number and health of animals post castration
- work effectively as a part of a team
- observe, identify and react appropriately to environmental implications and OHS hazards
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural,

**REQUIRED SKILLS AND KNOWLEDGE**

social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- male anatomy as it relates to castration
- organisation castration, hygiene and animal welfare procedures and policies
- industry standards for the care and husbandry of animals
- the need to maximise hygiene practices and awareness
- sound management practices and processes to minimise noise, odours and debris from the livestock operations
- relevant OHS legislation, codes of practice and enterprise requirements
- animal welfare requirements under the code of practice.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- handle animals humanely in line with animal welfare codes of practice
- perform a recommended method of castration with attention to hygiene
- administer pre or post operative treatments
- monitor castrated animals.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## AHCLSK326A Mix and mill standard stockfeed

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of ordering and storing ingredients and mixing feed for livestock being produced intensively and defines the standard required to: interpret and apply feeding instructions; measure and calculate volumes and consumption requirements; relate livestock performance data to ration consistency; mix feeds and ingredients in line with industry quality standards and requirements; recognise and rectify minor operational faults and perform routine maintenance; complete records and documentation of feed use and volumes for the shed; and take and prepare feed samples for dispatch to the laboratory.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to working under limited supervision from others with checking only related to overall progress. It is usually done within established routines, methods and procedures where some discretion and judgement is required in the selection of equipment and materials, organisation of work, services and actions to achieve outcomes within time and budgetary constraints. It requires an understanding of basic nutritional and animal requirements.
--------------------------------	---

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to work with livestock feed	<p>1.1. Work to be undertaken is interpreted from the work program, where necessary, and confirmed with the supervisor.</p> <p>1.2. Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.3. Suitable personal protective equipment (PPE) is selected, used and maintained.</p> <p>1.4. Tools and equipment suitable for the work to be undertaken are selected, checked and maintained, if necessary.</p> <p>1.5. Environmental implications of undertaking work are identified, likely outcomes assessed and, if necessary, responsible action taken.</p>
2. Order and store feed and ingredients	<p>2.1. Ingredients previously selected are ordered from the supplier according to organisational protocols.</p> <p>2.2. Ingredients and feed are stored safely in the location</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and manner determined by the supervisor.</p> <p>2.3. Stock is rotated and replacements are ordered to arrive at the appropriate time to ensure optimum freshness.</p> <p>2.4. All required records and documentation are completed accurately and promptly according to organisational requirements.</p>
3. Mix feed	<p>3.1. Scales and containers to be used for measurements are calibrated according to manufacturer instructions.</p> <p>3.2. Ingredients are identified from instructions and obtained from storage locations.</p> <p>3.3. Ingredients are measured in the specified ratios and quantities.</p> <p>3.4. Ingredients are blended adequately and hygienically in the manner specified and using the appropriate equipment.</p> <p>3.5. Where milling is required, it is done in the manner specified and using the appropriate equipment.</p> <p>3.6. OHS hazards are identified, risk assessed and suitable controls implemented.</p> <p>3.7. Suitable PPE is selected, used and maintained.</p>
4. Conduct hygiene and administration activities	<p>4.1. Equipment is cleaned according to manufacturer specifications and organisational procedures to maintain hygiene standards.</p> <p>4.2. All required records and documentation are completed accurately and promptly according to organisational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- identify a range of grain types and qualities
- identify grain contaminants
- identify premixes and weigh out

## REQUIRED SKILLS AND KNOWLEDGE

- mix feeds and ingredients
- identify basic mixing problems
- relate livestock performance data to ration consistency
- recognise and rectify minor operational faults
- read and interpret manufacturers specifications, work and maintenance plans, and material safety data sheets (MSDS)
- interpret and apply task instructions, communicate with work team and supervisor, and record and report faults, workplace hazards and accidents
- measure and calculate volumes and consumption requirements
- complete records and documentation of feed use and volumes for the shed
- take and prepare feed samples for dispatch to the laboratory
- perform routine maintenance of milling and mixing equipment
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- silo operations and configuration, machinery and operating practices
- cleaning and storage of machinery, equipment and materials
- enterprise recording and reporting procedures
- raw ingredients (grains and meals)
- vitamins, minerals and premix formulations
- the implications of grain incorporating chemical, insect and fungal contamination. This includes an awareness of the industry process in place to monitor these contaminants - the National Residue Survey (NRS), the National Antibiotic Residue Minimisation (NARM) and programmed basket surveys
- contaminants of raw feed and meals that could reduce performance - seeds, moulds, nutritional and disease factors which can influence product quality
- evidence of spoilage and handling spoiled feeds
- OHS and environmental legislative and enterprise requirements.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

<b>EVIDENCE GUIDE</b>	
Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• interpret and apply feeding instructions</li> <li>• measure and calculate volumes and consumption requirements</li> <li>• relate livestock performance data to ration consistency</li> <li>• mix feeds and ingredients in line with industry quality standards and requirements</li> <li>• recognise and rectify minor operational faults and perform routine maintenance</li> <li>• complete records and documentation of feed use and volumes for the shed</li> <li>• take and prepare feed samples for dispatch to the laboratory.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Mixing and milling may include:	<ul style="list-style-type: none"> <li>• the safe operation and maintenance of machinery and equipment, including hydraulics and guarding of exposed moving parts, including pumps, impellers and aeration equipment</li> <li>• precautions should also be in place to minimise exposure to noise and organics and other dusts.</li> </ul>

## AHCLSK327A Collect, store and administer colostrum

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of collecting colostrum from lactating animals for obtaining and preparing artificial colostrum and defines the required standard to: filter colostrum; prepare artificial colostrum; handle animals after parturition; handle and feed new born animals; observe health and condition of newborn animals.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to supporting new born animals in small and large enterprises.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Obtain colostrum	<p>1.1. Required equipment is obtained, checked and sterilised.</p> <p>1.2. Suitable donor animals are identified and colostrum is collected.</p> <p>1.3. Artificial colostrum is obtained from stocks held where required.</p> <p>1.4. Suitable Personal Protective Equipment (PPE) is selected, used and maintained.</p>
2. Administer colostrum to newborn animals	<p>2.1. Identify newborn animals requiring supplementary colostrum.</p> <p>2.2. Obtain and prepare feeding equipment.</p> <p>2.3. Frozen colostrum is thawed at room temperature.</p> <p>2.4. Thawed colostrum is warmed to body temperature.</p> <p>2.5. Warmed colostrum is administered to newborn animals according to individual animal requirements and enterprise procedures.</p> <p>2.6. Newborn animals are checked regularly after administration of colostrum and repeat colostrum feeds are given as required.</p>
3. Store colostrum	<p>3.1. Colostrum is filtered according to enterprise procedures and placed in appropriate container.</p> <p>3.2. Surplus colostrum is frozen for future use and container is labelled with details of donor animal and date of collection.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- filter colostrum
- prepare artificial colostrum
- handle animals after parturition
- handle and feed new born animals
- observe health and condition of newborn animals
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the time periods after parturition in which colostrum can be collected from donor animals
- the time periods during which newborn animals must receive feeds of colostrum
- the nutrition requirements of newborn animals and the reasons for feeding colostrum
- the behavioural characteristics of animals that have just given birth.
- animal welfare requirements and safe work practices.

## Evidence Guide

### EVIDENCE GUIDE

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to work with effluent disposal equipment	<p>1.1. Work to be undertaken is interpreted from work program where necessary, and confirmed with management.</p> <p>1.2. Discussions are held with other workers who may be affected by the maintenance activities to ensure continued smooth operation of the production process.</p> <p>1.3. Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.4. Suitable personal protective equipment is selected, used and maintained.</p> <p>1.5. Tools and equipment suitable for the work to be undertaken are selected, checked and maintained if necessary.</p>
2. Maintain and operate effluent storage and disposal system	<p>2.1. Organisational OHS procedures, practices, policies and precautions are observed and followed, including the use of personal protective equipment.</p> <p>2.2. Effluent removal and disposal equipment is correctly serviced and maintained.</p> <p>2.3. Effluent disposal systems are used according to system design in compliance with approval granted by local government and State environment protection authority.</p> <p>2.4. When liquid effluent storages are used, recognised techniques for irrigation are carried out according to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>establishment practice.</p> <p>2.5. In-shed effluent pits are flushed and drained as required.</p> <p>2.6. When effluent is composted, turning is done in accordance with establishment practice, State environment protection authority recommendations, and OHS procedures.</p>
<p>3. Monitor effluent disposal system</p>	<p>3.1. Organisational OHS procedures, practices, policies and precautions are observed and followed, including the use of personal protective equipment.</p> <p>3.2. Flow rates, pit levels, compost temperatures and equipment are regularly checked to maintain effective operation of the system.</p> <p>3.3. Cleaning procedures and hygiene practice are carried out according to established practice.</p> <p>3.4. Monitoring reflects an understanding of the environmental duty of care.</p>
<p>4. Conduct hygiene and administration activities</p>	<p>4.1. Equipment is cleaned in accordance with manufacturer's specifications, organisational procedures and regulations.</p> <p>4.2. Attachments and other ancillary equipment are cleaned and stored in accordance with manufacturer's specifications, organisational procedures and regulations.</p> <p>4.3. All containers, leftover fluids, waste and debris from the operations are disposed of safely and appropriately.</p> <p>4.4. All required records and documentation are completed accurately and promptly in accordance with organisational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- maintain production shed environment and system through an efficient effluent

## REQUIRED SKILLS AND KNOWLEDGE

handling program

- read and interpret cost sheets, production information, target statistics, quantities of feed and other inputs, job performance audits, and Material Safety Data Sheets (MSDSs)
- prepare and present production and other information in a manner that is readily accessible for both management and operators
- maintain and monitor gauges and instruments that control the effluent disposal system
- observe, identify and react appropriately to environmental implications and OHS hazards
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- effluent handling systems
- factors affecting effluent degradation
- environmental codes of practice, and local and State government regulations
- environmental controls and codes of practice applicable to the enterprise
- the organisations livestock production and management plans - sound management practices and processes to minimise noise, odours and debris from the livestock operations
- relevant legislation and regulations relating to waste and environment management, animal health and welfare, and employment of staff and contractors
- OHS legislation, codes of practice and enterprise procedures.

## Evidence Guide

## AHCLSK329A Implement procedures for calving

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of monitoring cows at calving and providing the support required, and defines the standard required to: recognise signs of imminent calving; prepare facilities and equipment for calving; monitor calving and provide intervention if required, or refer on if birthing difficulties require specialist assistance; recognise abnormalities in freshly calved cows and their calves; monitor cow and calf post calving.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers on cattle farms who are responsible for overseeing calving. The person is expected to refer any high risk issues or problems for veterinary advice.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for calving	<p>1.1. Condition and health status of cow is assessed and monitored prior to birthing.</p> <p>1.2. Birthing equipment, resources and materials are checked and prepared for use.</p> <p>1.3. Cows at risk of calving difficulty (especially first calf heifers) are grazed in an area where intervention can be carried out with as little disruption as possible.</p> <p>1.4. Hazards in assisting with calving are identified and safe work practices followed.</p> <p>1.5. Mating records are checked and anticipated calving date is confirmed.</p>
2. Observe the calving	<p>2.1. Cows are monitored for signs of approaching parturition and throughout calving.</p> <p>2.2. Signs of calf malpresentation or dystocia are noted from the rate of progress in giving birth and the initial orientation of the feet and head.</p>
3. Support calving	<p>3.1. Calving cows are handled calmly and put in a secure environment.</p> <p>3.2. Hygiene procedures are implemented to ensure that any calving equipment entering the birth canal is clean.</p> <p>3.3. The orientation and size of the foetus relative to the pelvis is estimated through manual palpation.</p> <p>3.4. The possibility of twins is checked and the position of the lead foetus adjusted where required.</p> <p>3.5. A malpresentation is physically manipulated into the correct position where required.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.6. Calving ropes/chains are placed on the calf above the front fetlocks and appropriate calf pulling equipment is applied in the case of dystocia, without causing undue harm to the female.</p> <p>3.7. Specialist support is brought in if normal assistance procedures are not adequate to assist the calving.</p>
4. Carry out monitoring after calf has been born	<p>4.1. Cow is allowed to rest and encouraged to lick the calf as an initial bonding.</p> <p>4.2. Calves that have been assisted are checked for clear airways.</p> <p>4.3. The placenta is left for the cow to ingest after calving.</p> <p>4.4. Cows with retained placentas or other abnormalities are treated and recorded.</p> <p>4.5. The calving environment, facilities and equipment are maintained in a safe, hygienic and operational state and faults are reported or fixed.</p> <p>4.6. Record of calving is kept.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- carry out cow husbandry procedures and recognise signs of imminent calving
- apply contingency measures for calving in the event of difficulties
- ability to correctly apply calving ropes/chains and use suitable calf pulling equipment
- monitor cow condition and recognise abnormal behaviour/presentations
- ability to manual palpate and recognise simple malpresentations
- recognise abnormalities in calving behaviour, expulsion of foetus and placenta, and progress of calf immediately after birth
- prepare calving environment, materials and resources to industry standards
- maintain a safe and secure post-calving environment
- demonstrate safe and environmentally responsible workplace practices
- identify hazards and use safe work practices in the calving environment
- use literacy skills to read, interpret and follow organisational policies and

**REQUIRED SKILLS AND KNOWLEDGE**

procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures.

**Required knowledge**

- calving behaviour and basic health and nutritional requirements as directed
- calving environment requirements
- calving equipment and materials, their components and functions
- calving intervention and non-intervention strategies
- normal calf presentation v abnormal that may need assistance
- problems associated with calving and intervention and follow up treatment
- cow gestation and birthing and husbandry procedures
- enterprise policies with regard to calving down, recording and reporting routines
- environmental impacts and minimisation measures associated with cattle breeding
- health and injury hazards associated with handling cattle
- personal protective clothing and equipment, and when and how it should be used
- procedures for cleaning and maintaining treatment equipment and materials
- relevant State/Territory legislation, regulations and codes of practice with regard to workplace Occupational Health and Safety (OHS) and animal welfare.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- recognise signs of imminent calving in cattle
- monitor calving and provide assistance if required, or

<b>EVIDENCE GUIDE</b>	
	<p>refer on if birthing difficulties require supervisor or veterinary assistance</p> <ul style="list-style-type: none"> <li>• recognise abnormalities in calved cows and in newborn calves</li> <li>• monitor cow and calf post calving.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Compliance requirements may include:	<ul style="list-style-type: none"> <li>• OHS legislation, regulations and codes</li> <li>• animal welfare legislation and codes of practice</li> <li>• quality assurance procedures.</li> </ul>
Class of stock to be calved down may include:	<ul style="list-style-type: none"> <li>• all types and breeds of cattle.</li> </ul>
Calving equipment may include:	<ul style="list-style-type: none"> <li>• calf pullers, calf chains, halters and ropes.</li> </ul>
Hygiene procedures may include:	<ul style="list-style-type: none"> <li>• personal hygiene, use of disinfectants, sanitising of equipment, use of sterile gloves.</li> </ul>
Post calving procedures may include:	<ul style="list-style-type: none"> <li>• removal of retained placenta, antibiotic treatments, and mothering up and suckling of the calf.</li> </ul>
Situations requiring veterinary intervention may include:	<ul style="list-style-type: none"> <li>• dystocias, ruptures, physical injury to the calving female or calf.</li> </ul>

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for foaling	<p>1.1. Condition and health status of pregnant mare is assessed and monitored prior to foaling.</p> <p>1.2. Birthing equipment, resources and materials are checked and prepared for use.</p> <p>1.3. Hazards in assisting with birthing are identified and safe work practices followed.</p> <p>1.4. Mares are moved to area where intervention can be carried out with as little disruption as possible.</p> <p>1.5. Mating or AI records are checked and anticipated foaling date is confirmed.</p>
2. Observe the foaling process	<p>2.1. Mares are monitored for signs of approaching parturition.</p> <p>2.2. Each of the three stages of foaling - the water breaking, the expulsion of the foetus, and the expulsion of the afterbirth - are monitored with veterinary advice sought where required.</p> <p>2.3. Signs of dystocia or malpresentation are noted from the rate of progress in giving birth and the initial presentation of the foal.</p>
3. Apply intervention strategies if birthing fails to progress normally	<p>3.1. Foaling mares are handled calmly and put in a safe and restricted environment.</p> <p>3.2. Mares experiencing birthing difficulties are identified by observing behaviour and foaling progress.</p> <p>3.3. Hygiene procedures are implemented to ensure the operator and any object entering the birth canal is clean.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. The orientation and size of the foetus relative to the pelvis is estimated through manual palpation.</p> <p>3.5. The possibility of twins is checked and the position of the lead foetus adjusted where required.</p> <p>3.6. A malpresentation is physically manipulated into the correct position where required.</p> <p>3.7. Force is applied to the foetus in the case of hips being caught or a breech birth.</p>
4. Carry out monitoring after foal has been born	<p>4.1. Mare is allowed to lie and rest for as long as possible.</p> <p>4.2. The foal is allowed to stand to break the umbilical cord.</p> <p>4.3. The afterbirth is tied after the mare stands and is checked for expulsion within two to three hours after foaling.</p> <p>4.4. The placenta is examined to ensure no part of it has been retained.</p> <p>4.5. The mare and foal are monitored for nursing and general health.</p> <p>4.6. Foaling environment, facilities and equipment are maintained in a safe, hygienic and operational state and faults are reported or fixed.</p> <p>4.7. Record of foaling is kept.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- carry out mare husbandry procedures and recognise signs of imminent foaling
- assist at foaling in the event of difficulties
- monitor mare condition and recognise abnormal behaviour
- recognise abnormalities in foaling behaviour, expulsion of foetus and placenta, and progress of foal immediately after birth
- refer for specialist advice where required
- prepare foaling environment, materials and resources to industry standards
- maintain a safe and secure post-foaling environment

## REQUIRED SKILLS AND KNOWLEDGE

- demonstrate safe and environmentally responsible workplace practices
- identify hazards and use safe work practices in the foaling environment
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- foaling behaviour and basic health and nutritional requirements
- foaling environment requirements
- foaling equipment and materials, their components and functions
- foaling intervention and non-intervention strategies
- problems associated with foaling and remedial treatment
- horse gestation and birthing and husbandry procedures
- enterprise policies with regard to foaling down mares, recording and reporting routines
- environmental impacts and minimisation measures associated with horse breeding
- hazards associated with handling horses
- personal protective clothing and equipment, and when and how it should be used
- procedures for cleaning and maintaining treatment equipment and materials
- relevant State/Territory legislation, regulations and codes of practice with regard to workplace Occupational Health and Safety (OHS) and animal welfare.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy

<b>EVIDENCE GUIDE</b>	
<b>competency in this unit</b>	<p>holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• recognise signs of imminent foaling in mares</li> <li>• monitor foaling and provide assistance if required, or refer on if birthing difficulties require veterinary assistance</li> <li>• recognise abnormalities in freshly foaled out mares and in newborn foals</li> <li>• ensure both mare and foal have recovered from foaling and the foal stands and nurses.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Apply animal welfare practices	<p>1.1.Elements of the industry animal welfare requirements are determined.</p> <p>1.2.Hazards to animal welfare are identified for work area according to enterprise guidelines and standard operating procedures.</p> <p>1.3.Critical control points for work area are determined according to workplace procedures.</p> <p>1.4.Record keeping on animal welfare is completed according to industry Quality Assurance (QA) requirements.</p>
2. Comply with standard operating procedures	<p>2.1.Standard operating procedures in respect to animal welfare requirements are implemented in accordance with enterprise requirements.</p> <p>2.2.Non-conformance is reported to supervisor according to enterprise/industry requirements.</p> <p>2.3.Corrective action taken in accordance with enterprise policy and procedures.</p>
3. Report problems that affect animal welfare	<p>3.1.Recognise potential or existing animal welfare problems.</p> <p>3.2.Identify instances of problems of animal welfare from specifications or work instructions.</p> <p>3.3.Report variation and potential problems to supervisor/manager according to enterprise guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- implement animal welfare practices
- implement standard operating procedures
- report problems that affect animal welfare
- handle livestock in a humane and caring manner
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- industry animal health requirements
- animal production processes
- enterprise policies, guidelines and standard operating procedures relating to animal welfare
- enterprise Occupational Health and Safety (OHS) requirements
- animal health and welfare
- animal handling techniques
- codes of practice for welfare.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and

The evidence required to demonstrate competency in this

<b>EVIDENCE GUIDE</b>	
<b>evidence required to demonstrate competency in this unit</b>	unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following: <ul style="list-style-type: none"> <li>• implement animal welfare practices</li> <li>• implement standard operating procedures</li> <li>• report problems that affect animal welfare.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Types of animals may include:	<ul style="list-style-type: none"> <li>• all types of animals that are farmed or held for commercial purposes.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor animal health status	<p>1.1. Information on animal health programs are sourced from the livestock production plans.</p> <p>1.2. Animal health status is assessed by routinely inspecting each animal from induction to despatch to ensure unimpeded access and opportunity to observe behavioural characteristics, signs of ill-health and freedom of movement.</p> <p>1.3. Information on past treatment is sourced from the individual animal's health tag/s and enterprise records to assist with decision making.</p> <p>1.4. Prevention and treatment strategies are identified to resolve health issues such as; recording for follow-up observation, removal/pulling for exclusion from other livestock and or treatment.</p>
2. Identify and diagnose animals requiring treatment	<p>2.1. Potential health issues are identified for individual animals in different pens and classes of livestock.</p> <p>2.2. The type and severity of infection or injury is determined and animals requiring treatment under the animal health plan are identified and removed/pulled.</p>
3. Determine the type and scope of treatment	<p>3.1. The need for treatment and the type and scope of treatment is determined and prepared according to manufacturer's specifications or veterinary advice.</p> <p>3.2. Equipment, materials and treatment site are prepared</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>to industry standards and according to enterprise requirements.</p> <p>3.3. Hazards in the workplace are identified; risk assessed and controlled according to Occupational Health and Safety (OHS) requirements and enterprise guidelines.</p> <p>3.4. Withholding periods and other details of treatment are recorded according to enterprise guidelines and product specifications.</p>
4. Administer treatment	<p>4.1. Suitable personal protective equipment is selected according to OHS requirements and enterprise guidelines.</p> <p>4.2. Animals are safely handled and restrained without causing harm or injury to animal or handler.</p> <p>4.3. Treatment is administered hygienically and consistently according to manufacturer's specifications or veterinary advice.</p> <p>4.4. Treated animals are identified from non-treated animals to ensure compliance against the required Withholding Period (WHP).</p> <p>4.5. Treated animals are counted out, prepared and moved along a planned route without damage to animal, person, property or environment.</p>
5. Implement follow-up procedures	<p>5.1. Animal health and condition is monitored post-treatment and abnormalities reported according to enterprise guidelines.</p> <p>5.2. Environmental implications associated with the treatment of animals are identified, assessed and controlled according to enterprise requirements.</p> <p>5.3. Equipment and worksite are cleaned and waste, including animal residues, is disposed of according to OHS and enterprise guidelines.</p> <p>5.4. Health treatments are stored to manufacturers recommendations, industry and enterprise requirements.</p> <p>5.5. Relevant information is documented according to industry and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices for animal health treatment
- collect faecal, tissue or blood samples for laboratory analysis samples
- identify the symptoms of infectious and other diseases and injuries
- select livestock prone to infection and behavioural problems for culling
- arrange and co-ordinate equipment and resources
- drench and vaccinate livestock
- select and apply appropriate chemicals to treat infections and infestations
- assemble, check and calibrate drenching and vaccinating equipment
- calculate animal numbers and measure treatment dosage and rates, demonstrating safe and environmentally responsible workplace practices
- provide due care and humanely handle animals to minimise stress
- return animals to prepared and clean environments
- read and interpret chemical and veterinary health labels, manufacturers specifications and Material Safety Data Sheets (MSDSs)
- recognise, monitor and report the signs of heat load to work team and management
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the relationship between livestock health and nutrition
- types of feedlot diseases and their symptoms
- application procedures and effects of veterinary chemicals
- types of health preparation treatments
- enterprise vaccination programs and procedures
- identification of and prescribed treatments for infections and infestations
- livestock health and nutritional requirements
- requirements for the preparation and transportation of samples for laboratory testing
- drenching equipment, drenches and their efficiency
- relevant codes of practice with regard to the safe use and handling of hazardous substances
- WHP for treated animals

**REQUIRED SKILLS AND KNOWLEDGE**

- principles of animal behaviour, handling and restraint techniques
- OHS and animal welfare legislative and enterprise requirements
- relevant codes of practice with regard to environmental protection
- understanding of the enterprise heat load management plan
- understanding of Livestock Arrivals Bio-security Risk Assessment.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- monitor animal health status and refer to the production plan for intervention strategies
- accurately diagnose the type and severity of infection or injury
- determine the type and scope of treatment
- administer treatments and observe withholding periods
- monitor animals for treatment effectiveness
- document and record procedures for animal treatment.

**Context of and specific resources for assessment**

Competency requires the application of safe work practices under enterprise conditions. Selection and use of resources for worksites may differ due to the regional or enterprise circumstances.

**Method of assessment**

This unit may be assessed in a holistic way with other units. The assessment strategy for this unit must verify required knowledge, skill and application using more than one of the following assessment methods:

<b>EVIDENCE GUIDE</b>	
	demonstration, practical skills assessment, oral/written questions, professional conversations, direct observation, third-party evidence, case study analysis, role play, simulations, presentations, performance audit, written assignment, portfolio, and examinations.
<b>Guidance information for assessment</b>	Evidence should be gathered over a period of time in a range of actual or simulated environments.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Animals may include:	<ul style="list-style-type: none"> <li>• beef cattle</li> <li>• dairy cattle</li> <li>• sheep</li> <li>• goats</li> </ul>
Feedlots may include:	<ul style="list-style-type: none"> <li>• sheds</li> <li>• pens etc</li> </ul>
Enterprises may include:	<ul style="list-style-type: none"> <li>• large scale</li> <li>• fully automated</li> <li>• small scale</li> <li>• manually operated</li> </ul>
Livestock health issues may include:	<ul style="list-style-type: none"> <li>• monitoring the heat load and heat stress of animals</li> <li>• bovine respiratory disease (BDR)</li> <li>• acidosis</li> <li>• feet problems</li> <li>• digestive disorders</li> </ul>
Treatments may include:	<ul style="list-style-type: none"> <li>• acclimation</li> <li>• ration variations</li> <li>• animal health treatments</li> <li>• medication</li> </ul>

## AHCLSK333A Monitor pen condition and ration suitability

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the processes required to monitor the ration available to livestock and pen conditions associated with feeding livestock and defines the standards required to: monitor ration and water available to animals and refer to the livestock production and/or ration plan for intervention strategies; inspect pen status and refer to the livestock production and or ration plan for intervention strategies; assess manure condition and refer to livestock production ration plan for intervention strategies; observe pen conditions considering weather and refer to feedlot management and or ration plan for intervention strategies; check pen hygiene conditions for ration spillages, insect activity, moisture and refer to livestock production and or maintenance plan for intervention strategies; monitor intervention effectiveness; record intervention and make improvements to livestock production plans where necessary.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in feedlot enterprises who operate under supervision within enterprise guidelines.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>	
---------------------------	--

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor ration and water levels	<p>1.1.Information on ration ingredients and composition is sourced from the livestock production and/or feed plans.</p> <p>1.2.Ration levels, composition and consistency are assessed and potential production and health issues identified for different pens and classes of livestock.</p> <p>1.3.Strategies are identified for emptying wet, mouldy and fouled ration from bunks; exclusion of animals from inappropriate rations.</p> <p>1.4.Water quantity and quality are assessed to meet animal requirements.</p>
2. Inspect pen status and condition	<p>2.1.Information on pen group status is sourced from the livestock production plan.</p> <p>2.2.Pen infrastructure including feed bunks, feed apron and water troughs are assessed together with animal feeding behaviour and performance and potential issues are identified.</p> <p>2.3.Strategies are identified to address control of leaking troughs; exclusion of animals from damaged bunk</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and apron area if necessary.</p> <p>2.4. Pen surface conditions and animal behaviour are assessed in consideration with prevailing weather conditions.</p> <p>2.5. Strategies are identified for increasing or decreasing stock density, provision of access to shade, pen drainage or cleaning and ration modification.</p>
3. Assess manure condition	<p>3.1. Manure consistency and colour is assessed and potential production and health issues identified for different pens and classes of livestock.</p> <p>3.2. Strategies are identified for including increased roughage in ration, courser processing of grain and observation and treatment of sick animals if necessary.</p>
4. Check Pen Hygiene	<p>4.1. Feed bunks, aprons and water troughs are assessed for fouling and unhygienic build up waste.</p> <p>4.2. Strategies are identified for resolving animal production and health issues and worker Occupational Health and Safety (OHS) concerns, including cleaning of area to prevent odour and insect problems.</p>
5. Report and record incidents as required	<p>5.1. Reporting of incidents and potential problems to supervisor as per feedlot guidelines.</p> <p>5.2. Recording and monitoring effectiveness of strategy adopted.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify ration ingredients
- identify ration composition ranging from starter, grower and finisher
- identify grain contaminants
- identify, resolve and/or report water supply issues
- recognise, monitor and report the signs of heat load to work team and management
- relate livestock performance data to ration consistency

## REQUIRED SKILLS AND KNOWLEDGE

- interpret and apply task instructions
- communicate with work team, supervisor and management
- record and report faults, workplace hazards and accidents
- recognise abnormal and normal feeding behaviour
- recognise ration related symptoms
- arrange and co-ordinate equipment and resources
- provide due care and humanely handle animals
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- the relationship between livestock health and nutrition
- understanding of the enterprise heat load management plan
- livestock health and nutritional requirements
- enterprise recording and reporting procedures
- contaminants of rations that could reduce performance, such as seeds, moulds, nutrition levels and disease factors which can influence product quality
- evidence of spoilage and correct handling of spoilt rations
- animal behaviour and indicators of stress, and/or ill-health
- animal handling and restraint techniques
- OHS and animal welfare legislative and enterprise requirements
- relevant codes of practice with regard to environmental protection.
- documentation and recording procedures.

## Evidence Guide

# AHCLSK335A Conduct dropped ovary technique procedures for spaying cattle

## Modification History

Release	TP Version	Comment
1	AHC10v6	Initial release

## Unit Descriptor

This unit of competency describes the skills and knowledge necessary to plan, prepare and conduct Dropped Ovary Technique (DOT) procedure for controlling fertility in females in extensive beef herds where alternative options for the management of cull heifers and cows, other than spaying, have been evaluated but deemed unsuitable or not available.

The unit defines the standard required to confirm pre-operative evaluation outcomes, prepare appropriate sites, facilities and equipment in line with infection control and animal welfare standards, carry out DOT procedure and monitor animals' behaviour post-spaying for health and well-being.

## Application of the Unit

This unit is intended for cattle producers and contractors in the livestock industry who normally operate under limited supervision. It is essential that candidates who undertake this unit have at least one year's prior experience working with cattle; skills in either bovine pregnancy diagnosis and/or artificial insemination procedures are desirable.

In addition to complying with legal and ethical responsibilities, handlers are to work with animals gently and calmly. The spay technician is required to exhibit appropriate care for animals so that stress, discomfort and pain are minimised. At all times the spay technician must consider the welfare of the animal and act appropriately.

## Licensing/Regulatory Information

Candidates should confirm the regulatory requirements that apply in their relevant State or Territory before undertaking this unit. Regulations in some States and Territories restrict the conduct of the DOT procedure to registered veterinarians. There is a direct link between this unit of competency and approval for lay operators to perform the DOT procedure in some State/Territory jurisdictions.

## Pre-Requisites

Nil

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct pre-DOT evaluations	<p>1.1 Relevant State/Territory legislation, regulations, codes of practice and animal welfare standards and guidelines are identified and complied with</p> <p>1.2 <i>Alternatives to ovariectomy (spaying)</i> are discussed with cattle manager and carefully considered prior to undertaking DOT procedure</p> <p>1.3 <i>Pre-operative evaluation</i> of cattle submitted for ovary dropping is confirmed with cattle manager</p> <p>1.4 <i>Risks associated with DOT procedure</i> are identified and discussed with cattle manager</p>
2. Prepare for DOT operations	<p>2.1 <i>Weather conditions</i> are monitored to determine optimal conditions for operation</p> <p>2.2 Time of day for operation is selected to minimise animal stress</p> <p>2.3 Adequate numbers of skilled workers are engaged</p> <p>2.4 Appropriate holding yards, forcing yards, race and settling yards are selected</p> <p>2.5 Low-stress stock mustering, movement and handling procedures are followed</p> <p>2.6 Cattle are allowed to settle and cool after yarding</p>
3. Select, maintain and use appropriate equipment	<p>3.1 All <i>equipment</i> is well-maintained and in a clean and hygienic condition to reduce the risk of infection and cross-infection</p> <p>3.2 <i>Cattle crush</i> used for procedure is maintained in good working</p>

ELEMENT	PERFORMANCE CRITERIA
4. Conduct DOT procedures	<p>order and operated to ensure minimal risk to the operator and animal, especially when loading and unloading</p> <p>3.3 Wash-down, soaking and disinfecting containers are prepared and positioned ready for use</p> <p>3.4 Disinfectant solution is prepared in accordance with the label and Material Safety Data Sheet (MSDS) directions</p> <p>3.5 Ovariometer is sharpened regularly and disinfected before use and between each procedure</p> <p>3.6 All equipment is cleaned and disinfected at the end of operations and stored appropriately to minimise contamination</p> <p>4.1 All procedures are conducted in accordance with <i>animal welfare considerations</i> and <i>workplace health and safety</i> standards</p> <p>4.2 A <i>high standard of hygiene</i> is maintained throughout the procedures in relation to facilities, hands, handling and equipment</p> <p>4.3 Cattle are handled quietly in the holding yards, forcing yards and race so that they are relatively calm when they reach the crush</p> <p>4.4 <i>Common DOT procedural impediments</i> are identified and remedial actions planned</p> <p>4.5 Pain management is provided in accordance with legislative requirements</p> <p>4.6 <i>DOT procedures are performed in accordance</i> with industry best practice standards and processing rates</p> <p>4.7 Upon completion of procedures, <i>identification earmarks or ear tags</i> are applied to cattle in accordance with relevant State/Territory legislative requirements</p> <p>4.8 Ovariectomised animals are released and allowed to settle on to feed and water in the settling yards for several hours, before moving quietly to pasture</p>
5. Follow post-spay management procedures	<p>5.1 Spayed cattle are put onto good quality and quantity feed and water without having to travel long distances in between</p> <p>5.2 Cattle manager is advised on the <i>post-spay management requirements</i> to assist with rapid convalescence</p> <p>5.3 Required <i>documentation and records</i> are maintained and updated</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit

---

**Required skills include:**

---

**Ability to:**

- apply effective cattle identification techniques
- apply effective ovarian palpation techniques
- apply a high degree of skill in transrectal ovarian manipulation
- apply interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities
- clean, disinfect and maintain equipment to ensure efficient and safe working standards
- communicate effectively with others, including questioning, active listening, asking for clarification and consulting with or seeking advice as required
- comply with animal welfare legislation, animal welfare standards and guidelines, State and Territory veterinary surgeons' or practitioners' legislation and regulations and relevant codes of conduct
- employ safe, humane and environmentally responsible systems and procedures when working with and handling livestock
- follow sequenced written instructions
- record information collected accurately and legibly
- maintain the highest standards of hygiene and infection control at all times to reduce the risk of infection and cross-infection
- consider zoonotic and exotic disease possibilities (biosecurity)
- operate equipment effectively and with due consideration to the potential hazards associated with using equipment on cattle
- use numeracy skills to estimate, calculate and record routine workplace measures
- use safe manual handling techniques and equipment
- use safe, hygienic and environmentally friendly waste handling and disposal procedures
- work as a member of a team

---

**Required knowledge includes:**

---

**Knowledge of:**

- alternative options available to control fertility in cows
- Australian Animal Welfare Standards and Guidelines for Cattle (handling and management)
- basic reproductive anatomy of the cow and stages of pregnancy diagnosis
- body condition score (BCS) system for cattle
- basic cattle nutrition and husbandry
- cattle crush design and safety requirements
- disinfectant label and relevant Material Safety Data Sheet formats
- grazing industry biosecurity manual and related strategies
- guidelines for the proper selection and management of cattle for ovariectomy
- industry recognised best practice DOT procedure and processing rates
- relevant legislation, regulations and codes of practice, including those relating to WHS, animal welfare, veterinary practitioner/surgeons' Acts, stock diseases and waste disposal

- principles of animal welfare
- safe operating procedures for use of all equipment including veterinary crush, ovariome, earmarking and ear tagging pliers
- weather and other conditions and impacts on safe and effective DOT operations
- workplace hygiene standards including: disinfectants, cleaning agents and techniques, cleaning and appropriate disinfection of equipment and materials

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit. Assessors should ensure that candidates can:

- assess alternative strategies and confirm key indicators for the use of DOT procedures in consultation with cattle manager
- understand optimal conditions for carrying out DOT procedures
- conduct pre-operative evaluation of cattle submitted for ovary dropping and risk assessment in consultation with cattle manager
- prepare appropriate sites, facilities and equipment in line with infection control, workplace health and safety and animal welfare standards including pain management in accordance with legislative requirements
- follow low-stress stock mustering, movement and handling procedures
- carry out DOT procedures in accordance with industry recognised best practice DOT procedure and processing rates, impediment remedial actions and hygiene standards
- communicate post-spay management requirements to cattle manager
- accurately document and maintain appropriate records

The skills and knowledge required to conduct DOT procedure for spaying cattle must be transferable to a range of work environments and contexts and include the ability to deal with unplanned events.

Context of and specific resources for assessment

Assessment for this unit is to be practical in nature and will be most appropriately assessed in an on-farm workplace situation with access to appropriate female cattle, facilities and equipment to enable one to

	demonstrate competence.
Method of assessment	<p>To ensure consistency of performance, competency must be demonstrated to industry recognised standards, over a number of assessment activities, taking into account appropriate processing rates, procedural impediment remedial actions and hygiene standards.</p> <p>Assessment must take place over a period of time in order to cover a variety of circumstances, cases and responsibilities.</p> <p>The assessment strategies must include practical skills assessment. Suggested strategies for this unit are:</p> <ul style="list-style-type: none"> <li>• written and/or oral assessment of candidate's required knowledge</li> <li>• observed, documented and firsthand testimonial evidence of candidate's application of practical tasks</li> <li>• simulation exercises that reproduce normal work conditions</li> <li>• portfolio records that provide evidence of practical skills</li> </ul> <p>This unit may be assessed in a holistic way with other units of competency relevant to the industry sector, workplace and job role.</p>
Guidance information for assessment	Assessment methods should reflect workplace demands (e.g. literacy and numeracy demands) and the needs of particular target groups (e.g. people with disabilities, Aboriginal and Torres Strait Islander people, women, people with a language background other than English, youth and people from low socioeconomic backgrounds).

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Alternatives to ovariectomy (spaying)*** for management of heifers and cows may include:

- lot feeding
- alternative selling options
- breeder segregation
- heifer-safe paddocks
- bull removal
- pregnancy diagnosis of heifers by veterinarians or accredited testers, with on-selling of empty heifers
- use of prostaglandins for heifers that are less than 4 months gestation prior to transport to a feedlot/live export depot

<p><b><i>Pre-operative evaluation</i></b> of cattle submitted for ovary dropping should include:</p>	<ul style="list-style-type: none"> <li>• therapeutic pregnancy control when available</li> <li>• selection of cattle that are:             <ul style="list-style-type: none"> <li>• surplus wet cows and heifers</li> <li>• at least 4 weeks postpartum</li> <li>• preferably well handled</li> <li>• accustomed to being worked in yards and races</li> <li>• empty or early pregnant (less than 4 months gestation)</li> <li>• strong and present with a good BCS (greater than 2.5 out of 5)</li> <li>• generally at or above a 180kg live weight (lower limit)</li> <li>• not affected by heavy tick burdens</li> <li>• not scheduled for dehorning within 4 weeks before or after spaying</li> <li>• feed only curfewed for a minimum of 12 hours prior to the procedure but have continuous access to water</li> </ul> </li> <li>• identifying animals showing signs of disease, weakness or emaciation which should not be spayed by any technique</li> </ul>
<p><b><i>Risks associated with DOT procedures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• fractious animals and those with poor temperaments</li> <li>• animals with poor BCS</li> <li>• extreme environmental conditions, for example: heat, cold, rain</li> <li>• operator limitations for example: fatigue, hand size, lack of experience</li> <li>• anaemia due to heavy worm or tick burdens</li> <li>• pneumorectum (sucking air into the rectum)</li> <li>• lack of feed curfew</li> <li>• water curfew, dehydration</li> <li>• poor equipment, yards and other necessary infrastructure</li> <li>• inadequate spelling facilities</li> </ul> <p>Where such risks exist, it is recommended that the overall risks be assessed and risk mitigation put in place in the interests of animal welfare. In some cases the situation will be significant enough to be unmanageable and require deferral of the procedure.</p>
<p><b><i>Weather conditions</i></b></p>	<p>Weather conditions for operations should be a fine, mild day.</p> <p>Weather conditions to be avoided include:</p>

	<ul style="list-style-type: none"> <li>• excessively hot conditions which can increase bleeding and stress on cattle</li> <li>• cold weather conditions which place additional stress on cattle</li> <li>• wet or dusty conditions which increase the risk of contamination</li> </ul>
<p><b>Equipment</b> may include:</p>	<p>Essential equipment for performing DOT includes:</p> <ul style="list-style-type: none"> <li>• cattle crush and race</li> <li>• ovariotomes x 3 sizes (heifer, cow and large cow) plus spares</li> <li>• disinfectant and wash buckets preferably with a lid to reduce dust contamination</li> <li>• chlorhexidine or centrimide disinfectant</li> <li>• shoulder-length gloves</li> <li>• lubricant</li> <li>• overalls/aprons</li> <li>• safety boots and glasses</li> <li>• earmarking pliers</li> <li>• ear tagging pliers and tags</li> <li>• diamond sharpener</li> <li>• paper towelling</li> </ul> <p>Extra equipment may include:</p> <ul style="list-style-type: none"> <li>• table and chair</li> <li>• knives</li> <li>• waterbottle/pannikin</li> <li>• counter</li> <li>• electric prodder (use should be kept to a minimum)</li> <li>• hat/sunscreen</li> </ul>
<p><b>Cattle crush</b> must include:</p>	<ul style="list-style-type: none"> <li>• a rear kick gate featuring:             <ul style="list-style-type: none"> <li>• a recommended average height of 800mm</li> <li>• the gap between the bottom of the kick gate and the floor of the crush and the bottom of the side gate and the floor of the crush should be no more than 20 mms</li> <li>• side gates that are sheeted or closely railed up to 1 metre</li> </ul> </li> <li>• head bail</li> <li>• solid non-slip floor</li> <li>• squeeze</li> <li>• a wide area that is dust and mud free around the crush</li> <li>• effective protection for operators from cattle in same yard as crush</li> </ul>

<p><b><i>Animal welfare considerations</i></b> will include:</p>	<ul style="list-style-type: none"> <li>• complying with relevant legislation, regulations concerned with: <ul style="list-style-type: none"> <li>• animal welfare (eg. Australian Animal Welfare Standards for Cattle (handling and management))</li> <li>• the prevention of cruelty to animals</li> </ul> </li> <li>• adopting best practice recommendations as relevant in the Australian Animal Welfare Standards and Guidelines for Cattle (handling and management) and in industry documents such as: <ul style="list-style-type: none"> <li>• industry codes of practice</li> <li>• industry standards and protocols</li> </ul> </li> </ul>
<p><b><i>WHS standards</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• applying appropriate manual handling techniques when handling loads, including livestock and equipment</li> <li>• following safe operating procedures for: <ul style="list-style-type: none"> <li>• cleaning, disinfecting and sharpening instruments</li> <li>• following personal and workplace hygiene procedures</li> <li>• hazard identification and risk minimisation, including handling, use, storage, transport and disposal of chemicals and handling and disposal of biological wastes</li> <li>• livestock catching, handling, controlling and restraining methods</li> </ul> </li> <li>• using materials and equipment in accordance with manufacturers' instructions</li> <li>• using infection control procedures to minimise risks associated with: <ul style="list-style-type: none"> <li>• zoonotic diseases</li> <li>• release of infective agents (both animal and human)</li> <li>• chemical spillage</li> </ul> </li> <li>• using personal protective equipment (PPE) including: <ul style="list-style-type: none"> <li>• clothing of a protective nature</li> <li>• eye protection</li> <li>• gloves</li> <li>• items for sun and other protection</li> <li>• safety footwear and leg protection</li> <li>• surgical mask</li> </ul> </li> </ul>
<p><b><i>A high standard of hygiene</i></b> will require:</p>	<ul style="list-style-type: none"> <li>• equipment to be thoroughly cleaned and disinfected before initial use, between procedures and each time they are changed for cleaning and sharpening</li> </ul>

	<ul style="list-style-type: none"> <li>• disinfectant to be used in accordance with label instructions (MSDS)</li> <li>• appropriate reprocessing of reusable equipment</li> <li>• personal hygiene practices especially washing and drying hands (e.g. before and after animal contact)</li> <li>• safe handling and disposal of clinical, related and general waste</li> <li>• surface cleaning and management of blood and bodily fluid spills</li> <li>• techniques to limit contamination</li> <li>• use of personal protective equipment</li> </ul>
<b><i>Common DOT procedural impediments</i></b> may include, but are not limited to:	<ul style="list-style-type: none"> <li>• excessive animal movement</li> <li>• the head of the ovariator becoming caught in vaginal folds and deep vaginas</li> <li>• difficulty in penetrating the vaginal wall</li> <li>• the head of the ovariator becoming caught in broad ligament (membrane obstructions)</li> <li>• pneumorectum (wind sucking, ballooning of the rectum)</li> <li>• difficulty locating one ovary or both ovaries after the ovariator is in place</li> <li>• difficulty severing the ovary</li> <li>• small intestinal entanglement in the spay tool</li> </ul>
<b><i>DOT procedures</i></b> include:	<ul style="list-style-type: none"> <li>• administration of pain relief, where available</li> <li>• appropriate restraint of the cow, avoiding where possible the use of electro-immobilisation as a form of restraint for the procedure (only to be used when beneficial to the health and wellbeing of the animal and/or the operator)</li> <li>• a gloved hand being inserted in the rectum to manipulate the reproductive tract</li> <li>• the ovariator being introduced into the vagina and placed against the vaginal wall above the cervix</li> <li>• the vaginal wall being pierced with the spearhead end and the ovariator passed into the abdomen</li> <li>• each ovary then being manipulated per rectum and placed in the oval hole of the ovariator</li> <li>• each ovary then being cut off by a slow backward pull on the ovariator which draws the ovary into the cutting slot</li> </ul>
<b><i>Identification earmarks or ear tags</i></b> requirements include:	<ul style="list-style-type: none"> <li>• completed spay</li> <li>• incomplete spay</li> <li>• untoward event; should a mishap occur this needs to be identified that may require veterinary referral or</li> </ul>

<p><i>Post-spay management requirements</i> include:</p>	<p>humane euthanasia</p> <ul style="list-style-type: none"> <li>• monitoring spayed cattle for a minimum of three days after the procedure for indications of complications such as: pain, haemorrhage, rectal perforation, intestinal lacerations, sepsis</li> <li>• identifying situations requiring veterinary referral or humane euthanasia</li> <li>• providing appropriate treatment for complications which may include antibiotics, analgesia, supportive care or euthanasia</li> <li>• avoiding using paddocks with no shelter, little feed, or long distances to walk to water</li> <li>• moving spayed cattle gently and calmly and avoiding walking them long distances (more than 5km) to paddocks</li> <li>• familiarising cattle with a watering point</li> <li>• avoiding forced walks or trucking long distances for approximately 10 days after the procedure</li> <li>• organising/conducting post-mortems in deceased animals to determine the cause of death for continuous improvement of the technique</li> </ul>
<p><i>Documentation and records</i> may include:</p>	<ul style="list-style-type: none"> <li>• accurate animal counts</li> <li>• earmark and tagging system identifying spayed animal and operator</li> <li>• Material Safety Data Sheets (MSDSs)</li> </ul>

## Unit Sector(s)

Livestock

## AHCLSK401A Develop feeding plans for a production system

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers developing feeding plans for a production system and defines the standard required to: discuss feed and nutritional content with nutritionist and managers; develop rations for different classes of livestock based on production targets and cost and availability of feeds and additives; assess adequacy of feed storage and distribution systems; supervise feed milling and mixing and sample feeds for analysis; maintain a consistent feeding regime and check water is always available; monitor livestock for symptoms of digestive problems and review feeding plan if required.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to supervisors and unit managers who are responsible for nutrition and feeding in an intensive livestock production facility.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Select ingredients for feed	<p>1.1.Nutritional needs of livestock are identified from information available and class of livestock.</p> <p>1.2.Nutritional advice is sourced from the appropriate industry or organisational sources.</p> <p>1.3.Ingredients are selected that provide for the identified nutritional need of livestock.</p> <p>1.4.Suppliers of ingredients are selected on the basis of quality and cost of feed.</p> <p>1.5.Quantities of individual ingredients are determined from the production program, in conjunction with advice from other available information and expert/supplier advice.</p>
2. Determine feed rations and schedules	<p>2.1.Quantities of feeds required for livestock are determined from the production program, in conjunction with advice from other available information and expert advice.</p> <p>2.2.The results of any available laboratory testing are taken into consideration when determining the quantities of each ingredient to be used.</p> <p>2.3.Feeding is scheduled and responsibility for feeding allocated in line with the production program and other operations occurring within the shed.</p> <p>2.4.Method(s) of providing feed to livestock is identified from production plan and confirmed with supplier of</p>

ELEMENT	PERFORMANCE CRITERIA
	ingredients and other expert advice.
3. Supervise mixing and storage of feed	<p>3.1. Secure and hygienic storage of feed and ingredients is organised to eliminate contamination and infestation.</p> <p>3.2. Storage location is selected to ensure safe access.</p> <p>3.3. Rotation of feedstocks and replacements are organised to arrive at the appropriate time to ensure optimum freshness.</p> <p>3.4. Mixing of feed is organised to suit the needs of the livestock, the identified nutritional requirements and the equipment available within the organisation.</p> <p>3.5. Medications are added to feeds according to enterprise procedures if required</p> <p>3.6. Samples of feed are taken, packaged and labelled, and forwarded to the laboratory for testing according to the schedules described in the production program.</p> <p>3.7. Calibration of measuring equipment and calculation of quantities is checked at regular intervals.</p> <p>3.8. Occupational Health and Safety (OHS) hazards are identified, risks assessed, and risk controls are implemented, monitored and reviewed for feed preparation and feeding operations.</p>
4. Supervise feeding	<p>4.1. Rations are supplied to the livestock according to the production program and schedules devised.</p> <p>4.2. Potable water is available continuously to the livestock.</p> <p>4.3. The health and wellbeing of the livestock is monitored and any reaction to a change in feed or schedules is noted and reported.</p> <p>4.4. Any change in production levels as a direct result of changes to feed types, ingredients or schedules is monitored and reported.</p> <p>4.5. Advice is given to operational staff during the feeding operation when requested, or when the need is observed.</p> <p>4.6. All waste materials and substances are removed from the site and stored, or disposed of according to legislation and enterprise procedures.</p> <p>4.7. Documentation is collated and stored according to the requirements of the organisation.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- discuss feed and nutritional content with nutritionist and managers
- identify a range of raw ingredients
- interpret laboratory result data
- operate a range of feeding equipment
- assess adequacy of feed storage and distribution systems
- perform basic trouble shooting of the feeding operation
- monitor animal intake and performance
- recognise and rectify minor operational faults
- read and interpret manufacturers specifications, work and maintenance plans, and Material Safety Data Sheets (MSDSs)
- interpret and apply task instructions, communicate with work team and supervisor, and record and report faults, workplace hazards and accidents
- measure and calculate volumes, consumption and storage requirements
- complete the required records of feed use and livestock performance
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- control of common diseases and preventative measures including the placement of medications in feed
- growth and development in livestock
- milling systems
- dietary needs and analysis of feed samples
- the organisations sampling requirements and techniques
- appropriate legislative requirements, manufacturers instructions and enterprise

**REQUIRED SKILLS AND KNOWLEDGE**

procedures/instructions

- silo operations and configuration, machinery and operating practices
- relevant State/Territory legislation, regulations and codes of practice with regard to workplace OHS, environment, animal welfare and the use and control of machinery and equipment
- cleaning and storage of machinery, equipment and materials
- enterprise recording and reporting procedures
- seasonal ingredient variations.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- discuss feed and nutritional content with nutritionist and managers
- develop rations for different classes of livestock based on production targets and cost and availability of feeds and additives
- assess adequacy of feed storage and distribution systems
- supervise feed milling and mixing and sample feeds for analysis
- maintain a consistent feeding regime and check water is always available
- monitor livestock for symptoms of digestive problems and review feeding plan if required.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources

<b>EVIDENCE GUIDE</b>	
	for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Livestock may include:	<ul style="list-style-type: none"> <li>intensively raised pigs, poultry or lot fed ruminants.</li> </ul>
Feeds that may be used in an intensive system may include:	<ul style="list-style-type: none"> <li>prepared and formulated proprietary rations</li> <li>whole grains</li> <li>roughages</li> <li>protein additives</li> <li>and/or vitamins and minerals.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine nutritional requirements for livestock	<p>1.1.Nutritional value of pasture and feedstuffs is determined.</p> <p>1.2.Livestock production status is identified and assessed according to enterprise requirements.</p> <p>1.3.Essential requirements for livestock nutrition are determined according to assessed livestock condition.</p>
2. Assess pasture feed	<p>2.1.Grazing management strategy is determined to ensure the sustainable stocking capacity of pasture.</p> <p>2.2.Pasture is monitored for quantity and quality to ensure continual and consistent supply of nutrients to livestock.</p> <p>2.3.Pasture intake is monitored and assessed according to identified nutritional requirements of livestock.</p>
3. Determine supplementary feeding program	<p>3.1. Economic basis to supplementary feeding is determined according to enterprise requirements.</p> <p>3.2.Types of supplementary feed are identified and determined for all classes of livestock.</p> <p>3.3.Supplementary feeding program is determined to fill the pasture shortfall for predicted pasture growth.</p>
4. Develop livestock feeding plan	<p>4.1.Feeding plan is developed and reviewed to ensure it remains responsive to changing conditions.</p> <p>4.2.Suitable feed conservation methods or fodder sources are identified and carried out in preparation for abnormal conditions.</p> <p>4.3.A system of feeding is selected that supplies the appropriate amount of feed to the herd/flock to meet</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>condition and growth needs, and that meets production requirements of the business.</p> <p>4.4.A feed budget is prepared according to the selected system of feeding.</p> <p>4.5.Data is documented for continual assessment and effective management planning.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research predicted seasonal pasture production for the area
- estimate the feed value of a standing pasture
- calculate the feed demand for different types of livestock and production phases
- match feed supply and demand
- assess feeding plan alternatives
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- nutrient and daily energy requirements of livestock
- water quality and livestock tolerances
- nutritive levels of different feedstuffs
- assessment procedures to ascertain livestock condition
- methods of assessing pastures quality and quantity
- pasture livestock carrying capacity
- relationship between lactation and body reserves, udder development and secretion

**REQUIRED SKILLS AND KNOWLEDGE**

of milk.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify the production system and intended market for the livestock
- match feed supply to livestock nutritional requirements
- assess the feed available to stock from pasture and their likely performance
- determine an effective and sustainable grazing management strategy
- identify pasture shortfalls and supplementary feeding alternatives
- determine suitable feed conservation methods or fodder sources
- document the feeding plan.

## AHCLSK403A Escort livestock during export

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers escorting livestock during export and defines the standard required to: handle, treat and feed livestock; identify signs of ill health and injury, or signs of abnormal or depressed appetite; handle and restrain livestock for observation and treatment as required; oversee the care of livestock in transit; communicate effectively with exporting agents and related agencies, as well as the Master/Captain, officers and seamen on board; complete export documentation including daily records of animal observations and conditions.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to animal attendants who escort livestock on sea voyages.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out administration requirements	<p>1.1.Details of the livestock to be exported are obtained from, and clarified with, the exporter or producer.</p> <p>1.2.Effective communication links are established between all parties to the consignment and any relevant organisations or agencies.</p> <p>1.3.Specific details of the vessel/plane are investigated and verified to attain efficiencies in loading and transit operations.</p> <p>1.4.Required certification, permit and invoicing arrangements are completed according to exporter requirements and relevant legislation.</p> <p>1.5.Nutritional and veterinary requirements are estimated and required quantities are ordered according to exporter directions, established industry standards and load specifications.</p>
2. Prepare for livestock to be loaded	<p>2.1.Details of the livestock to be exported are obtained from, and clarified with, the exporter or producer.</p> <p>2.2.Effective communication links are established between all parties to the consignment and any relevant organisations or agencies.</p> <p>2.3.Specific details of the vessel/plane are investigated and verified to attain efficiencies in loading and transit operations.</p> <p>2.4.Required certification, permit and invoicing arrangements are completed according to exporter requirements and relevant legislation.</p> <p>2.5.Nutritional and veterinary requirements are estimated and required quantities are ordered</p>

ELEMENT	PERFORMANCE CRITERIA
	according to exporter directions, established industry standards and load specifications.
3. Load and transport accompany livestock	<p>3.1. Workplace health and safety policies and procedures are observed and followed in line with regulatory and exporter requirements.</p> <p>3.2. Prepared livestock are loaded and secured safely and humanely according to animal welfare, Occupational Health and Safety (OHS), and exporter requirements.</p> <p>3.3. Loading densities and conditions are checked and verified in accordance with the loading plan, government regulations and exporter specifications.</p> <p>3.4. Water and feed provision to livestock is monitored and recorded, and any abnormalities or variance from feed budgets are reported to the appropriate party.</p> <p>3.5. Regular observation of all livestock is carried out to ensure timely and appropriate responses to changes in condition, feed and water intake, or incidence of disease.</p> <p>3.6. Injured or diseased livestock are humanely dealt with according to exporter policy, relevant health and environmental considerations, and in consideration of customer requirements.</p> <p>3.7. Reports are completed according to exporter and shipping company policy and in accurate observation of shipping conditions.</p>
4. Complete post-shipment procedure	<p>4.1. Unloading strategies including timing, health checks and documentation are established in consultation with the carriers Chief Officer or Master.</p> <p>4.2. Pen cleaning and other established pre-unloading procedures are completed prior to entering port.</p> <p>4.3. Animals are unloaded safely and humanely using appropriate equipment and facilities in line with manufacturer's specifications.</p> <p>4.4. Specific animal requirements at unloading are identified and supplies are obtained to meet consignment needs.</p> <p>4.5. End of voyage reports and required documentation are completed according to exporter requirements, shipping company policy, government legislation, and customer requirements.</p> <p>4.6. Post-transport checks are undertaken according to exporter and customer requirements, and shipping</p>

ELEMENT	PERFORMANCE CRITERIA
	company policy.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- quickly and accurately identify signs of ill health and injury, or signs of abnormal or depressed appetite
- competently handle and restrain livestock for observation and treatment as required
- effectively oversee the care of livestock in transit
- humanely handle, treat and feed livestock
- communicate effectively with exporting agents and related agencies, as well as the Master/Captain, officers and seamen on board
- complete livestock health and medication records clearly, accurately, and in line with established practice for such records
- accurately complete export documentation including daily records of animal observations and conditions
- maintain and store records, reports and log books
- select, fit and use personal and protective equipment
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- applicable geography and culture of the importing nation
- health and welfare of all classes of livestock - including pregnant livestock - in transit
- zoonoses applicable to the specific classes and species of livestock
- commonly occurring animal disease and parasitic infestation
- on-board procedures and responsibilities

**REQUIRED SKILLS AND KNOWLEDGE**

- quarantine and its implementation both for export and import purposes
- the application of a range of treatments under veterinary supervision
- methods of safe animal handling within the code of practice guidelines
- methods of euthanasing and disposing of livestock
- relevant legislation and regulations relating to waste management, animal health and welfare, and employment of staff and contractors
- invoice, receipt and document requirements at both ends of the transport operation.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- handle, treat and feed livestock
- identify signs of ill health and injury, or signs of abnormal or depressed appetite
- handle and restrain livestock for observation and treatment as required
- oversee the care of livestock in transit
- communicate effectively with exporting agents and related agencies, as well as the Master/Captain, officers and seamen on board
- complete export documentation including daily records of animal observations and conditions.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Export livestock may include:	<ul style="list-style-type: none"> <li>• cattle</li> <li>• horses</li> <li>• goats</li> <li>• sheep.</li> </ul>

# AHCLSK404A Implement and monitor animal welfare programs

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers implementing and monitoring animal welfare programs and defines the standard required to: provide information to the work group about animal welfare; facilitate the participation of workers in complying with animal welfare guidelines; implement and monitor enterprise programs for animal welfare; deal with animal welfare emergencies; maintain animal welfare records including staff training.
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	This unit applies to livestock production enterprise supervisors and managers with responsibility for animal production.
--------------------------------	--

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Provide information about animal welfare	<p>1.1.Relevant provisions of animal welfare legislation and codes of practice are accurately and clearly explained to the work group.</p> <p>1.2.Information on enterprise animal welfare policies, procedures and programs is provided in a readily accessible manner and is accurately and clearly explained to the work group.</p> <p>1.3.Information about identified animal welfare requirements is regularly provided and is accurately and clearly explained to the work group.</p>
2. Facilitate the participation of workers in animal welfare compliance	<p>2.1.Enterprise procedures for compliance on animal welfare issues are implemented and monitored.</p> <p>2.2.Procedures whereby workers report animal welfare hazards, risks and action taken to control risks, are clearly described to the work group.</p> <p>2.3.Issues raised on animal welfare are dealt with and resolved promptly or referred to the appropriate personnel for resolution in accordance with workplace procedures.</p>
3. Implement and monitor enterprise animal welfare procedures	<p>3.1.Existing and potential hazards to animal welfare which are identified are reported so that effective remedial measures are implemented.</p> <p>3.2.Work procedures to control animal welfare risks are implemented by the work group and regular monitoring occurs to ensure ongoing adherence and effectiveness of animal practices.</p> <p>3.3.Inadequacies in allocation of resources to ensure animal welfare are identified and reported to</p>

ELEMENT	PERFORMANCE CRITERIA
	management.
4. Implement workplace procedures for dealing with animal welfare emergencies	<p>4.1. Workplace procedures for dealing with animal welfare emergencies are implemented where necessary to ensure that prompt and effective control action is taken.</p> <p>4.2. Animal welfare emergencies are reported in accordance with established enterprise procedures.</p> <p>4.3. Measures to prevent recurrence and minimise risk of animal welfare emergencies are implemented.</p>
5. Implement and monitor enterprise procedures for providing animal welfare training	<p>5.1. Animal welfare induction and training needs are identified accurately.</p> <p>5.2. Arrangements are made for meeting identified animal welfare training needs in both on and off-the-job training programs in consultation with relevant parties.</p>
6. Implement and monitor enterprise procedures for maintaining animal welfare record	<p>6.1. Animal welfare records for work area are accurately and legibly completed in accordance with workplace and legislative requirements for record keeping.</p> <p>6.2. Aggregate information from animal welfare records is used to identify potential hazards to animal welfare and monitor compliance procedures within work area according to enterprise procedures and within scope of responsibilities.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- facilitate the participation of workers in animal welfare compliance
- implement and monitor enterprise animal welfare procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views

**REQUIRED SKILLS AND KNOWLEDGE**

- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- animal health and welfare requirements, practices and procedures.
- animal physiology.
- relevant animal welfare legislation and codes of practice.
- industry animal health requirements
- animal production processes
- enterprise policies, guidelines and standard operating procedures relating to animal welfare.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- provide information to the work group about animal welfare
- facilitate the participation of workers in complying with animal welfare guidelines
- implement and monitor enterprise programs for animal welfare
- deal with animal welfare emergencies
- maintain animal welfare records including staff training.

**Context of and specific resources for**

Competency requires the application of work practices

**EVIDENCE GUIDE**

<b>assessment</b>	under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
-------------------	--

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Animal welfare programs may include:

- those within the full range of livestock production enterprises.

**Unit Sector(s)**

<b>Unit sector</b>	Livestock

## AHCLSK405A Implement intensive production systems

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers implementing intensive production systems and defines the standard required to: determine measurable indicators, specifications and targets for the intensive enterprise; assess the resources required for unit operations; establish processes/strategies, procedure and controls to meet quality assurance requirements and production targets; implement quarantine procedures and monitor disease status of stock; operate effluent storage and disposal systems; monitor the production system for output, Quality Assurance (QA) compliance, costs and profitability.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the implementation and monitoring of intensive production systems.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for production operations	<p>1.1. Documents within the organisation that detail the requirements of the production program are identified and obtained.</p> <p>1.2. The resources required for the production operations are assessed and calculated from the product to be produced, the available timelines, the available resources, and the types of shed used.</p> <p>1.3. Measurable indicators, specifications and targets are determined, based on the production program and type of shed used.</p> <p>1.4. Discussions are held with operational personnel and immediate management to discuss the production program.</p> <p>1.5. Any approvals that are required for the operations are identified, sought and obtained.</p>
2. Intensively produce livestock products	<p>2.1. People, materials and equipment required for the operations are co-ordinated, scheduled and regularly communicated with, according to the prepared plan and to ensure smooth operation and progress.</p> <p>2.2. Occupational Health and Safety (OHS) hazards are identified, assessed, and responsible action taken throughout the production operations.</p> <p>2.3. The procedures and tools to be used, the personal protective equipment to used/worn, the kind of records that are to be taken, and any potential hazards that might be faced are clearly communicated to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>operational personnel, and confirmation of the clear communication is sought.</p> <p>2.4.Any documentation that is required to be kept by either the organisation or OHS guidelines is completed clearly and accurately.</p> <p>2.5.Advice is given to operational staff and any contractors during the production operations when requested, or when the need is observed.</p>
3. Manage environment for livestock	<p>3.1.Herd/flock and shed conditions are regularly observed for signs of ill health and changes recorded and reported.</p> <p>3.2.Dead livestock is examined for evidence of disease through correct post-mortem techniques in line with individual unit standard and veterinary advice.</p> <p>3.3.Disease status of unit stock is assessed and evaluated, and serviceman or veterinary assistance notified when required.</p> <p>3.4.Components of quarantine procedures are regularly checked for compliance.</p> <p>3.5.Aspects of the internal environment are monitored and adjusted in line with the production program.</p>
4. Manage waste and environmental matters	<p>4.1.Effluent storage and disposal systems are operated according to production program and manufacturers instructions.</p> <p>4.2.Volume and type of effluent is calculated, monitored and documented according to the requirements of the production program.</p> <p>4.3.All rubbish and used consumables are removed from production site according to the requirements of the production program.</p> <p>4.4.Environment maintenance program is ongoing through all seasons where this is required by the organisations management plan.</p> <p>4.5.The regulatory and legislative requirements outlined in the production program are monitored and reported on as necessary.</p>
5. Monitor and adjust production operation	<p>5.1.Monitoring points outlined in the production plan are adhered.</p> <p>5.2.Checks are made to ensure that the OHS requirements are being observed and followed.</p> <p>5.3.Checks are made to ensure that the site environmental requirements are being observed and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>followed.</p> <p>5.4.Operational staff and any contractors are communicated with regularly to ensure smooth operation and progress.</p> <p>5.5.Checks are made to ensure that the documentation required by the organisation or other regulating bodies, is completed clearly and accurately during the progress of the control operations.</p> <p>5.6.Where any corrective action or amendment is required, the action is initiated and taken.</p> <p>5.7.Documentation is collated and stored according to the requirements of the organisation.</p> <p>5.8.Recommendations for subsequent production programs are prepared, based on the conduct of the operation, the data collected, and the discussions had during the operation.</p> <p>5.9.Where it is required, a report on the production operations and throughput is made including the key aspects of the operation.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and monitor the safety of the operating environment
- perform routine hygiene maintenance activities
- observe, identify and react appropriately to environmental implications and OHS hazards
- establish processes/strategies, procedure and controls for livestock production
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• common livestock diseases and clinical signs</li> <li>• quarantine policies and herd/flock health status</li> <li>• relevant industry, environmental and quality standards (inc ISO9002:1094)</li> <li>• animal welfare codes of practice and procedures</li> <li>• differences between a range of production systems</li> <li>• types of sheds and production systems</li> <li>• livestock husbandry and management practices</li> <li>• environmental controls and codes of practice applicable to the enterprise</li> <li>• relevant legislation and regulations relating to waste and environment management, animal health and welfare, and employment of staff and contractors</li> <li>• relevant OHS legislation, regulations and codes of practice.</li> </ul>

## Evidence Guide

<p><b>EVIDENCE GUIDE</b></p>

## AHCLSK406A Oversee animal marking operations

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers overseeing animal marking operations and defines the standard required to: co-ordinate staff, equipment and resources; determine efficient animal grouping and sequencing of marking operations; prepare and implement a work plan for marking; monitor the health and well-being of animals after marking; maintain accurate data records.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to livestock producers.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare marking plan	<p>1.1. Information and instructions with regard to marking operations are obtained and clarified in line with enterprise objectives.</p> <p>1.2. The timing of marking reflects the calendar of operations and minimises growth checks.</p> <p>1.3. Animal groupings, marking operations and sequencing are determined.</p> <p>1.4. Resource requirements are assessed and determined within enterprise budgetary constraints.</p> <p>1.5. Marking plan is prepared and is sufficiently flexible to adapt to changes during marking operations.</p>
2. Co-ordinate and arrange resources	<p>2.1. Suitable locations for undertaking marking operations and facilities are located and arranged to meet requirements of marking schedules.</p> <p>2.2. Equipment, materials and health treatments are arranged and provided on site.</p> <p>2.3. Staff are confirmed and provided with safety, task and operational briefings.</p> <p>2.4. Safe and risk assessed workplace environment is maintained in line with Occupational Health and Safety (OHS) and enterprise requirements.</p> <p>2.5. Marking operations are timed and supervised to ensure mistreatment is minimised and animal welfare requirements are met.</p>
3. Monitor marking operation	<p>3.1. Implementation of marking plan is monitored for efficiency and effectiveness in terms of achieving enterprise objectives.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Condition and health status of animals is monitored and abnormalities are reported in line with enterprise and animal welfare requirements.</p> <p>3.3. Effective worksite communication is maintained to ensure efficient workflow and address immediate problems.</p> <p>3.4. Data with regard to operational processes and outcomes are documented for continual assessment and management planning.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and oversee the implementing of safe operating procedures
- plan, cost and schedule resource requirements
- develop and implement an operational strategy
- prioritise and schedule marking operations
- determine and allocate staff roles and responsibilities
- manage staff and operations
- establish and monitor performance targets
- implement safe and positive environmental workplace policies
- document and prepare written plans and reports for the understanding of staff and management
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- management processes and procedures
- cost analysis techniques

**REQUIRED SKILLS AND KNOWLEDGE**

- systems and procedures for planning and developing
- marketing and production plans
- codes of practice with regard to animal marking and animal health and welfare
- veterinary medicines and administration
- animal marking methods and procedures
- OHS and animal welfare legislation, codes of practice and enterprise requirements
- animal behaviour and nutritional requirements
- environmental codes of practice associated with animal production.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- co-ordinate staff, equipment and resources
- determine efficient animal grouping and sequencing of marking operations
- prepare and implement a work plan for marking
- monitor the health and well-being of animals after marking
- maintain accurate data records.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Livestock may include:	<ul style="list-style-type: none"> <li>• sheep</li> <li>• goats</li> <li>• pigs</li> <li>• alpacas</li> <li>• deer</li> <li>• beef cattle</li> <li>• dairy cattle.</li> </ul>
Marking may include:	<ul style="list-style-type: none"> <li>• castrating</li> <li>• tagging</li> <li>• tailing</li> <li>• pizzle dropping</li> <li>• notching</li> <li>• vaccinating</li> <li>• tattooing</li> <li>• micro-chipping</li> <li>• branding</li> <li>• dehorning</li> <li>• trimming eye teeth</li> <li>• identifying abnormalities or faults and marking animals for culling.</li> </ul>

## AHCLSK407A Plan and monitor intensive production systems

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers planning and monitoring intensive production systems and defines the standard required to: analyse key production data, herd/flock information and market requirements; set production targets and identify resources needed to achieve them; provide accommodation that meets animal welfare and production requirements; develop feeding plans and evaluate alternatives for feed purchasing, milling and distribution; determine work responsibilities and staffing requirements; remove waste and handle effluent in line with environmental requirements and legislation; and monitor and review intensive production operations.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes sourcing relevant information and planning for intensive production of livestock.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Source information for input to production system planning	<p>1.1.Livestock production plan is consulted for details of current period planning, organisation requirements and market expectations.</p> <p>1.2.Key production data is analysed to establish unit performance.</p> <p>1.3.Information regarding the characteristics of the herd/flock under production is accessed and analysed.</p> <p>1.4.Organisation and regulatory requirements that impact on the production system are accessed.</p> <p>1.5.Market information regarding quality, standards and trends is accessed for input to the planning process.</p>
2. Plan for production	<p>2.1.Target unit performance is determined through a comparison with organisation and industry standards.</p> <p>2.2.Production targets are established and confirmed using data and information from its livestock production.</p> <p>2.3.Resources required to achieve production targets are determined in terms of personnel, equipment and materials.</p> <p>2.4.Staff and contractors are organised and/or engaged to suit the production plan and its targets.</p> <p>2.5.Other resources are selected and ordered according to organisational guidelines.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Plan for animal welfare needs	<p>3.1. Accommodation requirements are calculated from livestock numbers, market requirements and regulations.</p> <p>3.2. Alternative construction and equipment system options are evaluated and optimal choice selected.</p> <p>3.3. Materials chosen for construction are selected according to animal welfare needs, cost and efficiency.</p> <p>3.4. Aspects of the internal environment are determined according to all welfare needs, efficiency of systems and market expectations.</p> <p>3.5. Feed requirements are selected based on its end use of the animals, the size of the herd/flock, and the suitability of the range of available products.</p>
4. Plan for environmental and waste management requirements	<p>4.1. Accommodation requirements are calculated from livestock numbers, market requirements and regulations.</p> <p>4.2. Alternative construction and equipment systems options are evaluated and optimal choice selected.</p> <p>4.3. Materials chosen for construction are selected according to animal welfare needs, cost and efficiency.</p> <p>4.4. Aspects of the internal environment are determined according to all welfare needs, efficiency of systems and market expectations.</p> <p>4.5. Feed requirements are selected based on its end use of the animals, the size of the herd/flock, and the suitability of the range of available products.</p>
5. Determine scheduling and key responsibilities	<p>5.1. Scheduling for the production plan is determined taking the range of seasonal, geographic and resourcing factors into consideration.</p> <p>5.2. Key responsibilities for specific implementation processes are determined.</p> <p>5.3. Record keeping requirements are determined and procedures are put in place to ensure compliance with the range of applicable regulations.</p> <p>5.4. The plan, including scheduling and key responsibilities, is clearly documented.</p> <p>5.5. The plan includes the type, format, frequency and detail of any reporting required by both managers and operators.</p>
6. Monitor and adjust	6.1. The effectiveness of the production plan is evaluated

ELEMENT	PERFORMANCE CRITERIA
production plan strategies	<p>at key points and adjustments made as necessary.</p> <p>6.2.Environmental impacts and Occupational Health and Safety (OHS) hazards relating to the production plan are identified, monitored and assessed throughout the implementation process.</p> <p>6.3.Modifications are made to the plan as and when necessary for environmental, OHS, resourcing or effectiveness reasons.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- observe, identify and react appropriately to environmental implications and OHS hazards
- work planning
- assess, then adopt profitable innovations
- implement procedures to meet OHS and animal welfare requirements
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- sustainable effluent management practices
- environmental, welfare and OHS legislation, codes of practice and enterprise requirements
- livestock husbandry and management practices
- sound management practices and processes to minimise noise, odours and debris from the livestock operations

**REQUIRED SKILLS AND KNOWLEDGE**

- disposal of waste and manure in compliance with legislation.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- analyse key production data, herd/flock information and market requirements
- set production targets and identify resources needed to achieve them
- provide accommodation that meets animal welfare and production requirements
- develop feeding plans and evaluate alternatives for feed purchasing, milling and distribution
- determine work responsibilities and staffing requirements
- remove waste and handle effluent in line with environmental requirements and legislation
- monitor and review intensive production operations.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## AHCLSK408A Pregnancy test animals

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers pregnancy testing animals and defines the standard required to: draft animals and source information on joining to assist in pregnancy testing; restrain each animal for pregnancy testing using humane methods and facilities; detect pregnancy through several manually determined key indicators; maintain records of pregnancy testing; monitor animals after pregnancy testing.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes testing animals for pregnancy. Veterinary advice may need to be sought in some cases where pregnancy symptoms are difficult to detect, or animals are to be identified as pregnant for sale.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for pregnancy diagnosis procedures	<p>1.1.Pregnancy testing preparations including the preparation of relevant documentation are completed according to organisation requirements and procedures.</p> <p>1.2.Animals are mustered, yarded and safely restrained in line with organisation policy.</p> <p>1.3.Animals to be tested are drafted according to breeding or management program requirements.</p> <p>1.4.Physical and human resources for pregnancy testing are assembled according to organisation policy.</p>
2. Arrange support for pregnancy testing procedures	<p>2.1.Pregnancy testing supplies and equipment are assembled for the pregnancy testers use.</p> <p>2.2.Individual animals are separated and restrained for veterinary treatment or examination.</p> <p>2.3.All handling and testing of animals is undertaken with strict adherence to the Code of Animal Welfare.</p> <p>2.4.Records of pregnancy testing operations are completed in line with established procedures and outcomes reported to management as required.</p>
3. Carry out manual pregnancy diagnosis procedures	<p>3.1.Individual animals are humanely restrained for testing and individual breeding records checked.</p> <p>3.2.Personal protective equipment, including appropriate hand protection, is fitted and used according to organisation policy.</p> <p>3.3.While working with animals, Occupational Health and Safety (OHS) hazards are continually identified, risks assessed and suitable controls implemented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4.Rectal area of animal is cleaned as required prior to examination.</p> <p>3.5.Rectal examination/palpation is humanely carried out to establish pregnancy or non-pregnancy from a range of key indicators.</p> <p>3.6.Strict hygiene procedures are implemented between individual animals in line with organisation and industry requirements.</p> <p>3.7.Records are kept and non pregnant animals identified according to organisation requirements.</p> <p>3.8.Other indicators of animal health are observed and noted for input to herd health management.</p>
4. Carry out post pregnancy testing clean up procedure	<p>4.1.Animals diagnosed as pregnant or not pregnant are accurately identified according to the requirements of the organisation.</p> <p>4.2.All animals are consigned to their destination or returned to paddocks/pens in line with organisation needs.</p> <p>4.3.Debris and veterinary medicine containers from pregnancy testing operations are disposed of in full consideration of environmental considerations and controls.</p> <p>4.4.Regular monitoring of animals post testing is carried out to ensure that no evidence of physical damage or injury is evident.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- provide empathic care for animals during husbandry operations
- report clearly, accurately and in a timely fashion on the health and welfare of the animals
- accept advice and instruction
- work effectively and safely to accurately carry out manual pregnancy diagnosis

## REQUIRED SKILLS AND KNOWLEDGE

with safety and nil damage to animals or personnel

- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- the physiology of reproduction of the animal
- the stages of parturition in animals
- basic animal reproductive physiology
- animal reproductive systems
- animal embryological development
- relevant zoonoses
- OHS and animal welfare legislation, codes of practice and enterprise procedures
- recording and reporting systems used in conjunction with pregnancy diagnosis and animal breeding programs.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- draft animals and source information on joining to

<b>EVIDENCE GUIDE</b>	
	assist in pregnancy testing <ul style="list-style-type: none"> <li>• restrain each animal for pregnancy testing using humane methods and facilities</li> <li>• detect pregnancy through several manually determined key indicators</li> <li>• maintain records of pregnancy testing</li> <li>• monitor animals after pregnancy testing.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Pregnancy testing may include:	<ul style="list-style-type: none"> <li>• the manual pregnancy testing of cattle and horses. This standard does not cover pregnancy scanning.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor and assess animal health	<p>1.1.Regular observations are taken to assess animals' health according to the requirements of the organisation.</p> <p>1.2.Symptoms of ill health and common diseases or parasite infestations are recognised and reported.</p> <p>1.3.Sampling is carried out and testing arranged for internal parasites or diseases.</p> <p>1.4.Unusual or suspected exotic disease outbreaks are referred for veterinary advice immediately.</p> <p>1.5.Notifiable diseases are reported and all restrictions and treatment requirements are complied with.</p> <p>1.6.Animal health status is recorded according to enterprise requirements.</p> <p>1.7.Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.8.Suitable personal protective equipment (PPE) is selected, used and maintained.</p> <p>1.9.Animal welfare status is recorded according to enterprise and legislative requirements.</p> <p>1.10. Deceased animals are disposed of according to organisational and environmental policies.</p>
2. Implement preventative health strategies	<p>2.1.Risks to animal health are identified, and strategies sourced, from the production plan.</p> <p>2.2.A vaccination program is developed and implemented to control clostridial and other diseases.</p> <p>2.3.Livestock prone to internal parasite build up are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>identified and the timing of treatments is planned out.</p> <p>2.4.Strategies based around pasture spelling and rotations of different classes of livestock are implemented.</p> <p>2.5.The health treatments for animals are planned using an integrated approach.</p> <p>2.6.Drenches, vaccines and other stock medications are used according to manufacturer instructions and withholding periods are complied with.</p> <p>2.7.Drench groups are rotated to minimise the risk of parasite resistance.</p>
3. Record and review the animal health program	<p>3.1.All treatments are recorded and an inventory is maintained of stock medicines.</p> <p>3.2.Health issues are recorded and the results of tissue, organ and/or blood samples are recorded if applicable.</p> <p>3.3.Records of health tests and animal health treatments, including animal production records, are used to review the animal health plan.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and oversee safe work practices
- detect possibility of disease through parameters such as behaviour or length of time required to eat food
- recognise clinical symptoms (normal vs. abnormal)
- recognise abnormal physiological and behavioural signs in livestock
- undertake post-mortems and collect tissue, organ and blood samples
- administer vaccines and medications to animals
- recognise abnormal behavioural signs
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks

## REQUIRED SKILLS AND KNOWLEDGE

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- storage conditions for a range of chemicals, including veterinary chemicals
- types of vaccines and how they work
- zoonotic diseases and mode of transmission
- animal anatomy and physiology for post-mortems, and the collection of tissue, organ and blood samples
- environmental controls and codes of practice applicable to the organisation, including biosecurity
- sound management practices and processes to minimise noise, odours, and debris from the livestock operations
- relevant legislation and regulations relating to waste and environment management, animal diseases and animal welfare
- relevant OHS legislation, regulations and codes of practice.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- determine animals health issues
- prepare and implement a work plan for animal health

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• coordinate staff, equipment and resources to supervise animal health programs</li> <li>• monitor the health and wellbeing of animals</li> <li>• maintain accurate data records.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Animal health programs may include:	<ul style="list-style-type: none"> <li>• those for sheep</li> <li>• goats</li> <li>• pigs</li> <li>• horses</li> <li>• alpacas</li> <li>• deer</li> <li>• poultry</li> <li>• beef and dairy cattle.</li> </ul>

## AHCLSK410A Supervise feedlot operations

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers supervising feedlot operations and defines the standard required to: discuss feed and feeding regime with nutritionist and managers; select, purchase and induct livestock for feedlotting; administer preventative health treatments and monitor health and welfare; assess livestock performance on weight gains and meeting carcass criteria; diagnose feeding problems and remove animals for treatment; review procedures in response to feedback from slaughter point and customers; complete the required records of feed use and livestock performance.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to feedlot supervisors whose job role includes recommending the suitability of livestock for feedlotting and subsequently preparing rations and monitoring the performance of feedlot livestock.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Select feedlot livestock	<p>1.1. Organisational plans and management are consulted regarding the breeds, classes and numbers of livestock to be obtained for feedlotting.</p> <p>1.2. Livestock for feedlotting are selected and purchased according to management requirements and organisational practice.</p> <p>1.3. Purchased livestock are inspected on delivery to the organisation for health, form, and quality.</p> <p>1.4. All records required by the organisation and regulations to be kept are prepared and maintained accurately, and stored appropriately.</p>
2. Oversee the preparation of rations for feedlot livestock	<p>2.1. Nutritional need of livestock is identified from information available and class of livestock.</p> <p>2.2. Expert nutritional advice is sourced from the appropriate government, industry or organisational sources.</p> <p>2.3. Ingredients are selected that provide for the identified nutritional need of livestock.</p> <p>2.4. Suppliers of ingredients are selected on the basis of quality and cost of feed.</p> <p>2.5. Quantities of individual ingredients are determined from the production program in conjunction with advice from other available information and expert/supplier advice.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.6. Feeding is scheduled and responsibility for feeding allocated in line with the production program and other operations occurring within the shed.</p> <p>2.7. Method(s) of providing feed to livestock is identified from production plan and confirmed with supplier of ingredients and other expert advice.</p>
3. Supervise feeding of feedlot livestock	<p>3.1. Mixing of feed is organised to suit the needs of the livestock, the identified nutritional requirements, and the equipment available within the organisation.</p> <p>3.2. Calibration of measuring equipment and calculation of quantities is supervised at regular intervals.</p> <p>3.3. Checks are made to ensure that suitable personal protective equipment is selected, used and maintained.</p> <p>3.4. Occupational Health and Safety (OHS) hazards are identified, assessed, and responsible action is taken throughout the preparation and feeding operations.</p> <p>3.5. Rations are supplied to the livestock according to the production program and schedules devised.</p>
4. Monitor performance of feedlot livestock	<p>4.1. The health and wellbeing of the livestock is monitored and any reaction to a change in feed or schedules is noted and reported upon.</p> <p>4.2. Any change in production levels as a direct result of changes to feed types, ingredients or schedules is monitored and reported upon.</p> <p>4.3. Advice is given to operational staff during the feeding operation when requested, or when the need is observed.</p> <p>4.4. All waste materials and substances are removed from the site and stored, or disposed of according to legislative and enterprise requirements.</p> <p>4.5. Animals are dispatched for slaughter with required identification and documentation.</p> <p>4.6. Feedback is gathered and analysed from slaughter point and downstream customers.</p> <p>4.7. Documentation is collated and stored according to the requirements of the organisation.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and oversee safe work practices
- discuss feed and nutritional content with nutritionist and managers
- identify a range of raw ingredients for feed mixes
- assess the suitability of livestock for feeding to meet a market specification
- assess ration performance used on weight gains, feed times, and make adjustments to ensure required performance parameters are maintained
- diagnose feed toxicities
- assess live animals for carcass characteristics and suitability for markets
- apply feed rates to nutritional profiles
- perform basic troubleshooting for animal health and welfare
- supervise staff
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- control of common diseases and preventative measures including the placement of medication in feed
- rationale for a range of feeding techniques and methods
- dietary and nutritional requirements of different livestock classes
- growth and development in livestock
- physiology of digestion and relationship to feed inputs
- appropriate legislative requirements, manufacturers instructions and enterprise procedures/instructions
- organisational and industry guidelines for the preparation of feed and mixes
- relevant State/Territory legislation, regulations and codes of practice with regard to workplace OHS, the environment and the use and control of machinery and equipment
- cleaning and storage of machinery, equipment and materials

**REQUIRED SKILLS AND KNOWLEDGE**

- seasonal ingredient variations
- factors adversely affecting meat quality.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- discuss feed and feeding regime with nutritionist and managers
- select, purchase and induct livestock for feedlotting
- administer preventative health treatments and monitor health and welfare
- assess livestock performance on weight gains and meeting carcass criteria
- diagnose feeding problems and remove animals for treatment
- review procedures in response to feedback from slaughter point and customers
- complete the required records of feed use and livestock performance.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Supervisory activities may include:	<ul style="list-style-type: none"> <li>those associated with all types and sizes of cattle, sheep and goat feedlots.</li> </ul>

## AHCLSK411A Supervise natural mating of livestock

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers supervising natural mating of livestock and defines the standard required to: select appropriate joining areas; carry out physical examination of sires and females for health and breeding soundness; draft livestock into appropriate ratios to encourage optimum mating; monitor mating activity and returns to oestrus; identify and implement remedial action as required; record details of mating.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to livestock producers.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare animals for breeding	<p>1.1. Joining areas are identified and prepared using a range of selection factors.</p> <p>1.2. Animals are handled safely and humanely to minimise stress and discomfort.</p> <p>1.3. Animals are drafted according to mating plan and in appropriate ratios to encourage optimum mating.</p> <p>1.4. Siring requirements are determined and met in advance of mating.</p> <p>1.5. Animals are prepared and examined for mating.</p>
2. Implement breeding program and monitor mating	<p>2.1. Veterinary advice is accessed according to animals' needs, enterprise requirements and industry practice.</p> <p>2.2. Dates and timing of breeding are identified and scheduled</p> <p>2.3. Physical examination of animals is carried out to evaluate health and welfare status of animal.</p> <p>2.4. Behaviour of animals during joining is observed to identify necessity of intervention and assistance.</p> <p>2.5. Assistance is provided as required.</p>
3. Complete breeding program	<p>3.1. Where required, sires are removed from herd, mob or flock.</p> <p>3.2. Mating activity is monitored to ensure successful joinings have occurred, to identify problems and to effect remedial action as required.</p> <p>3.3. Pregnancy testing is carried out to determine the effectiveness of joining</p> <p>3.4. Data is recorded and documented to develop history of mating performance and outcomes.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. Industry information of emerging and prevailing practices are researched and compared with enterprise practice to recommend future improvements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and oversee safe systems of work
- prepare animals for joining
- monitor joining activity
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- mating behaviour
- anatomy and physiology of the reproductive organs and reproductive process in animals
- live weights and conditions for mating
- environmental influences and their effects on joining
- ovulation stimulation and synchronisation
- enterprise's breeding programs and selection criteria (EBV)
- breeding principles
- pregnancy testing
- animal health and abnormalities
- enterprise and industry identification system for animals
- relevant State/Territory legislation, regulations and Codes of Practice with regard

**REQUIRED SKILLS AND KNOWLEDGE**

- to workplace Occupational Health and Safety (OHS) and animal welfare
- legislative and regulatory controls with regard to breeding programs
  - enterprise and industry policies with regard to recording and reporting requirements
  - identification of veterinary and non-veterinary procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select appropriate joining areas
- carry out physical examination of sires and females for health and breeding soundness
- draft livestock into appropriate ratios to encourage optimum mating
- monitor mating activity and returns to oestrus
- identify and implement remedial action as required
- record details of mating.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify purchasing opportunities	<p>1.1.Number, type and breed of livestock to be purchased are identified and confirmed.</p> <p>1.2.Agents and sellers of livestock are researched and reviewed to determine appropriate sources.</p> <p>1.3.Sales schedules for livestock types are monitored and identified.</p> <p>1.4.Purchasing prices are researched and evaluated to identify comparative values between sellers and agents.</p>
2. Inspect livestock condition	<p>2.1.Health status of livestock is checked using accepted methods.</p> <p>2.2.Records and documents relating to livestock histories are obtained and verified.</p> <p>2.3.Suitability of livestock for purchasing purposes is assessed.</p> <p>2.4.Prices are assessed against livestock condition and enterprise requirements to identify appropriate purchasing values.</p>
3. Complete documentation	<p>3.1.Insurance requirements for livestock are sourced and completed.</p> <p>3.2.Purchases are confirmed at realistic price levels according to estimated livestock values.</p> <p>3.3.Documentation details are accurate and exchanged promptly with seller.</p>
4. Organise transportation	<p>4.1.Carriers appropriate to livestock type and quantity are identified and engaged on suitable terms.</p> <p>4.2.Timing and dates of transportation and delivery are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>arranged with transporter, vendors and agents.</p> <p>4.3. Special needs of livestock are assessed and facilities prepared to ensure timely pick up.</p> <p>4.4. Animal health checks on arrival are undertaken according to enterprise and legislative requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- arrange livestock purchases
- research and determine best prices
- organise transport
- negotiate on price and terms
- assess livestock and condition
- arrange transport and insurance
- check on health status and condition of livestock
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- livestock assessment
- livestock selling procedures
- matching livestock to feed available
- livestock transportation
- animal health procedures
- livestock insurance

**REQUIRED SKILLS AND KNOWLEDGE**

- relevant legislative health and Occupational Health and Safety (OHS) requirements especially as they relate to livestock sales, livestock products, animal transportation for local and export markets, and safe livestock handling techniques
- enterprise and industry policies and codes of practice with regard to livestock sales, livestock transportation, and recording and reporting requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- monitor livestock price trends and budgeted returns
- identify selection criteria to meet enterprise requirements and set bid offer
- check the health status and records of the intended purchase
- arrange and prepare for correct and timely transport
- quarantine purchased livestock and isolate sick and distressed animals.

**Context of and specific resources for assessment**

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine requirements	<p>1.1. Requirements for livestock handling facilities are assessed and clarified according to enterprise objectives.</p> <p>1.2. Cost structures and timelines are negotiated and confirmed within enterprise budgetary constraints.</p> <p>1.3. Plans are obtained for livestock handling facilities from a variety of sources and are assessed in relation to enterprise requirements.</p>
2. Undertake a site analysis	<p>2.1. Location of new or existing site is inspected and physical elements and features of the site are recorded for assessment of suitability.</p> <p>2.2. Surveys to be undertaken are specified and tolerances determined according to enterprise requirements.</p> <p>2.3. Site preparation requirements are assessed and determined according to enterprise policies and site parameters.</p>
3. Prepare a design brief	<p>3.1. Plans are modified appropriate to the individual site and reflect enterprise objectives.</p> <p>3.2. Options to modify existing facilities or establish alternative handling operations are assessed and quotes obtained.</p> <p>3.3. Occupational Health and Safety (OHS) codes of practice and enterprise quality assurance requirements are identified and incorporated into the plan.</p> <p>3.4. Legal requirements and constraints on development</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>processes are identified.</p> <p>3.5.Design brief is prepared and consultation is undertaken to establish agreement on options and approaches for development.</p>
4. Develop a final plan	<p>4.1.Recommendations are prepared based on the analysis of data and enterprise instructions.</p> <p>4.2.Authorisations and approvals required for implementation of the plan are obtained.</p> <p>4.3.Detailed plan is produced with consideration for safety, environmental implications and meeting enterprise objectives.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- evaluate and recommend alternative options
- identify appropriate safe workplace procedures for livestock and personnel
- regularly access industry information databases to maintain currency with industry developments
- incorporate safety considerations in all aspects of design
- develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- livestock behaviour and design interactions
- enterprise operations
- costing alternatives

**REQUIRED SKILLS AND KNOWLEDGE**

- livestock handling and/or accommodation facilities and their uses
- site analysis and issues
- industry and legislative requirements for the planning and establishment of livestock handling facilities
- OHS issues and legislative requirements
- codes of practice with regard to environmental protection.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- assess the need for livestock handling facilities
- determine the site and design the handling facility for the site
- incorporate animal welfare requirements and movement principles into design
- identify appropriate safe workplace procedures for livestock and personnel
- estimate cost of building the designed facilities.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Confirm transport requirements	<p>1.1.Transport requirements are confirmed according to enterprise marketing and production plans.</p> <p>1.2.The amount and type of farm produce and/or number of livestock to be transported, the pick up or delivery requirements, and the route to be taken is confirmed according to enterprise instructions.</p> <p>1.3.Legislative requirements associated with the transport farm produce or livestock are identified and complied with.</p>
2. Prepare transport plan	<p>2.1.Equipment, vehicles and resources required to transport farm produce or livestock are determined and arranged according to enterprise requirements.</p> <p>2.2.Relevant authorisations, permits or animal identification requirements are identified, sought and obtained according to legislative requirements.</p> <p>2.3.Transport arrangements include pick up and delivery details, and any requirement to unload livestock to allow for spelling, are documented.</p> <p>2.4.Conditions to be maintained for produce, including separation for product integrity, are documented.</p> <p>2.5.Compensation or penalties for damage to produce or livestock is negotiated, or transport insurance is obtained.</p>
3. Source and select carrier	<p>3.1.Carriers are sourced to ascertain availability, terms and conditions in relation to transport and enterprise requirements.</p> <p>3.2.Carriers who satisfy the transport requirements are contacted to negotiate suitable costs, terms and</p>

ELEMENT	PERFORMANCE CRITERIA
	cartage conditions. 3.3. Carrier is selected and negotiations are confirmed with an agreement and insurance arrangements prepared accordingly.
4. Co-ordinate transport arrangement	4.1. Relevant documentation is complete, accurate and according to industry, legislative and enterprise requirements. 4.2. Operational staff and contractors are communicated with regularly to confirm arrangements are clear and understood. 4.3. Scheduling arrangements and preparation of farm produce or livestock in readiness for transportation are checked and confirmed with enterprise personnel.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- organise quotes and negotiate effective transport contracts
- co-ordinate transport operations
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- industry and legislative requirements for the transport of grain and livestock
- safety requirements for livestock and personnel
- animal welfare and Occupational Health and Safety (OHS) legislative requirements
- transportation availability and costing alternatives

**REQUIRED SKILLS AND KNOWLEDGE**

- environmental codes of practice and management practices, and processes to minimise noise, odours, and debris from transport operations.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- source and negotiate an appropriate transportation agreement
- obtain permits and clearances
- ensure the accurate and timely completion of relevant documentation.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Transport activities may include:

- the transport of a range of farm produce, fodder and livestock.

## AHCLSK415A Oversee alpaca farm activities

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers overseeing alpaca farm activities and defines the standard required to: complete appropriate forms and records; manage nomination of alpacas for sale, exhibition and competition; maintain operational and breeding records.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes overseeing activities on an alpaca farm, particularly maintaining the farms administrative affairs.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Maintain farm records	<p>1.1.Information required to successfully manage farm activities is identified and obtained.</p> <p>1.2.Record keeping and information management systems in place within farm are maintained and managed to ensure that sound records may be accessed at any time.</p> <p>1.3.Required pedigrees and histories are obtained from, or supplied to, relevant controlling body.</p> <p>1.4.Alpaca transfer and registration forms are completed and forwarded to relevant controlling body.</p>
2. Identify and nominate alpacas for sale, exhibition or competition	<p>2.1.Individual alpacas are considered for sale, exhibition or competition according to enterprise objectives and procedures.</p> <p>2.2.Appropriate entry forms are obtained, completed and submitted for specified activity and any required entry fees are paid.</p>
3. Oversee alpaca farm activities	<p>3.1.Risks associated with alpaca farm activities are identified. Site quarantine and other biosecurity protocols, including hygiene and cleanliness of work areas, are applied to all animals and activities as appropriate.</p> <p>3.2.Services to be provided for clients' animals are agreed with each client and documented.</p> <p>3.3.Plan is developed and agreed with each client for management of identified risks in relation to services provided.</p> <p>3.4.Alpacas arriving at the property are identified in line</p>

ELEMENT	PERFORMANCE CRITERIA
	with established farm protocols.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identifying hazards and implementing safe work procedures
- keeping alpaca farm records that comply with requirements of controlling body
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant legislation and regulations relating to Occupational Health and Safety (OHS), waste and environment management, animal health and welfare, and employment of staff and contractors
- relevant state and territory legislation, regulations and codes of practice with regard to workplace occupational health and safety, and the use and control of machinery and equipment
- requirements and procedures laid down by the breed society for recording and communicating farm records
- risk management procedures required when providing services to clients' animals.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• complete appropriate forms and records</li> <li>• manage nomination of alpacas for sale, exhibition and competition</li> <li>• maintain operational and breeding records.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Activities may include:	<ul style="list-style-type: none"> <li>• all operational and breeding activities, and the associated records, for alpaca production.</li> </ul>

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify breeding selection criteria	<p>1.1. Enterprise production records are referenced and enterprise production goals are reaffirmed in the breeding program.</p> <p>1.2. The heritabilities of the desired performance characteristics are sourced and the potential for genetic improvement is identified.</p> <p>1.3. Criteria for selection are determined and recorded in the production plan.</p>
2. Select animals for breeding	<p>2.1. Animals are accurately assessed against selection criteria.</p> <p>2.2. Culling and replacement practices are determined and organised to improve the performance of the enterprise breeding program.</p> <p>2.3. Selected livestock are checked and monitored to ensure condition and welfare status is maintained according to breeding program requirements.</p> <p>2.4. Tests are conducted using recognised industry methods and evaluated within appropriate breeding program parameters.</p>

## Required Skills and Knowledge

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <p>This section describes the skills and knowledge required for this unit.</p>
--

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- develop selection criteria for a breeding program
- select animals that have defects in conformation
- select animals that display characteristics associated with desirable genetic traits
- select animals according to a breeding program's selection criteria
- record performance information
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- principles of genetic selection for multi traits
- structural abnormalities and their potential impact on production
- correlated traits
- market requirements and related physical traits
- selection criteria to be applied
- strategies for animal selection - individual traits, measured performance, Estimated Breeding Value (EBVs), indexes
- environmental codes of practice with regard to livestock production.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and

The evidence required to demonstrate competency in this

## AHCLSK417A Manage horses for stock work

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers managing horses for stock work and defines the standard required to: organise the safe handling and riding of horses; develop operational procedures to manage health and nutritional requirements of horses; identify ill or injured horses and consult with veterinarians; match horse type and experience to rider and task; supervise the horse work of other property personnel such as the breaking in by contractors.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to livestock managers who use horses for stock work. Coordinating specialist services from veterinarians and farriers may be required.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Manage horse condition and health	<p>1.1.Organisation procedures for maintaining health are developed in consultation with other organisation staff, and using sound animal welfare guidelines.</p> <p>1.2.Soundness and working condition of organisation horses is assessed, reported and documented.</p> <p>1.3.Suitable personal protective equipment is selected, used and maintained.</p> <p>1.4.Unsound or unhealthy horses are identified, and reasons for their condition are established, if necessary, in consultation with available veterinary advice.</p>
2. Manage nutritional requirements of horses	<p>2.1.Daily and seasonal factors affecting the nutritional requirements of horses are determined for the organisation.</p> <p>2.2.Supplementary feeding programs are provided to organisation horses to ensure that their physical condition and health is optimised for stock work.</p> <p>2.3.Work programs for horses are related to, and balanced with, feeding program.</p> <p>2.4.Potential nutritional problems are anticipated and preventative or corrective action taken for supplementary feeding.</p>
3. Supervise horse work of other property personnel	<p>3.1.Horse selection matches rider ability and suitability for task.</p> <p>3.2.Planned horse activities are scheduled and details are communicated to appropriate staff.</p> <p>3.3.Horse work and breaking by contractors or staff is</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>co-ordinated, and supervision provided to ensure that horses and personnel work within their limitations.</p> <p>3.4. Inexperienced horses are provided with stock training by experienced riders.</p> <p>3.5. Occupational Health and Safety (OHS) hazards are identified, assessed, and planned activities provide for responsible actions by all people working with and around the horses.</p> <p>3.6. Operational staff and any contractors are communicated with regularly to ensure smooth operation and progress.</p> <p>3.7. Work outcomes and horse costs and treatments are monitored and recorded in the organisation record.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- handle and ride horses safely
- assess the suitability and soundness of horses and match to riders
- train inexperienced horses
- provide feed for horses suitable for their stage and workload
- monitor the health and welfare of stock horses
- co-ordinate operations with horse breakers, vets, farriers and farm staff
- observe, identify and react appropriately to environmental implications and OHS hazards
- meet animal welfare legislative and enterprise requirements
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental

**REQUIRED SKILLS AND KNOWLEDGE**

abilities.

**Required knowledge**

- care and maintenance of hooves and the lower limb
- relevant legislation and regulations relating to OHS, contractor engagement and animal welfare
- environmental controls and codes of practice applicable to the business and to the seeding operations
- sound management practices and processes to minimise noise, odours, and debris.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- organise the safe handling and riding of horses
- develop operational procedures to manage health and nutritional requirements of horses
- identify ill or injured horses and consult with veterinarians
- match horse type and experience to rider and task
- supervise the horse work of other property personnel such as the breaking in by contractors.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Types of horses may include:	<ul style="list-style-type: none"> <li>all types and breeds of horses that are used for stock work.</li> </ul>
Type of conditions that impact on the welfare of horses may include:	<ul style="list-style-type: none"> <li>Lameness, sore eyes, sore mouth, girth galls, back conditions, mud, caked sweat or vegetable matter, damaged feet or lower limbs, and localised or systemic infections.</li> </ul>
Factors that effect nutrition and feeding programs may include:	<ul style="list-style-type: none"> <li>paddock conditions</li> <li>the presence of native and introduced species of grasses and legumes</li> <li>feeding, mastication, teeth problems</li> <li>hierarchical structures in the mob</li> <li>the differing demands of age, sex, work, growth and pregnancy</li> <li>mineral requirements and availability of roughage</li> <li>grains, supplements and greenfeed.</li> </ul>

## AHCLSK501A Manage livestock production

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of planning for livestock production, and then managing the implementation of such a plan, and defines the standard required to: establish livestock production targets and plans; monitor and manage animal health and nutrition; implement grazing strategies that match livestock needs and optimise pasture growth; maintain the farm natural resource base through sustainable practice; plan and monitor the finances of the production unit; maintain records of production.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to farm managers with extensive or intensive livestock production enterprises.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan for production	<p>1.1.The capability of land resources for grazing is assessed and stock, fire, pasture or range management strategies are determined for each land capability class.</p> <p>1.2.The suitability and sustainability of water resources is assessed.</p> <p>1.3.Livestock production targets for each enterprise are established for the short and long term according to the farms marketing and business plans.</p> <p>1.4.Short and long term livestock production targets take breeding for herd/flock improvement into consideration, and are established in the light of the risk control factors that are applicable.</p> <p>1.5.Breeds and breeding programs are selected based on the production targets and the marketing requirements for the enterprise.</p> <p>1.6.Production facilities are selected and designed in a way that deals sensitively with identified waste products.</p> <p>1.7.Environmental controls are established and specifically included in the production plan.</p> <p>1.8.Occupational Health and Safety (OHS) hazards are identified, risks assessed, and suitable controls are incorporated into the production plan.</p> <p>1.9.A plan is prepared that documents the decisions taken, the assessments made, the targets established, and any specific issues that relate to environmental and OHS risks.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.10. The plan includes the type, format, frequency and detail of any reporting required by both manager(s) and operators.</p>
<p>2. Plan for livestock needs</p>	<p>2.1. Feed requirements are determined for each age/sex category of herds and/or flocks.</p> <p>2.2. A feeding plan is determined for each livestock category based on a cost benefit analysis.</p> <p>2.3. Health strategies are devised to prevent and control disease in each herd and/or flock on the basis of a cost benefit analysis.</p> <p>2.4. Schedules are prepared for purchasing and using the products and services that are used in livestock production.</p> <p>2.5. Livestock production, harvesting, handling and transportation methods are determined from a cost benefit analysis.</p> <p>2.6. A livestock production plan is prepared that incorporates the calendar of operations for each enterprise production cycle, and any specific animal welfare issues.</p> <p>2.7. The plan includes the type, format, frequency and detail of any reporting required by both manager(s) and operators.</p>
<p>3. Seek information on innovations for existing or potential enterprises and farm activities</p>	<p>3.1. Sources of information on innovations are identified and accessed.</p> <p>3.2. Information on innovations is assessed to determine whether or not such innovations could be used in the present enterprise, or in a potential enterprise.</p> <p>3.3. Prepared production plans are amended to include innovations that are deemed suitable for use in the enterprise.</p>
<p>4. Test and adopt relevant innovations</p>	<p>4.1. Any people who may be involved in implementing the innovation or in planning for it are consulted, and the change is discussed with them.</p> <p>4.2. Innovations are tested on the farm to determine whether or not they are suitable, and whether they may be readily adapted to suit the circumstances of the business.</p> <p>4.3. Any OHS hazards or environmental risks that present during the trial phase are identified, assessed, and responsible action is taken.</p> <p>4.4. A decision is made about whether or not to adopt the</p>

ELEMENT	PERFORMANCE CRITERIA
	innovation, based on its costs and benefits and any implementation issues, including environmental and OHS considerations.
5. Implement, monitor and evaluate livestock production plans	<p>5.1. Production plans are implemented and monitored according to the calendar of operations.</p> <p>5.2. Production facilities are sited, erected and/or installed in a way that deals sensitively with identified waste products.</p> <p>5.3. Livestock growth/maturity or production is evaluated according to the planned targets and the marketing requirements.</p> <p>5.4. Flock/herd health is monitored and parasite and disease outbreaks are controlled quickly and effectively.</p> <p>5.5. Feed supplies are assessed, pasture or range condition and species composition are monitored, and stocking rates are varied to maintain optimum pasture and livestock health.</p> <p>5.6. Environmental impacts and OHS hazards relating to livestock production in the business are identified, monitored and managed to promote optimum pasture, livestock, and employee health.</p> <p>5.7. Physical and financial records are analysed and extractions taken from them to assess production performance, and to provide information for taxation purposes.</p> <p>5.8. The production performance of each enterprise is evaluated to determine whether or not they are sustainable and profitable, and to use in reviewing and revising production plans.</p>
6. Comply with legal requirements and regulation	<p>6.1. Information about the legal requirements and regulations that affect farm land ownership/possession and livestock production is obtained.</p> <p>6.2. Record keeping requirements are determined, and procedures are put in place to ensure compliance with the range of applicable regulations including taxation legislation.</p> <p>6.3. Permits are obtained from the relevant authorities for the transport and movement of livestock and equipment.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- develop livestock production plans
- supervise or perform livestock husbandry operations
- monitor health and welfare of animals
- manage all resources for a grazing enterprise
- observe, identify and react appropriately to environmental implications and OHS hazards
- analyse and assess the whole cost and benefit of specific situations
- establish processes/strategies, procedures and controls for livestock production
- assess land capability
- comply with legal and taxation requirements
- assess, and then adopt profitable innovations
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- livestock nutrition
- health and welfare of animals.
- livestock breeding, where appropriate
- livestock husbandry and management practices
- land capability
- sustainable land use principles and practices applicable in the region
- environmental controls and codes of practice applicable to the enterprise
- whole farm planning
- budgeting and financing for an enterprise
- cost benefit analysis,
- sound management practices and processes to minimise noise, odours and debris from the livestock operations

**REQUIRED SKILLS AND KNOWLEDGE**

- relevant legislation and regulations relating to soil and water degradation issues, animal health and welfare, and chemical use
- OHS legislation codes of practice and enterprise requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- establish livestock production targets and plans
- monitor and manage animal health and nutrition
- implement grazing strategies that match livestock needs and optimise pasture growth
- maintain the farm natural resource base through sustainable practice
- plan and monitor the finances of the production unit
- maintain records of production.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Livestock may include:	<ul style="list-style-type: none"> <li>• beef cattle</li> <li>• dairy cattle</li> <li>• pigs</li> <li>• horses</li> <li>• alpacas</li> <li>• deer</li> <li>• goats</li> <li>• sheep.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine sales characteristics and demand	<p>1.1.Potential purchasers and their purchasing requirements are identified from available market information.</p> <p>1.2.Current and recent sales are observed to monitor market trends and patterns.</p> <p>1.3.Regulatory requirements for market entry are monitored and reviewed to ensure quality assurance and fitness for sale.</p> <p>1.4.Ability to deliver product to meet market demand and requirements is determined.</p>
2. Sell product and arrange transport	<p>2.1.Sale logistics are researched and incorporated into marketing strategy.</p> <p>2.2.Sale outlets are consulted about market prospects and informed of preferred sale method.</p> <p>2.3.Transport arrangements are completed in time for sale, and facilities and product are prepared and organised.</p> <p>2.4.Negotiations with agents, brokers and buyers are completed.</p> <p>2.5.Payments are arranged and processed.</p>
3. Assess sales performance	<p>3.1.Sales data is obtained and analysed to facilitate monitoring of performance against marketing plan and enterprise requirements.</p> <p>3.2.Strengths and weaknesses of performance are analysed.</p> <p>3.3.Sales strategies are reviewed to maximise future returns.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4.Data is recorded for future reference according to enterprise, industry and legislative requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify appropriate markets and sales opportunities
- ensure that the product meets legislative and industry requirements for fitness for sale
- select sales outlets
- arrange transport
- monitor sales trends and analyse and record sales data to help improve future profit margins
- prepare marketing plans
- implement marketing plan
- implement sales and transport logistics for livestock product
- monitor the effectiveness of the sales strategy
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- market specifications
- quality assurance procedures and techniques
- sales outlets and dates
- transport systems
- price risk and sales strategies
- sales analysis

**REQUIRED SKILLS AND KNOWLEDGE**

- livestock preparation requirements
- sale methods
- communication techniques
- relevant legislative health and Occupational Health and Safety (OHS) requirements especially as they relate to livestock products, live animals, animal transportation for local and export markets, and safe livestock handling techniques
- enterprise and industry policies and codes of practice with regard to livestock sales transportation and recording and reporting requirements
- awareness and knowledge of Minimum Residue Levels (MRLs) and the variance between countries
- withholding periods after treatment.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify appropriate markets and sales opportunities
- calculate cost of production and target sale price
- ensure that the product meets legislative and industry requirements for fitness for sale
- select selling method and negotiate with brokers, sellers and agents
- arrange transport/delivery.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess breeding requirements	<p>1.1. Breeding requirements are assessed and clarified according to enterprise objectives.</p> <p>1.2. Resources to support breeding requirements are identified and arranged.</p> <p>1.3. Breeding options are selected to optimise results and consistency according to enterprise objectives.</p> <p>1.4. Economic assessments are undertaken to establish the feasibility of the breeding objectives.</p> <p>1.5. Breeding program is formulated to meet enterprise objectives, and is sufficiently flexible to accommodate contingencies.</p>
2. Select livestock for breeding	<p>2.1. Selection criteria are determined for the visual and objective methods of selecting livestock based on heritabilities and economic returns of selection for traits.</p> <p>2.2. Culling and replacement practices are established to maintain the appropriate size and ratios of livestock.</p> <p>2.3. Rate of genetic gain is considered in determining herd or flock structure.</p> <p>2.4. Genetic material is sourced to optimise genetic gain within the herd or flock.</p> <p>2.5. Selected livestock are checked and monitored to ensure condition and welfare status meets breeding program requirements.</p> <p>2.6. Tests are conducted using recognised industry methods, and evaluated within appropriate breeding program parameters.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Monitor breeding program	3.1. Implementation of the breeding program is monitored for efficiency and effectiveness. 3.2. Changes necessary to achieve breeding aims are prioritised and implemented according to breeding program requirements. 3.3. Allocated resources are monitored and controlled within enterprise budgetary constraints. 3.4. Safe workplace and environmentally responsible practices are maintained according to OHS and enterprise requirements. 3.5. Relevant legislative requirements associated with livestock production are observed and complied with.
4. Evaluate breeding program	4.1. Breeding program processes and outcomes are reviewed and evaluated against enterprise objectives. 4.2. Performance of facilities, resources and equipment are evaluated for effectiveness and efficiency. 4.3. Effectiveness of selection criteria is evaluated for contribution to achievement of breeding aims and enterprise profitability. 4.4. Relevant information is documented for continual assessment to inform future practice.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- handle livestock safely and humanely
- supervise personnel
- plan and schedule resources
- interpret genetic reports and information
- develop selection criteria
- monitor genetic progress
- assess and review documentation and resource requirements
- maintain a safe and hazard-free workplace environment
- monitor and minimise impacts to the environment
- use literacy skills to fulfil job roles as required by the organisation. The level of

**REQUIRED SKILLS AND KNOWLEDGE**

skill may range from reading and understanding documentation to completion of written reports

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- basic genetic theories, including knowledge of genotype and phenotype, heritability of traits, dominant and recessive genes, generation interval and genetic correlation
- use of estimated breeding values and indexes in multi trait selection
- the application of basic genetic theory to the development of an enterprise's breeding strategy and its long term planning
- economic assessment of production characteristics
- testing procedures
- costs and benefits of alternative strategies.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- develop a breeding objective
- implement selection strategies for livestock
- use industry programs to benchmark and identify sources of genetic material

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• monitor progress in a breeding program.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Livestock may include:	<ul style="list-style-type: none"> <li>• sheep</li> <li>• beef cattle</li> <li>• dairy cattle</li> <li>• goats</li> <li>• alpacas</li> <li>• pigs.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine health strategy for livestock	<p>1.1.Livestock condition is monitored and risks to health and welfare are identified based on property history, type of livestock and external disease threats.</p> <p>1.2.A program of monitoring parasite and disease status is implemented.</p> <p>1.3.Preventative health strategies based on integrated controls and production requirements are documented in a livestock health plan.</p> <p>1.4.Treatments based on veterinary medicines are integrated with other parasite and disease control strategies, if applicable.</p> <p>1.5.Treatment program, procedures and operations are planned to meet livestock health requirements, legislative and enterprise requirements.</p> <p>1.6.Facilities and equipment required to implement health strategy are identified and arranged according to industry standards and enterprise requirements.</p> <p>1.7.Staff is briefed with details of treatment programs, schedules and Occupational Health and Safety (OHS) issues.</p>
2. Implement treatment program	<p>2.1.Diagnosis of livestock condition is made systematically with reference to all symptoms and signs according to veterinary guidelines.</p> <p>2.2.Complex problems or signs of disease are referred for specialist advice and treatment.</p> <p>2.3.Treatment is planned and administered according to veterinary guidelines, legislative requirements, and animal welfare codes of practice.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.4. Control measures are carried out as required to prevent the spread of communicable diseases.</p> <p>2.5. Procedures for reporting notifiable diseases are implemented according to legislative requirements.</p>
3. Manage livestock welfare	<p>3.1. Requirements of the animal welfare code of practice are integrated into the production plan and enterprise procedures.</p> <p>3.2. Livestock are continually monitored for access to feed and water and health status.</p> <p>3.3. Injured or sick animals are treated and monitored, or euthanased if required.</p> <p>3.4. Susceptible animals are provided with adequate shade and shelter.</p> <p>3.5. Welfare issues are documented and accurate records are maintained according to industry standards, legislative and enterprise requirements.</p>
4. Monitor health strategy	<p>4.1. Withholding periods for veterinary medicines are noted and complied with according to manufacturer's instructions and legislative requirements.</p> <p>4.2. Livestock are monitored post-treatment for evidence of treatment effectiveness and any further health problems.</p> <p>4.3. Treatment outcomes and processes are reviewed for effective management planning and best practice.</p> <p>4.4. Animal health procedures are evaluated in a review of the animal health plan.</p> <p>4.5. Travel and quarantine restrictions are identified and complied with.</p> <p>4.6. Surplus health supplies are stored according to manufacturer's recommendations and enterprise requirements.</p> <p>4.7. Data is documented and accurate records are maintained according to industry standards, legislative and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- plan and co-ordinate livestock health and welfare strategies
- develop a plan for health control and disease prevention
- diagnose health problems in livestock
- measure preventative health treatment dosage and calculate rates and schedule for treatment effectiveness
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- livestock health and abnormalities
- preventative health strategies
- principles of genetic resistance and immunity
- contingency and operational planning
- animal welfare codes of practice
- environmental protection codes of practice
- veterinary medicines and their use
- quarantine procedures
- vaccine types and their administration
- OHS legislative requirements.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify common livestock diseases</li> <li>• develop prevention and treatment strategies for diseases</li> <li>• handle and use veterinary medicines</li> <li>• maintain records of animal health treatment</li> <li>• implement a risk management approach to managing animal health.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## AHCLSK505A Develop production plans for livestock

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of developing production plans for livestock and defines the standard required to: assess potential livestock enterprises for their market potential and gross margin returns; define production objectives for the chosen livestock enterprise; incorporate livestock selection, health and grazing strategies into production planning; develop cash flow budgets and marketing strategies for the enterprise; prepare the production plan.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to managers of intensive or extensive livestock production systems.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine feasibility of livestock enterprise	<p>1.1. Farm environment parameters are assessed for their suitability for a range of livestock species.</p> <p>1.2. Potential livestock enterprises are assessed for their market potential and gross margin returns.</p> <p>1.3. Resource requirements are identified.</p> <p>1.4. Production risks and strategies to address them are identified.</p> <p>1.5. Livestock species and breeds are selected to suit the production system and the market.</p>
2. Identify and define determinants of livestock profitability	<p>2.1. Production objectives are defined.</p> <p>2.2. Strategies for herd/flock sourcing and improvement are established, and breeding program determined as appropriate.</p> <p>2.3. Feed requirements are determined for each age/sex/category of herds/flocks.</p> <p>2.4. Feeding strategy including grazing management, where appropriate, is determined and feeding programs are developed for each livestock category.</p> <p>2.5. Health management program is developed to manage/prevent disease in each herd/flock.</p> <p>2.6. Environmental controls are established as required.</p>
3. Establish livestock production targets and prepare production plan	<p>3.1. Performance indicators for the livestock enterprise are defined.</p> <p>3.2. Product quality specifications are developed and production targets set.</p> <p>3.3. Livestock cash flow budget is established.</p> <p>3.4. Production plan is prepared incorporating a calendar</p>

ELEMENT	PERFORMANCE CRITERIA
	of operations for the enterprise production cycle.
4. Review production plans to determine input and service requirement	4.1. Logistical arrangements related to harvesting/transportation/marketing and other key operations are planned for the production cycle. 4.2. Schedules are established for the purchase of inputs and services used in production. 4.3. Appropriate physical and financial record keeping system is established to provide data for the analysis of livestock production performance. 4.4. Production plan is reviewed.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- determine feasibility of livestock enterprise
- identify and define determinants of livestock profitability
- establish livestock production targets
- prepare production plans
- review production plans to determine input and service requirements
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- livestock husbandry, production and management practices
- livestock selection, health and grazing strategies
- financial analysis techniques
- livestock marketing

**REQUIRED SKILLS AND KNOWLEDGE**

- sustainable land use principles and practices applicable in the region
- environmental controls and codes of practice applicable to the enterprise
- whole farm planning processes
- relevant Occupational Health and Safety (OHS) legislation, regulations and codes of practice.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- assess potential livestock enterprises for their market potential and gross margin returns
- define production objectives for the chosen livestock enterprise
- incorporate livestock selection, health and grazing strategies into production planning
- develop cash flow budgets and marketing strategies for the enterprise
- prepare the production plan.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## AHCLSK506A Design livestock effluent systems

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of the design and planning of livestock effluent systems and defines the standard required to: meet the requirements of statutory, local government and environment authorities for effluent disposal; identify factors affecting the design of effluent systems; conduct a cost benefit analysis of a livestock effluent management system; design an effluent system that meets environmental standards and enterprise requirements and; evaluate the effectiveness of a range of livestock effluent management systems.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to intensive production unit managers or related specialists who design effluent disposal systems.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine the feasibility of an effluent management system	<p>1.1.Planning parameters that affect the design of effluent management system are identified.</p> <p>1.2.Statutory, local government and environment authority requirements for effluent disposal are identified.</p> <p>1.3.The environmental implications of livestock effluent disposal are identified.</p> <p>1.4.Effluent recycling options are evaluated in accordance with the whole farm plan.</p> <p>1.5.Processing options are analysed on the basis of their merits and suitability for the environment.</p> <p>1.6.Information is obtained from effluent management specialists on all relevant aspects of effluent management.</p> <p>1.7.An effluent management system is selected on the basis of a cost benefit analysis.</p>
2. Design an effluent management system	<p>2.1.The volume of livestock effluent is calculated according to established guidelines.</p> <p>2.2.The volume of water flowing into the effluent management system is calculated.</p> <p>2.3.Storage requirements are calculated.</p> <p>2.4.Professional assistance is obtained, appropriate to the complexity of the task and the financial risk involved.</p> <p>2.5.Plan and layout include provision of access, availability and the incorporation of technological innovations.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.6. Occupational Health and Safety (OHS) hazards are identified, risks assessed, safe systems established, and OHS risk assessment records maintained.</p> <p>2.7. The effluent management system design reflects the requirements of the business plan, production plan and the whole farm plan.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify all factors affecting the design of a livestock effluent system
- evaluate the effectiveness of a range of livestock effluent management systems
- research the latest innovations in livestock effluent management
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the role of differing components of a livestock effluent management system
- the options available and the relative advantages and disadvantages of differing effluent management systems
- different methods of managing large quantities and reducing the quantity of effluent water in effluent management
- financial considerations including the availability of low interest loans and incentives for expenditure on facilities to treat and retain livestock effluent
- relevant legislation and regulations relating to effluent management
- relevant OHS legislation, codes of practice and enterprise procedures.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Respond to customer complaints	<p>1.1.Complaints are processed in accordance with organisational policies and procedures established under legislation, regulations or codes of practice.</p> <p>1.2.Necessary reports relating to the complaints are obtained, documented and reviewed.</p> <p>1.3.Decisions are made, taking into account applicable law, company policies and codes.</p> <p>1.4.Resolution of the complaint is negotiated and agreed where possible.</p> <p>1.5.A register of complaints/disputes is maintained.</p> <p>1.6.Customer is informed of outcome of investigation.</p>
2. Refer complaints	<p>2.1.Complaints that require referral to other personnel or external bodies are identified.</p> <p>2.2.Referrals are made to appropriate personnel for follow up in accordance with individual level of responsibility.</p> <p>2.3.All documents and investigation reports are forwarded.</p> <p>2.4.Appropriate personnel are followed up to gain prompt decisions.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- the ability to apply organisational and/or industry procedures to a range of situations, and to exercise judgement in this application, along with an ability to facilitate other people to undertake appropriate customer service
- active listening
- using open and/or closed questions
- speaking clearly and concisely
- using appropriate language and tone of voice
- giving customers full attention
- maintaining eye-contact (for face-to-face interactions)
- non-verbal communication, e.g. body language, personal presentation (for face-to-face interactions)
- negotiation techniques
- clear, legible writing/language skills which allow for adequate communication with required people
- literacy skills to the level required to process complaints
- numeracy skills to the level required to interpret the customer complaints and take required actions.

#### Required knowledge

- State/Territory/Commonwealth legislation, regulations, industry codes of practice, standards and guidelines
- organisational policy and procedures for dealing with complaints
- the importance of customer complaints
- the importance of good communication
- the individual's role in processing customer complaints.

## Evidence Guide

### EVIDENCE GUIDE

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify customer needs	1.1. Appropriate interpersonal skills are used to accurately identify customer needs. 1.2. Customer enquiries are handled courteously and promptly in accordance with enterprise procedures and industry requirements. 1.3. Available products are matched to customer needs. 1.4. Knowledge and understanding of hardware products is actively and regularly researched and updated from authoritative sources.
2. Provide product advice	2.1. Advice that addresses customer needs is provided to customers in a timely and professional manner. 2.2. Products that may meet customer needs are appropriately exhibited to customer. 2.3. Alternative and additional products and services are suggested as necessary. 2.4. Customers concerns and questions are addressed sensitively in line with enterprise requirements.

## Required Skills and Knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>

## REQUIRED SKILLS AND KNOWLEDGE

- communicate using a range of interpersonal skills, including questioning and attentive listening skills
- relate to people from a range of social, cultural and ethnic backgrounds, and of varying physical and mental abilities
- assess and demonstrate cost benefits
- research supplier information
- safely lift, carry and handle products
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- customer service and selling techniques
- systems and procedures for the safe handling of products
- enterprises business values, structure, products and services
- industry terminology for products
- requirements of local or specific customers
- relevant requirements of Occupational Health and Safety (OHS), industry, fair trading, trade practices, sales of goods, public liability and environmental legislation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- advise customers as to the range of products available

<b>EVIDENCE GUIDE</b>	
	<p>for their specific application/environment</p> <ul style="list-style-type: none"> <li>• engage with and give advice to customers</li> <li>• ensure that the advice, product type, application and suitability are understood by the customer</li> <li>• encourage add on sales</li> <li>• organise the demonstration of products</li> <li>• represent the enterprise in a professional manner when dealing with customers.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Advice may include:	<ul style="list-style-type: none"> <li>• advice on building products such as: <ul style="list-style-type: none"> <li>• timber</li> <li>• cement</li> <li>• colorbond</li> <li>• galvanised</li> <li>• zincalume</li> <li>• fibrous cement cladding</li> <li>• roofing materials</li> <li>• insulation and damp-proofing materials</li> <li>• pre-fabricated buildings</li> <li>• small hardware items.</li> </ul> </li> <li>• advice on irrigation and stock water supply systems.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Engage customer	1.1. Customer is approached in a timely and professional manner and in line with enterprise procedures. 1.2. Appropriate interpersonal skills are used to engage customer. 1.3. Customers are presented with purchase options that address their needs, and assisted to identify their preferred option. 1.4. Personal and professional limitations in addressing customer needs are identified, and assistance is sought from appropriate personnel when required.
2. Sell products and services	2.1. Prices and quotations are determined on the advice of appropriate personnel and provided to customer. 2.2. Sales are completed in accordance with enterprise requirements and to maximise potential for customer satisfaction. 2.3. Opportunities for "add-on" and repeat sales are identified and responded to in line with enterprise procedures.
3. Maintain products	3.1. Products are handled and stored safely and efficiently in line with manufacturer, enterprise and Occupational Health and Safety (OHS) guidelines. 3.2. Documentation and re-ordering are completed in line with enterprise requirements. 3.3. Own sales techniques are reviewed to enhance future sales results.

## Required Skills and Knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
--------------------------------------

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- assess initial customer needs
- calculate quantities and prices
- access and research product information
- seek assistance as required
- recommend products
- encourage repeat business
- complete sales
- communicate effectively with customers from a range of culturally diverse backgrounds
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- customer buying signals
- customer requirements in various rural and horticultural settings
- how to effectively engage and communicate with a range of customers from culturally diverse backgrounds, and of varying physical and mental abilities
- legal requirements in sales environments, particularly Fair Trading, Trade Practices and Sale of Goods legislation, and public liability
- sales techniques.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy

<b>EVIDENCE GUIDE</b>	
<b>competency in this unit</b>	holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following: <ul style="list-style-type: none"> <li>• engage customers</li> <li>• identify the potential for a sale</li> <li>• present purchase options to the customer</li> <li>• provide quotations</li> <li>• complete a sale.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Products and services may include:	<ul style="list-style-type: none"> <li>• selling products and services in an agricultural, horticultural or land management context including details and documented data of the enterprise's products and services, and relevant government legislation and regulations.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to quality customer standards	<p>1.1. Customer service standards are accessed, interpreted, applied and monitored in the workplace in accordance with enterprise policies and procedures.</p> <p>1.2. Contributions are made to the development, refinement and improvement of service policies, standards and processes.</p>
2. Implement customer service systems	<p>2.1. All personnel are encouraged to consistently implement customer service systems.</p> <p>2.2. Customer feedback is reviewed in consultation with appropriate personnel and is analysed when improving work practices.</p> <p>2.3. Customer service complaints are identified and adjustments made to ensure continued service quality.</p> <p>2.4. Adjustments are communicated to all those involved in service delivery within appropriate time frames.</p> <p>2.5. Delivery of services/products is coordinated and managed to ensure they effectively and efficiently meet agreed quality standards.</p>
3. Manage networks to ensure customer needs are addressed	<p>3.1. Effective regular communication is established with customers.</p> <p>3.2. Relevant networks are established, maintained and expanded to ensure appropriate referral of customers to products/services from within and outside the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>organization.</p> <p>3.3. Procedures are put in place to ensure that decisions about targeting of customer services are based on up-to-date information about the customer and the products/services available.</p> <p>3.4. Procedures are put in place to ensure that referrals are based on the matching of the assessment of customer needs and availability of products/services.</p> <p>3.5. Records of customer interaction are maintained in accordance with organisational procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds
- clear, legible writing
- language skills which allow for adequate communication with customer and all relevant personnel
- literacy skills to the level required to read and write procedures and reports
- numeracy skills to the level required to develop and implement customer service procedures.

#### Required knowledge

- legislative and regulatory requirements may include but are not limited to: Consumer Law, Environmental Law, Occupational Health and Safety (OHS), Privacy Legislation, Codes of Conducts, Discrimination/Equal Employment Opportunity, Harassment and other laws specific to local government, State and Federal legislation
- the organisation's business structure, products and services
- customer service systems/procedures including the continuous quality improvement framework, together with some knowledge of the customer population and how the system applies to delivering customer service to that customer population
- the principles of customer service
- the principles of effective communication in relation to listening, questioning and

**REQUIRED SKILLS AND KNOWLEDGE**

non-verbal communication

- the individual's role in delivering customer service
- techniques for dealing with customers with special needs
- techniques for building relationships of trust and mutually acceptable outcomes
- related organisations, agencies and networks
- the principles and operations of networks.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- access and apply customer service policies and procedures
- respond to customer feedback and complaints
- develop and use networks to source goods and services
- provide value for the customer in sourcing and supplying goods and services
- maintain records of customer feedback and interactions.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

ELEMENT	PERFORMANCE CRITERIA
4. Handle and maintain products	4.1. Products are handled and stored safely and efficiently in line with manufacturer, enterprise and Occupational Health and Safety (OHS) guidelines. 4.2. Documentation is completed in line with enterprise requirements. 4.3. Stock levels are monitored and re-ordering procedures followed in line with enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- assess and demonstrate cost benefits
- valuing trade-ins
- research supplier information
- demonstrate equipment
- safe lifting, carrying and handling techniques
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- customer service and selling techniques
- systems and procedures for the safe handling of machinery
- enterprises business values, structure, products and services
- industry terminology for products
- requirements of local or specific customers

## REQUIRED SKILLS AND KNOWLEDGE

- nature of agricultural activities in district
- industry trends and improved practices in relation to machinery usage and equipment
- systems and procedures for the safe handling of machinery and parts
- manufacturers product recommendations and warranty requirements
- relevant OHS, industry, fair trading, trade practices, and sales of goods legislation
- relevant components of State/Territory Acts relating to machinery and its use.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- advise customers as to the most appropriate products for their specific application/environment
- engage with and give advice to customers
- ensure that the advice, product type, application and suitability are understood by the customer
- encourage add on sales
- organise the demonstration of products
- represent the enterprise in a professional manner when dealing with customers.

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the processes required to: provide information on fertilisers and soil ameliorants and defines the standard required to: take soil, plant tissue and water samples; use and explain use of nutrient management tools; provide information on the relationship between soil types, water, crops, fertiliser and soil ameliorant use; describe legislative requirements relating to use of fertiliser and soil ameliorants.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to employees in a sales role in an agricultural or horticultural support enterprise who provide information on fertilisers, soil ameliorants and related environmental information to primary producers and the provision of services and products that improve the nutrition and benefit the physical, biological and chemical nature of a soil.
--------------------------------	---

### Licensing/Regulatory Information

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Gather information on the requirements of the client	<p>1.1. Basis of customer's fertiliser or soil ameliorant requirement is identified.</p> <p>1.2. Planned use of fertiliser or soil ameliorant is evaluated against legislative requirements, local productivity and environmental guidelines and food safety regulations.</p> <p>1.3. Individual soil, plant tissue and water samples are taken for each customer.</p> <p>1.4. Where appropriate, customer is provided with relevant sampling kits and advice on required sampling processes to be followed.</p>
2. Provide information on nutrient management program	<p>2.1. Information and referrals about the fertiliser and soil ameliorant product are provided to customer, with particular reference to Occupational Health and Safety (OHS), food safety and environmental issues and according to industry codes of practice.</p> <p>2.2. Use of nutrient management tools is recommended where necessary.</p> <p>2.3. Changes to application method and/or timing are suggested if necessary.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Provide appropriate service or product	3.1. Customer is referred to an appropriately qualified specialist adviser if required. 3.2. Customer is supplied with information and recommendations regarding transporting, storing and handling fertiliser and soil ameliorants in a safe and environmentally responsible manner. 3.3. Where required by customer, the transport, handling and storage of fertiliser and soil ameliorants in a safe and environmentally responsible manner are arranged. 3.4. Fertiliser and soil ameliorants are supplied that meet legislative requirements and productivity, food safety and environmental guidelines. 3.5. Details of transaction are recorded according to enterprise and industry guidelines.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- taking soil, water and plant tissue samples
- analysing soil and plant tissue tests to determine nutrient requirements
- using safe and environmentally responsible work practices
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- crop nutrient requirements - both macro and micro nutrients

## REQUIRED SKILLS AND KNOWLEDGE

- effect of soil ameliorants in dispersion and adjustment for acidity or alkalinity (pH)
- fertiliser and soil ameliorant application methods, including timing and frequency of fertiliser and soil ameliorant application to minimise losses
- fertiliser and soil ameliorants availability and relative costs
- industry production regimes and fertiliser practices
- sources of technical information
- major nutrient management risks of leach, run-off, load, blow, mine and how these impact on the environment
- nutrient management advisory tools and processes used by advisers in making a crop nutrition recommendation
- organisational OHS and environmental procedures, practices and policies in operating sampling equipment
- packaging and dispatch procedures for samples
- physical, chemical and biological properties related to a healthy soil and environment, including texture, structure, slaking, dispersion, organic matter and pH
- rainfall patterns in local area
- sampling tools and methods, including soil, plant tissue and water tests; yield monitoring; and electrical conductivity survey
- environmental impacts such as soil structural decline, fertility decline, acidification and salinity, erosion, loss of organic matter, water quality, fertiliser and soil ameliorant impurities, and greenhouse gas emissions
- transport, handling and storage requirements of fertiliser and soil ameliorants in terms of legislation, codes of practice, environmental stewardship and human safety.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include

<b>EVIDENCE GUIDE</b>	
	<p>achievement of the following:</p> <ul style="list-style-type: none"> <li>• take soil, plant tissue and water samples</li> <li>• use and explain use of nutrient management tools</li> <li>• provide information on the relationship between soil types, water, crops, fertiliser and soil ameliorant use</li> <li>• describe legislative requirements relating to use of fertiliser and soil ameliorants.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Fertiliser or soil ameliorants may include:	<ul style="list-style-type: none"> <li>• the range of fertiliser or soil ameliorants that form part of a nutrient management plan covering inorganic or organic solids and fluids applied directly to soil or plant via foliar sprays.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Review existing sales plans	1.1. Current market returns are reviewed against sales objectives for the property. 1.2. Current performance data is analysed and compared to relevant benchmark information. 1.3. Trends and opportunities in respect to customer requirements are identified. 1.4. Current specifications for products and services are reviewed.
2. Devise a sales strategy	2.1. Range of market options for farm products and services are identified. 2.2. Alternative market options are analysed for their profitability and feasibility consistent with sales objectives for property. 2.3. Sales plan is developed identifying product specifications and quality assurance strategy, target market outlets, timing and volume of sales, and price risk management strategy. 2.4. Available resource commitments and capacity are determined to implement the sales strategy. 2.5. Contingency arrangements are defined to manage variations in production and market prices.
3. Implement and review a sales strategy	3.1. Sales are conducted according to the sales strategy and adjusted according to the contingency plan. 3.2. Sales plan is reviewed and amended.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research skills
- determine current market position
- review existing strategies and propose improvements
- check relevant business, industrial and legislative requirements
- define and obtain information for use in making effective decisions
- develop plans to implement sales strategies
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- potential market outlets
- customer specifications for products and services
- relevant information sources related to markets and market returns
- marketing and promotional planning targets
- OHS legislation, codes of practice and enterprise requirements
- relevant commercial law and legislation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify faults in milking machines	1.1. Occupational Health and Safety (OHS) hazards are identified, risk assessed and recorded. 1.2. Poor performance of milking equipment is identified from observations at milking. 1.3. Minor machine adjustments are carried out to rectify identified poor performance characteristics. 1.4. Fault finding and fault diagnosis is completed with minimum disruption to milking routines.
2. Identify external faults	2.1. Independent electrical appliances that impact on the farm dairy operation are identified and isolated. 2.2. Animal behaviour during milking is observed and recorded to identify abnormalities. 2.3. Earthing systems and grids are installed to minimise potential differences in the milking shed.
3. Carry out operational service & maintenance of milking machines	3.1. Machine components are cleaned, adjusted and defective parts or components repaired or replaced to bring machine up to industry performance standards. 3.2. Defective electric motors are disconnected, removed and replaced to conform to manufacturer's recommendations and OHS guidelines. 3.3. Programmed maintenance routines are completed to replace consumables and maintain lubrication in accordance with manufacturer's recommendations. 3.4. OHS hazards identified in safety audits are

ELEMENT	PERFORMANCE CRITERIA
	<p>eliminated or risk controlled according to manufacturer's guidelines and industry standards.</p> <p>3.5. Adjustments are completed to restore optimum performance of milking equipment.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- observe and critically evaluate the performance of milking equipment
- operate the full range of milking equipment components
- identify common sources of air leakage
- operate hand tools and use a range of test equipment proficiently
- communicate effectively with the dairy farmer, milkers and other personnel to identify all contributing factors to milking equipment performance
- disassemble and assemble a range of milking equipment components such as pulsators, regulators
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- familiarity with the components that make up milking equipment installations and their individual contributions to milking function
- common symptoms of poor milking machine performance
- symptoms demonstrated by animals in the milking environment when external problems are apparent
- routine maintenance requirements for milking equipment
- consumable replacement strategies recommended for milking equipment
- lubrication requirements for milking equipment
- OHS legislation and industry and enterprise safety standards for milking equipment installations

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>environmental legislation and impacts of milking machinery servicing.</li> </ul>

## AHCMKH303A Service and repair milking equipment

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of non-company specific service and repair of milking equipment on farm so as to meet prescribed maintenance schedules or to rectify poor performance and defines the standard required to monitor and evaluate the performance of milking equipment; operate the full range of milking equipment components; carry out mechanical testing of milking equipment; apply information from operator's manuals and supplied maintenance and diagnostic data; disassemble and re-assemble a range of milking equipment components such as pulsators, regulators and vacuum pumps.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to technicians and dairy farm workers who service and repair specific machine components. It requires some judgement and discretion and is likely to be carried out independently, with advice sought from milk company representatives or equipment resellers.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Service and repair vacuum pumps and the vacuum regulator	<p>1.1. Vacuum pump capacity is established as a part of mechanical testing and performance assessed against design parameters and shed requirements.</p> <p>1.2. Vacuum pump is disassembled, serviced and reassembled.</p> <p>1.3. Vacuum pump exhaust and housing is checked and repaired as required to minimise noise and ensure that levels remain within prescribed workplace standards.</p> <p>1.4. Regulators are checked for performance cleaned and defective parts replaced.</p>
2. Service pulsators and electronic systems	<p>2.1. Pulsator performance is assessed during milking and as a part of mechanical testing.</p> <p>2.2. Electronic or pneumatic pulsators are removed and repaired or replaced as identified in mechanical testing.</p> <p>2.3. Extra low voltage segments of the pulsation and wash systems controllers are tested and replaced as required.</p>
3. Service and repair	3.1. Milk pumps are checked for pumping performance.

ELEMENT	PERFORMANCE CRITERIA
milk pumps and the milk releasing system	<p>3.2.Milk pumps are disassembled and repairs as required including drives and couplings.</p> <p>3.3.Milk releaser is inspected and checked with rubber seals and flaps replaced as required.</p>
4. Repair and maintain the milk transport system	<p>4.1.Rubberware is inspected for correct specification including liner/teat cup matching and replaced or adjusted as required.</p> <p>4.2.Claws and claw bowls are inspected for cleanliness and correct connection to suit the specific pulsation system.</p> <p>4.3.The operation of automatic vacuum cut-off in the claw is assessed and air admission holes cleaned as required.</p> <p>4.4.Milk lines and air lines are inspected and joints checked for compliance with industry minimum standard recommendations.</p> <p>4.5.Cans and vessels are checked for dents and damage and shut off valves checked for correct operation.</p> <p>4.6.Plate cooler is disassembled, cleaned and re-assembled and filters cleaned and replaced as required.</p>
5. Service and repair non-milking systems	<p>5.1.Jettors and cleaning system are inspected to ensure adequate air admission during cleaning and correct water volumes are circulating.</p> <p>5.2.Repairs or replacement of cleaning system components are effected as required</p> <p>5.3.Automatic cup removers are checked to ensure that detectors are clean and effective and that the pistons operate effectively.</p> <p>5.4.Automatic cup removers are repaired or replaced as required.</p> <p>5.5.Herd recording equipment is inspected and valves and rubberware replaced as required.</p> <p>5.6.Feed systems are inspected and repaired or maintained as required.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- identify hazards and implement safe work procedures
- observe and critically evaluate the performance of milking equipment
- competently operate the full range of milking equipment components
- efficiently and effectively carry out mechanical testing of milking equipment
- operate hand tools and use a range of test equipment proficiently
- communicate effectively with the dairy farmer, milkers and other personnel to identify all contributing factors to milking equipment performance
- disassemble and re-assemble a range of milking equipment components such as pulsators, regulators and vacuum pumps
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- familiarity with the components that make up milking equipment installations and their individual contributions to milking function
- common symptoms of poor milking machine performance
- symptoms demonstrated by animals in the milking environment that indicates poor performance such as cup slip, agitation or frequent urination or defecation.
- routine maintenance requirements for milking equipment
- consumable replacement strategies recommended for milking equipment
- lubrication requirements for milking equipment
- industry safety standards for milking equipment installations.
- Occupational Health and Safety (OHS) guidelines for working with machinery in the rural sector.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

<b>EVIDENCE GUIDE</b>	
Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• monitor and evaluate the performance of milking equipment</li> <li>• operate the full range of milking equipment components</li> <li>• carry out mechanical testing of milking equipment</li> <li>• apply information from operator's manuals and supplied maintenance and diagnostic data</li> <li>• disassemble and re-assemble a range of milking equipment components such as pulsators, regulators and vacuum pumps.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
International Standards may include:	<ul style="list-style-type: none"> <li>• International Standards for Milking Machines ISO5707 Construction and Performance and ISO6690 Mechanical Tests.</li> </ul>
Service and repair may include:	<ul style="list-style-type: none"> <li>• low voltage pulsation or other electronic systems (up to 36v DC).</li> </ul>
Adjustments may include:	<ul style="list-style-type: none"> <li>• vacuum pumps and vacuum regulator may also include the adjustment of vacuum pressure or available effective reserve.</li> </ul>
Pumps may include:	<ul style="list-style-type: none"> <li>• centrifugal or diaphragm and slow speed two vane, high speed four vane or liquid ring</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify cleaning problems	<p>1.1. Current hygiene practices are established through interview and shed records.</p> <p>1.2. Factory test results are accessed and collated to establish bacterial levels for the plant and identify potential cleaning problems.</p> <p>1.3. Milking equipment is inspected and disassembled as required to identify residues and other evidence of poor cleaning regimes.</p> <p>1.4. Cleaning chemicals are identified to establish current cleaning and hygiene regimes.</p> <p>1.5. Water quality and quantity is assessed to establish the effect on cleaning procedures.</p> <p>1.6. Occupational Health and Safety (OHS) hazards are identified, risks assessed and hazards reported, or risk controlled and the risk assessment recorded as a part of investigative procedures.</p>
2. Carry out cleaning routines	2.1. Machine and ancillary equipment cleaning routines are carried out as specified by the equipment

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer.</p> <p>2.2. Vat cleaning routines are carried out as specified by the equipment manufacturer.</p> <p>2.3. Water temperature and the chemical concentrations circulated are monitored through the cleaning cycle.</p> <p>2.4. Plant is manually cleaned to remove milk stone and other accumulated residues.</p>
3. Advise on chemicals and cleaning routines	<p>3.1. Cleaning routines to suit the installation are determined and documented in consultation with the equipment manufacturer and chemical company representatives as required.</p> <p>3.2. Hygiene regime for the total installation is recorded and specified to the shed manager.</p> <p>3.3. Prescribed cleaning routines are evaluated to ensure that equipment and cleaning performance meets performance specification.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- assemble/disassemble milking equipment
- efficiently carry out milking equipment and vat cleaning routines
- prepare cleaning solutions in accordance with manufacturers specifications
- effectively evaluate cleaning routines for equipment and vats
- identify cleaning problems
- identify mechanical and chemical safety hazards associated with the cleaning process
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural,

**REQUIRED SKILLS AND KNOWLEDGE**

social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- best practice hygiene routines employed in farm dairies
- the range of bacteria affecting milk quality
- microbial testing of milk and the effect of cleaning practices on those levels
- the role of chemical concentration, physical turbulence, water temperature and contact time in the cleaning routine
- the conduct of milking machine cleaning routines
- the conduct of vat cleaning routines
- cleaning chemicals and methods
- common milking machine cleaning systems and their operation.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- assemble/disassemble milking equipment
- carry out milking equipment and vat cleaning routines
- prepare cleaning solutions in accordance with manufacturer's specifications
- evaluate cleaning routines for equipment and vats and identify cleaning problems
- identify mechanical and chemical safety hazards associated with the cleaning process.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

# AHCMKH305A Mechanically test milking machines

## Modification History

Not Applicable

## Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit covers the process of the static testing of milking equipment and the compilation of results according to industry standard reporting procedures and defines the work practices required to: disassemble and reassemble milking machines and equipment; operate milking machine testing equipment; calculate effective reserve and vacuum pump capacity for the plant; measure air consumption and component leakage, and adjust vacuum to optimise performance; record measurements of milking machine performance; identify and make appropriate recommendations to the dairy manager.</p>
-------------------------------	---

## Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit applies to working independently as part of preparing for milking. The information from testing is supplied to the supervisor or employer</p>
---------------------------------------	--

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<p><b>Prerequisite units</b></p>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Record milking machine specifications	1.1.Herd details and health status are established in consultation with dairy farmer. 1.2.Overall machine specifications are recorded to establish expected performance. 1.3.Component condition is assessed and recorded. 1.4.Occupational Health and Safety (OHS) hazards are identified and risks assessed in line with workplace OHS and industry standards, and reported to supervisor.
2. Calculate required milking machine performance	2.1.Effective reserve is calculated based on individual shed specification. 2.2.Vacuum pump capacity is calculated from effective reserve. 2.3.Manufacturer's recommended component specification and matching is recorded.
3. Measure milking machine performance	3.1.Working vacuum levels are measured in line with required performance. 3.2.Vacuum is adjusted as required to optimise plant performance. 3.3.Air consumption and component leakage is established and reported. 3.4.Pulsators are tested in line with manufacturer's recommendations.

ELEMENT	PERFORMANCE CRITERIA
	3.5. Working air consumption is established and matched to manufacturer's recommendations in line with industry standards.
4. Make recommendations to optimise machine performance	4.1. Test results are interpreted in line with desired performance and herd details. 4.2. Verbal recommendations backed with a written report are provided to the farmer or shed manager on safety considerations for the specific installation tested. 4.3. Written recommendations on plant performance are provided to the farmer. 4.4. Report on component condition is completed in line with manufacturer's requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- complete the necessary calculations and identify leakage and defects isolated from a machine test
- competently disassemble and reassemble milking machines and equipment
- competently operate milking machine testing equipment
- effectively communicate with the farmer or shed manager and relevant industry professionals
- access and interpret relevant industry standards
- identify and make appropriate recommendations on aspects of milking equipment and shed safety identified during equipment testing procedures
- demonstrate the use of tools and testing equipment, and in the disassembly and reassembly milking equipment
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• the International Standards ISO 6690 - 1983 ( Mechanical Tests) and ISO5707 ( Construction and Performance) together with the Industry Standard Minimum recommendations established by the Australian Milking Machine Trade Association are the basis of testing procedures - knowledge needs to include an awareness of these documents and an ability to use and interpret their contents in a working environment</li> <li>• OHS hazards associated with milking machines and principles of risk control including machine guarding, protection from hot water or steam scalds, noise control, electrical safety in the dairy, and the responsibilities of people in the workplace</li> <li>• vacuum requirements, pulsation and the interaction between these characteristics in a milking machine</li> <li>• the components that make up milking equipment</li> <li>• how milking machines work</li> <li>• pulsation systems, e.g. difference between 2x2 or 4x1 systems</li> <li>• the effects of high or low milking machine vacuum on animal health</li> <li>• the establishment and recording of machine specifications includes a working knowledge of how to obtain and interpret manufacturer's specifications</li> <li>• environmental legislative and enterprise requirements.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• disassemble and reassemble milking machines and equipment</li> <li>• operate milking machine testing equipment</li> <li>• calculate effective reserve and vacuum pump capacity for the plant</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• measure air consumption and component leakage, and adjust vacuum to optimise performance</li> <li>• record measurements of milking machine performance</li> <li>• identify and make appropriate recommendations to the dairy manager.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Sheds may include:	<ul style="list-style-type: none"> <li>• herringbone sheds</li> <li>• rotary sheds</li> <li>• conventional sheds.</li> </ul>
Data collected for overall machine specifications may include:	<ul style="list-style-type: none"> <li>• details of vacuum pumps</li> <li>• milkline size</li> <li>• milkline fall</li> <li>• airline sizes</li> <li>• regulator detail</li> <li>• pulley and belt sizes</li> <li>• electric motor size</li> <li>• claw specifications</li> <li>• liner and cup specifications</li> <li>• shaft speeds.</li> </ul>

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for cleaning-time testing	<p>1.1. Protocols for the conduct of cleaning-time tests are established with the farmer and other relevant advisers based on a consideration of the previous testing outcomes.</p> <p>1.2. Water quality utilised for the cleaning process is assessed through on-site, factory or laboratory testing and recorded.</p> <p>1.3. Cleaning chemicals are identified and their suitability and recommended concentrations are established in line with prevailing water quality, factory requirements and equipment manufacturer recommendations.</p> <p>1.4. Relevant factory records are accessed to establish bacteriology of the specific plant.</p>
2. Carry out cleaning-time tests of milking equipment	<p>2.1. Normal cleaning routines and procedures are identified for use whilst testing is carried out and details recorded.</p> <p>2.2. Testing equipment is installed to measure water and/or airflow velocities in line with testing requirements for the installation.</p> <p>2.3. Cleaning-time tests are carried out before or during the cleaning of the milking machines or bulk milk tank in accordance with established industry procedures.</p>
3. Report on cleaning-time test result	<p>3.1. Test results are recorded accurately using industry standard test report forms and collated.</p> <p>3.2. Test report results are interpreted in line with industry standards and manufacturer</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>recommendations.</p> <p>3.3. Test results are reported to the farmer or shed manager.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- accurately carry out mechanical tests of milking machines in accordance with industry standards
- competently use milking equipment testing tools, gauges and equipment
- interpret water quality test results
- effectively carry out cleaning-time testing procedures of milking machines in line with standard procedures and ISO standards
- efficiently implement routine cleaning procedures for milking machines
- act in a team situation to address milk quality problems
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- principles of milking machine function
- the mechanical testing of milking equipment
- milking operation and shed management
- relevant milk quality assurance programs
- dairy factory milk quality assessment procedures
- relevant bacteriology of milking equipment and factory milk quality assurance

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <p>programs</p> <ul style="list-style-type: none"> <li>• cleaning and sanitation processes for milking equipment</li> <li>• aspects of water quality that affect cleaning chemicals and the cleaning process</li> <li>• the range of cleaning chemicals and compounds used for cleaning milking equipment and their action</li> <li>• Occupational Health and Safety (OHS) and environmental legislation, codes of practice and enterprise procedures.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare design and installation estimates	<p>1.1. Shed design and installation estimates to suit the application are determined and meet current industry guidelines.</p> <p>1.2. Financial and physical resources that impact on the proposed works are identified and documented.</p> <p>1.3. Occupational Health and Safety (OHS) issues affecting the design and construction of the shed and equipment are identified and addressed in design and construction planning.</p> <p>1.4. Labour and other inputs are calculated and the tender submitted.</p>
2. Plan installation	<p>2.1. Contract for work is completed with the customer including verification of material estimates and costings.</p> <p>2.2. Relevant building and planning permits are obtained in co-operation with the appropriate authorities.</p> <p>2.3. Site planning includes consideration of environmental issues, service connections and alternative power supplies.</p> <p>2.4. Required components are planned to match the proposed installation and sourced from the appropriate original equipment manufacturer.</p> <p>2.5. The installation is planned to create a safe working environment designed to eliminate hazards to people and animals during milking, cleaning or service operations.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Facilitate the completion of the installation	3.1. Job scheduling is carried out in consultation with all relevant parties. 3.2. Physical and material resources are ordered and delivery facilitated. 3.3. Co-ordination of the implementation of the milking machine installation is carried out according to the project plan. 3.4. Project management is carried out in line with the scope of the project and contract needs. 3.5. Site OHS procedures and policies are established including areas of responsibility for all the project participants and full notification provided.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- blend design standards and requirements with practical application and customer needs
- understand construction plans and specifications on machinery and equipment components of dairy installations
- safely utilise hand and power tools in a workshop and field situation
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- applicable building regulations and codes of practice
- OHS acts in the relevant state, and specifically regulations relating to plant and

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <p>machinery and noise</p> <ul style="list-style-type: none"> <li>• relevant industry minimum standards for the design and installation of milking equipment</li> <li>• original equipment manufacturers requirements for milking equipment installation</li> <li>• the working requirements of milking sheds including the siting of components to ensure efficient shed operation.</li> </ul>

# AHCMKH403A Design and install on-farm milk cooling and storage

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers design and installation of on-farm milk cooling and storage systems and defines the standard required to: identify milk cooling and storage requirements; recognise and rectify operational faults in milk cooling and storage equipment; perform tests on cooling towers; install and maintain milk cooling and storage equipment.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit applies to milking machinery technicians.
--------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine cooling and storage system requirements	<p>1.1. Available water supply is identified and analysed in line with cooling requirements for quality and quantity.</p> <p>1.2. Components of the on-farm dairy milk cooling and storage requirements are identified to meet standard industry guidelines and herd and dairy factory needs.</p> <p>1.3. Design considerations, including the siting of components, are identified and recorded.</p> <p>1.4. Occupational Health and Safety (OHS) hazards are identified and risks assessed in line with workplace OHS and industry standards and reported to the supervisor.</p>
2. Identify milk pre-cooling requirements	<p>2.1. Maximum peak flow of milk delivery is measured and recorded.</p> <p>2.2. Cooling water temperatures and quality are checked against design specifications.</p> <p>2.3. Available milk cooling equipment is compared to design requirements and suitable equipment selected.</p> <p>2.4. Relevant legislation including OHS and human health requirements is identified and compliance targets established.</p> <p>2.5. Water cooling system requirements are identified in line with installed equipment and available resources.</p>
3. Identify milk storage requirements	<p>3.1. Farm milk production together with projected production increases is estimated in line with the available farm management plan.</p> <p>3.2. Milk entry temperature and other critical design</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>considerations are established in consultation with the shed manager and available data.</p> <p>3.3. Vat selection is made meet shed production requirements and bulk milk collection routines.</p>
4. Install milk cooling and storage equipment	<p>4.1. Plate cooler and other components of the pre-cooling system are installed in line with established system design and industry standards.</p> <p>4.2. Vat and refrigeration equipment are installed to meet design specifications.</p> <p>4.3. Commissioning tests are completed as required to ensure that the operation of all elements of the cooling and storage equipment complies with performance targets and milk supply quality standards.</p>
5. Operate and maintain milk cooling & storage equipment	<p>5.1. Routine maintenance program requirements are completed in line with manufacturers' recommendations.</p> <p>5.2. Repair and service requirements including operational faults are identified as a structured part of maintenance routines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and assess risks
- recognise and rectify operational faults in milk cooling and storage equipment
- perform tests on cooling towers
- install and commission equipment
- complete routine maintenance
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• the components of on-farm milk pre-cooling, cooling and storage systems</li> <li>• how milk is cooled on farm</li> <li>• the effect of cooling on milk quality</li> <li>• available milk cooling and storage equipment</li> <li>• the requirements of factory based milk quality assurance programs</li> <li>• industry recognised milking equipment minimum standards</li> <li>• relevant OHS and environmental legislation, codes of practice and enterprise procedures relating to milk cooling and storage</li> <li>• applicable human health standards requirements.</li> </ul>

## Evidence Guide

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Order installation components	<p>1.1. Contract for work is completed with customer.</p> <p>1.2. Specified tinware is ordered in line with planned installation.</p> <p>1.3. Bending and rolling of pipe work by external contract are overseen to ensure specifications are met.</p> <p>1.4. Components are assembled in transportable sections in preparation for transfer to site.</p> <p>1.5. Specialist advice is sought for non-standard installations.</p>
2. Inspect and prepare installation site	<p>2.1. Site is checked for correct location, dimensions and levels, etc., utilising appropriate measuring equipment.</p> <p>2.2. Occupational Health and Safety (OHS) hazards are identified, risk assessed, hazards eliminated or risk controlled and risk assessment recorded.</p> <p>2.3. Non-compliance with the contract specification is reported and alterations and correction are undertaken in co-operation with the appropriate authorities.</p> <p>2.4. Installation is measured and layout marked in line with contract plans.</p>
3. Manufacture components in the workshop	<p>3.1. Vacuum pump guards and stands are manufactured according to specifications.</p> <p>3.2. Pipelines and vessels are manufactured and assembled according to installation design.</p> <p>3.3. Electrical components are pre-wired in the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>workshop.</p> <p>3.4.Non-milking systems are completed as required in dairy plan.</p> <p>3.5.OHS hazards are identified, risks assessed and safe systems of work implemented during manufacture.</p>
4. Install equipment	<p>4.1.Machine/equipment components are prepared for correct sequential installation.</p> <p>4.2.Machine/equipment is installed in accordance with manufacturers and site specifications and in co-operation with the dairy farmer and other trade and building personnel.</p> <p>4.3.All work is carried out in accordance with appropriate legislative requirements and in compliance with Australian Standards for Milking Equipment Installation and Performance.</p> <p>4.4.OHS hazards are identified, risk assessed and safe systems of work implemented during installation.</p> <p>4.5.Routine modifications/alterations are undertaken to standard operating procedures where required.</p> <p>4.6.Machine/equipment is levelled, aligned, coupled and connected (excluding electrical components) in accordance with the specification.</p>
5. Commission test installed equipment	<p>5.1.Completed equipment is mechanically tested to ensure that it conforms to design specification and performance standards, including OHS standards.</p> <p>5.2.Equipment performing below standard is brought up to manufacturer's specifications.</p> <p>5.3.Final work quality and finish complies with established industry standards.</p> <p>5.4.Site is cleaned and cleared of all materials and debris and left in a safe state and in consideration of environmental and OHS considerations.</p> <p>5.5.All alterations/modifications are recorded and/or reported to the appropriate authority.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- identify hazards and implement safe work practices
- interpret technical data
- interpret plans and equipment specifications
- ensure that proper equipment and component matching is practised
- understand construction plans and specifications on machinery and equipment components of dairy installations
- safely utilise hand and power tools in a workshop and field situation
- use minimum standard recommendations in the assembly and installation of milking equipment
- safely use a range of hand and power tools
- be resourceful in all aspects of fitting milking equipment
- employ safe working practices and exercise duty of care whilst employed on work-sites
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- an appreciation of the function of the full range of the components of milking machines and equipment
- vacuum and the operation of pulsation systems
- international standards for milking equipment and their application in Australia in working sheds
- OHS legislation and codes of practice, in the relevant state, and specifically regulations relating to equipment, machinery and noise
- the application of dairy shed design in the field
- the mechanical testing of milking equipment installations
- original equipment manufacturer's requirements for milking equipment installation
- the working requirements of milking sheds including the siting of components to ensure efficient shed operation
- milking equipment installation standards including pipe sizing, friction loss,

**REQUIRED SKILLS AND KNOWLEDGE**

- component size selection, drainage within the equipment, bracketing, waterproofing and safety including practical design criteria for safe operation
- safe working practices in a workshop and building situation. This will include an awareness of safe lifting and manual handling practices, the safe use of hand and power tools, and duty of care to all other personnel on-site.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- interpret plans and equipment specifications
- ensure that proper equipment and component matching is practised
- interpret construction plans and specifications on machinery and equipment components for dairy installations
- manufacture/assemble milking equipment in the workshop
- fit and test milking equipment.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Milking machinery may include:	<ul style="list-style-type: none"> <li>• milking equipment</li> <li>• milk storage and cooling equipment</li> <li>• Cleaning in Place (CIP) systems.</li> </ul>
Milking equipment installed or serviced may include:	<ul style="list-style-type: none"> <li>• full shed installations</li> <li>• pipework and vessels</li> <li>• vacuum pumps</li> <li>• regulators</li> <li>• plate coolers</li> <li>• cup removers</li> <li>• cleaning systems</li> <li>• cluster and pulsation systems</li> <li>• releasers and milk transfer systems</li> <li>• non-milking systems may include:                             <ul style="list-style-type: none"> <li>• feeding systems</li> <li>• jettors</li> <li>• automatic cup removers.</li> </ul> </li> </ul>
Installations may include:	<ul style="list-style-type: none"> <li>• new milking sheds</li> <li>• be installed in existing sheds to replace old equipment.</li> </ul>

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Wet test milking equipment	<p>1.1.Relevant mechanical testing reports and outcomes are collated as the basis for additional tests in consultation with the farmer or adviser.</p> <p>1.2.Protocols for wet testing are established to suit the individual installation requirements.</p> <p>1.3.Test equipment is installed at specific locations, as required, to complete tests according to industry standard methods and procedures.</p> <p>1.4.Vacuum levels and vacuum drop are measured and recorded and abnormalities identified.</p>
2. Carry out milking-time tests of milking equipment	<p>2.1.Protocols for the conduct of milking-time tests are established with the farmer and other relevant industry professionals based on a consideration of the previous dry or wet testing outcomes.</p> <p>2.2.Testing equipment is installed, as required, to complete agreed tests during milking.</p> <p>2.3.Milking-time tests are completed according to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>industry standard procedures in cooperation with the milking personnel and results recorded.</p> <p>2.4. Written assessment and recommendations are reported to the dairy farmer or manager.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- accurately dry test milking machines in accordance with industry standards
- competently use milking equipment testing tools, gauges and equipment
- accurately measure vacuum fluctuation in line with industry standard measuring procedures
- understand and initiate the conduct of milking machine performance testing procedures
- effectively carry out performance testing in line with standard procedures and ISO standards
- act in a team situation to address milk harvesting problems
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- effects of vacuum changes on milking machine function
- the mechanical testing of milking equipment
- the effects of machine function as they relate to teat health and condition, slow or incomplete milking, or a higher incidence of liner slipping or cluster falling
- milking operation and shed management.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• dry test milking machines in accordance with industry standards</li> <li>• use milking equipment testing tools, gauges and equipment</li> <li>• measure vacuum fluctuation in line with industry standard measuring procedures</li> <li>• initiate milking machine performance testing procedures</li> <li>• carry out performance testing in line with standard procedures and ISO standards.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Testing may include:	<ul style="list-style-type: none"> <li>• recognised wet tests</li> <li>• milking-time tests.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for basic routine maintenance	1.1. Tools and supplies required to carry out basic routine maintenance tasks are identified, selected and provided on site according to supervisor's instructions. 1.2. Routine pre-operational checks of machinery and equipment are carried out and adjustments made according to manufacturers specifications and/or enterprise procedures. 1.3. Faulty or unsafe machinery and equipment are identified and segregated for repair or replacement according to enterprise requirements. 1.4. Occupational Health and Safety (OHS) hazards in the workplace are identified and reported to the supervisor.
2. Carry out basic routine maintenance	2.1. Suitable personal protective equipment is stored, selected, used and maintained according to OHS requirements. 2.2. Greasing, lubrication and other basic servicing of machinery and equipment are carried out according to operator's manual/manufacturer's specifications and supervisor's instructions. 2.3. Routine adjustments and repairs are made to machinery and equipment according to operator manual/manufacturer's specifications and supervisor's instructions. 2.4. Work is conducted according to OHS requirements and completed to supervisor's satisfaction.
3. Complete basic	3.1. Tools are cleaned, returned to operating order and

ELEMENT	PERFORMANCE CRITERIA
routine maintenance activities	<p>stored according to manufacturer's specifications and enterprise requirements.</p> <p>3.2.Environmental procedures are followed and waste from maintenance activities is collected, treated and disposed or recycled according to enterprise requirements.</p> <p>3.3.Work area is cleaned and maintained according to OHS and enterprise requirements.</p> <p>3.4.Malfunctions, faults, wear or damage to tools are reported to the supervisor according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- demonstrate safe and environmentally responsible workplace practices
- read and interpret manufacturers specifications, work and maintenance plans, safety decals and Material Safety Data Sheets (MSDSs)
- measure and calculate volumes, consumption and lubrication requirements
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- types, characteristics and functions of machinery and equipment
- machinery and equipment testing and operating procedures
- types, characteristics and functions of tools used in maintenance of machinery and equipment
- OHS legislative requirements
- Codes of Practice with regard to the use and control of hazardous substances and/or working in confined spaces
- environmental Codes of Practice with regard to maintenance activities and disposal of fuels and oils.

## Evidence Guide

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare a two wheel motor bike for operation	<p>1.1. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p> <p>1.2. Two wheel motor bike is safely unloaded from transport (where applicable).</p> <p>1.3. Routine checks and maintenance of two wheel motor bike is conducted prior to use according to manufacturer's specifications and enterprise requirements.</p> <p>1.4. Ensure any items that are to be transported on the bike are safely secured.</p> <p>1.5. Two wheel motor bike and equipment faults or malfunctions are identified and reported for repair according to enterprise requirements.</p> <p>1.6. Areas and applications excluded to two wheel motor bikes are identified on the enterprise safety plan.</p> <p>1.7. Appropriate licenses for operation of two wheel motor bikes are obtained where required.</p> <p>1.8. Appropriate motor cycle is selected for the rider's size and skill and the task to be completed.</p>
2. Operate a two wheel motor bike	<p>2.1. Risks to self, others and the environment are recognised and controlled according to legislative and enterprise requirements.</p> <p>2.2. Suitable personal protective equipment is selected, used and maintained according to legislative and enterprise requirements.</p> <p>2.3. Legislation and enterprise policies are complied with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>in regards to carrying passengers.</p> <p>2.4.Hazards are identified, anticipated and controlled through the application of safe riding techniques and monitored for performance and efficiency.</p> <p>2.5.Farm two wheel motor bikes are operated in a safe and controlled manner.</p> <p>2.6.Environmental implications associated with two wheel motor bike's operation are recognised and positive enterprise environmental procedures applied where relevant.</p>
<p>3. Complete and check two wheel motor bike operation</p>	<p>3.1.Shut-down procedures are conducted according to manufacturer's specifications and enterprise requirements.</p> <p>3.2.Malfunctions, faults, irregular performance or damage to ride-on vehicle is detailed and reported according to enterprise requirements.</p> <p>3.3.Two wheel motor bikes are cleaned, secured and stored according to enterprise requirements.</p> <p>3.4.Two wheel motor bike operational reports are maintained to industry standards according to enterprise requirements.</p> <p>3.5.Two wheel motor bikes are loaded and secured for transport.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- steer, manoeuvre and position two wheel motor bikes in a smooth and controlled manner
- apply hand-eye co-ordination and body positioning to achieve stable riding
- safely operate two wheel motor bikes in a range of weather and terrain conditions
- demonstrate safe and environmentally responsible workplace practices
- read and comprehend manufacturer's specifications, work and maintenance plans, and Material Safety Data Sheets (MSDSs)

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>effectively communicate faults and hazards</li> <li>interpret and apply task instructions</li> <li>report and maintain operational records</li> <li>use literacy skills to follow sequenced written instructions and record information accurately and legibly</li> <li>use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor</li> <li>use numeracy skills to estimate, calculate and record routine workplace measures</li> <li>use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare tractor for operation	<p>1.1. Occupational Health and Safety (OHS) hazards in the work area are identified and safety concerns reported to the supervisor.</p> <p>1.2. Routine checks of tractors are conducted prior to use according to manufacturer's specifications and enterprise requirements.</p> <p>1.3. Attached equipment is identified and selected appropriate to work requirements, checked for safety and set for operation.</p> <p>1.4. Tractor and attached equipment faults or malfunctions are identified and reported for repair according to enterprise requirements.</p>
2. Operate tractor	<p>2.1. Risks to self, others and the environment are recognised and avoided according to enterprise requirements.</p> <p>2.2. Suitable personal protective equipment is used, maintained and stored according to enterprise requirements.</p> <p>2.3. Tractor is operated according to low risk operating procedures in a controlled manner and monitored for performance and efficiency.</p> <p>2.4. Environmental impacts associated with tractor operation are recognised and minimised according to directions.</p>
3. Complete and check tractor operation	<p>3.1. Shut-down procedures are conducted according to manufacturer's specifications and enterprise requirements.</p> <p>3.2. Malfunctions, faults, irregular performance or</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>damage to tractor and attached equipment is detailed and reported according to enterprise requirements.</p> <p>3.3. Tractor and attached equipment is cleaned and decontaminated where necessary, secured and stored according to enterprise and OHS requirements.</p> <p>3.4. Tractor operational reports are maintained to industry standards according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- steer, manoeuvre and position tractor in a smooth and controlled manner
- utilise the various components and controls of tractors
- set and secure equipment for operation
- safely and effectively operate tractors in adverse weather and difficult terrain conditions
- demonstrate safe and environmentally responsible workplace practices
- interpret manufacturers specifications, work and maintenance plans, and Material Safety Data Sheets (MSDSs)
- effectively communicate faults and hazards, interpret and apply task instructions, report and maintain operational records
- calculate and measure distance, volumes and weights
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- tractor components, controls and features and operational functions
- tractor steering systems and features
- attached equipment, features and operational functions and procedures
- operating principles and operating methods
- load limits and the principles of weight distribution with regard to load shifting and tractor movement
- distinguishing characteristics of individual tractors including rated power

**REQUIRED SKILLS AND KNOWLEDGE**

- effects of adverse weather and difficult terrain conditions on tractor operation
- duty of care to self, others and the environment
- use and control of hazardous substances.
- relevant legislation with regard to machinery operation and licensing requirements
- environmental Codes of Practice with regard to machinery operation
- OHS legislative requirements, Codes of Practice, hazard identification and risk assessment.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include evidence of the following:

- carry out pre-operational checks and maintenance including tagging defects
- set and secure attachments according to manufacturer's directions
- operate tractor in a safe and controlled manner
- implement shut-down procedures
- store machinery and equipment
- record maintenance and operation details.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Tractors may include:	<ul style="list-style-type: none"> <li>• two wheel drive</li> <li>• four wheel drive</li> <li>• front wheel assist tractors.</li> </ul>
Steering systems may include:	<ul style="list-style-type: none"> <li>• conventional front-wheel steering</li> <li>• all wheel steering.</li> </ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- use, maintain and store personal protective clothing and equipment
- use safe operating procedures for basic machinery and equipment
- carry out pre start checks for basic machinery and equipment
- carry out basic servicing and maintenance of basic machinery and equipment
- operate basic machinery and equipment
- recognise caution or hazard signs and symbols
- interpret tasks or information from labels, manuals or written instructions
- record information accurately or verbally report information
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- pre-operational and safety checks for basic machinery and equipment
- hazards associated with the operation of basic machinery and equipment
- operating principles and operating methods for basic machinery and equipment
- procedures for cleaning, securing and storing basic machinery and equipment
- risks associated with the operation of machinery and equipment in different weather and difficult terrain conditions
- relevant State/Territory legislation, regulations and Codes of Practice with regard

**REQUIRED SKILLS AND KNOWLEDGE**

- to workplace OHS requirements, and the use and control of hazardous substances
- environmental impacts and minimisation measures associated with the operation of basic machinery and equipment
  - enterprise policies with regard to machinery and equipment use, recording and reporting routines.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- carry out pre-operational checks and maintenance
- tag and report defects if necessary
- secure attachments according to manufacturer's directions
- operate machinery in a safe and controlled manner
- implement shut-down and storage procedures
- record maintenance and operation details.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Basic machinery and equipment may include:	<ul style="list-style-type: none"> <li>• lawn mowers</li> <li>• line cutters</li> <li>• lawn edgers</li> <li>• mechanized horticultural tillage equipment</li> <li>• motorised machinery used in landscape and turf construction projects</li> <li>• motorised machinery used in nursery production</li> <li>• pneumatic pruners and cutters</li> <li>• power tools</li> <li>• conveyors and pumps as used in agriculture, horticulture and land management.</li> </ul>
Basic machinery and equipment does not include:	<ul style="list-style-type: none"> <li>• chainsaws</li> <li>• tractors</li> <li>• vehicles</li> <li>• earth moving equipment</li> <li>• other machinery described elsewhere in these standards.</li> </ul>

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for maintenance	1.1.Maintenance plans are accessed and understood prior to undertaking maintenance work. 1.2.Tools and supplies are selected appropriate to job requirements and confirmed against maintenance plan. 1.3.Tools are inspected for serviceability and prepared for use according to manufacturer's specifications and enterprise requirements. 1.4.Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.
2. Perform scheduled maintenance	2.1.OHS hazards are identified and safety concerns reported to the supervisor. 2.2.Greasing, lubrication and other basic servicing of machinery are carried out according to manufacturer's specifications and enterprise requirements. 2.3.Equipment is adjusted according to manufacturer's specifications and enterprise requirements. 2.4.Basic diagnostic techniques are applied and

ELEMENT	PERFORMANCE CRITERIA
	<p>mechanical faults are identified and rectified according to manufacturer's specifications.</p> <p>2.5. More serious or complex faults are reported for referral according to enterprise requirements.</p>
3. Complete maintenance activities	<p>3.1. Tools are cleaned and stored according to OHS and enterprise requirements.</p> <p>3.2. Waste from maintenance activities is collected, treated and disposed or recycled according to enterprise environmental requirements.</p> <p>3.3. Work areas are cleaned, returned to operating condition and maintained according to OHS and enterprise requirements.</p> <p>3.4. Relevant information is documented according to industry and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and apply safe work practices
- use tools and equipment safely
- carry out basic servicing of machinery
- carry out basic mechanical fault finding and diagnostic tests
- refer complex mechanical faults to appropriate technician
- follow procedures to dispose of waste
- recognise caution or hazard signs and symbols
- interpret tasks or information from labels, manuals or written instructions
- record information accurately or verbally report information
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• types and uses of lubricants and other commonly used servicing materials</li> <li>• operational principles of machinery including mechanical and auto-electrical systems</li> <li>• servicing characteristics of plant and equipment</li> <li>• types, characteristics, uses and limitations of hand power tools</li> <li>• functions of components of common mechanical and hydraulic systems</li> <li>• working principles of 2-stroke, 4-stroke, petrol and diesel engines</li> <li>• set-up requirements of plant and equipment, and principles of calibration</li> <li>• basic diagnostic processes and techniques</li> <li>• environmental Codes of Practice with regard to maintenance activities</li> <li>• OHS and environmental legislative and enterprise requirements and Codes of Practice</li> <li>• hazard identification and OHS procedures.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• select and prepare tools and equipment</li> <li>• carry out lubrication and basic servicing</li> <li>• conduct basic diagnostic tests</li> <li>• report simple faults or report and tag more serious faults</li> <li>• collect, remove and recycle or dispose of wastes</li> <li>• maintain records of machinery maintenance.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare vehicle for use	1.1. Occupational Health and Safety (OHS) hazards in the work area are identified and reported to the supervisor. 1.2. Routine checks and maintenance of vehicle are conducted prior to use according to manufacturers specifications and enterprise requirements. 1.3. Faults or malfunctions are identified and reported for repair according to enterprise requirements. 1.4. Loads are secured according to safe operational specifications, OHS, legislative and enterprise requirements.
2. Drive vehicle	2.1. Suitable personal protective equipment is selected, used, maintained and stored according to OHS and enterprise requirements. 2.2. Vehicle is driven in a safe and controlled manner and monitored for performance and efficiency. 2.3. Driving hazards are identified, anticipated and controlled through the application of safe and defensive driving techniques. 2.4. Environmental implications associated with vehicle operation are recognised and positive enterprise environmental procedures applied where relevant.
3. Complete and record vehicle performance	3.1. Shut-down procedures are conducted according to manufacturer's specifications and enterprise requirements. 3.2. Malfunctions, faults, irregular performance or damage to vehicle is detailed and reported according to enterprise requirements. 3.3. Vehicle is cleaned and decontaminated (where necessary), secured and stored according to enterprise and OHS requirements.

ELEMENT	PERFORMANCE CRITERIA
	3.4. Vehicle operational reports are maintained to industry standards according to enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- steer, manoeuvre and position vehicles in a smooth and controlled manner in on and off-road conditions
- demonstrate safe and environmentally responsible workplace practices
- obtain relevant licenses and permits
- demonstrate emergency procedures and safe driving techniques
- read and comprehend operator manuals
- effectively communicate faults, malfunctions and workplace hazards
- interpret and apply task instructions, report and maintain operational records
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- components, controls and features of vehicles and their functions
- operating principles and operating methods
- load limits and the principles of weight distribution with regard to load shifting and vehicle movement
- effects of adverse weather and terrain conditions on the operation of vehicles
- OHS legislative requirements and Codes of Practice
- Environmental Codes of Practice with regard to the operation of vehicles
- Relevant State/Territory legislation and regulations with regard to licensing, road and traffic requirements.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare side by side utility vehicle for use	1.1. Appropriate personnel protective equipment is used and maintained according to enterprise requirements. 1.2. Conduct routine pre-operational checks. 1.3. Replace and/or report damaged or worn components. 1.4. Identify and report potential Occupational Health and Safety (OHS) hazards. 1.5. Secure loads and ensure weight does not exceed limits. 1.6. Attach equipment and loads that do not exceed the weight limitations or change the dynamic stability of the vehicle. 1.7. Appropriate licenses for operation of vehicles are obtained where required.
2. Operate side by side utility vehicle	2.1. Operate machinery and equipment in a safe, efficient and controlled manner. 2.2. Operate side by side utility vehicles in accordance with task requirements, conditions and manufacturers operating guidelines. 2.3. Assess and minimise potential risks to self, others and the environment. 2.4. Ensure that the vehicles seat belts and other safety features are functional and used. 2.5. Environmental implications associated with side by side utility vehicle operation are recognized and positive enterprise environmental procedures applied where relevant.
3. Complete work	3.1. Follow shut down procedures.

ELEMENT	PERFORMANCE CRITERIA
	3.2. Complete operational records. 3.3. Carry out routine operator servicing. 3.4. Identify and report malfunctions, faults, irregular performance or damage.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- conduct pre-operational checks
- operate machinery in a safe, efficient and controlled manner
- perform operator maintenance tasks
- attach and uncouple associated equipment
- recognise caution or hazard signs and symbols
- interpret tasks or information from labels, manuals or written instructions
- record information accurately or verbally report information
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- equipment characteristics, technical capabilities and limitations
- safe riding techniques including hilly terrain and crossing waterways
- transporting the side by side utility vehicles
- manufacturer's specifications and/or workplace requirements for pre-start checks, machinery operation techniques, load carrying operator level servicing and shutdown emergency procedures
- basic diagnostic techniques
- components and controls, features and functions.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>In order to confer competency, evidence must prove that the candidate is able to:</p> <ul style="list-style-type: none"> <li>• conduct pre and post operational checks;</li> <li>• operate side by side utility vehicles in a safe, efficient and controlled manner;</li> <li>• perform minor maintenance and fault finding; and</li> <li>• give due respect to:                             <ul style="list-style-type: none"> <li>• performance criteria;</li> <li>• application of knowledge and skills;</li> <li>• human exposure to health and safety hazards;</li> <li>• environmental impacts; and</li> <li>• animal welfare.</li> </ul> </li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole.</p>	
<p>The variables for this unit may include:</p>	<ul style="list-style-type: none"> <li>• side by side utility vehicles used in agricultural, horticultural or conservation land management contexts.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare a quad bike for operation	<p>1.1. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p> <p>1.2. Routine checks and maintenance of quad bike is conducted prior to use according to manufacturer's specifications and enterprise requirements.</p> <p>1.3. Attached equipment suitable for quad bikes is fitted according to manufacturer's specifications.</p> <p>1.4. Attached equipment is selected appropriate to work requirements, checked for safety, and set for operation.</p> <p>1.5. Quad bike and equipment faults or malfunctions are identified and reported for repair according to enterprise requirements.</p> <p>1.6. Areas and applications excluded to quad bikes are identified on the farm safety plan.</p> <p>1.7. Appropriate licenses for operation of vehicles are obtained where required.</p> <p>1.8. Unload quad bike safely.</p>
2. Operate a quad bike	<p>2.1. Risks to self, others and the environment are recognised and controlled according to legislative and enterprise requirements.</p> <p>2.2. Suitable personal protective equipment is selected, used and maintained according to legislative and enterprise requirements.</p> <p>2.3. Legislation and enterprise policies are complied with in regards to carrying passengers only bikes</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>specifically equipped for passengers may be used.</p> <p>2.4.Hazards are identified, anticipated and controlled through the application of safe riding techniques.</p> <p>2.5.Farm quad bikes are operated in a safe and controlled manner and monitored for performance and efficiency.</p> <p>2.6.Environmental implications associated with quad bike operation are recognised and positive enterprise environmental procedures applied where relevant.</p>
3. Complete and check quad bike operation	<p>3.1.Shut-down procedures are conducted according to manufacturer's specifications and enterprise requirements.</p> <p>3.2.Malfunctions, faults, irregular performance or damage to ride-on vehicle is detailed and reported according to enterprise requirements.</p> <p>3.3.Quad bikes are cleaned, secured and stored according to enterprise requirements.</p> <p>3.4.Quad bike operational reports are maintained to industry standards according to enterprise requirements.</p> <p>3.5.Load and secure quad bike safely.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- steer, manoeuvre and position quad bikes in a smooth and controlled manner
- apply hand-eye co-ordination and correctly transfer body weight to maintain bike stability
- safely operate quad bikes in a range of weather and terrain conditions
- match and attach equipment to quad bikes according to manufacturer's specifications, legislative requirements, work requirements and enterprise safety policy
- demonstrate safe and environmentally responsible workplace practices
- read and comprehend manufacturer's specifications, work and maintenance plans,

<b>REQUIRED SKILLS AND KNOWLEDGE</b>	
<p>and Material Safety Data Sheets (MSDSs)</p> <ul style="list-style-type: none"> <li>effectively communicate faults and hazards, interpret and apply task instructions, report and maintain operational records</li> <li>use literacy skills to follow sequenced written instructions and record information accurately and legibly</li> <li>use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor</li> <li>use numeracy skills to estimate, calculate and record routine workplace measures</li> <li>use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.</li> </ul>	
<b>Required knowledge</b>	
<ul style="list-style-type: none"> <li>hazards and risks associated with quad bike use</li> <li>components, controls and features of quad bikes and their functions</li> <li>range of quad bikes and attached equipment and functional applications</li> <li>operating principles and operating methods</li> <li>load limits and the principles of weight distribution with regard to load shifting and bike movement</li> <li>effects of adverse weather and terrain conditions on the operation of quad bikes</li> <li>licensing requirements</li> <li>OHS legislative requirements, codes of practice and enterprise procedures</li> <li>codes of practice with regard to the use and control of hazardous substances</li> <li>environmental codes of practice for machinery operation.</li> <li>Safe Operating Procedures (SOPs)</li> <li>record keeping requirements.</li> </ul>	

## Evidence Guide

# AHCMOMB01A Coordinate machinery and equipment maintenance and repair

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of coordinating machinery and equipment maintenance and repair for a small enterprise and defines the standard required to: seek technical advice on scale of repairs required where necessary; establish priorities for work to be carried out; calculate material and resource requirements and place orders; respond to contingencies and take corrective actions where necessary; monitor and document personnel, activities, timelines and materials usage; monitor and report on activities undertaken.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in agriculture, horticulture and land management who ensure that machinery and equipment for the enterprise is maintained and repaired in a way that allows the core business of the enterprise to continue with minimal disruption.
--------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>	

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

### Elements and Performance Criteria Pre-Content

Not Applicable

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for maintenance and repair work	1.1. Requirements of the work responsibilities are clarified with the supervisor and according to enterprise guidelines. 1.2. Equipment and material resource requirements are identified according to the scope of the coordination work and the supervisor's instructions. 1.3. The priorities for maintenance and repair activities and time allocation is identified, documented and presented to the supervisor for verification. 1.4. The environmental implications of the proposed maintenance and repair work are identified and the likely outcomes assessed and reported to the supervisor. 1.5. Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls are implemented. 1.6. Personal Protective Equipment (PPE) is selected, used and maintained according to procedures.
2. Maintain and repair machinery and	2.1. Equipment/machinery is maintained and repaired as authorised by the supervisor and according to

ELEMENT	PERFORMANCE CRITERIA
equipment	<p>enterprise guidelines and work place priorities.</p> <p>2.2. Materials to assist in maintenance and repair work are purchased, stored and/or used as required.</p> <p>2.3. Delivery of materials to the site is organised according to workplace priorities.</p> <p>2.4. Machinery and equipment is organised to be on-site in good order when they are required.</p> <p>2.5. Maintenance and repairs requiring specialist attention and work are identified and organised according to enterprise guidelines.</p>
3. Co-ordinate and report on maintenance and repair activities	<p>3.1. Resources are coordinated and timed to suit the maintenance and repair activities and priority of work.</p> <p>3.2. Operators are informed of appropriate use and their responsibilities in respect to operational maintenance requirements of machinery and equipment.</p> <p>3.3. Personnel, activities, timelines and materials usage are monitored and documented according to enterprise guidelines.</p> <p>3.4. Contingency situations are recognised and reported to the supervisor and corrective actions taken according to enterprise guidelines.</p> <p>3.5. A simple report is written to inform management of maintenance and repair activities undertaken and completed.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- implement safe work procedures and ensure a safe workplace
- read and interpret documentation associated with work site activities
- calculate material and resource requirements
- co-ordinate a team to achieve optimum performance
- document results clearly and concisely
- perform an OHS risk assessment

## REQUIRED SKILLS AND KNOWLEDGE

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- work schedule programming
- possible causes of disruption to work activities and their effect on quality and time schedules
- responsibilities and requirements for maintaining and repairing machinery and equipment
- the range, use and availability of materials, equipment and machinery that may be required for the project
- environmental awareness associated with undertaking maintenance and repair work on machinery and equipment to ensure the impact on the environment is minimal
- OHS issues, legislative requirements and codes of practice.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- seek technical advice on scale of repairs required where necessary
- establish priorities for work to be carried out
- calculate material and resource requirements and place orders
- respond to contingencies and take corrective actions

<b>EVIDENCE GUIDE</b>	
	<p>where necessary</p> <ul style="list-style-type: none"> <li>• monitor and document personnel, activities, timelines and materials usage</li> <li>• monitor and report on activities undertaken.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Hazards may include:	<ul style="list-style-type: none"> <li>• disturbance of services</li> <li>• solar radiation</li> <li>• dust</li> <li>• noise</li> <li>• through traffic</li> <li>• uneven surfaces and holes</li> <li>• moving machinery and machinery parts</li> <li>• powered equipment and hand tools</li> <li>• hazards from use of hired equipment</li> <li>• overhead hazards including powerlines.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out engine/equipment checks	<p>1.1. Timed and regular engine equipment checks are carried out on specialised machinery and equipment as specified in operator manuals.</p> <p>1.2. All relevant grease or lubricant points are lubricated according to manufacturer specifications.</p> <p>1.3. Oils and filters are changed at intervals prescribed in operator manuals.</p> <p>1.4. Hydraulic hoses and systems checked for deterioration and defects actioned in line with supervisor's instructions.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls are implemented.</p>
2. Carry out transmission checks	<p>2.1. Drive and steering clutches are checked for operation and adjustment in line with operator manual.</p> <p>2.2. Transmission oil levels are checked in line with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>operator manual.</p> <p>2.3.Tracks/wheels and undercarriage are checked for oil leaks and wear.</p> <p>2.4.Faulty seals or leaks are identified and corrective actions taken according to operator's instructions.</p> <p>2.5.Machine is regularly cleaned as an integral part of maintenance checks.</p>
3. Maintain components and attachments	<p>3.1.Personal protective equipment (PPE) is selected, used and maintained according to procedures.</p> <p>3.2.Machine operational replacement wear components are checked for wear and condition.</p> <p>3.3.Worn or unserviceable replacement components are replaced as part of daily routines.</p> <p>3.4.Component inspection and replacement activities are completed safely following enterprise and industry guidelines.</p> <p>3.5.Moving operational components are checked for wear and condition and adjusted to the tolerances specified in operator manuals where applicable.</p> <p>3.6.Work areas are cleaned, returned to operating condition and maintained according to enterprise and OHS requirements.</p>
4. Record maintenance	<p>4.1.Identified faults and defects are recorded in machine record.</p> <p>4.2.Maintenance procedures including duplicates usage are recorded in workshop record.</p> <p>4.3.Service or repair requirements are reported and actioned according to prescribed procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- carry out engine/equipment checks
- carry out transmission checks

## REQUIRED SKILLS AND KNOWLEDGE

- replace parts and carry out lubrication required at servicing
- maintain machinery and equipment components
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- engine function principles
- turbo charging and after cooling
- assessing engine specifications in line with power requirements
- all engine electric and hydraulic indicators and gauges
- transmission and drive systems
- machinery and equipment operation principles
- environmental impacts of machinery servicing and legislation covering disposal of fuels, oils and other wastes
- OHS and environmental legislation, enterprise requirements and codes of practice.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- carry out engine/equipment checks according to operator manuals and enterprise requirements

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• carry out lubrication and replacement of oils and filters according to operators manual</li> <li>• carry out transmission checks including drive and steering clutches and oil levels</li> <li>• check machinery and equipment components for wear and tear, and replace, tag and report defects, if necessary</li> <li>• dispose of replaced parts and oils according to legislation and enterprise procedures</li> <li>• record all details of maintenance and requirements for monitoring.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Types of machinery may include:	<ul style="list-style-type: none"> <li>• machinery and equipment that is used on diverse agricultural, horticultural and rural enterprises. This includes: <ul style="list-style-type: none"> <li>• heavy earthmoving equipment</li> <li>• tractors</li> <li>• vehicles and trucks</li> <li>• skid steer loaders</li> <li>• self-propelled harvesters and pickers</li> <li>• front end loaders</li> <li>• forklifts</li> <li>• land levellers</li> <li>• pumps</li> <li>• grain handling equipment.</li> </ul> </li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare machinery and equipment for use	1.1. Machine and equipment is selected appropriate to job requirements and confirmed against a work plan. 1.2. Routine pre-operational checks of machinery and equipment are carried out to manufacturer's specifications and enterprise requirements. 1.3. Equipment is securely attached and calibrated for operation to manufacturer's specifications. 1.4. Faulty machinery and equipment is identified, safety tagged, and reported to supervisor according to enterprise requirements. 1.5. Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls are implemented.
2. Operate machinery and equipment	2.1. Machinery and equipment is operated in a safe and controlled manner, and monitored for performance and efficiency. 2.2. Risk to self, others and the environment are recognised and minimised according to enterprise and OHS requirements. 2.3. Personal Protective Equipment (PPE) is selected, used and maintained according to procedures. 2.4. Environmental implications associated with machinery operation are identified, assessed and taken into account.

ELEMENT	PERFORMANCE CRITERIA
3. Check and complete machinery and equipment operation	3.1.Machinery and equipment shut-down procedures are carried out to manufacturer's specifications and enterprise requirements. 3.2.Machinery and equipment operational records are maintained according to enterprise requirements. 3.3.Machinery and equipment damage, malfunctions or irregular performance are recorded and/or reported according to enterprise requirements. 3.4.Machinery and equipment is cleaned, secured and stored according to manufacturer's specifications and enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- complete pre-operational checks
- recognise and report defects
- operate machinery and equipment to industry standards
- demonstrate safe and environmentally responsible workplace practices
- read and interpret manufacturer's specifications, work and maintenance plans, and Material Safety Data Sheets (MSDSs)
- interpret and apply instructions, communicate with work team and supervisor, record and report equipment faults, workplace hazards, and accidents
- measure and calculate volumes, consumption and servicing requirements
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- manufacturers specifications for servicing of machinery and equipment
- operating principles and operating methods for machinery and equipment
- principles of weight distribution with regard to load shifting and machinery movement
- procedures for cleaning, securing and storing machinery, equipment and materials
- potential risks and hazards associated with the operation of machinery and

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
equipment <ul style="list-style-type: none"> <li>• use of hazardous substances</li> <li>• environmental impacts and minimisation measures associated with the operation of machinery and equipment</li> <li>• OHS and environmental legislation, regulations and Codes of Practice</li> <li>• relevant State/Territory legislation, regulations and Codes of Practice with regard to licensing, roads and traffic requirements.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following: <ul style="list-style-type: none"> <li>• carry out pre-operational checks and maintenance and report defects if necessary</li> <li>• secure attachments according to manufacturer's directions</li> <li>• operate machinery in a safe and controlled manner</li> <li>• follow procedures to minimise environmental impacts</li> <li>• implement shut-down procedures and store machinery and equipment</li> <li>• record maintenance and operation details</li> <li>• evidence records must include details of the machinery and equipment that the candidate was assessed on.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

3. Complete and report on specialised machinery and	<p>3.1. Shut-down procedures for specialised machinery and equipment are completed to manufacturer's specifications and enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
equipment operation	<p>3.2. Specialised machinery and equipment operational records are completed and maintained according to enterprise requirements.</p> <p>3.3. Malfunctions, faults, irregular performance and damage to specialised machinery and equipment are detailed and reported according to enterprise requirements.</p> <p>3.4. Specialised machinery and equipment is cleaned, secured and stored according to OHS and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- select the appropriate machinery and equipment for the work plan
- determine and check operating methods with management
- carry out pre-operational checks on machinery
- examine faults or breakdowns and specify repairs
- use machinery or equipment in a safe and controlled manner to perform specific tasks by utilising the various components, controls and features
- maintain and monitor performance and maintenance records
- use environmentally responsible practices for operation of machinery and equipment, and to dispose of used oils and machinery parts
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- manufacturer's requirements and/or workplace requirements for:

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• pre-operational checks</li> <li>• machinery operation techniques</li> <li>• operator level servicing</li> <li>• shutdown</li> <li>• emergency procedures</li> <li>• basic diagnostic techniques</li> <li>• equipment characteristics, technical capabilities and limitations</li> <li>• components and controls features and functions</li> <li>• OHS and environmental legislation, Codes of Practice and enterprise requirements</li> <li>• licensing requirements for machinery.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• prepare and operate the machinery in accordance with manufacturer specifications</li> <li>• operate the machinery in a safe, efficient and controlled manner</li> <li>• conduct pre and post operational checks</li> <li>• perform minor maintenance and fault finding</li> <li>• record work activities</li> <li>• Evidence records must include a description of the machinery and equipment that the candidate was assessed on.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or</p>

<b>EVIDENCE GUIDE</b>	
	enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Machinery and equipment may include:	<ul style="list-style-type: none"> <li>• feed mixers</li> <li>• specialised turf equipment</li> <li>• specialised nursery equipment</li> <li>• livestock feeding systems</li> <li>• filtering and pumping equipment</li> <li>• poultry performance monitoring equipment</li> <li>• fertilising application</li> <li>• grain handling equipment.</li> </ul>

## AHCMOMB06A Ground spread fertiliser and soil ameliorant

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit standard covers the process of spreading fertiliser and soil ameliorants according to environmentally sound practices to meet customer requirements and industry standards and defines required to: assess environmental and physical hazards that may be encountered when ground spreading and take appropriate action to minimise these risks; maintain and operate spreading equipment to meet industry standards for uniformity of application; maintain and operate spreading equipment to meet Occupational Health and Safety (OHS) requirements; apply fertiliser or soil ameliorants at rate agreed by customer to specified land area.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit is carried out under limited or independently and follows established enterprise procedures and the requirements of the land owner. The work may be performed as part of a team. If load-shifting equipment is required then appropriate training/certification must be provided according to state and territory safety and licensing requirements
--------------------------------	---

### Licensing/Regulatory Information

Refer to Application of the Unit

### Pre-Requisites

<b>Prerequisite units</b>	
---------------------------	--

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Confirm customer requirements.	<p>1.1. Confirmation is sought from customer that fertiliser or soil ameliorant products to be spread are those that were ordered.</p> <p>1.2. Verification is obtained from customer that technical specification of product is acceptable for job.</p> <p>1.3. Customer's written fertiliser order is confirmed with customer and documented to enable trace back to depot or factory if required.</p> <p>1.4. Agreement for spreading services is documented according to enterprise or industry codes of practice.</p>
2. Identify features of the target area.	<p>2.1. Location and boundaries of area to be treated are identified, agreed with customer and recorded according to relevant industry codes of practice.</p> <p>2.2. Soil type and condition are assessed visually or advice is sought from customer.</p> <p>2.3. Environmentally sensitive areas are identified and operations are planned to ensure minimum adverse impact and to comply with any required buffer zones.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.4. Features that may present a hazard to the operation are identified by inspection and by discussion with customer and appropriate action is taken.</p> <p>2.5. Location of services and utilities are identified from customer advice or local maps, and proposed spreading operation is adjusted if required.</p> <p>2.6. Local weather and climate conditions are identified and taken into account when preparing to begin operations.</p>
3. Perform pre-spreading checks.	<p>3.1. Rate of spreading is determined and buffer allowance is calculated.</p> <p>3.2. Before being moved onto site, machinery and equipment are confirmed to be clean of soil and/or plant material.</p> <p>3.3. Machinery and equipment are prepared according to enterprise procedures and manufacturer instructions to ensure they are serviceable and are set up and calibrated.</p>
4. Spread fertiliser	<p>4.1. Personal Protective Equipment (PPE) and clothing are selected and used by self and all personnel involved in spreading tasks.</p> <p>4.2. Fertiliser or soil ameliorant is applied in a manner that complies with guidelines on buffer zones, to minimise run-off into waterways and drains.</p> <p>4.3. Weather and other conditions are monitored to ensure that variations that may alter limits to operation are taken into account, and that operations are adjusted accordingly.</p> <p>4.4. Any existing site quarantine or biosecurity protocols are followed as required.</p> <p>4.5. All work is monitored to ensure that it is performed in an environmentally aware and safe manner and according to industry codes of practice.</p>
5. Perform follow up and clean-up activities on completion of spreading operations	<p>5.1. Machinery, equipment and hand tools are returned to depot or storage area after cleaning, checking for future serviceability, and carrying out basic preventative maintenance according to enterprise procedures.</p> <p>5.2. Faults are noted for remedial action.</p> <p>5.3. Records are completed legibly and accurately, according to enterprise procedures and industry codes of practice.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identifying hazards and implementing safe work procedures
- communicating with clients to ensure a common understanding of task to be performed
- monitoring and recording activities performed
- operating equipment according to manufacturer recommendations and in line with equipment calibration
- using maps and interpreting written instructions regarding areas to be spread, and products and rates to be applied
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- equipment being used and understanding of appropriate service and safety checks
- environmental risks and how to identify and manage them
- operational limits of equipment being used with regard to uniformity of application and health and safety risks
- spreading characteristics of different fertiliser and soil ameliorant products.
- environmental impacts of fertiliser spreading including hazards to waterways
- OHS hazards including operating in rough or steep terrain.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<b>EVIDENCE GUIDE</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assess environmental and physical hazards that may be encountered when ground spreading and take appropriate action to minimise these risks</li> <li>• maintain and operate spreading equipment to meet industry standards for uniformity of application</li> <li>• maintain and operate spreading equipment to meet health and safety requirements</li> <li>• apply fertiliser or soil ameliorants at rate agreed by customer to specified land area.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Equipment and products may include:	<ul style="list-style-type: none"> <li>• all ground spreading machinery and equipment.</li> </ul>
Products to be spread include:	<ul style="list-style-type: none"> <li>• chemical and organic fertilisers, composts, lime and dolomite.</li> </ul>
Equipment must include	<ul style="list-style-type: none"> <li>• the tractors or other drive equipment used in the operation.</li> </ul>

# AHCMOMB07A Operate a cane harvester

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of preparing and operating a cane harvester in the sugar cane production industry and defines the standard required to: conduct pre-start and shut-down procedures; communicate and co-operate with other personnel such as haul-out drivers; control cane spillage; demonstrate emergency driving procedures; effectively sterilise the harvester to prevent cross-property contamination; maintain operational records.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit applies to correctly setting-up, calibrating and operating a cane harvester to maximise sustainable cane production. The work is likely to be carried out under routine supervision within enterprise guidelines.
--------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare a cane harvester for operation	<p>1.1. Routine pre-operational checks of cane harvester are completed to manufacturer's specifications and enterprise requirements.</p> <p>1.2. Cabin drill is carried out according to enterprise instructions and safety routines.</p> <p>1.3. Potential and existing hazards in the workplace are recognised, risks assessed and controlled according to Occupational Health and Safety (OHS) requirements.</p> <p>1.4. Suitable personal protective equipment is selected, used and maintained according to OHS requirements.</p> <p>1.5. Crop class, variety and field for harvest is correctly located and selected.</p>
2. Carry out cane harvesting	<p>2.1. Harvester is set and operated in a safe, controlled and correct manner and monitored for performance and efficiency.</p> <p>2.2. Harvester is operated in co-ordination with haul out vehicles and other associated harvesting equipment.</p> <p>2.3. Cane is harvested in a productive, safe and controlled manner and correctly consigned.</p> <p>2.4. Risks to self, others and the environment are anticipated and minimisation strategies implemented accordingly.</p> <p>2.5. Environmental implications associated with cane harvesting are identified, assessed and reported to the supervisor.</p>
3. Complete cane	3.1. Shut-down procedures for cane harvester are

ELEMENT	PERFORMANCE CRITERIA
harvesting operations	<p>completed to manufacturer's specifications and enterprise requirements.</p> <p>3.2. Harvester is sterilised at scheduled times according to operators manual and enterprise requirements.</p> <p>3.3. Records are completed and maintained according to enterprise requirements.</p> <p>3.4. Malfunctions, faults, irregular performance and damage to cane harvester are identified, detailed and reported according to enterprise requirements.</p> <p>3.5. Cane harvester is cleaned, secured and stored according to OHS and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- readily familiarise self with local conditions
- perform routine safety, basic service and maintenance procedures on cane harvesters
- demonstrate emergency operating procedures
- obtain licenses and permits
- demonstrate safe and environmentally responsible workplace practices
- read and interpret property maps, operators manuals, manufacturers specifications, work and maintenance plans, and MSDS
- communicate faults, malfunctions and workplace hazards, report and maintain operational records
- comprehend and apply task instructions
- measure and calculate volumes, feed rates, consumption and servicing requirements
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• components, controls and features of cane harvesters and their functions</li> <li>• operating principles and operating methods for cane harvesters</li> <li>• cane harvester processes and spillage minimisation techniques</li> <li>• legislative requirements with regard to licensing</li> <li>• harvest and haulage processes and procedures</li> <li>• principles of the safe removal of obstacles from harvesters and adjustment of harvester settings</li> <li>• OHS and environmental protection legislation, codes of practice and enterprise procedures</li> <li>• environmental impacts and minimisation measures.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• conduct pre-start and shut-down procedures</li> <li>• communicate and co-operate with other personnel such as haul-out drivers</li> <li>• control cane spillage</li> <li>• demonstrate emergency driving procedures</li> <li>• effectively sterilise the harvester to prevent cross-property contamination</li> <li>• maintain operational records.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Hazards may include:	<ul style="list-style-type: none"> <li>• disturbance of services</li> <li>• solar radiation</li> <li>• dust</li> <li>• noise</li> <li>• through traffic</li> <li>• uneven surfaces and holes</li> <li>• moving machinery and machinery parts</li> <li>• overhead hazards including powerlines.</li> </ul>

## Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit is used to optimise specialised machinery performance. It is likely to be carried out under limited supervision within enterprise guidelines. A level of technical understanding is required to make best use of the equipment and recognise operating faults and anomalies.</p>
---------------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<p><b>Prerequisite units</b></p>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare precision technology for use	1.1. Complete routine pre-operational checks in accordance manufacturer specifications. 1.2. Carry out and record minor routine servicing and house keeping tasks. 1.3. Identify and report Occupational Health and Safety (OHS) hazards. 1.4. Check ancillary equipment for correct operation. 1.5. Check that data complies with job specifications.
2. Use precision technology	2.1. Operate technology in accordance with task requirements, conditions and manufacturer operating guidelines. 2.2. Monitor activities to ensure that machinery is operating in an efficient and controlled manner and make adjustments as required. 2.3. Assess and minimise potential risks to self, others and the environment during operation.
3. Complete work	3.1. Follow shutdown procedures. 3.2. Download data and/or complete operational records. 3.3. Perform basic diagnostic procedures. 3.4. Identify and report malfunctions, faults and irregular performance.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- conduct pre-operational checks
- use technology to operate machinery in an efficient and controlled manner
- perform routine maintenance tasks
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- manufacturer specifications and requirements for:
  - pre-operational checks
  - precision instrument controls, feature and functions
  - minor servicing
- uploading and downloading of data
- basic diagnostic techniques
- characteristics, technical capabilities and limitations of associated machinery and equipment
- components and controls features and functions.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and

The evidence required to demonstrate competency in this

<b>EVIDENCE GUIDE</b>	
<b>evidence required to demonstrate competency in this unit</b>	<p>unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• conduct pre- and post-operational checks</li> <li>• operate precision control technology</li> <li>• perform minor maintenance and fault finding</li> <li>• record work activities.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
The types of machinery and equipment may include:	<ul style="list-style-type: none"> <li>• on-board and fixed precision control technology.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare machinery for use	<p>1.1. Occupational Health and Safety (OHS) hazards for working with machinery are identified, risks assessed and risk controls are implemented.</p> <p>1.2. Appropriate personnel protective equipment is selected, used and maintained.</p> <p>1.3. Routine pre-operational checks and house keeping tasks are conducted.</p> <p>1.4. Damaged or worn components are replaced and/or reported.</p> <p>1.5. Ancillary equipment and check for correct operation is attached.</p>
2. Operate machinery and equipment	<p>2.1. Machinery and equipment is operated in a safe, efficient and controlled manner.</p> <p>2.2. Machinery is operated in accordance with task requirements, conditions and manufacturer's operating guidelines.</p> <p>2.3. Machinery performance and efficiency is monitored and adjustments made as required.</p> <p>2.4. Potential environmental risks of operating sowing equipment are assessed and minimised.</p>
3. Complete work	<p>3.1. Shut down procedures are followed.</p> <p>3.2. Operational records are completed.</p> <p>3.3. Routine operator servicing is carried out.</p> <p>3.4. Malfunctions, faults, irregular performance or</p>

ELEMENT	PERFORMANCE CRITERIA
	damage are identified and reported.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- conduct pre-operational checks
- operate machinery in a safe, efficient and controlled manner
- follow planting requirements
- perform operator maintenance tasks
- attach and uncouple associated equipment
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- manufacturer's requirements and/or workplace requirements for:
- pre-operational checks
- machinery operation techniques
- operator level servicing
- shutdown
- emergency procedures
- precision agriculture and controlled traffic
- basic diagnostic techniques
- equipment characteristics, technical capabilities and limitations
- components and controls features and functions
- OHS legislation and requirements for operators
- risks to environment from operating sowing equipment for row crops.

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Load machines	<p>1.1.The enterprise safe operating procedures for transporting machinery are sourced and complied with.</p> <p>1.2.Trailer or float is prepared for loading according to contractor policy.</p> <p>1.3.Machine is loaded in compliance with safe operating procedures.</p> <p>1.4.Tying down procedures are completed in line with recognised industry standards.</p> <p>1.5.Machine is secured to prevent movement in transport according to industry practice.</p> <p>1.6.Legal requirements for signs indicating oversized loads are met.</p> <p>1.7.Legal requirements for permits, clearances and escorts for transporting oversized loads are arranged.</p>
2. Transport machines	<p>2.1.Machines are driven on or off road in compliance with relevant legislation.</p> <p>2.2.Machinery is loaded and driven safely to destination in compliance with relevant legislation.</p> <p>2.3.Selected transport route for oversized loads complies with permits, clearances and relevant legislation.</p> <p>2.4.Machines are unloaded safely in line with accepted workplace policy.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- load and unload earthmoving machines
- secure machinery as a transport load
- provide an escort to wide loads
- travel earthmoving machines
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the provisions, requirements and legislation pertaining to heavy transport
- principles for machine operation
- tying down procedures for large machinery.
- Occupational Health and Safety (OHS), vehicle and operator licensing, and road transport legislation
- OHS and environmental legislation, codes of practice and enterprise requirements.

## Evidence Guide

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare machinery for use	1.1. Select and use appropriate personal protective equipment. 1.2. Conduct routine pre-operational checks and house keeping tasks. 1.3. Replace and/or report damaged or worn components. 1.4. Identify and report potential Occupational Health and Safety (OHS) hazards. 1.5. Identify and report potential environmental impacts. 1.6. Calibrate/set up equipment in accordance with spray/application plan. 1.7. Attach ancillary equipment and check for correct operation. 1.8. Undertake and record pre-operational checks.
2. Operate machinery and equipment	2.1. Operate machinery and equipment in a safe, efficient and controlled manner. 2.2. Operate machinery in accordance with task requirements, conditions and manufacturers operating guidelines. 2.3. Monitor machinery performance and efficiency and

ELEMENT	PERFORMANCE CRITERIA
	<p>make adjustments as required.</p> <p>2.4. Assess and minimise potential risks to self, others, product integrity and the environment.</p> <p>2.5. Monitor meteorological conditions during application</p> <p>2.6. Wear appropriate personal protective equipment during operation and clean up.</p>
3. Complete work	<p>3.1. Follow shut down procedures.</p> <p>3.2. Clean/flush components in accordance with manufacturer's specifications and chemical label requirements.</p> <p>3.3. Complete operational records in accordance with legislative and/or regulatory requirements.</p> <p>3.4. Carry out routine operator servicing.</p> <p>3.5. Identify and report malfunctions, faults, irregular performance or damage.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- conduct pre-operational checks
- calibration/set up of application components
- operate machinery in a safe, efficient and controlled manner
- perform operator maintenance tasks
- attach and uncouple associated equipment
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- manufacturers specifications and/or workplace requirements for:
  - pre-operational checks
  - machinery operation techniques
  - operator level servicing
  - shutdown emergency procedures
- features and function of application equipment components:
  - liquid spray - nozzles, tanks, agitation systems, pumps, filters, pressure regulation valves etc
  - granular applicators/dusters - hoppers, flow control valves etc
- effect of meteorological conditions on chemical application
- equipment characteristics, technical capabilities and limitations
- basic diagnostic techniques
- equipment characteristics, technical capabilities and limitations
- components and controls features and functions
- environmental impacts including spray drift.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare the machinery in accordance with manufacturer specifications
- operate the machinery in a safe, efficient and controlled manner
- conduct pre and post operational checks
- perform minor maintenance and fault finding

# AHCMOM401A Conduct major repair and overhaul of machinery and equipment

## Modification History

Not Applicable

## Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit covers conducting major repair and overhaul of machinery and equipment and defines the standard required to: diagnose faults and repair requirements; dismantle and reassemble parts and components of machinery and equipment; select and use tools and materials appropriate to the task; carry out repairs and servicing of a range of machinery and equipment; determine appropriate cutting and welding techniques; operate welding equipment safely and effectively.</p>
-------------------------------	---

## Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit applies to those working in a technical role to ensure that machinery and equipment for the enterprise is repaired or overhauled in a way that allows the core business of the enterprise to continue with minimal disruption.</p>
---------------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<p><b>Prerequisite units</b></p>		

<b>Prerequisite units</b>	

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

### Elements and Performance Criteria Pre-Content

Not Applicable

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to carry out major repairs and overhaul of machinery and equipment	1.1. Major repairs and overhaul requirements for machinery and equipment are identified and resources organised according to manufacturer's recommendations and enterprise requirements. 1.2. Tools and equipment are identified, accessed and confirmed against job requirements. 1.3. Potential and existing hazards in the workplace are risk assessed and controlled according to Occupational Health and Safety (OHS) and enterprise requirements. 1.4. Suitable personal protective equipment is used and maintained according to OHS and enterprise requirements.
2. Conduct major repairs and overhaul of machinery and equipment	2.1. Machinery and equipment faults and malfunctions are located and confirmed. 2.2. Scope and costing for repairs or overhaul are estimated for approval by management. 2.3. Repair and replacement process is implemented for major repairs according to enterprise requirements, manufacturer's specifications and OHS procedures.

ELEMENT	PERFORMANCE CRITERIA
	2.4. Worn or damaged parts in need of overhaul are identified, removed and overhauled. 2.5. Appropriate personnel are consulted as necessary in regard to overhaul requirements and major repairs according to enterprise requirements.
3. Carry out advanced welding repairs and workplace engineering	3.1. Cutting and welding equipment and materials are selected, set-up and started according to industry and OHS standards and enterprise requirements. 3.2. OHS hazards are identified, risks assessed and risk controls are implemented, monitored and reviewed. 3.3. Cutting and welding is conducted to industry and safety standards and according to enterprise requirements. 3.4. Workplace engineering tasks to modify design or manufacture parts are carried out according to enterprise and job requirements.
4. Complete major repairs and overhaul operation	4.1. Tools and equipment are shut down, adjusted, cleaned and stored consistent with manufacturer's specifications and enterprise requirements. 4.2. Waste from repair and maintenance activities is collected, treated and disposed or recycled according to enterprise environmental requirements. 4.3. Work areas are cleaned, returned to operating condition and maintained according to OHS and enterprise requirements. 4.4. Records of breakdowns, major repairs, overhauls, incidents and work conducted is detailed and recorded according to enterprise, industry and legislative requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- recognise and replace deteriorated or worn parts
- plan and meet seasonal deadlines

<b>REQUIRED SKILLS AND KNOWLEDGE</b>	
<ul style="list-style-type: none"> <li>• identify most effective and economic option in the replacement, repair and overhaul of components</li> <li>• use and maintain welding and thermal cutting equipment</li> <li>• use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views</li> <li>• use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>	
<b>Required knowledge</b>	
<ul style="list-style-type: none"> <li>• assemblies and components of drive, electrical and hydraulic systems</li> <li>• operational requirements of machinery and equipment</li> <li>• detailed knowledge of mechanics and equipment operating systems</li> <li>• storage and use of welding equipment</li> <li>• OHS legislative and enterprise requirements</li> <li>• environmental codes of practice with regard to the major repair of machinery and equipment.</li> </ul>	

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• diagnose faults and repair requirements</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• dismantle and reassemble parts and components of machinery and equipment</li> <li>• select and use tools and materials appropriate to the task</li> <li>• carry out repairs and servicing of a range of machinery and equipment</li> <li>• determine appropriate cutting and welding techniques</li> <li>• operate welding equipment safely and effectively.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Machinery and equipment may include:	<ul style="list-style-type: none"> <li>• harvesters</li> <li>• tractors</li> <li>• seeding machines with components such as metering systems, air flow control, blower drives, air system, electronic monitoring systems, hydraulic hoses and couplings</li> <li>• engines</li> <li>• boom spray units</li> <li>• harvesters</li> <li>• associated grain-handling equipment.</li> </ul>
The repair and replacement process for machinery may involve:	<ul style="list-style-type: none"> <li>• rectifying major faults and restoring machinery and equipment systems to an acceptable status of operation by replacing worn, failed, faulty or damaged mechanical, hydraulic, basic electrical or frame and support structure parts and components.</li> </ul>
The repair and replacement process for machinery may include:	<ul style="list-style-type: none"> <li>• carrying out tests and making adjustments</li> <li>• rectifying faults by welding, aligning, tightening, securing or adjusting components that are not a part of normal service operations</li> <li>• Major repairs may require dismantling and</li> </ul>

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare maintenance plan	<p>1.1. Maintenance requirements for property, machinery and equipment are identified from relevant information sources.</p> <p>1.2. Maintenance costs are identified and quantified.</p> <p>1.3. Maintenance requirements are checked against warranty, insurance agreements and indemnity provisions.</p> <p>1.4. Maintenance plan is developed to promote and sustain performance and production systems in line with enterprise requirements.</p> <p>1.5. Effective workplace communication strategies are established with regard to maintenance plan, environmental and Occupational Health and Safety (OHS) policies, and enterprise requirements.</p>
2. Implement maintenance plan	<p>2.1. Resource and supply requirements are identified, secured and included in enterprise budgets and operational considerations.</p> <p>2.2. Prepared maintenance schedules and procedures are effectively communicated to staff, contractors and suppliers to minimise negative impacts on production and costs.</p> <p>2.3. Maintenance plan is implemented and scheduled to minimise disruption to enterprise operations.</p> <p>2.4. Potential risks are assessed with regard to staff and supply problems, and contingency plans prepared accordingly.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.5. Tasks required are aligned to staff capability, and training is provided where required.</p> <p>2.6. Machinery and equipment are operated to manufacturer's specifications, OHS and enterprise requirements.</p>
3. Monitor maintenance plan	<p>3.1. Maintenance activities and performance are monitored against maintenance plan for efficiency and effectiveness.</p> <p>3.2. Workplace hazards and environmental implications associated with maintenance procedures are monitored and controlled in line with OHS and enterprise requirements.</p> <p>3.3. Costs are monitored and controlled within enterprise budget requirements.</p> <p>3.4. Relevant information with regard to the maintenance plan is documented in accordance with enterprise requirements.</p> <p>3.5. Property, machinery and equipment are maintained in clean and safe operational conditions.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and oversee safe work practices
- plan, cost and schedule maintenance requirements
- establish and monitor performance targets for maintenance team
- monitor and access performance of maintenance activities
- observe the emergence and supervise the removal of workplace hazards and risks
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<p>workplace measures and data</p> <ul style="list-style-type: none"> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• types of maintenance requirements with regard to property, machinery and equipment</li> <li>• maintenance and servicing cycles for property, machinery and equipment</li> <li>• relevant State/Territory legislation, regulations and Codes of Practice with regard to workplace OHS and environmental protection requirements, and the use and control of hazardous substances</li> <li>• hazards and risks and respective control measures</li> <li>• training and instruction techniques for directing the learning of staff.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• schedule and cost the maintenance requirements of machinery</li> <li>• order materials, allocate resources and schedule maintenance</li> <li>• carry out maintenance with regard to timelines, costs and safety</li> <li>• deal with contingencies and reschedule maintenance where necessary</li> <li>• dispose of waste products according to environmental legislation and enterprise procedures.</li> </ul>

<b>EVIDENCE GUIDE</b>	
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Supervision may include:	<ul style="list-style-type: none"> <li>the range of maintenance programs performed in agriculture horticulture industry enterprises.</li> </ul>

### Unit Sector(s)

<b>Unit sector</b>	Machinery operation and maintenance

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Evaluate machinery and equipment	<p>1.1. Operations of available machinery and equipment are reviewed and matched to production processes and OHS requirements.</p> <p>1.2. Operation and servicing costs of machinery and equipment are calculated to justify total purchasing price.</p> <p>1.3. Productivity returns from machinery and equipment are estimated to identify benefit to production processes.</p> <p>1.4. Machinery and equipment replacement cycles are monitored to identify improvement options and maximise life cycles of components.</p> <p>1.5. Machinery and equipment is accessed through appropriate procurement options.</p>
2. Coordinate maintenance	<p>2.1. Maintenance and service cycles are identified and scheduled to ensure servicing is according to manufacturer's specifications and production processes.</p> <p>2.2. Storing and housing of machinery and equipment is</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>costed and organised.</p> <p>2.3.Maintenance is documented and recorded to ensure operational and service history.</p> <p>2.4.OHS hazards in the workplace are identified, risk assessed, and risk controls are recorded and reviewed according to enterprise requirements.</p> <p>2.5.Suitable personal protective equipment is provided, used, maintained and stored according to OHS requirements.</p> <p>2.6.Repair and maintenance routines are developed and monitored according to manufacturer's specifications and OHS requirements.</p>
3. Monitor operation	<p>3.1.Consumables and operational support materials are made available, maintained and disposed of according to enterprise requirements.</p> <p>3.2.Environmental implications and workplace safety practices are monitored according to enterprise requirements.</p> <p>3.3.Operational procedures are clear, documented and followed according to manufacturer's specifications.</p> <p>3.4.Operators are provided with competent instruction and appropriate supervision according to OHS requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe systems of work
- monitor machinery and equipment operations
- evaluate machinery and equipment
- identify skill needs of staff
- identifying, assessing and controlling hazards
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views</li> <li>• use numeracy skills to estimate, calculate and record complex workplace measures</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• servicing and maintaining machinery and equipment within area of responsibility</li> <li>• methods of calculating the cost of machines and their contribution</li> <li>• training and instruction techniques for directing the learning of staff</li> <li>• relevant OHS and environmental issues, legislative requirements and Codes of Practice</li> <li>• OHS hazard identification, risk assessment and developing risk controls</li> <li>• environmental legislation and Codes of Practice with regard to maintenance of machinery and equipment, disposal of wastes and hazardous substances</li> <li>• legislative and enterprise requirements for OHS.</li> </ul>

# AHCMOM502A Implement a machinery management system

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the implementation of a machinery management system and defines the standard required to: identify machinery and equipment requirements for the property; source machinery services provided by external suppliers where required; manage machinery and equipment maintenance; manage machinery and equipment operation.
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes establishing a system for the management of machinery.
--------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify machinery and equipment requirements for the property	<p>1.1. Machinery and equipment requirements are identified for the enterprises being conducted.</p> <p>1.2. Alternative options to machinery ownership are evaluated for applicability.</p> <p>1.3. Storage and housing requirements for machinery and equipment are identified and addressed.</p> <p>1.4. Machinery innovations are monitored and assessed for applicability.</p> <p>1.5. Inventory of machinery and equipment is maintained as required by the enterprise.</p>
2. Select and manage the range of machinery services provided by off-farm suppliers	<p>2.1. Services to be provided by off-property suppliers are identified.</p> <p>2.2. Criteria to select and monitor the provision of services are developed.</p> <p>2.3. Agreements and transactions are appropriately recorded and monitored.</p>
3. Manage machinery maintenance	<p>3.1. Maintenance requirements of machinery and equipment are determined from manufacturer's instructions, and maintenance schedules are established.</p> <p>3.2. Systems for recording machinery use and maintenance are established.</p> <p>3.3. Machinery maintenance is monitored to ensure adherence to schedules and manufacturers instructions.</p>
4. Manage machinery and equipment	<p>4.1. Machinery and equipment use is monitored and recorded according to enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
operation	<p>4.2. Machinery operation is monitored to ensure compliance with manufacturers instructions.</p> <p>4.3. Procedures for the safe operation of machinery are determined and adherence to safe procedures is monitored and ensured.</p> <p>4.4. Staff are trained in the safe operation of machinery and the required procedures for the maintenance of machinery.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and manage safe systems of work
- identify machinery and equipment requirements for the property or enterprise
- select and manage the range of machinery services provided by off-farm suppliers
- manage machinery maintenance
- manage machinery and equipment operation
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- cultural operations and their associated machinery requirements
- costs associated with the use of machinery
- maintenance requirements of machinery and equipment
- storage and housing requirements of machinery
- negotiation and the development of agreements
- safe operating procedures for machinery

**REQUIRED SKILLS AND KNOWLEDGE**

- systems for monitoring machinery maintenance and operation
- licensing requirements for the operation of machinery
- Occupational Health and Safety (OHS) and environmental legislation, codes of practice and enterprise requirements
- staff training.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify machinery and equipment requirements for the property
- source machinery services provided by external suppliers where required
- manage machinery and equipment maintenance
- manage machinery and equipment operation.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Machinery and equipment will include:

- all vehicles and attachments
- stationary and mobile plant used by the enterprise.

**Unit Sector(s)**

<b>Unit sector</b>	Machinery operation and maintenance

## AHCMOM601A Analyse machinery options

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the analysis of machinery options within an agricultural, horticultural or land management enterprise and defines the standard required to: calculate the total running cost of machinery; review the machinery needs of the enterprise and evaluate costed alternative options; budget the calculated rate of return on investments using benchmarks of energy efficiency; compare the productivity and suitability of different types and brands of machinery; analyse the financial costs, tax impact and investment risk for different types of machinery; document the analysis and define the preferred option; and review the investment plan and analysis of options.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to the analysis of machinery options within an agricultural, horticultural or land management enterprise and requires expertise of benchmarking practices and procedures, energy efficiency, capital budgeting techniques, relevant taxation provisions relating to investment, risks associated with investments and analysis and planning processes.</p>
--------------------------------	---

### Licensing/Regulatory Information

### Elements and Performance Criteria Pre-Content

Not Applicable

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Calculate costs associated with machinery and use to assist decision making	1.1.Overhead, operating and intangible costs related to machinery are calculated. 1.2.Relevant benchmark data that relates machinery costs to enterprise productivity is sourced and compared to own enterprise data. 1.3.Comparison of productivity and suitability of different types and brands of machinery is made.
2. Review machinery requirements	2.1.Machinery inventory is reviewed in the context of the goals of the business, and current and future productivity and profitability levels. 2.2.Alternatives to ownership are identified, costed and evaluated. 2.3.Tax impact of the capital investment is identified through appropriate professional support and incorporated into the analysis. 2.4.Risks associated with high capital investment in machinery are assessed and controlled in making machinery decisions.

ELEMENT	PERFORMANCE CRITERIA
3. Analyse returns from major capital investments in machinery	3.1. Capital budgeting techniques including energy efficiency are used to calculate the rate of return on major investment decisions. 3.2. Plan and analysis of machinery options are reviewed and refinements are recorded.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- calculate costs associated with machinery
- review machinery inventory and requirement
- evaluate and cost options
- assess investment risk
- budget and incorporate benchmarks
- calculate returns from major capital investments in machinery
- document a comprehensive report
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- benchmarking practices and procedures, including energy efficiency, carbon footprint and water use efficiency
- capital budgeting techniques
- relevant taxation provisions relating to investment
- risks associated with investments
- analysis and planning processes.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare materials, tools and equipment for conservation work	<p>1.1.The required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions.</p> <p>1.2.Checks are conducted on all materials, tools and equipment with insufficient or faulty items reported to the supervisor.</p> <p>1.3.Techniques used when loading and unloading materials demonstrate correct manual handling and minimise damage to the load and the vehicle.</p> <p>1.4.Suitable Personal Protective Equipment (PPE) is selected and checked prior to use</p> <p>1.5.Conservation support is provided according to Occupational Health and Safety (OHS) requirements and according to workplace information.</p> <p>1.6.OHS hazards are identified and reported to the supervisor.</p>
2. Undertake conservation work as directed	<p>2.1.Instructions and directions provided by supervisor are followed and clarification sought when necessary.</p> <p>2.2.Conservation work is undertaken in a safe and environmentally appropriate manner according to work site guidelines.</p> <p>2.3.Interactions with other staff and clients are carried out in a positive and professional manner.</p> <p>2.4.Policy and procedures in relation to workplace handling and disposal of materials is observed.</p> <p>2.5.Problems or difficulties in completing work to required standards or timelines are reported to</p>

ELEMENT	PERFORMANCE CRITERIA
	supervisor.
3. Store and stockpile materials	3.1.Plant debris and waste material produced during conservation activities are stored in a designated area according to supervisor's instructions. 3.2.Plant debris and waste materials are prepared and processed in an appropriate and safe manner according to supervisor's instructions. 3.3.Surplus materials are stockpiled for removal according to supervisor's instructions. 3.4.A clean and safe work site is maintained while completing conservation activities.
4. Clean up on completion of conservation work	4.1.Plants and materials are stored in a designated area according to supervisor's instructions. 4.2.Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and supervisor's instructions. 4.3.Work outcomes are reported to the supervisor.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- follow safe work practices
- participate in teams and contribute to team objectives
- understand instructions
- read labels, site plan measurements and OHS symbols
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- tools and equipment used in conservation work
- revegetation techniques including planting, direct seeding, assisted natural

**REQUIRED SKILLS AND KNOWLEDGE**

- regeneration and protection of remnant vegetation
- maintenance tasks for conservation areas
  - common bushland weeds
  - personal protective equipment
  - team work and following instructions
  - techniques for cleaning a site and disposing of debris
  - OHS and environmental protection legislation and enterprise procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare tools and equipment
- assist others with conservation works
- remove and stockpile waste materials
- clean up site, tools and equipment.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Revegetation activities may include:	<ul style="list-style-type: none"> <li>• assisting with planting programs</li> <li>• direct seeding operations</li> <li>• assisted natural regeneration</li> <li>• assisting with natural regeneration</li> <li>• protection of remnant vegetation</li> <li>• removal of weeds by hand</li> <li>• cleaning up of on-site debris</li> <li>• release of animals</li> <li>• collecting plants or seeds for propagation.</li> </ul>
Maintenance of conservation areas may include:	<ul style="list-style-type: none"> <li>• weed and disease control</li> <li>• mulching</li> <li>• pruning</li> <li>• fertilising</li> <li>• pruning</li> <li>• watering</li> <li>• securing plants (e.g. staking, tying)</li> <li>• repair of installation of guards and protective fencing.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare materials, tools and equipment for seed collection	<p>1.1.The required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions.</p> <p>1.2.Checks are conducted on all materials, tools and equipment, with insufficient or faulty items reported to the supervisor.</p> <p>1.3.Techniques used when loading and unloading materials demonstrate correct manual handling.</p> <p>1.4.Suitable Personal Protective Equipment (PPE) is selected and checked prior to use.</p> <p>1.5.Seed collection support is provided according to Occupational Health and Safety (OHS) requirements and workplace information.</p> <p>1.6.OHS hazards are identified and reported to the supervisor.</p>
2. Support seed collection	<p>2.1.Assistance is provided to support the seed collection activities of others and instructions and directions provided by supervisor are followed, and clarification sought when necessary.</p> <p>2.2.Seed collection work is undertaken in a safe and environmentally appropriate manner in accordance with relevant legislation and regulations.</p> <p>2.3.Support is provided to collect seeds from a range of plants and from different areas of plants.</p> <p>2.4.Assistance is given to separate seeds from other materials, weigh and store the seeds.</p> <p>2.5.Directions to place seed in clean containers and label</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>the containers are followed.</p> <p>2.6. Instructions to record seed information are completed.</p>
3. Clean up on completion of seed collection work	<p>3.1. Seeds and plant materials are stored according to supervisor's instructions and OHS requirements.</p> <p>3.2. Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and supervisor's instructions.</p> <p>3.3. Work outcomes are reported to the supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- comply with legislation, regulations, standards, codes of practice and established safe
- practices and procedures for collecting seed
- review and accurately identify work requirements
- use and maintain relevant tools and equipment
- identify problems and equipment faults and demonstrate appropriate response procedures
- accurately record and maintain information including details of seed species, weight and place of origin
- efficiently and safely carry out seed collecting procedures
- apply appropriate mathematical techniques to calculate seed weights and quantities
- identify a range of seed species and apply accurate identifying information
- use a range of seed collection methods and related equipment
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- basic knowledge and understanding of applicable Commonwealth, State or Territory licensing

## REQUIRED SKILLS AND KNOWLEDGE

- legislative, regulatory or certification requirements and codes of practice relevant to the full
- range of processes for collecting, treating and storing seed
- organisational and site standards, requirements, policies and procedures for collecting seed
- principles of cultural diversity and access and equity
- environmental requirements for the collecting, treating and storing of seed and the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of seed collecting resources and equipment and procedures for their safe use, operation and maintenance
- procedures for the recording, reporting and maintenance of workplace records and information
- hazards associated with the collection, treatment and storage of seed
- range of seed species and appropriate collection, treatment and packaging processes
- range of seed treatments and storage requirements for different seed species
- types of diseases and pests likely to infect a range of seed species
- appropriate mathematical procedures for estimation, measurement and calculation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- apply safe work practices in collecting seed
- provide seed collecting support to others
- assist with cleaning up after completion
- prepare, use and clean tools and equipment for seed

<b>EVIDENCE GUIDE</b>	
	collection.
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Seed collection may include:	<ul style="list-style-type: none"> <li>the range of sites and methods used for seed collection</li> <li>the range of species available for seed collection.</li> </ul>

## AHCNAR201A Carry out natural area restoration works

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of carrying out natural area restoration work and defines the standard required to: establish the task and site with supervisor by referring to a revegetation plan; carry out weed removal and ground preparation as part of a team; transport tools, plants and planting materials to the site; carry out planting and regeneration techniques and protect the restored area; remove any waste.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to supervised workers in land management programs who carry out natural area restoration work as part of a team and work under routine supervision with intermittent checking. The work is usually within established routines, methods and procedures.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for natural area restoration works	<p>1.1. Services are located using site and natural area restoration plans and in consultation with the supervisor.</p> <p>1.2. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p> <p>1.3. The environmental implications of natural area restoration works are identified and the likely outcomes assessed and reported to the supervisor.</p> <p>1.4. Natural area restoration tools, equipment and machinery are selected and prepared for use according to enterprise work procedures and native plant species to be established.</p> <p>1.5. Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturers specifications and enterprise work procedures.</p> <p>1.6. Personal Protective Equipment (PPE) is used and maintained according to procedures.</p>
2. Apply weed control measures	<p>2.1. Species and quantities of weeds requiring control are identified according to enterprise work procedures.</p> <p>2.2. Herbicides are prepared, where necessary, according to manufacturer's specifications and enterprise work procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3. Weed control measures are undertaken according to the weed and non-target species physiological characteristics, and enterprise work procedures.</p> <p>2.4. Work practices and control measures employed cause damage only to the target weed species.</p>
<p>3. Prepare the soil for natural area restoration</p>	<p>3.1. Soil treatments are selected according to the soil condition, species requirements and enterprise work procedures.</p> <p>3.2. Intact natural soil profiles are protected from damage.</p> <p>3.3. Soil treatments are applied either broadly or at specific restoration sites according to enterprise work procedures.</p>
<p>4. Replace native vegetation on the natural area restoration site</p>	<p>4.1. Vegetation replacement methods are determined and assisted natural regeneration, planting, seeding or transplanting treatments are prepared according to the restoration plan and enterprise work procedures.</p> <p>4.2. Assisted regeneration treatments are applied to remnant vegetation and intact soil profiles where required according to enterprise work procedures.</p> <p>4.3. Seed (and fertiliser if required) is sown either by hand in discrete areas or broadly using sowing and/or ripping trailed machinery.</p> <p>4.4. Containerised plants or transplants are positioned according to the restoration plan and planted firmly ensuring good contact between roots and surrounding soil according to enterprise work procedures.</p> <p>4.5. Hand watering or irrigation, where specified, is undertaken to establish newly sown or planted vegetation.</p> <p>4.6. The natural area restoration works are undertaken according to OHS requirements.</p>
<p>5. Complete natural area restoration work</p>	<p>5.1. Plant guards and/or fencing are installed and maintained according to the natural area restoration plan and enterprise work procedures.</p> <p>5.2. Multiple follow up weed control treatments are undertaken, as necessary, according to enterprise work procedures.</p> <p>5.3. Waste material is removed from the natural area restoration site and disposed of in an environmentally aware and safe manner according to enterprise work procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.4. Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures.</p> <p>5.5. A clean and safe area is maintained throughout and upon completion of work according to enterprise work procedures.</p> <p>5.6. Work outcomes are recorded or reported to the supervisor according to enterprise work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- participate in teams and contribute to team objectives
- read written instructions, understand and interpret work procedures
- calibrate tools, equipment and machinery, measure distance, calculate area, planting and seeding rates, volumes and treatment application rates
- minimise noise, dust, high activity vehicle traffic and water run-off to prevent nuisance-level environmental disturbance
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- common names of native plants
- common names of native animals
- common names of weeds and pest animals
- the importance and value of the local provenance species
- natural area restoration techniques
- basic plant and animal ecology
- map and plan reading
- OHS and environmental legislative and enterprise requirements.

## Evidence Guide

## AHCNAR202A Maintain wildlife habitat refuges

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of maintaining wildlife habitats and refuges to protect desirable animal species from predators and defines the standard required to: confirm the features required for a wildlife habitat refuge; identify native species that are present in the wildlife refuge; provide harbours and modify habitat where necessary to provide refuge for native species; assess the risk of vertebrate pest predators within the refuge; implement strategies to control vertebrate pests in a wildlife habitat.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to supervised workers in land management projects who operate with intermittent checking within enterprise guidelines.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess the scope of the refuge maintenance job	<p>1.1.Desirable wildlife species to be protected are identified and their behaviour pattern determined.</p> <p>1.2.Characteristics of wildlife habitat refuges are identified.</p> <p>1.3.Locations of wildlife habitat refuges are determined.</p> <p>1.4.Time required to complete the wildlife habitat refuge maintenance job is estimated.</p> <p>1.5.Hazards associated with the wildlife habitat refuge maintenance job are identified in accordance with Occupational Health and Safety (OHS) standards.</p> <p>1.6.Environmental risks associated with the wildlife habitat refuge maintenance job are identified in accordance with statutory and local authority requirements.</p> <p>1.7.Vehicles, equipment and materials required to complete the wildlife habitat refuge maintenance job are identified.</p>
2. Prepare for the refuge maintenance job	<p>2.1.Location and boundaries for the wildlife habitat refuge maintenance job are determined in accordance with the vertebrate pest management strategy and monitoring program.</p> <p>2.2.Precautions to minimise hazards associated with the wildlife habitat refuge maintenance job are taken in accordance with OHS standards.</p> <p>2.3.Precautions to minimise environmental risks associated with the wildlife habitat refuge</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>maintenance job are taken in accordance with statutory and local authority requirements.</p> <p>2.4.Vehicles, equipment and materials are checked for serviceability in accordance with manufacturer's specifications and relevant policies.</p>
<p>3. Maintain wildlife habitat refuges for protection of desirable species from predators</p>	<p>3.1.Vehicles and equipment are operated and/or driven in accordance with manufacturer's instructions, statutory requirements and industry practice.</p> <p>3.2.Wildlife habitat refuges which protect desirable animal species are maintained in accordance with industry practice and environmental statutory requirements.</p> <p>3.3.Desirable animal species are protected as required in accordance with environmental statutory requirements.</p> <p>3.4.Debris is disposed of in accordance with industry practice.</p>
<p>4. Clean and store equipment and material</p>	<p>4.1.Equipment and materials are cleaned and stored in accordance with relevant standards and policies.</p> <p>4.2.Job completion is reported or recorded in accordance with relevant policies and procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare for the refuge maintenance job
- identify wildlife species and their requirements
- maintain wildlife habitat refuges for protection of desirable animal species from predators
- identify hazards and follow safety procedures
- use and maintenance of tools and equipment
- record and report task completion and, where necessary, observations of property status
- clean and store equipment and materials
- use literacy skills to follow sequenced written instructions and record information

## REQUIRED SKILLS AND KNOWLEDGE

accurately and legibly

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- vertebrate pest life cycles and behaviours
- harbours used by vertebrate pests
- wildlife habitats used by desirable animal species
- wildlife habitat modification techniques
- predator behaviour and control techniques
- common law principles relating to property, stock, duty of care and due diligence
- risks to land users' posed by vertebrate pests including exotic diseases and zoonoses
- OHS, environment and threatened species legislative and enterprise requirements.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- confirm the features required for a wildlife habitat refuge
- identify native species that are present in the wildlife refuge
- provide harbors and modify habitat where necessary to provide refuge for native species
- assess the risk of vertebrate pest predators within the

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan maintenance works	<p>1.1.Movement through place is planned to minimise disturbance and degradation.</p> <p>1.2.Legislative requirements, Codes of Practice and the relevant management strategy and plan are identified.</p> <p>1.3.Equipment, machinery and materials for maintenance works are determined and obtained.</p> <p>1.4.Where required, stakeholders are consulted about pending maintenance works.</p>
2. Undertake maintenance	<p>2.1.Activity maintenance works conform to relevant risk control measures and practices, and are in accordance with enterprise guidelines.</p> <p>2.2.Interim protective measures are taken to avoid degradation and disturbance during maintenance works.</p> <p>2.3.Activities of personnel and visitors are monitored to reduce risks to the significance of the place.</p>
3. Report completion of activities	<p>3.1.Site is made good on completion of works.</p> <p>3.2.Equipment and machinery is cleaned and stored according to enterprise guidelines.</p> <p>3.3.Excess materials are removed from site and stored or disposed of according to enterprise guidelines.</p> <p>3.4.Completed maintenance works are reported to supervisors to enterprise and legislative requirements and best practice guidelines and Codes of Practice.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- plan maintenance works to achieve minimal deleterious impacts
- undertake maintenance with minimal deleterious impacts
- make good sites after restoration works
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- ecology in land based, coastal zones and/or marine parks
- marine, shore and land based species
- natural and human threats to places of natural significance
- pollution sources and damage potential
- basic protection/rehabilitation methods
- legislation under which enterprise operates
- enterprise procedures for reporting maintenance works
- selection and application of protective structures, devices and signs
- applicable State/Territory and Commonwealth legislation covering parks, conservation, environmental protection and heritage.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare equipment and materials	<p>1.1. Tools and materials are selected for the task to be undertaken according to manufacturer guidelines and Occupational Health and Safety (OHS) regulations.</p> <p>1.2. Plant materials are identified, obtained and stored according to enterprise guidelines.</p> <p>1.3. Labour and machinery requirements are estimated and organised.</p> <p>1.4. Schedule of works is prepared and provided to management/client.</p>
2. Prepare the revegetation site	<p>2.1. Site hazards are identified, risks assessed and suitable risk controls implemented.</p> <p>2.2. Site preparation is undertaken according to planting plan and/or supervisor's instructions.</p> <p>2.3. Soil ameliorants are used, if necessary, according to plan specifications.</p> <p>2.4. Revegetation site is marked out according to supervisor's directions and/or plans.</p> <p>2.5. All competing plants, debris and pollutants are treated according to the plan specifications and risk controls implemented.</p> <p>2.6. Treatments are selected according to the risk controls selected and applied according to documented guidelines and manufacturer instructions.</p> <p>2.7. Protective structures are installed where indicated by the risk controls implemented.</p>
3. Effect revegetation works	<p>3.1. Revegetation works are implemented according to enterprise guidelines.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. All plants materials are inspected prior to revegetation works and defective materials are discarded.</p> <p>3.3. Plant materials to be installed are treated according to documented guidelines.</p> <p>3.4. Plant materials are installed according to planting program.</p> <p>3.5. Remedial action is undertaken to ensure all of the revegetation program requirements have been implemented.</p> <p>3.6. Potential threats to revegetation works are identified and reported.</p>
4. Maintain revegetated site	<p>4.1. Site is maintained according to the planting program requirements.</p> <p>4.2. Remedial action and plant protection is undertaken according to the needs of the species.</p> <p>4.3. Tools and equipment are cleaned, maintained and stored consistent with manufacturer specifications.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare equipment and materials
- prepare a planting site
- effect revegetation works
- maintain revegetated site
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- revegetation techniques
- ecosystems, provenance and habitat requirements
- factors affecting the timing and method of planting
- identification of pests and diseases of trees
- principles and methods relating to the prevention and control of pests and diseases
- safety requirements when handling and using hazardous goods
- nutrient requirements of a range of plant species and cultivars
- physiology of plant growth
- techniques for protecting and securing/anchoring trees and shrubs
- plant selection and culture
- soils and nutrients
- calculations for materials.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare the site for revegetation works
- conduct a site hazard identification and risk control assessment
- recognise and treat plant diseases on a revegetation site
- treat weeds and competing plants
- carry out revegetation works
- clean and maintain the revegetated site.

#### Context of and specific resources for

Competency requires the application of work practices

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the direct seeding of regeneration sites and defines the standard to: prepare the site for seeding with consideration to environmental impacts; conduct seeding to maximise germination response; complete seeding operations in line with site stability and environmental requirements.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the regeneration of natural areas that require specialist seeding requirements.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise for direct seeding	<p>1.1. Conducts work according to site procedures, regulations, Occupational Health and Safety (OHS), other relevant legislation, manufacturer's specifications safely and efficiently.</p> <p>1.2. Receives, interprets and clarifies shift change over details.</p> <p>1.3. Selects appropriate type of equipment and/or attachments according to job specifications and to maximise efficiency and effectiveness of work activities.</p> <p>1.4. Appropriate materials are selected according to site conditions and rehabilitation plan.</p> <p>1.5. Identifies and manages potential risks and hazards according to the work plan to ensure safe and efficient seeding.</p> <p>1.6. Uses appropriate personal protective equipment.</p> <p>1.7. Conducts equipment pre-start (visual) checks to ensure equipment is ready for operation.</p> <p>1.8. Manages site environmental and heritage issues.</p> <p>1.9. Collects seeds for use in rehabilitation activities from local plants near the rehabilitation site to promote native plant growth.</p> <p>1.10. Determines type and proportion of cover crop according to rehabilitation plan and site conditions.</p> <p>1.11. Avoids introduction of foreign species or incompatible species (where applicable).</p> <p>1.12. Communicates with other personnel using approved communication methods.</p>

ELEMENT	PERFORMANCE CRITERIA
	1.13. Adheres to emergency procedures to ensure safety of personnel, plant and equipment.
2. Conduct direct seeding operations	2.1.Ensures direct seeding method provides adequate plant coverage according to plant type, rehabilitation plan and environmental guidelines. 2.2.Minimises damage to site utilising direct seeding equipment and appropriate techniques. 2.3.Conducts seeding activities within appropriate season and growing conditions. 2.4.Completes all required records and documentation accurately and promptly indicating result of seeding activities. 2.5.Carries out seeding and fertilising activities according to site conditions, flora type, rehabilitation plan and environmental guidelines. Applies appropriate seed mix and fertiliser according to site and weather conditions, accessibility and future land use.
3. Conduct housekeeping activities	3.1.Cleans equipment. 3.2.Cleans and stores attachments and other ancillary equipment. 3.3.Completes all required records and documentation accurately and promptly.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- ancillary equipment operation, maintenance, cleaning
- apply diagnostic techniques
- decision making
- directing
- equipment adjustment
- equipment operation, maintenance (minor), cleaning
- hazard identification
- hazardous goods handling techniques

## REQUIRED SKILLS AND KNOWLEDGE

- interpret ground conditions
- interpretation of plans, reports, maps, specifications
- maintain records
- monitoring
- organise work tasks
- plan and document reading
- report defects
- safe work practices
- seed application (machine or hand)
- select and fit personal protective equipment
- team work
- trouble shooting
- use computer systems
- use relevant hand tools
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## Required knowledge

- cover crop methods
- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- fertiliser characteristics and application methods
- foreign species identification
- future land use principles
- geological and technical data
- hazardous goods procedures and consequences of spills
- isolation procedures
- night and day working procedures
- occupational health and safety procedures
- open cut procedures
- operational procedures and checks
- seeding methods
- shutdown procedures
- site procedures
- site safety requirements

**REQUIRED SKILLS AND KNOWLEDGE**

- soil dynamics
- start up procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare the site for seeding with consideration to environmental impacts
- conduct seeding to maximise germination response
- complete seeding operations in line with site stability and environmental requirements.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Equipment may include:

- aircraft (helicopter, fixed winged craft)
- machinery that can be calibrated
- seeding equipment.

<b>RANGE STATEMENT</b>	
Materials may include:	<ul style="list-style-type: none"> <li>• chemicals</li> <li>• fertiliser</li> <li>• seeds.</li> </ul>
Future land use may be:	<ul style="list-style-type: none"> <li>• agriculture</li> <li>• re-establish vegetation which fulfils the functions of the original native vegetation</li> <li>• restore to native vegetation.</li> </ul>

### Unit Sector(s)

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify scope of natural area restoration works	<p>1.1. Nature of restoration works and extent of responsibilities are identified and checked against relevant contract documentation.</p> <p>1.2. Personnel and other resources (in-house or by contractor) required to undertake restoration works are identified according to the scope of the project and relevant documentation provided.</p> <p>1.3. A work program is developed according to the needs of management and/or the client to ensure that project outcomes are reached within designated time lines.</p> <p>1.4. Potential environmental impacts of the proposed restoration works is determined and advised to manager/client.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls are implemented, monitored and reviewed.</p>
2. Coordinate the supply of materials/equipment	<p>2.1. Material quantities and equipment requirements are calculated and coordinated to ensure an on-going work program is maintained according to the scope of the project.</p> <p>2.2. Materials are ordered, checked for specified quantity and quality then stockpiled according to enterprise guidelines.</p> <p>2.3. Specific delivery requirements are conveyed and confirmed with suppliers to ensure materials are delivered to suit the work program.</p> <p>2.4. Rejected materials or products are sent back to the</p>

ELEMENT	PERFORMANCE CRITERIA
	supplier for replacement according to enterprise guidelines.
3. Monitor restoration works	<p>3.1. The work program is monitored and adjusted, if necessary, to ensure that project outcomes are reached within designated time lines or to accommodate any client changes or directions.</p> <p>3.2. Work is monitored and adjusted, if necessary, to ensure project outcomes are achieved.</p> <p>3.3. Project contract direction is periodically given to the contractor for action in written instructions.</p> <p>3.4. Issues likely to cause delays, or alter the scope of the works, are identified, recorded and reported to management and/or the client according to enterprise guidelines.</p> <p>3.5. Alterations to the scope of the work are costed using agreed unit rates by the contractor and variations are forwarded in writing for approval by the client.</p> <p>3.6. Periodic inspection of work are undertaken to ensure project outcomes are achieved and to make progress payments.</p> <p>3.7. The work site is monitored to ensure it remains in a clean, tidy and safe condition throughout and on completion of restoration works.</p>
4. Prepare site for completion	<p>4.1. Site is inspected prior to practical completion to ensure all works have been undertaken according to contract documents and the relevant documentation.</p> <p>4.2. Any works not complying are noted and rectified according to the contract specification as outstanding items.</p> <p>4.3. A completed restoration works report is produced, recorded and communicated to management and/or the client according to enterprise guidelines.</p> <p>4.4. Following completion of outstanding items a Practical Completion Certificate is forwarded to the contractor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and ensure safe systems of work are in place
- inspect and assess site for restoration needs and potential
- identify native plants and establish their role in the ecosystem
- assess the risk of weeds and pests and plan integrated control methods
- identify native fauna and their requirements and ecosystem role
- identify vertebrate pests and options for control
- minimise environmental disturbance
- inspect and assess personnel for work quality
- monitor the quality of work to achieve specified outcomes
- monitor timelines and resource requirements to ensure project outcomes are met
- coordinate a team to achieve optimum performance
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- strategies and techniques to avoid negative environmental impacts
- work programming
- responsibilities and requirements of contracts and other relevant documentation
- common and scientific names of native plants
- common names of weeds, native and pest animals
- importance and value of local provenance species
- natural area restoration techniques
- ability to assess restoration potential of sites
- basic plant and animal ecology
- knowledge of different ecosystems
- map and plan reading
- team supervision

**REQUIRED SKILLS AND KNOWLEDGE**

- strategies for monitoring work quality and progress
- OHS and environmental legislation, codes of practice and enterprise procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- scope the natural area restoration works required and compare to specifications of work on the contract
- develop a work program and source labour and equipment to undertake the work
- maintain the supply of materials and access to equipment to allow restoration work to proceed
- monitor the work program and make adjustments to task schedule where required
- inspect work to ensure specifications are met and environmental impact is minimised
- arrange for inspection of completed works and complete project report.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Revegetation programs include:	<ul style="list-style-type: none"> <li>• assisted natural regeneration</li> <li>• planting and direct seeding</li> <li>• weed and animal control</li> <li>• conservation earthworks</li> <li>• construction of pathways and visitor facilities</li> <li>• erosion control.</li> </ul>

## AHCNAR402A Plan the implementation of revegetation works

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers planning the implementation of revegetation works and defines the standard required to: establish the purpose and client preferences for the site to be revegetated; carry out a site visit and confirm any planning requirements; develop a plan for the site, detailing the resources required and the program of works; develop timelines for the establishment and maintenance phases of the project; document the staged implementation plan.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to supervisors of revegetation programs who plan the implementation of revegetation works.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out preliminary planning activities for revegetation works	<p>1.1. Client preferences and contract requirements including the scope of the work for the revegetation project are confirmed and verified.</p> <p>1.2. Specific statutory obligations and site responsibilities that may affect the implementation of works are identified.</p> <p>1.3. An initial site visit is conducted to verify the biophysical and other factors of the project area including environmental considerations and historical modifications.</p> <p>1.4. Occupational Health and Safety (OHS) obligations associated with the revegetation works are identified, OHS hazards are assessed and controls developed, costed and documented in the implementation plan according to enterprise guidelines.</p> <p>1.5. The availability, quantity and costs of plants and other materials listed in the project schedules are verified.</p>
2. Prepare a staged plan of work	<p>2.1. Resources, tools and equipment required for revegetation procedures and ongoing maintenance of the site are identified, costed and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>2.2. Site access and establishment issues are investigated to consider and plan for the environmental impacts of site work practices, avoid safety hazards to workers or the public, and minimise disruption to site works during the construction period.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3. A program of works is prepared to provide a sequential allocation of resources and work tasks to meet the project contract timelines.</p> <p>2.4. Timelines are developed for site establishment, the establishment period and maintenance of works.</p> <p>2.5. Seasonal factors and impacts are incorporated in the staging strategy to allow for planting supply and care, wet day access, machinery use, fire hazards and establishment period.</p> <p>2.6. Where required, special project works related to habitat resource development and enhancement are included in the staged implementation plan.</p> <p>2.7. Document the staged implementation plan.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- assess a site for opportunities and constraints associated with implementation of revegetation works
- prepare schedules for implementation of revegetation works
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- awareness of the role of revegetation works in the restoration of the environment
- practical understanding of the environmental issues associated with undertaking revegetation works, and the need to comply with legislation and ensure that the

## REQUIRED SKILLS AND KNOWLEDGE

- impact on the environment is minimal
- principles of ecology including specific native plant and animal relationships and habitat requirements
  - identification, propagation and establishment techniques of specific native plant species
  - site evaluation techniques including methods of analysing soils, waterways and their condition
  - practical understanding of the advantages and disadvantages of a range of revegetation procedures
  - chemical, cultural and biological weed and feral animal control techniques
  - soil conservation and enhancement techniques and their advantages and disadvantages in reference to specific sites and habitats
  - soil erosion control and stormwater management techniques
  - maintenance requirements and practices for native plants prior to and after initial establishment
  - growth habits and cultural requirements of specific native plants under a range of soil and environmental conditions
  - OHS hazards associated with undertaking revegetation works and the controls necessary to remove or minimise risks associated with them
  - contract documents including specifications, plans of landscape works, services, supplies and surveyors documents.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- establish the purpose and client preferences for the site to be revegetated
- carry out a site visit and confirm any planning

<b>EVIDENCE GUIDE</b>	
	<p>requirements</p> <ul style="list-style-type: none"> <li>• develop a plan for the site, detailing the resources required and the program of works</li> <li>• develop timelines for the establishment and maintenance phases of the project</li> <li>• document the staged implementation plan.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.

## AHCNAR501A Manage natural areas on a rural property

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers management of natural areas on a rural property and defines the standard required to: determine features and characteristics of natural areas; assess the ecological value of natural areas on a property; consult with neighbouring landholders, local authorities and interest groups; carry out work in natural areas according to management strategies and within statutory requirements; and prepare and implement management strategies.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to rural property owners who implement programs on a rural property that enhance the ecological and economical sustainable capacity of the land and outcomes for an enterprise.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine location, size and type of natural area to be managed	<p>1.1. Location of natural area confirming property ownership and boundaries are mapped following industry guidelines.</p> <p>1.2. Lists of native animal and plant species specific to natural area are obtained in line with scientific guidelines.</p> <p>1.3. Vegetation structure and conservation value data for natural area is sourced and accuracy confirmed.</p> <p>1.4. Details of the presence of and threats from pest plants and animals are obtained following industry guidelines.</p> <p>1.5. Documented evidence of physical impacts on natural area is compiled.</p>
2. Prepare management plan	<p>2.1. Boundary control is designed appropriate to natural area protection guidelines.</p> <p>2.2. Restoration/maintenance strategies for natural area are planned consistent with relevant industry principles.</p> <p>2.3. Environmental concerns are adhered to when developing management strategies in accordance with relevant national, state, territory and local legislation and/or regulations.</p> <p>2.4. Physical impacts reduced/corrected utilising industry endorsed strategies.</p> <p>2.5. Appropriate planning and specialist personnel, and local authorities are liaised with according to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>organisation policy and guidelines.</p> <p>2.6.Habitat enhancement strategies are developed in line with industry guidelines.</p> <p>2.7.Strategies to integrate management of natural areas into land use and production systems of property are developed.</p> <p>2.8.Management plan is prepared and presented according to enterprise guidelines and industry best practice</p>
3. Implement management strategies	<p>3.1.Work schedules are developed incorporating objectives and timelines consistent with rural production requirements.</p> <p>3.2.Organisational Occupational Health and Safety (OHS) procedures, practices, policies and precautions are observed and followed.</p> <p>3.3.Work is carried out in natural areas according to management strategies and within statutory requirements.</p> <p>3.4.People, materials and equipment required for the work in natural areas are coordinated and scheduled in accordance with enterprise guidelines.</p> <p>3.5.Schedule for natural area works is organised in conjunction with operational personnel and sources of equipment, and takes seasonal weather conditions into consideration according to enterprise policy guidelines.</p> <p>3.6.Any permits or licenses required for the natural area works are identified, sought and obtained.</p> <p>3.7.Neighbouring landholders, local authorities and interest groups are consulted with, as required, during the implementation of works.</p> <p>3.8.Staff, clients, and contractors are communicated with regularly during implementation work.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- determine features and characteristics of natural areas
- source topographical information and conservation data about a site
- develop strategies for restoration and maintenance of habitat
- prepare management strategies
- implement management strategies
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- natural area restoration and management principles
- advantages and limitations of sustainable land management practices, including environment sustainability as a 'whole-system' approach
- property planning, financial management and enterprise budgeting systems and procedures
- identification of native plants, animals, weeds and vertebrate pests
- strategies to maximise opportunities and minimise environment impact
- environmental issues especially in regard to water catchments, air, noise, ecosystems, habitat and waste minimisation
- fencing and barriers, stocking options and control
- ecological systems in regard to business operation
- relevant state/territory legislative requirements with regard to environmental protection and control standards.

## Evidence Guide

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out preliminary design activities for the biological survey	<p>1.1. Survey scope, objectives and constraints are identified according to client requirements, biological components to be surveyed and enterprise policy.</p> <p>1.2. All current data relevant to survey requirements is sourced, collated and evaluated according to enterprise policy.</p> <p>1.3. Processes for data collection are developed, consistent with the survey scope, objectives and constraints.</p> <p>1.4. Processes for data processing are developed, consistent with the survey scope, objectives and constraints.</p> <p>1.5. A survey design that reflects client requirements and survey scope, objectives and constraints is developed and presented to the client for discussion and approval.</p>
2. Determine requirements of the biological survey	<p>2.1. Survey indicators are identified and constraints and opportunities for data collection identified and evaluated.</p> <p>2.2. Data collection points are identified that are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>repeatable and statistically representative for the biological survey.</p> <p>2.3.OHS hazards associated with conducting a biological survey are identified; risks assessed and controls developed according to enterprise guidelines, costed and documented in the survey design.</p> <p>2.4.Tools, equipment and machinery required for the biological survey are identified, costed and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>2.5.Scheduling of survey activities and surveyor access are determined according to the survey design.</p> <p>2.6.Survey procedures and schedules are documented according to scientific conventions and the survey scope and objectives, and are presented to appropriate personnel and the client for briefing and acceptance.</p>
3. Conduct the biological survey	<p>3.1.Field visits are conducted to verify and consolidate previously collected data and to gather further information on species frequency, distribution, and health and/or habitat values.</p> <p>3.2.The biological survey is conducted according to the survey design and enterprise policy.</p> <p>3.3.Survey activities are monitored for accuracy, compliance to the survey design and out-of-specification procedures or events.</p> <p>3.4.Staged data collection is undertaken according to survey design, survey scheduling and surveyor access requirements.</p> <p>3.5.All monitoring and survey data is recorded promptly and accurately, according to the specifications of the survey design.</p>
4. Compile a biological survey report	<p>4.1.Analysis of collected data is undertaken according to industry policies and guidelines.</p> <p>4.2.Conclusions about the biological survey are drawn from relevant information and are based on appropriate evidence and reasoned arguments.</p> <p>4.3.A biological survey report is produced which conforms to industry standards for presentation, structure and content, and is presented to the client for acceptance.</p> <p>4.4.The report describes biological survey findings</p>

ELEMENT	PERFORMANCE CRITERIA
	according to the survey scope and objectives, identifies areas requiring remedial action for improvement and details recommendations for action.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research and evaluate information
- assess survey findings and produce written reports and conclusions based on appropriate evidence and reasoned arguments
- comply with legislative requirements
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- biological classification systems
- plant/animal recognition
- environmental factors that impact on vegetation/animal populations
- ecological principles and terminology
- energy flows and trophic structures of communities
- legal requirements relating to the protection and clearance of vegetation and/or animal species
- assessment, reporting and client liaison procedures and best practice techniques
- enterprise work team management guidelines
- Occupational Health and Safety (OHS) legislative requirements and Codes of Practice
- hazard identification, assessment and control.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify the scope, objectives and constraints for a biological survey according to client requirements, the biological components to be surveyed and enterprise policy</li> <li>• assess the availability of current data and determine data collection and processing needs</li> <li>• identify biological indicators that are repeatable and statistically representative</li> <li>• document survey methods and indicators as a survey plan</li> <li>• schedule survey activities and establish access to the site</li> <li>• conduct a biological survey with data collection staged and recorded according to the survey plan</li> <li>• produce a biological survey report with detailed analysis and conclusion, including a description and assessment of the specified biological components.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
The scope of biological surveys may include:	<ul style="list-style-type: none"> <li>• the size of the area to be surveyed</li> <li>• the type of plant/animal community and the quantity and species within the community that are to be directly surveyed</li> <li>• regularity and replication of survey periods</li> <li>• the extent of analysis and recommendations required.</li> </ul>

## AHCNAR503A Design a natural area restoration project

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the design of a natural area restoration project and defines the standard required to: establish the project purpose, scope and extent, and costs and benefits; prepare a base plan incorporating landforms, soils, fauna and flora and habitat; determine options for natural area restoration and incorporate into a concept design and; produce a final design with supporting documentation, including costings.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to restoration managers designing a natural area restoration project.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Develop a design brief	<p>1.1.The client is consulted to establish the purpose and requirements of design.</p> <p>1.2.The ecological aims and objectives for the restoration project are developed and confirmed with client.</p> <p>1.3.The design brief is developed and scope of extent of project is agreed with the client.</p> <p>1.4.The project budget is prepared in liaison with the client.</p> <p>1.5.A base plan of the site is obtained or prepared.</p> <p>1.6.Existing site data and information is reviewed prior to visiting the site.</p>
2. Undertake a site analysis	<p>2.1.The project site is visited and inspected at the first stage of the design work.</p> <p>2.2.Physical elements and features of the site, its physical and biological condition and the presence of threats are quantified and mapped onto the base plan.</p> <p>2.3.Soil, topography, aspect, habitat resources, existing vegetation and climatic factors are recorded on the base plan and in the site report.</p> <p>2.4.Legal requirements and constraints on restoration work are assessed.</p> <p>2.5.The potential for natural regeneration is assessed and the limiting factors are identified and recorded.</p> <p>2.6.Options for passive and active interventions are determined.</p> <p>2.7.Other relevant information is assessed and recorded.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Develop a concept design	<p>3.1. Concept design is prepared to illustrate location and layout of the proposed restoration project according to the design brief.</p> <p>3.2. Consultation with the client is undertaken to establish agreement on options and approaches for development in accord with the proposed ecological aims and goals.</p> <p>3.3. A professional graphic format is used to present the concept design with supporting written information and justification or reasons for the proposed actions.</p>
4. Produce a final design	<p>4.1. A detailed plan is prepared and drafted according to the design brief, concept design and enterprise guidelines.</p> <p>4.2. Information on the design is relevant and precise and must clearly communicate the project works in a sequential manner.</p> <p>4.3. Plan, notes and specifications are included on the design to give an interpretation of the plan, to establish the quality and standard of the works, and the responsibilities of the contractor during implementation.</p> <p>4.4. Appropriate construction and engineering principles are applied to restoration design according to accepted industry standards and regulations.</p> <p>4.5. Further design documentation is organised and/or prepared according to the design brief and enterprise guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- use a range of graphic techniques for illustrating design concepts
- source and review site data
- assess ecological restoration needs and prescribe solutions
- carry out natural resource mapping for a site

## REQUIRED SKILLS AND KNOWLEDGE

- prepare a concept design
- use a professional graphic format
- interpret legislation and regulations in relation to natural area restoration works.
- prepare a Bill of Quantities
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- design process.
- construction principle and practices
- graphical presentation and drafting techniques
- recognition of plant species and a range of ecological communities
- natural regeneration potential and limits
- ecological restoration theory and techniques
- drafting techniques
- cost estimating
- calculations of materials, labour, machinery and equipment
- environmental implications of restoration works.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance

<b>EVIDENCE GUIDE</b>	
<b>competency in this unit</b>	<p>criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish the project purpose, scope and extent, and costs and benefits</li> <li>• prepare a base plan incorporating landforms, soils, fauna and flora and habitat</li> <li>• determine options for natural area restoration and incorporate into a concept design</li> <li>• produce a final design with supporting documentation, including costings.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Restoration projects include:	<ul style="list-style-type: none"> <li>• seeding/planting of vegetation</li> <li>• release and/or protection of native animal species</li> <li>• weed and pest animal control</li> <li>• assisted natural regeneration</li> <li>• protection of remnant plant species and communities</li> <li>• maintenance and protection of sites of cultural or natural significance.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Inspect and assess site for replacement of vegetation	<p>1.1.A vegetation assessment report is prepared.</p> <p>1.2.Site conditions, level of degradation and potential for natural area restoration are determined.</p> <p>1.3.Threats to existing ecosystem, flora, fauna and property from natural area restoration works are assessed.</p> <p>1.4.Range of likely operating conditions, hazards and difficult/sensitive environments are assessed for impact on natural area restoration works.</p>
2. Plan natural area restoration program	<p>2.1.Plans and specifications for natural area restoration works are prepared according to program/management aims and objectives.</p> <p>2.2.Natural area restoration techniques are selected to meet management plans and enterprise requirements.</p> <p>2.3.Staging strategy for works is outlined.</p> <p>2.4.Protective structures are planned to ensure compliance with Occupational Health and Safety (OHS) and relevant legislation.</p> <p>2.5.Appropriately skilled personnel are selected.</p> <p>2.6.Equipment and personnel are transported to natural area restoration sites without injury or damage according to enterprise procedures.</p> <p>2.7.Appropriate permits/licenses and authorisations are obtained according to legislative and enterprise requirements.</p> <p>2.8.Equipment and materials required for natural area restoration work is sourced according to enterprise</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures.
3. Monitor natural area restoration works	3.1.Observations are made according to natural area restoration plans and to enterprise procedures. 3.2.Checks are made that the site is prepared according to specifications. 3.3.Plant materials, machinery and equipment are checked to ensure compliance with enterprise guidelines and natural area restoration plan. 3.4.Natural area restoration works are effected according to enterprise guidelines. 3.5.Work is monitored to ensure remedial action is undertaken as required. 3.6.Occupational health and safety management conforms to legislative requirements and enterprise policies and procedures.
4. Review natural area restoration programs	4.1.Site is monitored to ensure compliance with maintenance program plans and specifications or enterprise guidelines. 4.2.Site is assessed to determine whether natural area restoration works are addressing factors and issues consistent with management plans. 4.3.Changes to natural area restoration techniques are reported to enterprise procedures for adoption in future works.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- inspect and assess site for restoration
- plan natural area restoration program
- monitor natural area restoration works
- review natural area restoration program
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports

## REQUIRED SKILLS AND KNOWLEDGE

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- plant species and community recognition
- natural regeneration potential and limits
- ecological restoration theory and techniques
- factors affecting the timing and method of plant establishment
- identification of plant and animal threats to treated areas
- principles and methods relating to the prevention and control of pests and diseases
- safety requirements when handling and using hazardous goods
- soils and nutrients, plant selection and culture
- calculations for materials
- legislative requirements
- preparation of plans and specifications
- OHS.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- carry out a site assessment for restoration
- select vegetation restoration techniques

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• plan a natural area restoration program</li> <li>• calculate staff and resources required</li> <li>• supervise natural area restoration works</li> <li>• review natural area restoration program against issues identified in the management plan for the area.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish client need	<p>1.1.The client expectations is discussed and confirmed.</p> <p>1.2.Current impacting legislation and policies are explained to the client.</p> <p>1.3.Possible strategies are discussed with the client and the best option confirmed in writing.</p>
2. Develop the strategy to utilise restoration works	<p>2.1.Property ownership and boundaries are confirmed by checking maps and titles.</p> <p>2.2.Profiles of river sections are determined from survey and aerial photographs.</p> <p>2.3.Erosion control measures are developed and are consistent with industry principles and selection criteria.</p> <p>2.4.Sediment control measures are developed consistent with industry principles and selection criteria.</p> <p>2.5.Fauna habitats are developed following industry recommendations.</p> <p>2.6.Vegetation species utilised within restoration project comply with industry guidelines.</p> <p>2.7.River restoration strategies are established and documented in co-operation with the client and relevant consent authority.</p>
3. Prepare a detailed works plan	<p>3.1.Selection criteria for earthwork structures or measures are checked against industry guidelines.</p> <p>3.2.Habitat enhancement strategies checked against industry guidelines.</p> <p>3.3.Plan is prepared according to enterprise guidelines and industry best practice.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- establish requirements of the project
- establish the suitability of a project proposal
- develop erosion and sediment control strategies
- develop a river restoration strategy
- design structural works, and prepare a river restoration plan
- prepare a detailed works plan
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant environmental protection, planning and groundwater legislation
- river processes and restoration techniques
- erosion and sediment control techniques
- planning procedure for erosion and sediment control
- erosion control and design principles
- soils and soil formation
- levels and levelling
- design principles
- earthmoving principles
- restoration principles and techniques
- total catchment issues
- legal requirements - permits
- environmental issues
- biodiversity
- managing peak water flows

**REQUIRED SKILLS AND KNOWLEDGE**

- subsurface and surface drainage principles and systems.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- restoration strategies are checked for compliance and discussed with client
- develop erosion and sediment control measures
- follow industry guidelines to establish fauna habitat and vegetation species
- document the strategy and submit to the relevant consent authority
- prepare a detailed works plan.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Erosion control measures may

- embankment stabilising structures and

<b>RANGE STATEMENT</b>	
include:	techniques.
Sediment control measures may include:	<ul style="list-style-type: none"> <li>• coffer dams</li> <li>• site management</li> <li>• sediment fences</li> <li>• sediment traps</li> <li>• sediment curtains</li> <li>• sediment retention basins.</li> </ul>

## AHCNAR506A Develop and implement sustainable land use strategies

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers developing and implementing sustainable land use strategies and defines the standard required to: assess the threats to sustainability for an area or region; manage water resources and riparian zones; manage vegetation and plant succession for an area; manage the health and sustainability of soils; incorporate sustainability principles into land use practices.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to managers of agricultural and production horticulture enterprises whose job role includes developing land use strategies that lead to improved ecological sustainability of land under production.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess requirements for improved land use	<p>1.1.The natural resource base of the area is audited and threats to sustainability identified.</p> <p>1.2.The organisation's production and management plans are reviewed to incorporate sustainable land use principles.</p> <p>1.3.Water quality and impacts of run off are assessed for risk of erosion.</p> <p>1.4.Soil health and fertility is assessed according to the requirements of the organisations production and management plans.</p> <p>1.5.Vegetation types and coverage is assessed and required changes identified.</p> <p>1.6.Land protection measures and structures are planned and prioritised to address threats to sustainability.</p>
2. Carry out structural improvements to address threats to sustainability	<p>2.1.Sites are inspected and measured, key features noted, and pegs or markers are placed as appropriate for structural improvements if required.</p> <p>2.2.Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls are implemented, monitored and reviewed.</p> <p>2.3.Materials required for the construction of the improvement(s) are calculated from the plans, observations and discussions with colleagues.</p> <p>2.4.Materials, personnel and equipment are obtained and organised to be on site at the appropriate times.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.5. Equipment to be used is checked and calibrated, if necessary, prior to commencement.</p> <p>2.6. Structural works are constructed and the area is revegetated and secured from livestock if required.</p>
3. Integrate sustainable land use principles into production	<p>3.1. Fences or boundaries are realigned to land classes and soil conservation works.</p> <p>3.2. Contour banks are protected and repaired as necessary.</p> <p>3.3. Water carrying structures are constructed or repaired as necessary.</p> <p>3.4. Tree, other vegetation and shelter belts are established for crop and stock protection.</p> <p>3.5. Soil cultivation and planting practices are reviewed and amended to prevent erosion and minimise soil run-off.</p> <p>3.6. Grazing strategies are planned to maximise ground cover and avoid damage through foot tracks or damage to banks.</p>
4. Treat areas of land degradation	<p>4.1. Fences or boundaries are realigned to land classes and soil conservation works.</p> <p>4.2. Contour banks are protected and repaired as necessary.</p> <p>4.3. Water carrying structures are constructed or repaired as necessary.</p> <p>4.4. Tree, other vegetation and shelter belts are established for crop and stock protection.</p> <p>4.5. Soil cultivation and planting practices are reviewed and amended to prevent erosion and minimise soil run-off.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- handle and manoeuvre equipment
- assess soil health and stability in a landscape

## REQUIRED SKILLS AND KNOWLEDGE

- assess vegetative cover in a landscape
- assess water resources and threats to water quality or soil erosion
- incorporate principles of sustainability into land use planning
- read and interpret manufacturers specifications, work and maintenance plans, and Materials Safety Data Sheets (MSDSs)
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- the role of biodiversity in farming systems
- sustainable land and water use principles and practices applicable in the region
- sustainable soil management
- soil appraisal and remediation strategies
- environmental controls and codes of practice applicable to the business and to the improvement works
- the whole farm plan
- relevant legislation and regulations relating to soil and water degradation issues and chemical use, building construction
- relevant OHS and environmental protection legislation, regulations and codes of practice
- causes of land degradation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<b>EVIDENCE GUIDE</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assess the threats to sustainability for an area or region</li> <li>• manage water resources and riparian zones</li> <li>• manage vegetation and plant succession for an area</li> <li>• manage the health and sustainability of soils</li> <li>• incorporate sustainability principles into land use practices.</li> </ul>

## AHCNRM501A Develop a coastal rehabilitation strategy

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the process of developing, implementing and evaluating a rehabilitation strategy for a natural area in a coastal zone. It requires the ability to inspect and assess the condition of the coastal area, assess threats to the stability of the environment, plan for rehabilitation and/or maintenance of the area and natural resources within the area, implement, monitor and review the rehabilitation program. The unit includes the development of strategies. Developing a strategy to rehabilitate a coastal area requires knowledge of ecological principles, coastal zone habitats, landforms and processes, identification of flora and fauna, biodiversity, identification of pest species, identification of environmental degradation processes and threats, coastal habitat restoration techniques, pest control techniques and monitoring techniques.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit is suitable for persons working in enterprises, organizations or groups who are responsible for the management of natural resources within the coastal zone.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>	
---------------------------	--

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and describe coastal resource/assets	<p>1.1. Identify existing sources of information including advice from the relevant land manager, organization or group on the coastal zone resource/assets in the area to be managed.</p> <p>1.2. Conduct site survey to determine physical/biological entities and processes including threatening processes.</p> <p>1.3. Identify cultural and heritage sites within the resource zone and arrange for an archaeological assessment if required.</p> <p>1.4. Identify OH&amp;S risks and hazards that may impact on management operations at the site.</p> <p>1.5. Identify resource use and management stakeholders for the area and the requirements and opportunities</p>

ELEMENT	PERFORMANCE CRITERIA
	for consultation.
2. Establish condition of coastal area	2.1. Evaluate current condition of resources and or assets within the area. 2.2. Assess threatening processes in terms of the level of impact on the resources/assets within the area. 2.3. Present preliminary findings on the coastal resource and its condition to the appropriate audience.
3. Establish a strategy to rehabilitate the coastal area	3.1. Analyse information gathered to facilitate decisions on management options. 3.2. Present findings to management authority and seek direction on drafting management actions. 3.3. Implement processes for consultation with management, enterprise staff, consultants and stakeholders where required in accordance with enterprise policies and procedures. 3.4. Establish and prioritise strategy for asset rehabilitation and improvement. 3.5. Design management action plan for implementation of the strategy. 3.6. Document acceptance of the action plan by management and other stakeholders according to organisational policies and procedures. 3.7. Formal consent gained from relevant land manager/authority as required.
4. Implement and monitor the strategy and action plan	4.1. Seek funds/volunteer assistance to undertake actions in accordance with organisational plans and procedures, OH&S and legislative requirements. 4.2. Co-ordinate activities with other relevant organizations, community groups, individuals or stakeholders. 4.3. Monitor progress of works in accordance with strategy plans, organisational policies and procedures. 4.4. Review strategies and actions with recommendations for change processed in accordance with organisational policies and procedures.
5. Evaluate rehabilitation strategy	5.1. Evaluate changes in resource condition and effectiveness of strategy. 5.2. Report findings to management and stakeholders with recommendations for adjustments to strategy.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- undertake site research
- assess condition of resources
- identify and recommend rehabilitation strategies
- evaluate and monitor rehabilitation strategy
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- coastal zone geomorphology and processes
- ecological principles and environmental assessment techniques
- native flora and fauna identification, habitat requirements, vulnerable and endangered species
- techniques and strategies for use in the management, rehabilitation of natural communities and species within the coastal zone
- environmental degradation processes
- management of cultural and heritage sites
- natural resource management planning and issues
- pest plant and animal management
- relevant legislative and regulatory requirements
- preparing reports.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

<b>EVIDENCE GUIDE</b>	
performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The critical requirements that are valuable for this unit of competency as a whole are listed below.</p> <p>Assessment must confirm one's ability to:</p> <ul style="list-style-type: none"> <li>• assess the condition of a natural area within a coastal zone and identify threats</li> <li>• determine management options to facilitate the development of a strategy and action plan</li> <li>• monitor and evaluate the implementation of the strategy.</li> </ul>
<b>Context of and specific resources for assessment</b>	For valid and reliable assessment of this unit, competency should be consistently demonstrated over a period of time and observed by the assessor.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Sources of information may include:	<ul style="list-style-type: none"> <li>• existing local, regional, state or national management plans or strategies impacting on the resource, previous surveys, maps and studies on or relating to the site.</li> </ul>
Resource/assets may be:	<ul style="list-style-type: none"> <li>• a natural resource or physical asset within the area e.g. <ul style="list-style-type: none"> <li>• a natural resource such as a fishery</li> <li>• natural communities of significant ecological value</li> <li>• site specific where there may be several resources/assets and may include a</li> </ul> </li> </ul>

<b>RANGE STATEMENT</b>	
	statement of significance for each resource/asset.
Cultural and heritage sites may include:	<ul style="list-style-type: none"> <li>• archaeological remains of aboriginal occupation and cultural sites</li> <li>• remains of early European settlement and other historic values</li> <li>• shipwrecks</li> <li>• recreational values</li> <li>• landscape values</li> <li>• scientific sites of significance.</li> </ul>
Threats and disturbances that may affect a coastal zone include:	<ul style="list-style-type: none"> <li>• coastal development</li> <li>• degradation and destabilisation of habitats</li> <li>• pollution and degradation of coastal water quality</li> <li>• terrestrial and/or marine pest impact on ecosystems</li> <li>• erosion and sedimentation</li> <li>• overfishing</li> <li>• recreational pressures</li> <li>• major event</li> <li>• poaching</li> <li>• marine industries/fisheries and aquaculture.</li> </ul>
Strategies may include:	<ul style="list-style-type: none"> <li>• protecting or rehabilitating dunes</li> <li>• estuaries and wetlands and other coastal and marine habitats</li> <li>• removing threats</li> <li>• monitoring beach conditions</li> <li>• flora and fauna</li> <li>• removing inappropriate structures</li> <li>• regulate recreational and commercial activities</li> <li>• controlling pedestrian or vehicular traffic</li> <li>• education and training activities that raise community awareness of coastal and marine conservation issues</li> <li>• temporary control measures may be included</li> <li>• strategies to include monitoring criteria.</li> </ul>

## AHCNRM502A Develop a water quality monitoring program

### Modification History

Not Applicable

### Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit of competency covers the process of developing a water-quality monitoring program. It requires the ability to assess the requirements of such a program, determine the type and extent of data to be collected, store and manage data, interpret and analyse the data, assess water quality, assess factors contributing to water quality, monitor and evaluate the program. Developing a water quality monitoring program required knowledge of the hydrological cycle, catchment and coastal management issues contributing to surface and groundwater quality, water quality parameters, chemical principles, sampling techniques, analytical techniques, data storage and management and accepted scientific process.</p>
-------------------------------	--

### Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit is appropriate for persons working in the role of coordinator/manager in an organization, group or enterprise concerned with gathering information for land or water management purposes. The role is likely to include delegation of implementation tasks and may include consultation with specialists such as hydrologists, hydrographers etc.</p>
---------------------------------------	--

### Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine water quality monitoring program requirements	1.1. Survey client to identify scope, objectives and constraints of project and intended use of the data. 1.2. Research, collate and evaluate background information relevant to survey type and site. 1.3. Determine water quality indicators to be measured, frequency and volume of sampling required to meet scope, objectives and constraints of project. 1.4. Determine that procedures required for data collection and processing and reporting format are consistent with the survey scope, objectives and constraints of program and legislative requirements. 1.5. Seek estimates of costs involved and/or sources of

ELEMENT	PERFORMANCE CRITERIA
	<p>funds for the program as required by the client and according to enterprise policies and procedures.</p> <p>1.6. Provide a survey strategy to client that reflects project requirements, scope, objectives and constraints for discussion and approval.</p>
2. Undertake a site analysis	<p>2.1. Identify and record physical and biological features at the site of the monitoring program.</p> <p>2.2. Identify and record resource management factors that are contributing to water quality.</p> <p>2.3. Survey biota as required to meet the scope and objectives of the program.</p> <p>2.4. Identify and assess OH&amp;S hazards and risks associated with conducting the sampling program.</p> <p>2.5. Identify and evaluate sampling points for safety, accessibility and opportunities for repeatable data collection.</p>
3. Plan monitoring program	<p>3.1. Evaluate information gathered to select suitable monitoring sites for repeatable monitoring and to obtain representative samples.</p> <p>3.2. Source and cost laboratory and field equipment, tools, machinery and other material required for the monitoring program, assess for suitability/reliability and confirm availability with suppliers, contractors and enterprise personnel.</p> <p>3.3. Confirm surveyor access to site with land manager for the duration of the monitoring program.</p> <p>3.4. Determine and document OH&amp;S controls and emergency procedures required for the program to be presented to appropriate personnel according to enterprise policies and guidelines.</p> <p>3.5. Document methods of data collection, monitoring and field techniques for field operators according to enterprise policies and guidelines.</p> <p>3.6. Present to appropriate personnel and the client for briefing and acceptance, survey schedules and procedures developed in accordance with enterprise guidelines and relevant legislation.</p>
4. Monitor water quality	<p>4.1. Carry out surveying tasks out in line with monitoring plan and enterprise/agency guidelines/protocols and in accordance with OH&amp;S guidelines.</p> <p>4.2. Store and transport and treat samples with regard to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>temperature, maximum holding periods and other variables and according to enterprise/agencies guidelines and policies.</p> <p>4.3. Monitor surveying process for accuracy, compliance with the survey plans and procedures, OH&amp;S policies and regulatory requirements.</p> <p>4.4. Assess and evaluate for errors and inconsistencies, implementing contingency plans when problems arise with the monitoring plans and procedures.</p>
5. Evaluate program	<p>5.1. Analyse data collected according to industry policies and guidelines and scientific standards.</p> <p>5.2. Outcomes, conclusions and/or trends from the monitoring program are drawn from relevant information including industry standards for interpretation of water quality data and are based on appropriate evidence and reasoned arguments.</p> <p>5.3. Advice is sought from client as to satisfaction with monitoring program in terms of the process and outcomes.</p> <p>5.4. Provide report on outcomes to client with recommendations for changes and improvements any further monitoring activities.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate effectively with the client, enterprise staff, managers, community groups and consultants both orally and in writing
- research and evaluate information
- collect, store and evaluate data
- produce written reports and conclusions based on appropriate evidence and reasoned arguments
- comply with legislative requirements
- undertake water quality monitoring
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
abilities.
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• hydrological cycle</li> <li>• catchment and coastal management issues contributing to surface and groundwater quality</li> <li>• aquatic ecology</li> <li>• water quality indicators</li> <li>• standard techniques to assess ecological health of aquatic sites</li> <li>• chemical principles</li> <li>• sampling techniques</li> <li>• analytical techniques</li> <li>• data storage and management</li> <li>• accepted scientific process</li> <li>• statistical analysis</li> <li>• OH&amp;S and other related legislative requirements</li> <li>• hazard identification, assessment and control.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The critical requirements that are valuable for this unit of competency as a whole are listed below.</p> <p>Assessment must confirm one's ability to:</p> <ul style="list-style-type: none"> <li>• determine water quality monitoring requirements for a project brief</li> <li>• undertake research and a site analysis to select suitable monitoring sites</li> <li>• develop the monitoring plan</li> <li>• monitor and evaluate the program.</li> </ul>
<b>Context of and specific resources for</b>	For valid and reliable assessment of this unit,

**EVIDENCE GUIDE****assessment**

competency should be consistently demonstrated over a period of time and observed by the assessor.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Survey scope may include:

- the time over which the water-quality monitoring program is to be undertaken
- size of the area to be surveyed
- the type of monitoring
- frequency of sampling
- the extent of analysis and recommendations required.

Objectives may include:

- monitoring of the health of an aquatic system
- measuring trends in quality over time
- measuring outcomes in response to changes in catchment or coastal management
- conforming to regulatory requirements related to quality of discharge water from an enterprise.

Processes for data collection may include:

- the sampling techniques
- treatment
- storage and transport of samples
- measurement standards
- identification of species

Processes may include:

- data recording
- organising
- storage
- analysis and presentation techniques including

Methods of data collection, monitoring and field techniques to

- the scope and frequency of monitoring reports
- the collecting, recording and storing of data

**RANGE STATEMENT**

be documented may include:

(eg. logbooks, recording sheets, dataloggers).

- techniques and guides for the field identification of species
- recording of site information and use of information for classification, coding systems etc
- checklists for equipment, tools and machinery for field trips
- the storage, transport, calibration, maintenance and safe operation of equipment, tools and machinery including the manufacturers instructions
- guidelines for the treatment, preservation, transport and storage of specimens.

## AHCNRM503A Support the implementation of waterways strategies

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the implementation of catchment plans relevant to waterways improvement using a diverse range of strategies. The determination of priorities and targets and the support of specific strategies are within the legislative and policy context. It requires knowledge of legislation relevant to waterways, changes to waterways management and planning and their impact on traditional approaches to and arrangements for managing waterways. It requires skills in assessing the relevance of diverse and interrelated strategies in achieving regional priorities and targets, encouraging and supporting stakeholder participation and evaluating the success of strategies in meeting overall targets. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency is applicable to persons who have a role in waterways development and management and are responsible for implementing waterways improvement plans by working with a range of stakeholders using a range of strategies.</p>
--------------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Confirm the arrangements for waterways planning and management within a catchment area	<p>1.1. The roles and responsibilities of key stakeholders relevant to waterways planning and management are identified.</p> <p>1.2. The purpose, scope and impact of legislation relevant to waterways planning and management are reviewed.</p> <p>1.3. The impact of changes to waterways planning and management arrangements and current trends are reviewed.</p> <p>1.4. The impact of government policies and plans on waterways planning and management is reviewed.</p>
2. Establish priorities	2.1. Catchment plans are reviewed based on relevant

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
for implementing catchment plans for waterways improvement	<p>legislation and policies, management targets and priorities.</p> <p>2.2.Information on the specific needs of waterways is collected and assessed.</p> <p>2.3.Consultation with colleagues and stakeholders (as relevant) is undertaken to establish priorities, targets and funding requirements.</p> <p>2.4.Strategies including existing local, state and national programs are assessed for relevance to achievement of priorities and targets.</p>
3. Facilitate stakeholder participation	<p>3.1.Priorities and targets are communicated to stakeholders.</p> <p>3.2.Funding and other opportunities that support strategies for action are communicated to stakeholders.</p> <p>3.3.The development of submissions/plans that identify aims, outcomes, steps, evaluation and reporting methodology are supported.</p> <p>3.4.Cooperation and partnerships between stakeholders is facilitated.</p>
4. Advise and support stakeholders	<p>4.1.Support is provided to ensure that all legislative requirements, including occupational health and safety, are met.</p> <p>4.2.Ensure that variations to planned approaches are notified to the appropriate agencies/stakeholder.</p> <p>4.3.Timely and appropriate support is provided that meets with stakeholder needs.</p> <p>4.4.Communication and negotiation skills are used to resolve conflicts where they arise.</p>
5. Evaluate the achievement of priorities and targets	<p>5.1.Monitoring strategies appropriate to a range of strategies are used.</p> <p>5.2.Monitoring information is collected and analysed against priorities and targets.</p> <p>5.3.Findings are communicated to stakeholders and other relevant agencies.</p> <p>5.4.Evaluation findings are documented for use in future planning and reported to stakeholders.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prioritise projects (based on regional targets)
- identify enterprise funding mechanisms
- undertake project planning and support including the:
  - identification of aims, risks, outcomes, stages
  - selection of resources and equipment e.g. project management software
  - use of evaluation and reporting methods
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures.

#### Required knowledge

- environmental legislation
- obligations of landholders
- contemporary regional catchment strategies
- principles of community capacity building and engagement
- policies applying across all levels of government and within the specific region, including those under catchment plans
- Occupational Health and Safety requirements for community groups
- waterways improvement techniques including:
  - fencing
  - revegetation
  - habitat restoration
  - pest plant control.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	It is critical that the candidate is able to facilitate a diverse range of strategies and approaches to achieve the priorities and related targets derived from catchment plans. They must be able to liaise with, and give feedback to a wide range of stakeholders and to solve conflicts as they arise. Candidates must display skills in evaluating the achievement of priorities and targets.
<b>Context of and specific resources for assessment</b>	Assessment of this unit could take place in the workplace or in a simulated environment where candidates support a range of strategies for waterways improvement by working with one or more stakeholders.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Legislation may include:	<ul style="list-style-type: none"> <li>• the Environment Protection and Biodiversity Conservation Act 1999</li> <li>• Catchment and Land Protection Act 1994</li> <li>• Planning and Environment Act 1987</li> <li>• Environmental Protection Act 1970</li> <li>• Coastal Management Act 1995</li> <li>• Water Act 1989.</li> </ul>
Policies and plans may include:	<ul style="list-style-type: none"> <li>• State Environment Protection Policies</li> <li>• regional River Health Strategies</li> <li>• Weed Action Plans</li> <li>• regional Rabbit Action Plans</li> <li>• regional Landcare Plans</li> <li>• soil health strategies</li> <li>• local catchment management plans.</li> </ul>

<b>RANGE STATEMENT</b>	
Strategies may include:	<ul style="list-style-type: none"> <li>• community education programs</li> <li>• small and large scale projects</li> <li>• information dissemination</li> <li>• awareness campaigns</li> <li>• field days.</li> </ul>
Variations may include:	<ul style="list-style-type: none"> <li>• availability of or use of alternative materials and equipment</li> <li>• completion dates</li> <li>• human resource requirements</li> <li>• data availability</li> <li>• project design.</li> </ul>
Monitoring information may include:	<ul style="list-style-type: none"> <li>• qualitative surveys of perceptions or values</li> <li>• quantitative surveys such as water quality data</li> <li>• before and after project</li> <li>• establishing photo points</li> </ul>

# AHCNRM504A Interpret and report on catchment hydrology

## Modification History

Not Applicable

## Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit of competency covers the interpretation of catchment hydrology and reporting on water quantity and quality within a catchment. It requires knowledge of hydrogeology, geology, geomorphology, hydrology and contemporary water allocation issues. It requires skills in interpreting geological maps and hydrological data, predicting water movement in catchments, identifying processes that have a negative impact on water quality and quantity and the use of software in hydrological data reporting. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-------------------------------	--

## Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit is applicable to a person employed in a technical capacity to collect, collate, analyse and report on hydrological data for use in floodplain management, asset protection and water allocation.</p>
---------------------------------------	---

## Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

<p><b>Prerequisite units</b></p>		

<b>Prerequisite units</b>	

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Collate and evaluate catchment information	1.1.Data collection priorities are determined in consultation with supervisor or team where appropriate. 1.2.Sources of information are used to access catchment information. 1.3.The accuracy and currency of information is evaluated and additional data requirements are identified. 1.4.Land uses within the catchment are identified. 1.5.Management units within the catchment are determined.
2. Analyse the hydrological processes of a catchment using	2.1.Natural ground and surface water processes within the catchment are analysed. 2.2.Man-made ground and surface water movement within a catchment are identified.

ELEMENT	PERFORMANCE CRITERIA
available data	<p>2.3.Man-made impacts on water quantity within the catchment are determined and analysed.</p> <p>2.4.Appropriate representative sites for field surveys are identified for the collection of additional data where required.</p>
3. Design and implement field surveys and assess findings	<p>3.1.Objectives, locations and resource requirements for site assessments are determined in consultation with supervisor or team.</p> <p>3.2.Physical entities and processes, including threats, within representative management units are assessed.</p> <p>3.3.Site data is collected according to enterprise policies, practices and guidelines.</p>
4. Report on catchment hydrology	<p>4.1.A written overview on catchment hydrological behaviour is prepared, according to enterprise guidelines and templates.</p> <p>4.2.A visual overview of catchment hydrological behaviour is presented to meet the needs of stakeholders.</p> <p>4.3.Advice and guidance on remediation measures consistent with catchment management objectives is outlined.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- access and collate existing hydrological information
- analyse surface and groundwater hydrological processes in catchments
- undertake field site assessments for the collection of hydrological data
- identify and evaluate non-sustainable practices in catchments
- estimate and assess the impact of hydrological events
- present and interpret hydrological data in an appropriate form
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of

**REQUIRED SKILLS AND KNOWLEDGE**

cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- hydrological cycle
- chemical and physical properties of water
- rock and soil types including weathering processes
- fluvial geomorphology including:
  - drainage basin function
  - factors influencing stream flow rates
  - interactions between ground and surface water
  - stream hierarchy and ordering
  - human impacts on surface water quality and quantity
- hydrogeology including:
  - aquifer types and properties
  - aquifer discharge and recharge
  - rates of water movement through aquifers
  - human impacts on groundwater quality and quantity
- sustainable use of ground and surface water including:
  - uses of water in catchments
  - water allocation
  - policies and strategies determining water use.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The candidate must be able to locate, collect and assess a wide range of hydrological data. This data must then be interpreted and presented according to the requirements of the task. The candidate must be capable of determining the movement of water within a catchment from existing data and report on the impacts of

<b>EVIDENCE GUIDE</b>	
	environmental change on water quantity and quality in a catchment
<b>Context of and specific resources for assessment</b>	<p>For valid assessment to take place candidates should have access to:</p> <ul style="list-style-type: none"> <li>• equipment used to analyse water quality and quantity</li> <li>• hydrological data in electronic form</li> <li>• geological maps and appropriate remotely sensed data</li> <li>• water management plans.</li> </ul>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Sources of information may include:	<ul style="list-style-type: none"> <li>• hydrological information</li> <li>• previous monitoring studies</li> <li>• geological data</li> <li>• hydrogeological data</li> <li>• land use studies</li> <li>• aerial photography</li> <li>• satellite imagery</li> <li>• maps</li> <li>• water quality and or irrigation data</li> <li>• environmental management studies</li> <li>• anecdotal information from land owners.</li> </ul>
Field surveys may include:	<ul style="list-style-type: none"> <li>• slope analysis</li> <li>• land uses</li> <li>• soil surveys</li> <li>• occurrence of erosion and sedimentation</li> <li>• bed and bank stability</li> <li>• water quality and quantity.</li> </ul>

<b>RANGE STATEMENT</b>	
Management objectives may include:	<ul style="list-style-type: none"> <li>• erosion control</li> <li>• water quality</li> <li>• salinity reduction</li> <li>• sustainable irrigation and environmental flows</li> <li>• flood protection</li> <li>• ground water usage.</li> </ul>
Threats may include:	<ul style="list-style-type: none"> <li>• erosion and sedimentation</li> <li>• pest plant and animal infestation</li> <li>• loss of biodiversity</li> <li>• salinity</li> <li>• poor land use practices</li> <li>• point and diffuse sources of pollution</li> <li>• nutrient management issues.</li> </ul>
Remediation measures may include:	<ul style="list-style-type: none"> <li>• fencing</li> <li>• revegetation</li> <li>• installation of sediment control structures</li> <li>• flood control structures</li> <li>• pest plant control</li> <li>• implementation of nutrient management strategies</li> <li>• changes to agricultural practices</li> <li>• community awareness programs.</li> </ul>
Management objectives may include:	<ul style="list-style-type: none"> <li>• erosion control</li> <li>• water quality improvement</li> <li>• salinity reduction</li> <li>• sustainable irrigation environmental flows</li> <li>• flood protection</li> <li>• ground water usage.</li> </ul>

# AHCNRM505A Provide technical advice on sustainable catchment management

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the provision of technical advice on sustainable catchment management to land managers in a catchment area or region. It requires knowledge of land degradation, catchment management principles, regional priorities for land management, ecological processes and the roles and responsibilities of stakeholders. Providing technical advice on sustainable catchment management requires the ability to identify land management issues, analyse the causes and provide advice to land managers on alternative practices. This unit is not intended for use in providing advice on land development. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	This unit is applicable to persons who have a catchment management role and are responsible for identifying and managing land degradation as well as providing advice and information on programs and funding for the sustainable management of farms, small properties, recreational land and land used for commercial activities e.g. mining.
--------------------------------	---

## Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Respond to requests for advice	<p>1.1. Enterprise guidelines are followed when responding to requests from land managers.</p> <p>1.2. Information on location, land management/production objectives and land management concern/s including degradation is sought from land managers.</p> <p>1.3. State and regional legislation, regulations and strategies relevant to the region are reviewed in relation to potential constraints.</p> <p>1.4. Options and processes for provision of advice are confirmed with land managers.</p>
2. Identify and analyse	2.1. A site assessment is conducted to collect information

ELEMENT	PERFORMANCE CRITERIA
land management issues	<p>on geological characteristics, ecological processes and biodiversity.</p> <p>2.2.The site visit is used to collect detailed information on land uses and land management techniques.</p> <p>2.3.Site information is interpreted to land managers and other relevant stakeholders in a supportive and non-threatening manner.</p> <p>2.4.The site assessment evaluates the types and levels of land degradation.</p>
3. Provide advice on sustainable land management	<p>3.1.Advice complies with State and regional legislation, regulations and strategies.</p> <p>3.2.Options for changing land management practices take into account economic factors, technical difficulty, practical feasibility, social and/or environmental acceptability, including the highlighting of examples.</p> <p>3.3.Advice to land manager includes information on outcomes of analysis, sustainable land management techniques, whole property planning and remediation measures.</p> <p>3.4.Resource materials and information on supportive programs and funding are provided to land managers.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify and analyse the issues, processes and techniques in sustainable land management
- provide advice on sustainable land management
- gather information and undertake research
- recommend funding programs
- recognise limits to advice
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views

**REQUIRED SKILLS AND KNOWLEDGE**

- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- geology
  - rock types
  - weathering
  - soil formation and soil types
- ecological processes
  - energy flow through ecological systems
  - matter flow through ecological systems
  - nutrient cycling
- land degradation processes and impacts including:
  - soil compaction
  - erosion
  - tree decline
  - pest plant and animal infestations
  - eutrophication
  - acidification
  - salinity
  - fertility decline
- catchment Management principles
  - catchment planning priorities and programs
  - Victorian Planning Provision Framework
  - roles and responsibilities of land users in catchments
- biodiversity
  - basic plant identification techniques
  - animal identification
  - ecological vegetation communities
- whole property planning principles
  - energy flows
  - sustainable water management
  - land capability
- extension
  - principles of extension
  - funding.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The candidate must be able to source information on legislation, regulations and strategies relevant to the responsibilities of land managers. The candidate must be capable of assessing land management practices in relation to the long-term objectives of a catchment or region. The ability to source and communicate advice on sustainable land management practices to a variety of land managers in a knowledgeable and non-threatening manner is critical.</p>
<b>Context of and specific resources for assessment</b>	<p>Specific resources required for assessment of this unit include access to monitoring equipment used in undertaking site assessments and documenting site information.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Land management issues may include:</p>	<ul style="list-style-type: none"> <li>• overgrazing</li> <li>• stock access to waterways</li> <li>• nutrient runoff from intensive farming or industry</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• riverbed and bank erosion</li> <li>• soil erosion</li> <li>• pest plant and animal infestations</li> <li>• salinity</li> <li>• native vegetation clearing or decline.</li> </ul>
Types and levels of land degradation may include:	<ul style="list-style-type: none"> <li>• processes such as erosion</li> <li>• soil structure decline</li> <li>• eutrophication</li> <li>• sedimentation</li> <li>• loss of ecosystem diversity</li> <li>• reduction in water quality</li> <li>• excess nutrients</li> <li>• pollution.</li> </ul>
Remediation measures may include:	<ul style="list-style-type: none"> <li>• fencing remnant vegetation</li> <li>• pest plant and animal control</li> <li>• tree-planting</li> <li>• construction of shelterbelts</li> <li>• conservation earthworks</li> <li>• waste water re-use</li> <li>• relocation of stock watering points.</li> </ul>
Resource materials may include:	<ul style="list-style-type: none"> <li>• fact sheets such as Landcare notes and Agnotes</li> <li>• information on websites</li> <li>• information on local demonstration sites</li> <li>• before and after pictures of similar issues.</li> </ul>

## AHCNRM506A Plan and monitor works projects in catchments and waterways

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the process of planning, implementing and reviewing works projects in catchments and waterways. It requires the ability to assist in the planning of works projects, monitor and support the works project and report on the works project. Planning and monitoring work projects in catchments and waterways requires knowledge of catchment health, wetland and floodplain processes and function, heritage and cultural values of waterways and monitoring and evaluation tools for works projects. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit could be applied in a variety of workplaces that undertake or contract project works in catchments and waterways. Works projects could be undertaken with community based participants, enterprise colleagues and/or contractors.</p>
--------------------------------	--

### Licensing/Regulatory Information

Refer to Unit Descriptor

### Pre-Requisites

<b>Prerequisite units</b>	
---------------------------	--

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and assess catchment and waterways sites for inclusion in a works program	<p>1.1.The environmental outcomes and priorities of the works program are established.</p> <p>1.2.Site assessments are undertaken to confirm the physical characteristics and health of catchment and waterways.</p> <p>1.3.The range of likely operating conditions, hazards and sensitive environments are assessed for impact on any proposed works project/s.</p> <p>1.4.The heritage and cultural values of sites are assessed.</p> <p>1.5.Potential project partners and investors are consulted on the scope and purpose of the works program.</p>
2. Plan works projects	2.1.Project priorities are determined in consultation with stakeholders based on catchment plans, project

ELEMENT	PERFORMANCE CRITERIA
	<p>impact and availability of funding.</p> <p>2.2.The requirements for permits, licenses and other authorisations are met.</p> <p>2.3.Equipment and materials required for project/s are determined and sourced using enterprise guidelines.</p> <p>2.4.Terms and conditions of project work are confirmed with project partners and investors.</p> <p>2.5.Plans and specifications for works project/s are prepared according to enterprise guidelines.</p> <p>2.6.Project documentation is completed and details are finalised and communicated, as required.</p>
3. Monitor works project/s	<p>3.1.Monitoring program is established using data collection guidelines, data collection parameters and timelines.</p> <p>3.2.Data benchmarks for evaluating the outcomes of project/s are established.</p> <p>3.3.Occupational health and safety (OHS) arrangements are monitored against legislative requirements and other relevant policies.</p> <p>3.4.The ongoing requirements of contractors and project workers are met.</p> <p>3.5.Appropriate and timely support that meets the requirements of the project is provided.</p> <p>3.6.The condition of the project site is monitored to ensure it is left in an agreed condition.</p>
4. Review works program	<p>4.1.Individual projects are evaluated to ensure compliance with agreed outcomes.</p> <p>4.2.Sites are assessed to determine whether projects are meeting the environmental outcomes.</p> <p>4.3.Changes to the works program are recommended to better achieve catchment and waterways priorities.</p> <p>4.4.A relational data management system is used for recording monitoring data and reporting to stakeholders.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- assist in project planning and requirements for implementation
- provide support to project partners during project implementation
- monitor the impact of projects on sustainable catchment management
- monitor and ensure the regulatory requirements of works project
- record, review and report on works project utilising enterprise methods
- develop waterway monitoring programs including the selection of representative water quality and macro invertebrate monitoring sites incorporating the use and maintenance of relevant equipment and indicator
- identify examples of degraded catchments and waterways
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- wetland and floodplain processes and function including:
  - factors that influence stream flow
  - stream dynamics
  - stream formation
  - eutrophication
  - impacts of land use on waterways
- indicators of catchment health including:
  - pest plant and animal infestations
  - vegetation decline
  - soil erosion
  - stream bank erosion
  - water quality decline
- water quality parameters including:
  - physical and chemical properties of water
  - biological indicators of water quality
- use of relational data management systems
  - data input
  - data analysis

**REQUIRED SKILLS AND KNOWLEDGE**

- data output
- project planning including:
  - establishing priorities
  - monitoring and reviewing
  - working with partner, investors and contractors
  - resource and equipment requirements
- regulatory requirements
  - responsibilities under the OHS Act
  - permits and licences required for on-ground works
  - local cultural and heritage values.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The candidate must be able to research and determine the environmental conditions of project worksites in relation to the wider catchment and be able to determine the physical and human resources necessary for project success. The candidate must be able to determine suitable monitoring procedures and evaluate the environmental benefits of the works program utilising existing techniques and reporting guidelines.

**Context of and specific resources for assessment**

Specific resources required for assessment of this unit include access to monitoring equipment used in the collection of catchment health data such as Waterwatch kits, pH meters and EC meters.

Assessment of this unit could take place in conjunction with VBP584 Provide technical advice on sustainable catchment management.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Environmental outcomes may include:	<ul style="list-style-type: none"> <li>• reductions in salinity</li> <li>• increase in vegetation cover</li> <li>• improvements in water quality parameters</li> <li>• reducing or stabilising erosion</li> <li>• nutrient losses from land to water</li> <li>• protection of heritage or cultural values.</li> </ul>
Site assessment may include:	<ul style="list-style-type: none"> <li>• an environmental assessment</li> <li>• establishing conditions before works</li> <li>• identifying cultural significance</li> <li>• assessing access issues for equipment and machinery</li> <li>• assessing access issues for workers</li> <li>• establishing seasonal issues i.e. site saturation or dryness for works.</li> </ul>
Works project details may include:	<ul style="list-style-type: none"> <li>• landholder contact details</li> <li>• description of project works</li> <li>• partner details</li> <li>• funding amounts</li> <li>• permits and approvals</li> <li>• contractor requirements</li> <li>• resources.</li> </ul>
Monitoring programs may include:	<ul style="list-style-type: none"> <li>• monitoring programs that contribute data to assess indicators of catchment health such as:             <ul style="list-style-type: none"> <li>• Waterwatch</li> <li>• Saltwatch</li> </ul> </li> <li>• index of stream condition</li> <li>• macro invertebrate monitoring sites</li> <li>• SEPP water quality monitoring</li> <li>• stream flow management plans</li> <li>• EVC mapping</li> <li>• Australian Bureau of Statistics data.</li> </ul>
Data benchmarks may include:	<ul style="list-style-type: none"> <li>• quantitative data for site or catchment</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• social indicators such as Landcare membership</li> <li>• qualitative history of management and attitudes to sustainable catchment management.</li> </ul>
Contractor and project workers requirements may include:	<ul style="list-style-type: none"> <li>• management of materials and equipment resources and invoicing</li> <li>• resource procurement</li> <li>• timesheets</li> <li>• OHS.</li> </ul>

## AHCNRM507A Manipulate and analyse data within geographic information systems

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit relates to extracting, comparing and manipulating data in response to customer requests.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations within which councils must operate is essential. The unique nature of councils, as a tier of government directed by elected members and reflecting the needs of local communities, must be appropriately reflected.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop procedures for manipulation and analysis of data	1.1.Desired data format is specified and based on job requirements. 1.2.Parameters are specified for manipulation of the data sets. 1.3.New procedures are documented clearly explaining the procedure and rationale for development.
2. Establish models required to provide outcome	2.1.Applicability of existing tools, models, theories, applications and solutions is evaluated. 2.2.Feasible parameters, equations and assumptions are specified. 2.3.Models required to provide specified outcome are established.
3. Analyse data	3.1.Steps to be undertaken to analyse and manipulate data are specified. 3.2.Source data limitations and other restricting factors are taken into account when selecting techniques for analysis. 3.3.Data is isolated and retrieved from its source. 3.4.Data is interrogated to ensure reliability. 3.5.Data is prepared for presentation media.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analysing options
- using tools within software to manipulate data
- reading external data sets into data model
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- database structures
- scripting and commands
- line instructions and programming
- operating systems:
  - UNIX
  - DOS
  - Windows
  - NT
- range of tools, models, theories, applications and solutions
- data analysis and manipulation techniques.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

<b>EVIDENCE GUIDE</b>	
Guidelines for the Training Package.	
<b>Overview of assessment</b>	A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit are also required to be demonstrated.
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<ul style="list-style-type: none"> <li>• suitable procedures are developed</li> <li>• new procedures are documented</li> <li>• appropriate models are used and/or created.</li> </ul>
<b>Context of and specific resources for assessment</b>	On the job or in a simulated work environment.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Customer may include:	<ul style="list-style-type: none"> <li>• internal</li> <li>• external.</li> </ul>
Factors may include:	<ul style="list-style-type: none"> <li>• time</li> <li>• command line operation</li> <li>• menu drivers options.</li> </ul>
Source data limitations may include:	<ul style="list-style-type: none"> <li>• currency</li> <li>• structure</li> <li>• accuracy</li> <li>• source of data.</li> </ul>

## AHCNSY101A Support nursery work

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers supporting nursery work and defines the standard required to: apply safe work practices; apply correct plant handling techniques; plant, maintain and pack plants; and prepare, use and clean tools and equipment.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the provision of support to those undertaking work in both production and retail nurseries.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials, tools and equipment for nursery work	<p>1.1. Required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions.</p> <p>1.2. Checks are conducted on all materials, tools and equipment, with insufficient or faulty items reported to the supervisor.</p> <p>1.3. Techniques used when loading and unloading materials demonstrate correct manual handling, and minimise damage to the load and the vehicle.</p> <p>1.4. Suitable personal protective equipment (PPE) is selected and checked prior to use.</p> <p>1.5. Nursery support is provided according to Occupational Health and Safety (OHS) requirements and workplace information.</p> <p>1.6. OHS hazards are identified and reported to the supervisor.</p>
2. Undertake nursery work as directed	<p>2.1. Instructions and directions provided by supervisor are followed, and clarification sought when necessary.</p> <p>2.2. Nursery work is undertaken in a safe and environmentally appropriate manner according to nursery guidelines.</p> <p>2.3. Interactions with other staff and customers are carried out in a positive and professional manner.</p> <p>2.4. Nursery policy, procedures and OHS requirements in relation to workplace hygiene practices, handling and disposal of materials are observed.</p> <p>2.5. Problems or difficulties in completing work to required standards or timelines are reported to supervisor.</p>
3. Store and stockpile	3.1. Plant debris and waste material produced during

ELEMENT	PERFORMANCE CRITERIA
materials	<p>nursery activities are stored according to supervisor's instructions.</p> <p>3.2.Plant debris and waste materials are prepared and processed in an appropriate and safe manner according to supervisor's instructions.</p> <p>3.3.Surplus materials are stockpiled for removal according to supervisor's instructions.</p> <p>3.4.A clean and safe work site is maintained while completing nursery activities.</p>
4. Clean up on completion of nursery work	<p>4.1.Plants and materials are stored according to supervisor's instructions and OHS requirements.</p> <p>4.2.Tools and equipment are cleaned, maintained and stored according to manufacturer specifications and supervisor's instructions.</p> <p>4.3.Work outcomes are reported to the supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- follow safety directions
- prepare materials, tools and equipment for nursery work
- undertake nursery work as directed
- store and stockpile materials
- clean up on completion of nursery work
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- safe work practices
- nursery hygiene and quality control
- nursery plant maintenance activities

**REQUIRED SKILLS AND KNOWLEDGE**

- basic stock control procedures
- propagation techniques
- OHS and environmental legislative and enterprise requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- apply safe work practices
- apply correct plant handling techniques
- plant, maintain and pack plants
- prepare, use and clean tools and equipment.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Support may include:

- support of others undertaking nursery activities.

## AHCNSY201A Pot up plants

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the production procedure of staged containerisation of nursery plants after propagation in production nurseries and defines the standard required to: prepare tools, equipment and plants for potting up; prepare growing media for potting up plants; pot up plants to required specification pot size; type and carry out follow-up procedures to potting up.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to transplanting established plants with developed root systems sown from seed, from cuttings, layering, growing on tissue cultured plants, division or splitting, spores, cloning, and budding or grafting into larger appropriate sized containers of growing media. Potting up involves working within routine methods and procedures under supervision with intermittent checking. Responsibility for some roles and co-ordination within a team may be required.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for potting up operations	1.1. Workplace information is interpreted and clarified according to instructions. 1.2. Occupational Health and Safety (OHS) hazards are identified and reported to the supervisor. 1.3. Tools and equipment for potting up are selected and used according to documented guidelines. 1.4. Work area is cleaned and disinfected according to company hygiene practices. 1.5. Materials are collected and checked to ensure sufficient quantity and quality for potting up operations.
2. Prepare growing media	2.1. Suitable Personal Protective Equipment (PPE) is selected, used and maintained. 2.2. Media components are measured and mixed according to documented guidelines. 2.3. Growing media is tested to ensure the product complies with media specifications.
3. Pot up propagated plants	3.1. Plants are prepared for potting in accordance with enterprise guidelines. 3.2. Plants are graded during the potting process

ELEMENT	PERFORMANCE CRITERIA
	<p>according to quality specifications.</p> <p>3.3. Media level in pots is adjusted to produce a well-furnished plant according to documented guidelines.</p> <p>3.4. Placement and depth of plants comply with the planting method and plan.</p> <p>3.5. Potting operations are carried out according to written OHS requirements.</p>
4. Complete potting up operation	<p>4.1. Plants are watered in to eliminate air pockets and prevent dehydration.</p> <p>4.2. Cleaning procedures are performed and hygiene practices followed according to enterprise guidelines.</p> <p>4.3. Waste is collected and disposed of or recycled to minimise damage to the external environment.</p> <p>4.4. Records of potting up operations are maintained in the appropriate format.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare tools, equipment, media and plants
- handle plants with care
- grade plants for quality
- apply different types of potting media
- measure out media components accurately
- produce a uniform media level in the pot
- use and maintain tools
- disinfect selected work areas
- treat common problems of plants in a controlled environment
- participate in teams and contribute to team objectives
- interpret work procedures
- maintain required records
- minimise damage of waste products on the environment
- use literacy skills to follow sequenced written instructions and record information

**REQUIRED SKILLS AND KNOWLEDGE**

accurately and legibly

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- appropriate use of personal protective equipment
- properties of relevant potting media
- basic plant physiology
- enterprise plants and their characteristics
- hygiene and quality control
- common problems in a controlled environment
- methods of disposing of waste.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare tools, equipment and plants for potting up
- prepare growing media for potting up plants
- pot up plants to required specification
- carry out follow-up procedures to potting up.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

**EVIDENCE GUIDE**

enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Potting up plants may include:

transplanting of established plants with developed root systems sown from:

- seed
- from cuttings
- layering
- growing on tissue cultured plants
- division or splitting
- spores
- cloning, and budding or grafting into larger appropriate sized containers of growing media.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Maintain the nursery environment	<p>1.1. Occupational Health and Safety (OHS) hazards in the nursery environment are identified, risks assessed and reported to the supervisor.</p> <p>1.2. Plant growth and health requirements are clarified with the supervisor.</p> <p>1.3. Irrigation system components are serviced for basic operational use and basic user serviceable parts are repaired or replaced.</p> <p>1.4. Performance of the irrigation system is checked to ensure optimum results.</p> <p>1.5. Temperature controls are monitored to ensure specified levels are maintained.</p> <p>1.6. Hygiene practices are followed to minimise risk of contamination.</p>
2. Maintain nursery plants	<p>2.1. Suitable Personal Protective Equipment (PPE) is selected, used and maintained.</p> <p>2.2. Common problems in nursery plants are recognised, and rectified and/or reported to the supervisor.</p> <p>2.3. Tools and equipment are selected and used for plant maintenance.</p> <p>2.4. Treatments are applied to assist plant growth as directed by the supervisor.</p> <p>2.5. Water is applied in the quantity and method specified.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.6. Nursery operations are undertaken according to OHS requirements. 2.7. Plant quality is maintained.
3. Complete nursery plant maintenance operation	3.1. Workplace information is recorded in the appropriate format. 3.2. Waste is collected and disposed of or recycled. 3.3. Tools and equipment are cleaned and stored.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- recognise common problems in nursery plants
- monitor temperature controls
- apply plant growth treatments as directed
- apply specified watering
- select and use tools and equipment
- check irrigation system performance
- service basic irrigation system components
- repair or replace user serviceable irrigation components
- maintain nursery hygiene
- participate in teams and contribute to team objectives
- read and interpret enterprise work procedures
- communicate effectively with team members and supervisor
- measure quantities and calculate application rates
- minimise environmental disturbance
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- daily water requirements of nursery plants
- botany and plant physiology
- environmental requirements of a range of containerised plants growing in a nursery setting
- applied understanding of the importance of hygiene and quality control when

**REQUIRED SKILLS AND KNOWLEDGE**

- tending nursery plants
- common problems that may occur with containerised plants in a controlled environment and their treatment
  - Nursery Industry Water Management Best Practice Guidelines 2005
  - principles and operations of a range of irrigation systems used in nurseries
  - methods of disposing of waste to minimise damage to the external environment.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- establish the requirements of plants
- monitor irrigation and temperature control systems
- maintain nursery hygiene
- monitor plants
- maintain nursery records
- implement procedures for waste disposal and tool maintenance.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Nursery environments may include:	<ul style="list-style-type: none"> <li>• glasshouses</li> <li>• shade houses</li> <li>• hardening-off areas.</li> </ul>
Plants may include:	<ul style="list-style-type: none"> <li>• plants common in production nurseries and commonly used and produced in the region.</li> </ul>
Plant physiological processes may include:	<ul style="list-style-type: none"> <li>• principles of transpiration</li> <li>• water intake</li> <li>• nutrient uptake</li> <li>• photosynthesis</li> <li>• respiration</li> <li>• translocation.</li> </ul>

## AHCNSY203A Undertake propagation activities

### Modification History

Release	TP Version	Comments
2	AHC10v5	Included missing information in Required Skills and Knowledge
1	AHC10	Initial release. Supersedes and is equivalent to RTC2026A

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of undertaking propagation activities and defines the standard required to: collect and maintain suitable plant material; apply a range of propagation techniques; maintain and monitor propagated plants; maintain plant hygiene.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of carrying out a range of propagation tasks, such as preparing plant stock, collecting propagation materials, pre-planting treatments and basic plant propagation techniques. This standard involves working within routine methods and procedures under supervision with intermittent checking. Responsibility for some roles and coordination within a team may be required.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for plant propagation	1.1. Workplace information is interpreted and clarified according to instructions. 1.2. Occupational Health and Safety (OHS) hazards in the work area are identified, rectified and/or reported. 1.3. Suitable Personal Protective Equipment (PPE) is selected, used, maintained and stored. 1.4. Tools and equipment appropriate to the task being undertaken are selected and prepared according to written guidelines. 1.5. Propagation material is collected using the appropriate method for the species. 1.6. Propagation material is maintained and stored to ensure maximum viability.
2. Propagate plants	2.1. Pre-treatment is applied and/or carried out appropriate to the propagation method and species. 2.2. Propagation techniques are carried out according to

ELEMENT	PERFORMANCE CRITERIA
	<p>the requirements of the species.</p> <p>2.3. Propagation material is handled in a way that minimises damage and maximises viability.</p> <p>2.4. Water and nutrients are applied to suit the media conditions, plant requirements and propagation techniques employed.</p> <p>2.5. Labels are applied according to enterprise guidelines.</p> <p>2.6. Plant health is monitored and remedial action is taken according to written guidelines.</p> <p>2.7. Propagation activities are carried out according to OHS requirements.</p>
3. Complete propagation activities	<p>3.1. Records are completed accurately and at the required time according to written guidelines.</p> <p>3.2. Tools and equipment are cleaned and stored according to manufacturer specifications.</p> <p>3.3. Waste is removed and hygiene practices are followed according to enterprise and OHS requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect propagation material
- maintain environmental parameters and temperature controls
- apply pre-treatments
- carry out a variety of propagation techniques
- minimise damage and maximise viability
- apply water and nutrients
- read and interpret instructions
- participate in teams and contribute to team objectives
- communicate effectively with fellow team members
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- propagation methods required for a range of plant species
- enterprise hygiene requirements
- quality specifications/characteristics of a range of parent plants and propagation materials
- basic plant nutrition
- botany and physiology
- maintenance requirements of tools and equipment used for propagation
- OHS requirements of employees
- record keeping relevant to the work function
- enterprise requirements for handling and disposal of nursery wastes
- common problems that may occur while performing propagation activities in a controlled environment
- OHS legislative requirements and Codes of Practice
- OHS procedures.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- collect suitable plant material
- successfully apply a range of propagation techniques
- maintain and monitor propagated plants
- maintain plant hygiene.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

**EVIDENCE GUIDE**

enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Propagation techniques may include:

- seed - (small seed sown in modules and pricked out or sown in seedbeds by hand)
- cuttings - (hardwood stem, semi-ripe stem, leaf, root)
- simple layering
- growing on tissue-cultured plants
- division or splitting
- spores.

Propagation techniques does not include:

- budding and grafting.

## AHCNSY204A Maintain indoor plants

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of maintaining indoor plants and defines the work required to: preparing the tools, equipment and materials for indoor plant maintenance; identifying hazards involved in indoor plant maintenance; maintaining a growing environment; recognise common problems; use and maintain the watering systems; inspect plant quality and record workplace information.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the processes involved in maintaining indoor plants.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to maintain indoor plants	<p>1.1. Workplace information is interpreted and clarified with the supervisor.</p> <p>1.2. Tools, equipment and materials for maintenance activities are selected and prepared according to enterprise guidelines, and safe working practices are employed.</p> <p>1.3. Occupational Health and Safety (OHS) hazards relating to maintaining indoor plants and the growing environment are identified, risks assessed and reported to the supervisor.</p>
2. Maintain the growing environment	<p>2.1. Plants are accessed according to client requirements and supervisors instructions.</p> <p>2.2. Tools, equipment and materials are transported safely in accordance with access requirements, client and supervisors instructions.</p> <p>2.3. Watering system is maintained and / or adjusted where necessary according to enterprise guidelines.</p> <p>2.4. Light meter readings are taken to ensure specified parameters are maintained.</p> <p>2.5. Condition of media is checked according to supervisor's instructions.</p> <p>2.6. Containers and growing site are cleaned to ensure the aesthetic and hygiene standards of indoor plants are maintained.</p>
3. Maintain indoor plants	<p>3.1. Common problems in indoor plants are recognised, and rectified and/or reported to the supervisor.</p> <p>3.2. Treatments are selected and applied to optimise</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>plants health and appearance according to enterprise guidelines.</p> <p>3.3. Water is applied in the quantity and method specified by enterprise work procedures.</p> <p>3.4. Plants are replaced when no longer at optimum health and appearance.</p>
4. Complete indoor plant maintenance operation	<p>4.1. Rubbish, litter and decaying material are removed from plants, pots and surrounds and cleaning procedures are performed according to enterprise guidelines.</p> <p>4.2. Waste is collected and disposed of or recycled to minimise damage to the environment.</p> <p>4.3. Tools and equipment are cleaned and stored according to enterprise work procedures.</p> <p>4.4. Workplace information is recorded in the appropriate format.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- participate in teams and contribute to team objectives
- interpret enterprise work procedures
- communicate with clients, team members and supervisor
- take light meter readings
- measure quantities and calculate application rates
- operate, adjust and maintain the watering system
- inspect plant quality
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- identification and characteristics of common indoor plants and their culture
- botany and physiology of indoor plants
- growth requirements of indoor plants
- light and moisture tolerance/intolerance for common indoor plant species

**REQUIRED SKILLS AND KNOWLEDGE**

- acclimatisation techniques for indoor plants
- common problems that may occur with indoor plants and their treatment
- operations and maintenance of a range of irrigation/subirrigation systems used for watering indoor plants/displays
- methods of disposing of waste to minimise damage to the environment.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- preparing the tools, equipment and materials for indoor plant maintenance
- identifying hazards involved in indoor plant maintenance
- maintaining a growing environment
- recognise common problems
- use and maintain the watering systems
- inspect plant quality
- record workplace information.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor and maintain the nursery environment	<p>1.1.Environmental parameters are monitored against the needs of the plants and enterprise guidelines.</p> <p>1.2.Environmental parameters are altered, as required, to meet the needs of nursery plants and market requirements.</p> <p>1.3.Irrigation system components are serviced for basic operational use and basic user serviceable parts are repaired or replaced.</p>
2. Determine daily water requirements	<p>2.1.Water requirements are determined according to the needs of the plant and environmental parameters.</p> <p>2.2.Water is applied according to the needs of the plant group.</p> <p>2.3.Water requirements of the plant are monitored according to enterprise guidelines.</p>
3. Promote plant growth by intervention	<p>3.1.Potting media is tested in production areas to ensure quality specifications are met.</p> <p>3.2.Health of the plant is monitored according to enterprise guidelines.</p> <p>3.3.Plant interventions are undertaken according to marketing plans, appropriate stage of plant growth for the particular intervention, and Occupational Health and Safety (OHS) requirements.</p> <p>3.4.Waste is disposed of with full consideration of the environmental implications.</p> <p>3.5.Records are kept on all maintenance activities according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- select, fit and use appropriate personal protective equipment
- calculate daily water needs
- recognise stages of plant growth
- monitor plant health
- integrate range of plant maintenance activities
- monitor the effects of plant interventions
- prepare, mix and use chemicals as required
- service basic irrigation system components
- repair or replace user serviceable irrigation components
- interpret and record required workplace information
- operate irrigation systems
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- effects of environmental parameters on plant growth
- methods of calculating daily water needs
- relationship between plant water needs and environmental parameters
- characteristics of various types of potting media
- factors affecting the growth of nursery plants
- optimum growing conditions for a range of plants in a nursery
- quality parameters for a range of nursery plants
- symptoms of unhealthy plants
- common problems that occur with nursery plants and their treatment
- botany and plant physiology
- effect of different pruning and intervention methods
- processes for modifying environmental parameters
- phenological stages of plant growth
- treatments required by plants at different phenological stages and environmental parameters
- principles and operations of a range of irrigation systems used in nurseries

**REQUIRED SKILLS AND KNOWLEDGE**

- OHS hazards and the associated risks when maintaining plants
- environmental impacts of applying plant interventions
- Nursery Industry Water Management Best Practice Guidelines 2005.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- calculate daily water needs
- recognise stages of plant growth
- monitor plant health
- integrate range of plant maintenance activities
- monitor the effects of plant interventions
- prepare, mix and use chemicals as required.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

<b>RANGE STATEMENT</b>	
Plants may include:	<ul style="list-style-type: none"> <li>a wide range of plants common in production and retail nurseries and commonly used and produced in the region.</li> </ul>
Plant cultural practices may include:	<ul style="list-style-type: none"> <li>practices relevant to maintenance activities in diverse environments and a varying ability to control the environmental parameters.</li> </ul>
Plant physiological processes may include:	<ul style="list-style-type: none"> <li>principles of transpiration, water intake, nutrient uptake, photosynthesis, respiration and translocation.</li> </ul>

## AHCNSY302A Receive and dispatch nursery products

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of facilitating client orders for products and the receiving and dispatching of plants and other nursery products from a production or retail nursery and defines the standard required to: communicate with client and advise on product; select and evaluate individual product quality; fulfil orders for nursery products in quantity and meet client quality requirements; maintain stock inventory; advise on nursery product availability and record sales quantities of product; record financial details of transactions.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of selection and collection of product for the purpose of dispatch, delivery or pickup by client and the process of receiving and processing of products from suppliers. Some discretion and judgement may be required in relation to the selection, presentation and preparation for transportation of particular nursery products. Receiving and dispatching involves the application of a diverse range of knowledge in horticulture, warehousing, storage and transportation techniques.
--------------------------------	---

### Licensing/Regulatory Information

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Select product for an order	<p>1.1. Materials, equipment and Personal Protective Equipment (PPE) required for the job are selected and used.</p> <p>1.2. Occupational Health and Safety (OHS) hazards are identified and reported and suitable risk controls implemented.</p> <p>1.3. Product is selected from stock batches in accordance with order forms or by client request.</p> <p>1.4. Clients onsite are assisted with selection or directed to particular product or display areas.</p> <p>1.5. Quality of product is evaluated visually to meet the standard order requirements for quality.</p> <p>1.6. Special order requirements are detailed on the order forms or requested verbally.</p> <p>1.7. Stockholding areas are blocked up for presentation.</p> <p>1.8. Volume of product remaining is observed and information is retained to inform other clients.</p>

ELEMENT	PERFORMANCE CRITERIA
2. Maintain the stock inventory	2.1.Orders are collated in the sales/dispatch area. 2.2.Orders are checked for enterprise quality of a sales product and for accuracy in quantity. 2.3.Records are kept of outgoing sales in the product inventory by manual or electronic means. 2.4.Adjustments are made in the inventory about the quantity of nursery stock available for sale.
3. Prepare for dispatch or delivery	3.1.Product is checked for correct labelling and incorrect labelling is replaced. 3.2.Product is packaged for delivery and presentation to the client. 3.3.Product is packed into containers for ease of handling. 3.4.Delivery of product is assisted by loading and stacking product according to the configuration of the transportation vehicle. 3.5.Product quality is checked at each stage in the delivery process. 3.6.Sales/dispatch areas and packing/packaging materials are maintained and tidied.
4. Receive products	4.1.Incoming product is received and checked for quality and correct quantities. 4.2.Product is transferred to stock holding areas with appropriate manual handling techniques. 4.3.Incoming documentation, receipts of delivery and invoices are transferred to administration.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate with clients, suppliers and work team members
- interpret order forms
- select product for order requirements
- evaluate product quality

**REQUIRED SKILLS AND KNOWLEDGE**

- meet client service requirements
- maintain product records accurately, either manually or on a computer
- use a calculator
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- environmental controls necessary for transporting plants
- common sources of cross contamination from transport vehicles
- enterprise quarantine policies and relevant quarantine legislation
- enterprise stock control procedures
- best practice guidelines for nursery hygiene
- enterprise quality standards for the packing, packaging and labelling of products.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- communicate with client and advise on product
- select and evaluate individual product quality
- fulfil orders for nursery products in quantity and meet client quality requirements
- maintain stock inventory
- advise on nursery product availability
- record sales quantities of product and record financial details of transactions.

## AHCNSY303A Install and maintain plant displays

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of the installation and maintenance work associated with plant displays and defines the standard required to: select suitable plants for a range of plant display purposes; undertake routine regular maintenance of plants in a display; identify symptoms of plant cultural problems; analyse cost benefit of replacing/reviving plants.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of installation and maintenance work associated with plant displays in a diverse range of situations, buildings and structures and a wide range of locations in urban and regional areas. Installing and maintaining plant displays applies to permanent, semi-permanent and temporary displays of plant life under a range of gardening, exhibition, visual merchandising, marketing and commercial leasing and hiring activities.
--------------------------------	--

### Licensing/Regulatory Information

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess requirements for plantscaping	<p>1.1. Access factors are assessed and recorded prior to installation.</p> <p>1.2. Environmental parameters are assessed and recorded prior to installation.</p> <p>1.3. Light sources in regard to both plant growth and client requirements are noted and light meter readings taken for interior installations and recorded.</p> <p>1.4. Site conditions and constraints are analysed for plant suitability and results are recorded.</p> <p>1.5. Plants are selected to meet the requirements of the site according to the results recorded.</p>
2. Install containerised and direct planted specimens	<p>2.1. Materials, equipment and machinery required for the job are identified and scheduled according to a given plan or specifications.</p> <p>2.2. Personnel required for the job are identified and scheduled.</p> <p>2.3. Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls implemented.</p> <p>2.4. Suitable safety equipment and Personal Protective</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>Equipment (PPE) are selected, used and maintained.</p> <p>2.5.Plants are installed securely, are presented well, are accessible for routine maintenance and conform to the plan or specifications.</p> <p>2.6.Damaged or unnecessary material is pruned to enhance the presentation.</p> <p>2.7.Plants are watered and fertilised as required according to enterprise policy.</p> <p>2.8.The site is left in a clean and tidy state.</p>
3. Maintain plants	<p>3.1.The symptoms of under and over-watering are detected and actioned according to the maintenance agreement.</p> <p>3.2.The symptoms of low and high light intensity are detected and rectified.</p> <p>3.3.The symptoms of low and high fertiliser concentration are detected and the pH of the growing medium is measured where required and amended as required.</p> <p>3.4.Insects, pests and diseases associated with plants are detected and controlled as required.</p> <p>3.5.Appearance of plants is enhanced according to the maintenance agreement.</p> <p>3.6.The cost benefit of reviving or replacing plants is determined in line with site requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- select a range of plants used for displays
- interpret plans and specifications, and product labels
- calculate numbers of plants and materials
- detect and control pests and diseases
- identify symptoms of plant cultural problems
- calculate rates of chemicals
- determine spatial measurements of plantscape

**REQUIRED SKILLS AND KNOWLEDGE**

- analyse cost benefit
- interpret test results as required
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- characteristics and attributes of a range of plants used for plantscaping
- plant growth requirements
- light and moisture tolerance/intolerance for common plant species
- photosynthesis, respiration, nutrient uptake and growth rate for plants
- acclimatisation techniques for plants
- commonly occurring problems with plantscaping
- options for remedial action.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select suitable plants for a range of plant display purposes
- prepare a site for a plant display
- create a designed display
- undertake routine regular maintenance of plants in a display
- deconstruct or knock down a plant display.

**EVIDENCE GUIDE****Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Displays may include:

- displays for merchandising
- functions
- annual bedding displays
- herbaceous perennial displays
- indoor presentations.

Plant displays may include:

- containerised or direct planted installations.

## AHCNSY304A Deliver and promote sales of plants

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of transporting and delivering plants to retail outlets and other nurseries and the associated task of maintaining promotional displays and defines the standard required to: prepare and load plant orders from a production site; transport plants and other products to and from a production nursery; deliver and unload nursery products according to order requirements; maintain nursery product displays at retail outlets where necessary; use sales techniques to promote a range of nursery products.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the transport and maintenance of plant samples and plant displays and other product from a production operation to retail outlet, other nursery or end user and the promotion and sale of the product. This type of work is likely to be under limited supervision from others, with checking only related to overall progress. The provision of product and marketing support requires the application of extensive horticultural knowledge and a broad range of horticultural skills.
--------------------------------	--

### Licensing/Regulatory Information

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to provide marketing support	<p>1.1.Product list, clients, delivery schedule and transport vehicle are identified according to enterprise work procedures.</p> <p>1.2.Tools, equipment and machinery are selected according to delivery requirements and enterprise work procedures.</p> <p>1.3.Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturer's specifications and enterprise work procedures.</p> <p>1.4.Plants are selected according to orders; sample specifications and delivery schedule, and are prepared and loaded into transport vehicle according to enterprise work procedures.</p> <p>1.5.Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor.</p> <p>1.6.Suitable Personal Protective Equipment (PPE) is selected, used and maintained.</p>

ELEMENT	PERFORMANCE CRITERIA
2. Deliver plants	2.1.Maintenance of stock is undertaken according to enterprise work procedures. 2.2.Current stock lists are updated and maintained according to enterprise work procedures. 2.3.Regular delivery service is maintained according to enterprise work procedures. 2.4.Clients are supplied, on request, with information about stock availability according to enterprise work procedures. 2.5.Delivery documentation is completed accurately according to enterprise work procedures.
3. Maintain off-site displays	3.1.Off-site product displays are checked regularly according to enterprise work procedures. 3.2.Maintenance of displays is undertaken according to enterprise work procedures and client requirements. 3.3.Marketing support is undertaken according to OHS requirements, and with due consideration of the environmental implications.
4. Promote sales	4.1.Retailers are informed of available promotional literature with particular stock lines. 4.2.Regular sales memos are dispatched according to enterprise work procedures. 4.3.Advanced lists for seasonal promotions are prepared according to enterprise work procedures. 4.4.Sales, promotional and marketing documentation are completed accurately according to enterprise work procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate with clients, work team members and supervisors, interpret and apply delivery schedules and marketing plans, utilise proforma reporting and work procedure documents, and understand labels and symbols
- maintain mobile and remote displays and samples

## REQUIRED SKILLS AND KNOWLEDGE

- estimate treatment and product requirements, material sizes and quantities; interpret maps and directories, and calculate orders, sales figures, ratios, proportions and application rates
- co-ordinate own activities with plant production, marketing and sales teams to deliver and maintain plant orders, in a timely and cost effective manner and to clients specifications
- drive a motor vehicle
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- enterprise and industry labelling standards and methods
- enterprise standards and methods of packaging, and delivery of plant orders, samples and displays
- practical understanding of the range of plants available from the enterprise, their botanical, common and trade names, growth habits, and presentation requirements for display
- enterprise standards and methods for the preparation and dispatch of promotional literature and lists for seasonal promotions
- awareness of the environmental implications associated with the preparation, transport and maintenance of plant orders, samples and displays.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare and load plant orders from a production site
- transport plants and other products to and from a production nursery

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• deliver and unload nursery products according to order requirements</li> <li>• maintain nursery product displays at retail outlets where necessary</li> <li>• use sales techniques to promote a range of nursery products.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Plants may include:	<ul style="list-style-type: none"> <li>• a wide range of plants common in production and retail nurseries and commonly used and produced in the region.</li> </ul>
Delivery may include:	<ul style="list-style-type: none"> <li>• the delivery of all commercial plant products transported to a range of clients.</li> </ul>
Promotions may include:	<ul style="list-style-type: none"> <li>• consumer sales and trade sales promotions.</li> </ul>

## AHCNSY305A Prepare specialised plants

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of preparing specialised plants for sale and defines the standard required to: identify customer requirements and treatments to achieve the effect; prepare equipment and plants for treatment; carry out plant treatments; maintain the appearance and growth pattern of treated plants.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of production and preparation of specialised, unusual or rare plants in a production nursery or by other organisations, groups and individuals with a wide range of species and cultivars as the specialised plants or individual cultivars under production. This standard involves working under limited supervision from others, with checking only related to overall progress. The work requires the application of horticultural knowledge and a broad range of horticultural skills. Specialist plant preparation is usually done according to established enterprise guidelines where some discretion and judgement is required in the selection of equipment, work organisation, services, actions, and achieving outcomes within time constraints.
--------------------------------	---

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to treat specialised plants	<p>1.1. Customer requirements are analysed and clarified by market research or with a supervisor.</p> <p>1.2. Specialist plants requiring treatment are selected for appropriateness to the requirements.</p> <p>1.3. Treatments appropriate to the specialised plant are selected according to production and/marketing plan of an organisation, or the creative talent of the individual entrepreneur.</p> <p>1.4. The timing of the treatments is determined according to the seasonality of the plant species and market considerations.</p> <p>1.5. Occupational Health and Safety (OHS) hazards in carrying out specialist plant treatments are identified, risks assessed and controls implemented.</p>
2. Implement treatments	<p>2.1. Materials, tools and equipment required for the job are selected, prepared and used.</p> <p>2.2. Treatments are undertaken to meet the aesthetic</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements of the plant.</p> <p>2.3. Treatments are carried out according to enterprise OHS requirements.</p>
3. Maintain aesthetic appearance of specialised plants	<p>3.1. The health and aesthetic appearance of the plant is monitored to ensure quality standards are met.</p> <p>3.2. Water is applied according plant requirements.</p> <p>3.3. Environmental parameters are modified to ensure optimum growth of plant.</p> <p>3.4. Remedial or preventative measures are applied to the plants to ensure they maintain their aesthetic appearance.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate with work team members, supervisors, suppliers and clients
- interpret production/marketing plans and plant quality specifications
- organise and co-ordinate planned activities
- estimate treatment and plant requirements, sizes and quantities; and calculate ratios, proportions and application rates
- co-ordinate work group, materials, equipment and own activities to sequentially and effectively complete operations in a timely manner
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- characteristics of a range of potted plants commonly treated for special aesthetic purposes
- different treatments which are applied to specialised plants to get desired aesthetic appearance
- optimum timing of treatments
- aftercare requirements of treated plants
- nursery industry best practice guide.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for propagation activities	<p>1.1. Workplace information is interpreted and tasks organised to achieve daily work routine within time constraints.</p> <p>1.2. Tools, equipment and machinery are selected according to propagation method and enterprise work procedures.</p> <p>1.3. Growing environment is prepared to suit species and propagation method.</p> <p>1.4. Hygiene practices are implemented according to enterprise guidelines.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor.</p>
2. Select propagation material	<p>2.1. Parent plant is identified and selected according to health, vigour and desired characteristics.</p> <p>2.2. Propagation material is selected and collected according to the propagation method, and species.</p> <p>2.3. Conditioning and storage requirements are selected to ensure maximum viability of propagating material.</p>
3. Prepare propagating media	<p>3.1. Media components are selected according to manufacturer directions, enterprise guidelines, propagation method and plant needs.</p> <p>3.2. Propagation media is tested to ensure the product complies with media specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Media and components are handled according to OHS requirements. 3.4. Storage requirements for the unused propagation media are selected.
4. Propagate plants	4.1. Propagation material is prepared according to the propagation method and species. 4.2. Propagation techniques are performed according to plant species and documented guidelines. 4.3. Plants are handled in a way that minimises damage. 4.4. Aftercare is applied to suit the media conditions, plant requirements and propagation techniques employed.
5. Complete propagation operations	5.1. Ensure work site is cleaned according to hygiene requirements. 5.2. Waste is collected and disposed of or recycled to minimise damage to the external environment in accordance with enterprise guidelines. 5.3. Records are completed accurately and at the required time according to documented guidelines.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- select appropriate propagation material
- identify and assess hazards in the work area
- recognise and rectify problems and anomalies with parent plants, propagation material, propagation media, equipment and materials
- use propagation techniques for a range of plants
- use a diversity of propagation techniques
- prepare, mix and use chemicals as required
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening,

**REQUIRED SKILLS AND KNOWLEDGE**

clarifying information and consulting with supervisors as required

- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- quality specifications for parent plants and propagation materials
- enterprise and industry hygiene standards required for propagation activities
- common problems that may occur while performing propagation activities in a controlled environment, and preventative/corrective action that may apply
- propagation techniques required for a range of plants
- aftercare requirements for a range of propagated plants
- testing methods applied to propagation media
- preferred types of propagation media for different species.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare tools and propagation materials for work
- prepare workspaces for propagation activities
- use a range of propagation methods to produce new crops
- place or prepare for placing newly propagated material in appropriate growing environment
- record propagation activities.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources

**EVIDENCE GUIDE**

	for some worksites may differ due to the regional or enterprise circumstances.
--	--

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Methods of propagation may include:

- sexual and asexual methods of propagation including tissue culture.

Propagation material may include:

- seeds
- cuttings
- spores
- rootstock
- scion
- rootlings
- buds
- separations/divisions
- tissue cultures
- rhizomes
- plantlets.

Propagating media may include:

- sand
- potting mix
- agar
- gravel
- scoria
- rock wool
- gro-wool
- sawdust
- pine bark
- perlite
- vermiculite
- water (hydroponics).

	<p>cleaning procedures is managed according to environmental protection requirements and enterprise OHS procedures.</p> <p>3.4. Fertigation activities are reported and recorded according to regulatory requirements and enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- calculate and prepare fertigation materials
- connect, calibrate and operate the equipment, and monitor and adjust the delivery of fertilisers
- shut down, clean equipment and dispose of waste
- use personal protective equipment
- identify adverse environmental impacts of fertigation activities and appropriate remedial action
- implement enterprise, OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- fertigation injection equipment
- chemical handling procedures for fertiliser, chlorine, acid and cleaning agents
- cleaning procedures for fertigation equipment
- Material Safety Data Sheets (MSDSs)
- environmental impacts of delivering fertilisers via the irrigation system
- OHS issues

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise policies and procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- calculate and prepare fertigation materials
- connect and calibrate equipment
- operate, monitor and adjust delivery
- shut down and clean equipment

## AHCNSY401A Plan a growing-on program

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers planning a growing-on program and defines the standard required to: determine requirements for growing-on program; schedule potting program; develop budgets and plans for a growing-on program; and monitor the implementation of the program.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to production nursery managers.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify issues affecting the growing-on program	1.1. Production requirements are determined in consultation with management. 1.2. Factors that could limit the production of nursery plants are identified. 1.3. Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented. 1.4. The environmental implications in relation to a growing-on program are considered. 1.5. Sustainable practices are incorporated into the plan.
2. Develop the growing-on plan	2.1. Activities involved in the growing-on program are identified. 2.2. Labour, materials, tools and equipment needs are identified. 2.3. Environmental parameters are selected and altered to meet plant needs and production plans. 2.4. Growing media requirements are determined according to the needs of the plant and production plans. 2.5. Planting dimensions and layout are determined according to production plans. 2.6. Treatments required for the growing-on program are identified. 2.7. Hygiene requirements for the growing-on program are identified according to industry best practice.
3. Document the growing-on plan	3.1. The growing-on plan is documented, including all information identified in the development stage. 3.2. A budget supporting the plan is documented and approval sought by management. 3.3. A schedule of activities is organised according to production plans. 3.4. The growing-on plan and schedule of activities are communicated clearly to staff.

ELEMENT	PERFORMANCE CRITERIA
4. Oversee and monitor the growing-on program	4.1. The health of the plants is monitored to ensure they are at optimum growth. 4.2. Treatments are modified as required to maintain optimum growth. 4.3. Plants ready for dispatch are checked to ensure they meet customer specifications.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- conduct literature and consultative research to obtain information about production requirements, growth conditions and marketing implications
- negotiate, budget and document plans
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- Worksafe Australia criteria for the labelling and handling of hazardous substances
- enterprise and industry hygiene standards required for growing-on activities
- environmental implications of the disposal of chemicals or chemical containers, and the drainage of high nutrient effluent
- optimal growing requirements of nursery plants
- enterprise and industry quality standards of nursery plant production
- common problems that may occur while performing growing-on activities in a controlled environment and preventative/corrective actions that may apply
- processes and techniques for preparing, costing and documenting plans for and scheduling growing-on activities

**REQUIRED SKILLS AND KNOWLEDGE**

- testing methods applied to propagation media
- preferred types of propagation media for different species
- chemical, cultural and biological pest, weed and disease control techniques
- application techniques for chemical and non-chemical intervention or treatments.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- determine requirements for growing-on program
- schedule potting program
- develop budgets and plans for a growing-on program
- monitor the implementation of the program.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safe work practices	1.1. Protective clothing and equipment is used according to best practice when completing work tasks. 1.2. Safety of machines, tools and equipment is checked before use. 1.3. Correct manual handling techniques are used. 1.4. Hazards are reported to supervisor. 1.5. Supervisors are immediately informed verbally when there is an emergency. 1.6. Machines, tools and equipment are operated to manufacturer's specifications and in accordance with supervisor's instructions. 1.7. Safety procedures involved in handling of hazardous substances are interpreted and followed as required. 1.8. Safety procedures to protect people in the workplace are followed.
2. Communicate with others	2.1. Instructions and notices are interpreted correctly and observed. 2.2. Simple messages from clients and customers are taken and passed to supervisor. 2.3. Communication with others is conducted in a courteous manner and is appropriate to age, culture, linguistic background and position in the organisation.
3. Contribute to a productive working environment	3.1. Work practices contribute positively to quality, productivity and conditions, and promote co-operation and good relationships. 3.2. Industry expectations of conduct and presentation are determined and observed. 3.3. Information on working in the industry including employment terms and conditions is collected.

ELEMENT	PERFORMANCE CRITERIA
	3.4. Work is consistent with workplace standards relating to anti-discrimination and workplace harassment.
4. Follow good environmental practices	4.1. Work practices relating to potential environmental impacts are recognised and followed, and clarification is sought where necessary. 4.2. Environmental threats and potential hazards are recognised and reported to supervisor. 4.3. Contributions are made to improve environmental work practices.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- observe safe work practices
- communicate with others
- contribute to a productive working environment
- follow good environmental practices
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- hazards in the industry
- Occupational Health and Safety (OHS) legislative requirements and Codes of Practice including manual handling and use, maintenance, and storage of protective equipment and clothing
- communication procedures, systems and technology relevant to the industry
- industry expectations of conduct, presentation and work performance (including quality and productivity)
- appropriate behaviour relating to anti-discrimination and sexual harassment
- industry employment terms and conditions and career pathways

**REQUIRED SKILLS AND KNOWLEDGE**

- good environmental practices in the workplace
- environmental issues relevant to the industry.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- work safely
- communicate effectively
- contribute to a productive workplace
- observe good environmental work practice.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Working safely may include:

- all aspects and contexts associated with the agriculture, horticulture and conservation and land management industries.

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Follow workplace procedures for hazard identification and risk control	1.1.Hazards in the workplace are recognised and reported to designated personnel according to enterprise procedures. 1.2.Assessment of risk associated with identified hazards is made according to enterprise procedures. 1.3.Workplace procedures and work instructions for controlling risks are followed accurately. 1.4.Workplace procedures for dealing with accidents, fire and emergencies are followed whenever necessary within the scope of responsibilities and competencies. 1.5.Risks to fellow workers, other people and animals are recognised, and action taken to eliminate or reduce them. 1.6.Employee responsibilities prescribed in OHS legislation are recognised and carried out. 1.7.Safety training is undertaken as directed.
2. Observe safe practices during work operations	2.1.Work for which PPE is required is identified, used, maintained and stored according to enterprise procedures.

ELEMENT	PERFORMANCE CRITERIA
	<p>2.2.Safety checks on all machinery and equipment are undertaken before operation according to enterprise procedures.</p> <p>2.3.Hazards associated with handling of hazardous substances are identified and reported, and risk assessed according to enterprise procedures and OHS requirements.</p> <p>2.4.Noise hazards are identified and notified, and risk assessed according to enterprise procedures and OHS requirements.</p> <p>2.5.Manual handling job risks are assessed prior to activity and work carried out according to currently recommended safe practices.</p> <p>2.6.Information on OHS is accessed as required.</p>
<p>3. Participate in arrangements for maintaining health and safety of all people in the workplace</p>	<p>3.1.Individuals have input into ongoing monitoring and reporting on all aspects of workplace safety.</p> <p>3.2.OHS issues are raised with designated personnel according to enterprise procedures and relevant OHS legislation.</p> <p>3.3.Contributions to participative arrangements in the workplace are made within organisational procedures and scope of responsibilities and competencies.</p> <p>3.4.Contributions are provided towards the development of effective solutions to control the level of risk associated with enterprise activities.</p>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Adapt OHS policies and procedures	<p>1.1. Information regarding the organisation OHS policies and procedures is made readily accessible to all employees.</p> <p>1.2. Employee responsibilities prescribed in OHS legislation, codes and national standards are identified and carried out.</p> <p>1.3. Employee responsibilities prescribed in enterprise OHS policies and procedures (including emergency procedures) are identified and carried out.</p>
2. Assist in workplace hazard identification and risk control	<p>2.1. Information regarding hazard identification and risk control is provided and explained regularly.</p> <p>2.2. Hazards in the workplace are recognised and reported to designated personnel according to enterprise procedures.</p> <p>2.3. Assessment of risk associated with identified hazards is made in accordance with enterprise procedures.</p> <p>2.4. Workplace procedures and work instructions for controlling risks are followed accurately.</p> <p>2.5. Risks to fellow workers, other people and animals are recognised and action is taken to eliminate or reduce them.</p> <p>2.6. Safety training is undertaken or provided as necessary.</p>
3. Observe safe practices during work operations	<p>3.1. Personal Protective Equipment (PPE) required for work is identified, used, maintained and stored according to enterprise procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Basic safety checks on all machinery and equipment are undertaken before operation according to enterprise procedures.</p> <p>3.3. Hazards associated with handling of hazardous substances are identified, risks assessed and risk controls implemented in accordance with enterprise procedures and OHS requirements.</p> <p>3.4. Noise hazards are identified and notified, risks assessed and risk controls implemented in accordance with enterprise procedures and OHS requirements.</p> <p>3.5. Manual handling risks are assessed prior to activity, and safe lifting practices are used.</p> <p>3.6. Information on OHS for specific work operations is accessed as required.</p>
<p>4. Participate in arrangements for maintaining health and safety of all people in the workplace</p>	<p>4.1. Individuals have input into ongoing monitoring and reporting on all aspects of workplace safety.</p> <p>4.2. OHS issues are raised with designated personnel in accordance with enterprise procedures and relevant OHS legislation.</p> <p>4.3. Contributions to participative arrangements in the workplace are made within organisational procedures and scope of responsibilities and competencies.</p> <p>4.4. Suggestions are made to assist the development of effective solutions to control the level of risk with enterprise activities.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply workplace procedures for hazard identification and risk control
- ability to direct others in identifying hazards, controlling risks, and following other OHS enterprise requirements
- ability to read safety warning signs
- participate in arrangements for maintaining the health and safety of all people in the workplace

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• accurately record incidents in the work area in accordance with OHS legal requirements</li> <li>• observe and direct others to follow safe working operations</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required</li> <li>• use numeracy skills to estimate, calculate and record routine workplace measures</li> <li>• use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• employee and employer responsibilities under OHS legislation and relevant national and industry codes of practice</li> <li>• enterprise procedures relating to hazards, fires, emergencies, accidents, and risk control</li> <li>• OHS signs and symbols relevant to area of work</li> <li>• hazard identification and the risk assessment process</li> <li>• manual handling principles and procedures</li> <li>• safe systems of work.</li> </ul>

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Provide information about occupational health and safety	1.1.Relevant provisions of OHS legislation and Codes of Practice are accurately and clearly explained to the work group. 1.2.Information on enterprise OHS policies, procedures and programs is provided in a readily accessible manner, and is accurately and clearly explained to the work group. 1.3.Information about identified hazards and the outcomes of risk assessment and control procedures is regularly provided, and is accurately and clearly explained to the work group.
2. Facilitate the participation of workers in OHS observance and decision-making	2.1.Enterprise procedures for consultation over OHS issues are implemented and monitored to ensure that all members of the work group have the opportunity to contribute. 2.2.Procedures whereby workers report OHS hazards, risks are assessed and action taken to control risks, are clearly described to the work group. 2.3.Issues raised through consultation are dealt with and resolved promptly, or referred to the appropriate personnel for resolution in accordance with workplace procedures for issue resolution. 2.4.The outcomes of consultation over OHS issues are promptly communicated to the work group.

ELEMENT	PERFORMANCE CRITERIA
<p>3. Implement procedures for identifying hazards and assessing and controlling risks</p>	<p>3.1.Existing and potential hazards which are identified are reported so that adequate risk assessment and effective control measures are implemented.</p> <p>3.2.Work procedures to control OHS risks are implemented by the work group and regular monitoring occurs to ensure ongoing adherence and effectiveness of risk control.</p> <p>3.3.Inadequacies in existing risk control measures are identified in accordance with the hierarchy of control, and reported to designated personnel/management.</p> <p>3.4.Inadequacies in allocation of resources to ensure safe work practice are identified and reported to management.</p> <p>3.5.Existing risk control measures are monitored and results reported regularly in accordance with workplace procedures.</p>
<p>4. Implement workplace procedures for dealing with emergencies and hazardous events</p>	<p>4.1.Workplace procedures for dealing with OHS emergencies are implemented where necessary to ensure that prompt and effective control action is taken.</p> <p>4.2.OHS emergencies are reported in accordance with established enterprise procedures.</p> <p>4.3.Control measures to prevent recurrence and minimise risk of emergencies and hazardous events are implemented based on the hierarchy of control, or alternatively, referred to designated personnel for implementation.</p>
<p>5. Implement and monitor enterprise procedures for providing OHS training</p>	<p>5.1.OHS induction and training needs are identified accurately, specifying the gaps between OHS competencies required and those held by the work group.</p> <p>5.2.Arrangements are made for meeting identified OHS training needs in both on and off-the-job training programs in consultation with relevant parties.</p>
<p>6. Implement and monitor enterprise procedures for maintaining occupational health and safety records</p>	<p>6.1.OHS records for work area are accurately and legibly completed in accordance with workplace requirements for OHS records, and legal requirements for the maintenance of records of occupational hazards, risk control, injury and disease events.</p> <p>6.2.Aggregate information from OHS records is used to identify hazards and monitor risk control procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	within work area according to enterprise procedures and within scope of responsibilities.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- facilitate the participation of workers in OHS observance and decision-making
- identify OHS hazards and conduct the risk assessment process
- respond to emergencies and OHS issues in an appropriate and timely manner
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- hazards in the workplace
- relevant OHS legislation and Codes of Practice
- risk control measures
- the hierarchy of OHS risk control and its implementation for hazards in land-based industries
- communication and engagement strategies with workers
- suitable communication techniques
- relevant enterprise management systems and procedures
- accident/incident investigation
- participative work practices.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• facilitate meetings and document actions to consider OHS issues in the workplace</li> <li>• distribute information concerning OHS processes and requirements to staff</li> <li>• establish procedures to document the identification of hazards and assessment of risk covering the operations of the enterprise</li> <li>• provide staff with OHS training in risk assessment, and other areas nominated by risk controls</li> <li>• put emergency procedures in place and organise for safety drills</li> <li>• maintain health and safety records.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

# AHCOHS501A Manage Occupational Health and Safety (OHS) processes

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers managing OHS processes and defines the standard required to: develop OHS policies and procedures which demonstrate enterprise commitment to OHS; establish arrangements to ensure the involvement of all employees in the management of OHS; supervise procedures for identifying hazards; conduct risk assessments to cover all phases of the organisations operations involving all relevant staff; develop risk controls and ensure all relevant staff are aware of them; establish and maintain procedures for dealing with hazardous events and emergencies; established and maintain an OHS safety induction and training program; establish and maintain a system for OHS records; review the enterprise OHS system based on an analysis of OHS records, related policies, procedures and programs and make changes in response to review.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit requires the ability to develop management systems and procedures, and to manage the implementation process. The process is usually conducted within policy guidelines and procedures where discretion and judgement are required.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Develop OHS policies and procedures	<p>1.1. An OHS business plan and program is developed for the enterprise in consultation with designated personnel and/or management.</p> <p>1.2. OHS responsibilities and duties are clearly defined, allocated and included in job descriptions and duty statements for all relevant positions.</p> <p>1.3. Financial and human resources for implementation of OHS policies and procedures are identified, sought and/or provided as required.</p> <p>1.4. Information on the OHS system and procedures for the area of responsibility is provided and explained in a form which is readily understood by employees.</p>
2. Establish and maintain processes to ensure the participation of all employees in the	<p>2.1. Consultation processes are established and maintained with employees and their representatives in accordance with relevant legislation and according to enterprise guidelines.</p> <p>2.2. Issues raised through participation and consultation</p>

ELEMENT	PERFORMANCE CRITERIA
application of OHS	<p>are dealt with and resolved promptly and effectively in accordance with enterprise procedures for issue resolution.</p> <p>2.3.Information about the outcomes of participation and consultation is provided in a manner readily accessible to employees.</p>
3. Establish and maintain procedures for identifying hazards	<p>3.1.Existing and potential hazards within the area of responsibility are identified and confirmed in accordance with legislation, Codes of Practice, and trends identified from the OHS records system.</p> <p>3.2.A procedure for ongoing identification of hazards is developed and integrated within systems of work and procedures.</p> <p>3.3.Activities are appropriately monitored to ensure that this procedure is adopted effectively throughout areas of managerial responsibility.</p> <p>3.4.Hazard identification is addressed at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created.</p>
4. Establish and maintain procedures for assessing risks	<p>4.1.Risks associated with identified hazards are assessed in accordance with safe work practices, with information derived from workplace OHS records and industry wide information, and with relevant OHS legislation and Codes of Practice.</p> <p>4.2.A procedure for ongoing assessment of risks is developed and integrated within systems of work and procedures.</p> <p>4.3.Activities are monitored to ensure that risk assessment procedures are adopted effectively throughout the area of managerial responsibility.</p> <p>4.4.Risk assessment is addressed at the planning, design and evaluation stages of any change in the workplace to ensure that the risk from hazards is not increased.</p> <p>4.5.Accident and dangerous occurrences are investigated and recorded according to enterprise and OHS procedures.</p>
5. Interim risk control measures are implemented until a better or permanent control measure is developed	<p>5.1.Measures to control assessed risks are developed and implemented in accordance with the hierarchy of control, relevant OHS legislation, Codes of Practice, and trends identified from the OHS records system.</p> <p>5.2.When measures which control a risk at its source are not immediately practicable, interim solutions are implemented until a permanent control measure is</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>developed.</p> <p>5.3. A process of ongoing hazard identification and risk assessment, and review of effectiveness of control programs is developed and integrated into enterprise management arrangements.</p> <p>5.4. Activities are monitored to ensure that the risk control procedure is adopted effectively throughout the area of managerial responsibility.</p> <p>5.5. Risk control is addressed at the planning, design and evaluation stages of any change in the workplace to ensure that adequate risk control measures are included.</p> <p>5.6. Systems are designed to reduce risk and administrative arrangements to ensure safe OHS work practices are put in place where elimination of a hazard is not possible.</p> <p>5.7. Effective OHS risk management measures are set in place during any modification of the buildings and structures, machinery and work activities.</p> <p>5.8. Inadequacies in existing risk control measures are identified and resources enabling implementation of new measures are sought and/or provided according to appropriate workplace procedures.</p>
<p>6. Plan and manage enterprise procedures for dealing with hazardous events</p>	<p>6.1. Potential emergencies posing risk to health and safety of workers and the public are correctly identified.</p> <p>6.2. Plans and procedures which control the risks associated with hazardous events and meet any legislative requirements as a minimum, are developed in consultation with appropriate emergency services.</p> <p>6.3. Appropriate information and training is provided to employees to enable implementation of correct emergency procedures.</p> <p>6.4. Adequate numbers of workers are trained in First Aid to ensure that first aid is applied to preserve life and minimise injury.</p>
<p>7. Establish and maintain an OHS safety induction and training program</p>	<p>7.1. An OHS induction program is developed to meet the occupational health and safety needs of new employees.</p> <p>7.2. An OHS training program is developed as part of supervisors and employee's general training.</p>
<p>8. Establish and</p>	<p>8.1. A system for keeping OHS records is established and</p>

ELEMENT	PERFORMANCE CRITERIA
maintain a system for OHS records	monitored to allow identification of patterns of occupational injury and disease in the enterprise. 8.2. Records are regularly updated and used to evaluate the effectiveness of the enterprise OHS program.
9. Evaluate the enterprise OHS system and related policies, procedures and programs	9.1. The effectiveness of the OHS system and related policies, procedures and programs is assessed according to enterprise aims with respect to OHS. 9.2. Improvements to the OHS system are developed and implemented to ensure more effective achievement of enterprise aims. 9.3. Compliance with OHS legislation and Codes of Practice is assessed to ensure that legal OHS standards are maintained as a minimum.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- develop OHS policies and procedures which demonstrate enterprise commitment to OHS
- establish and maintain arrangements to ensure the involvement of all employees in the management of OHS
- establish and maintain procedures for identifying hazards
- establish and maintain procedures for assessing risks
- establish and maintain procedures for controlling risks
- establish and maintain enterprise procedures for dealing with hazardous events
- establish and maintain an OHS safety induction and training program
- establish and maintain a system for OHS records
- evaluate the enterprise OHS system and related policies, procedures and programs
- analyse recorded data to determine where the OHS program can better meet enterprise and employee needs
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <p>clarification, negotiating solutions and responding to a range of views</p> <ul style="list-style-type: none"> <li>• use numeracy skills to estimate, calculate and record complex workplace measures</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• data and documentation for industry injury statistics</li> <li>• significant hazards and areas of risk in the workplace</li> <li>• all relevant OHS legislation and Codes of Practice consistent with the hierarchy of OHS risk control and its implementation for hazards in land-based industries</li> <li>• risk control measures</li> <li>• hierarchy of risk controls</li> <li>• relevant management systems and procedures</li> <li>• public safety issues.</li> </ul>

## Evidence Guide

<p><b>EVIDENCE GUIDE</b></p>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• develop OHS policies and procedures which demonstrate enterprise commitment to OHS</li> <li>• establish arrangements to ensure the involvement of all employees in the management of OHS</li> <li>• supervise procedures for identifying hazards</li> <li>• conduct risk assessments to cover all phases of the organisations operations involving all relevant staff</li> <li>• develop risk controls and ensure all relevant staff are aware of them</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• establish and maintain procedures for dealing with hazardous events and emergencies</li> <li>• established and maintain an OHS safety induction and training program</li> <li>• establish and maintain a system for OHS records including records to be kept and persons responsible</li> <li>• review the enterprise OHS system based on an analysis of OHS records, related policies, procedures and programs and make changes in response to review.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
The enterprise OHS program includes:	<ul style="list-style-type: none"> <li>• the full range of hazards that workers are exposed to (or are likely to be exposed to) in the workplace.</li> </ul>

### Unit Sector(s)

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare materials, tools and equipment for organic production work	<p>1.1. Required materials, tools and equipment are identified according to supervisor instructions.</p> <p>1.2. Checks for serviceability are conducted on all materials, tools and equipment and insufficient or faulty items are reported to supervisor.</p> <p>1.3. Techniques used when loading and unloading materials demonstrate correct manual handling techniques and minimise damage to self, load and vehicle.</p> <p>1.4. Suitable personal protective clothing and equipment are selected and checked prior to use.</p> <p>1.5. OHS hazards are identified and reported to supervisor.</p>
2. Undertake organic production work as directed	<p>2.1. Instructions and directions provided by supervisor are followed and clarification is sought when necessary.</p> <p>2.2. Work is undertaken in an environmentally appropriate manner and according to workplace information, principles of organic agriculture, OHS requirements and enterprise guidelines.</p> <p>2.3. Site quarantine, biosecurity protocols and farm and personal hygiene requirements are followed as required by enterprise guidelines.</p> <p>2.4. Where appropriate to enterprise's activities, food safety requirements are met.</p> <p>2.5. Interactions with other staff and customers are carried out in a positive and professional manner.</p> <p>2.6. Enterprise policies and procedures in relation to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace practices, and handling and disposal of materials are observed.</p> <p>2.7. Problems or difficulties in completing work to required standards or timelines are reported to supervisor.</p> <p>2.8. Clean and safe work site is maintained while working.</p>
3. Handle materials and equipment	<p>3.1. Waste material produced during work is stored in a designated area according to supervisor instructions.</p> <p>3.2. Materials, tools and equipment are handled and transported according to supervisor instructions and enterprise guidelines.</p>
4. Clean up on completion of work	<p>4.1. Materials are returned to store or disposed of according to supervisor instructions.</p> <p>4.2. Tools and equipment are cleaned, maintained and stored according to manufacturer specifications and supervisor instructions.</p> <p>4.3. Work outcomes are reported to supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- following safe work procedures
- cleaning up on completion of work
- handling materials and equipment
- observing interactions between parts of the farm system
- preparing materials, tools and equipment for work
- undertaking work as directed
- where appropriate to enterprise's activities, working safely with and around livestock
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural,

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
social and religious backgrounds.
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• principles of organic production</li> <li>• organic procedures and recording requirements</li> <li>• safe work practices relevant to the tasks being undertaken, including safe use of tools and equipment</li> <li>• where appropriate to enterprise's activities, food safety requirements</li> <li>• OHS and environmental protection legislation and enterprise procedures.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• apply principles of organic agriculture to daily work routines</li> <li>• follow supervisor instructions</li> <li>• follow OHS procedures and where appropriate, food safety procedures</li> <li>• report any variations from required standards or procedures to supervisor.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

# AHCORG401A Manage biodynamic production

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of managing a farming system according to the principles and using the practices of biodynamic agriculture, and defines the standard required to: understand and apply biodynamic principles; make and apply biodynamic preparations and compost; enhance soil and plant health; integrate and manage animals in a biodynamic enterprise; plan for biodynamic production.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit applies to farmers who manage according to the principles of biodynamic agriculture. Work is likely to be done independently and according to the requirements of the National Standard for Organic and Biodynamic Produce.
--------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare a plan for a biodynamic farming enterprise	<p>1.1. Work is undertaken in an environmentally appropriate manner and according to Occupational Health and Safety (OHS) requirements and enterprise guidelines.</p> <p>1.2. Requirements for biodynamic certification are identified.</p> <p>1.3. Personal, ecological and financial goals for a biodynamic enterprise are incorporated into an enterprise plan.</p> <p>1.4. Marketing plan for biodynamic produce is developed which maintains product quality and integrity.</p> <p>1.5. Research findings for biodynamic agriculture are trialled within enterprise and incorporated into plans where appropriate.</p>
2. Make and apply biodynamic field spray preparations	<p>2.1. Horn Manure (500), Horn Silica (501) and Horn Clay preparations are made and stored correctly.</p> <p>2.2. Preparations are stirred by creating vortex and chaos.</p> <p>2.3. Equipment for application of biodynamic preparations is selected.</p> <p>2.4. Equipment is calibrated and adjusted for suitable application rate.</p> <p>2.5. Preparations are applied according to biodynamic principles.</p>
3. Use biodynamic compost preparations, composts and liquid	<p>3.1. Biodynamic compost preparations are used and stored according to biodynamic principles.</p> <p>3.2. Materials and mineral inputs for compost are identified from farm production plan.</p>

ELEMENT	PERFORMANCE CRITERIA
brews	3.3.Compost heap is built. 3.4.Biodynamic preparations are applied to compost according to biodynamic principles. 3.5.Aeration, moisture and temperature of compost heap are monitored. 3.6.Compost is applied to enhance natural cycles.
4. Apply biodynamic principles and techniques to enhance soil and plant health	4.1.Planting, harvest and pruning times are planned with regard to moon rhythms and planetary patterns. 4.2.Soil and plant health is optimised using biodynamic preparations, cover crops, crop rotation, mulching and composting and through application of farm-based fertility products. 4.3.Weeds and insect pests in enterprise are identified. 4.4.Options for managing weeds and insects are evaluated that consider natural predators, life cycles, cultural practices, soil health and the plant community. 4.5.Plan for managing pests and weeds is developed and implemented.
5. Manage animals within a biodynamic production system	5.1.Soil and plant health are optimised to provide a nutrient-dense and balanced diet. 5.2.Grazing and feeding strategies are developed and incorporated into the biodynamic system. 5.3.Homeopathic remedies and allowable treatments are incorporated into animal health strategies.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analysing soil test results and applying them to a biodynamic farm
- calibrating sprays and calculating application rates
- developing a biodynamic management plan (from start-up to full implementation)
- developing biodynamic spray programs for various types of agriculture and horticulture systems
- making and using biodynamic compost, manure concentrate, seaweed tea, various

## REQUIRED SKILLS AND KNOWLEDGE

- liquid brews and foliar sprays
- making and using biodynamic preparations
- stirring and spraying systems
- stirring water and other liquids by creating vortexes and chaos
- using planetary rhythms for seed sowing and cultivation
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- animal health
- biodynamic preparations and their role in soil food web and atmosphere
- biodiversity, shelter belts, birds and native bush on biodynamic farm
- calcium-clay-silica polarities
- crop and animal rotation systems
- cultivation methods
- etheric and astral forces and how they relate to biodynamics
- experiments and testing methods such as chromatography and sensitive crystallisation
- green manuring
- management of insects and birds
- paradigms of various farming systems: biodynamics, organics and permaculture, and holistic management
- peppering for animals and insects
- planting calendar
- purpose of various herbs and organs used for making biodynamic preparations
- relationship between soil, plant, animal and human health
- research in biodynamics
- rhythms and cycles of planets and moon
- role of the biodynamic preparations 500-508
- role of bacteria and fungi
- role of humus
- soil: food web information, how it is made, its structure and feeding cycle
- water retention

**REQUIRED SKILLS AND KNOWLEDGE**

- weed management
- principles, practices and inputs allowable under the National Standard for Organic and Biodynamic Produce.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- understand and apply biodynamic principles
- make and apply biodynamic preparations and compost
- enhance soil and plant health
- integrate and manage animals in a biodynamic enterprise
- plan for biodynamic production.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

**RANGE STATEMENT**

Organic may include:	<ul style="list-style-type: none"> <li>the application of practices that emphasise the use of renewable resources</li> <li>conservation of energy, soil and water</li> <li>recognition of livestock welfare needs</li> <li>environmental maintenance and enhancement, while producing optimum quantities of produce without the use of artificial fertiliser or synthetic chemicals.</li> </ul>
Biodynamic may include:	<ul style="list-style-type: none"> <li>agricultural systems that introduce specific additional requirements to an organic system based on the application of preparations indicated by Rudolf Steiner and subsequent developments for management derived from practical application, experience and research based on these preparations.</li> </ul>
Production may include:	<ul style="list-style-type: none"> <li>any primary production involved in producing an agricultural or aquaculture product.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Manage animal health and welfare	<p>1.1.All work is undertaken in an environmentally appropriate manner and according to the principles of organic agriculture, occupational health and safety requirements and enterprise guidelines.</p> <p>1.2.Natural behaviours of animals and requirements of animal welfare codes of practice are considered in planning for organic livestock production.</p> <p>1.3.Genetic resistance to parasites is incorporated into breeding strategy.</p> <p>1.4.Livestock is monitored constantly for health and welfare and records are kept according to enterprise requirements.</p> <p>1.5.Animal health preventative strategies are developed, communicated to others working on farm and implemented.</p> <p>1.6.Use of prohibited/restricted substances for organic livestock is documented and treated animals are identified and quarantined.</p> <p>1.7.Animal transport is conducted humanely and in compliance with organic certification requirements.</p> <p>1.8.Livestock records required for organic certification are maintained.</p>
2. Develop and implement feed	<p>2.1.Planning for winter feed and drought preparedness is undertaken.</p>

ELEMENT	PERFORMANCE CRITERIA
production and storage requirements	<p>2.2. Haymaking and/or cropping are incorporated into annual program for animal feed and on-farm sustainability.</p> <p>2.3. Long term storage for hay and feed is implemented and quality and quantity are monitored.</p>
3. Develop and implement grazing strategies to achieve biodiversity, recycling and sustainability	<p>3.1. Soil and plant health are optimised to provide a nutrient-dense and balanced diet for livestock.</p> <p>3.2. Pastures are assessed for diversity, health, vigour and ground cover.</p> <p>3.3. Infrastructure required for implementing rotational grazing strategies is identified and incorporated into property improvement program.</p> <p>3.4. Rotational grazing strategies are developed and implemented.</p> <p>3.5. Impact of grazing strategies on nutrient recycling and pasture diversity, persistence and vigour is evaluated.</p> <p>3.6. Strategies for controlling weeds in pastures are implemented.</p>
4. Research and source allowable inputs for organic livestock production	<p>4.1. Level of nutrients exported from farm is estimated.</p> <p>4.2. Soil-testing program, including observation of pasture species present, is implemented in order to monitor and maintain optimal pasture species and soil health.</p> <p>4.3. Soil nutrient levels are replenished through recycling, optimising nutrient availability in soil, and sourcing allowable inputs where necessary.</p> <p>4.4. Organic fertilisers and soil conditioners are applied to ensure a mineral-balanced and healthy soil.</p> <p>4.5. Certification protocols for sourcing essential fodder off-farm are followed.</p> <p>4.6. Fodder is sourced and fed to stock, minimising risk of weed spread and maintaining adequate records.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**REQUIRED SKILLS AND KNOWLEDGE****Required skills**

- animal handling and husbandry techniques
- assessing pastures
- monitoring feed intake
- feed budgeting
- parasite and disease monitoring
- developing grazing strategies
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- certification requirements
- animal parasites and diseases
- animal welfare code of practice
- grazing management, including pasture identification and assessment, feed budgeting and grazing strategies
- management options for animal health based on an understanding of pest life cycles, genetic selection and acquired immunity
- permitted, restricted and prohibited inputs and activities as described in the National Organic Standards for Organic Livestock Production
- principles of organic agriculture
- relationship between soil, plant and animal health
- Occupational Health and Safety (OHS) and animal welfare legislation and codes of practice.
- record keeping
- principles, practices and inputs allowable under the National Standard for Organic and Biodynamic Produce.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor indicators of soil fertility	<p>1.1. Work is undertaken in an environmentally appropriate manner and according to workplace information, principles of organic agriculture, Occupational Health and Safety (OHS) requirements and enterprise guidelines.</p> <p>1.2. Soil testing is conducted at reference sites according to enterprise procedures and organic industry standards.</p> <p>1.3. Soil acidity or alkalinity (pH), mineral balances and organic matter levels are assessed and recorded.</p> <p>1.4. Soil texture, structure, salinity and sodicity are assessed and recorded.</p> <p>1.5. Soil biological activity is assessed and recorded</p> <p>1.6. Soil condition is assessed for drainage, compaction, aeration and water infiltration in relation to requirements for desired plant growth for selected species.</p> <p>1.7. Results are analysed to identify trends in soil health and fertility and areas for improvement.</p>
2. Assess soil-related factors for selected plants	<p>2.1. Nutritional requirements of selected plant species are identified.</p> <p>2.2. Soil analyses to be conducted and suitable testing facilities are selected.</p> <p>2.3. Plant tissue sample collection is conducted according</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>to enterprise procedures and requirements of testing facility.</p> <p>2.4. Results of tissue testing are combined with observations of plant vigour and productivity to determine management and input requirements of the farming system.</p>
<p>3. Select and implement allowable techniques and inputs to optimise soil fertility</p>	<p>3.1. Range of allowable inputs is identified according to requirements of the National Standard for Organic and Biodynamic Produce.</p> <p>3.2. Cultural practices to enhance nutrient cycling are identified and implemented.</p> <p>3.3. Appropriate inputs are calculated, based on soil/plant analyses, crop removal and plant/animal observations.</p> <p>3.4. Cover crop and pasture systems are selected and managed.</p> <p>3.5. Mulching and composting systems are developed, applied and monitored.</p> <p>3.6. Rotations to optimise soil fertility are designed and implemented.</p> <p>3.7. Cultural practices to enhance soil fertility are selected and implemented.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- applying organic soil improvements, such as compost
- assessing biodiversity and plant health through observation of plant community
- observing animal health and relating it to plant and soil nutrient status
- operating equipment safely
- sampling soil and plant tissues
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as

## REQUIRED SKILLS AND KNOWLEDGE

specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views

- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- availability, use and definition of organic fertilisers
- structural properties of soils
- factors contributing to soil acidity, sodicity and salinity
- factors promoting soil and plant water-holding capacity
- importance of soil biological activity
- major nutrient elements and their role in plant growth
- methods and inputs that can be used to correct imbalances and maintain soil fertility
- principles of organic agriculture
- processes and practices that impact on soil structure, biological activity, water-holding capacity and weed patterns
- processes of aggregate and colloid formation
- range of soil analyses available and principles of each
- relationship between soil structure, water holding capacity and nutrient availability
- role of organic matter, humus and micro-organisms
- role of livestock in enhancing soil fertility
- role of macro and micro-elements in soil and plants
- role of weeds
- significance of levels and balance of soil fertility indicators
- soil food chains and food webs
- soil textural types and determinants
- when and how to take soil samples to test for indicators of soil fertility
- principles, practices and inputs allowable under the National Standard for Organic and Biodynamic Produce.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

<b>EVIDENCE GUIDE</b>	
performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>

# AHCORG404A Arrange selling through community based marketing

## Modification History

Release	TP Version	Comments
1	AHC10v4	Initial release

## Unit Descriptor

This Unit of Competency defines the standard required to: identify types of community based markets; develop and maintain a community based connection with customers; and comply with the requirements of the selected community marketing scheme.

## Application of the Unit

This Unit applies to production managers and workplace supervisors in an organic farming enterprise that are responsible for identifying selling options, developing a relationship with community groups, complying with community based marketing scheme requirements, organising appropriate transport and keeping sale records.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Nil.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and evaluate selling options	1.1 Identify the various types of <i>community based selling schemes</i> . 1.2 Identify <i>characteristics of the farm business produce</i> . 1.3 Identify and document the potential customer base. 1.4 Evaluate and document selling options.
2. Comply with the requirements of the selected community marketing scheme.	2.1 Identify and comply with <i>market requirements</i> . 2.2 Comply with legislative requirements in each step of the supply chain. 2.3 Keep records to verify compliance with the community marketing scheme.
3. Develop and maintain a relationship with customers	3.1 Investigate <i>characteristics of the community customers</i> . 3.2 Identify potential links between the community and the farm system. 3.3 Develop the connections between individuals and the farm production system. 3.4 Develop a 'farm story' and communicate the uniqueness of the enterprise to the community. 3.5 Monitor community satisfaction levels through customer feedback and address valid concerns.
4. Organise transport	4.1 Identify transport requirements and engage carriers as required. 4.2 Arrange transport timing and delivery of product with carrier, processing and or selling facility and, where appropriate, agent. 4.3 Comply with any special requirements to ensure appropriate transport. 4.4 Comply with all relevant legislative requirements.
5. Keep records	5.1 Complete pre and post sale documentation. 5.2 Record transactions. 5.3 Document customer feedback and identify and record potential improvements.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills include:

---

#### Ability to:

- focus on the customer
- work collaboratively with others
- adapt appropriately to cultural differences in the community market place, including modes of behaviour and interactions with others
- work with attention to detail and thoroughness
- use rural produce marketing and presentation skills
- interpret, analyse and extract information from a range sources such as professional literature, legal documents, discussions and workshops
- communicate detailed and complex information in written and oral form with people both inside and outside the organisation
- converse and liaise with industry contacts, relevant stakeholders, staff and family regarding marketing through a community based scheme
- identify and build strategic industry relationships and establish and use network and support groups
- measure, calculate and estimate material quantities
- assess and adopt profitable innovations
- calculate financial returns
- use appropriate technology, including software
- implement contingency plans for unplanned events such as problems arising during the supply and management of community marketing activities

### Required knowledge includes:

---

#### Knowledge of:

- applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes in selling produce through community based markets
- relevant legislation and regulations relating to OHS
- organic certification systems and standards
- organisation policies and procedures related to supply chain management, purchasing, and contracting and tendering
- characteristics and composition of farm business marketing plans
- characteristics of community marketing schemes and the steps within a farm produce supply chain
- product knowledge related to goods and services required by the organisation
- ways to build trust and collaboration as opposed to competition
- business terms and conditions for purchasing, tendering and contracting

- ethical behaviour
- established communication channels and protocols
- procedures for operating electronic communications equipment
- procedures for recording and reporting workplace information and completing relevant documentation.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this Unit must be able to provide evidence that they can arrange the necessary processes to sell rural produce through community based markets</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and holistically satisfy all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify farm produce selling options</li> <li>• identify and comply with requirements of a community marketing scheme and its characteristics</li> <li>• establish relationships with community stakeholders and customers</li> <li>• monitor and record community satisfaction levels and customer feedback and address concerns</li> <li>• communicate the ‘farm story’ and the uniqueness of the enterprise to the community</li> <li>• arrange timely transport and delivery of produce and address any special transport requirements</li> <li>• comply with transport legislative requirements</li> <li>• accurately record pre and post sale documentation and transactions</li> <li>• identify and record potential improvements.</li> </ul>
<p>Context of and specific resources for assessment</p>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other Units.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge.</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills.</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other Units of Competency.</li> <li>• The assessment environment should not disadvantage the candidate.</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English.</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment.</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role.</li> </ul>
Guidance information for assessment	<p>To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Community based selling schemes</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• boxed schemes</li> <li>• farmers markets</li> <li>• roadside stall</li> <li>• community supported agriculture</li> <li>• subscription selling</li> <li>• direct selling.</li> </ul>
<p><b><i>Characteristics of the farm business produce</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• organic</li> <li>• local</li> <li>• RSPCA cert</li> <li>• sustainable production elements</li> <li>• environmental outcomes</li> <li>• approaches to Environmental protection,</li> <li>• animal welfare standards</li> <li>• minimise food miles</li> <li>• social engagement</li> <li>• production system eg biodynamic.</li> </ul>
<p><b><i>Market requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• produce specifications</li> <li>• specific market area</li> <li>• supply volumes</li> <li>• portion sizes</li> <li>• weight</li> <li>• packaging and labelling</li> <li>• timing</li> <li>• quality parameters</li> <li>• certification scheme.</li> </ul>
<p><b><i>Characteristics of the community customers</i></b> may be influenced by:</p>	<ul style="list-style-type: none"> <li>• past experiences</li> <li>• perceptions of the produce</li> <li>• fresh</li> <li>• better tasting</li> <li>• chemical and hormone free</li> <li>• non genetically modified</li> <li>• sustainability beliefs</li> <li>• religious beliefs</li> <li>• customs</li> </ul>

	<ul style="list-style-type: none"><li>• habit</li><li>• social beliefs</li><li>• environmental views</li><li>• animal welfare</li><li>• vegetarian.</li></ul>

## Unit Sector(s)

Organic Production

# AHCORG405A Implement sustainable practices in the organic farm based business

## Modification History

Release	TP Version	Comments
1	AHC10v4	Initial release

## Unit Descriptor

This Unit defines the standard required to; monitor the sustainability of the organic farm business; implement and monitor sustainability improvement programs; and monitor the impact of daily management decisions on sustainability goals and engage others in sustainability practices.

## Application of the Unit

The Unit involves managing the establishment and implementation of sustainable work practices in organic farming enterprises of all sizes and in a variety of work settings.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Nil.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Access the farm businesses guidelines and principles for social, financial and environmental sustainability</p>	<p>1.1 Identify environmental regulations, organic farming requirements and the organic farm plan which apply to the farming enterprise.</p> <p>1.2 Source and interpret environmental and sustainable organic farming information and current best practice guidelines and principles.</p> <p>1.3 Identify the impact of best practice guidelines and principles on day to day farm operations and management.</p> <p>1.4 Identify <i>key sustainability practices</i> for an organic farming enterprise.</p> <p>1.5 Access business guidelines and farm practices which comply with sustainable organic farming guidelines and principles.</p>
<p>2. Implement established farm business guidelines and principles</p>	<p>2.1 Implement strategies to effectively integrate sustainability principles and practices into the organic farm system.</p> <p>2.2 Identify continuous improvement opportunities and document identified changes to businesses guidelines and principles.</p> <p>2.3 Implement agreed improvements to the farm businesses guidelines and principles.</p>
<p>3. Monitor farm business sustainability initiatives for effectiveness and compliance</p>	<p>3.1 Monitor and evaluate the effectiveness and compliance of sustainability practices in terms of environmental, social and financial goals.</p> <p>3.2 Evaluate and report changing trends and techniques relevant to sustainable organic farming for continuous improvement.</p>
<p>4. Engage farm business stakeholders in sustainability practices</p>	<p>4.1 Communicate sustainability strategies to <i>stakeholders and relevant staff</i>.</p> <p>4.2 Monitor stakeholder compliance with organic sustainability strategies along the entire supply chain.</p> <p>4.3 Identify and document identified continuous improvement initiatives.</p> <p>4.4 Encourage and assist stakeholders to implement improvements to the system.</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- maintain and use record keeping systems to keep records required in the organic farming workplace
- identify opportunities to improve work processes
- use monitoring and evaluating skills to report on sustainability initiatives
- use literacy skills to read and interpret policy and legislation documents
- use oral communication skills to engage farm business stakeholders in sustainability practices, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal techniques to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities
- use numeracy skills to estimate, calculate and record routine and complex workplace measures and data
- use problem-solving skills to identify and react appropriately to routine environmental issues.

### Required knowledge includes:

#### Knowledge of:

- best practice guidelines
- principles and processes relevant to sustainable organic farming
- compliance requirements for all relevant environmental/sustainability legislation, regulations and codes of practice including resource hazards/risks associated with work area, job specifications and procedures
- sustainability issues including environmental and social issues that relate to an organic farm
- external benchmarks used within an organic farming enterprise, including approaches to improving techniques used and expected outcomes.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this Unit must be able to provide evidence that they can
------------------------	--

	implement sustainable practices in an organic farm based business.
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify businesses guidelines and principles for social, financial and environmental sustainability</li> <li>• identify and interpret environmental regulations, sustainable organic farming requirements, farm plan and current best practice guidelines and principles</li> <li>• implement strategies to integrate sustainability principles and practices into the farm system and identify continuous improvement opportunities</li> <li>• monitor farm business sustainability initiatives for effectiveness and compliance</li> <li>• adopt and document continuous improvement initiatives</li> <li>• encourage staff and farm business stakeholders to embrace sustainability practices.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other Units.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge.</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills.</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> </ul>

	<ul style="list-style-type: none"> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other Units of Competency.</li> <li>• The assessment environment should not disadvantage the candidate.</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English.</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment.</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role.</li> </ul>
<p>Guidance information for assessment</p>	<p>To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Key sustainability practices</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• purchase of inputs</li> <li>• enterprise selection</li> <li>• production practices</li> <li>• land management strategies</li> <li>• supply and marketing chain selection.</li> </ul>
<p><b><i>Stakeholders and relevant staff</i></b> may include:</p>	<p>individuals and groups both inside and outside the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, including:</p> <ul style="list-style-type: none"> <li>• customers</li> </ul>

	<ul style="list-style-type: none"><li>• employees at all levels of the organisation</li><li>• government</li><li>• investors</li><li>• local community</li><li>• other organisations</li><li>• suppliers</li><li>• personnel within the organisation</li><li>• technical specialists outside the organisation.</li></ul>

## **Unit Sector(s)**

Organic Production

# AHCORG406A Overseer compliance with an organic certification scheme

## Modification History

Release	TP Version	Comments
1	AHC10v4	Initial release

## Unit Descriptor

This Unit covers the skills and knowledge required to oversee continued compliance with an organic certification scheme and defines the standard required to: keep production records; keep records that support the organic certification scheme; comply with quality assurance requirements; comply with the specific organic certification scheme; and comply with the food safety requirements of the supply chain.

## Application of the Unit

This Unit applies to production managers and workplace supervisors in an organic farming enterprise that are responsible for ensuring compliance within the scope of the selected organic certification scheme.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Nil.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify compliance requirements of the selected organic standard relating to the farm system	1.1 Access the selected <i>organic certification scheme</i> relevant to the operation and management of the organic farming enterprise. 1.2 Identify and interpret key clauses and requirements of the organic standard that relate to the existing farm system. 1.3 Identify and document compliance of the farm system with the requirements of the selected organic certification scheme. 1.4 Identify and document <i>key farm operations</i> that are impacted by the organic standards.
2. Keep records to comply with organic certification requirements	2.1 Identify the <i>records</i> and detail required for compliance with the organic certification scheme. 2.2 Complete and maintain clear and accurate records to an approved industry standard. 2.3 Communicate recording requirements to appropriate stakeholders and key personnel. 2.4 Monitor the record keeping process and maintain records to the National Organic Standard.
3. Support compliance with organic standards by staff in the farm business	3.1 Identify all steps within the production system that require compliance with the selected organic standards. 3.2 Support <i>staff and key personnel</i> to implement and foster a compliant organic supply chain culture. 3.3 Keep accurate records at all key supply chain steps to verify and maintain compliance.
4. Meet annual audit requirements of the selected organic certification scheme	4.1 Comply with the specific certification requirements. 4.2 Prepare the farm and organic records and documents for audit. 4.3 Conduct an internal organic audit of the farm system and complete associated records and documents. 4.4 Take corrective actions to comply with the specific certification requirements. 4.5 Participate in an annual organic audit. 4.6 Comply with and close any corrective actions requested.
5. Comply with food safety requirements	5.1 Identify <i>food safety requirements</i> that must be satisfied by the farm system to comply with industry standards.

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	5.2 Communicate food safety requirements to all staff.
	5.3 Keep records to demonstrate compliance with food safety requirements to industry standard.
	5.4 Correct any non-conformance issues identified by internal audit or industry compliance audit.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- identify critical steps and in the production of organic products
- identify issues that may cause non-compliance with the organic certification scheme
- provide induction and in-service staff training
- implement organic standards and manage contingencies
- plan and organise audit activities
- identify food safety hazards
- keep records and prepare reports to meet compliance and/or client requirements
- respond to corrective action requests
- maintain production and compliance records
- use literacy skills to interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal techniques to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.
- use numeracy skills to estimate, calculate and record routine and complex workplace measures and data
- use problem-solving skills to identify and react appropriately to environmental implications, OHS hazards and threats to compliance with the organic certification scheme.

**Required knowledge includes:****Knowledge of:**

- organic standards and specifications
- applicable food safety and licensing requirements
- farm supply chain market requirements for product
- organic quality specifications for product
- enterprise and industry quality assurance systems
- strategies for control of hazards to organic compliance.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this Unit must be able to provide evidence that they can oversee compliance with an organic certification scheme.
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify and document compliance requirements of the selected organic standard relating to the farm system</li> <li>• identify and document key farm operations impacted by the organic standards</li> <li>• support key personnel and staff to implement and foster a compliant organic supply chain culture</li> <li>• keep accurate records at all key supply chain steps to verify and maintain organic compliance</li> <li>• conduct an internal organic audit of the farm system and accurately complete associated records and documents</li> <li>• participate in an annual organic audit and successfully close any identified corrective actions</li> <li>• identify food safety requirements and ensure compliance of the farm system with industry standards</li> <li>• ensure all farm records and production data is</li> </ul>

	kept, monitored and maintained in compliance with National Organic Standard requirements.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other Units.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge.</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills.</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other Units of Competency.</li> <li>• The assessment environment should not disadvantage the candidate.</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English.</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment.</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role</li> </ul>
Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where

	possible, over a number of assessment activities.
--	---

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Organic certification scheme</i></b> may include:</p>	<p>A range of certification programs used by the different organic certifying bodies and where appropriate the different requirements for export to specific countries.</p> <ul style="list-style-type: none"> <li>• AUS-QUAL Limited (AUSQUAL)</li> <li>• Australian Certified Organic (ACO)</li> <li>• Byo-Dynamic Research Institute</li> <li>• National Association of Sustainable Agriculture Australia (NASAA)</li> <li>• Organic Food Chain (OFC)</li> <li>• Safe Food Production Queensland</li> <li>• Tasmanian Organic Dynamic Producers</li> <li>• ACO Small Producer Scheme</li> <li>• Biological Farmers of Australia</li> <li>• Organic and biodynamic products</li> <li>• Australian and Biodynamic food</li> <li>• National Organic Program (NOP)</li> <li>• Japan Agricultural Standard (JAS).</li> </ul>
<p><b><i>Key farm operations</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• use of production inputs</li> <li>• contractor equipment and machinery</li> <li>• transport equipment and facilities</li> <li>• processing</li> <li>• packaging and labelling</li> <li>• livestock husbandry</li> <li>• environmental management.</li> </ul>
<p><b><i>Records</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• input and output registers</li> <li>• production records</li> <li>• isolation log</li> <li>• organic management plan</li> <li>• client statements</li> <li>• sales and purchases records.</li> </ul>

<i>Staff and key personnel</i> may include:	<ul style="list-style-type: none"><li>• members of farm family</li><li>• farm staff</li><li>• supply and marketing chain personnel.</li></ul>
<i>Food safety requirements</i> may include:	<ul style="list-style-type: none"><li>• national and state legislation</li><li>• local council requirements</li><li>• AS ISO 22000</li><li>• Food Safety Standards (Australia)</li><li>• industry schemes including Livestock Production Assurance</li><li>• Freshcare</li><li>• Spotless food safety standard</li><li>• Salad Good Agricultural Practices (Salad GAP).</li></ul>

## Unit Sector(s)

Organic Production

## AHCORG501A Develop an organic management plan

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers developing an organic management plan and defines the standards required to: identify and develop required components of an Organic Management Plan (OMP) for a property; understand and use interrelationships between soil, plant and animal health and farming system's resilience when developing plan; identify options for prevention and control of risks; apply appropriate regional catchment targets and; document the plan in compliance with certification requirements.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those producers who develop an OMP to convert an agricultural or horticultural farm to an organic, biological and ecological system. It requires the capability to set objectives to meet organic certification requirements of the National Standard for Organic and Biodynamic Produce.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Locate and access assistance in developing the OMP	<p>1.1.Sources of support and advice including agricultural extension officers and training programs are located and accessed.</p> <p>1.2.Industry publications and internet sources are assessed for their value in informing decision making.</p> <p>1.3.Contributions of work colleagues and others are sought and considered during planning process.</p>
2. Design the organic farming system to be described in the OMP	<p>2.1.Map of property to be covered by OMP is developed or obtained.</p> <p>2.2.Time scale to be addressed in plan is determined.</p> <p>2.3.Information on soil fertility and management, and weed, pest, disease and animal health status and their interrelationships is collected to serve as benchmarks for development of management options in plan.</p> <p>2.4.Regional catchment targets for land, water and biodiversity are obtained and those applicable to property and sub-catchment are identified.</p> <p>2.5.Components of OMP that need to be developed are identified.</p> <p>2.6.Suitable format for planning documents is developed.</p>
3. Develop soil fertility plan	<p>3.1.A soil fertility assessment of farm production areas is undertaken or commissioned.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2. Soil types and topography are mapped on farm plan.</p> <p>3.3. Soil fertility plan is developed and documented that amends soil chemistry, soil structure and soil biology, based on assessment results, overall budget and intended cropping regime.</p> <p>3.4. Appropriate inputs are identified according to the National Standard for Organic and Biodynamic Produce.</p> <p>3.5. Plan is documented according to established format.</p>
4. Develop soil management sub-plan	<p>4.1. Suitability of land for production is determined based on soil type, slope, aspect and previous use.</p> <p>4.2. Soil management plan to enhance soil structure and prevent compaction and water logging is developed.</p> <p>4.3. Appropriate inputs are identified according to the National Standard for Organic and Biodynamic Produce.</p> <p>4.4. Sub-plan is documented according to established format.</p>
5. Develop weed management sub-plan	<p>5.1. Problematic weed species are identified and weeds are observed as an indicator of soil health.</p> <p>5.2. Life cycles of weeds species are identified to inform management options.</p> <p>5.3. Appropriate inputs are identified according to the National Standard for Organic and Biodynamic Produce.</p> <p>5.4. Options for managing weeds are developed.</p> <p>5.5. Sub-plan is documented according to established format.</p>
6. Develop and design an integrated pest and disease management sub-plan	<p>6.1. Evidence of pest and disease burden in farming system is collected and documented.</p> <p>6.2. Pests and diseases and their life cycles are observed and monitored.</p> <p>6.3. Evidence of pest and disease burden is evaluated in order to develop strategy for management.</p> <p>6.4. Pests and diseases are evaluated as indicators of farming system health.</p> <p>6.5. Options for addressing pest and disease issues, including improving soil health, are identified.</p> <p>6.6. Appropriate inputs are identified according to the National Standard for Organic and Biodynamic Produce.</p>

ELEMENT	PERFORMANCE CRITERIA
	6.7.Sub-plan is documented according to established format.
7. Develop animal health sub-plan	7.1.Regional and farm-based animal health issues are identified. 7.2.Options for preventative actions aimed at establishing and maintaining optimal animal health are identified. 7.3.Options for treating animal health issues are identified. 7.4.Sub-plan is documented according to established format.
8. Integrate and finalise the organic management plan	8.1.Sub-plans for soil fertility and management, and weed, pest, disease and animal health are integrated. 8.2.Record-keeping system is developed and implemented to track various components of OMP as they are put into practice and reviewed. 8.3.OMP is reviewed and updated annually.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- carry out property planning
- undertake soil assessment
- interpret the landscape
- observe cycles, patterns, change and systems dynamics
- use lateral thinking and a systems approach to develop solutions to problems
- apply ecological principles to agricultural production
- complete production planning
- access industry information
- monitor the farming system
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for

**REQUIRED SKILLS AND KNOWLEDGE**

- clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
  - use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- principles of organic agriculture, especially fundamental role of soil health
- principles of sustainable production
- requirements and components of an OMP
- systems approach to agriculture and horticulture
- organic and biodynamic certification requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify and develop required components of an OMP for a property
- understand and use interrelationships between soil, plant and animal health and farming system's resilience when developing plan
- identify options for prevention and treatment of risks
- apply appropriate regional catchment targets
- document the plan in compliance with certification requirements.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

**EVIDENCE GUIDE**

	enterprise circumstances.
--	---------------------------

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Organic management plans may include:

- the conversion of an agricultural or horticultural farm to an organic, biological and ecological system.

## AHCORG502A Prepare the enterprise for organic certification

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the preparation of the enterprise for organic certification and defines the standard required to: identify requirements for organic certification and apply them to one's enterprise; identify critical points in supply chain at which the organic integrity of one's product may be compromised; implement and monitor effective risk management for those parts of supply chain under one's control; identify practices and strategies to minimise the risk of contamination and non conformance with organic standards; develop an operational plan for conversion to organic production.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to farmers who are preparing a production enterprise for compliance with the Australian Quarantine and Inspection Service (AQIS), accredited certification bodies and the National Standard for Organic and Biodynamic Produce.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>	

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Investigate and access information sources and support for conversion to organic production	<p>1.1. Contact is established with other organic producers and marketers of organic products.</p> <p>1.2. Other sources of support and advice, including agricultural extension officers and training programs, are identified and accessed.</p> <p>1.3. Literature, industry publications and internet sources of information to support decision-making are assessed for usefulness and reliability.</p> <p>1.4. Certification process requirements are obtained from certification bodies.</p> <p>1.5. Roles and responsibilities of inspector, certifier and accreditation bodies, including role of AQIS, are investigated.</p>
2. Conduct a risk assessment of the site	<p>2.1. Previous land use and chemicals applied on the site are identified and documented.</p> <p>2.2. Risk assessment for potential on-farm contaminants is undertaken and documented.</p> <p>2.3. Potential contamination risk from off-farm land use and agricultural practices is assessed.</p> <p>2.4. Risk management procedures to minimise potential</p>

ELEMENT	PERFORMANCE CRITERIA
	contamination from internal and external sources are incorporated into a certification preparation plan.
3. Develop and implement hazard analysis critical control point (HACCP) based procedures	<p>3.1. Production processes and activities, and those sections of supply chain under one's control, are identified and documented according to enterprise procedures, certification bodies' requirements and the National Standard for Organic and Biodynamic Produce.</p> <p>3.2. Quality, organic and statutory product standards to be met are identified, documented and compared to actual standards achieved by product and enterprise.</p> <p>3.3. Corrective actions or improvements to processes and activities are identified and documented.</p> <p>3.4. Procedures and processes for monitoring and annual review are developed and implemented.</p>
4. Manage customer feedback	<p>4.1. Procedures are developed and implemented to obtain, analyse and respond to customer feedback on quality and integrity of organic product.</p> <p>4.2. Product recall procedures are developed, communicated to relevant parties and monitored.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- conducting and documenting a risk assessment
- preparing an Organic Management Plan (OMP)
- reading and interpreting the National Standard for Organic and Biodynamic Produce
- researching and evaluating information
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views

## REQUIRED SKILLS AND KNOWLEDGE

- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- certification process
- chain of custody
- HACCP principles and risk management
- health and food safety issues
- labelling requirements for domestic and export markets
- market for organic produce, including the organic movement and organic industry
- National Standard for Organic and Biodynamic Produce
- principles of organic agriculture
- procedures and responsibilities in the case of product recall
- procedures for conducting and documenting a risk assessment
- regulatory requirements and their domestic and international contexts
- requirements of an OMP, including record keeping
- role of quality management systems in organic industry
- working knowledge of the regulated organic industry, including the role of AQIS, certification bodies and inspectors.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify requirements for organic certification and apply them to one's enterprise
- identify critical points in supply chain at which the

<b>EVIDENCE GUIDE</b>	
	<p>organic integrity of one's product may be compromised</p> <ul style="list-style-type: none"> <li>• implement and monitor effective risk management for those parts of supply chain under one's control</li> <li>• identify practices and strategies to minimise the risk of contamination and non conformance with organic standards</li> <li>• develop an operational plan for conversion to organic production.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>For valid assessment, one must have opportunities to participate in exercises, case studies and other real and simulated practical and knowledge assessments that demonstrate the skills and knowledge required to prepare an enterprise for organic certification.</p> <p>The candidate must also have access to the following resources:</p> <p>National Standard for Organic and Biodynamic Produce documented requirements of appropriate organic certification body.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Enterprises may include:	<ul style="list-style-type: none"> <li>• dairies</li> <li>• cropping</li> <li>• production horticulture</li> <li>• transport</li> <li>• poultry</li> <li>• livestock</li> <li>• post-harvest handling</li> <li>• storage</li> <li>• packaging</li> <li>• labelling and selling to wholesalers, retailers or direct to consumers.</li> </ul>

# AHCORG503A Design and document an organic farm landscape

## Modification History

Release	TP Version	Comments
1	AHC10v4	Initial release

## Unit Descriptor

This Unit of Competency covers the design and development of an organic farm landscape plan and defines the standard required to: audit the natural resource base of the property; determine the key sustainability principles that apply; and use a range of design tools to design an organic farm landscape allowing for climate and resource uncertainty.

## Application of the Unit

This Unit applies to farm managers or owners whose job includes designing and developing organic farming landscapes.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Nil.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Source legislative requirements which impact on the management of an organic farm	<p>1.1 Identify and access applicable legislative documents and codes of practice relevant to the design and planning of an organic farming enterprise.</p> <p>1.2 Investigate work practices and procedures which follow <i>industry standards</i>.</p> <p>1.3 Identify and interpret <i>key clauses and requirements</i> which apply to organic production and marketing.</p> <p>1.4 Identify relevant work practices and procedures which comply with regulatory requirements and codes of practice.</p>
2. Audit the natural resources and infrastructure of the property	<p>2.1 Identify and record property physical and biological characteristics and <i>landscape features</i>.</p> <p>2.2 Develop a farm soil map.</p> <p>2.3 Determine <i>land capability</i>.</p> <p>2.4 Conduct a risk analysis of the farm and adjoining land-use to determine compliance with organic standards, legislative and environmental requirements.</p>
3. Develop an organic landscape plan	<p>3.1 Identify key design parameters to meet financial, social and sustainability goals.</p> <p>3.2 Develop and document <i>key farm rules</i>.</p> <p>3.3 Investigate short term and long term uncertainties for the farm system.</p> <p>3.4 Investigate design options which impact on these long term changes.</p> <p>3.5 Identify and use appropriate <i>design tools</i>.</p> <p>3.6 Develop a concept framework.</p>
4. Document the organic landscape plan	<p>4.1 Review the draft plan against the financial, social and sustainability goals.</p> <p>4.2 Document the plan.</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- conduct sector analysis

- conduct soil mapping within a farm context
- conduct risk analysis for adjoining land-use
- identify natural and sensitive areas
- apply land-shape design methodology
- use permaculture design methodology
- map physical and biological features of the landscape
- develop design rules
- apply research skills
- use literacy skills to interpret, analyse and extract information from a range of sources such as professional literature, legal documents, discussions and workshops and to locate, read, interpret and convey information in written, diagrammatic and/or verbal form
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal techniques to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities
- use numeracy skills to estimate, calculate and record routine and complex workplace measures and data
- use problem-solving skills to identify and react appropriately to environmental implications and in the application of different planning processes.

### Required knowledge includes:

---

#### Knowledge of:

- applicable legislative documents and codes of practice relevant to farm landscape planning
- landscape types
- habitat/plant communities on farm
- relationship between land shape and soil type
- soil types
- different categories of cultural sites
- organic certification requirements
- landscape hydrology
- landscapes for agro-ecosystems
- native habitat requirements.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this Unit must be able to provide evidence that they can design and document an organic farm landscape.
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• source and interpret legislative requirements industry standards and codes of practice</li> <li>• identify compliant work practices and procedures</li> <li>• conduct an audit of the natural resources and infrastructure of the property</li> <li>• identify physical and biological characteristics and landscape features of the property</li> <li>• develop farm soil map and determine land capability</li> <li>• develop an organic landscape plan using appropriate development tools</li> <li>• revise a draft plan and document the final organic landscape plan.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other Units.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge.</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills.</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge.</li> <li>• Assessment may be applied under project-related</li> </ul>

	<p>conditions (real or simulated) and require evidence of process.</p> <ul style="list-style-type: none"> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other Units of Competency.</li> <li>• The assessment environment should not disadvantage the candidate.</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English.</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment.</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role.</li> </ul>
Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Industry standards</i></b> may include:	<ul style="list-style-type: none"> <li>• national organic standards</li> <li>• industry requirements</li> <li>• organisation requirements</li> <li>• required environmental protection</li> <li>• animal welfare.</li> </ul>
<b><i>Key clauses and requirements</i></b> may refer to:	<ul style="list-style-type: none"> <li>• farm infrastructure</li> <li>• cultural sites</li> <li>• habitat zones</li> <li>• plant communities</li> </ul>

	<ul style="list-style-type: none"> <li>• endangered species</li> <li>• natural resources</li> <li>• natural and sensitive areas requiring protection and/or enhancement</li> <li>• buffer zone requirements</li> <li>• soil types</li> <li>• aspect</li> <li>• slope</li> <li>• micro climates.</li> </ul>
<i>Landscape features</i> may include:	<ul style="list-style-type: none"> <li>• existing infrastructure</li> <li>• cultural sites</li> <li>• habitat zones</li> <li>• plant communities</li> <li>• endangered species</li> <li>• natural resources <ul style="list-style-type: none"> <li>• creeks, rivers, swamp, water soak</li> <li>• rock outcrops</li> <li>• stands of timber</li> <li>• caves</li> <li>• salt/mud flats</li> </ul> </li> <li>• natural and sensitive areas requiring protection and/or enhancement</li> <li>• buffer zone requirements</li> <li>• soil types</li> <li>• aspect</li> <li>• slope</li> <li>• micro climates.</li> </ul>
<i>Land capability</i> may include:	<ul style="list-style-type: none"> <li>• industry standard capability system</li> <li>• customised system to meet individual business requirements.</li> </ul>
<i>Key farm rules</i> are:	<ul style="list-style-type: none"> <li>• rules that will guide the development of the farm design to meet the requirements of the overall farm vision.</li> </ul>
<i>Design tools</i> may include:	<ul style="list-style-type: none"> <li>• sector analysis</li> <li>• land shape design</li> <li>• permaculture design tools</li> <li>• keyline design</li> <li>• landscapes for agro-ecosystems</li> <li>• landscapes for habitat</li> <li>• patterns to detail</li> <li>• zoning.</li> </ul>

## **Unit Sector(s)**

Organic Production

# AHCORG504A Develop and manage a community based marketing supply chain

## Modification History

Release	TP Version	Comments
1	AHC10v4	Initial release

## Unit Descriptor

This Unit of Competency defines the standard required to: evaluate the suitability of different community marketing options for farm products; determine the supply chain processes to participate in the selected community marketing schemes; develop a range of marketing alternatives; and develop and document a community marketing plan for farm produce and promote produce within community based marketing schemes.

## Application of the Unit

This Unit applies to rural enterprise managers who develop and manage marketing strategies and systems within a community based marketing scheme to meet desired production and business outcomes.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Nil.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate the suitability of different community marketing options for farm products	1.1 Research and document non traditional selling options. 1.2 Identify different <i>community marketing models</i> applicable to the farm system. 1.3 Identify key input <i>supply chain steps</i> and stakeholders and relevant <i>certification requirements</i> . 1.4 Evaluate different options.
2. Determine the marketing chain processes to participate in the selected community marketing schemes	2.1 Research and identify applicable <i>legislative, environmental, and certification requirements</i> relevant to <i>managing a community based marketing chain</i> . 2.2 Document specifications for the various components of the marketing chain management system in line with organisational and legislative requirements. 2.3 Document traceability requirements of the marketing chain.
3. Determine appropriate community marketing strategies for farm products	3.1 Identify communities that have a potential relationship with the farm system. 3.2 Document the <i>characteristics and values of the identified communities</i> . 3.3 Match community characteristics and values to farm system. 3.4 Establish and document <i>market specifications</i> to meet community expectations. 3.5 Identify and document appropriate community marketing strategies. 3.6 Identify and assess risks in strategy.
4. Establish product marketing chain requirements to meet marketing options	4.1 Map required <i>steps in marketing chains</i> to supply identified market. 4.2 Establish <i>farm business requirements</i> for each step in marketing chain. 4.3 Establish <i>compliance requirements</i> at each step in marketing chain. 4.4 Develop <i>record keeping requirements</i> for each step in marketing chain.
5. Develop and document a community based marketing plan	5.1 Document required processes for the chosen enterprises and production systems. 5.2 Identify and document marketing targets.

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	5.3 Identify the key factors that differentiate product.
	5.4 Develop and document a promotion plan.
	5.5 Collate customer feedback and use to improve market outcomes.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- provide strong customer focus
- work collaboratively with others
- adapt appropriately to cultural differences in the community market place, including modes of behaviour and interactions with others
- work with attention to detail and thoroughness
- interpret, analyse and extract information from a range sources such as professional literature, legal documents, discussions and workshops
- communicate detailed and complex information in written and oral form with people both inside and outside the organisation
- converse and liaise with industry contacts, relevant stakeholders, staff and family regarding marketing through a community based scheme
- identify and build strategic industry relationships and establish and use network and support groups
- react appropriately to environmental implications and OHS hazards
- measure, calculate and estimate material quantities
- assess and adopt profitable innovations
- calculate financial returns
- use appropriate technology, including software
- implement contingency plans for unplanned events such as problems arising during the supply and management of community marketing activities
- assess and adopt profitable innovations
- prepare enterprise budgets and calculate financial returns.

### Required knowledge includes:

#### Knowledge of:

- applicable federal, state or territory legislation, regulations, standards, codes of practice

and established safe practices relevant to the full range of processes in selling produce through community based markets

- relevant legislation and regulations relating to OHS
- organic certification systems and standards
- rural produce marketing and presentation
- organisation policies and procedures related to supply chain management, purchasing, and contracting and tendering
- characteristics and composition of farm business marketing plans
- characteristics of community marketing schemes and the steps within a farm produce supply chain
- product knowledge related to goods and services required by the organisation
- ways to build trust and collaboration as opposed to competition
- business terms and conditions for purchasing, tendering and contracting
- ethical behaviour
- established communication channels and protocols
- procedures for operating electronic communications equipment
- procedures for recording and reporting workplace information and completing relevant documentation.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this Unit must be able to provide evidence that they can develop and manage a community based marketing supply chain.

Critical aspects for assessment and evidence required to demonstrate competency in this Unit

The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- research and evaluate the suitability of different community marketing options for farm products
- research and identify applicable legislative, environmental, and certification requirements relevant to managing a community based marketing chain
- document specifications for the various components of the marketing chain management

	<p>system in line with organisational and legislative requirements</p> <ul style="list-style-type: none"> <li>• establish and document market specifications meet community expectations</li> <li>• establish product marketing chain to meet marketing options</li> <li>• establish farm business requirements for each step in the marketing chain</li> <li>• establish compliance requirements at each step in the marketing chain</li> <li>• conduct record keeping requirements for each step in the marketing chain</li> <li>• develop and document a community based marketing plan</li> <li>• develop and document a promotion plan</li> <li>• collate customer feedback and use to improve market outcomes.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other Units.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge.</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills.</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other Units of Competency.</li> </ul>

	<ul style="list-style-type: none"> <li>• The assessment environment should not disadvantage the candidate.</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English.</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment.</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role.</li> </ul>
Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Community marketing models</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• boxed schemes</li> <li>• farmers markets</li> <li>• roadside stall</li> <li>• community supported agriculture</li> <li>• subscription selling</li> <li>• direct selling.</li> </ul>
<p><b><i>Supply chain steps</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• input sources and procurement</li> <li>• animal welfare considerations</li> <li>• allowable inputs</li> <li>• transport</li> <li>• production processes</li> <li>• harvesting</li> <li>• post-harvest treatment.</li> </ul>
<p><b><i>Managing a community based marketing chain</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• suitability of produce</li> <li>• timing</li> <li>• size of market</li> </ul>

	<ul style="list-style-type: none"> <li>• resource requirements to service market.</li> </ul>
<p><i>Characteristics and values of the identified communities</i> may include:</p>	<ul style="list-style-type: none"> <li>• food miles</li> <li>• animal welfare</li> <li>• environmental parameters</li> <li>• local</li> <li>• organic/biodynamic</li> <li>• packaging style</li> <li>• communication.</li> </ul>
<p><i>Market specifications</i> may include:</p>	<ul style="list-style-type: none"> <li>• produce specifications</li> <li>• specific market area</li> <li>• supply volumes</li> <li>• portion sizes</li> <li>• weight</li> <li>• packaging and labelling</li> <li>• timing</li> <li>• quality parameters</li> <li>• certification scheme.</li> </ul>

## Unit Sector(s)

Organic Production

# AHCORG505A Develop and monitor a sustainable production plan

## Modification History

Release	TP Version	Comments
1	AHC10v4	Initial release

## Unit Descriptor

This Unit of Competency defines the standard required to: identify personal and enterprise goals; identify and document physical, biological, social and financial resources under management; research and evaluate available sustainable production systems; and develop a sustainable production plan and monitor the plan.

## Application of the Unit

Developing and monitoring a sustainable production plan is likely to be undertaken alone with input from stakeholders in the business. Responsibility for the planning and management of the work of others may be involved.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Nil.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify personal and enterprise goals	1.1 Identify and record personal goals. 1.2 Identify and document physical, biological, social and financial resources under management. 1.3 Identify and analyse the values, expectations and personal goals of customers, stakeholders and employees. 1.4 Identify and document sustainability goals using current and historical industry data and organisational records.
2. Research and evaluate available sustainable production systems	2.1 Identify and document potential enterprises and evaluate against identified goals and resources. 2.2 Research and evaluate applicable sustainable <b>production systems</b> information from a range of sources for identified enterprises. 2.3 Identify and document a selected production system that meets sustainability and enterprise management goals. 2.4 Compare the selected system with those systems and production processes that currently exist on the farm. 2.5 Test the selected system against enterprise goals and sustainability principles and record the findings.
3. Develop a sustainable production plan	3.1 Document required modifications to existing farm system processes and infrastructure for the chosen enterprises and production systems. 3.2 Identify and document <b>production targets</b> . 3.3 Identify inputs required to achieve the production targets. 3.4 Establish risk management strategies. 3.5 Identify record keeping requirements. 3.6 Develop and document a sustainable production plan for the selected enterprises and production systems.
4. Monitor/evaluate effectiveness of the sustainable production systems	4.1 Establish farm system monitoring procedures and performance indicators. 4.2 Monitor performance indicators and against production and <b>sustainability targets</b> . 4.3 Evaluate production and sustainability data against the sustainable production plan goals. 4.4 Modify the enterprise mix and/or production system where differences between the sustainable production plan and

ELEMENT	PERFORMANCE CRITERIA
	actual results are identified.
	4.5 Identify, monitor and assess environmental impacts and OHS hazards relating to the production processes throughout the production cycle.
5. Record and manage information and data	5.1 Create and maintain records and documents in line with the production plan, the OHS requirements, and machinery and equipment management programs. 5.2 Maintain recordkeeping systems and data to enterprise and industry standards. 5.3 Recommendations for future sustainable production plans are prepared. 5.4 Document revised plans.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- document personal and business goals
- identify values and expectations of stakeholders
- research available production systems
- set enterprise sustainability objectives and evaluate the researched production systems against the objectives
- develop production and sustainability plans
- monitor actual production and sustainability outcomes against the documented plan
- use literacy skills to interpret, analyse and extract information from a range sources such as professional literature, legal documents, discussions and workshops and to prepare written plans and procedures for implementation by others
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities
- use numeracy skills to estimate, calculate and record complex workplace measures and to prepare enterprise budgets and calculate financial returns.

## Required knowledge includes:

### Knowledge of:

- applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes in developing and monitoring a sustainable production plan
- relevant legislation and regulations relating to OHS, contractor engagement, animal health and welfare, chemical use and application, vehicle and plant use and soil and water degradation issues
- environmental protection requirements and codes of practice, including the safe disposal of products and waste material, available to the organisation
- organisational policies and procedures, standards and site requirements for risk management and hazard identification
- sustainable land use principles and practices applicable in the region
- farm planning processes.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this Unit must be able to provide evidence that they can develop and monitor a sustainable production plan.
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify personal and enterprise goals</li> <li>• identify and document physical, biological, social and financial resources under management</li> <li>• research and evaluate sustainable production systems and select and document a production system that meets sustainability and enterprise management goals</li> <li>• develop a sustainable production plan</li> <li>• monitor and evaluate effectiveness of the sustainable production system</li> <li>• modify the enterprise mix and/or production system where differences between the sustainable</li> </ul>

	<p>production plan and actual results are identified</p> <ul style="list-style-type: none"> <li>record and manage farm system information and data.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other Units.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge.</li> <li>Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills.</li> <li>Assessment methods must confirm the ability to access, interpret and apply the required knowledge.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Assessment may be in conjunction with assessment of other Units of Competency.</li> <li>The assessment environment should not disadvantage the candidate.</li> <li>Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English.</li> <li>Where the participant has a disability, reasonable adjustment may be applied during assessment.</li> <li>Language and literacy demands of the assessment task should not be higher than those of the work role.</li> </ul>
Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of

	circumstances, cases and responsibilities, and where possible, over a number of assessment activities.
--	--

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Production systems</i></b> may include:</p>	<p>The full range of livestock, production horticulture and cropping systems including, but not limited to:</p> <ul style="list-style-type: none"> <li>• extensive livestock production</li> <li>• intensive livestock systems</li> <li>• broadacre cropping using traditional, reduced cultivation, minimum till, no till, pasture cropping and no kill cropping methods</li> <li>• production horticulture fruit and vegetable systems</li> <li>• organic farming techniques</li> <li>• biodynamic</li> <li>• permaculture</li> <li>• agro-ecology.</li> </ul>
<p><b><i>Production targets</i></b> may be measured against:</p>	<ul style="list-style-type: none"> <li>• sustainability targets</li> <li>• production inputs</li> <li>• labour inputs</li> <li>• resource use.</li> </ul>
<p><b><i>Sustainability targets</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• resource use</li> <li>• biodiversity outcomes</li> <li>• waste and pollution production</li> <li>• water quality outcomes</li> <li>• social engagement.</li> </ul>

## Unit Sector(s)

Organic Production

# AHCORG506A Manage an agro-ecology production system

## Modification History

Release	TP Version	Comments
1	AHC10v4	Initial release

## Unit Descriptor

This Unit of Competency defines the standard required to implement agro-ecology principles in managing the soil ecosystem, pests and diseases, the overall health of the farm ecosystem and farm production.

## Application of the Unit

Managing an agro-ecology production system is likely to be undertaken alone with input from advisors or other stakeholders in the business.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Nil.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the farm agro ecosystem functions at a systems level	1.1 Identify and map <i>energy flows</i> through a farm agro ecosystem. 1.2 Identify and map <i>nutrient cycles</i> through different parts of a farm ecosystem. 1.3 Identify <i>disturbance points</i> in the farm ecosystem succession. 1.4 Develop a model of the farm ecosystem. 1.5 Identify areas of complexity and simplicity within the farm ecosystem. 1.6 Identify <i>interactions between elements</i> of farm ecosystem. 1.7 Assess <i>health of existing farm ecosystems</i> .
2. Develop plans to enhance farm agro ecosystem	2.1 Identify areas within the agro ecosystem that require enhancement. 2.2 Identify <i>methods that encourage niche development</i> , increase complexity in the farm agro ecosystem and improve interactions between different components of farm agro ecosystem. 2.3 Document the implementation plan.
3. Manage farm agro ecosystems	3.1 Identify and monitor <i>appropriate parts</i> of the ecosystem. 3.2 Set up monitoring system. 3.3 Comply with requirements for monitoring determined by organic standards and legislative. 3.4 Review measured ecosystem and farm production performance with expected performance and adjust plan in response to differences.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- identify ecosystem elements and map energy water and nutrient flows through ecosystems
- perform ecosystem monitoring
- plan using ecosystem process knowledge
- apply ecosystem processes to farm production system

- use literacy skills to interpret, analyse and extract information from a range sources such as professional literature, legal documents, discussions and workshops and to converse and liaise with industry contacts, colleagues and family regarding the ecosystem function
- use interpersonal techniques to identify, build and use network and support groups
- use numeracy skills to estimate and monitor ecosystem processes
- use problem-solving skills to enhance farm agro ecosystem.

### Required knowledge includes:

#### Knowledge of:

- advantages of ecological agriculture
- ecosystem processes, energy flows, nutrient cycles, biological succession, predator/prey relationships, ecological niche
- relationships between ecosystems and agricultural production
- application of ecosystem processes to a production system.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this Unit must be able to provide evidence that they can manage an Agro-ecology production system
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify the farm agro ecosystem functions at a systems level</li> <li>• assess the health of existing farm ecosystems</li> <li>• develop plans to enhance farm agro ecosystem</li> <li>• manage and monitor the development of a farm ecosystem</li> <li>• review ecosystem and farm production performance.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other Units.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge.</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills.</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Assessment may be in conjunction with assessment of other Units of Competency.</li> <li>• The assessment environment should not disadvantage the candidate.</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English.</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment.</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role.</li> </ul>
Guidance information for assessment	<p>To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Energy flows</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• primary production of the system</li> <li>• imported energy</li> <li>• energy moving to and from production parts of the farm agro system</li> <li>• movement to entropy.</li> </ul>
<p><b><i>Nutrient cycles</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• existing nutrients</li> <li>• imported nutrients</li> <li>• movement to and from production parts of the farm agro ecosystem.</li> </ul>
<p><b><i>Disturbance points</i></b></p>	<p>These are points in the ecosystem succession where the ecosystem processes are disturbed and move the system back to the start of the succession. These points may include:</p> <ul style="list-style-type: none"> <li>• cultivation</li> <li>• heavy or crash grazing</li> <li>• herbicides</li> <li>• fire</li> <li>• slashing</li> <li>• invasion.</li> </ul>
<p><b><i>Interactions between elements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• predator – prey relationships</li> <li>• movement of energy, nutrients water between elements</li> <li>• symbiotic relationships</li> <li>• neutral relationships</li> <li>• one way relationships.</li> </ul>
<p><b><i>Health of existing farm ecosystems</i></b> could be measured by:</p>	<ul style="list-style-type: none"> <li>• biodiversity</li> <li>• identifying indicators</li> <li>• niche development.</li> </ul>
<p><b><i>Methods that encourage niche development</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• increasing diversity of abiotic elements within a system</li> <li>• increasing biodiversity</li> <li>• increasing energy and nutrient flow through system</li> <li>• poly-cultures</li> </ul>

	<ul style="list-style-type: none"><li>• multiple animal/plant relationships</li><li>• succession as a management tool.</li></ul>
<i>Appropriate parts</i> of the ecosystem may include:	<ul style="list-style-type: none"><li>• biological diversity</li><li>• plant succession</li><li>• water cycle processes</li><li>• nutrient cycles</li><li>• energy capture and use</li><li>• soil health.</li></ul>

Organic Production

# AHCPCM201A Recognise plants

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of recognising plants that are commonly encountered in horticulture or land management situations and defines the standard required to: inspect and research enterprise plants; observe and record the habits; characteristics and significant features of plants; use available processes to recognise plants; update a plant reference collection.
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	This unit involves collecting and documenting plant information and updating a plant reference collection.
--------------------------------	--

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for plant recognition	1.1. Range of plants requiring recognition is identified. 1.2. Resources and equipment for use in recognition activity are prepared. 1.3. Available processes for plant recognition are identified, selected and prepared for use.
2. Recognise specified plants	2.1. Visual inspection and research processes of enterprise plants are undertaken. 2.2. Specified plants are recognised according to their identifiable characteristics and named. 2.3. Brief descriptions of plant habits, characteristics and significant features are recorded. 2.4. Advice is sought when necessary and where appropriate in the recognition activity.
3. Update the reference collection	3.1. Information about plants is documented and added to the reference collection. 3.2. Reference collection is updated as new plants are recognised.

## Required Skills and Knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- recognise the range of plants specific to the enterprise
- describe the plant attributes and main purpose within the enterprise
- describe the specific handling requirements and growth requirements
- identify available processes of literature searches, internet browsing, personal consultation with experts, specimen collections, field guides, workplace notes, and use of simple keys to aid recognition
- update reference collection
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- plant morphology and physiology
- range of plant identification techniques
- plant nomenclature
- enterprise procedures for obtaining and supplying advice and information about plants
- enterprise expectations about the range and number of plants to be recognised.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include

<b>EVIDENCE GUIDE</b>	
	achievement of the following: <ul style="list-style-type: none"> <li>• inspect and research enterprise plants</li> <li>• observe and record the habits, characteristics and significant features of plants</li> <li>• use available processes to recognise plants</li> <li>• update a plant reference collection.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement**

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Plants may include:	<ul style="list-style-type: none"> <li>• those native or introduced species (including weeds) commonly encountered in horticulture or land management situations.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Collect specimen	<p>1.1. Sample collected is the largest practical to fit on herbarium sheet.</p> <p>1.2. Sample includes features required for positive identification, e.g., flowers and fruit, leaves and roots.</p> <p>1.3. Particular features are collected following enterprise procedures or guidelines.</p> <p>1.4. Observations regarding locality, habit of plant, etc., are recorded following enterprise procedure.</p> <p>1.5. Individual specimens are clearly identified in a manner that allows them to be linked to observations.</p>
2. Press plants	<p>2.1. Samples are protected from wilting until pressing following enterprise procedures.</p> <p>2.2. Specimens are arranged on sheets following enterprise guidelines for pressing.</p> <p>2.3. Specimens are pressed correctly following established guidelines.</p> <p>2.4. Archival specimens are attached to suitable material with observations attached following established material.</p> <p>2.5. Specimens to be submitted for identification are packed following established procedures, including all data from collection observations as required by herbarium.</p>
3. Record data	<p>3.1. All data relating to specimens is recorded and catalogued correctly following enterprise procedures.</p>

## Required Skills and Knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>	
This section describes the skills and knowledge required for this unit.	
<b>Required skills</b>	
<ul style="list-style-type: none"> <li>• collect specimen</li> <li>• press plant</li> <li>• record and catalogue data</li> <li>• use literacy skills to follow sequenced written instructions and record information accurately and legibly</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor</li> <li>• use numeracy skills to estimate, calculate and record routine workplace measures</li> <li>• use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.</li> </ul>	
<b>Required knowledge</b>

## AHCPCM301A Implement a plant nutrition program

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of implementing a plant nutrition program in the horticultural or agricultural industry and defines the standard required to: recognise a range of common causes of nutrient deficiency; prepare fertilizers and other products for application to plants; apply fertilizers and other products; clean up and maintain tools and equipment; record work activities according to enterprise guidelines.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of monitoring and controlling the nutritional requirements of and applications to plants in the horticulture industries across a range of situations and environments including amenity and natural resource areas. This standard involves working under limited supervision from others, with checking only related to overall progress. Work is undertaken within a program, routines, methods and procedures where some discretion and judgement is required in the selection of equipment and materials, organisation of work, services, actions, and the achievement of outcomes within time and budgetary constraints.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for implementation of the plant nutrition program	<p>1.1.Goals, target site, soils and plant species and varieties are identified.</p> <p>1.2.Materials for soil and plant treatments are identified and the storage site or supplier details located.</p> <p>1.3.Services are located using site plans and in consultation with the supervisor.</p> <p>1.4.Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented.</p> <p>1.5.Suitable Personal Protective Equipment (PPE) is selected, used and maintained.</p>
2. Monitor soil pH	<p>2.1.Soil pH in the implementation site is monitored in relation to plant nutrition.</p> <p>2.2.Products useful in changing soil pH are identified, compared, selected and sourced.</p> <p>2.3.Product application methods are assessed according to product type and type of growing media.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Determine nutritional problems in plants	<p>3.1. Common nutrient deficiency and toxicity problems in plants are identified using visual inspection.</p> <p>3.2. The supervisor and/or horticulturist are consulted, as required, to determine causes of nutritional or toxicity problems.</p> <p>3.3. Soil ameliorants to improve soil fertility are identified, compared, selected and sourced.</p>
4. Prepare to use fertilisers	<p>4.1. The fertiliser to be used is selected according to plant species and type of growing media.</p> <p>4.2. Fertiliser application methods are assessed according to fertiliser type, soils, enterprise work procedures, and in due consideration of the environmental implications.</p> <p>4.3. Fertilisers are applied according to the plant growing cycle and the enterprise fertiliser calendar.</p>
5. Prepare application equipment	<p>5.1. Tools, equipment and machinery are selected according to enterprise work procedures.</p> <p>5.2. Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturers specifications and documented work procedures.</p> <p>5.3. Tools, equipment and machinery are calibrated and adjusted according to manufacturer's guidelines.</p>
6. Apply specific products at appropriate rates	<p>6.1. Specific products are selected based on their analysis to meet plant needs according to enterprise work procedures.</p> <p>6.2. Product application rates are calculated to optimise plant benefit and minimise environmental impact according to manufacturer's specifications and enterprise work procedures.</p> <p>6.3. Specific products are applied at the correct rate, timing and method according to the product type and analysis, manufacturers specifications, enterprise work procedures, and in due consideration of the environmental implications.</p> <p>6.4. Product applications are recorded according to enterprise work procedures.</p> <p>6.5. Target plant response to the plant nutrition program, as well as any non-target effects such as environmental impact or pest responses are monitored, documented and reported to the supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate with work team members, supervisors, contractors and suppliers
- interpret manufacturers and plant nutrition program specifications
- utilise proforma reporting, analysis and work procedure documents
- understand labels and symbols
- estimate treatment and product requirements, material sizes and quantities
- interpret specifications, and calculate areas, ratios, proportions and application rates
- conduct a site hazard identification and risk control assessment
- coordinate own activities with the requirements and schedules of the work group and contractors
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- botany and plant physiology
- the relationship between soil characteristics and the availability of nutrients
- nutrient cycling and its practical relevance to the specific plants and soils
- methods of nutrient uptake by plants
- nutrients required by plants grown within the enterprise and
- the affects of nutrient deficiency and toxicity on individual plant species and varieties
- soil ameliorants commonly required to treat the soil problems experienced by the enterprise
- the main simple and compound fertiliser products available to the enterprise including analysis, solubility, salt index, application rates and costs
- the environmental implications for the external environment of soil ameliorant and fertiliser use.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• conduct a site hazard identification and risk control assessment</li> <li>• recognise a range of common causes of nutrient deficiency</li> <li>• prepare fertilizers and other products for application to plants</li> <li>• apply fertilizers and other products</li> <li>• clean up and maintain tools and equipment</li> <li>• record work activities according to enterprise guidelines.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of providing information to clients and others about plants and their cultural requirements and defines the standard required to: confirm client brief and request for information; consider the growing environment (soil, climate and aspect, pests and diseases, and weed competition); develop product knowledge through in-house and online sources; incorporate client aims and preferences into developing options for plantings; determine the optimal solution for the client needs; provide recommendations on plants, plantings and/or plant treatments, with supporting information to the client.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the wide range of horticultural and client service skills used in interacting with clients to meet their needs and recommend a solution to a plant or plant cultural issue. This standard involves working within routines, methods and procedures where some discretion and judgement is required.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>	
---------------------------	--

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify the issue	<p>1.1. Contact is initiated with the client when appropriate.</p> <p>1.2. The client is assisted in explaining the issue by the use of attentive listening and questioning techniques.</p> <p>1.3. The nature of the issue is clarified by gathering all relevant information from the client.</p> <p>1.4. The issue is defined as closely as possible according to the amount of information gathered.</p> <p>1.5. The client is advised that expert advice may be required to assist them further with their issue.</p>
2. Decide on preferred solution	<p>2.1. Options and/or strategies are identified and developed using available in-house and online reference material, product information, own experiences and sharing collective workplace knowledge.</p> <p>2.2. Options and/or strategies are examined and evaluated according to sound problem-solving techniques.</p> <p>2.3. The optimal solution is determined based on</p>

ELEMENT	PERFORMANCE CRITERIA
	reasoned argument, appropriate evidence and sound cultural principles.
3. Provide the preferred solution	3.1.The recommended solution, method of application and probable outcomes are clearly explained to the client. 3.2.The original source of the plant and its cultural requirements is referred to where necessary. 3.3.Client requests for clarification or expansion are responded to by the use of attentive listening and questioning techniques.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- interpret information sheets, labels, horticultural literature, specifications and design symbols
- utilise proforma reporting and work procedure documents
- estimate treatment and product requirements, material sizes and quantities
- interpret site designs, ground plans and specifications
- calculate ratios, proportions and application rates
- coordinate own work activities to gain knowledge about plants, products and treatments
- investigate client requests for information, identify and evaluate options, decide on a solution, and deliver recommendation and information to the client
- select appropriate plants for the client from a wide range of available plants
- provide customer service to satisfy the clients need for information
- develop product knowledge through research and access to in-house and online information
- inform the client of any recommended solution using verbal explanations, available audio-visual or multimedia materials, literature, and demonstrations of the solution offered by a plant, product or treatment
- communicate with clients, work team members, supervisors, suppliers, contractors and consultants
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- broad range of plant species and their cultural requirements
- awareness of legal issues, Occupational Health and Safety (OHS) issues and requirements, and environmental implications, regulations and cultural sensitivities of clients
- problem-solving techniques
- plant identification techniques, plant selection, plant physiology, habit and growth characteristics of the plants
- soil characteristics particularly in relation to the local region
- pest and disease symptoms, basic physiology and life cycle of pests and diseases, vulnerable plant growth stages, treatment thresholds, treatment products, effective application procedures and environmental implications
- weed species, growth stages, treatment thresholds, treatment products, effective application procedures and environmental implications
- local plant suppliers, consultants, services, products and contractors
- awareness of duty of care in provision of advice and recommendations to retail, commercial and private clients.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- confirm client brief and request for information
- consider the growing environment (soil, climate and aspect, pests and diseases, and weed competition)
- incorporate client aims and preferences into developing options for plantings
- provide recommendations on plantings and/or plant

<b>EVIDENCE GUIDE</b>	
	treatments, with supporting information, to the client.
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Information may include:	<ul style="list-style-type: none"> <li>• information on weeds, pest and disease control measures</li> <li>• selection and use of plant materials</li> <li>• basic garden design and maintenance</li> <li>• soils, irrigation, plant nutrition, products and services</li> <li>• local geographical variables</li> <li>• habitat and conservation use</li> <li>• bush restoration</li> <li>• other plant cultural information.</li> </ul>
Plants may include:	<ul style="list-style-type: none"> <li>• all plant species and cultivars.</li> </ul>

## AHCPCM303A Identify plant specimens

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of identifying an unknown plant specimen and defines the standard required to: capture relevant morphological features of a plant, record qualitative and quantitative data; use comparative techniques to define progress towards identification; use indications of health, environmental influences and location to assist identification; construct a plant database; document a report of the identification process; name unknown plant specimens.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of inspection and description of the features and attributes of a plant for the purpose of plant identification and providing information to a client or organisation in specialist roles within in each of the industry sectors and applies in addition to the existing standards referencing plant identification in a general application across the industry sectors.
--------------------------------	--

### Elements and Performance Criteria Pre-Content

Not Applicable

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Observe the plant specimen	1.1.Immediate recognition of overall features is used to remember the plant name and inform client. 1.2.Information retrieved from memory is recorded for common and botanical names. 1.3.Data is recorded in a format allowing further process of observation of features. 1.4.Specimens yet to be identified fully continue through the process of identification.
2. Inspect plant morphological features	2.1.Visual inspection of the form and structures of the specimen is described in botanical terms. 2.2.Qualitative and quantitative data are recorded in a format listing the main observable features. 2.3.Photographs of the main features are taken and stored in a database for future reference. 2.4.All relevant available senses are used to assist in the observation procedure. 2.5.Useful identifying attributes of the leaf, flower, vegetative growth, fruiting body, stem, bark and habit are recorded. 2.6.Identity of specimen is recorded where known at this

ELEMENT	PERFORMANCE CRITERIA
	<p>point.</p> <p>2.7. Unknown specimen is analysed for plant group or family characteristics from available sources of knowledge and information gained is recorded.</p>
3. Determine status of health	<p>3.1. Plant specimen is inspected for health and general condition.</p> <p>3.2. Observations are used to identify any diseases, pests or deficiencies indicative of plant groups.</p> <p>3.3. Discussion and research are used to determine the current location, environmental influences and distribution of the specimen where known.</p> <p>3.4. Relevant data are recorded and evaluated and identification recorded where possible and the client or organisation informed of the result.</p>
4. Identify the specimen	<p>4.1. Database is constructed of plants and their characteristics using digital methods, collection of physical specimens and associated data or illustrations of specimens and key features.</p> <p>4.2. Research, reference material, field guides and taxonomic keys are used to define a closer identification by comparison of generic characteristics and all results of the process are recorded.</p> <p>4.3. Photographs or illustrations or physical specimens are inspected and compared to similar specimens in the reference material and database.</p> <p>4.4. Unknown specimens are analysed for specific characteristics and identified to species and cultivar level where possible and named.</p>
5. Report on the process results	<p>5.1. Compile the information data observed for the plants morphological features throughout the process.</p> <p>5.2. Label all the information data recorded and highlight key identifying features observed in the process.</p> <p>5.3. Document a report of the identification process and list the compiled data.</p> <p>5.4. The client or organisation is informed of the results of the identification process.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- recognition of plants common to the region
- use digital cameras
- use comparative techniques
- use a database
- determine the health of plants
- research multiple sources of reference material
- compile a database of plant specimens and characteristics
- use taxonomic keys
- identify and label key features of plant morphology
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- botany, plant morphology, physiology and taxonomy
- methods of data capture
- use and configuration of a database
- plant identification techniques
- problem-solving techniques
- soil characteristics particularly in relation to the local region
- symptoms of plant pests and diseases
- basic physiology and life cycle of pests and diseases.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify client preferences and requirements	<p>1.1. Contact is initiated with the client when appropriate and according to enterprise customer service policy</p> <p>1.2. The purpose of the planting and cultural and environmental factors of the intended planting site are clarified and defined by gathering all relevant information from the client according to enterprise customer service policy.</p> <p>1.3. Botanical and common names are used to describe plants according to client preferences and requirements</p> <p>1.4. The client is informed of the enterprises policy on the provision of advice and customer service under law.</p>
2. Select plants to suit specific situations	<p>2.1. Plants and their growth and performance characteristics that suit the specific situation are identified according to research and experiential awareness and enterprise guidelines</p> <p>2.2. Available plants are compared, assessed and evaluated according to sound problem-solving techniques and enterprise guidelines</p> <p>2.3. The best choice is determined, based on reasoned argument, appropriate evidence, sound principles, and enterprise customer service policy and industry standards.</p>
3. Advise on plants for specific situation	<p>3.1. Performance characteristics and particular planting, cultural and maintenance requirements are clearly explained to the client according to enterprise customer service policy.</p> <p>3.2. The original supplier of the plant is referred to where</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>necessary.</p> <p>3.3. Client requests for clarification or expansion are responded to by the use of attentive listening and questioning techniques according to enterprise customer service policy.</p> <p>3.4. Purchase options and availability of recommended plants are outlined according to enterprise customer service policy and industry standards.</p> <p>3.5. Recommendations are recorded and reports are made to the manager according to enterprise customer service policy.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- conduct literature and industry research, collate and analyse findings on plant species and cultivars, their characteristics and requirements
- comply with legislative requirements
- explain to the client Occupational Health and Safety (OHS) requirements or basic safety precautions relevant to the establishment and on-going maintenance of plants
- comply with OHS requirements of the workplace
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- principles and practices for the establishment and maintenance of plants

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<p>recommended by the enterprise</p> <ul style="list-style-type: none"> <li>• nomenclature to plant family, genus, species and cultivar for the range of plants recommended by the enterprise</li> <li>• botanical features of plant species and/or cultivars relevant to the industry region</li> <li>• practical understanding of the physiology of the range of plants supplied and recommended by the enterprise and their comparative growth and performance characteristics in response to different cultural and environmental factors</li> <li>• soil characteristics, particularly in relation to the geographical and climatic region from which clients generally originate</li> <li>• responsibilities and liabilities in respect to the provision of recommendations and customer service under the Trade Practice laws</li> <li>• enterprise customer service policy and procedures</li> <li>• problem-solving techniques</li> <li>• innovation and recent practices in plant selection, use and performance relevant to the region</li> <li>• customer service and communication skills.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>

## AHCPCM402A Develop a soil health and plant nutrition program

### Modification History

June 2012: Updated Unit mapping information.

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers developing a soil health and plant nutrition program and defines the standard required to: access and analyse information on regional and site factors; assess the physical, chemical and biological characteristics of soils; assess the physical, chemical and biological requirements of plants; select suitable management practices, soil amendments, additives and fertilisers; document implementation plans including monitoring of soil and plant growth.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes the application of knowledge including soil health and fertility, plant biology and plant nutrition requirements.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine relevant regional data and site characteristics	1.1.Goals and target site for assessment and development of program are defined. 1.2.Relevant climate data, environmental context information and site data are accessed and reviewed. 1.3.Appropriate soil, plant and water tests are determined according to plant species, climatic conditions, prevailing growth media, industry best practice and enterprise guidelines. 1.4.Soil, plant and water testing program is developed that defines sampling, field testing, off-site analysis activities, task responsibilities, involvement of contractors, scheduling and desired information outcomes. 1.5.Testing tasks are implemented and monitored, liaison procedures with outside testing agencies are supervised, and remedial action is undertaken where necessary. 1.6.Data and readings are compiled and presented in a form that can be easily understood. 1.7.Seasonal variations and requirements are determined from published data on species, historical records, own experience, industry best practice and enterprise guidelines. 1.8.Characteristics, condition and nutritional status of soils and plant species are determined by analysing collected data and comparing to accepted standards.
2. Define the requirements for	2.1.Different nutritional requirements of the plant during growing cycle and a range of conditions are

ELEMENT	PERFORMANCE CRITERIA
plant nutrition	<p>identified according to published data on species, historical records, own experience and enterprise guidelines.</p> <p>2.2. Program is developed to achieve appropriate soil conditions and nutrient availability for plant growth.</p> <p>2.3. Soil amendments, management practices and fertiliser requirements are determined.</p> <p>2.4. Resources, tools, equipment and machinery required for program are identified and costed, and availability is confirmed with suppliers, contractors and appropriate personnel.</p> <p>2.5. Cost-effective approach to soil management, soil amendment, and provision of plant nutrients is determined.</p> <p>2.6. Occupational Health and Safety (OHS) hazards associated with program are identified, risks are assessed and controls are developed and documented.</p> <p>2.7. Environmental implications of program are identified and documented in plant nutrition program.</p>
3. Document the soil health and plant nutrition program and specifications	<p>3.1. Detailed plan, objectives, specifications and associated costs are established based on program requirements.</p> <p>3.2. Detailed on-site procedures and schedules required for program are developed and documented.</p>
4. Monitor plant growth and evaluate the program	<p>4.1. Program implementation and results are monitored by testing soil, plants and/or produce.</p> <p>4.2. Program is reviewed and refined to ensure it is responsive to changing conditions.</p> <p>4.3. Non-compliance with documented objectives and specifications is identified and remedial actions are implemented to alleviate or overcome identified shortcomings in program.</p> <p>4.4. Remedial action to improve plant nutrition is taken and documented.</p> <p>4.5. Agreed changes are incorporated into a detailed plan.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- consultants and customers
- complying with legislative requirements and codes of practice
- conducting literature and consultative research, and collating and analysing findings on plant nutritional requirements, nutrients available from soils and other growth media, and environmental implications of program
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- characteristics of soil and other growth media types, uses and additives to enhance available nutrition for specific plants
- main simple and compound fertiliser products available to enterprise, including analysis, solubility, salt index, application rates and costs
- methods of nutrient uptake by plants and favourable conditions for effective uptake to occur
- nutrients and water required by plants grown within enterprise and affects of nutrient deficiency and toxicity on individual plant species and varieties, including visual symptoms
- plant physiology
- OHS hazards associated with implementing a plant nutrition program and controls necessary to remove or minimise associated risks
- organic matter, pest and disease, and nutrient interactions in soil and nutrient cycling
- practical relevance of the concepts to specific plants and soils used in the enterprise
- practical understanding of environmental issues associated with selecting nutritional materials, implementing a plant nutrition program, needing to comply with legislation and ensuring minimal impact on environment
- processes and techniques for preparing, costing and documenting a plant nutrition program

**REQUIRED SKILLS AND KNOWLEDGE**

- relationship between soil and growth media characteristics and availability of nutrients, including macro and micro elements, to plants
- site evaluation techniques, including methods of sampling and analysing soils and other growth media
- soil amendments commonly required to treat soil problems experienced by enterprise.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- access and analyse information on regional and site factors
- assess the physical, chemical and biological characteristics of soils
- assess the physical, chemical and biological requirements of plants
- select suitable management practices, soil amendments, additives and fertilisers
- document implementation plans including monitoring of soil and plant growth.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Soils may include:	<ul style="list-style-type: none"> <li>all types of soils and growing media.</li> </ul>
Nutrients may include:	<ul style="list-style-type: none"> <li>all products and materials to meet the nutritional requirements of plants</li> <li>to modify soil pH</li> <li>soil ameliorants to improve soil fertility.</li> </ul>

# AHCPCM501A Diagnose plant health problems

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of diagnosing plant health problems and defines the standard required to: identify plant species and describe their growing requirements and characteristics; assess the suitability of the growing environment and the level of beneficial organisms; diagnose and record plant disorders and diseases; formulate a weed, pest or disease control program using the principles of Integrated Pest Management (IPM); implement modifications to plant growing conditions; document a treatment program report.
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of diagnosing plant health problems and is likely to be undertaken without supervision.
--------------------------------	--

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor factors that influence plant health	<p>1.1.The plant species is identified to the lowest taxonomic level, and its region of origin stated.</p> <p>1.2.The seasonal growth stages of the plant are determined.</p> <p>1.3.Day to day cultural practices used on each horticultural species are recorded.</p> <p>1.4.Characteristics of the growing environment that affect the growth of a specific plant species are determined.</p> <p>1.5.Climatic data and environmental growing conditions are recorded.</p> <p>1.6.The presence (or numbers) of beneficial organisms is recorded according to enterprise guidelines.</p>
2. Diagnose plant health problems	<p>2.1.Environmental and cultural factors that predispose plants to attack by pests and diseases are identified.</p> <p>2.2.The symptoms and signs of plant health problems are identified using accepted nomenclature.</p> <p>2.3.The severity and extent of the problem in a plant species are assessed.</p> <p>2.4.Observations are compared with published data, historical records, own experience, and enterprise guidelines.</p> <p>2.5.The possible causes of the plant health problem are determined.</p> <p>2.6.Consult with specialist services in severe, complex</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>or rapid onset cases.</p> <p>2.7.Plant or soil specimens are sampled and dispatched for specialist diagnosis or laboratory testing where required.</p> <p>2.8.Plant disorders and problems are recorded and documented in a report.</p>
3. Remedy plant health problems	<p>3.1.A weed, pest and disease control program is formulated according to the enterprise IPM strategy and production plan.</p> <p>3.2.Resources, tools, equipment and machinery required for work activities are identified, costs/benefits analysed, and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>3.3.Occupational Health and Safety (OHS) hazards associated with work activities are identified, risks assessed and controls implemented.</p> <p>3.4.A range of modifications to growing conditions that could be considered in a specific situation are identified.</p> <p>3.5.Modifications to growing conditions for a specific plant species are selected and implemented, having regard to cost of damage, marketing requirements and sustainable horticultural practices.</p>
4. Evaluate treatment program	<p>4.1.Plants are monitored during treatment.</p> <p>4.2.Appropriate data is recorded according to enterprise guidelines.</p> <p>4.3.Observations are compared to expected results.</p> <p>4.4.Modifications to the treatment program are recommended to client/management.</p> <p>4.5.Treatment program report is documented and presented to client/management.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

## REQUIRED SKILLS AND KNOWLEDGE

- differentiate between pest and disease and nutrient associated symptoms in specific plant species
- research information about plant health problems, their diagnosis and remedial treatments available
- identify signs and symptoms of plant health problems
- determine possible causes of the problem
- assess the severity, extent and speed of onset of the problem
- implement treatment programs to remedy the diagnosed health problems
- comply with legislative requirements
- identify hazards, assess risk and implement controls
- comply with OHS requirements of the workplace
- communicate orally with staff, supervisors, contractors, suppliers and consultants
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## Required knowledge

- plant anatomy, morphology, physiology, histology, pathology, taxonomy and nomenclature
- taxonomic descriptions, horticultural function, cultural and growth requirements, and target growth and performance characteristics of specific horticultural plants for the achievement of enterprise production and business plans
- plant nutrition issues associated with the growth media used, and horticultural region for specific plant species
- weeds, pests and disease detection methods, taxonomic identification, life cycle stages and characteristic symptoms for the specific horticultural plants of the enterprise
- chemical, cultural and biological control methods included in the IPM strategy of the enterprise
- chemical use, toxicity and compatibility with target plants, growth media, and environmental characteristics of the horticultural region
- sustainable horticultural practices relevant to the enterprise and/or horticultural region
- evaluation procedures, including cost/benefit analysis, for plant and growth media treatments in relation to plant health, enterprise budget and performance targets
- enterprise and industry record keeping and reporting policies and requirements

**REQUIRED SKILLS AND KNOWLEDGE**

- OHS hazards associated with activities to promote plant health and the controls necessary to remove or minimise risks associated with them.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify plant species and describe their growing requirements and characteristics
- assess the suitability of the growing environment and the level of beneficial organisms
- diagnose and record plant disorders and diseases
- formulate a weed, pest or disease control program using the principles of Integrated Pest Management
- implement modifications to plant growing conditions
- document a treatment program report.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

<b>RANGE STATEMENT</b>	
Plants may include:	<ul style="list-style-type: none"> <li>all plant species and cultivars.</li> </ul>

## AHCPCM502A Collect and classify plants

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of collecting and identifying plants using taxonomic keys and the preserving of plant specimens and defines the standard required to: collect plant specimens; note the location, characteristics and occurrence of specimens at the point of collection; clean, preserve, mount and label plant specimens; use a plant key to identify plants against the botanical description of the species; label preserved specimens.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the collection, classification and preservation of plants as a herbarium collection and requires the ability to work independently to prepare for plant collecting, collect plant specimens, preserve specimens and identify plant specimens.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for plant collecting	<p>1.1.Purpose and objectives for collecting range of plants is confirmed.</p> <p>1.2.Area, location and/or habitat for collecting are defined.</p> <p>1.3.Resources to assist in plant location and identification are determined and prepared.</p> <p>1.4.Equipment required for collecting and preserving specimens is determined and prepared.</p> <p>1.5.Licences and/or permission to collect specimens are sought from landowner or managing agency.</p> <p>1.6.Range of likely operating conditions, hazards and difficult/sensitive environments are assessed for impact on collecting and preserving specimens.</p> <p>1.7.Occupational Health and Safety (OHS) hazards associated with plant collecting are identified.</p>
2. Collect plant specimens	<p>2.1.Collecting ethics are observed when selecting specimens for picking.</p> <p>2.2.Relevant information about the specimen, its characteristics and occurrence is entered into a field note book and location coordinates are noted.</p> <p>2.3.Specimen collected provides adequate material for identification and preserving.</p> <p>2.4.Specimens are correctly tagged and stored for later identification.</p> <p>2.5.Appropriate OHS legislative requirements and work</p>

ELEMENT	PERFORMANCE CRITERIA
	practices are followed.
3. Preserve specimens	3.1.Preservation of specimen is undertaken while still fresh. 3.2.Specimen is cleaned and prepared for preserving according to enterprise guidelines. 3.3.Preserving of specimen carried out using either pressing or drying techniques. 3.4.Dried specimen is mounted and labelled with accurate information from notebook.
4. Identify plant specimen	4.1.Resources are identified and accessed to assist in identification. 4.2.The basic characteristics of a plant are identified and documented. 4.3.Relevant plant key is used to identify plant. 4.4.Plant identity is confirmed against botanical description of species. 4.5.Plant identity is documented on label according to enterprise guidelines.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare for plant collecting
- collect plant specimens
- preserve specimens
- identify plant specimens
- follow safe work practices
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of

**REQUIRED SKILLS AND KNOWLEDGE**

cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- herbarium collection techniques and ethics
- plant anatomy, physiology, morphology, taxonomy and nomenclature
- physical and biological habitat types (including vegetation associations and communities where appropriate)
- OHS legislative requirements and Codes of Practice
- hazard identification and risk assessment and control.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- collect plant specimens
- note the location, characteristics and occurrence of specimens at the point of collection
- clean, preserve, mount and label plant specimens
- use a plant key to identify plants against the botanical description of the species
- label preserved specimens.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole.

Information to be recorded for each specimen may include:

- information that identifies the particular specimen
- information that describes the plant
- information that outlines the location of the plant specimen
- information that describes the ecological characteristics of the area.

## AHCPCM503A Specify plants for landscapes

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers specifying plants for landscapes and defines the standard required to inspect and identify an extensive range of plants; determine the suitability of a plant for a purpose; evaluate and document the selection of plants; specification of replacement plantings; monitor and record quality control of selections; document a report of the identification, evaluation and specification process.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the selection and specification of landscape plants in a range of industries to provide information and advice to a client or organisation in specialist roles within horticulture and applies in addition to the existing standards referencing plant selection in a general application across the industry sectors. This standard applies in wide application to urban and regional areas and in local government and legal contexts in the specification of plants in residential, commercial public open spaces and amenity areas.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>

<b>Prerequisite units</b>	

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

### Elements and Performance Criteria Pre-Content

Not Applicable

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Develop a client brief	1.1.Client is consulted and a brief developed and agreed.
2. Determine the suitability of a plant for a purpose.	2.1.Site inspection is undertaken according to the client brief and legislative and regulatory requirements. 2.2.Planting area dimensions are estimated for the plant species or cultivar. 2.3.Species and cultivar selection is appropriate to the available dimensions of the aspect and the site. 2.4.Soil volume is proportioned to the size of plant in consideration. 2.5.Environmental conditions are considered and applied to the functional characteristics of the plant. 2.6.The existing soil is appraised for suitability as a growth medium appropriate to the plant species or cultivar. 2.7.Functional life expectancy of site and plantings is determined. 2.8.The selection of the plant is evaluated and the

ELEMENT	PERFORMANCE CRITERIA
	rationale for plant selection is documented.
3. Select plants	<p>3.1.Plants are selected as per the client brief and their suitability for the intended purpose.</p> <p>3.2.Plant function is determined for the precise location within the plan.</p> <p>3.3.Recommendations are made for soil improvements in accordance with the plant species selected.</p> <p>3.4.Species and cultivars are matched appropriately to the determined selection criteria for species specific characteristics.</p> <p>3.5.Plant species or cultivars for replacement or new plantings are recommended.</p> <p>3.6.Plant selections, selection criteria and notes on quality expectations are documented as specifications.</p>
4. Specify plants	<p>4.1.Criteria determined for size of stock selection are incorporated to the specifications.</p> <p>4.2.Selection criteria for mature plants are evaluated against capability and availability of transplanted plants.</p> <p>4.3.Final selections are assessed against the specified soil, site location and client brief and confirmed.</p> <p>4.4.Selected plants are monitored for quality and quantities according to the specifications.</p> <p>4.5.Materials, soils and growing media are monitored for quality according to the specifications.</p> <p>4.6.Records of quality checks on delivered plants and product are documented.</p>
5. Correlate and present a report	<p>5.1.A report of the process is documented and the correlated records are incorporated.</p> <p>5.2.The client or organisation is presented with the report.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- identify and select an extensive range of plants common to the region
- select and appraise a wide range of soils and growing media
- conduct site inspections and site assessments
- evaluate plant selections
- use comparative techniques
- research multiple sources of reference material and taxonomic keys
- compile a database of plant specimens and characteristics
- monitor quality
- apply quality controls
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- plant identification techniques
- ethnobotany, plant morphology, physiology, taxonomy and nomenclature
- soil characteristics particularly in relation to the local region
- soils appraisal techniques
- methods of data capture
- surface hydrology
- problem-solving techniques
- methods of quality control
- symptoms of plant pests and diseases
- basic physiology and life cycle of pests and diseases
- AS4419-2003 and AS4454-2003
- specific legislation and regulations for horticulture and development
- relevant Occupational Health and Safety (OHS) legislation and regulations.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• inspect and identify an extensive range of plants</li> <li>• determine the suitability of a plant for a purpose</li> <li>• evaluate and document the selection of plants</li> <li>• specification of replacement plant plantings</li> <li>• monitor and record quality control of selections</li> <li>• document a report of the identification, evaluation and specification process.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Access to a digital camera and an easy to use database is recommended for the delivery of this standard. Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

## AHPCCM504A Design and maintain a specialised landscape

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers designing and maintaining a specialised landscape and defines the standard required to identify plant species and cultivars using botanical nomenclature; recognise and select plants appropriate to the design criterion; identify and design with plants appropriate for the use in controlled environments; implement biological, organic and inorganic plant and plant pest management techniques; Identify and apply appropriate irrigation techniques and manage irrigation applications; identify disorders and recommend soils and plant nutrition requirements; Identify weeds and recommend appropriate weed management; provide garden design solutions; compile the recommendations and document a design plan or report.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the identifying the various plant families and a wide range of plants for different situations; making accurate observations of details; recognising the implications of environmental and climatic range; and assessing plants prior to planting. It requires knowledge of botanical geography; ethno botany; plant culture in Green Buildings; Conservatories and Glass Houses; lawns and lawn care; stakes and guying and irrigation and current process in new irrigation techniques.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Design with plants as a main focus of the design project	<p>1.1. Identify plant families and genera, species and cultivars, by making accurate observations of fine details and applying logical and systematic methods of working.</p> <p>1.2. Identify a wide range of plants for different design criterion and requirements, which include the use of aesthetic, ornamental, productive and economic plant groups.</p> <p>1.3. Recognise and select plants appropriate to the design criterion.</p> <p>1.4. Identify and design with plants appropriate for the use in Green Buildings (eg. Rooftops) Conservatories, Glass houses and Atriums.</p>
2. Place plants in a designed space	<p>2.1. Determine the implications of climate and environment on plant selection and design.</p> <p>2.2. Recognise and choose plants that are adaptive to micro and meso climates in domestic, and small to</p>

ELEMENT	PERFORMANCE CRITERIA
	moderate scale public space. 2.3. Assess plants prior to planting and identify their nature e.g. annual, perennial and arboreal. 2.4. Report on the cultural techniques required to establish and maintain plants in specialised environments.
3. Identify disorders and recommend soils and plant nutrition requirements	3.1. Identify soil types and condition and make recommendations for appropriate soil management techniques. 3.2. Identify organic and inorganic fertilisers and make appropriate recommendations. 3.3. Identify common plant disorders and make appropriate recommendations. 3.4. Instruct in the use and production of compost.
4. Establish and maintain plants in a designed landscape environment	4.1. Implement a range of propagation techniques. 4.2. Perform planting techniques. 4.3. Recognise appropriate situations for the use of, and make recommendations, regarding staking and guying. 4.4. Identify and apply appropriate irrigation techniques and manage irrigation applications. 4.5. Perform a range of appropriate pruning and shaping techniques ensuring optimum plant performance and make recommendations. 4.6. Identify weeds and recommend appropriate weed management. 4.7. Implement biological, organic and inorganic plant and plant pest management techniques. 4.8. Compile the recommendations and document a design plan or report.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

## REQUIRED SKILLS AND KNOWLEDGE

- identify plant species and cultivars using botanical nomenclature
- identify and select plants appropriate to the design criterion
- identify and design with plants appropriate for the use in controlled environments
- implement biological, organic and inorganic plant and plant pest management techniques
- Identify and apply appropriate irrigation techniques and manage irrigation applications
- identify and recommend soils and plant nutrition requirements
- Identify weeds and recommend appropriate weed management
- provide garden design solutions
- compile the recommendations and document a design plan or report
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## Required knowledge

- botany - plant structures and physiology
- botanical geography (plant families, geographic distribution and links)
- ethno botany (sustainability and the stories of plants)
- plant taxonomy and nomenclature
- aesthetic, ornamental, productive and economic plant groups
- plant families and detailed knowledge of species and cultivars used in garden design, horticulture industry and other ornamental, productive and economic plant industries
- the use and development of plants through history
- types, properties and characteristics of a wide range of soils and growing media
- horticultural media, information and knowledge based resources
- turf culture
- principles and processes of plant culture.
- allied horticultural, environmental and conservation industries and movements
- irrigation and current progress in new irrigation techniques
- AS4419-2003 and AS4454-2003.

## AHCPCM505A Conduct environment and food safety risk assessment of plant nutrition and soil fertility programs

### Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release. Supersedes and is equivalent to RTE5527A

### Unit Descriptor

This unit covers the responsibilities of agricultural advisers in conducting an environment and food safety risk assessment on established or developing plant nutrition and soil fertility programs and, where appropriate, developing a nutrient management plan. The risk assessment involves analysing and prioritising environmental risks associated with the program. This risk assessment is combined with the identification of options to manage risk and establish processes for the ongoing monitoring and improvement of plant nutrition and soil fertility programs.

### Application of the Unit

This unit of competency applies to agricultural advisers who are providing services to land managers. Conducting the assessment is likely to be undertaken without supervision but includes practical input from the land owner or manager.

### Licensing/Regulatory Information

Not applicable

### Pre-Requisites

Nil

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes of a unit of competency.

demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain currency of environment and food safety information relating to fertilisers and soil ameliorants	<p>1.1 Community, government and agricultural industry concerns and legislative requirements in relation to <b><i>fertiliser and soil ameliorant environmental stewardship</i></b> and initiatives to address them are identified and documented by actively and regularly researching industry and other information sources</p> <p>1.2 Local information relating to nutrient management, particularly in a catchment or regional context, is identified and documented by active communication with local organisations</p> <p>1.3 National and local information and standards relating to food safety associated with fertiliser and soil ameliorant use are identified and documented by actively and regularly researching industry and other information sources</p> <p>1.4 Information and standards relating to transport, handling, storage and application of fertilisers and soil ameliorants are identified and documented by actively and regularly researching industry and other information sources</p>
2. Evaluate environmental risks and develop a nutrient management plan	<p>2.1 <b><i>Environmentally significant features</i></b> of fertiliser, soil ameliorants, soil, landscape and climate that are likely to influence environmental risks associated with plant nutrition and soil fertility program are identified and documented</p> <p>2.2 <b><i>Agronomic and operational activities</i></b> associated with fertiliser and/or soil ameliorant program, and associated <b><i>environmental risk categories</i></b>, are identified and documented</p> <p>2.3 <b><i>Environmental risks and impacts</i></b> associated with agronomic and operational activities are <b><i>evaluated and prioritised</i></b></p> <p>2.4 <b><i>Management options</i></b> to appropriately address environmental risks are identified and evaluated</p> <p>2.5 Appropriate management options to address any identified environmental risks are discussed and agreed with customer</p> <p>2.6 <b><i>Nutrient management tools</i></b> are used in conjunction with land owner/manager to monitor effectiveness of</p>

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	management decisions over time
	2.7 Opportunities to <i>improve efficiency and effectiveness</i> of plant nutrition and soil fertility program, including use of fertilisers and soil ameliorants, are identified and operational and agronomic recommendations are modified accordingly
3. Identify and communicate relevant best practice in transport, handling and storage for environmental stewardship to land owner/manager	3.1 Key environmental product stewardship issues in <i>transport, handling and storage</i> of fertilisers and soil ameliorants that are relevant to plant nutrition and soil fertility program (as contained in codes of practice, legislation and enterprise work procedures) are identified and communicated to land owner/manager

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills include:

---

#### Ability to:

- calculate areas, ratios, proportions and application rates
- assign probability and severity of identified risks
- communicate with work team members, supervisors, contractors and suppliers
- estimate treatment and product requirements, material sizes and quantities
- interpret manufacturer and plant nutrition program specifications
- interpret specifications
- store and retrieve information and reports
- understand labels and symbols
- use paper-based or computer software interpretation system to integrate information and results from multiple sources and produce recommendation reports that are easily implemented
- use pro forma reporting, analysis and work procedure documents

### Required knowledge includes:

---

#### Knowledge of:

- soil and water sampling techniques to adapt activities and instructions to a range of environmental contexts

- environmental implications for environment of soil amendment and fertiliser use, that may include nutrient mining, run-off, nutrient loading of soil and water, toxicity, noise and dust
- food safety issues relating to the use of fertilisers and soil ameliorants
- law of the minimum and importance of nutrient interactions
- methods and pathways of nutrient uptake by plants and loss from soil
- nutrient cycling and its practical relevance to specific plants and soils encountered in local area, including role of soil biology
- nutrients required by plants grown within enterprise and effects of nutrient deficiency and toxicity on individual plant species and varieties
- relationship between soil characteristics and the availability of nutrients, including macro and micro elements, to plants
- single nutrient and complete fertiliser products encountered in local area, including physical attributes, nutrient analysis, solubility, salt index, application rates and costs, and appropriate application techniques and equipment
- soil amendments commonly used to treat local soil problems
- techniques for interpreting laboratory results and making fertiliser and amendment recommendations
- techniques to assess effects of fertiliser and amendment recommendations on soil, plants and water

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The evidence require to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify environmental parameters at risk</li> <li>• assess magnitude of risk and establish likelihood</li> <li>• assess potential impact on environmental parameters and assign severity rating</li> <li>• develop soil fertility report and fertiliser recommendation with consideration of environmental stewardship principles</li> <li>• communicate recommendation with customer, including methods of assessing outcomes of</li> </ul>

	<p>recommendation</p> <ul style="list-style-type: none"> <li>• develop a nutrient management plan</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other units</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</li> <li>• Assessment may be in conjunction with assessment of other units of competency</li> <li>• The assessment environment should not disadvantage the candidate</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role</li> </ul>
Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where

	possible, over a number of assessment activities.
--	---

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Fertiliser and soil ameliorant environmental stewardship</i></b> involves:	<ul style="list-style-type: none"> <li>• commitment to actions in line with their effect on the overall environmental outcome as distinct from just the effects of individual components</li> <li>• duty of care for the environmental effects of fertiliser and soil ameliorants that goes beyond a person’s direct area of responsibility</li> </ul>
<b><i>A nutrient management plan</i></b> consists of:	<ul style="list-style-type: none"> <li>• consideration of environmental risks and their priority (likelihood/consequence)</li> <li>• management options to address risks</li> <li>• process for ongoing monitoring and management of plant nutrition and soil fertility program</li> <li>• strategies to maintain soil fertility and product quantity and quality</li> <li>• understanding of nutrient requirements of region, farm or paddock</li> </ul>
<b><i>Environmentally significant features</i></b> may include:	<ul style="list-style-type: none"> <li>• biological properties of soil and applied organic products such as:             <ul style="list-style-type: none"> <li>• beneficial macro and micro-organisms</li> <li>• disease potential</li> </ul> </li> <li>• chemical properties of soil such as:             <ul style="list-style-type: none"> <li>• acid/alkaline (pH) balance</li> <li>• carbonate content</li> <li>• cations</li> <li>• nutrient content such as nitrogen</li> <li>• organic matter</li> <li>• phosphorus</li> <li>• potassium</li> <li>• salinity</li> <li>• sulphur</li> </ul> </li> </ul>

	<ul style="list-style-type: none"><li>• trace elements</li><li>• physical properties of soil such as:<ul style="list-style-type: none"><li>• colour</li><li>• depth of root zone and plant available water</li><li>• soil stability</li><li>• structure</li><li>• texture</li><li>• water-holding capacity</li></ul></li><li>• climatic features such as:<ul style="list-style-type: none"><li>• annual diurnal temperature patterns</li><li>• annual precipitation</li><li>• prevailing winds</li><li>• rainfall intensity</li><li>• seasonal and annual rainfall pattern</li><li>• wind strength</li></ul></li><li>• fertilisers that are inorganic or organic solids</li><li>• fertilisers that are fluids applied directly to soil or to plant via foliar sprays such as:<ul style="list-style-type: none"><li>• liquefied gases</li><li>• solutions</li><li>• suspensions</li><li>• location of major water bodies and underground water sources</li><li>• native vegetation in vicinity of proposed plant nutrition or soil fertility program</li><li>• nitrogen input from leguminous green manure crops or leguminous pastures</li></ul></li><li>• properties of fertilisers and soil ameliorants that are environmentally significant such as:<ul style="list-style-type: none"><li>• chemical composition</li><li>• impurity concentration</li><li>• nutrient content</li><li>• particle size</li><li>• particle size distribution</li><li>• solubility</li><li>• slope and aspect</li></ul></li><li>• soil ameliorants such as gypsum</li><li>• liming products including:<ul style="list-style-type: none"><li>• dolomite</li><li>• mixtures of lime and magnesium oxide</li><li>• any by-product used to change soil acid/alkaline</li></ul></li></ul>
--	---

	<p>(pH) balance or soil calcium level</p> <ul style="list-style-type: none"> <li>• biosolids, animal manures and compost</li> <li>• surface water drainage patterns</li> </ul>
<p><b><i>Agronomic and operational activities</i></b> associated with environmental risks may include:</p>	<ul style="list-style-type: none"> <li>• agronomic activities such as: <ul style="list-style-type: none"> <li>• crop/pasture production at levels that deplete soil nutrients or adversely affect soil health</li> <li>• form of nutrient</li> <li>• growth of legume species</li> <li>• nutrient placement</li> <li>• rate of nutrient applied</li> <li>• timing of nutrient application</li> </ul> </li> <li>• operational activities such as: <ul style="list-style-type: none"> <li>• clean-up of spills</li> <li>• application and disposal of animal manures</li> </ul> </li> <li>• fertiliser application activities including: <ul style="list-style-type: none"> <li>• application as solid or fluid products</li> <li>• application in irrigation water</li> <li>• broadcast or band application</li> <li>• direct injection of anhydrous ammonia</li> </ul> </li> <li>• siting of permanent and temporary fertiliser/ amendment storage</li> <li>• storage and handling on farm</li> </ul>
<p><b><i>Environmental risk categories</i></b> include:</p>	<ul style="list-style-type: none"> <li>• blow (airborne losses)</li> <li>• leach (nutrient leaching or change in chemical composition through the soil profile)</li> <li>• load (nutrient loading in soil, water, air or food)</li> <li>• mine (mining soil nutrient by non-maintenance rate strategies)</li> <li>• run-off (nutrient transport in surface water)</li> </ul>
<p>An adviser may <b><i>evaluate and prioritise environmental risks and impacts</i></b> based on:</p>	<ul style="list-style-type: none"> <li>• environmental consequence</li> <li>• likelihood of occurrence</li> </ul>
<p><b><i>Management options</i></b> appropriate in managing environmental risks may include:</p>	<ul style="list-style-type: none"> <li>• activities directly related to fertiliser use such as: <ul style="list-style-type: none"> <li>• changing product</li> <li>• method of application</li> <li>• rate applied</li> <li>• timing</li> </ul> </li> <li>• broader range of agricultural management options such as: <ul style="list-style-type: none"> <li>• changing cultivation practices</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• land use planning</li> <li>• rotation management</li> </ul>
<p><i>Nutrient management tools</i> used to monitor the effectiveness of decisions may include:</p>	<ul style="list-style-type: none"> <li>• nutrient budgeting</li> <li>• paddock record keeping</li> <li>• soil, plant tissue and water analysis</li> <li>• yield maps</li> </ul>
<p>Monitoring results consulted to <i>improve efficiency and effectiveness</i> of plant nutrition and soil fertility programs may include:</p>	<ul style="list-style-type: none"> <li>• monitoring results after implementation of recommendations such as: <ul style="list-style-type: none"> <li>• nutrient and water use efficiency data, including: <ul style="list-style-type: none"> <li>• changes to nutrient and water use efficiency after implementation of recommendations</li> <li>• changes to production requirements</li> <li>• environmental changes</li> </ul> </li> </ul> </li> </ul>
<p>Aspects of fertiliser <i>transport, handling and storage</i> that may raise awareness of environmental issues include:</p>	<ul style="list-style-type: none"> <li>• issues contained in industry codes of practice such as: <ul style="list-style-type: none"> <li>• Aerial Agriculture Association of Australia</li> <li>• Australian Fertiliser Services Association</li> </ul> </li> </ul>

# AHCPCM601A Develop and implement a plant health management strategy

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of managing plant health in a horticultural or agricultural enterprise, and defines the standard required to: gather information and advice on plant health for an enterprise; develop strategies to manage plant health; integrate plant health strategies into enterprise planning; determine scheduling and key responsibilities for plant health management; evaluate and modify the plant health program; document the strategic plan for plant health management; report on the implementation of the strategies.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit applies to the ability to develop a plant health and management strategy, determine plant health strategies, scheduling and key responsibilities and document a strategic plan of plant health management.
--------------------------------	--

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

### Elements and Performance Criteria Pre-Content

Not Applicable

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Develop a plant health and management program	1.1.Plant health issues are identified from published data, historical records and industry consultation. 1.2.Management issues are defined relative to desired quality, quantity and productivity requirements of marketing and production plans. 1.3.The program is developed which defines enterprise guidelines and specific responsibilities of operational elements to achieve required outcomes. 1.4.The program is communicated effectively, and systems are established to monitor business goals. 1.5.Professional assistance is sought where appropriate. 1.6.Information is assessed to determine potential key information for input to planning decisions. 1.7.The environmental implications of chemical use, alternative methods and non-chemical preventative methods are considered and documented. 1.8.Information is assessed to determine potential key information for input to planning decisions.
2. Determine plant health strategies	2.1.Information gathered is analysed for suitable approaches to plant health management.

ELEMENT	PERFORMANCE CRITERIA
	<p>2.2.Strategies are considered in the light of their impacts.</p> <p>2.3.Strategies for plant health management are determined to integrate the most suitable methods with the proposed plants and the existing soil types.</p> <p>2.4.Environmental controls are established and specifically included in the plan.</p> <p>2.5.Occupational Health and Safety (OHS) hazards are identified, risks assessed, and suitable controls are incorporated into the plan.</p>
3. Provide input to other planning processes	<p>3.1.Details regarding plant health management strategies are used as input to other organisational planning processes.</p> <p>3.2.Information regarding other planning processes is collected and used to inform the plant health management planning process.</p> <p>3.3.Information about the range of planning processes is communicated verbally and/or in writing according to the requirements of the circumstances and the people involved.</p>
4. Determine scheduling and key responsibilities	<p>4.1.Scheduling for plant health management is determined taking the range of seasonal, geographic, and resourcing factors into consideration.</p> <p>4.2.Key responsibilities for specific implementation processes are determined.</p> <p>4.3.Recordkeeping requirements are determined and procedures are put in place to ensure compliance with the range of applicable regulations.</p> <p>4.4.The strategic plan, including scheduling and key responsibilities, is clearly documented.</p> <p>4.5.The plan includes the type, format, frequency and detail of any reporting required by both manager(s) and operators.</p>
5. Monitor and adjust plant health management strategies	<p>5.1.The effectiveness of the plant health management strategies is evaluated at key points and adjustments made as necessary.</p> <p>5.2.Environmental impacts and OHS hazards relating to plant health management are identified, monitored and risk assessed and managed throughout the implementation process.</p> <p>5.3.Modifications are made to the strategy as and when necessary for environmental, OHS resourcing, or effectiveness reasons.</p>

ELEMENT	PERFORMANCE CRITERIA
6. Evaluate plant health management strategies and record result	6.1.Data, observations and documentation from the implementation of plant health management program is analysed against the plan according to organisation guidelines. 6.2.Recommendations for future strategies are prepared based on the analysis of the data. 6.3.A report is prepared that documents the implementation of the strategies.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- determine plant health strategies
- develop plant health management strategies
- provide input to other planning processes
- determine scheduling and key responsibilities
- monitor and adjust plant health management strategies
- evaluate plant health management strategies and record results
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- strategic aspects of managing plant quality, performance and nutrition
- management of weed, pest and disease infestations
- planning water budgets and irrigation strategies
- plant growth processes such as photosynthesis, respiration, nutrient uptake, solute transport, and metabolism, water balance and osmotic pressure

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• plant growth and development and growth regulators</li> <li>• Integrated Pest Management (IPM)</li> <li>• environmental controls and codes of practice applicable to the enterprise</li> <li>• relevant legislation and regulations relating to OHS contractor engagement, chemical use and application, and vehicle and plant use</li> <li>• environmental controls and codes of practice applicable to the business and to plant health management operations</li> <li>• sound management practices and processes to minimise plant health management control operations.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• gather information and advice on plant health for an enterprise</li> <li>• develop strategies to manage plant health</li> <li>• integrate plant health strategies into enterprise planning</li> <li>• determine scheduling and key responsibilities for plant health management</li> <li>• evaluate and modify the plant health program</li> <li>• document the strategic plan for plant health management</li> <li>• report on the implementation of the strategies.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or</p>

**EVIDENCE GUIDE**

enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Strategies may include:

- managing plant quality, performance and nutrition
- management of weed, pest and disease infestations
- planning water budgets and irrigation strategies
- plant health management and organisational planning processes
- integrated pest management
- risk management and environmental and OHS impacts.

Report structure may include:

- the approach to the implementation of the strategies that includes any difficulties or issues faced
- the methods used for treatment
- impacts on environmental and OHS
- any recommendations for future work
- results, costs, and data analysis.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials, tools and equipment for gardening work	1.1.The required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions. 1.2.Checks are conducted on all materials, tools and equipment with insufficient or faulty items reported to the supervisor. 1.3.Techniques used when loading and unloading materials demonstrate correct manual handling and minimise damage to the load and the vehicle. 1.4.Suitable Personal Protective Equipment (PPE) is selected and checked prior to use. 1.5.Gardening support is provided according to Occupational Health and Safety (OHS) requirements, and according to workplace information. 1.6.OHS hazards are identified and reported to the supervisor.
2. Undertake gardening work as directed	2.1.Instructions and directions provided by supervisor are followed and clarification sought when necessary. 2.2.Gardening work is undertaken in a safe and environmentally appropriate manner according to enterprise guidelines. 2.3.Interactions with other staff and customers are carried out in a positive and professional manner. 2.4.Enterprise policy and procedures in relation to workplace practices, handling and disposal of materials is observed. 2.5.Problems or difficulties in completing work to required standards or timelines are reported to supervisor.
3. Handle materials and	3.1.Waste material produced during gardening work is

ELEMENT	PERFORMANCE CRITERIA
equipment	<p>stored in a designated area according to supervisor's instructions.</p> <p>3.2. Materials, equipment and machinery are handled and transported according to supervisor's instructions and enterprise guidelines.</p> <p>3.3. A clean and safe work site is maintained while completing gardening activities.</p>
4. Clean up on completion of gardening work	<p>4.1. Materials are returned to store or disposed of according to supervisor's instructions.</p> <p>4.2. Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and supervisor's instructions.</p> <p>4.3. Work outcomes are reported to the supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- follow safe work procedures
- prepare materials, tools and equipment for gardening work
- undertake gardening work as directed
- handle materials and equipment
- clean up on completion of gardening work
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- safe work practices
- planting techniques
- garden tools and equipment
- maintenance practices for planted areas
- repair and maintenance of garden features

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• OHS and environmental protection legislation and enterprise procedures.</li> </ul>

## Evidence Guide

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for planting operations	<p>1.1. Occupational Health and Safety (OHS) hazards are identified and reported to the supervisor.</p> <p>1.2. Personal Protective Equipment (PPE) is used and maintained according to procedures.</p> <p>1.3. Tools and equipment for planting are used according to directions.</p> <p>1.4. Site is marked out according to planting plan and according to directions.</p> <p>1.5. Competing plants are controlled.</p> <p>1.6. Soil is modified according to directions.</p>
2. Prepare trees and shrubs for planting	<p>2.1. Planting holes are excavated according to the needs of the plant.</p> <p>2.2. Trees and shrubs are watered prior to planting.</p> <p>2.3. Root ball is verified to be damp.</p> <p>2.4. Trees and shrubs are removed from containers.</p>
3. Inspect plants and report problems	<p>3.1. Plant and root ball are inspected</p> <p>3.2. Dry, water repellent and loose root balls are reported to the supervisor.</p> <p>3.3. Presence of symptoms of pests or disease is reported to the supervisor.</p> <p>3.4. Root treatments are applied according to directions.</p>
4. Install trees, shrubs and/or other plants	<p>4.1. Plants are placed in hole.</p> <p>4.2. Planting hole is back-filled and soil consolidated.</p> <p>4.3. Plants are watered in where required to eliminate air pockets.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.4. Apply mulch as directed.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards
- use tools and equipment for planting
- mark out planting site
- excavate planting holes
- inspect root ball condition
- observe problems of root balls
- install plants
- apply root treatments
- follow work procedures
- participate in teams and contribute to team objective
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- basic botany and physiology
- chemical use, toxicity and mode of action of chemicals used
- awareness of the impact of planting activities on the surrounding environment
- planting techniques relating to specific species
- factors affecting the timing and method of tree or shrub planting
- initial establishment needs of juvenile plants
- soil amelioration techniques
- principles relating to the application of mulches and fertilisers
- basic plant structure and the physical and nutritional requirements of plants
- OHS legislative requirements and Code of Practice

**REQUIRED SKILLS AND KNOWLEDGE**

- manual handling techniques
- the effect of adverse outdoor climatic conditions.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- carry out ground preparation
- excavate planting holes
- apply suitable tree planting techniques for the tree species
- inspect root ball quality
- apply a range of treatments
- apply post planting applications
- monitor and record plantings.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

<b>RANGE STATEMENT</b>	
Plants may include:	<ul style="list-style-type: none"> <li>trees, shrubs and other containerised and bare-rooted plants.</li> </ul>
Planting may include:	<ul style="list-style-type: none"> <li>all plant installations and planting activities in parks and gardens</li> <li>domestic and commercial landscapes</li> <li>sporting facilities</li> <li>planting of windbreaks and shelter belts</li> <li>programmed environmental maintenance</li> <li>rehabilitation of natural areas</li> <li>reversal of environmental degradation.</li> </ul>

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the display site	1.1.The plant display site is prepared according to instructions. 1.2.Materials, tools, equipment and machinery are used according and enterprise work procedures. 1.3.Suitable personal safety equipment is selected and used.
2. Install plants	2.1.Plants are placed in the pattern specified by the plan. 2.2.Accessories and materials chosen are as specified in the plan. 2.3.Work is undertaken according to Occupational Health and Safety (OHS) requirements.
3. Maintain plants	3.1.Health of the plants is monitored to ensure they retain optimum appearance. 3.2.Plants are fertilised and watered to maintain optimum health and appearance. 3.3.Plants are replaced when no longer at optimum health and appearance. 3.4.Rubbish, litter and decaying material are removed from plants, pots and surrounds to maintain optimum appearance of display.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

**REQUIRED SKILLS AND KNOWLEDGE**

- communicate with work team members, supervisors, suppliers and customers
- use hand tools and machinery associated with the preparation of plant displays
- use fertilisers and chemicals associated with plant maintenance
- interpret planting plans
- calculate quantities of plants and materials
- effectively complete plant display in a timely manner
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- planting techniques for annual bed displays
- maintenance techniques for annuals and/or indoor displays
- common problems occurring with display plants
- remedial action required for display plants displaying health problems.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select suitable plants for a range of display purposes
- prepare a site for a plant display
- plant or arrange plants for a plant display

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>maintain plants in a display.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Displays may include:	<ul style="list-style-type: none"> <li>displays for functions</li> <li>annual bedding displays</li> <li>herbaceous perennial displays</li> <li>indoor presentations.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify pruning requirements	1.1. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor. 1.2. Personal protective equipment (PPE) is used according to procedures. 1.3. Pruning tools and equipment are appropriate to the location, access and size of material to be pruned. 1.4. Plants that require pruning are identified according to the pruning program and directions. 1.5. Pruning method to be used is confirmed by the supervisor.
2. Undertake pruning of shrubs and small trees	2.1. Pre-operational and safety checks are carried out on pruning tools and equipment according to manufacturer specifications and documented low risk work procedures. 2.2. Machinery, equipment and tools are operated according to documented low risk work procedures. 2.3. Pruning cuts are implemented according to directions and AS 4373 Pruning of amenity trees. 2.4. Correct manual handling techniques are used when lifting or moving heavy loads. 2.5. Work outcomes are recorded or reported to the supervisor according to enterprise work procedures.

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- recognise plants, shrubs and trees
- operate tools
- adjust fuel levels
- use appropriate tools, equipment and safety equipment
- identify and report site and tree hazards
- participate in teams and contribute to team objectives
- minimise environmental disturbance
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- principles of pruning
- effects of pruning on plant growth and habit
- plant health principles (e.g. CODIT) relevant to pruning
- AS 4373 Pruning of amenity trees
- plant names and growth habits
- basic botany and physiology
- correct and safe use and care of tools and equipment
- understanding of work procedures
- the effect of outdoor climatic conditions on pruning programs and tool selection
- awareness of potential public nature of pruning work
- use of hygienic practices.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

<b>EVIDENCE GUIDE</b>	
Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• confirm the pruning method</li> <li>• prepare tools and equipment</li> <li>• prune shrubs and trees to AS 4373-2007 Pruning of amenity trees, as required.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Small trees may include:	<ul style="list-style-type: none"> <li>• trees less than three metres in height.</li> </ul>
Pruning may include:	<ul style="list-style-type: none"> <li>• modifying the shape, form, vigour, correction or control of growth</li> <li>• prevention of disease or damage</li> <li>• promotion of health</li> <li>• modifying the canopy and fruit and flower production</li> <li>• providing ornamental effects or aesthetic appeal</li> <li>• providing clearance for services, access or cultural practices.</li> </ul>

## AHCPGD204A Transplant small trees

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of small tree and shrub transplanting without the use of lifting machinery and equipment and defines the standard required to: determine transplanting requirements from work documents; prepare the plant and the new site for transplanting; bind and/or wrap root balls and crowns; remove the plant safely and with minimal damage; replant the small tree and provide aftercare for transplanted plants.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the complete transplant operation involved in re-locating small trees.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for tree or shrub removal	<p>1.1. Transplanting plans/instructions are obtained and confirmed with the supervisor.</p> <p>1.2. Occupational Health and Safety (OHS) hazards are identified, risks assessed and reported to the supervisor.</p> <p>1.3. All underground services are located according to supply authorities' guidelines.</p> <p>1.4. Tools and equipment appropriate to the task being undertaken are prepared and used according to supervisor's instructions and manufacturers guidelines.</p> <p>1.5. Suitable Personal Protective Equipment (PPE) is selected, used and maintained.</p>
2. Prepare tree or shrub and undertake earthworks for removal	<p>2.1. Crown is prepared according to the requirements of the species, time of removal and enterprise work procedures.</p> <p>2.2. Site is cleared and watered prior to transplanting.</p> <p>2.3. Root ball width and depth is confirmed with the supervisor to ensure the root system can colonise new ground according to the needs of the species and size of the specimen.</p>
3. Remove tree or shrub from original site	<p>3.1. Soil around the root zone is excavated according to documented guidelines.</p> <p>3.2. Tree roots are pruned where required to meet AS4373 Pruning of amenity trees.</p> <p>3.3. Tree is stabilised as the root system is undercut and anti-transpirants applied as a root soak or foliar spray</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>to ensure viability of the plant is maintained.</p> <p>3.4. Root ball is bound with appropriate material to ensure adequate soil is retained and kept moist prior to transportation and installation.</p> <p>3.5. Tree is lifted and secured for potential storage and/or transportation using safe lifting techniques and in accordance with documented guidelines.</p> <p>3.6. Tree or shrub is prepared and handled to minimise damage during handling and transportation.</p>
4. Replant tree or shrub in new environment	<p>4.1. Appropriate drainage is provided to ensure root system survival is maintained according to the needs of the species and conditions of the planting site.</p> <p>4.2. Soil is modified according to the cultural requirements of the species.</p> <p>4.3. Tree or shrub is planted in prepared hole according to documented work procedures.</p> <p>4.4. Plant support devices are installed according to the supervisor's instructions and/or installation plan.</p>
5. Complete transplant operation	<p>5.1. Transplanted plant is maintained with regular aftercare activities appropriate to the requirements of the species.</p> <p>5.2. Tools and equipment are cleaned, maintained and stored according to enterprise guidelines.</p> <p>5.3. Waste is collected and disposed of or recycled to minimise damage to the external environment.</p> <p>5.4. Records of transplant are maintained in the appropriate format.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify and report site and tree hazards
- prepare crown, root ball and earthworks
- prune roots where appropriate
- provide precise watering applications

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• install support devices</li> <li>• apply anti-transpirants</li> <li>• maintain transplanted specimen</li> <li>• interpret work procedures including transplanting/installation plans and site map</li> <li>• participate in teams and contribute to team objectives</li> <li>• use tools and equipment in a safe and effective manner</li> <li>• calculate area, volumes and treatment application rates</li> <li>• use literacy skills to follow sequenced written instructions and record information accurately and legibly</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor</li> <li>• use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• enterprise guidelines for manual handling</li> <li>• safe lifting loads</li> <li>• trees and shrubs that are most suited to transplanting</li> <li>• factors affecting the timing and method of lifting trees and shrubs</li> <li>• causes of damage or drying-out of trees and shrubs, and prevention methods</li> <li>• transplanting practices associated with different soil types and relationships to plant care</li> <li>• responsible and environmentally sensible practices concerning the nutrition and watering requirements for newly transplanted trees and shrubs</li> <li>• techniques of securing and anchoring transplanted trees and shrubs</li> <li>• the effect of adverse outdoor climatic conditions (e.g., rain, hail, or very high ultraviolet radiation), which may prevent or impede transplanting operations</li> <li>• transference of soil/root borne diseases.</li> </ul>

**Evidence Guide**

## AHCPGD205A Prepare a grave site

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of preparing a gravesite and defines the standard required to: select and safely use machinery and equipment for grave site preparation including digging graves by hand and restore a site following a burial service.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of preparing a gravesite and involves working in association with a fellow worker or work team.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare site for excavation	<p>1.1. Occupational Health and Safety (OHS) hazards are identified, risks assessed and reported to the supervisor.</p> <p>1.2. Personal protective clothing and equipment is selected, used and maintained.</p> <p>1.3. Tools, equipment and machinery are prepared and used according to supervisor's instructions.</p> <p>1.4. Surrounding monuments, masonry or headstones that threaten the stability of the new gravesite are inspected and removed if necessary, according to supervisor's instructions.</p> <p>1.5. Sludge pump is used to remove excess water if required.</p> <p>1.6. Gravesite is marked out to suit coffin dimensions and according to supervisor's instructions and/or enterprise policy.</p>
2. Assist with the excavation	<p>2.1. Grave is excavated according to enterprise policy.</p> <p>2.2. Sides of grave are shored where depth of grave exceeds 1.5 metres or as determined by enterprise policy.</p> <p>2.3. Surface area for 400 mm from the edge of the excavation is covered with an approved material to ensure the integrity and stability of the soil.</p> <p>2.4. Access to and egress from the excavation site is undertaken according to OHS requirements.</p> <p>2.5. Gravesite is secured with protective restraints to limit access to the site while being established and when</p>

ELEMENT	PERFORMANCE CRITERIA
	left unattended.
3. Backfill and enhance the gravesite following burial	3.1. Burial hole is back-filled with soil free from large lumps, plant debris or waste material. 3.2. Backfilling techniques are employed to consolidate the soil, to minimise cavities and to restore the ground to its original level. 3.3. Surrounding monuments, masonry or headstones are replaced as necessary. 3.4. Waste material and plant debris removed from the gravesite are disposed of in an environmentally aware and safe manner according to enterprise policy. 3.5. Gravesite is enhanced according to supervisor's instructions and/or enterprise policy.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare site for excavation
- assist with the excavation
- shore up sides of grave as required
- backfill and enhance the gravesite following burial
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- OHS responsibilities of employees
- applied understanding of safe work practices when working in and around confined spaces
- the environmental impact of soil disturbance when excavating a grave

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>the environmental implications of pumping sludge water from an excavation site and the effects it may have on surrounding gravesites.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>select and safely use machinery and equipment for grave site preparation including digging graves by hand</li> <li>restore a site following a burial service.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## AHCPGD206A Conduct visual inspection of park facilities

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of routine visual inspection of park and recreational facilities to identify visible hazards and existing and/or potential risks and defines the standard required to: access site plans and checklists on multiple locations; inspect site facilities for risks to health and safety; evaluate condition of facilities of amenity spaces; identify and rate environmental risks and impacts from site facilities; record inspection details.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to a range of situations and environments including amenity and natural resource areas.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for visual inspection	<p>1.1.Site plans and inspection checklists are interpreted and clarified with the supervisor.</p> <p>1.2.Specific terminology used in checklists is clarified.</p> <p>1.3.Park site to be inspected is identified and located on the site plan.</p> <p>1.4.Park facilities, equipment and services are identified on site from checklist descriptions and site plan.</p>
2. Undertake visual inspection	<p>2.1.Park facilities, equipment and services are inspected and compared against enterprise presentation standards and Occupational Health and Safety (OHS) requirements.</p> <p>2.2.Health and safety hazards and adverse environmental impacts are identified and recorded on the appropriate form.</p> <p>2.3.Situations requiring urgent action are reported immediately to supervisor.</p>
3. Submit report	<p>3.1.Inspection activity, reports and checklists are concise and accurate, and comply with enterprise standards.</p> <p>3.2.Checklist and/or report are forwarded to supervisor promptly, according to enterprise working procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- participate in teams and contribute to team maintenance and presentation objectives
- interpret instructions, communicate with team members and supervisor, and use the written materials necessary to effectively complete the inspection task
- measure distance and calculate area
- determine the extent of problems
- rate the condition of facilities
- evaluate serious issues that may be present
- report urgent situations
- identify environmental risks and impacts from site facilities
- rate the hazards and associated environmental implications of malfunctioning facilities, equipment and services
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- purpose of park facilities inspections, in providing information for effective maintenance and repair work particularly in relation to end use of the facilities and equipment, and the safety of users
- the practical application of site plans, checklist descriptions and presentation standards to locate and effectively assess facilities and equipment against the required parameters
- the effect of adverse outdoor climatic conditions (e.g., rain, hail, wind, or very high ultraviolet radiation), on park facilities inspection activities
- potential public nature of park inspection activities
- hazards investigation and risk assessment
- occupational health and safety issues, legislative requirements and Codes of Practice
- recognition of the range of park facilities, equipment and services relevant to the enterprise (including recommended use, safety parameters, maintenance schedules and manufacturers specifications)
- terminology used to describe different components of the range of facilities,

**REQUIRED SKILLS AND KNOWLEDGE**

- equipment and services relevant to the enterprise
- the hazards that are likely to be encountered by visitors using the park facilities and equipment
  - reporting requirements, procedures and materials for use in park inspection
  - cleaning, servicing and hygiene requirements of public conveniences
  - the relevant Australian Standards.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- access site plans and checklists on multiple locations
- inspect site facilities for risks to health and safety
- evaluate condition of facilities of amenity spaces
- identify and rate environmental risks and impacts from site facilities
- record inspection details.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Parks may include:	<ul style="list-style-type: none"> <li>• a range of parks catering to public recreational activities.</li> </ul>
Facilities may include:	<ul style="list-style-type: none"> <li>• playgrounds</li> <li>• playground soft fall</li> <li>• pathways</li> <li>• play equipment</li> <li>• parks and street furniture and structures</li> <li>• fences</li> <li>• barbeques</li> <li>• steps and stairs</li> <li>• bollards</li> <li>• tree and grass protection devices</li> <li>• bins</li> <li>• signs</li> <li>• toilets</li> <li>• shelter buildings and structures</li> <li>• paved, turf and/or grassed recreational areas.</li> </ul>

## AHCPGD301A Implement a plant establishment program

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the installation and consolidation of planted areas as part of a horticultural, agricultural or land management tree and shrub planting program and defines the standard required to: determine plant establishment methods and requirements from plans, clients quotations or instructions; interpret planting plans and specifications for a planting project; inspect quality of supplied plants and take appropriate action; conduct a site hazard identification and risk control assessment; undertake planting work, review the work and take remedial action where required.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the establishment of planting areas in new projects and in programs of extensive replacement and renovation works across a range of situations and environments including amenity and natural resource areas. It excludes sports turf or recreational turf surfaces, intensive plant production and revegetation areas.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to establish a planted area	<p>1.1.The planting site, planting methods and plant species and cultivars are identified according to the site plan.</p> <p>1.2.Materials, tools, equipment and machinery are selected according to planted area design requirements.</p> <p>1.3.Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturers' specifications.</p> <p>1.4.Site hazards are identified, risks assessed and risk controls implemented.</p> <p>1.5.Suitable safety and Personal Protective Equipment (PPE) is selected, used, maintained and stored.</p> <p>1.6.A clean and safe work area is maintained throughout and on completion of work.</p>
2. Prepare the planting area	<p>2.1.Layout of services is recognised, depths checked against the site plan, and discrepancies are reported to the supervisor and the relevant authority.</p> <p>2.2.Earthworks are undertaken according to documented work procedures.</p> <p>2.3.Additives are selected and applied, as required,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to site conditions.</p> <p>2.4. The planting site is watered, where required, according to the planting method and enterprise work procedures.</p> <p>2.5. Positions of plants are marked out on site according to the plant establishment program.</p> <p>2.6. Debris and pollutants are removed from the site and disposed of in an environmentally aware and safe manner.</p>
3. Undertake planting operation	<p>3.1. All plants are inspected for health, vigour and well established root systems prior to being planted.</p> <p>3.2. Plants with major defects are returned to the supplier or set aside to be returned.</p> <p>3.3. Plants with minor defects are trimmed or treated to maintain health and vigour.</p> <p>3.4. Plants are planted with appropriate spacings as detailed in the plant establishment program.</p> <p>3.5. Planting methods comply with the growing requirements of individual plant species and cultivars.</p> <p>3.6. Newly installed plants are provided with post-planting care.</p> <p>3.7. Pruning is undertaken, where necessary, according to the needs of the species and cultivar to ensure plants develop a sound framework for their growth and habit.</p>
4. Review the plant establishment works	<p>4.1. The plant establishment program is reviewed according to enterprise work procedures.</p> <p>4.2. Plants incorrectly planted, or situations that will prevent plants from reaching their full potential are identified, recorded and reported.</p> <p>4.3. Remedial action is undertaken to ensure all requirements of the plant establishment program are implemented.</p>
5. Complete establishment works	<p>5.1. Earthworks and surface finishes are completed to plan specifications.</p> <p>5.2. Waste material is removed from the planting site.</p> <p>5.3. Work outcomes are recorded and reported to the client or appropriate supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- inspect plant quality
- determine plant health
- interpret site plans and plant establishment specifications
- measure quantities, calculate material requirements, area, volume, ratios and application rates
- record and report work outcomes
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the objectives of the plant establishment program, including finished plant forms, site appearance, end use and time constraints
- the physiology of required plant species and cultivars, culture and planting procedures including growth rates, main nutrient and water requirements, deficiency symptoms, recommended treatments and associated environmental implications
- the identification of pests and diseases, plant symptoms of infections, treatment threshold levels, recommended treatments, methods of application and environmental implications
- soils and soil amelioration techniques
- Occupational Health and Safety (OHS) legislative requirements and codes of practice, OHS procedures, OHS employee and employer responsibilities, and hazard identification, assessment and control.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

<b>EVIDENCE GUIDE</b>	
Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• determine plant establishment methods and requirements from plans, clients quotations or instructions</li> <li>• interpret planting plans and specifications for a planting project</li> <li>• inspect quality of supplied plants and take appropriate action</li> <li>• conduct a site hazard identification and risk control assessment</li> <li>• undertake planting work, review the work and take remedial action where required.</li> </ul>

## AHCPGD302A Plan and maintain plant displays

### Modification History

Not Applicable

### Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit covers the process of planning and establishing plant displays either indoors or as seasonal displays of annual and perennial plants in garden beds and defines the standard required to: select suitable plants for plant display purposes; prepare plans for a plant display; plant or arrange plants for a plant display; maintain a plant display.</p>
-------------------------------	---

### Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit applies to the planning and establishment of plant displays. This standard is applied using established routines, methods and procedures and is likely to be undertaken without supervision. Responsibility for the work of others installing and maintaining the displays may be required. Discretion and judgement is required in the selection of equipment, work organisation, services, actions and achieving outcomes within time constraints.</p>
---------------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<p><b>Prerequisite units</b></p>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare plans for plant displays	<ul style="list-style-type: none"> <li>1.1. Display site is inspected for aesthetic, environmental and physical attributes.</li> <li>1.2. Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented.</li> <li>1.3. Personal Protective Equipment (PPE) is selected, used and maintained according to procedures.</li> <li>1.4. Location and projected life of display are identified on the display plan.</li> <li>1.5. Plant types suitable for aesthetic effects, environmental and physical attributes are identified on the display plan.</li> <li>1.6. Actions, timelines and work organisation are identified on the display plan in consultation with the supervisor or manager.</li> <li>1.7. Availability of plants, materials and services for preparing the display are confirmed.</li> <li>1.8. Materials, tools, equipment and machinery are selected according to the display plan and enterprise work procedures.</li> </ul>
2. Select plants	<ul style="list-style-type: none"> <li>2.1. Plants selected are healthy and vigorous and comply with enterprise specifications for quality.</li> <li>2.2. Number and size of plants are selected according to the display plan.</li> <li>2.3. Plants selected display the ability to survive in the</li> </ul>

ELEMENT	PERFORMANCE CRITERIA
	display position for the length of the display.
3. Place plants	3.1.Plants are placed in a pattern specified by the plan. 3.2.Accessories and materials are chosen as specified in the plan. 3.3.Work is undertaken according to OHS requirements.
4. Maintain plants	4.1.Health of the plants is monitored to ensure retain optimum appearance. 4.2.Plants are fertilised and watered to maintain optimum health and appearance. 4.3.Plants are replaced when no longer at optimum health and appearance. 4.4.Rubbish, litter and decaying material are removed from plants, pots and surrounds to maintain optimum appearance of display.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate with work team members, supervisors, suppliers and customers
- prepare design plans and specifications
- calculate number of plants and materials
- determine spatial measurements of display site
- co-ordinate own activities sequentially
- effectively complete plant display in a timely manner
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- aim and purpose of building plant displays
- design principles for plant displays
- features and characteristics of a range of plants used for display purposes

**REQUIRED SKILLS AND KNOWLEDGE**

- growing requirements of a range of common plants used in plant displays
- common problems occurring with display plants
- remedial action required for display plants displaying health problems.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select suitable plants for plant display purposes
- prepare plans for a plant display
- plant or arrange plants for a plant display
- maintain a plant display.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Plant displays may include:

- displays for functions
- annual bedding displays
- herbaceous perennial displays

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>indoor presentations.</li> </ul>

## AHCPGD303A Perform specialist amenity pruning

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of performing specialist amenity pruning and the application of specialist pruning techniques and defines the standard required to: determine pruning requirements for a range of amenity plants; undertake a range of specialist pruning techniques; assess pruning quality; meet pruning program requirements; select use and maintain pruning tools and equipment.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of performing specialist amenity pruning. The standard requires knowledge of pruning tools and equipment, principles and techniques of specialist pruning, and identification of relevant plants.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for specialist amenity pruning	<p>1.1.Plants are visually inspected and pruning strategy is determined according to the plants characteristics or desired outcome.</p> <p>1.2.Occupational Health and Safety (OHS) hazards are identified, risks assessed and suitable controls implemented.</p> <p>1.3.Pruning tools and equipment are selected and prepared according to the extent of the pruning program and enterprise guidelines.</p> <p>1.4.Where required, references are consulted to determine best pruning strategies for special plants.</p>
2. Undertake specialist pruning	<p>2.1.Equipment is used according to OHS requirements and manufactures specifications.</p> <p>2.2.Pruning is undertaken according to established and specialist pruning techniques.</p> <p>2.3.Site environmental concerns are adhered to in accordance with relevant legislation and/or regulations</p> <p>2.4.Waste material is disposed of according to enterprise guidelines.</p> <p>2.5.Tools, equipment and machinery are cleaned, maintained, serviced and stored consistent with enterprise guidelines and manufacturers specifications.</p> <p>2.6.Site is cleared and cleaned according to enterprise guidelines.</p>
3. Assess pruning	3.1.Plants selected for specialist pruning are visually

ELEMENT	PERFORMANCE CRITERIA
quality	<p>checked to assess pruning quality.</p> <p>3.2. Pruning work is reviewed to ensure pruning requirements have been met</p> <p>3.3. Where required remedial work is carried out to ensure the pruning work meets objectives.</p> <p>3.4. Completed pruning is recorded and communicated to management and/or the client according to enterprise guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- recognise common diseases, pests and nutrition deficiencies in trees
- sharpen and maintain tools required for pruning
- undertake a range of specialist pruning techniques
- assess pruning quality
- meet pruning program requirements
- store and carry tools safely
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- identification of plant species and their pruning requirements
- principles and methods of specialist pruning to achieve given objectives
- anatomy and physiology of plants, shrubs and trees
- effect on plant growth and habit after pruning
- specialist tools and equipment
- local government tree protection and preservation regulations

**REQUIRED SKILLS AND KNOWLEDGE**

- AS4373-2007 Pruning of amenity trees
- relevant Code of Practice.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- determine pruning requirements for a range of amenity plants
- undertake a range of specialist pruning techniques
- assess pruning quality
- meet pruning program requirements
- select use and maintain pruning tools and equipment.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Plants that require pruning may include:

- plants that require special treatment including fruit trees and vines

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• ornamental flowering trees and shrubs</li> <li>• standards</li> <li>• topiaries</li> <li>• pleached arbors</li> <li>• roses</li> <li>• other plants that have special pruning requirements due to flowering, growth or other characteristics.</li> </ul>
Techniques may include:	<ul style="list-style-type: none"> <li>• cleaning out</li> <li>• crown lifting</li> <li>• crown reduction</li> <li>• pruning for structural integrity</li> <li>• crown renewal</li> <li>• crown thinning</li> <li>• dead wooding</li> <li>• hedging</li> <li>• branch</li> <li>• root pruning</li> <li>• espaliers</li> <li>• topiary</li> <li>• preparation of standards</li> <li>• bonsai</li> <li>• epicormic and green shoot removal according to desired outcomes, plant habit and seasonal needs.</li> </ul>

# AHCPGD304A Implement a landscape maintenance program

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of implementing a landscape maintenance program of newly constructed or established landscapes and defines the standard required to: determine the scope, frequency and standards required for a range of routine landscape maintenance activities from an existing landscape maintenance program; implement landscape maintenance activities; evaluate landscape maintenance works; record the results of the maintenance works.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit applies to implementing a landscape maintenance program on newly constructed or established landscapes and is carried out under limited supervision from others, with checking only related to overall progress. The work requires the application of extensive horticultural knowledge and a broad range of horticultural skills. Landscape maintenance is normally done within routines, methods and procedures where some discretion and judgement is required in the selection of equipment, work organisation, services, actions, and achieving outcomes within time constraints.
--------------------------------	--

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Interpret a landscape maintenance program	1.1.Scope of maintenance works is determined according to the landscape maintenance program. 1.2.Frequency of maintenance works is determined and implemented according to the landscape maintenance program. 1.3.Landscape maintenance standards are established in line with the landscape maintenance program. 1.4.Maintenance tasks are planned and prepared. 1.5.Occupational Health and Safety (OHS) hazards are identified, associated risks assessed and suitable controls implemented.
2. Monitor and maintain landscape areas	2.1.A site inspection checklist is prepared or used according to the landscape maintenance program. 2.2.Remedial action, repairs, renovations, treatments and replacements are identified to restore site to full effectiveness. 2.3.Maintenance tasks are implemented.

ELEMENT	PERFORMANCE CRITERIA
	<p>2.4. Items which are beyond the scope of the maintenance program are reported to the nominated person.</p> <p>2.5. Items requiring further action are recorded.</p> <p>2.6. Results of maintenance works are evaluated and recorded.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- determine maintenance requirements
- implement maintenance operations
- treat diseased plants
- repair and renovate landscape structures and features
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- a detailed knowledge of what is included (and what is excluded) from the landscape maintenance program or contract
- actions permitted in the event of variations to maintenance programs/contracts
- appropriate horticultural practices for heritage and cultural areas
- principles and applications of an integrated pest management program
- characteristics of a range of plants
- optimal growing conditions for a range of plants
- common problems occurring in a range of plants.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• determine the scope, frequency and standards required for a range of routine landscape maintenance activities from an existing landscape maintenance program</li> <li>• implement landscape maintenance activities</li> <li>• evaluate landscape maintenance works</li> <li>• record the results of the maintenance e works.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## AHCPGD305A Conduct operational inspection of park facilities

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of inspecting park/recreational facilities to identify hazards, existing and/or potential risks, and non-conformities with Australian Standards and Occupational Health and Safety (OHS) requirements and defines the standard required to: confirm with client the facilities to be inspected, standards to be referenced and reporting formats; conduct inspections and record details of non-conformities; note signs of potential damage or issues that may arise and require follow-up; evaluate condition of facilities; communicate directly any issues requiring urgent action; and complete inspection reports.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of conducting an operational inspection of park/recreational facilities and is likely to be under limited supervision from others and with checking only related to overall progress. The work is normally done within routines, methods and procedures where some discretion and judgement is required in the selection of equipment and materials, organisation of work, services, actions and the achievement of outcomes within time and budgetary constraints.
--------------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for operational inspection	<p>1.1. Specific facilities and equipment to be inspected and purpose of the inspection are determined according to operational request.</p> <p>1.2. Tools and equipment for testing and inspection are selected according to enterprise work procedures.</p> <p>1.3. Pre-operational and safety checks are carried out on tools and equipment according to manufacturer specifications and enterprise work procedures.</p> <p>1.4. Appropriate checklists and reporting formats are prepared to suit the application.</p> <p>1.5. Different types of facilities are identified from checklist descriptions.</p> <p>1.6. Specific terminology used in checklists is clarified with the supervisor.</p>
2. Undertake operational inspection	<p>2.1. Modes of non-conformity with Australian Standards, OHS guidelines and enterprise standards are identified and recorded.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.2. Hazards and indications and signs of hidden faults are detected and recorded. 2.3. Checklist entries are concise and accurate. 2.4. Inspections are undertaken according to OHS requirements.
3. Finalise the park inspection	3.1. Situations requiring urgent action or closure of facilities are reported immediately to supervisors. 3.2. Recommendations to rectify non-conformities are noted as required. 3.3. An inspection report is completed and submitted to the client/supervisor.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- evaluation of condition of facilities
- understand design symbols and terminology
- compare actual measurements of inspected components with legal, OHS and/or enterprise standards and specifications
- apply judgement of estimated level of conformity
- utilise proforma reporting and work procedure documents
- estimate degree of urgency to report serious situations
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the range, use and safety parameters of park/recreational facilities and equipment, their material construction and maintenance requirements
- the operational expectations and enterprise standards for the presentation and working order of a range of park/recreational facilities and equipment
- different modes of non-conformity that may be identified in reference to relevant

**REQUIRED SKILLS AND KNOWLEDGE**

Australian Standards and OHS requirements

- terminology used to describe different components of park/recreational facilities and equipment
- inspection procedures and techniques, and legal and enterprise reporting requirements for maintenance, repair and replacement recommendations
- OHS legislative requirements and codes of practice associated with public use of park facilities
- identification, assessment and control of hazards.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- confirm with client the facilities to be inspected, standards to be referenced and reporting formats
- conduct inspections and record details of non-conformities
- note signs of potential damage or issues that may arise and require follow up
- evaluate condition of facilities
- communicate directly any issues requiring urgent action
- complete inspection reports.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## AHCPGD306A Implement a maintenance program for an aquatic environment

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of implementing a maintenance program for an aquatic environment and defines the standard required to: recognise desired and pest plant populations and monitor their levels; apply weed control methods where necessary to maintain balance and remove weeds; apply chemicals according to label directions and keep records; maintain water quality to the required standard for the purpose of the aquatic environment.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit relates to implementing a maintenance program for an aquatic environment and is usually undertaken according to enterprise guidelines and within established routines, methods and procedures. Some discretion and judgement may be required depending on the type and size of the aquatic environment.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for maintenance activities	<p>1.1. Enterprise guidelines and legislative requirements for the maintenance of the aquatic environment are identified, interpreted and applied.</p> <p>1.2. Tools, equipment and machinery are selected and prepared for use according to enterprise guidelines and manufacturers specifications.</p> <p>1.3. Occupational Health and Safety (OHS) hazards are identified, risks assessed, and suitable controls implemented.</p> <p>1.4. Environmental implications associated with maintenance activities are identified and reported to supervisor.</p>
2. Maintain aquatic organisms	<p>2.1. Identification of indigenous, exotic and pest aquatic animals and/or plants is undertaken for the specific aquatic environment.</p> <p>2.2. Aquatic plant and/or animal monitoring is undertaken and relevant data is recorded, maintained and applied to aquatic plant maintenance activities.</p> <p>2.3. Aquatic animal and/or plant issues are reported to supervisor, with recommendations for action.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.4. Control methods are implemented for excess aquatic animals and/or plants, and identified pest animals and/or plants.</p> <p>2.5. Waste plant and animal material is processed according to enterprise guidelines.</p>
3. Maintain water quality	<p>3.1. Where appropriate, water quality monitoring is undertaken for the aquatic environment and the input water resource according to standards for the end use of the aquatic environment.</p> <p>3.2. Monitoring data is recorded, maintained and applied to water quality maintenance activities.</p> <p>3.3. Debris is removed and processed using appropriate equipment according to enterprise guidelines.</p> <p>3.4. Water quality issues are reported to supervisor, with suggestions for remedial action.</p> <p>3.5. Where required, water is discharged, environment is cleaned, and water is recharged from the designated storage area or other input water resource.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate verbally and in writing with work team members, supervisors, contractors and consultants
- interpret site plans and maintenance program requirements, and utilise proforma reporting, recording, analysis and work procedure documents
- measure materials, and aquatic site dimensions
- schedule and implement monitoring activities correctly, and record, interpret and apply monitoring data
- coordinate and supervise work group and own activities to sequentially and effectively complete maintenance activities in a timely, and cost effective manner
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- recognition, physiology and biological characteristics of animals and/or plants

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<p>specific to the aquatic environment</p> <ul style="list-style-type: none"> <li>• aquatic systems ecology</li> <li>• relevant legislation regarding water pollution and management</li> <li>• wildlife habitats associated with the aquatic environment</li> <li>• food chain and nutrient cycling in aquatic systems</li> <li>• OHS legislative requirements and Codes of Practice</li> <li>• regulations and/or Codes of Practice pertaining to Hazardous Substances</li> <li>• safe systems and procedures for handling, transporting and storing chemicals and hazardous substances taking into account toxicity levels and environmental impacts</li> <li>• regulations, Codes of Practices, enterprise systems and procedures for the safe operation and maintenance of machinery and equipment in aquatic environments, and in observing correct safety procedures in working from boats or adjacent to large bodies of water</li> <li>• regulations and industry standards for water quality requirements in association with specified use.</li> </ul>

## Evidence Guide

## AHCPGD401A Design plant displays

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of the design and preparation of plant displays for special occasions and defines the standard required to: design a plant display according to client requirements and site limitations; select suitable plants for a range of interior/indoor or outdoor plant display purposes; document a design for plant display.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to contractors and staff engaged in the process of designing of plant displays in a wide range of locations and situations, buildings and structures and applies to permanent, semi-permanent and temporary displays of plant life under a range of gardening, exhibition, visual merchandising, marketing and commercial leasing and hiring activities. Designing plant displays requires detailed knowledge of plant selection and a sound understanding of design principles. Responsibility for the work of others installing and maintaining the displays may be required.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Develop the design concept plan	1.1.Design concepts for the display are developed from the client brief. 1.2.Site/location is evaluated for aesthetic, environmental and physical attributes. 1.3.Time-lines for display are determined and incorporated into the plan. 1.4.Budget parameters for concept plan are clarified with client/manager. 1.5.Concept plan is developed using common horticultural conventions.
2. Ensure compliance with the design plan	2.1.Concept plan is presented to client and agreement reached on design. 2.2.Final design plan documentation is developed. 2.3.Plants and display materials are inspected prior to installation to ensure they meet required quality standards. 2.4.Plant display is inspected to ensure compliance with design plan.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research and analyse information about plant and materials specifications, cultural requirements and environmental requirements
- evaluate sites/locations to determine the effect of aesthetic, environmental and physical attributes on nature of display
- develop maintenance programs
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- site evaluation techniques
- principles of design
- plant identification, physiology, taxonomy and nomenclature
- plant selection
- characteristics of a range of plants used in plant displays
- growth and maintenance requirements of plants in natural and artificial environments
- wide range of plants commonly used in plant displays
- processes and techniques for preparing, costing and documenting plans for plant displays
- industry codes of practice
- horticultural conventions for design plans.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• design a plant display according to client requirements and site limitations</li> <li>• select suitable plants for a range of interior/indoor or outdoor plant display purposes</li> <li>• document a design for plant display.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Plants may include	<ul style="list-style-type: none"> <li>• all plant species and cultivars.</li> </ul>
Displays may include:	<ul style="list-style-type: none"> <li>• displays for merchandising</li> <li>• functions</li> <li>• annual bedding displays</li> <li>• herbaceous perennial displays</li> <li>• indoor presentations.</li> </ul>
Designs plans may include:	<ul style="list-style-type: none"> <li>• a wide range of contexts and styles of presentation, design elements</li> <li>• styles and design plans and models.</li> </ul>
Plant displays may include:	<ul style="list-style-type: none"> <li>• containerised or direct planted installations.</li> </ul>

## AHCPGD402A Plan a plant establishment program

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of developing a plant establishment program and a relevant site plan and specifications, and defines the standard required to: develop a concept plan that reflects client needs, site factors and the growing requirements of plants; select the plant species and cultivars, and the required quantities of plant material and other resources; develop and document detailed site plan, specifications and quotation; detail on-site procedures for implementing the plan and maintaining the site.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes planning a plant establishment programs.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out preliminary planning activities for the plant establishment program	<p>1.1. Client preferences and requirements for the plant establishment program are understood and confirmed.</p> <p>1.2. The plant establishment site is assessed for legal attributes, biophysical factors, services and historical modifications.</p> <p>1.3. Research is conducted into plant species and cultivars, and local by-laws and restrictions that may affect the plant establishment program.</p> <p>1.4. Environmental implications of the planned programs are identified and if necessary, reported to relevant personnel for further research.</p> <p>1.5. A concept plan that reflects client preferences and requirements, takes into account site factors and any identified environmental requirements, is developed and presented to the client for discussion and approval.</p>
2. Determine requirements of the plant establishment program	<p>2.1. Plant species and cultivars that are appropriate to the site and consistent with the agreed concept plan are identified, and the required quantity calculated, costed, and availability confirmed with suppliers.</p> <p>2.2. Plant establishment procedures are selected consistent with the agreed concept plan, and according to the characteristics of available plant materials, the resources and equipment available, and the environmental factors affecting the success of the plant establishment program.</p> <p>2.3. Post-planting care is provided for according to client</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements, enterprise standards and site capabilities.</p> <p>2.4.Resources, tools, equipment and machinery required for planting and post-planting care are identified, costed, and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>2.5.Occupational Health and Safety (OHS) hazards associated with the plant establishment program are identified; risks assessed and controls developed according to enterprise guidelines, costed and documented in the plan.</p> <p>2.6.Staged implementation and development are outlined, where appropriate, with access for future works provided for according to client, enterprise and site requirements.</p> <p>2.7.Timelines for preparations, planting and post-planting care are determined taking into account the needs of the plant species and cultivars, site conditions, and any other planning requirements.</p>
<p>3. Prepare and document the plant establishment program and specification</p>	<p>3.1.Detailed plan, specifications and quotation are prepared based on the requirements of the plant establishment program, and presented to appropriate personnel and the client for acceptance.</p> <p>3.2.Scaled site plan is produced which can be readily interpreted and understood by on-site personnel according to enterprise standards.</p> <p>3.3.Detailed on-site procedures and schedules required for the planting of the site and post-planting care of plants are developed and documented.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- comply with legislative requirements
- document plans, specifications and work procedures, and write reports for the understanding of staff, clients and contractors

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• calculate the cost and spatial and logistical requirements of components of the plant establishment program</li> <li>• use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views</li> <li>• use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• identification, propagation and establishment techniques of specific plant species and cultivars</li> <li>• the advantages and disadvantages of a range of plant establishment procedures</li> <li>• maintenance requirements and practices for specific plant species and cultivars, prior to and after initial establishment</li> <li>• processes and techniques for preparing, costing and documenting plans for and scheduling plant establishment activities.</li> </ul>

## Evidence Guide

<p><b>EVIDENCE GUIDE</b></p>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• develop a concept plan that reflects client needs, site factors and the growing requirements of plants</li> <li>• select the plant species and cultivars, and the required</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<p>quantities of plant material and other resources</p> <ul style="list-style-type: none"> <li>• develop and document detailed site plan, specifications and quotation</li> <li>• detail on-site procedures for implementing the plan and maintaining the site.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Establishment sites may include:	<ul style="list-style-type: none"> <li>• large-scale or broad acre woodlots</li> <li>• revegetation areas</li> <li>• parks and gardens</li> <li>• landscaped areas</li> <li>• recreational reserves</li> <li>• sports turf or recreational turf surfaces</li> <li>• commercial nursery, floriculture and production horticulture sites.</li> </ul>
Plant species and cultivars may include:	<ul style="list-style-type: none"> <li>• exotic</li> <li>• native</li> <li>• endemic</li> <li>• evergreen</li> <li>• deciduous</li> <li>• conifer and palm trees and shrubs</li> <li>• turf</li> <li>• grasses</li> <li>• ground cover plants</li> <li>• bedding displays</li> <li>• aquatic plants.</li> </ul>

## AHCPGD501A Manage plant cultural practices

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of managing a plant cultural program and defines the standard required to: specify the plant cultural practices of the site; develop plant cultural practice management plans; manage the implementation of a plant cultural program; monitor and evaluate the processes in implementing a plant cultural program; document the program results in a report.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to parks and gardens and landscape managers program.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define the plant cultural requirements of the site	<p>1.1.The range of plant life areas and plant species is surveyed and recorded.</p> <p>1.2.Materials, equipment and labour required for implementation and maintenance are determined, acquired and maintained.</p> <p>1.3.Site hazards are identified, risk assessed and appropriate controls are implemented.</p> <p>1.4.Staff capability of skills and knowledge are assessed against implementation and maintenance requirements.</p> <p>1.5.Staff training and development is implemented in accordance with requirements.</p>
2. Develop a plant cultural program for the site	<p>2.1.Plant cultural practices are determined over the duration of a documented planning period.</p> <p>2.2.Soil types and growing media are prepared, sampled and tested through field tests by staff and laboratory tests by specialist services.</p> <p>2.3.Resources are allocated and appropriate budgets are developed for the implementation period.</p> <p>2.4.Specialist cultural practice services required are sourced and contracted.</p> <p>2.5.Schedule of operations is developed for the implementation period.</p> <p>2.6.Allowance is made in the program for environmental and cultural contingencies.</p>
3. Manage the implementation of the	<p>3.1.Routine and contracted services are implemented.</p> <p>3.2.Test results are interpreted and soils and growing</p>

ELEMENT	PERFORMANCE CRITERIA
program	<p>media are appropriately ameliorated.</p> <p>3.3. Staff are allocated, supervised and appraised for performance.</p> <p>3.4. Materials and equipment are used according to Occupational Health and Safety (OHS) requirements and documented safe operating procedures.</p> <p>3.5. Progress reports are logged detailing the on-going results of the plant cultural program.</p>
4. Monitor, review and document the program	<p>4.1. Daily workplace records, weekly or monthly expenses, and other information relevant to the plant cultural program are itemised in registers or diaries.</p> <p>4.2. Costs and expenditure are evaluated against budgets and documented in a report.</p> <p>4.3. Routine and contracted services are monitored, evaluated and performance audits recorded.</p> <p>4.4. The plant cultural program is compared to previous programs and appropriate adjustments are made</p> <p>4.5. Results are documented in a report covering all items of recorded information in the program.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- determine plant cultural requirements
- plan schedule of operations
- allocate resources
- develop a cultural program and budget documentation
- contract specialist services
- supervise, monitor and appraise the performance of work team and contracted services
- manage contingencies
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as

<b>REQUIRED SKILLS AND KNOWLEDGE</b>	
<p>specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views</p> <ul style="list-style-type: none"> <li>• use numeracy skills to estimate, calculate and record complex workplace measures</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>	
<b>Required knowledge</b>	
<ul style="list-style-type: none"> <li>• plant identification and selection</li> <li>• plant cultural practices</li> <li>• plant anatomy, physiology, morphology, taxonomy and nomenclature</li> <li>• plant life maintenance practices</li> <li>• operation and maintenance of irrigation systems</li> <li>• plant nutrition requirements and practices</li> <li>• soil types, properties, field tests and sampling techniques</li> <li>• legislation and regulations relevant to the plant cultural site</li> <li>• budgeting and planning.</li> </ul>	

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• specify the plant cultural practices of the site</li> <li>• develop plant cultural practice management plans</li> <li>• manage the implementation of a plant cultural program</li> <li>• monitor and evaluate the processes in implementing a plant cultural program</li> <li>• document the program results in a report.</li> </ul>

**EVIDENCE GUIDE****Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Cultural practice requirements may include:

- soil preparation and conditioning
- planting
- plant maintenance practices
- staking
- hedging
- pruning
- all turf maintenance activities in the area of open space management.

Cultural practices may include:

- differences for each cultural practice type or cultural plant group.

Specialist turf cultural practices may include:

- turf maintenance activities such as:
  - establishment
  - renovating
  - top dressing
  - over-sowing
  - de-compaction
  - pest and disease control.

Specialist tree maintenance may include:

- practices such as mulching
- thinning
- crown reduction
- pollarding
- tree structural management.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out preliminary planning activities for restoration works	<p>1.1. Client preferences and requirements for the park or garden are understood and confirmed.</p> <p>1.2. The site is assessed for biophysical factors, historical and cultural attributes, services and site modifications.</p> <p>1.3. Research is conducted and legal attributes and local by-laws and restrictions are identified that may affect the plan for restoration works.</p> <p>1.4. Environmental implications of the planned restoration works are identified and, if necessary, reported to relevant personnel for further research.</p> <p>1.5. A concept plan that reflects client preferences and requirements and takes into account heritage issues, site factors and any identified environmental requirements is developed and presented to the client for discussion and approval.</p> <p>1.6. Other professionals are consulted to assist in research and planning of restoration works according to legislative and enterprise requirements.</p>
2. Determine requirements of restoration works	<p>2.1. Plants that are appropriate to the site, consistent with the agreed concept plan and the original design philosophy, and take into consideration historical and cultural values are identified and the required quantity calculated and costed, and availability and genetic integrity confirmed with suppliers.</p> <p>2.2. Restoration procedures are selected consistent with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>the agreed concept plan and according to the characteristics of available plant materials, the resources and equipment available, and the environmental factors affecting the success of the restoration works.</p> <p>2.3.Maintenance of softscape and hardscape components of the park or garden is provided for according to client requirements, enterprise standards and site capabilities.</p> <p>2.4.Resources, tools, equipment and machinery required for the planting and ongoing maintenance of the restoration works are identified, costed, and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>2.5.Occupational Health and Safety (OHS) hazards associated with the restoration works are identified, risks assessed and controls developed according to enterprise guidelines, costed and documented in the plan.</p> <p>2.6.Staged implementation and development are outlined, where appropriate, with access for future works provided for according to client, enterprise and site requirements.</p> <p>2.7.Timelines for preparations, planting and maintenance are determined taking into account the needs of the restoration species, the softscape and hardscape components, site conditions, and any other planning requirements.</p>
<p>3. Prepare and document the restoration plan and specifications</p>	<p>3.1.Detailed plan, specifications and quotation are prepared based on horticultural conventions, original design philosophy and the requirements of the restoration works, and are presented to the client for acceptance.</p> <p>3.2.Scaled site plan is produced which can be readily interpreted and understood by on-site personnel according to enterprise standards.</p> <p>3.3.Detailed on-site procedures and schedules required for the restoration of the park or garden and its ongoing maintenance are developed and documented.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research and evaluate information
- calculate the cost and spatial and logistical requirements of components of the restoration works
- comply with legislative requirements
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- historic parks and gardens management principles and guidelines
- construction procedures, plant selection and cultural practices for historically or culturally significant parks and gardens
- legislation and regulations relating to heritage sites and restoration works
- site evaluation techniques including methods of analysing the condition of soils, plants and waterways for restoration activities
- growth habits and cultural requirements of specific plants under a range of soil and environmental conditions
- maintenance requirements and practices for specific plants prior to and after initial establishment
- role of project briefs and client consultation processes in planning restoration works
- principles of the Australian Natural Heritage Charter and the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Islander Cultural Heritage Places and the Burra Charter.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assess a restoration site and develop a concept plan</li> <li>• determine the requirements of restoration works</li> <li>• document a detailed plan, specification and quotation</li> <li>• document all procedures required for restoration and ongoing maintenance</li> <li>• document the schedules of work for restoration and maintenance.</li> </ul>

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Implement business, financial, marketing and human resource management plans	<p>1.1.Goals and objectives for park or reserve management, and the goals and objectives or charter of linked external agencies are identified.</p> <p>1.2.Actions required to achieve plans are identified and operational objectives determined.</p> <p>1.3.Roles, responsibilities and performance targets of staff and work groups are communicated to appropriate personnel.</p>
2. Implement and monitor a purchasing plan	<p>2.1.Purchasing plan is communicated to responsible personnel, systems initiated and monitored, and inventories maintained according to enterprise policy and procedures.</p> <p>2.2.Quantity, quality and timing of supply of each input and service are determined according to the business plan and cash flow budgets.</p> <p>2.3.The purchasing system and records facilitate the selection of suppliers and arrangement of orders.</p> <p>2.4.Inefficiencies, stock outs and system problems are isolated, solutions identified and systems modified according to enterprise policy and procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.5. Asset databases are established and asset management reports are prepared and presented according to enterprise policy and procedures.</p> <p>2.6. Occupational Health and Safety (OHS) criteria are considered in all purchase decisions.</p>
3. Schedule park or reserve operations	<p>3.1. Schedules and timelines of operations are documented in a form that is accessible and understandable to all relevant personnel.</p> <p>3.2. Quantity, quality and timing of supply of each input and service are identified and coordinated according to the financial, physical and human resource requirements of the operation.</p> <p>3.3. Operations are coordinated to ensure that available labour matches the quantity and type of work to be completed.</p> <p>3.4. Key performance outcomes and indicators are established to measure performance of all park or reserve operations and personnel.</p> <p>3.5. Benchmarking is undertaken according to enterprise policy.</p> <p>3.6. Coordination inefficiencies and problems are isolated, solutions identified, and systems modified according to OHS requirements and enterprise policy and procedures.</p>
4. Manage enterprise office	<p>4.1. Office and administrative systems and communications necessary for the well-ordered running of a business enterprise are developed and implemented.</p> <p>4.2. Equipment relevant to the well-ordered running of the enterprises office is acquired where appropriate and is cost effective.</p> <p>4.3. OHS hazards are identified, risks assessed and suitable controls implemented.</p> <p>4.4. Innovations in office procedures are assessed and implemented where appropriate.</p>
5. Monitor, review and report on changing conditions	<p>5.1. Systems are established to monitor operational objectives, identify variance from plans and adjust actions where necessary.</p> <p>5.2. Systems are established to monitor the immediate and related environments.</p> <p>5.3. Variances likely to affect the achievement of business, financial, marketing and human resource</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>management goals and objectives are identified and reported to senior management in a timely fashion.</p> <p>5.4. Records are maintained, reports provided and reviews documented according to enterprise policy.</p>
6. Recommend improvements to operation	<p>6.1. Operations are reviewed and possible improvements affecting business planning, personnel morale, productivity and systems efficiency are identified.</p> <p>6.2. Recommendations for improvements to operations are documented, supported by appropriate evidence and reasoned arguments, and presented to senior management.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- interpret business, financial, marketing and human resource management plans
- assign work, receive and interpret staff feedback and consultants reports, and respond effectively to achieve management objectives
- implement performance and OHS management systems
- assess financial systems, prepare and monitor budgets and liaise effectively with consultants and other industry contacts on the spatial and logistical aspects of management systems and on-ground operations
- assess environmental impacts on the immediate and related environments and impact reduction techniques
- research and consult to obtain the information required for effective maintenance and development of the park or reserve
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• enterprise management policies and procedures</li> <li>• budgeting, monitoring systems and allocation of monetary resources</li> <li>• asset and resource management</li> <li>• sports and recreational land use applications and associated environmental implications</li> <li>• management information systems</li> <li>• performance management and benchmarking</li> <li>• staff training and development principles, practices and techniques</li> <li>• technologically assisted management tools such as computing systems, software and hardware, and telecommunications equipment</li> <li>• legislative and regulatory requirements relevant to parks and reserve land use applications and management activities (e.g., OHS, HAZCHEM, dangerous goods, duty of care and Australian Standards as they apply to Parks and Gardens - AS/NZS 4486.1:1997)</li> <li>• policies applying across all levels of government and within the specific region, including those under catchment plans</li> <li>• principles of the Australian Natural Heritage Charter and the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Islander Cultural Heritage Places and the Burra Charter.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• discuss management plan objectives, deliverables and timeline with client</li> <li>• prepare a site plan detailing landscape values,</li> </ul>

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the development and implementation of a streetscape management plan and defines the standard required to: define the need for a management plan; undertake preliminary planning activities; prepare a site description; analyse site information and description; identify management strategies; document the management plan; implement the management plan.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of developing and implementing a streetscape management plan and is carried out as an independent task reporting to senior management.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define the need for a streetscape management plan	1.1. Management plan objectives are identified for the streetscape. 1.2. Brief is agreed in consultation with client for streetscape. 1.3. Planning team including specialists and consultants is identified.
2. Undertake preliminary planning activities	2.1. Major stakeholders are identified. 2.2. Availability of specialists to assist in management planning work is ascertained and contracts are prepared where required. 2.3. Timelines for development of the management plan and reporting arrangements to client are established. 2.4. Resources required for the development of management strategies are identified.
3. Prepare a site description	3.1. Landscape values of the area are identified and mapped. 3.2. Physical features and characteristics of the streetscape are identified and mapped. 3.3. Land uses including current, cultural and historical modifications are researched, and their effects on the streetscape are determined and recorded. 3.4. Physical condition of site is assessed and documented. 3.5. Biological characteristics of the site are documented.

ELEMENT	PERFORMANCE CRITERIA
4. Analyse site information and description	<p>4.1.Information is evaluated in terms of core principles and objectives.</p> <p>4.2.Documents are produced including plans, technical reports and maps.</p> <p>4.3.Priorities and key management issues are determined.</p> <p>4.4.Opportunities and constraints to meeting planning objectives and goals are identified and documented.</p> <p>4.5.Presentation to clients/residents is undertaken and feedback incorporated into planning documentation.</p>
5. Identify management strategies	<p>5.1.Management strategies are identified that address defined objectives.</p> <p>5.2.Management strategies are designed to alleviate existing impacts or to target management action.</p> <p>5.3.Management strategies are costed and compared to existing budgets and available resources.</p> <p>5.4.Implementation of work is planned to prioritise outcomes and management resource allocation.</p> <p>5.5.Consultation with clients/residents is undertaken and feedback incorporated into planning documentation.</p>
6. Prepare the management plan	<p>6.1.Site information and management strategies are documented into a draft management plan for consultation.</p> <p>6.2.Consultation with stakeholders and clients is undertaken according to enterprise guidelines.</p> <p>6.3.Changes are made to the draft plan and a final plan is prepared and presented to client.</p>
7. Implement the management plan	<p>7.1.Implementation is carried out within predetermined budget, and according to schedule and strategies set out in management plan.</p> <p>7.2.Implementation strategy is modified to address on-going feedback from clients/residents according to enterprise guidelines.</p> <p>7.3.Reports on progress of implementation works are provided to clients/residents as required by the management plan.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- define the need for a management plan
- undertake preliminary planning activities
- prepare a site description
- analyse site information and description
- identify management strategies
- prepare the management plan
- implement the management plan
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- management planning principles and issues
- basic civil design
- community consultation processes
- landscape assessment, survey and analysis techniques
- horticultural, landscape and arboricultural practices used in streetscape management
- soil, plant and water testing processes and procedures, interpretation and application of results.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

<b>EVIDENCE GUIDE</b>	
Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• define the need for a management plan</li> <li>• undertake preliminary planning activities</li> <li>• prepare a site description</li> <li>• analyse site information and description</li> <li>• identify management strategies</li> <li>• document the management plan</li> <li>• implement the management plan.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Streetscape management may include:	<ul style="list-style-type: none"> <li>• streetscapes</li> <li>• recreation and leisure opportunities</li> <li>• improved lifestyle for residents</li> <li>• safety hazards and risks</li> <li>• protection</li> <li>• conservation and restoration works for key plant species</li> <li>• disease and pest flora and fauna control</li> <li>• nutritional issues</li> <li>• erosion, toxicity repair works</li> <li>• habitat rehabilitation.</li> </ul>

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for comprehensive inspection of park facilities	<p>1.1. Specific facilities and equipment to be inspected and purpose of the inspection are determined according to operational request.</p> <p>1.2. Tools and equipment for testing and inspection are identified, and availability confirmed with appropriate personnel.</p> <p>1.3. Pre-operational and safety checks are carried out on tools and equipment according to manufacturers specifications and enterprise work procedures.</p> <p>1.4. Appropriate checklists and reporting formats are prepared to suit the application.</p> <p>1.5. Different types of facilities are identified from checklist descriptions.</p> <p>1.6. Specific terminology used in checklists is consistent with enterprise policy and guidelines.</p>
2. Undertake comprehensive	2.1. Instances of non-conformity with Australian Standards, OHS guidelines and manufacturers

ELEMENT	PERFORMANCE CRITERIA
inspection of park facilities	<p>standards are identified and recorded.</p> <p>2.2. Inspections for structural integrity are undertaken in an efficient and safe manner according to enterprise policy.</p> <p>2.3. Safety risks and hazards and situations are identified and detailed.</p> <p>2.4. Checklist entries are concise and accurate.</p> <p>2.5. Inspections are undertaken according to OHS requirements.</p>
3. Assess age and predict effective lifespan of existing park facilities	<p>3.1. The manufacturer of playground equipment and structures is identified through reference to original plans and specifications.</p> <p>3.2. Age and future lifespan of park facilities are determined and recorded.</p> <p>3.3. Costs of repair or replacement of park facilities are estimated and recorded.</p>
4. Submit report and recommendations	<p>4.1. Situations requiring urgent action are addressed according to OHS and enterprise policy.</p> <p>4.2. Concise and accurate reports are prepared and submitted to management.</p> <p>4.3. Existing management systems are reviewed, particularly regarding frequency of inspection, and improved in consultation with management.</p> <p>4.4. Recommendations for future action are consistent with industry standards and best practice.</p> <p>4.5. Collected data and information is submitted for inclusion on the asset management system.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- interpret standards, specifications and legal requirements
- interpret design symbols and terminology
- estimate costs of repair or replacement
- use literacy skills to fulfil job roles as required by the organisation. The level of

## REQUIRED SKILLS AND KNOWLEDGE

skill may range from reading and understanding documentation to completion of written reports

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- working knowledge of a range of park facilities and equipment including installation methods, intended use, intended users and safety parameters
- practical understanding of the terminology used to describe different components of park facilities and equipment
- the different modes of non-conformity that may be identified in relation to specific park facilities and equipment
- relevant national industry standards (e.g., AS486.1, AS4422, AS1924.1 and AS1924.2)
- Information management systems (e.g., AS4456)
- practical understanding of inspection and auditing procedures and techniques, and legal and enterprise reporting requirements for recommendations on maintenance, repair and replacement of park facilities
- OHS hazards associated with conducting a comprehensive inspection of park facilities and equipment, and the controls necessary to remove or minimise associated risks
- OHS legislative requirements and Codes of Practice
- hazard identification, assessment and control.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare materials, tools and equipment for horticultural production work	<p>1.1.The required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions.</p> <p>1.2.Checks are conducted on all materials, tools and equipment with insufficient or faulty items reported to the supervisor.</p> <p>1.3.Techniques used when loading and unloading materials demonstrate correct manual handling and minimise damage to the load and the vehicle.</p> <p>1.4.Suitable Personal Protective Equipment (PPE) is selected and checked prior to use.</p> <p>1.5.Work support is provided according to Occupational Health and Safety (OHS) requirements and according to workplace information.</p> <p>1.6.OHS hazards are identified and reported to the supervisor.</p>
2. Undertake horticultural production work as directed	<p>2.1.Instructions and directions provided by supervisor are followed and clarification sought when necessary.</p> <p>2.2.Work is undertaken in a safe and environmentally appropriate manner according to enterprise guidelines.</p> <p>2.3.Interactions with other staff and customers are carried out in a positive and professional manner.</p> <p>2.4.Enterprise policy and procedures in relation to workplace practices, handling and disposal of materials is observed.</p> <p>2.5.Problems or difficulties in completing work to</p>

ELEMENT	PERFORMANCE CRITERIA
	required standards or timelines are reported to supervisor.
3. Handle materials and equipment	3.1. Waste material produced during work is stored in a designated area according to supervisor's instructions. 3.2. Materials, equipment and machinery are handled and transported according to supervisor's instructions and enterprise guidelines. 3.3. A clean and safe work site is maintained while working.
4. Clean up on completion of work	4.1. Materials are returned to store or disposed of according to supervisor's instructions. 4.2. Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and supervisor's instructions. 4.3. Work outcomes are reported to the supervisor.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- follow safety directions
- prepare materials, tools and equipment for work
- undertake work as directed
- handle materials and equipment
- clean up on completion of work
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- safe work practices
- planting, picking, packing, loading and transporting techniques appropriate to this

**REQUIRED SKILLS AND KNOWLEDGE**

level

- use of horticultural tools and equipment
- OHS and environmental protection legislation and enterprise procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare materials, tools and equipment
- complete routine horticulture production assistance work including the safe use and operation of farm tools and equipment
- clean up and dispose of waste consistent with environmental and enterprise requirements.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Work tasks may include:

- assistance with all activities associated with

<b>RANGE STATEMENT</b>	
	horticultural production such as: <ul style="list-style-type: none"> <li>• land preparation</li> <li>• seeding/planting</li> <li>• maintaining</li> <li>• loading and unloading</li> <li>• harvesting/picking</li> <li>• sorting</li> <li>• packing.</li> <li>• assisting with routine maintenance or cleaning of sheds and other buildings, fences, fixtures and fitting.</li> </ul>
Tools and equipment may include:	<ul style="list-style-type: none"> <li>• knives</li> <li>• secateurs</li> <li>• spades</li> <li>• forks</li> <li>• ladders</li> <li>• hoes</li> <li>• packing equipment</li> <li>• boxes</li> <li>• bins and buckets</li> <li>• hoses and hose fittings.</li> </ul>
Hazards may include:	<ul style="list-style-type: none"> <li>• solar radiation</li> <li>• dust</li> <li>• noise</li> <li>• air- and soil-borne micro-organisms</li> <li>• chemicals and hazardous substances</li> <li>• sharp hand tools and equipment</li> <li>• manual handling</li> <li>• holes</li> <li>• slippery and uneven surfaces.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for crop planting operations	1.1. Instructions about planting the crop are applied. 1.2. Machinery, equipment and tools are prepared for crop planting tasks. 1.3. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor. 1.4. Personal Protective Equipment (PPE) is used and maintained according to safety procedures.
2. Prepare the site and plant material for planting	2.1. Soil or growing media is prepared. 2.2. Crop protection is implemented. 2.3. Pre planting treatments are applied. 2.4. Planting material is stored where required. 2.5. Machinery, equipment and tools for soil preparation are operated according to low risk operating procedures.
3. Carry out planting operations	3.1. Planting material is selected according to enterprise quality standard. 3.2. Planting materials are stored, handled and transported to the site. 3.3. Planting is carried out. 3.4. Plants are watered in and any post planting treatments applied.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- use and maintain planting equipment
- select planting material
- apply enterprise quality standards
- measure quantities of plant materials and treatments
- estimate spacing and planting patterns
- operate machinery to manufacturers specifications and low risk operating procedures
- apply agricultural chemicals under supervision
- identify hazards
- follow safety procedures
- participate in teams and contribute to team objectives
- communicate with team members and supervisor
- read and interpret a range of workplace information
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- principles of sustainable horticultural practices
- growing requirements of plants
- basic plant physiology
- soil structure and health
- basic preparation of soil and growing media
- importance of field hygiene and quality control in regard to crop planting
- principles of pest, weed and disease control
- nutritional, water and other requirements of the crop
- the importance of correct timing and procedures for crop planting
- range of pre-planting soil and plant treatments and their importance
- environmental impacts and risks of planting horticultural crops.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• prepare soil or growing media for planting</li> <li>• apply pre-planting soil and plant treatments</li> <li>• carry out planting</li> <li>• water in plants and apply other treatments to seedlings if required.</li> </ul>

## AHCPHT202A Carry out canopy maintenance

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of carrying out canopy maintenance and defines the standard required to: use, store and maintain tools safely and in line with plant hygiene requirements; remove unwanted growth and treat cuts if required; shape, support or position the canopy according to enterprise requirements; dispose of cuttings according to quarantine and environmental procedures; report problems or signs of disease to supervisor.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of manual or mechanised canopy maintenance, and includes the removal of unwanted vegetative growth and the erection and removal of protective covers during the growing period of crops. This standard relates to working under direct supervision with regular checking. Reporting and recording is required under some situations.
--------------------------------	---

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for canopy maintenance activities	1.1. Instructions for canopy maintenance are obtained from and confirmed with the supervisor. 1.2. Tools and equipment are collected and prepared for use. 1.3. Occupational Health and Safety (OHS) hazards are identified and reported to the supervisor. 1.4. Suitable Personal Protective Equipment (PPE) is selected, used and maintained.
2. Carry out basic canopy maintenance	2.1. Unwanted growth is identified and removed according to supervisor's instructions. 2.2. Pruned material is pulled out of the canopy according to supervisors instructions. 2.3. Perform post-pruning treatments on the canopy. 2.4. Canopy is shaped, supported or positioned according to instructions. 2.5. Control measures to regulate exposure of the crop to sun and to protect crop from damage are applied according to supervisor's instructions. 2.6. Equipment is operated and maintained according to work instructions and enterprise OHS procedures.
3. Complete canopy maintenance activities	3.1. Tools and equipment are cleaned, sharpened and stored according to enterprise housekeeping, hygiene and site quarantine procedures.

ELEMENT	PERFORMANCE CRITERIA
	3.2. Pruned material is disposed of according to enterprise environmental procedures. 3.3. Problems and anomalies are identified and reported to the supervisor.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- use and maintain basic hand and power tools and equipment
- interpret instructions and communicate with team members and supervisor, and calculate hours and personal production rate
- participate in teams and contribute to team objectives
- dispose of pruning waste in an environmentally aware and sensitive manner, e.g. sort waste for mulching and minimise risk of cross contamination from infected/infested material
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- basic canopy maintenance techniques and their importance in relation to the desired quality of fruit the enterprise is aiming to produce
- difference between fruiting and non-fruiting wood
- the effect of different climatic conditions on canopy maintenance requirements
- the importance of hygiene and quality control when performing basic canopy maintenance activities
- OHS responsibilities of employees when maintaining a canopy.

1. 1 Perform routine assessment of plant products for harvest	1.1.Estimate of crop maturity is reported to the supervisor.
2. 2 Prepare equipment for harvesting	2.1.Tools, equipment and machinery appropriate to the task being undertaken are selected. 2.2.Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturers specifications and written work procedures. 2.3.Occupational Health and Safety (OHS) hazards are identified and reported to the supervisor. 2.4.Suitable Personal Protective Equipment (PPE) is selected, used and maintained.
3. 3 Harvest the crop	3.1..Harvesting procedures minimise plant damage. 3.2.Harvesting the crop is undertaken according to OHS requirements. 3.3.Basic sorting and grading of the crop is carried out. 3.4.Harvesting tools, equipment and machinery are cleaned and maintained. 3.5.Problems are reported to the supervisor.
4. 4 Transport the crop	4.1.Safe manual handling techniques are employed when handling containers. 4.2.Containers are moved and stacked in such a way that

ELEMENT	PERFORMANCE CRITERIA
	<p>minimises damage to the crop.</p> <p>4.3. Temperature of the crop is maintained at the levels set by industry and written work procedures.</p> <p>4.4. The crop is transported from the field to the processing or storage area.</p> <p>4.5. Containers are maintained in good working order.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- assess the readiness of produce for picking
- use the correct crop harvesting technique the efficiently
- stack produce without damage or loss
- transport produce
- select and grade produce
- participate in teams and contribute to team objectives
- dispose of out-of-standard plant material in an environmentally aware and sensitive manner, such as the careful disposal of rotten produce to minimise smell and the spread of insect pests and disease
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- recognition of crop maturity of a range of crops
- enterprise quality procedures
- grading characteristics of each crop
- the importance of maintaining quality of produce including cooling requirements and quick transport from field to processing areas
- the effect of adverse climatic conditions (e.g., rain, hail, extreme wind with dust, or

**REQUIRED SKILLS AND KNOWLEDGE**

very high ultraviolet radiation), which may downgrade the quality of affected crop, prevent or impede harvest operations or severely influence the time taken to complete the harvest program.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- estimate the readiness of produce for picking
- harvest the crop using the correct technique
- stack produce in containers without causing damage or losses
- transport produce from the field according to enterprise requirements
- select and grade produce at picking where required.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

<b>RANGE STATEMENT</b>	
Crops may include:	<ul style="list-style-type: none"> <li>• a wide variety of horticultural crops including those for human consumption.</li> </ul>
Horticultural crops may include:	<ul style="list-style-type: none"> <li>• all fruit</li> <li>• vegetables</li> <li>• herbs</li> <li>• flowers</li> <li>• foliage</li> <li>• bulbs</li> <li>• tubers</li> <li>• nuts</li> <li>• fungi</li> <li>• wild harvest plants</li> <li>• oils</li> <li>• olives</li> <li>• grains</li> <li>• seeds</li> <li>• hops</li> <li>• other specialised crops not specifically named as broad acre crops.</li> </ul>
Harvesting practices may include:	<ul style="list-style-type: none"> <li>• the correct use of equipment</li> <li>• select picking</li> <li>• reporting or recording tallies</li> <li>• removing out-of-type plants</li> <li>• removing rotten or immature fruit.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare parent material for budding and grafting	<p>1.1.Parent plant is prepared and the method of taking budding or grafting material is employed suitable to the species according to organisational procedures.</p> <p>1.2.Tools and equipment are free from contamination, and hygiene practices are followed according to organisational guidelines.</p> <p>1.3.Tools appropriate to the task being undertaken are chosen and used according to organisational guidelines, and safe working practices are employed.</p>
2. Prepare budding and grafting materials	<p>2.1.Budding/grafting material is selected for propagation according to organisational guidelines and supervisors instructions.</p> <p>2.2.Viability of materials is maintained by appropriate storage according to the requirements of the species.</p> <p>2.3.Discarded material is disposed of according to organisational waste disposal guidelines and/or procedures.</p> <p>2.4.Stock is prepared according to species and organisational guidelines.</p> <p>2.5.Budding/grafting materials and stock are handled in a way that prevents damage.</p>
3. Bud/graft scion	<p>3.1.Budding/grafting method is selected according to species and organisational guidelines.</p> <p>3.2.Bud/graft is sealed according to instructions.</p> <p>3.3.Labels and identification are correct and applied</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to organisational guidelines.</p> <p>3.4. Records are completed accurately and at the required time according to organisational guidelines.</p> <p>3.5. Out-of-specification process and equipment performance is identified, rectified and/or reported.</p>
4. Complete budding/grafting activities	<p>4.1. Equipment is cleaned as required.</p> <p>4.2. Unused grafting material is disposed of/stored according to company procedures.</p> <p>4.3. Waste generated by both the grafting and cleaning procedures is collected, treated, disposed of or recycled according to company procedures.</p> <p>4.4. Workplace information is recorded in the appropriate format.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- access workplace information to identify grafting requirements
- select, fit and use appropriate personal protective equipment (PPE)
- select appropriate material for budding/grafting
- prepare material for grafting
- select and prepare equipment as required
- bud/graft plants according to instructions
- operate equipment safely
- treat plants after budding/grafting
- store unused grafting material
- take corrective action in response to out-of-specification results or non-compliance
- sort, collect, treat, recycle or dispose of waste as required
- clean equipment after use
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor

## REQUIRED SKILLS AND KNOWLEDGE

- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- botany, plant anatomy and physiology
- root stocks and scion stock
- importance of selection and use of rootstock
- stages of the budding/grafting procedure and their purpose
- common problems and corrective action required
- operation, components and purpose of budding/grafting and equipment
- maintenance requirements of equipment
- procedures and responsibilities for reporting problem
- environmental issues and controls
- cleaning requirements of work area and equipment
- recording requirements and procedures.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- take budding and grafting material from plants
- select and prepare stock for budding and grafting
- demonstrate a range of budding and grafting techniques
- maintain labels and records of the budding and grafting operation
- dispose of unused grafting material according to

<b>EVIDENCE GUIDE</b>	
	environmental and disease management procedures.
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>

## AHCPTH205A Carry out postharvest operations

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of carrying out post-harvest operations and defines the standard required to: use a range of equipment for handling and transporting produce; minimise handling damage to produce; label produce accurately and correctly; maintain records of post harvest operations to allow traceability and transport; grade, treat, pack and store harvested produce according to market requirements and industry and enterprise standards.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of carrying out routine post-harvest operations in a horticultural enterprise. Post-harvest operations are usually carried out within established routines, methods and procedures.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for postharvest operations	<p>1.1. Post-harvest operations to be performed and client specifications are identified according to enterprise work procedures.</p> <p>1.2. Materials, tools, equipment and machinery appropriate to the task being undertaken are selected.</p> <p>1.3. Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturers specifications and enterprise work procedures.</p> <p>1.4. Where applicable to crop under cultivation, Hazard Analysis Critical Control Point (HACCP) and food safety requirements are complied with.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified, and risks are assessed and reported to supervisor.</p> <p>1.6. Suitable Personal Protective Equipment (PPE) is selected, used and maintained.</p> <p>1.7. All work is performed in an environmentally aware and safe manner according to enterprise procedures.</p> <p>1.8. Site quarantine protocols, and farm and personal hygiene requirements, are applied and followed as required by enterprise procedures and supervisor instructions.</p>
2. Transport harvested produce	<p>2.1. Safe manual handling techniques are employed when handling containers.</p> <p>2.2. Field handling practices are conducted in a way that minimises damage to harvested produce.</p> <p>2.3. Temperature of harvested produce is maintained at</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>levels set by industry and enterprise work procedures.</p> <p>2.4. Produce is transported with due care from field to post-harvest processing or storage area.</p> <p>2.5. Containers are maintained according to enterprise requirements.</p>
3. Grade, label, treat, weigh and pack produce	<p>3.1. Harvested produce is graded and labelled according to client specifications and enterprise work procedures.</p> <p>3.2. Post-harvest treatments are applied to produce according to enterprise work procedures and industry best practice.</p> <p>3.3. Post-harvest practices are economical, methodical, meet established work schedules and minimise damage to produce.</p> <p>3.4. Post-harvest operations are undertaken according to OHS requirements.</p> <p>3.5. Tools, equipment and machinery are cleaned and maintained according to enterprise work procedures.</p> <p>3.6. Quality parameters of produce and specifications for packaging materials, containers, filling techniques and labelling of packed produce are identified and confirmed according to enterprise work procedures.</p> <p>3.7. Correct packaging materials and containers for specific produce are selected.</p> <p>3.8. Filled containers are weighed, weight recorded and repacked to correct weight, if required.</p> <p>3.9. Correct filling techniques for specific containers and produce are used to fill and arrange produce within containers according to client specifications, enterprise work procedures and industry best practice.</p> <p>3.10. Where required, wraps and lids are applied and containers are labelled according to client specifications, enterprise work procedures and industry best practice.</p>
4. Store produce in a facility	<p>4.1. Containers are placed onto pallets or racks to ensure stability and optimum airflow.</p> <p>4.2. Pallets or racks are transported to, and arranged in, storage facility according to enterprise work procedures.</p> <p>4.3. Storage facility monitoring gauges are read</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>accurately and efficiently with abnormal readings reported to supervisor.</p> <p>4.4. Condition of stored produce is checked and damaged produce and containers are removed from storage facility according to enterprise work procedures.</p> <p>4.5. Storage facility and packing containers are cleaned to a level of hygiene acceptable to enterprise and industry standards, without damaging monitoring or refrigeration equipment.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate orally with team members and supervisors
- correctly disposing of chemical and hazardous substances, their containers and other waste materials to minimise environmental impact
- counting and calculating quantities, treatment application rates and storage requirements
- interpreting and confirming information from chemical labels, Material Safety Data Sheets (MSDSs), work instructions and enterprise work procedures
- participating in teams and contributing to team objectives
- recording information about work activities on proformas
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- attributes of enterprise produce in relation to desired quality of produce to be presented to client
- characteristics and procedures for the use of coolrooms
- cool chain principles and practices
- correct storage temperatures for a range of enterprise produce
- environmental effects of post-harvest treatments

**REQUIRED SKILLS AND KNOWLEDGE**

- how to dispose of waste materials to minimise damage to external environment
- humidity levels and their effect on quality of enterprise produce
- hygiene issues in the handling and storage of plant produce
- importance of maintaining quality of produce, including handling and cooling requirements
- industry standards for packaging
- relationship between quality attributes of produce and packing techniques and packaging
- storage methods relevant to different enterprise produce.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- use a range of equipment for handling and transporting produce
- minimise handling damage to produce
- label produce accurately and correctly
- maintain records of post harvest operations to allow traceability
- transport, grade, treat, pack and store harvested produce according to market requirements and industry and enterprise standards.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## AHCPTH206A Handle and move mushroom boxes

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of working in the mushroom industry and specifies the outcomes required to handle and move mushroom boxes as part of the post-harvest process on a mushroom farm and defines the standard required to: carry out an inventory of mushroom boxes; supply appropriate quantities of empty boxes to mushroom pickers in a number of picking rooms; collect filled boxes at a rate and in a manner that ensure the continued smooth flow of picking and packing work and that do not impede the movement of other traffic in the area; handle filled boxes in such a way that mushroom quality is maintained and record coolroom air and mushroom pulp temperatures.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the processes involved with handling and moving mushroom boxes. These activities are usually carried out within established routines, methods and farm procedures.
--------------------------------	---

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Distribute boxes for filling to picking rooms.	<p>1.1. Materials, tools and equipment appropriate to the task being undertaken are selected, assembled where required, and positioned.</p> <p>1.2. Pre-operational and safety checks are carried out on materials, tools and equipment according to manufacturer specifications and farm procedures.</p> <p>1.3. Empty boxes are distributed to pickers in a timely and efficient manner to ensure smooth flow of picking work.</p> <p>1.4. Personal Protective Equipment (PPE) and clothing are selected and used.</p> <p>1.5. Occupational Health and Safety (OHS) requirements and hazards associated with the tasks are identified and appropriate action is taken to minimise risks to self and others.</p> <p>1.6. Site quarantine protocols and farm and personal hygiene requirements are applied and followed as required by farm procedures and supervisor instructions.</p> <p>1.7. All work is performed in an environmentally aware and safe manner according to farm procedures and</p>

ELEMENT	PERFORMANCE CRITERIA
	supervisor instructions.
2. Collect and move filled boxes.	<p>2.1. Collection of filled boxes is coordinated with delivery of empty boxes to minimise trolley trips and ensure smooth flow of picking work.</p> <p>2.2. Filled boxes are stacked on trolleys to the recommended height.</p> <p>2.3. Stacked trolleys are moved from picking rooms safely and with consideration for other traffic flow in the area.</p> <p>2.4. Filled boxes are handled carefully to ensure mushroom quality is maintained.</p> <p>2.5. Filled boxes are moved in a timely and efficient manner to ensure smooth flow of packing and loading work.</p> <p>2.6. Filled boxes are stacked in coolroom according to farm procedures.</p> <p>2.7. Coolroom air and mushroom pulp temperatures are recorded according to farm procedures.</p> <p>2.8. Variations from expected or required ranges of temperature or any other anomalies observed are reported to supervisor and remedial action is taken as directed.</p>
3. Finalise tasks	<p>3.1. Trolleys and other equipment are checked, cleaned and returned to store area or positioned for work for next shift.</p> <p>3.2. Where required, faulty items are reported to supervisor for repair or replacement.</p> <p>3.3. Daily work records are completed legibly and accurately according to farm procedures.</p> <p>3.4. Work outcomes are reported to supervisor, feedback on performance is sought, and any required improvements are noted for future action.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- estimate quantities of boxes
- maintain safe work practices including manual handling
- estimate rate of packing for collection
- handle boxes to maintain quality
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- safe manual handling techniques
- quality requirements
- collection and packing procedures
- storage requirements for mushrooms.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- carry out an inventory of mushroom boxes
- supply appropriate quantities of empty boxes to mushroom pickers in a number of picking rooms
- collect filled boxes at a rate and in a manner that

<b>EVIDENCE GUIDE</b>	
	<p>ensure the continued smooth flow of picking and packing work and that do not impede the movement of other traffic in the area</p> <ul style="list-style-type: none"> <li>• handle filled boxes in such a way that mushroom quality is maintained</li> <li>• record coolroom air and mushroom pulp temperatures.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

## AHCPTH207A Perform mushroom substrate process tasks

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of working in the mushroom industry and specifies the outcomes required to: perform tasks associated with filling, spawning and casing as part of mushroom substrate preparation. This unit applies to the second phase of production: maintain site quarantine protocols and personal hygiene; fill units with mushroom substrate; apply spawn into mushroom substrate; prepare and apply casing mixture; complete records.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit relates to working the preparation of mushroom substrate either in a general mushroom farming enterprise or in a specialist substrate preparation enterprise.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for each process stage.	<p>1.1.Task requirements are sought from and clarified with supervisor.</p> <p>1.2.All tools, machinery and equipment required for process stage are checked and prepared according to farm procedures.</p> <p>1.3.Faults or variations from required settings or farm quality standards observed at any stage in the process are reported to supervisor and remedial action is carried out as directed.</p> <p>1.4.Personal Protective Equipment (PPE) and clothing are selected and used according to farm Occupational Health and Safety (OHS) procedures.</p> <p>1.5.OHS requirements and hazards associated with tasks are identified and appropriate action is taken to minimise risks to self and others.</p> <p>1.6.Site quarantine protocols and farm and personal hygiene requirements are applied and followed as required by farm procedures or supervisor instructions.</p> <p>1.7.All work is performed in an environmentally aware and safe manner according to farm procedures.</p>
2. Fill units with mushroom substrate.	<p>2.1.Filling equipment is operated safely and at a speed that maintains continuous operation according to farm procedures, and supervisor and manufacturer instructions.</p> <p>2.2.Units are filled with mushroom substrate according to farm procedures and to required farm standards.</p>
3. Assist with spawning	<p>3.1.Spawn is visually inspected for abnormalities and</p>

ELEMENT	PERFORMANCE CRITERIA
processes.	<p>any abnormalities found are reported to supervisor.</p> <p>3.2.Spawn is applied and mixed into mushroom substrate according to farm procedures.</p> <p>3.3.Spawn usage rate is checked and any observed variation from farm standard is reported to supervisor.</p> <p>3.4.If applicable, supplement is applied and mixed as directed by manager.</p> <p>3.5.Spawned mushroom substrate is installed in spawn run rooms according to farm procedures.</p> <p>3.6.Samples of mushroom substrate are taken according to farm procedures.</p> <p>3.7.Mushroom substrate is checked for presence of pests and where pests are found, supervisor is advised and remedial action is taken as directed.</p>
4. Prepare and apply casing mixture.	<p>4.1.Required quantities of pesticides, peat, limestone and additives for casing are assembled and checked according to farm procedures, Material Safety Data Sheets (MSDSs) and OHS requirements.</p> <p>4.2.Casing ingredients are blended according to farm procedures.</p> <p>4.3.If applicable, supplement is applied and mixed as directed.</p> <p>4.4.Casing depth, structure and consistency are checked and any variation from farm standards is reported to supervisor and remedial action is taken as directed.</p> <p>4.5.Samples of prepared casing and mushroom substrate before casing has been added are taken according to farm procedures.</p>
5. Finalise mushroom substrate processes	<p>5.1.Equipment and tools are returned to storage area after cleaning, checking for future serviceability and carrying out basic preventative maintenance according to farm procedures, and supervisor and manufacturer instructions.</p> <p>5.2.Faults are reported to supervisor or maintenance personnel for remedial action.</p> <p>5.3.Clean-up activities are carried out at the end of each process stage according to farm procedures and supervisor instructions.</p> <p>5.4.Records are completed legibly and accurately according to farm procedures.</p> <p>5.5.Work outcomes are reported to supervisor, feedback</p>

ELEMENT	PERFORMANCE CRITERIA
	on performance is sought and any required improvements are noted for future action.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- Perform mushroom substrate process tasks applies to the
- following work instructions and schedules
- maintaining quality standards
- maintaining safety of self and others
- observing variations from required quality standards
- reading production schedules and farm procedures
- reporting faults and variations to supervisor
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- farm standards and procedures, including those relating to OHS, food safety, HACCP, quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
- impact on the rest of mushroom production cycle of deviations of mushroom substrate quality from farm standards for substrate
- industry and workplace awards and conditions
- overview of mushroom production cycle
- overview of substrate production
- site quarantine protocols.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• maintain site quarantine protocols and personal hygiene</li> <li>• fill units with mushroom substrate</li> <li>• apply spawn into mushroom substrate</li> <li>• prepare and apply casing mixture</li> <li>• complete records.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Mushroom substrate may include:	<ul style="list-style-type: none"> <li>• the range of ingredients and processes required for Phase II compost preparation.</li> </ul>
Growing systems may include:	<p>in the earlier stages of this process:</p> <ul style="list-style-type: none"> <li>• trays</li> <li>• shelves</li> <li>• or tunnels</li> </ul> <p>later stages may involve the use of:</p> <ul style="list-style-type: none"> <li>• trays</li> </ul>

<b>RANGE STATEMENT</b>

## AHCPTH208A Water mushroom crops

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of working in the mushroom industry and specifies the outcomes required to: water mushroom crops using a watering tree or a hand-held hose with attachments; estimate flow rate of water as delivered by the range of watering equipment in use on a mushroom farm; follow farm site quarantine procedures; measure correct doses of additives for water; deliver water to the mushroom crop at required rate and pressure; record water use accurately, legibly and in accordance with farm procedures; use Personal Protective Equipment (PPE) correctly and follow farm Occupational Health and Safety (OHS) procedures.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the processes involved with watering mushroom crops in and is usually conducted within established routines, methods and procedures.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to use watering equipment.	<p>1.1. Watering equipment components are assembled and checked for serviceability, and pre-operational checks are conducted according to farm procedures.</p> <p>1.2. Watering equipment is connected to water supply.</p> <p>1.3. Chemicals are added to water according to supervisor instructions and farm procedures.</p> <p>1.4. Water meter for the area to be watered is read and result is recorded according to farm procedures.</p> <p>1.5. Rooms that require watering are identified from supervisor instructions.</p> <p>1.6. Required watering pattern is identified according to supervisor instructions and farm procedures.</p> <p>1.7. PPE and clothing are selected and used.</p> <p>1.8. OHS hazards associated with watering mushroom crops are identified and appropriate action is taken to minimise the risks to self and others.</p>
2. Operate watering equipment.	<p>2.1. Site quarantine protocols and farm and personal hygiene requirements are applied and followed as required by farm procedures and supervisor instructions.</p> <p>2.2. Water pressure delivered through the equipment is checked and adjusted to farm standard or manufacturer instructions to ensure correct spray or droplet pattern is achieved throughout the watering</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>operation.</p> <p>2.3. Water is provided in the correct quantity and pressure and is evenly distributed with minimum waste and minimum adverse environmental impact.</p> <p>2.4. Faults or variations from required settings or farm quality standards observed at any stage in the process are reported to supervisor and remedial action is carried out as directed.</p>
3. Finalise watering operations	<p>3.1. Water meter for the area that has been watered is read and actual amount of water used is recorded according to farm procedures.</p> <p>3.2. Watering equipment is disconnected from water supply and returned to storage area.</p> <p>3.3. Watering equipment is checked for serviceability for future use and any requirement for maintenance or replacement of equipment or components is reported to supervisor according to farm procedures.</p> <p>3.4. Work outcomes are reported to supervisor, feedback on performance is sought and any required improvements are noted for future action.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work procedures
- estimating flow rate of water as delivered by the range of watering equipment in use on mushroom farm
- following farm site quarantine procedures where in place and as required
- giving and receiving information both in writing and orally
- measuring correct doses of additives for water
- organising and manoeuvring watering tree and hose
- recording water use accurately, legibly and in accordance with farm procedures
- using PPE correctly and following farm OHS procedures
- walking at a steady and predictable pace to ensure water is delivered to the mushroom crop at required rate

## REQUIRED SKILLS AND KNOWLEDGE

- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- basic understanding of effects of water on casing structure, mycelium, yields and quality
- effect on mushrooms of underwatering, overwatering, insufficient evaporation, late watering and moisture imbalance
- factors affecting effective operation of watering tree or other equipment used
- how panning occurs
- 'light', 'medium' and 'heavy' water and when each type is used
- safe and effective use of fungicides and other water additives.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- estimate flow rate of water as delivered by the range of watering equipment in use on a mushroom farm
- follow farm site quarantine procedures
- measure correct doses of additives for water
- deliver water to the mushroom crop at required rate and pressure
- record water use accurately, legibly and in

<b>EVIDENCE GUIDE</b>	
	<p>accordance with farm procedures</p> <ul style="list-style-type: none"> <li>• use PPE correctly and follow farm OHS procedures.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Watering processes and equipment may include:	<ul style="list-style-type: none"> <li>• all types of watering processes and equipment used in commercial mushroom production.</li> </ul>

## Unit Sector(s)

<b>Unit sector</b>	Production horticulture

## AHCPHT209A Produce trellis dried grapes

### Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release. New unit based on Victorian accredited unit VPAU729 Produce trellis dried grapes

### Unit Descriptor

This unit of competency covers the skills and knowledge required to operate a trellis dried grape system in a viticulture production environment including the ability to comply with processor quality standards and requirements, follow work plans, have a sound knowledge of workplace safety and comply with enterprise requirements.

### Application of the Unit

The unit applies to vineyard workers who perform summer pruning and crown bunch removal, emulsion application, harvest and post-harvest drying.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Nil

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Summer prune a grape crop for <i>trellis drying</i>	1.1 Leaf coverage on fruiting canes is reduced to assist cutting, emulsion application and drying 1.2 Canes are cut in accordance with enterprise standards 1.3 Replacement canes are left intact and undamaged to ensure next year's fruiting 1.4 Grapes requiring emulsion treatment are sprayed to ensure full and complete coverage
2. Prepare for harvesting trellis dried grapes	2.1 Uncut <i>grapes</i> are identified, crown bunches cut and hung on trellis without damage for drying or removed 2.2 Crop is sampled and tested for moisture content and readiness to harvest 2.3 Harvest tools, equipment and machinery are selected and checked 2.4 Suitable personal protective equipment is selected, used, maintained and stored
3. Harvest trellis dried grapes	3.1 Harvesting machinery and ancillary equipment is operated in a safe manner and at speeds to suit crop conditions 3.2 Quality of the crop is maximised by implementing and maintaining standards that meet processor and enterprise requirements 3.3 Full bulk bins are removed, stored and treated as soon as possible to minimise deterioration of crop quality 3.4 Harvest tools, equipment and machinery are cleaned of pests and other contaminants to maintain crop quality 3.5 Risks to self, others and the environment are recognised and controlled
4. Carry out postharvest drying	4.1 Drying tools, equipment and machinery are selected and checked 4.2 Post-harvest drying is undertaken as directed to meet processor requirements 4.3 Moisture and temperature of crop are monitored during drying and returned to bulk bins after appropriate cool down has occurred 4.4 Tool, equipment and machinery malfunctions, faults, irregular performance, damage and the need for corrective action are identified and reported

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills include:

#### Ability to:

- summer prune vines according to enterprise requirements
- handle and use trellis drying tools, equipment and machinery safely
- select, fit and use appropriate personal protective clothing and/or equipment
- demonstrate safe and environmentally responsible workplace practices
- record information according to enterprise requirements

### Required knowledge includes:

#### Knowledge of:

- summer pruning requirements and procedures
- crown/cordon bunch picking/removal requirements and procedures
- the parts of a grape vine
- year round preparation required for trellis drying
- processor quality standards and requirements
- environmental impact issues
- hazard identification and control

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and includes achievement of the following:</p> <ul style="list-style-type: none"> <li>• undertake summer pruning and crown bunch removal</li> <li>• carry-out harvest and post-harvest drying</li> </ul>

	<ul style="list-style-type: none"> <li>• follow work plans</li> <li>• comply with processor quality standards and requirements</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other units</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</li> <li>• The assessment environment should not disadvantage the candidate</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role</li> </ul>
Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Grape</i></b> varieties include:	<ul style="list-style-type: none"> <li>• sultanas</li> <li>• currants</li> <li>• Sunmuscats</li> <li>• other grape varieties suitable for trellis drying</li> </ul>
<b><i>Trellis drying</i></b> methods include:	<ul style="list-style-type: none"> <li>• emulsion treated</li> <li>• naturals</li> </ul>
Property characteristics include:	<ul style="list-style-type: none"> <li>• terrain</li> <li>• type of trellis system</li> <li>• water accessibility</li> <li>• irrigation</li> <li>• machinery access</li> <li>• level of mechanisation</li> <li>• property design/layout</li> <li>• soil types</li> <li>• crop yield</li> </ul>
Seasonal conditions include:	<ul style="list-style-type: none"> <li>• humidity</li> <li>• temperature</li> <li>• rainfall</li> </ul>

Production Horticulture

## AHCPHT301A Carry out a crop regulation program

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of co-ordinating a crop regulation program in which thinning and pruning of flower, fruit or vegetable crops is undertaken to control yield and quality and defines the standard required to: prepare for crop regulation activities; co-ordinate work groups; use a range of methods to achieve crop regulation goals; assess the effects on plant growth, habit and production levels of thinning and pruning operations; record or report activities; store and maintain equipment and materials.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to working under limited supervision from others with checking only related to overall progress.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for the crop regulation program	<p>1.1.The site and operational requirements of the crop regulation program are identified according to the site plan and enterprise work procedures.</p> <p>1.2.Crop regulation materials are selected according to enterprise work procedures.</p> <p>1.3.Services are located using site plans and in consultation with the supervisor.</p> <p>1.4.Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor.</p> <p>1.5.Suitable safety and Personal Protective Equipment (PPE) are selected, used and maintained.</p>
2. Prepare crop regulation equipment	<p>2.1.Tools, equipment and machinery are selected according to enterprise work procedures.</p> <p>2.2.Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturers specifications and enterprise work procedures.</p> <p>2.3.Tools, equipment and machinery are calibrated and adjusted according to manufacturer's guidelines and enterprise work procedures.</p>
3. Implement the crop regulation program	<p>3.1.Enterprise work team and contractors are identified and work tasks are co-ordinated in a sequential, timely and effective manner in consultation with the supervisor.</p> <p>3.2.Work pattern is planned to cover the site in an efficient, sequential and co-ordinated manner</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to enterprise work procedures.</p> <p>3.3. Crop regulation tasks are undertaken according to OHS requirements and with due consideration of the environmental implications.</p> <p>3.4. Crop regulation tasks are monitored and remedial action is undertaken where necessary to achieve program objectives.</p> <p>3.5. A clean and safe work area is maintained throughout and on completion of work.</p>
4. Complete crop regulation activities	<p>4.1. Waste material is removed from the site and disposed of in an environmentally aware and safe manner according to enterprise work procedures.</p> <p>4.2. Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures.</p> <p>4.3. Work outcomes are recorded or reported to the supervisor according to enterprise work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate orally and in writing with work team members, supervisors and contractors
- utilise proforma recording, reporting and work procedure documents
- interpret site plans and crop regulation specifications
- measure quantities, calculate material requirements, area, volume, ratios and application rates, and calibrate machinery
- co-ordinate work group, contractors and own activities
- monitor enterprise plants for quality
- minimise noise, dust, high activity vehicle traffic and water run-off to prevent nuisance-level environmental disturbance
- use chemicals to label and MSDS directions
- carry out thinning and pruning techniques
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- principles of thinning and pruning and the methods used to achieve crop regulation goals
- effects on plant growth, habit and production levels of thinning and pruning operations in relation to the market goals of the enterprise
- enterprise quality procedures and characteristics of a crop relative to varying market requirements
- types of crop regulation materials
- safe work procedures for use of machinery and equipment
- environmental impacts of crop regulation and disposal of waste.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare for crop regulation activities
- co-ordinate work groups
- use a range of methods to achieve crop regulation goals
- assess the effects on plant growth, habit and production levels of thinning and pruning operations
- record or report activities
- store and maintain equipment and materials.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Crop regulation methods may include:	<ul style="list-style-type: none"> <li>• chemical and manual thinning</li> <li>• selective harvesting</li> <li>• training</li> <li>• summer and winter pruning</li> <li>• hedging, skirting, topping and trimming.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for crop harvesting	<p>1.1.The crop to be harvested and the requirements and procedures to assure crop quality are identified according to enterprise work procedures.</p> <p>1.2.Crop maturity is determined by experience, specification charts, aids or devices and according to client, enterprise and industry quality assurance specifications.</p> <p>1.3.Suitable weather conditions for picking are established according to enterprise work procedures.</p> <p>1.4.Tools, equipment and machinery are selected according to harvest requirements and enterprise work procedures.</p> <p>1.5.Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturers specifications and enterprise work procedures.</p> <p>1.6.Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor.</p> <p>1.7.Suitable safety and Personal Protective Equipment (PPE) are selected, used and maintained.</p>
2. Co-ordinate harvesting activities	<p>2.1.The crop to be harvested and the requirements and procedures to assure crop quality are identified according to enterprise work procedures.</p> <p>2.2.Crop maturity is determined by experience, specification charts, aids or devices and according to client, enterprise and industry quality assurance specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3.Suitable weather conditions for picking are established according to enterprise work procedures.</p> <p>2.4.Tools, equipment and machinery are selected according to harvest requirements and enterprise work procedures.</p> <p>2.5.Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturers specifications and enterprise work procedures.</p> <p>2.6.OHS hazards are identified, risks assessed, controls implemented and reported to the supervisor.</p> <p>2.7.Suitable safety and PPE are selected, used and maintained.</p>
3. Monitor crop quality throughout harvest	<p>3.1.PPE is selected, maintained and used according to OHS procedures.</p> <p>3.2.Harvesting procedures and the harvested crop comply with client, enterprise and industry quality assurance specifications.</p> <p>3.3.The crop is handled carefully to prevent damage according to enterprise work procedures.</p> <p>3.4.Sorting and grading of the crop complies with client, enterprise and industry quality assurance specifications.</p> <p>3.5.Crop storage minimises postharvest deterioration according to enterprise work procedures.</p> <p>3.6.The crop is transported with minimum damage according to enterprise work procedures.</p> <p>3.7.Picking tallies or harvest yields are calculated and recorded according to enterprise work procedures.</p>
4. Deliver crop to specified destination	<p>4.1.Delivery details including quantity, timing and destination are confirmed according to enterprise work procedures.</p> <p>4.2.Crop is delivered with damage levels that are within client, enterprise and industry quality assurance specifications.</p> <p>4.3.Delivered crop complies with client, enterprise and industry quality assurance specifications.</p> <p>4.4.Delivery documentation is completed accurately according to enterprise work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate ideas and information to work team members, supervisors, contractors and clients
- utilise proforma reporting, analysis and work procedure documents, and interpret quality specifications
- measure materials
- interpret harvest specifications and schedules
- interpret and apply test results
- calculate tallies, working hours, yields and quality results
- coordinate work group, contractors and own activities
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- recognition of the maturity parameters of a range of crops
- enterprise quality procedures and characteristics of a crop relative to varying market requirements
- grading characteristics of each crop
- the importance of maintaining quality of produce including cooling requirements and quick transport from field to processing areas
- industry wage rates and conditions, contractors services, conditions and rates
- licensing requirements for use of forklifts, trucks and machinery
- the effect of adverse climatic conditions (e.g., rain, hail, extreme wind, or very high ultraviolet radiation), which may prevent or impede crop harvesting operations, or severely influence the time taken to complete the tasks necessary to fulfil the operation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• prepare for crop harvesting activities</li> <li>• maintain harvest requirements</li> <li>• coordinate a work group</li> <li>• monitor crop quality.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## AHCPHT303A Implement a post-harvest program

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of implementing a post-harvest program for horticultural crops and defines the standard to: coordinate the post-harvest operations consistent with the plan; implement post-harvest treatments and packing, presentation and storage requirements according to industry best practice and market specifications; and dispose of hazardous waste materials in line with guidelines and enterprise requirements.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to implementing a post-harvest program and is likely to be carried out under limited supervision from others with checking only related to overall progress. The work requires the application of extensive horticultural knowledge and a broad range of horticultural skills. The post-harvest program usually follows established routines, methods and procedures where some discretion and judgement is required. This includes selection of equipment and materials, organisation of work, services, actions and the achievement of outcomes within time and budgetary constraints.
--------------------------------	--

### Licensing/Regulatory Information

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for implementation of post-harvest operations	<p>1.1. Post-harvest operations to be performed are identified according to enterprise work procedures, the marketing plan and industry guidelines and confirmed with the supervisor.</p> <p>1.2. Materials, tools, equipment and machinery are selected according to enterprise work procedures.</p> <p>1.3. Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturer specifications and enterprise work procedures.</p> <p>1.4. Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor.</p> <p>1.5. Suitable safety and personal protective equipment (PPE) are selected, used and maintained.</p>
2. Coordinate post-harvest work	2.1. Enterprise work team is identified and tasks are coordinated in a sequential, timely and effective

ELEMENT	PERFORMANCE CRITERIA
	<p>manner in consultation with the supervisor.</p> <p>2.2. Post-harvest operations are undertaken according to OHS requirements and with due consideration of environmental implications.</p> <p>2.3. A clean, safe and hygienic work area is maintained throughout and on completion of work.</p>
<p>3. Implement post-harvest treatments</p>	<p>3.1. Harvested produce is graded and labelled according to the marketing plan and enterprise work procedures.</p> <p>3.2. Produce that does not meet specifications and enterprise standards is identified and disposed of according to enterprise environmental procedures.</p> <p>3.3. Post-harvest treatments are selected according to harvested produce requirements, the enterprise integrated pest management strategy and the marketing plan.</p> <p>3.4. Timing, rate, application method, environmental requirements and handling techniques conform to the requirements of the harvested produce, enterprise work procedures and industry best practice.</p> <p>3.5. Post-harvest practices are economical, methodical, meet established work schedules and minimise damage to produce.</p> <p>3.6. Tools, equipment and machinery are cleaned and maintained according to enterprise work procedures.</p>
<p>4. Implement hazardous waste disposal guidelines</p>	<p>4.1. Waste disposal requirements of the enterprise are reviewed and operational tasks determined.</p> <p>4.2. Collection of waste and disposal are monitored with variation from enterprise environmental procedures addressed promptly.</p> <p>4.3. Conditions likely to impact on business viability are reported promptly to the supervisor.</p>
<p>5. Implement packing and presentation requirements of produce</p>	<p>5.1. Packing and presentation requirements specified in the marketing plan and enterprise work procedures are reviewed and operational tasks determined.</p> <p>5.2. Packing and presentation of produce conform to the requirements of the harvested produce, the marketing plan and industry best practice.</p> <p>5.3. Packing and presentation processes are monitored and remedial action taken, where necessary.</p> <p>5.4. Packing and presentation processes are recorded according to enterprise work procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
6. Implement storage requirements of produce	<p>6.1.Storage requirements specified in the marketing plan and enterprise work procedures are reviewed and operational tasks determined.</p> <p>6.2.Storage and handling of produce conform to the requirements of the harvested produce, the marketing plan and industry best practice.</p> <p>6.3.Storage processes and facilities are monitored and remedial action taken, where necessary.</p> <p>6.4.Storage processes and conditions are recorded according to enterprise work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communicate orally and in writing with team members and supervisors
- interpret and confirm chemical labels, material safety data sheets (MSDS), work instructions and enterprise work procedures
- record information about work activities on proformas
- participate in teams and contribute to team objectives
- count and calculate quantities, treatment application rates and storage requirements
- correctly dispose of chemical substances, their containers and other waste materials to minimise environmental impact
- implement enterprise OHS policy and procedures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the attributes of produce in relation to the desired quality of produce to be presented to the client
- Integrated Pest Management principles and enterprise policy
- the importance of maintaining the quality of produce, including handling and cooling requirements
- the relationship between the quality attributes of produce and packing techniques and packaging
- industry standards for packaging

**REQUIRED SKILLS AND KNOWLEDGE**

- cool chain principles and practices
- characteristics and procedures for the use of coolrooms
- storage methods for a range of produce
- the correct storage temperatures for a range of produce
- humidity levels and their effect on the quality of produce
- hygiene issues in the handling and storage of plant produce
- environmental effects of post-harvest treatments and hazardous waste disposal methodologies, application and purpose
- enterprise confined spaces policy and safety procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- coordinate the post harvest operations consistent with the plan
- implement post-harvest treatments and packing, presentation and storage requirements according to industry best practice and market specifications
- dispose of hazardous waste materials in line with guidelines and enterprise requirements.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Post-harvest operations may include:	<ul style="list-style-type: none"> <li>• transporting harvested produce from the field to post-harvest processing or storage facilities</li> <li>• grading</li> <li>• applying treatments</li> <li>• packing</li> <li>• labelling</li> <li>• storing harvested produce for a range of horticultural crops.</li> </ul>

## Unit Sector(s)

## AHCPTH304A Harvest horticultural crops mechanically

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of operating machinery to harvest horticultural crops and defines the standard required to: operate horticultural harvesting machinery and equipment in a safe, efficient and controlled manner; conduct pre- and post-operational checks; perform minor maintenance and fault-finding; and record work activities.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the operation of machinery and related equipment used in the harvest of horticultural crops. This unit does not cover the harvesting of broadacre crops or sugar cane.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare machinery for use	<p>1.1. Select and use appropriate personnel protective equipment (PPE).</p> <p>1.2. Conduct routine pre-operational checks and housekeeping tasks.</p> <p>1.3. Replace and/or report damaged or worn components.</p> <p>1.4. Identify and report potential Occupational Health and Safety (OHS) hazards.</p> <p>1.5. Identify and report potential environmental implications.</p> <p>1.6. Attach ancillary equipment and check for correct operation.</p>
2. Operate machinery and equipment	<p>2.1. Operate machinery and equipment in a safe, efficient and controlled manner.</p> <p>2.2. Operate machinery according to task requirements, conditions and manufacturer operating guidelines.</p> <p>2.3. Monitor machinery performance and efficiency and make adjustments as required.</p> <p>2.4. Assess and minimise potential risks to self, others and the environment.</p>
3. Complete work	<p>3.1. Follow shutdown procedures.</p> <p>3.2. Complete operational records.</p> <p>3.3. Carry out routine operator servicing.</p> <p>3.4. Identify and report malfunctions, faults, irregular performance or damage.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- conduct pre-operational checks
- operate machinery in a safe, efficient and controlled manner
- perform operator maintenance tasks
- attach and uncouple associated equipment
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- manufacturer and/or workplace requirements for pre-operational checks, machinery operation techniques, operator level servicing, and shutdown and emergency procedures
- basic diagnostic techniques
- equipment characteristics, technical capabilities and limitations
- components and controls features and functions
- horticulture quality assurance and hygiene requirements.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy

<b>EVIDENCE GUIDE</b>	
<b>competency in this unit</b>	holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following: <ul style="list-style-type: none"> <li>• operate horticultural harvesting machinery and equipment in a safe, efficient and controlled manner</li> <li>• conduct pre and post operational checks</li> <li>• perform minor maintenance and fault-finding</li> <li>• record work activities.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Mechanical harvesting may include:	<ul style="list-style-type: none"> <li>• machinery and equipment used in harvesting root and leafy vegetables and tree crops, including fruits and nuts.</li> </ul>

## AHCPTH305A Regulate crops

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of regulating crops and defines the standard required to: interpret requirements for pruning or thinning according to the crop regulation program; select, use and maintain a range of plant thinning or pruning tools; record and report signs of diseases and pests; select and prepare chemicals; remove waste material and dispose of it according to environmental and disease management procedures.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of regulating crops by thinning and pruning flower, fruit or vegetable crops to control yield and quality.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify crop regulation requirements	<p>1.1.Plants that require crop regulation are identified according to enterprise work procedures.</p> <p>1.2.The purpose and methods of crop regulation are determined according to enterprise work procedures.</p> <p>1.3.Services are located using site plans and in consultation with the supervisor.</p> <p>1.4.Access to the site is determined in consultation with the supervisor.</p> <p>1.5.Occupational Health and Safety (OHS) hazards are identified, risks assessed and reported to the supervisor.</p>
2. Prepare for crop regulation	<p>2.1.Crop regulation tools, equipment and machinery are selected according to enterprise work procedures.</p> <p>2.2.Pre-operational and safety checks are carried out on crop regulation tools, equipment and machinery according to manufacturers specifications and enterprise work procedures.</p> <p>2.3.Chemicals to be used for crop regulation are selected and prepared according to manufacturer's specifications and enterprise work procedures.</p> <p>2.4.Suitable safety and Personal Protective Equipment (PPE) are selected, used and maintained.</p>
3. Undertake crop regulation	<p>3.1.Safety equipment is erected around the crop regulation site during and between work periods.</p> <p>3.2.The plant material to be thinned or pruned is identified according to the crop regulation program.</p> <p>3.3.The crop regulation program is undertaken</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to enterprise work procedures and OHS requirements.</p> <p>3.4. Crop regulation tools, equipment and machinery are operated safely and effectively.</p> <p>3.5. Signs of diseases and pests are recorded and reported to the supervisor.</p>
4. Complete crop regulation	<p>4.1. Waste material removed from the site is disposed of in an environmentally aware and safe manner according to enterprise work procedures.</p> <p>4.2. Correct manual handling techniques are used when lifting or moving heavy loads.</p> <p>4.3. Crop regulation tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures.</p> <p>4.4. A clean and safe work area is maintained throughout and on completion of work.</p> <p>4.5. Work outcomes are recorded or reported to the supervisor according to enterprise work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- participate in teams and contribute to team objectives
- communicate orally with work team members and supervisors
- utilise proforma recording, reporting and work procedure documents
- interpret site plans
- interpret crop regulation specification
- measure quantities, estimate quantities of plant material to be regulated
- select and prepare regulatory chemicals
- calculate material requirements, area, volume, ratios and application rates
- calibrate machinery
- co-ordinate own activities with the work group
- monitor enterprise plants for quality
- minimise noise, dust, high activity vehicle traffic and water run-off to prevent nuisance-level environmental disturbance

## REQUIRED SKILLS AND KNOWLEDGE

- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- principles of thinning and pruning and the methods used to achieve crop regulation goals
- effects on plant growth, habit and production levels of thinning and pruning operations in relation to the market goals of the enterprise
- the purpose of tools, equipment and machinery used for crop regulation and the correct and safe use and care of these tools, equipment and machinery
- the effect of outdoor climatic conditions (e.g., rain, hail, total fire ban days, or very high ultraviolet radiation), which may prevent or impede crop regulation activities, or influence the selection of crop regulation tools, equipment and safety equipment to minimise the hazards presented.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- interpret requirements for pruning or thinning and work to instructions
- use and maintain a range of plant thinning or pruning tools
- report signs of diseases and pests
- apply chemicals under supervision
- remove waste material and dispose of it according to environmental and disease management procedures.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources

<b>EVIDENCE GUIDE</b>	
	for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Crop regulation methods may include:	<ul style="list-style-type: none"> <li>removal of flowers or crops using hands, sticks, shakers and thinning sprays</li> <li>pruning methods such as winter or summer pruning</li> <li>minimal 'hand clean up' pruning and after machine pruning.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare machinery and equipment for use	<p>1.1.Machinery and equipment are selected and confirmed against the work plan and prepared to manufacturer specifications.</p> <p>1.2.Equipment is securely attached and calibrated for operation according to manufacturer specifications.</p> <p>1.3.Existing and potential Occupational Health and Safety (OHS) hazards in the workplace are identified, risks assessed and controlled in line with enterprise requirements.</p>
2. Prepare for horticultural crop establishment	<p>2.1.Soil and weather conditions are monitored for optimal seeding conditions.</p> <p>2.2.Soil conservation and sustainable land management practices and procedures are recognised and confirmed according to enterprise requirements.</p> <p>2.3.Seeding, fertiliser, and pest and weed control requirements are confirmed against the work plan and prepared to manufacturer specifications using safe handling procedures.</p> <p>2.4.Contingency plans are prepared for unusual seasonal conditions.</p>
3. Sow the crop	<p>3.1.Suitable personal protective equipment (PPE) is selected, used and maintained according to OHS requirements.</p> <p>3.2.Seeding and fertiliser applications are carried out in line with the work plan.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Pest and weed control treatment is coordinated with seeding and fertiliser applications as required.</p> <p>3.4. Environmental implications associated with sowing operations are identified, impacts assessed and procedures adopted in line with enterprise requirements.</p>
4. Complete seeding operations	<p>4.1. Seeding, machinery and equipment operation records are maintained according to enterprise requirements.</p> <p>4.2. Machinery and equipment damage, malfunctions or irregular performance are reported in line with enterprise requirements.</p> <p>4.3. Machinery and equipment is cleaned, secured and stored in line with manufacturer specifications and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- sow seed and apply fertiliser at the required placement and rate
- identify types of weeds and insects harmful to crop establishment
- perform pre-operational and safety checks, servicing and maintenance on machinery and equipment
- calibrate, operate machinery and attach/detach equipment
- demonstrate emergency operating procedures in normal and adverse conditions
- recognise and report machinery damage, faults or malfunctions and perform minor repairs
- demonstrate safe, environmentally responsible and sustainable land management practices
- monitor and minimise impacts to the environment associated with sowing operations
- read and interpret manufacturers specifications, work and maintenance plans, and material safety data sheets (MSDS)
- obtain relevant licences and permits

## REQUIRED SKILLS AND KNOWLEDGE

- clean, secure and store machinery and equipment
- interpret and apply task instructions
- communicate with work team and supervisor
- record and report equipment faults, workplace hazards and accidents
- assess and calculate the application of fertiliser/pesticide requirements and application rates
- calibrate equipment and calculate volumes, consumption and servicing requirements
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- crop types, preparation of seeds, seeding methods and application techniques
- fertiliser types, rates of application and crop nutrient requirements
- effects of weather conditions (normal and adverse) on seeding and fertilising applications
- operating principles and operating methods for machinery and equipment
- pre-operational and safety checks, servicing and maintenance procedures for seeding machinery and equipment
- principles of weight distribution with regard to load shifting and vehicle movement
- sustainable land management and soil conservation techniques
- positive environmental practices, negative environmental impacts and minimisation measures associated with seeding operations
- procedures for cleaning, securing and storing machinery, equipment and materials
- enterprise policies with regard to seeding operations, and recording and reporting routines
- relevant state/territory legislation, regulations and codes of practice with regard to workplace OHS and the use and control of hazardous substances
- PPE and when and how it should be used
- relevant state/territory legislation and regulations with regard to licensing requirements and the use and control of machinery and equipment.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• prepare and service machinery and equipment</li> <li>• carry out tillage and apply pre-planting treatments</li> <li>• carry out sowing operation and fertiliser application</li> <li>• monitoring the environmental impacts of establishing the crop</li> <li>• clean, secure and store machinery and equipment</li> <li>• keep records of the sowing operation.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

## AHCPT307A Prepare raw materials and compost the feedstocks

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of preparing and mixing raw materials into a suitable feedstock mixture for commercial-scale composting, and composting feedstock mixtures to manufacture compost products and defines the standard required to: prepare raw materials for composting according to enterprise product requirements; prepare batches for composting according to defined compost recipes; compost feedstock mixtures to manufacture compost; conduct and interpret basic field test results to confirm effective processing and define intervention required to rectify composting processes; establish and maintain appropriate compost batch documentation accurately and promptly.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to an employee of an enterprise engaged in commercial-scale composting operations. Work is likely to be performed as a part of a team and under the supervision of a site manager or operations manager. Where work requires the use of load-shifting or other equipment, appropriate training / certification must be provided according to state and territory safety and licensing requirements.
--------------------------------	---

### Licensing/Regulatory Information

Refer to Application of the Unit

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Organise for processing	<p>1.1. Job sheet is reviewed to clearly identify all processing requirements.</p> <p>1.2. Machinery, equipment and materials appropriate to the job requirements are selected and checked for serviceability and safe operation.</p> <p>1.3. Potential Occupational Health and Safety (OHS) hazards are identified and assessed, and appropriate action is taken to minimise risk to self and others.</p> <p>1.4. Suitable Personal Protective Equipment (PPE) is selected, fitted, used, maintained and stored according to work requirements, manufacturer specifications and enterprise procedures.</p> <p>1.5. Enterprise OHS guidelines are complied with.</p>
2. Prepare raw materials and compost the feedstock mixture	<p>2.1. Raw materials and additives for processing are identified, collected and checked to ensure compliance with enterprise procedures, including assessment of physical contamination according to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>enterprise guidelines.</p> <p>2.2.Composting technology and methods to be used are confirmed as appropriate to raw material types and enterprise product requirements.</p> <p>2.3.Raw materials are variously pre-processed into suitable forms for composting according to enterprise product requirements.</p> <p>2.4.Pre-processed raw materials are mixed into suitable feedstock mixtures for composting according to documented recipes or batches.</p> <p>2.5.Feedstock mixtures for composting are handled according to technology, appropriate method, and industry best practice and enterprise procedures.</p> <p>2.6.Batch numbers or codes are assigned and batch documentation is created to enable tracking of batch through compost production cycle.</p>
3. Monitor composting process	<p>3.1.Composting batch is monitored by observation and use of field testing equipment to maintain effective composting process and efficient compost production schedule according to relevant Australian standards for the product.</p> <p>3.2.Processing and operations records are maintained for process control and to track batch through the compost production cycle.</p> <p>3.3.Faults or variations observed at any stage of process are reported to supervisor and remedial action is taken to maintain effective and consistent compost production.</p>
4. Conduct quality control inspection	<p>4.1.Finished compost is inspected and assessed for compliance with enterprise product requirements and relevant Australian standards.</p> <p>4.2.Faults or variations observed are reported to supervisor.</p> <p>4.3.Non-compliant product is further processed with necessary adjustments made as directed to processing technique and compost batch management to achieve compliance with product quality requirements.</p> <p>4.4.Compliance of compost batch with product requirements is confirmed.</p> <p>4.5.Batch documentation is completed for compliant compost product.</p> <p>4.6.Sales and operational staff members are informed that product is suitable for sale and/or preparation of</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>value-added products.</p> <p>4.7. Work outcomes are reported to supervisor, feedback on performance is sought and any required improvements are noted for future action.</p>
5. Clean up area	<p>5.1. Loading-shifting machinery and other processing equipment are cleared and cleaned as required to avoid contamination between batches.</p> <p>5.2. Raw materials and finished compost products are cleared away to designated areas, and processing site is cleaned to ensure safe and effective future operation according to enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identifying hazards and implementing safe operating procedures
- establishing and maintaining compost batch documentation
- conducting basic field tests according to specified procedures
- operating equipment safely and efficiently
- identifying and handling raw materials and products
- preparing batches for composting according to defined compost recipes
- preparing raw materials in accordance with enterprise product requirements
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- awareness of compost quality standards
- basic principles of composting science as related to commercial compost

**REQUIRED SKILLS AND KNOWLEDGE**

- production
- characteristics of a range of raw materials
  - fundamental characteristics of compost quality
  - steps in pre-processing compost materials
  - batch documentation techniques
  - key process control stages critical to consistent compost production
  - overview of systems and technologies used in compost production, particularly as relevant to candidate's workplace
  - range and characteristics of categories of compost product.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare raw materials for composting according to enterprise product requirements
- prepare batches for composting according to defined compost recipes
- conduct and interpret basic field test results to confirm effective processing and define intervention required to rectify composting processes
- establish and maintain appropriate compost batch documentation accurately and promptly.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Composting technology may include:	<ul style="list-style-type: none"> <li>both aerobic and vermiculture composting technologies.</li> </ul>

## AHCPTH308A Prepare value added compost-based products

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of preparing and/or blend finishing compost with other materials or products to produce various value added compost-based products, and defines the standard required to: interpret batch sheets and follow enterprise production procedures; recognise, quantify and handle products according to enterprise requirements and procedures; recognise value added products and their characteristics; prepare batches of value-added product according to defined batch recipes and methods.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the people working at a commercial-scale composting facility. It will require taking responsibility for work output with checking related to overall progress, and taking limited responsibility for the work output of others for example as a loader operator or team leader. Where work requires the use of load-shifting or other equipment, appropriate training/certification must be provided according to state and territory safety and licensing requirements.
--------------------------------	---

### Licensing/Regulatory Information

Refer to Application of the Unit

### Pre-Requisites

<b>Prerequisite units</b>	
---------------------------	--

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Organise for value-added product preparation	<p>1.1. Job sheet or work order is reviewed to clearly identify all product requirements.</p> <p>1.2. Equipment required for safe, effective and efficient product preparation is identified and organised.</p> <p>1.3. Occupational Health and Safety (OHS) hazards in workplace are identified, and risk is assessed and managed according to enterprise procedures.</p> <p>1.4. Environmental implications associated with product preparation are identified, assessed and reported to supervisor.</p>
2. Prepare value-added products	<p>2.1. Compost and product additives are clearly identified and confirmed against job sheet and enterprise procedures.</p> <p>2.2. Suitable Personal Protective Equipment (PPE) and clothing are selected, used, maintained and stored according to OHS requirements.</p> <p>2.3. Required quantities of compost and product additives are measured and transported to product preparation</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>area.</p> <p>2.4.Compost and product additives are regularly monitored and checked against value-added product specifications and variations or non-conformances are identified and reported, and remedial action is taken according to enterprise procedures and product specifications.</p> <p>2.5.Preparation method and machinery to be used are confirmed as appropriate for product and as meeting enterprise product requirements.</p> <p>2.6.Plant and machinery are operated in a safe and controlled manner, and monitored for performance and efficiency.</p> <p>2.7.Compost, materials and other product additives are blended and processed according to product requirements.</p> <p>2.8.Products are monitored and adjustments to machinery operations are made to meet job sheet specifications.</p> <p>2.9.Batch numbers of compost materials and other additives are combined or reassigned.</p> <p>2.10. Blending, processing machinery and site are cleared and cleaned as required to avoid contamination between batches according to enterprise procedures.</p>
3. Conduct quality inspection and readiness for sale	<p>3.1.Value-added product is inspected and checked for compliance with job sheet and product requirements.</p> <p>3.2.Product details are documented accurately and promptly according to enterprise procedures.</p> <p>3.3.Value-added product is transported to holding bay and quantity of product is confirmed.</p> <p>3.4.Value-added product is clearly labelled according to regulatory and customer requirements.</p> <p>3.5.Value-added product is released for dispatch according to enterprise procedures.</p> <p>3.6.Work outcomes are reported to supervisor, feedback on performance is sought and any required improvements are noted for future action.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- demonstrating safe and environmentally responsible workplace practices
- following Material Safety Data Sheets (MSDSs)
- identifying and handling raw materials, products, additives and contaminants
- interpreting and applying instructions
- measuring and calculating volumes and consumption requirements
- reading and interpreting job sheets
- recording and reporting equipment faults, workplace hazards and accidents
- using emergency and personal protective equipment
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- common product contaminants
- enterprise product specifications and standards
- environmental license requirements, aspects and management measures associated with operation of machinery and equipment
- hazards in handling materials and additives and appropriate risk control measures
- identification of contaminants
- legislation, regulations and codes of practice with regard to workplace OHS and use and control of hazardous substances
- operating principles and methods for plant and machinery
- procedures for cleaning, securing and storing machinery, equipment and materials
- potential risks and hazards associated with operation of machinery and equipment
- product types and characteristics
- raw materials, compost and additives commonly used to manufacture value-added products
- relevant Australian standards for products
- relevant state and territory legislation, regulations and codes of practice with regard to licensing, roads and traffic requirements
- value-added product types and characteristics.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• interpret batch sheets and follow enterprise production procedures</li> <li>• recognise, quantify and handle products according to enterprise requirements and procedures</li> <li>• recognise value added products and their characteristics</li> <li>• prepare batches of value added product according to defined batch recipes and methods.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Compost-based products from aerobic, anaerobic and vermiculture composting systems may include:	<ul style="list-style-type: none"> <li>• composted and pasteurised mulches</li> <li>• composted and pasteurised soil conditioners</li> <li>• effluent, storm water or emission treatment products</li> <li>• general and special purpose landscaping soils</li> <li>• soft fall or loose fill materials for playground surfacing or other applications</li> <li>• mushroom substrate</li> <li>• ornamental mulches</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• products for agricultural disease suppression</li> <li>• products for erosion control or site remediation</li> <li>• sports turf substrates</li> <li>• standard and specialised potting mixes.</li> </ul>

## AHCPTH309A Supervise mushroom substrate preparation

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the process of applying, monitoring and supervising the achievement of farm quality standards and processes associated with mushroom substrate preparation, and defines the standard required to: organise the process of mushroom substrate preparation; observe and report non compliance with farm quality standards; supervise staff so that standards relating to productivity, workflow requirements, farm procedures and quality are met; contribute as a team member to performance of mushroom substrate processes; record and report production information.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to the role of a mushroom farm supervisor to apply, monitor and supervise the achievement of farm quality standards and process associated with mushroom substrate preparation (Phase II) either in a general mushroom farming enterprise or in a specialist substrate preparation enterprise. It requires responsibility for own work and coordination and supervision of a work team. Where work requires the use of load shifting equipment, appropriate training/certification must be provided according to state and territory safety and licensing requirements.</p>
--------------------------------	--

### Licensing/Regulatory Information

Refer to Application of the Unit

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Confirm that all requirements to commence mushroom substrate preparation are met	<p>1.1.Details of required quantities of substrate and dates/times to be achieved for each stage of the process are obtained and communicated to personnel involved in substrate preparation.</p> <p>1.2.Availability, quality, serviceability and cleanliness of all rooms, work areas, machinery, equipment and materials required for mushroom substrate preparation are ascertained and remedial action is taken if required according to farm procedures.</p> <p>1.3.Personnel are given instructions about mushroom substrate processing tasks to be performed.</p> <p>1.4.Personal Protective Equipment (PPE) and clothing are selected and used by all those involved in mushroom substrate processing tasks.</p> <p>1.5.Occupational Health and Safety (OHS) requirements and hazards associated with each task are identified and appropriate action is taken to minimise risks to self and others.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.6.Site quarantine protocols and farm and personal hygiene requirements are applied, followed and monitored as required by farm procedures or manager instructions.</p> <p>1.7.All work of the team is monitored to ensure that it is performed in an environmentally aware and safe manner while satisfying farm procedures and productivity and workflow requirements.</p>
2. Monitor mushroom substrate preparation process	<p>2.1.Mushroom substrate preparation processes are monitored to ensure that work is performed according to farm procedures and that all equipment is operated according to manufacturer instructions, and at a speed that maintains safe and continuous operation.</p> <p>2.2.Random samples of materials and/or outputs are taken according to farm procedures.</p> <p>2.3.Probes are monitored to ensure that they are functioning and correctly positioned to provide representative readings.</p> <p>2.4.Production information required for farm Hazard Analysis Critical Control Point (HACCP) system is recorded according to farm procedures.</p> <p>2.5.Faults or variations from required settings or farm quality standards observed at any stage in the process are reported to manager and remedial action is taken as directed.</p> <p>2.6.Compost, rooms and work areas are monitored for presence of pests and remedial action is taken as required and according to farm procedures.</p>
3. Finalise mushroom substrate preparation process	<p>3.1.Clean-up activities at end of each process stage are monitored to ensure they comply with farm procedures.</p> <p>3.2.Equipment and hand tools are returned to storage area after cleaning and checked for future serviceability.</p> <p>3.3.Basic preventative maintenance is carried out according to farm procedures and any faults are reported to maintenance personnel for remedial action.</p> <p>3.4.Records are completed legibly and accurately according to farm procedures.</p> <p>3.5.Feedback on performance is provided to personnel under supervision.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identifying hazards and implementing safe work procedures
- accepting responsibility for quality of own work
- contributing to productive work environment
- interpreting work schedules
- maintaining safety of self and others
- managing own work and supervising that of others
- observing employment requirements
- promoting workplace cooperation
- recording and reporting farm and HACCP information
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- casing function, application, required depth and required surface structure
- farm standards and procedures, including those relating to OHS, food safety, HACCP, quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
- impact on rest of mushroom production cycle of deviations of mushroom substrate quality from farm standards for substrate
- industry and workplace awards and conditions
- overview of mushroom production cycle
- overview of Phase I and Phase II substrate production
- relevant legislation and industry codes of practice
- site quarantine protocols.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• organise the process of mushroom substrate preparation</li> <li>• observe and report non compliance with farm quality standards</li> <li>• supervise staff so that standards relating to productivity, workflow requirements, farm procedures and quality are met</li> <li>• contribute as a team member to performance of mushroom substrate processes</li> <li>• record and report production information.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>

## AHCPHT401A Assess olive oil for style and quality

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers assessing olive oil for style and quality and defines the standard required to: identify olive oil styles; identify common olive oil defects; modify horticultural and/or processing practices to remedy variations from desired style and quality.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to olive growers or managers assessing oil produced from an olive crop.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish and implement appropriate tasting protocols	1.1.Appropriate tasting conditions are established. 1.2.Accepted industry tasting procedures are applied. 1.3.Oils are tasted in the order that will best show character of each oil.
2. Determine style and sensory quality of the olive oil	2.1.Characteristics of the olive oil are identified and assessed. 2.2.Style of oil is assessed by tasting. 2.3.Sensory quality of oil is assessed by smelling and tasting. 2.4.Observed defects are analysed and recorded for future action.
3. Determine the analytical quality of the olive oil	3.1.Samples of oils are sent to laboratory for testing of key chemical indices. 3.2.Analytical quality of oil is assessed by interpreting key chemical indices. 3.3.Observed chemical indices that are beyond the normal range are recorded for future action.
4. Identify factors influencing the style and quality of the olive oil	4.1.Horticultural factors that may influence style and quality of the olive oil are identified. 4.2.Processing factors that may influence style and quality of the olive oil are identified. 4.3.Other factors that may influence style and quality of the olive oil are identified.
5. Implement findings of tastings and chemical analyses	5.1.Records of season's tastings and chemical analyses are maintained according to enterprise procedures. 5.2.Horticultural and processing activities and methods are evaluated in terms of modifications and improvements to be made for next season. 5.3.Horticultural production plan for next season is adjusted, documented and communicated to

ELEMENT	PERFORMANCE CRITERIA
	<p>horticultural personnel according to enterprise procedures.</p> <p>5.4. Processing requirements for next season are documented and communicated to processing personnel according to enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- general tasting skills, including ability to detect and describe aromas and flavours, and to distinguish between bitterness and pungency in oils
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- cause of olive oil defects and how they can be remedied
- horticultural and processing practices that affect olive oil style, and reasons for the effect
- relationship between critical chemical parameters and oil style and quality.

## Evidence Guide

### EVIDENCE GUIDE

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify olive oil styles</li> <li>• identify common olive oil defects</li> <li>• modify horticultural and/or processing practices to remedy variations from desired style and quality.</li> </ul>

## AHCPHT402A Develop a crop regulation program

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers developing a crop regulation program and defines the standard required to: assess and select cost-effective techniques, resources and equipment for the regulation of horticultural crops; prepare a cost-benefit analysis on available crop regulation methods; develop a crop regulation program to achieve the yield and quality specified in the enterprise production plan; document detailed schedules and work procedures; and document a crop regulation plan, specifications and quotation.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those who develop a crop regulation program. It covers the process of developing a crop regulation program to control the yield and quality of horticultural crops.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess crop regulation methods	<p>1.1. Production targets and production requirements in terms of quantity, quality and availability of specified crops are identified from the enterprise production plan.</p> <p>1.2. Research is conducted into the characteristics and growing requirements of plant species and cultivars that may affect the crop regulation program.</p> <p>1.3. The benefits and limitations of available crop regulation methods for specified crops are assessed based on published data on the species and cultivars, historical records, own experience and enterprise guidelines.</p> <p>1.4. Implementation risk of available methods is evaluated and risk controls recorded and costed.</p> <p>1.5. A cost-benefit analysis is conducted on available crop regulation methods, and the most cost-effective approach to crop regulation is determined and submitted to management for approval.</p>
2. Identify the requirements of a crop regulation program	<p>2.1. The crop regulation program is developed to achieve the appropriate yield and quality specified in the enterprise production plan.</p> <p>2.2. Resources, tools, equipment and machinery required for the crop regulation program are identified, costed and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>2.3. Occupational Health and Safety (OHS) hazards</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>associated with the implementation of the crop regulation program are identified; risks assessed and controls developed according to enterprise guidelines, and are budgeted and documented in the plan.</p> <p>2.4.Environmental implications of the crop regulation program are identified and documented in the plan.</p> <p>2.5.Staged implementation and development are outlined, where appropriate, according to the range of conditions over the growing cycle of the plant species and cultivars.</p> <p>2.6.Timelines for crop regulation activities are determined taking into account the needs of the plant species and cultivars, site conditions, and any other planning requirements.</p>
3. Prepare and document the crop regulation program and specifications	<p>3.1.Detailed plan, specifications and quotation are prepared based on the requirements of the program and presented to management for acceptance.</p> <p>3.2.Scaled site plan is produced which can be readily interpreted and understood by on-site personnel according to enterprise standards.</p> <p>3.3.Detailed on-site procedures and schedules required for the crop regulation program are developed and documented.</p>
4. Monitor the crop regulation program	<p>4.1.Implementation of the program is monitored to ensure requirements of the enterprise production plan are achieved.</p> <p>4.2.The crop regulation program is reviewed and monitored to ensure it remains responsive to changing conditions.</p> <p>4.3.Appropriate courses of action are implemented to alleviate or overcome identified shortcomings in the program.</p> <p>4.4.Remedial action undertaken is documented and reported to management according to enterprise policies.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- comply with legislative requirements
- document plans, specifications, schedules and work procedures, and write reports for the understanding of staff, managers and contractors
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- site evaluation techniques including analysis of the condition of soils, plants and the site for production activities
- the characteristics of soil and other growth media types and the use of additives to enhance the available nutrition for specific plant species and cultivars
- the relationship between enterprise crop regulation methods, such as thinning, pruning and RDI, and the yield and quality of specific crops
- processes and techniques for preparing, costing and documenting plans for scheduling crop regulation activities
- specific crop physiology and timing of regulation.

## Evidence Guide

## AHCPHT403A Develop harvesting and processing specifications to produce an olive oil

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers developing harvesting and processing specifications to produce an olive oil and defines the standard required to: select an appropriate style of oil that can be produced from a crop and describe it using standard industry terminology; estimate and schedule fruit maturity; arrange for an appropriate method of processing to produce the desired style and quality of oil; incorporate specifications into a contract; and document the specifications and related processing requirements in a report.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those who develop specifications that will produce the required quantity, style and quality of oil from an olive crop and relates to the work involved with the commercial-scale growing of olives for the production of olive oil.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Specify the style and other characteristics desired of the olive oil	1.1.Desired properties of the olive oil are specified using standard industry terminology.
2. Establish the appropriate time and conditions for harvesting	2.1.Maturity of fruit is estimated using informal and formal methods, and according to enterprise and industry procedures. 2.2.Harvest is scheduled so that fruit picked will produce desired quality, style and amount of olive oil. 2.3.Range of harvest methods available is evaluated and the ones most likely to contribute to production of desired olive oil are selected. 2.4.Where required, harvesting personnel are obtained and briefed about harvest requirements and procedures.
3. Specify post-harvest handling and processing method	3.1.Post-harvest handling and treatment for olive crop are specified using standard industry terminology. 3.2.Processing method is specified using standard industry terminology.

ELEMENT	PERFORMANCE CRITERIA
	3.3. Packaging, storage and transport requirements for processed olive oil are specified using standard industry terminology.
4. Select an olive oil processor	4.1. Details of suitable available processors are obtained. 4.2. Criteria for selecting a processor are reviewed and applied. 4.3. Most suitable processor is selected using predetermined criteria. 4.4. Specifications and related processing requirements are agreed with selected processor and incorporated into a contract. 4.5. Document the specifications and related processing requirements in a report.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- judging crop maturity
- researching available processors and methods of extraction
- tasting skills to assess olive oil style and quality
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- how an olive oil is produced from olives
- market preferences for styles of olive oil

## REQUIRED SKILLS AND KNOWLEDGE

- methods of olive oil extraction and advantages/disadvantages associated with each
- relevant legislation and regulations covering food safety, trade practices and contract law
- influence of processing on chemical composition of oil (polyphenols, aroma and flavour compounds)
- influence of various harvesting methods on olive oil style and quality (bitterness, pungency, aroma and flavour)
- post-harvest handling (including storage and transport) requirements for olive fruit intended for olive oil processing
- post-processing storage and handling requirements of olive oil.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select an appropriate style of oil that can be produced from a crop and describe it using standard industry terminology
- estimate and schedule fruit maturity
- arrange for an appropriate method of processing to produce the desired style and quality of oil
- incorporate specifications into a contract
- document the specifications and related processing requirements in a report.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Harvesting specifications may include:	<ul style="list-style-type: none"> <li>• arrangements for delivery and collection of harvested crop</li> <li>• cost per tonne of fruit processed</li> <li>• delivery and collection of processed olive oil</li> <li>• price paid for processing, or amount of oil traded in lieu of processing fee</li> <li>• processing specifications include:                             <ul style="list-style-type: none"> <li>• availability, particularly at time of optimum maturity</li> <li>• capability supported by referees</li> <li>• cleanliness</li> <li>• capacity and location of the mill</li> <li>• commercial terms offered</li> <li>• flexibility regarding processing parameters</li> <li>• methods of extraction available</li> <li>• price or processing fee</li> <li>• type and condition of pre-processing handling</li> <li>• storage facilities and type of olive milling.</li> </ul> </li> </ul>
Post-harvest handling may include:	<ul style="list-style-type: none"> <li>• transporting harvested produce from the field to post-harvest processing or storage facilities</li> <li>• grading</li> <li>• applying treatments</li> <li>• packing, labelling and storing harvested produce.</li> </ul>

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan for harvesting	<p>1.1. Crop maturity and quality are assessed and recorded.</p> <p>1.2. Optimum time to harvest crop is estimated according to crop maturity assessment and customer requirements.</p> <p>1.3. Pre-harvest treatments for control and eradication of pests are determined and carried out according to Occupational Health and Safety (OHS) requirements.</p> <p>1.4. Where applicable to enterprise's operations, requirements for licences or permits are identified and met.</p> <p>1.5. Resource requirements are assessed, giving consideration to size of crop and estimated timing of harvest.</p> <p>1.6. Labour and equipment required to carry out harvesting operations are confirmed and arranged within budgetary constraints.</p> <p>1.7. Enterprise requirements for harvesting are identified and communicated to all harvest personnel.</p> <p>1.8. Insurance requirements are assessed and risk management strategies planned and implemented.</p> <p>1.9. Where applicable to enterprise's operations, requirements for fire prevention and control are identified and arranged according to OHS requirements.</p>
2. Coordinate the harvest strategy	<p>2.1. Effective communication strategies are implemented to ensure personnel safety and smooth flow of operations.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.2. Harvesting operations are implemented and adjusted as required, according to factors such as market or customer requirements, weather, equipment and staff or contractor availability.</p> <p>2.3. Equipment operation is coordinated for maximum efficiency and monitored for performance effectiveness.</p> <p>2.4. Existing and potential hazards are identified and controlled according to OHS and enterprise requirements.</p>
3. Complete harvest operation	<p>3.1. Storage resources are located for efficient operations.</p> <p>3.2. Strategies for drying crops are identified if necessary.</p> <p>3.3. Work is monitored to ensure that crop is graded, packed and stored according to enterprise requirements.</p> <p>3.4. Harvesting operations and outcomes, including resource allocation, are evaluated against harvest strategy.</p> <p>3.5. Feedback on performance is provided to personnel under supervision.</p> <p>3.6. Own performance is assessed, feedback on performance is sought and any required improvements are noted for future action.</p> <p>3.7. Strategies identified, crop quality, pre-harvest treatments and outcomes of harvest are documented in a report for continual analysis and effective planning management.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- establishing strategies, procedures and controls for crop harvesting
- implement treatments for control and eradication of pests
- implementing safe workplace and positive environmental practices

## REQUIRED SKILLS AND KNOWLEDGE

- coordinate equipment
- work within budgetary constraints
- evaluate harvest operations and outcomes
- document a crop harvesting report
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- crop measurement techniques and parameters
- customer requirements
- environmental controls and codes of practice applicable to harvesting operations
- functions and limitations of harvesting equipment
- market information and sources
- location and relative skills and abilities of available staff, contractors or casual staff
- relevant legislation and regulations relating to OHS, contractor engagement, chemical use and application, and vehicle and plant use
- required productivity rates
- weather or other conditions that may affect harvest
- where relevant to enterprise's production: food safety and Hazard Analysis Critical Control Point (HACCP) requirements, and requirements for export markets, such as EUREPGAP, Codex Alimentarius and the Bioterrorism Act (US).

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• organise resources for the harvest</li> <li>• establish strategies for pre-harvest and harvest</li> <li>• estimate crop quality and yield</li> <li>• evaluate harvest operations and outcomes</li> <li>• document a crop harvesting report.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Horticultural crops may include:	<ul style="list-style-type: none"> <li>• all fruit</li> <li>• vegetables</li> <li>• herbs</li> <li>• flowers</li> <li>• foliage</li> <li>• bulbs</li> <li>• tubers</li> <li>• nuts</li> <li>• fungi</li> <li>• wild harvest plants</li> <li>• oils</li> <li>• olives</li> <li>• grains</li> <li>• seeds</li> <li>• hops</li> <li>• other specialised crops not specifically named</li> </ul>

<b>RANGE STATEMENT</b>	
	as broad acre crops.
Harvesting programs may include:	<ul style="list-style-type: none"> <li>• the correct use of equipment</li> <li>• select picking</li> <li>• reporting or recording tallies</li> <li>• removing out-of-type plants</li> <li>• removing rotten or immature fruit.</li> </ul>

## AHCPHT405A Manage mushroom substrate preparation

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers managing mushroom substrate preparation and defines the standard required to: monitor and manipulate all interactions between inputs, conditions and outputs for each stage of substrate process; record and analyse production data; establish and review farm procedures for mushroom substrate preparation; set and monitor productivity standards for mushroom substrate and rest of production cycle.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the role of managers either in a general mushroom farming enterprise or in a specialist substrate preparation enterprise.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Confirm status of system requirements for mushroom substrate preparation	<p>1.1. Mushroom substrate preparation processes are overseen and managed to ensure that work is performed according to farm procedures, and that all equipment is operated according to manufacturer instructions and at a speed that maintains safe and continuous operation.</p> <p>1.2. Details of quantities of substrate required and dates/times to be achieved for each process stage are determined and communicated to personnel involved in the various stages of substrate preparation.</p> <p>1.3. Availability, quality, serviceability, and cleanliness of all rooms, work areas, machinery, equipment and materials required for mushroom substrate preparation are ascertained.</p> <p>1.4. Staff duties and responsibilities are allocated.</p> <p>1.5. Where problems with process are identified, remedial action is initiated as required and according to farm procedures.</p> <p>1.6. Personal Protective Equipment (PPE) and clothing are selected and used by all personnel involved in mushroom substrate processing tasks.</p> <p>1.7. Impact of mushroom substrate preparation processes on other enterprise activities is determined, personnel advised and adjustments to schedules and operations are made where required and according to farm procedures.</p> <p>1.8. Occupational Health and Safety (OHS) requirements and hazards associated with each task are identified and appropriate action is taken to minimise risks to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>self and others.</p> <p>1.9. Site quarantine protocols and farm and personal hygiene requirements are determined, applied and managed as required.</p> <p>1.10. All work of team is managed to ensure that it is performed according to farm procedures and in an environmentally aware and safe manner.</p>
2. Confirm quality and consistency of Phase II outputs	<p>2.1. Phase II process is managed to ensure it conforms to required production schedule and farm procedures.</p> <p>2.2. Key factors and critical points are recorded.</p> <p>2.3. Random representative samples of end product are taken in line with farm procedures and are dispatched to laboratory for analysis.</p> <p>2.4. Test results are recorded in farm records, compared to farm standards and remedial action is taken if required.</p>
3. Monitor and manipulate spawning and spawn run	<p>3.1. Condition and quality of compost are assessed before spawning and, if required, remedial action is taken according to farm procedures.</p> <p>3.2. Temperature readings are taken and recorded according to farm procedures and adjustments are made to thermostat if required.</p> <p>3.3. Carbon dioxide content is measured, recorded and controlled according to farm procedures.</p> <p>3.4. Spawn growth and appearance of mycelium are monitored during spawn run period.</p> <p>3.5. Where supplement is to be added to substrate at spawning, product and its rate of application are selected and instructions are given to appropriate personnel.</p> <p>3.6. Room hygiene and occurrence of pests and diseases are monitored and, if required, control measures are implemented according to farm procedures.</p>
4. Manage clean-up procedure	<p>4.1. Clean-up activities at the end of each process stage are managed to ensure they comply with farm procedures.</p> <p>4.2. Cook-out or chemical disinfestations treatment is conducted as appropriate prior to removal of spent substrate.</p> <p>4.3. Return of equipment and hand tools to storage area after cleaning, basic preventative maintenance and checking for future serviceability is monitored to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>ensure compliance with farm procedures.</p> <p>4.4. Faults are reported to maintenance personnel for remedial action.</p> <p>4.5. Inventory of all inputs is made to ensure availability of sufficient stock for future use.</p> <p>4.6. Records are completed legibly and accurately according to farm procedures.</p> <p>4.7. Feedback on performance is provided to personnel under supervision.</p> <p>4.8. Own performance is assessed, feedback on performance sought and any required improvements are noted for future action.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identifying hazards and overseeing safe work practices
- accepting responsibility for quality of own work
- contributing to productive work environment
- developing work schedules
- explaining quality standards and task requirements to personnel
- managing own work and that of others
- monitoring and recording key parameters including environmental impacts
- observing employment requirements
- promoting workplace cooperation
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
abilities.
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• casing function, application, required depth and required surface structure</li> <li>• detailed knowledge of all stages in Phase II substrate preparation process</li> <li>• farm standards and procedures, including those relating to OHS, food safety, Hazard Analysis Critical Control Point (HACCP), quality systems, emergency procedures, organisational structure and workplace communication channels and protocols</li> <li>• how mushrooms are grown, with a focus on interaction between compost, environmental factors (such as temperature, water, relative humidity, carbon dioxide and ammonia) and mushroom growth</li> <li>• industry and workplace awards and conditions</li> <li>• key parameters to be recorded and monitored and appropriate ranges in relation to temperature, ammonia, relative humidity, moisture content, carbon dioxide and time</li> <li>• overview of Phase I compost production</li> <li>• overview of mushroom production cycle and possible impact of deviations from farm standards on substrate and rest of production cycle</li> <li>• relevant legislation and industry codes of practice</li> <li>• site quarantine protocols.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• monitor and manipulate all interactions between inputs, conditions and outputs for each stage of substrate process</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>record and analyse production data</li> <li>establish and review farm procedures for mushroom substrate preparation</li> <li>set and monitor productivity standards for mushroom substrate and rest of production cycle.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Mushroom substrate may include:	<ul style="list-style-type: none"> <li>the range of ingredients and processes required for Phase II compost preparation and a range of mushroom substrate components and products.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Confirm the requirements for Phase II mushroom substrate preparation	<p>1.1. Phase II mushroom substrate process is monitored and managed to ensure that process is performed according to farm procedures and schedules, and that all equipment is operated safely and according to manufacturer instructions.</p> <p>1.2. Checks are made to ensure all temperature probes are functioning correctly.</p> <p>1.3. Occupational Health and Safety (OHS) requirements and hazards associated with Phase II process are identified and appropriate action is taken to minimise risks.</p> <p>1.4. Personal Protective Equipment (PPE) and clothing are selected and used according to farm OHS procedures.</p> <p>1.5. Site quarantine protocols and farm and personal hygiene requirements are determined, applied and monitored as required by farm procedures.</p> <p>1.6. Condition and quality of compost are assessed before filling and any required remedial action is communicated according to farm procedures.</p>
2. Carry out Phase II process	<p>2.1. Placement of probes in air and substrate is monitored to ensure placement complies with required farm procedures.</p> <p>2.2. The evenness of filling and amount filled are checked.</p> <p>2.3. Room or tunnel is checked at completion of filling to ensure that doors are secure and vents and thermostats are set according to farm procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.4.Key factors and critical points are measured and recorded legibly and accurately according to farm procedures.</p> <p>2.5.Equipment settings are adjusted as required and according to farm procedures to ensure optimum conditions for each Phase II sub-stage.</p> <p>2.6.Random representative samples are taken for laboratory chemical testing.</p> <p>2.7.Ammonia measurements are taken or ammonia levels assessed prior to cool down for spawning.</p> <p>2.8.Feedback on performance is provided to personnel under supervision.</p> <p>2.9.Own performance is assessed, feedback on performance sought and any required improvements are noted for future action.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- accepting responsibility for quality of own work
- contributing to productive work environment
- developing work schedules
- maintaining safety of self and others
- managing own work and that of others
- monitoring and recording key parameters
- OHS, environment and employment legislation and enterprise procedures
- promoting workplace cooperation
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of

**REQUIRED SKILLS AND KNOWLEDGE**

cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- basic interpretation of chemical test results
- concept of compost selectivity and biological indicators of compost quality
- factors influencing air quantity and distribution
- farm standards and procedures, including those relating to OHS, food safety, Hazard Analysis Critical Control Point (HACCP), quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
- industry and workplace awards and conditions
- key parameters to be recorded and monitored relating to temperature, ammonia and moisture content
- knowledge of how different systems (shelf, tray and tunnel) impact on temperature zones in substrate
- knowledge of objectives and desired parameters of each sub-stage of Phase II substrate preparation
- overview of Phase I compost production and how it impacts on Phase II process
- relevant legislation and industry codes of practice
- site quarantine protocols
- understanding of importance of correct probe placement and calibration.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- differentiate between Phase I substrate and substrate ready for spawning and describe desired parameters

<b>EVIDENCE GUIDE</b>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage casing application	<p>1.1. Casing materials and recipe are selected and instructions are given to appropriate personnel.</p> <p>1.2. Occupational Health and Safety (OHS) requirements and hazards are identified and appropriate action is taken to minimise the risks to self and others.</p> <p>1.3. Personal Protective Equipment (PPE) and clothing are selected and used according to farm OHS procedures.</p> <p>1.4. Condition and quality of spawn run are assessed before casing and, if required, remedial action is taken according to farm procedures.</p> <p>1.5. Where supplement is to be added to substrate at casing, product and its rate of application are selected and instructions are given to appropriate personnel.</p> <p>1.6. Casing mixture is checked against farm standards for moisture, structure and depth, and remedial action is taken if required.</p>
2. Control environment during casing colonisation growth phase	<p>2.1. Crop is installed in growing room according to farm procedures.</p> <p>2.2. Air conditioning system in the growing room is set up and checked for correct functioning.</p> <p>2.3. Temperature, relative humidity and carbon dioxide content are measured, recorded, and where required, adjusted.</p> <p>2.4. Mycelium growth is assessed and decisions are made</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>on the timing and quantity of water to be applied.</p> <p>2.5. Pest and disease status is monitored and recorded and, where required, remedial action is taken.</p>
<p>3. Initiate fruit body formation and manage pinning and pre-picking growth phases</p>	<p>3.1. Growth is assessed and changes are made to temperature and ventilation to initiate fruit body formation according to farm procedures.</p> <p>3.2. Temperature, relative humidity and carbon dioxide content are measured, recorded and adjusted.</p> <p>3.3. Variations from expected or required ranges of temperature, relative humidity and carbon dioxide content are identified and analysed, and appropriate remedial action is taken.</p> <p>3.4. Mycelium development and pin development are assessed and timing and quantity of water and additives to be applied to water are determined.</p> <p>3.5. Pest and disease status are monitored and recorded, and remedial action is taken where required.</p> <p>3.6. OHS requirements and hazards are identified and appropriate action is taken to minimise the risks to self and others.</p>
<p>4. Assess crop maturity, flush development and quality, and monitor the harvesting process</p>	<p>4.1. Crop maturity is assessed to determine when and what to pick.</p> <p>4.2. Pickers are given instructions about tasks to be performed.</p> <p>4.3. Picking results are monitored to ensure instructions continue to be appropriate and are being carried out.</p> <p>4.4. Markets are consulted to ensure product meets market needs and specifications.</p> <p>4.5. Crop quality is monitored, disorders stimulated by environmental conditions are recognised, and remedial action is implemented if required.</p> <p>4.6. Pest and disease status during this stage are monitored and recorded, and remedial action is taken where required.</p> <p>4.7. Daily work schedule for waterers is planned and picking and watering schedules are coordinated.</p> <p>4.8. Harvest process is reviewed for compliance with quality standards and areas for improvement are identified where appropriate, documented and implemented.</p> <p>4.9. Feedback is provided to pickers on individual and team performance.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- maintaining environment within parameters for production
- accepting responsibility for quality of own work
- contributing to productive work environment
- developing work schedules
- managing own work and supervising work of others
- maintaining safety of self and others
- implement and review QA procedures including food safety
- observing employment requirements
- promoting workplace cooperation
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- available options of additives to irrigation water to promote mushroom quality and the main considerations of their use
- basic understanding of air conditioning principles, particularly relative humidity
- casing function, application and depth and surface structure requirements
- desirable physical, biological and chemical characteristics of casing
- farm standards and procedures, including those relating to OHS, food safety, Hazard Analysis Critical Control Point (HACCP), quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
- goals and sub-stages of Phase II substrate preparation and impact of Phase II on yields and quality
- growth phases of a mushroom crop and interactions that occur between the

**REQUIRED SKILLS AND KNOWLEDGE**

- compost, casing, environmental factors (such as temperature, water, relative humidity and carbon dioxide) and growth of the mushroom
- how nature of casing and the appearance and quantity of mycelium growth in casing affect the number, distribution and quality of fruit bodies formed
  - impact of mushroom numbers and size on picking and quality
  - industry and workplace awards and conditions
  - overview of Phase I substrate production and its impact on yields and quality
  - management impacts of supplementing at spawning or casing
  - management requirements of casing - Compost Added at Casing (CAC) and/or Casing Inoculums (CI)
  - OHS and environmental legislation, industry codes of practice and enterprise procedures
  - site quarantine protocols.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- recognise stages of growth and development, and factors impacting on yields and mushroom quality
- recognise the interdependency of stages of growth and impact of early stages of production cycle on production results
- monitor and manage growing room conditions, watering and flush development of mushroom crops.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

**EVIDENCE GUIDE**

enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Mushrooms may include:

- all species and cultivars of fungi.

Farm standards and procedures may include:

- those relating to:
- OHS, food safety
- HACCP
- quality systems
- emergency procedures
- organisational structure
- workplace communication channels and protocols.

## AHCPHT408A Overseer vineyard practices

### Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release. New unit based on NSW accredited unit NSWTVIT501A Implement and manage vineyard practices

### Unit Descriptor

This unit of competency covers the process of overseeing vineyard practices for the production of grapes including knowledge of grape varieties, growing systems, vineyard establishment, vine training, vine health control, harvesting, planning and reporting processes, relevant legislation and supervision of workers.

### Application of the Unit

This unit applies to vineyard supervisors who develop and implement a program of vineyard practices and monitor and review the growing program.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Nil

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define the requirements of the vineyard	1.1 The range of grape varieties and cultivars, and growing systems are identified 1.2 <b>Materials, equipment</b> and labour required for maintaining the vineyard are determined 1.3 <b>Consumables</b> required for maintaining the vineyard are determined 1.4 Staff skills and knowledge are checked
2. Develop a program of <i>vineyard practices</i>	2.1 Vineyard practices are determined from planting out to harvest and for the annual growing season 2.2 Resources are allocated 2.3 Allowance in the program is made for unforeseen circumstances, damage caused by weather, and new developments
3. Implement the program	3.1 Daily workplace <b>records</b> and other information relevant to the vineyard program are gathered and stored 3.2 Staff are allocated and supervised, as required 3.3 Materials and equipment are used according to <b>workplace health and safety</b> requirements and enterprise <b>safe operating procedures</b>
4. Monitor and review the program	4.1 The vineyard program is checked against previous programs and adjustments are made as necessary 4.2 Production plans are reviewed to determine and align schedule of activities 4.3 Vineyard practices are regularly reviewed to identify opportunities for improvements in performance 4.4 Costs and estimates of the vineyard program are compared with resource allocation

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills include:****Ability to:**

- recognise grape varieties and cultivars
- determine maintenance requirements for the vineyard
- plan and program vineyard practices
- manage implementation of vineyard practices
- determine and organise work schedules
- source information
- gather and record information

**Required knowledge includes:****Knowledge of:**

- grape varieties and cultivars
- vineyard practices for a range of grape varieties and cultivars, and growing systems
- trellis and harvesting systems
- irrigation systems
- plant nutrition practices
- weed, pest and disease control practices
- legislation or local by-laws relevant to safe operating practices and workplace health and safety

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- determine maintenance requirements for the vineyard
- oversee the implementation of vineyard practices
- develop and organising work schedules

	<ul style="list-style-type: none"> <li>• supervise workers</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other units</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</li> <li>• The assessment environment should not disadvantage the candidate</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role</li> </ul>
Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Vineyard practices</i></b> include:</p>	<ul style="list-style-type: none"> <li>• soil preparation</li> <li>• planting</li> <li>• trellising</li> <li>• training</li> <li>• fertilising</li> <li>• weed, pest and disease control</li> <li>• inter row cultivation</li> <li>• irrigation</li> <li>• pruning</li> <li>• crop monitoring</li> <li>• harvesting and equipment</li> <li>• machinery maintenance</li> </ul>
<p><b><i>Materials and equipment</i></b></p>	<p>Large and small motorised machinery and equipment such as:</p> <ul style="list-style-type: none"> <li>• tractors</li> <li>• soil cultivation, spraying, pruning and harvesting machinery and equipment</li> <li>• hand tools such as secateurs, loppers and pruning saws</li> </ul>
<p><b><i>Consumables</i></b> may include but are not limited to:</p>	<ul style="list-style-type: none"> <li>• fertilisers</li> <li>• soil conditioners and ameliorants</li> <li>• irrigation components</li> <li>• sprays and chemicals</li> <li>• fuels and oils</li> <li>• posts and wire</li> <li>• vine protection devices</li> <li>• vine rootlings</li> <li>• personal protective equipment</li> <li>• first aid requirements</li> <li>• office requirements</li> </ul>
<p><b><i>Workplace health and safety</i></b></p>	<p>Hazards may include:</p> <ul style="list-style-type: none"> <li>• disturbance or interruption of services</li> <li>• solar radiation</li> <li>• dust, noise, soil-, air- and water-borne micro-organisms,</li> </ul>

	<ul style="list-style-type: none"><li>• chemicals and hazardous substances</li><li>• sharp hand tools and equipment</li><li>• manual handling</li><li>• moving vehicles</li><li>• machinery and machinery parts</li><li>• slippery and uneven surfaces</li><li>• falling and flying objects</li></ul>
<b><i>Safe operating procedures</i></b>	Safe operating procedures developed for machinery and equipment and particular vineyard cultural practices
<b><i>Records</i></b>	Records may be recorded manually or with proprietary software

## Unit Sector(s)

Production Horticulture

## AHCPT502A Develop a horticultural production plan

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of developing a production plan for a horticultural enterprise, and defines the standard required to: establish product specifications; research site factors and land use issues; select and source plants or plant material for seeding or propagation; design and incorporate infrastructure into planning; specify a monitoring program to cover the operation from sowing to sale; and document and cost the production plan.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit requires consideration of market requirements and site factors, suitable plant species and cultivars, resources and equipment for establishing production sites, planting and maintenance, and preparation of plans, specifications, quotations and associated documents. Work is likely to be under limited supervision with checking related to overall progress by senior managers. Responsibility for the work of others and team coordination may be required. Planning is usually undertaken within policy guidelines and procedures where discretion and judgement are required in the selection of technology, organisation of work, and the achievement of outcomes within time and budgetary constraints.
--------------------------------	---

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out preliminary planning activities	<p>1.1. Client preferences and requirements for the horticultural product are understood and confirmed according to enterprise marketing and business plans.</p> <p>1.2. The production site is assessed for growing environment factors, services and site modifications.</p> <p>1.3. Research is conducted into the characteristics and growing requirements of plant species and cultivars, legal attributes of the production site, and local by-laws and restrictions that may affect the production plan.</p> <p>1.4. Sustainable land use issues that may affect planned production are identified and, if necessary, reported to relevant personnel for further research.</p> <p>1.5. Production targets are set that are consistent with the marketing strategy and business plan.</p> <p>1.6. Production requirements in terms of quantity, quality and availability of the product are determined.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.7. A preliminary plan that reflects client preferences and requirements, and takes into account site factors and any identified sustainable land use requirements, is developed and presented to appropriate personnel for discussion and approval.</p>
<p>2. Determine the requirements of horticultural production</p>	<p>2.1. Plant species and cultivars that are appropriate to the site and consistent with the agreed preliminary plan are identified, and the required quantity calculated, costed and availability confirmed with the supplier.</p> <p>2.2. Plant establishment procedures consistent with the agreed preliminary plan are selected according to the characteristics and growing requirements of available plant materials, site factors, resources and equipment available and the sustainable land use factors affecting the success of production.</p> <p>2.3. Design of the production site includes irrigation and drainage systems, and takes into account the growing requirements of plants and sustainable land use practices.</p> <p>2.4. Cultural management of the growing environment from planting to harvest is provided for according to client requirements, site capabilities and enterprise standards, and encourages optimal growth.</p> <p>2.5. Harvesting dates to meet market deadlines are determined according to enterprise policies.</p> <p>2.6. Resources, tools, equipment and machinery required for the establishment of the production site, propagation of plants, planting, cultural management of the growing environment, harvesting and post-harvest care are identified, costed and availability confirmed with suppliers, contractors and appropriate personnel.</p> <p>2.7. Occupational Health and Safety (OHS) hazards associated with production activities are identified, risks assessed and controls developed according to enterprise guidelines, costed and documented in the plan.</p> <p>2.8. Policy concerning out-of-standard products is identified according to enterprise customer service, quality assurance policies and marketing strategy.</p>
<p>3. Schedule production activities</p>	<p>3.1. Staged implementation and development of product are outlined, where appropriate, with access for future works provided for according to client,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>enterprise and site requirements.</p> <p>3.2. Timelines for preparations, the establishment of the production site, propagation of plants, planting, cultural management of the growing environment, harvesting and post-harvest care are determined taking into account the needs of the plant species and cultivars, the softscape and hardscape components, site conditions and any other planning requirements.</p> <p>3.3. Timing within the plan ensures that available enterprise production facilities and space are effectively and efficiently utilised.</p> <p>3.4. Marketing is planned and scheduled according to the production schedule and marketing strategy.</p>
4. Plan monitoring of the production plan	<p>4.1. Production activities to be monitored, the format for recording factors, frequency of monitoring and the thresholds for remedial action are determined according to enterprise and industry quality assurance policies.</p> <p>4.2. Required remedial action is documented for implementation by staff according to enterprise and industry quality assurance policies.</p> <p>4.3. Effectiveness of the monitoring system is reviewed on a regular basis according to enterprise and industry quality assurance policies.</p> <p>4.4. The production program is compared with feedback and projections from clients according to sound business practice.</p>
5. Prepare and document the production plan and specification	<p>5.1. Detailed plan, specifications and quotation are prepared based on horticultural conventions and the requirements of production, and presented to appropriate personnel for acceptance.</p> <p>5.2. Scaled production site plan is produced which can be readily interpreted and understood by on-site personnel according to enterprise standards.</p> <p>5.3. Detailed on-site procedures and schedules required for production are developed and documented.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- research and evaluate information
- comply with legislative requirements
- calculate the cost and spatial and logistical requirements of components of the horticultural production plan
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- establishment and maintenance of a range of enterprise horticultural products in relation to client needs and the standards required by the marketplace
- establishment procedures, plant selection and cultural practices for a range of enterprise horticultural products
- the advantages and limitations of sustainable horticulture systems
- the role of business and marketing plans and client consultation processes in planning horticultural production
- processes and techniques for preparing, costing and documenting plans for and scheduling horticultural production.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and

The evidence required to demonstrate competency in this

<b>EVIDENCE GUIDE</b>	
<b>evidence required to demonstrate competency in this unit</b>	<p>unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish product specifications</li> <li>• research site factors and land use issues</li> <li>• select and source plants or plant material for seeding or propagation</li> <li>• design and incorporate infrastructure into planning</li> <li>• specify a monitoring program to cover the operation from sowing to sale</li> <li>• document and cost the production plan.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## AHCPT503A Manage a controlled growing environment

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of managing controlled growing environments, and defines the standard required to: identify the growing requirements of the crop; prepare specifications for controlled growing infrastructure; develop a management plan to cover staff training, budgets, operating procedures and remedial actions; develop environmental monitoring procedures; and evaluate and document the achievements towards management objectives.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the management of a horticultural production site consisting of one or several controlled growing environments. The work is usually undertaken without supervision, with only general guidance on progress sought by senior management. Responsibility for the work of others may be involved and team coordination may be required. Management of controlled growing environments requires extensive horticultural knowledge and practical skills, particularly in plant physiology and growth needs, controlled environment systems, monitoring, reporting and forward planning.
--------------------------------	---

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify crop requirements	<p>1.1.Crop growth and production requirements are determined according to a documented production plan.</p> <p>1.2.Environmental parameters for optimal growing conditions for the specific crop are researched using available information resources.</p> <p>1.3.Controlled growing environment factors are identified, evaluated and recorded.</p>
2. Determine requirements for controlled growing environment	<p>2.1.Structures, machinery, equipment and resources required to control environmental conditions are identified, costed and availability confirmed.</p> <p>2.2.Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented.</p> <p>2.3.Detrimental environmental impacts associated with the controlled growing environment system are identified and controls sanctioned.</p>
3. Prepare a	3.1.Management objectives for controlled growing

ELEMENT	PERFORMANCE CRITERIA
management plan for controlled growing environment	<p>environment are determined consistent with production plan and market requirements for crop quantity and quality.</p> <p>3.2.A schedule of environmental control procedures is developed according to controlled environment management objectives.</p> <p>3.3.Staff training needs are evaluated in regard to operation and maintenance of environmental control systems, and reported.</p> <p>3.4.A budget supporting the controlled environment management plan is documented and approval sought.</p> <p>3.5.The schedule of environmental control procedures is communicated clearly to staff.</p>
4. Manage controlled growing environment	<p>4.1.Controlled environment indicators and thresholds for remedial action are identified for monitoring according to industry best practice.</p> <p>4.2.Monitoring frequency and schedule is developed according to the requirements of the production plan and communicated clearly to staff.</p> <p>4.3.All monitoring data is recorded, analysed and applied to management of the controlled environment system to ensure optimal plant development.</p> <p>4.4.Remedial action undertaken is documented and reported.</p> <p>4.5.Costs of the controlled growing environment system are monitored against budget.</p> <p>4.6.Budget adjustments are recorded and reported.</p> <p>4.7.Recorded information, budget data and production outputs are evaluated and operational achievements towards management objectives are documented in a report.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- research information using available technology
- evaluate training needs
- assess risk
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- plant physiology and biochemistry
- techniques and methods of implementing optimal growing conditions for a range of horticultural crops
- controlled environmental conditions in regard to crop plant physiology, growth stages, and product quality and quantity
- quality production methods and techniques for a range of controlled environment plants
- legislation and regulations relating to the controlled environment systems
- market requirements for crop quantity and quality
- monitoring, analysis and recording systems
- staff training requirements.

## AHCPTH504A Develop a grape production plan

### Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release. New unit based on NSW accredited unit NSWTVIT505A Develop a winegrape production plan

### Unit Descriptor

This unit of competency covers the process of developing a production plan for a grape growing enterprise.

### Application of the Unit

This unit applies to vineyard managers who use knowledge of issues and trends affecting the industry, grape market requirements and vineyard site factors, suitable plant species and cultivars, resources and equipment for establishing a vineyard to develop a grape production plan.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Nil

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out preliminary planning activities	<p>1.1 <b>Trends and issues</b> affecting the Australian viticulture industry are identified and evaluated for their impact on planning decisions</p> <p>1.2 <b>Client preferences and requirements</b> for the production of grapes are determined</p> <p>1.3 The vineyard site is assessed for <b>growing environment factors</b>, services and site modifications</p> <p>1.4 Research is conducted into the characteristics and growing requirements of grape varieties and cultivars, legal attributes of the site, and local by-laws and restrictions that may affect the production plan</p> <p>1.5 <b>Sustainable land use</b> issues that may affect planned production are identified</p> <p>1.6 Production targets are set that are consistent with the marketing strategy and business plan</p> <p>1.7 Production requirements in terms of quantity and quality of grapes are determined</p> <p>1.8 A draft plan that reflects client preferences and requirements, and takes into account site factors and any identified sustainable land use requirements is developed</p>
2. Determine the production requirements for grapes	<p>2.1 Grape varieties, species and cultivars that are appropriate to the site and consistent with the agreed preliminary plan are identified, and the required quantity calculated, costed and availability confirmed with the supplier</p> <p>2.2 <b>Establishment procedures</b> consistent with the agreed preliminary plan are selected according to the characteristics and growing requirements of available planting material, site factors, the resources and equipment available and the sustainable land use factors affecting the success of production</p> <p>2.3 Design of the vineyard includes irrigation and drainage systems, and takes into account the growing requirements of grapes and sustainable land use practices</p> <p>2.4 <b>Cultural management</b> practices to achieve optimal growth are documented</p> <p>2.5 Harvesting dates to meet market specifications and deadlines are determined</p> <p>2.6 Resources, tools, equipment and machinery required for</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>production are identified and costed</p> <p>2.7 OHS hazards associated with production activities are identified, risks assessed and controls identified and documented in the plan</p> <p>2.8 Policy concerning grapes not meeting specifications, is identified according to customer requirements, quality assurance policies and marketing strategy</p>
3. Schedule grape production activities	<p>3.1 Staged implementation and development of the grape enterprise are documented</p> <p>3.2 Timelines for grape production activities are determined and documented</p> <p>3.3 Marketing is planned and scheduled according to the production schedule and marketing strategy</p>
4. Plan monitoring of the grape production plan	<p>4.1 Production activities to be monitored, the format for recording factors, frequency of monitoring and the thresholds for remedial action are determined</p> <p>4.2 Required remedial action is documented for implementation by staff</p> <p>4.3 Effectiveness of the monitoring system is reviewed on a regular basis</p> <p>4.4 The production program is compared with feedback and projections from clients</p>
5. Prepare and document the grape production plan and specifications	<p>5.1 Detailed plans, specifications and quotations are prepared based on industry conventions and the requirements of production</p> <p>5.2 Scaled vineyard site plan is produced which can be readily interpreted and understood by on-site personnel</p> <p>5.3 Detailed on-site procedures and schedules required for grape production are developed and documented</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills include:**

**Ability to:**

- document plans, specifications and production work procedures
- prepare reports for staff, managers, clients and contractors
- calculate the cost and logistical requirements of the production plan
- communicate and negotiate verbally and in writing with the client, staff, managers, suppliers, contractors and consultants
- research, evaluate and record relevant information
- comply with legislative requirements

**Required knowledge includes:**

**Knowledge of:**

- trends and issues impacting the Australian viticulture industry
- establishment and management of grape production in relation to client needs and the standards required by the marketplace
- processes and techniques for preparing, costing and documenting plans for and scheduling grape production
- establishment procedures, plant selection and cultural practices for grape production
- the role of business and marketing plans and client consultation processes in planning grape production

**Evidence Guide**

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• document plans, specifications and production work procedures</li> <li>• calculate the cost and logistical requirements of the production plan</li> <li>• prepare reports for staff, managers, clients and</li> </ul>

	contractors
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other units</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</li> <li>• The assessment environment should not disadvantage the candidate</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role</li> </ul>
Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

## Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Trends and issues</i></b> of the industry include:</p>	<ul style="list-style-type: none"> <li>• industry strategies</li> <li>• tourism</li> <li>• export market</li> <li>• e commerce</li> <li>• quarantine, both regional and national</li> <li>• biosecurity</li> <li>• safety</li> <li>• overseas regulations and agreements</li> <li>• labelling regulations</li> <li>• food regulations</li> </ul>
<p><b><i>Client preferences and requirements</i></b> include:</p>	<ul style="list-style-type: none"> <li>• purpose or intended use of the grapes</li> <li>• preferred varieties and cultivars</li> <li>• plant characteristics</li> <li>• growth habits and cultural requirements</li> <li>• quality and grades</li> <li>• quarantine specifications and protocols</li> <li>• postharvest care, storage and delivery</li> <li>• quantities and availability</li> <li>• non-compliance policy</li> <li>• contractual arrangements</li> <li>• pricing structures</li> <li>• budget limitations</li> <li>• payment terms</li> <li>• timelines for delivery of product</li> </ul>
<p><b><i>Growing environment factors</i></b> include:</p>	<ul style="list-style-type: none"> <li>• rainfall</li> <li>• humidity</li> <li>• wind</li> <li>• sunlight intensity</li> <li>• mean temperatures</li> <li>• season length</li> <li>• air quality and flow</li> <li>• soil types and profiles</li> <li>• nutrient toxicities and deficiencies</li> <li>• presence or absence of weeds, pests, diseases and</li> </ul>

	<ul style="list-style-type: none"> <li>• beneficial organisms</li> <li>• the aspect and slope of the site</li> <li>• watercourses and other water sources</li> <li>• existing flora and fauna</li> </ul>
<i>Sustainable land use</i> issues include:	<ul style="list-style-type: none"> <li>• waste minimisation</li> <li>• energy conservation</li> <li>• water resource management</li> <li>• cultural practices</li> <li>• weed, pest and disease control</li> <li>• conservation of heritage values such as native vegetation</li> </ul>
Grape <i>establishment procedures</i> include:	<ul style="list-style-type: none"> <li>• soil testing for physical and chemical characteristics</li> <li>• modification of soil profiles</li> <li>• application of soil treatments; preparation of soil for planting</li> <li>• propagation of planting material, growing-on; planting methods</li> <li>• post-planting care</li> <li>• installation of propagation facilities</li> <li>• installation of irrigation and/or drainage systems</li> <li>• protection of young plants</li> <li>• erection of trellising</li> </ul>
<i>Cultural management</i> of the growing environment includes:	<ul style="list-style-type: none"> <li>• soil preparation</li> <li>• irrigation</li> <li>• fertilising</li> <li>• weed</li> <li>• pest and disease control</li> <li>• integrated pest management</li> </ul>
Crop regulation includes:	<ul style="list-style-type: none"> <li>• canopy management</li> <li>• pruning</li> <li>• de-budding</li> <li>• use of growth hormones and retardants</li> <li>• light manipulation</li> <li>• air temperature and humidity control</li> <li>• trellising and tying</li> </ul>

Production Horticulture

## AHCPTH505A Evaluate wine

### Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release. New unit based on NSW accredited unit NSWTVIT502A Manage and evaluate wine production

### Unit Descriptor

This unit of competency covers evaluating a variety of wine types and styles, enabling recommendations for the improvement of wine making and viticultural practices to enhance the quality of wine produced.

### Application of the Unit

This unit applies to vineyard managers who use knowledge of wine type, style and quality in order to determine the relative contributions of winemaking technique and viticulture practice to the wine.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Nil

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse chemical components of wine	<p>1.1 Chemical components for a particular <i>wine style</i> are determined and where required, testing laboratories are identified</p> <p>1.2 Samples of grapes, juice and/or wine are taken according to standard sampling procedures and laboratory requirements</p> <p>1.3 Simple wine analysis procedures are performed and results recorded</p> <p>1.4 Results of <i>chemical analyses</i> are evaluated and compared with desired values to identify potential chemical problems in the winemaking process and any required additions or fining agents</p>
2. Resolve wine making problems	<p>2.1 Wine or juice is evaluated using standard laboratory and <i>organoleptic procedures</i></p> <p>2.2 The protein stability of a wine is identified using a buttes or heat technique</p> <p>2.3 The need for cold stabilisation of a wine is identified</p> <p>2.4 <i>Additives and/or fining agents</i> are used to alleviate problems or improve quality, and their effectiveness is evaluated and their use adjusted where indicated</p> <p>2.5 Wine making and handling processes are carried out in a <i>hygienic working environment</i></p> <p>2.6 Cellar operations procedures and instructions are clearly described, recorded and utilised during the winemaking process</p>
3. Taste and evaluate a wine	<p>3.1 Accepted <i>tasting procedures</i> are used for tasting the wine</p> <p>3.2 The <i>flavour and aroma components</i> and <i>characteristics of the wine</i> are identified using sensory evaluation methods</p> <p>3.3 The relative contribution and interaction of wine components to the wine taste, aroma and appearance are identified using accepted wine description terminology</p> <p>3.4 Characteristics of wine that make it suitable for cellaring and the ideal cellaring conditions are identified</p> <p>3.5 Tasting notes are made during the tasting process according to industry standards</p> <p>3.6 Records of wine evaluation are made and stored according to industry standards</p>
4. Analyse the effect of	<p>4.1 Evidence of the winemaking technique is identified in the</p>

ELEMENT	PERFORMANCE CRITERIA
<i>winemaking techniques</i> on wine quality	<p>wine to distinguish it from other influences on the wine</p> <p>4.2 Faults in the wine attributable to the winemaking technique are identified and distinguished from bottle age characteristics</p> <p>4.3 The effect of winemaking techniques on suitability of wine for cellaring is determined</p>
5. Analyse the effect of site characteristics, viticultural practices and grape varieties on wine quality	<p>5.1 Effects of climate are identified in the wine</p> <p>5.2 Effects of the physical characteristics of vineyard sites are identified in the wine</p> <p>5.3 Effects of <i>grape variety</i> are identified and analysed</p> <p>5.4 Effects of viticultural practices are identified in the wine and evaluated in terms of modifications and improvements to be made for the next season</p> <p>5.5 Viticultural production plan for next season is adjusted, documented and communicated to vineyard personnel</p>
6. Analyse current <i>packaging methods, bottle closure methods</i> and <i>wine labelling laws</i>	<p>6.1 The range of wine packaging available and used in the Australian wine industry are identified</p> <p>6.2 The range of wine bottle closure methods used in the Australian wine industry are identified and compared</p> <p>6.3 Current wine labelling regulations and their impact on the wine industry are identified and interpreted</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills include:

#### Ability to:

- determine wine characteristics and faults using organoleptic evaluation techniques
- document plans, specifications and production work procedures and write reports for staff, managers, clients and contractors
- communicate and negotiate verbally and in writing with the client, staff, managers, suppliers, contractors and consultants
- research, evaluate and record information
- comply with legislative requirements

## Required knowledge

### Knowledge of:

- changes to the physical characteristics of grapes during ripening including size, hardness and colour
- changes to the chemical characteristics of grapes during ripening including acid, sugar and flavour
- factors involved in the initiation and management of primary, secondary and malolactic fermentation processes
- ideal Australian cellaring conditions
- vintage ratings in Australia
- sensory evaluation of wines with potential for cellaring
- varieties of wine grapes in Australia
- types and styles of wine produced in Australia
- 'balance' in relation to wine taste
- climatic and physical features of wine grape growing areas and wine styles produced
- main export markets
- food safety requirements
- cleaning procedures and processes, including:
  - cleaning and sanitising agents
  - cleaning systems and equipment
  - waste disposal
  - wastewater removal
- packaging, regulations and relationship to product marketing and quality

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- perform chemical analyses necessary for the winemaking process
- evaluate wine

	<ul style="list-style-type: none"> <li>• identify and recommend improvements to viticultural practices that will contribute to enhanced wine quality in the next season</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
Method of assessment	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other units</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</li> <li>• The assessment environment should not disadvantage the candidate</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role</li> </ul>
Guidance information for assessment	To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Wine types and styles***  
include:

- dry white table wine
- dry red table wine
- sweet white table wine
- sparkling wine
- fortified wine
- blended wines

***Grape varieties***

The major grape varieties used in the production of wine in Australia include:

- major red varieties:
  - Shiraz
  - Cabernet Sauvignon
  - Merlot
  - Pinot Noir
- major white varieties:
  - Chardonnay
  - Semillon
  - Riesling
  - Sauvignon Blanc
  - Sultana

The minor and newer wine varieties in Australia include:

- red varieties:
  - Cabernet Franc
  - Malbec
  - Grenache
  - Chambourcin
  - Italian varieties
- white varieties:
  - Chenin Blanc
  - Marsanne
  - Verdelho

	<ul style="list-style-type: none"> <li>Italian varieties</li> </ul>
<b>Chemical analyses</b> include:	<ul style="list-style-type: none"> <li>pH</li> <li>sugar</li> <li>titratable acid (TA)</li> <li>sulphur dioxide</li> <li>alcohol</li> <li>malic/lactic acid</li> </ul>

## Unit Sector(s)

Production Horticulture

## AHCPTH506A Manage a wine making process

### Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release. New unit based on NSW accredited unit NSWTVIT502A Manage and evaluate wine production

### Unit Descriptor

This unit of competency covers the process of acquiring grapes for processing and the preparation for, and production of, a variety of wine types and styles.

### Application of the Unit

This unit applies to vineyard managers who also have a role in the wine making process.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Nil

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine <i>type and style of wine</i> to be produced and <i>winemaking process</i> to be followed	1.1 The type and style of wine to be produced from the crop is determined according to variety and characteristics of the <i>grapes, winemaking factors</i> , consumer preferences, client requirements and industry trends 1.2 The winemaking process to be followed is determined according to type and style of wine to be produced, quality and quantity of grapes available, and availability of required <i>equipment</i> and personnel
2. Acquire, deliver and <i>prepare grapes</i> for fermentation	2.1 Grapes are harvested and handled in accordance with standard vineyard practices and quality criteria 2.2 Grapes meeting the desired variety and quality parameters are acquired and delivered to the winery 2.3 Grapes are prepared for fermentation, and must or juice is delivered to fermentation vessels to meet the desired wine type and style requirements
3. Initiate a ferment	3.1 <i>Yeast types/strains</i> are selected to produce a given wine type and style 3.2 Fermentation vessels are prepared and must or juice is transferred according to wine type and style requirements 3.3 Yeast culture is prepared according to specifications 3.4 Yeast is added to fermentation vessels according to specified instructions
4. Manage <i>primary fermentation</i>	4.1 Physical characteristics of ferment are monitored and adjusted 4.2 Chemical characteristics of ferment are monitored and adjusted 4.3 Potential fermentation problems are predicted 4.4 The presence of undesirable fermentation characteristics is detected 4.5 Steps to rectify fermentation problems are outlined 4.6 Gross lees or pressings are racked off into appropriate vessels at a determined time 4.7 Records of additions and adjustments are maintained
5. Manage <i>secondary fermentation</i>	5.1 Oak barrels are obtained and checked for serviceability for use if required 5.2 Wine is inoculated with selected malolactic fermentation bacteria 5.3 Malolactic fermentation is managed to the predetermined end point

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
6. Mature wine in storage vessels	<p>6.1 Suitable maturation <i>storage vessels</i> to produce a given wine style are selected, obtained and checked for serviceability and use</p> <p>6.2 Wine is transferred into the selected vessels according to determined wine style characteristics</p> <p>6.3 Condition of wine in storage is monitored</p> <p>6.4 Wine is bottled and sealed</p> <p>6.5 Records are made and maintained</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

#### Ability to:

- calculate the cost and logistical requirements of components of the wine production
- plan processes that may be used to maximise production of grapes that meet winery quality requirements
- operate the range of equipment required to process grapes from winery receipt point to the fermentation tank
- perform must handling processes
- make additions and finings as required
- operate the filtration and bottling processes
- identify, establish, supervise and monitor daily cellar work practices

### Required knowledge

#### Knowledge of:

- vineyard practices relevant to the production of grapes that meet the requirements of the winery
- changes to the physical characteristics of grapes during ripening including size, hardness and colour
- changes to the chemical characteristics of grapes during ripening including acid, sugar and flavour
- processes involved in handling grapes from the vineyard to the winery in order to produce wine
- the range of equipment and the ability to use this equipment to process grapes and must in a winery
- factors involved in the initiation and management of primary, secondary and malolactic

- fermentation processes
- routine winemaking and cellar operation procedures
- cleaning procedures and processes, including:
  - cleaning and sanitising agents
  - cleaning systems and equipment
  - waste disposal
  - wastewater removal
- must and marc handling procedures
- equipment and processes for filtration of wine
- ideal Australian cellaring conditions
- varieties of wine grapes in Australia
- types and styles of wine produced in Australia
- 'balance' in relation to wine type and style
- climatic and physical features of wine grape growing areas and wine styles produced

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• acquire and process grapes for wine production</li> <li>• initiate and manage the fermentation process</li> <li>• perform chemical analyses necessary for the winemaking process</li> <li>• organise and undertake routine cellar operations</li> <li>• identify and recommend improvements to viticultural practices that will contribute to enhanced wine quality in the next season.</li> </ul>
<p>Context of and specific resources for assessment</p>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>
<p>Method of assessment</p>	<ul style="list-style-type: none"> <li>• Assessment methods must satisfy the endorsed</li> </ul>

	<p>Assessment Guidelines of the AHC10 Training Package and can be assessed holistically with other units</p> <ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required knowledge</li> <li>• Assessment must be by direct observation of tasks, with questioning on required knowledge and it must also reinforce the integration of employability skills</li> <li>• Assessment methods must confirm the ability to access, interpret and apply the required knowledge</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</li> <li>• The assessment environment should not disadvantage the candidate</li> <li>• Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English</li> <li>• Where the participant has a disability, reasonable adjustment may be applied during assessment</li> <li>• Language and literacy demands of the assessment task should not be higher than those of the work role</li> </ul>
<p>Guidance information for assessment</p>	<p>To ensure consistency of performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the

<p>candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Wine types and styles</i></b></p>	<p>Relevant wine types include:</p> <ul style="list-style-type: none"> <li>• dry white table wine</li> <li>• dry red table wine</li> <li>• sweet white table wine</li> <li>• sparkling wine</li> <li>• fortified wine</li> <li>• blended wines</li> </ul>
<p><b><i>Grape varieties</i></b></p>	<p>The major grape varieties used in the production of wine in Australia include:</p> <ul style="list-style-type: none"> <li>• major red varieties:                             <ul style="list-style-type: none"> <li>• Shiraz</li> <li>• Cabernet Sauvignon</li> <li>• Merlot</li> <li>• Pinot Noir</li> </ul> </li> <li>• major white varieties:                             <ul style="list-style-type: none"> <li>• Chardonnay</li> <li>• Semillon</li> <li>• Riesling</li> <li>• Sauvignon Blanc</li> <li>• Sultana</li> </ul> </li> </ul> <p>The minor and newer wine varieties in Australia include:</p> <ul style="list-style-type: none"> <li>• red varieties:                             <ul style="list-style-type: none"> <li>• Cabernet Franc</li> <li>• Malbec</li> <li>• Grenache</li> <li>• Chambourcin</li> <li>• Italian varieties</li> </ul> </li> <li>• white varieties:                             <ul style="list-style-type: none"> <li>• Chenin Blanc</li> <li>• Marsanne</li> <li>• Verdelho</li> <li>• Italian varieties</li> </ul> </li> </ul>
<p><b><i>Winemaking processes, operations and equipment include:</i></b></p>	<ul style="list-style-type: none"> <li>• handling operations:                             <ul style="list-style-type: none"> <li>• heading down</li> <li>• pumping over</li> <li>• racking</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• transfer</li> <li>• blending</li> <li>• cooling and temperature control</li> <li>• cold stabilisation</li> <li>• filtering</li> <li>• making additions</li> <li>• preparing for bottling</li> <li>• cleaning and</li> <li>• a consideration of reasons for each operation, procedures involved and problems occurring in wine handling</li> </ul> <p>Specific processes for still white and red wine production include:</p> <ul style="list-style-type: none"> <li>• fermentation methods</li> <li>• open</li> <li>• closed</li> <li>• skin contact techniques</li> <li>• plunging</li> <li>• header boards</li> <li>• pumping over</li> <li>• pressing process</li> <li>• free run/pressings</li> <li>• use of oak, including the different types of oak available and their application to the wine making process including French, American and others</li> <li>• methods of addition</li> <li>• barrel types and size (relationship between surface area/volume to flavour)</li> <li>• chips</li> <li>• beads</li> <li>• staves</li> <li>• clarification and stabilising techniques</li> <li>• techniques</li> <li>• methods</li> <li>• bottling process</li> </ul> <p>Plant and equipment used in wine making operations include:</p> <ul style="list-style-type: none"> <li>• Crushers, de-stemmers, presses</li> </ul>
<p>Grape selection criteria and <i>winemaking factors</i> include:</p>	<ul style="list-style-type: none"> <li>• types of grapes used</li> <li>• ripeness of grapes</li> <li>• fermentation techniques</li> <li>• maturation</li> </ul>

	<ul style="list-style-type: none"> <li>• additions</li> </ul>
<b><i>Grape preparation operations</i></b> include:	<ul style="list-style-type: none"> <li>• sulphur dioxide application</li> <li>• crushing</li> <li>• de-stemming</li> <li>• pressing</li> </ul>
<b><i>Types of yeast</i></b>	<p>Factors to be considered in relation to types of yeast used in wine production include:</p> <ul style="list-style-type: none"> <li>• the fermentation process</li> <li>• yeast types (commercial, wild) and their effects on characteristics of wine</li> <li>• chemical changes due to fermentation</li> <li>• killer yeasts</li> </ul>
<b><i>Primary fermentation</i></b> procedures	<p>Factors to be managed and monitored in relation to the process of fermentation include:</p> <ul style="list-style-type: none"> <li>• initiation</li> <li>• yeast selection</li> <li>• must preparation</li> <li>• yeast inoculum preparation</li> <li>• yeast addition techniques</li> <li>• chemical/physical characteristics</li> <li>• problems (stuck fermentation, off flavours/aromas)</li> <li>• racking off gross lees</li> <li>• timing</li> </ul>

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of assessing, grading, cleaning, storing and fumigating fertile eggs and defines the standard required to: collect eggs and monitor quality; wash eggs and sort by grade and shell quality; assemble, stack, and label eggs and place in correct trays as required by organisation procedures; fumigate eggs and maintain correct temperature and humidity in storage; clean and disinfect egg handling equipment and areas.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the collection, storage and handling of eggs from breeder flocks and is usually conducted within established routines, methods and procedures.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to handle eggs	<p>1.1. Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.2. Suitable personal protective equipment is selected, used and maintained.</p> <p>1.3. Egg machinery is operated according to manufacturers instructions.</p> <p>1.4. All required information recorded and reported accurately and promptly in accordance with organisational requirements.</p> <p>1.5. Egg collection times and frequency required by the enterprise are noted.</p>
2. Prepare eggs	<p>2.1. Eggs are collected and quality monitored.</p> <p>2.2. Eggs are collected according to workplace requirements.</p> <p>2.3. Eggs are washed using approved equipment.</p> <p>2.4. All lifting and bending is done according to safe working practices and using the available safety and lifting equipment.</p> <p>2.5. Records of all collections are completed clearly and accurately to monitor production levels.</p>
3. Assess and grade eggs	<p>3.1. Eggs are sorted according to industry standards and organisation quality assurance program.</p> <p>3.2. Eggs graded into appropriate weight according to enterprise practices.</p> <p>3.3. Handling problems are recognised and reported to the supervisor according to organisation procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Pack and store eggs	<p>4.1.Eggs are placed in correct trays and assembled, stacked, and labelled as required by organisation procedures.</p> <p>4.2.Labels are clear and accurate and contain all information required by the industry and organisation.</p> <p>4.3.Eggs are transferred to storage in order of age, grade or dispatch.</p> <p>4.4.Cool room and equipment is cleaned, sanitised and checked for efficient operation if appropriate.</p> <p>4.5.Eggs are fumigated according to approved industry practice.</p> <p>4.6.Temperature and humidity are recorded to ensure optimum storage conditions are maintained.</p> <p>4.7.Where appropriate packing, labelling and cleaning problems are recognised and reported to the supervisor according to organisation procedures.</p>
5. Clean and disinfect equipment	<p>5.1.All machines and equipment used are cleaned hygienically and disinfected or sanitised according to organisations quality assurance program and health regulations.</p> <p>5.2.All chemicals used in the cleaning process are handled safely and measured according to occupational health and safety requirements and organisation procedures.</p> <p>5.3.Egg handling areas and structures are cleaned hygienically and disinfected or sanitised according to organisations quality assurance program and health regulations.</p> <p>5.4.Samples are taken and prepared for testing as required by organisation procedures and analysing body.</p> <p>5.5.All waste containers, fluids and run-off are disposed of, or managed, according to organisation environmental management requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- identify hazards and implement safe work procedures
- observe small differences in shell quality and relate this to specific instructions for grading
- perform routine hygiene maintenance activities as required by the employer or unit manager and more frequently on demand
- record readings and observations using workplace systems and procedures
- observe, identify and react appropriately to environmental implications and occupational health&safety hazards
- calculate figures for stocktakes and quantities of eggs in storage at any specific time
- maintain premises in a hygienic condition both structurally and operationally
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- egg hygiene
- hygiene in egg cool rooms
- the need to maximise hygiene practices and awareness
- importance of temperature and humidity with egg storage
- environmental controls and codes of practice applicable to the enterprise
- relevant procedures relating to waste and environment management and animal health and welfare
- egg grading and sizes
- hazard analysis and quality assurance
- sanitisers and activity, and measurement
- the need to maximise hygiene practices and awareness
- OHS requirements
- environmental impacts and procedures.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• collect eggs and monitor quality</li> <li>• wash eggs and sort by grade and shell quality</li> <li>• assemble, stack, and label eggs and place in correct trays as required by organisation procedures</li> <li>• fumigate eggs and maintain correct temperature and humidity in storage</li> <li>• clean and disinfect egg handling equipment and areas.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole.</p>	
Breeder flocks may include:	<ul style="list-style-type: none"> <li>• all poultry species and breeds produced in all types of breeder systems.</li> </ul>

## AHCPLY202A Maintain health and welfare of poultry

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of monitoring poultry health and welfare and defines the standard required to: recognise symptoms of ill health, common diseases, parasite infestations, or physical abnormalities and remove non viable poultry; administer vaccines and medications and maintain records; collect samples for analysis; monitor bird housing conditions for temperature and humidity; minimise the risk of infection through the effective use of hygiene and quarantine procedures.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the maintenance of the health and welfare of poultry following set routines, methods and procedures.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor and assess poultry health and welfare	<p>1.1. Biosecurity protocols and quarantine procedures are maintained at all times to prevent the entry of disease.</p> <p>1.2. Regular checks are taken to assess poultry health and welfare according to the requirements of the organisation.</p> <p>1.3. Symptoms of ill health, common diseases, parasite infestations, or physical abnormalities are recognised and reported.</p> <p>1.4. Identify cull birds using criteria established by the enterprise or industry quality assurance program.</p> <p>1.5. Flock/herd health status is recorded in accordance with organisation procedures.</p>
2. Provide an optimal environment for poultry	<p>2.1. Bird housing conditions are monitored to ensure that protection is provided from external factors identified by the welfare code of practice and farm welfare Quality Assurance (QA) procedures.</p> <p>2.2. Temperature control equipment and humidity control equipment where installed is correctly monitored, maintained and operated to ensure optimal temperatures for poultry.</p> <p>2.3. Equipment and housing is installed in accordance with established organisation quality assurance programs.</p> <p>2.4. Welfare of poultry is continually monitored and non-compliance with animal welfare codes are reported promptly and dealt with by management.</p> <p>2.5. Information which is relevant to the welfare and</p>

ELEMENT	PERFORMANCE CRITERIA
	health of stock is recorded according to organisation practice.
3. Administer vaccines or alternative therapies	<p>3.1. Vaccines, veterinary chemicals, or other therapeutic medicines appropriate to the operation are stored and labelled in controlled or refrigerated conditions or in freezers.</p> <p>3.2. Killed and live vaccines or other compounds are stored to maintain maximum efficacy of the product.</p> <p>3.3. Routine prevention procedures for disease or parasite infestation are safely carried out.</p> <p>3.4. Quantities of medicines are accurately measured for administration according to clear organisation instruction and manufacturer's instructions.</p> <p>3.5. Vaccination or medication is carried out under instruction as required according to organisation procedures.</p> <p>3.6. Administration or medicines are recorded.</p>
4. Collect samples for analysis	<p>4.1. Swabs are taken from surfaces and work areas on a regular basis and prepared for laboratory testing as required by organisation and industry standards.</p> <p>4.2. Swabs and samples are clearly and accurately labelled and prepared for dispatch to the laboratory as directed by veterinary staff, organisation practice and the Biosecurity Code.</p>
5. Remove non-viable poultry	<p>5.1. Culling and removal is undertaken according to organisational procedures and industry quality assurance program.</p> <p>5.2. Sick poultry are treated or culled by neck dislocation or gassing safely and the practice must comply with industry standards of health and hygiene and the industry quality assurance program.</p> <p>5.3. Post-mortem assistance is provided where necessary according to organisation practice.</p>
6. Keep and maintain record	<p>6.1. Disease information is reported to the unit manager so that prevention strategies can be planned and implemented.</p> <p>6.2. All records made, kept and maintained are clear, accurate, and follow the guidelines laid down by industry and the organisation.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safety directions
- maintain biosecurity protocols and quarantine procedures
- accurately assess bird numbers and hatch
- complete worksheets clearly and accurately
- detect possibility of disease through parameters such as behaviour, length of time required to eat food
- recognise clinical symptoms (normal vs abnormal)
- survey workplace for hygiene and occupational health and safety issues
- tag poultry of varying ages
- use computing technology to create, maintain and amend workplace records
- observe, identify and react appropriately to environmental implications and occupational health and safety hazards
- observe the welfare of poultry and take action in accordance with organisational procedures, codes of welfare and industry quality assurance programs
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- symptoms of ill-health in poultry
- relevant codes of animal welfare
- the range of diseases affecting the class and age of poultry
- vaccination programs, vaccines and mode of action in use in the organisation
- withholding periods for use of antibiotics
- zoonotic diseases and mode of transmission
- environmental controls and codes of practice applicable to the enterprise
- the organisations poultry production and management plans. Sound management practices and processes to minimise noise, odours and debris from the poultry operations
- relevant legislation and regulations relating to waste and environment management and animal health and welfare
- relevant occupational health and safety legislation, regulations and codes of

**REQUIRED SKILLS AND KNOWLEDGE**

practice.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- recognise symptoms of ill health, common diseases, parasite infestations, or physical abnormalities and remove non viable poultry
- administer vaccines and medications and maintain records
- collect samples for analysis
- monitor bird housing conditions for temperature and humidity
- minimise the risk of infection through the effective use of hygiene and quarantine procedures.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

**RANGE STATEMENT**

Animals may include:

- all breeds and types of poultry applicable to the production of poultry in a range of housing environments.

**Unit Sector(s)****Unit sector**

## AHCPLY203A Set up shed for placement of day-old chickens

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of preparing the shed for day-old chickens and then placing them in the correct sheds, pens or cages and defines the standard required to: check alarms, time switches and lighting systems are working effectively prior to placement of the hatchlings; put bird wire and rodent barriers in place; handle and move birds in line with animal welfare codes of practice; place birds evenly throughout shed; maintain hygiene and quarantine procedures; dispose of left over fluids, waste and debris from the operation; maintain temperature and air quality.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the processes involved in setting up a shed for the placement of day old chickens conducted within routines, methods and procedures.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to work in poultry shed	<p>1.1. Work to be undertaken is interpreted from work program where necessary, and confirmed with management.</p> <p>1.2. Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of the production process.</p> <p>1.3. Suitable personal protective equipment is selected, used and maintained.</p> <p>1.4. Tools and equipment suitable for the work to be undertaken are selected, checked, and maintained if necessary.</p>
2. Check and maintain shed and equipment	<p>2.1. Level of shed cleanliness is checked and where required, shed is cleaned to meet enterprise standards.</p> <p>2.2. Shed repair and maintenance are carried out to maximise pest and vermin exclusion and control.</p> <p>2.3. Bird wire and rodent barriers are maintained in good order to minimise the risk of disease introduction.</p> <p>2.4. Shed equipment and machinery are checked and appropriate action taken as required according to establishment practice.</p> <p>2.5. Lights, time switches and all other shed equipment are operated and checked for proper function as required by lighting and flock programs.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.6. Quarantine procedures are in place to prevent entry of pathogens on personnel and equipment.
3. Prepare shed	3.1. Litter is correctly ordered to provide adequate quantity for new chickens. 3.2. Litter is spread or paper is laid evenly on shed floor or brooder cages to depth specified by establishment and appropriate for the class of poultry. 3.3. Watering, feeding, ventilation and fogging systems are cleaned, reinstalled and tested for operation. 3.4. Lighting levels for day old chickens are selected and adjusted as required. 3.5. Alarm systems and the time switches are tested to ensure timely warning of system malfunctions. 3.6. Brooders are tested for correct operation and thermostat control. Brooder curtains are installed if required. 3.7. Time clocks are adjusted. 3.8. Specific extra requirements of day old chickens are carried out in readiness for brooding operations.
4. Place chickens	4.1. Chickens are placed from chick boxes into correct sheds, pens or cages with a minimum of stress. 4.2. Chickens are checked after a short period to observe behaviour.
5. Complete hygiene and activities	5.1. Equipment is cleaned in accordance with manufacturers' specifications, organisational procedures and regulations. 5.2. All containers, leftover fluids, waste and debris from the operations are disposed of safely and appropriately. 5.3. All required records and documentation are completed accurately and promptly in accordance with organisational requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<b>Required skills</b>
<ul style="list-style-type: none"> <li>• identify hazards and follow safety directions</li> <li>• prepare and clean sheds</li> <li>• put bird wire and barriers in place</li> <li>• maintain biosecurity and hygiene protocols</li> <li>• read thermometers and adjust ventilation</li> <li>• use literacy skills to follow sequenced written instructions and record information accurately and legibly</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor</li> <li>• use numeracy skills to estimate, calculate and record routine workplace measures</li> <li>• use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.</li> </ul>
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• environmental controls and codes of practice applicable to the enterprise</li> <li>• bird behaviours in the first few hours of life</li> <li>• brooder shed set up and environmental parameters</li> <li>• biosecurity and hygiene</li> <li>• animal welfare.</li> </ul>

## Evidence Guide

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Collect eggs	<p>1.1.Eggs are collected using either hand or mechanical means.</p> <p>1.2.Eggs are placed in egg trays with the pointed end down.</p> <p>1.3.All lifting and bending is done according to safe working practices and using the available safety and lifting equipment.</p> <p>1.4.Records of all collections are completed clearly and accurately to monitor production levels.</p> <p>1.5.Vertebate and invertebrate pests are controlled in egg grading and storage areas.</p>
2. Assess and grade eggs	<p>2.1.Equipment to be used is calibrated according to manufacturer's instructions.</p> <p>2.2.Eggs are sorted according to industry standards and organisation quality assurance program.</p> <p>2.3.Eggs are candled using appropriate equipment in a light proof area.</p> <p>2.4.Eggs are graded into appropriate weight and quality grades according to industry standards.</p> <p>2.5.Cage marked and dirty, cracked or weak shelled eggs removed.</p> <p>2.6.Grading, cleaning, and packing machine problems and abnormal noises are recognised and reported to the supervisor according to organisation procedures.</p> <p>2.7.Grading records are completed clearly and accurately according to organisation requirements.</p> <p>2.8.Eggs are washed using equipment approved by</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>appropriate industry Quality Assurance (QA) program.</p> <p>2.9.Eggs are oiled when required according to legislative requirements and organisational practice.</p>
3. Pack and store eggs	<p>3.1.Eggs are placed in correct cartons or trays and assembled, packed, and labelled.</p> <p>3.2.All labelling is clear and accurate and contains all information required by the industry and organisation.</p> <p>3.3.Cool room and equipment is cleaned, sanitised and checked for efficient operation.</p> <p>3.4.Cool room operates with strict temperature and humidity ranges.</p> <p>3.5.Records are maintained of cool room temperature, and if required, the humidity.</p> <p>3.6.Eggs are transferred to storage and positioned in order of age, grade or dispatch.</p>
4. Pack and store egg	<p>4.1.All machines, equipment, and egg handling areas used are cleaned hygienically and disinfected or sanitised according to organisations quality assurance program and health regulations.</p> <p>4.2.All chemicals used in the cleaning process are handled safely and measured according to occupational health and safety requirements and organisation procedure.</p> <p>4.3.Samples are taken and prepared for testing as required by organisation procedures and analysing body.</p> <p>4.4.All waste containers, fluids and run-off are disposed of, or managed, according to organisation environmental management requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

## REQUIRED SKILLS AND KNOWLEDGE

- identify hazards and apply safe work practices
- operate an egg wash machine
- perform routine hygiene maintenance activities as required by the employer or unit manager and more frequently on demand
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- egg grading and sizes
- hazard analysis and quality assurance
- sanitisers and activity, and measurement
- the need to maximise hygiene practices and awareness
- Occupational Health and Safety (OHS), food safety and environment legislative and enterprise requirements
- the national Code of Practice for Shell Egg Production, Grading, Packing and Distribution Production of Egg Products.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- clean and sanitise the equipment used for handling the eggs

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• collect and handle eggs in commercial quantities in a hygienic fashion</li> <li>• assess and grade eggs for storage or packing</li> <li>• pack and store eggs according to enterprise procedures</li> <li>• check eggs are fit for human consumption and meet shelf life requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>

## AHCPLY301A Artificially inseminate birds

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of artificially inseminating birds and defines the standard required to: prepare for artificial insemination; sterilise equipment and prepare hygienic worksite prior to insemination procedures; prepare semen and inseminate birds; handle birds humanely and safely; clean up work areas and equipment; record data.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit is likely to be carried out under minimal supervision, with checking only related to overall progress.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for insemination of birds	<p>1.1. Timing of insemination process is scheduled to ensure availability of resource and personnel requirements.</p> <p>1.2. Hygiene factors are identified and appropriate procedures followed.</p> <p>1.3. Semen supplies are accessed from appropriate and reliable sources and stored appropriately.</p> <p>1.4. Birds are prepared to maximise success of insemination program.</p> <p>1.5. Suitable personal protective equipment and clothing is selected, used and maintained according to OHS and enterprise requirements.</p>
2. Inseminate birds	<p>2.1. Semen is prepared according to accepted industry and enterprise practices.</p> <p>2.2. Insemination equipment is sterile and clean, and applied according to industry code of practice.</p> <p>2.3. Intended recipient is correctly identified.</p> <p>2.4. Intended recipient is restrained and prepared for insemination to optimise results according to recognised handling techniques that minimise stress.</p> <p>2.5. Insemination is carried out in sterile conditions and according to appropriate hygiene procedures.</p> <p>2.6. Data on insemination process is accurate and recorded according to enterprise requirements.</p>
3. Clean work area and equipment	<p>3.1. Waste is disposed of according to recommended hygiene standards and environmental policy.</p> <p>3.2. Work area is cleaned to industry standards and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>returned to operating order.</p> <p>3.3. Restraints are cleaned and returned to safe and operational order.</p> <p>3.4. Birds are safely returned to designated area according to enterprise requirements and instructions.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- sterilise equipment and prepare hygienic worksite prior to insemination procedures employ safe work practices and comply with animal welfare
- clean up work site and safely dispose of waste
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- working knowledge of enterprise bird production plan
- basic bird breeding principles
- bird health and abnormalities
- semen thawing techniques
- preparation requirements for artificial insemination of birds
- bird behavioural characteristics
- handling techniques, restraint methods and when to use them
- enterprise and industry identification system for birds
- relevant State/Territory legislation, regulations and codes of practice with regard to workplace OHS and bird welfare
- legislative and regulatory controls with regard to artificial insemination

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise and industry policies with regard to artificial insemination and recording and reporting routines.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare for artificial insemination
- sterilise equipment and prepare hygienic worksite prior to insemination procedures
- prepare semen and inseminate birds
- handle birds humanely and safely
- clean up work areas and equipment and record data.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Birds may include:

- the artificial insemination of:
  - chickens

## AHCPLY302A Brood poultry

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of brooding all poultry species and breeds produced in an intensive environment and defines the standard required to: handle hatchlings and brooding chickens and ensure access to feed and water according to codes of welfare; monitor ventilation, temperature and humidity of the shed environment; provide litter and replace as required; expand the brooding area to provide optimal stocking density as required; use immunisation techniques and diet to optimise the immune system; remove dead or culled young birds; keep records as required.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit requires some judgement and discretion, and would be carried out with minimal supervision within enterprise guidelines and within specified timeframes.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for brooding	<p>1.1. Work to be undertaken is interpreted from work program where necessary, and confirmed with management/supervisor.</p> <p>1.2. Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of the production process.</p> <p>1.3. Tools and equipment required for the work to be undertaken are selected, checked, and serviced if necessary.</p> <p>1.4. Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.5. Suitable personal protective equipment is selected, used and maintained.</p>
2. Carry out brooding operations	<p>2.1. Temperatures are monitored and recorded accurately according to supervisor's instructions.</p> <p>2.2. Day old chickens are placed in the shed according to workplace instructions and handled with care.</p> <p>2.3. Shed temperatures are adjusted in accordance with supervisor or manager instructions and the observed activity of the birds.</p> <p>2.4. Observed changes are recorded and reported.</p> <p>2.5. Dead or culled young birds are removed and disposed of according to establishment practice and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>code of welfare, and recorded in appropriate record.</p> <p>2.6. Brooding area is extended as young birds grow, if required and according to instructions, to provide an optimal stocking density and avoid crowding.</p> <p>2.7. Black-out training of young birds/hatchlings is regularly carried out according to establishment practice.</p>
3. Shed operation	<p>3.1. All debris and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to organisation work procedures.</p> <p>3.2. Tools, machinery and equipment are cleaned, maintained and stored according to organisation work procedures.</p> <p>3.3. A clean and safe area is maintained throughout and on completion of work.</p> <p>3.4. Work outcomes are recorded or reported to the supervisor according to organisation work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- recognise feed types
- observe, identify and react appropriately to environmental implications and OHS
- perform routine hygiene maintenance activities as required by the employer or unit manager and more frequently on demand
- monitor and record temperature, times, humidity and bird numbers
- handle brooding chickens and hatchlings with strict accordance to the codes of welfare
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening,

## REQUIRED SKILLS AND KNOWLEDGE

clarifying information and consulting with supervisors as required

- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- the relationship between bird behaviour and brooding temperature
- the effect of litter quality and depth on chicken activity and or productivity
- the impact that feed, water and floor space has on uniformity and subsequent flock performance
- how live respiratory vaccines impact on bird behaviour and how to manage this
- the need to maximise hygiene practices and awareness
- environmental controls and codes of practice applicable to the enterprise
- the organisation's livestock production and management plans
- sound management practices and processes to minimise noise, odours and debris from the livestock operations
- relevant procedures relating to waste and environment management and animal health and welfare
- relevant OHS legislation, regulations and codes of practice.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- handle hatchlings and brooding chickens and ensure access to feed and water according to codes of welfare
- monitor ventilation, temperature and humidity of the shed environment
- provide litter and replace as required

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• expand the brooding area to provide optimal stocking density as required</li> <li>• use immunisation techniques and diet to optimise the immune system</li> <li>• remove dead or culled young birds</li> <li>• keep records as required.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Poultry may include:	<ul style="list-style-type: none"> <li>• all poultry species and breeds run under intensive (shedded) conditions.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to sex birds	<p>1.1. Work to be undertaken is interpreted from a work program where necessary, and confirmed with management.</p> <p>1.2. Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of the production process.</p> <p>1.3. Tools and equipment suitable for the work to be undertaken are selected, checked, and maintained if necessary.</p> <p>1.4. Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.5. Suitable personal protective equipment is selected, used and maintained.</p>
2. Identify and sex chickens birds	<p>2.1. Criteria for identification are sought and clarified from the production program and supervisor or management instructions.</p> <p>2.2. Procedures to control and sort chickens are conducted with due care.</p> <p>2.3. Identification method is carried out according to the given criteria and the marking requirements of the organization.</p> <p>2.4. Birds are handled with care strictly according to the code of welfare.</p> <p>2.5. Birds are sexed, held for beak trimming if appropriate, separated and placed according to organisational work procedures and instructions.</p> <p>2.6. Existing and potential hazards in the workplace are</p>

ELEMENT	PERFORMANCE CRITERIA
	recognised, risk assessed and controlled in line with OHS requirements.
3. Complete hygiene and administration activities	3.1. All debris and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to organisation work procedures. 3.2. Tools and equipment are cleaned, maintained and stored according to organisation work procedures. 3.3. A clean and safe area is maintained throughout and on completion of work. 3.4. Work outcomes are recorded or reported to the supervisor according to organisation work procedures. 3.5. Unit records are completed as required and reported to the hatchery manager.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- operate marking equipment
- identify the key features used to sex chickens using a variety of techniques
- perform routine hygiene maintenance activities as required by the employer or unit manager and more frequently on demand
- observe, identify and react appropriately to environmental implications and OHS hazards
- count sexed birds
- share information and observations with fellow workers and supervisors
- read and interpret written instructions prepared by the organisation, industry bodies, and/or manufacturers
- complete sexing at a rate acceptable to the industry and the organisation
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as

**REQUIRED SKILLS AND KNOWLEDGE**

specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required

- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- hygienic maintenance and use of machinery
- the key indicators of gender in a range of birds
- welfare implications of poor beak trimming
- avian reproductive anatomy
- the need to maximise hygiene practices and awareness
- environmental controls and codes of practice applicable to the enterprise
- the organisation's livestock production and management plans
- sound management practices and processes to minimise noise, odours and debris from the livestock operations
- relevant legislation and regulations relating to waste and environment management, animal health and welfare, and employment of staff and contractors
- relevant OHS legislation, regulations and codes of practice.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify and sort chickens to organisational requirements
- handle chickens according to the code of welfare
- sex chickens using recognised techniques
- count sexed birds and keep records of operations.

**EVIDENCE GUIDE****Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Receive eggs into hatchery	<p>1.1.Occupational health&amp;safety hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.2.Suitable personal protective equipment is selected, used and maintained.</p> <p>1.3.Delivery vehicle is monitored to ensure door remains sealed.</p> <p>1.4.Eggs are unloaded at hatchery and quality monitored.</p> <p>1.5.All required information recorded accurately and promptly in accordance with organisational requirements.</p>
2. Store eggs	<p>2.1.Eggs are stored as instructed with regard to position, temperature, humidity and period of storage according to industry standards.</p> <p>2.2.Eggs are transferred from delivery dollies/trolleys to setter dollies/trolleys.</p> <p>2.3.Eggs are attached to the turning machine to ensure maximum viability is maintained.</p> <p>2.4.All lifting and bending is done according to safe working practices and using the available safety and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>lifting equipment.</p> <p>2.5.Egg stock is managed to minimise egg age on setting.</p> <p>2.6.Temperature, humidity and airflow are monitored to maintain required settings.</p>
3. Prepare to incubate eggs	<p>3.1.Work to be undertaken is interpreted from work program where necessary, and confirmed with management.</p> <p>3.2.Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of the production process.</p> <p>3.3.Tools and equipment suitable for the work to be undertaken are selected, checked, and maintained if necessary.</p>
4. Monitor and operate setter	<p>4.1.Setter readings are accurately taken and recorded.</p> <p>4.2.Alarms are recognised and specified sequence of operations carried out during a breakdown as set out by the employer.</p> <p>4.3.Setter is operated, repaired and maintained according to establishment practice.</p> <p>4.4.Temperature probes are calibrated with known standards.</p>
5. Transfer eggs to hatcher	<p>5.1.Dollies moved to the egg handling/transfer area safely and in the sequence required by the organisation.</p> <p>5.2.Temperature, humidity and airflow are checked to ensure specified equipment operation and adjustment.</p> <p>5.3.Where required by the organisation, fumigant is measured and placed according to label instructions and safe work practices.</p> <p>5.4.Hatcher is fumigated and gases exhausted according to manufacturers instructions.</p> <p>5.5.Eggs are transferred to hatching trays in sequence according to organisation procedures.</p>
6. Fumigate setter or hatcher	<p>6.1.Need for fumigation is determined from supervisors instructions, production/hygiene management plan, or management practice.</p> <p>6.2.Occupational Health and Safety (OHS) hazards are identified, risks assessed and suitable controls are implemented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>6.3. Fumigant and apparatus are prepared according to manufacturer's instructions and in line with established safe working procedures.</p> <p>6.4. Setter or hatcher is sealed and fumigated to ensure maximum exposure of the fumigant to disease-causing organisms.</p> <p>6.5. Shed is aired to ensure evacuation of toxicants prior to re-entry of staff, re-installation of equipment, and placement of eggs.</p>
7. Monitor and operate hatcher	<p>7.1. Manual readings are accurately taken and recorded.</p> <p>7.2. Adjustments to temperature, humidity and airflow are carried out when instructed according to establishment standards.</p> <p>7.3. Alarms are recognised and a correct sequence of operations carried out during a breakdown as set out by employer.</p>
8. Complete hygiene and administration activities	<p>8.1. Waste material is removed from the incubation area and disposed of in an environmentally aware and safe manner according to organisational work procedures.</p> <p>8.2. Tools, equipment and machinery are cleaned, maintained and stored according to organisational work procedures.</p> <p>8.3. A clean and safe area is maintained throughout and upon completion of work according to organisational work procedures.</p> <p>8.4. Work outcomes are recorded or reported to the supervisor according to organisational work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- monitor setters and hatchers for constant performance

## REQUIRED SKILLS AND KNOWLEDGE

- to maintain operational standards
- maintain airflows, construction standards
- replace fan motors
- fix alarms and investigate causes
- calibrate temperature and humidity probes
- operate and interpret data from multi channel recorders
- complete manual monitoring sheets
- perform routine hygiene maintenance activities as required by the employer or unit manager and more frequently on demand
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- airflow and aerodynamics of machines in hatchery
- servicing requirements
- the need to maximise hygiene practices and awareness
- environmental controls and codes of practice applicable to the organisation
- sound management practices and processes to minimise noise, odours and debris from the livestock operations
- relevant legislation and regulations relating to waste and environment management, animal health and welfare, and employment of staff and contractors
- relevant OHS legislation, regulations and codes of practice.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to beak trim birds	<p>1.1.Entry biosecurity procedures, as specified by the farm and beak trimming team, are followed.</p> <p>1.2.Beak trimming instructions are sought and confirmed with farm or team management.</p> <p>1.3.Discussions are held with other workers to ensure smooth operation of the beak trimming process.</p> <p>1.4.Equipment and tools - including personal protective equipment - suitable for beak trimming are selected, checked, and maintained according to Occupational Health and Safety (OHS) requirements.</p> <p>1.5.Equipment is set up according to the age of bird stock to be trimmed and bird behaviour.</p> <p>1.6.Safety hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.7.A clean and safe area is prepared for trimming.</p>
2. Carryout trimming of beaks	<p>2.1.Birds are handled according to relevant codes of practice to facilitate accurate beak trimming.</p> <p>2.2.Beak shape, length and hardness are assessed regularly.</p> <p>2.3.Birds are beak trimmed according to work procedures.</p> <p>2.4.Industry standards for accuracy are achieved.</p> <p>2.5.Length of beak trimmed is in accordance with industry guidelines.</p> <p>2.6.Birds with bleeding beaks are re-cauterised.</p> <p>2.7.Bird welfare is assessed regularly.</p> <p>2.8.Birds are culled according to instructions.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Complete beak trimming procedure	3.1.The welfare of beak-trimmed birds is checked and adjustments made where necessary. 3.2.Upper beak length is measured on samples of 100 birds. 3.3.Relevant information is recorded and reported according to farm and team requirements. 3.4.Exit biosecurity procedures are completed in line with farm and team procedures. 3.5.Equipment and tools are cleaned, sanitised and maintained according to team procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work procedures
- prepare to beak trim birds
- carry out trimming of beaks
- complete beak trimming procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- biosecurity procedures for poultry production
- bird handling and restraint techniques
- trimming methods and procedures
- animal welfare code of practice
- enterprise standard operating procedures
- tools and equipment used in trimming

**REQUIRED SKILLS AND KNOWLEDGE**

- techniques to treat bleeding and injured birds including euthanasing methods
- OHS requirements for this work.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- ensure biosecurity requirements are met if contractors are used
- set up equipment correctly so that accurate trims are achieved
- minimise stress on the birds by careful handling
- cut beak to correct length and cauterise bleeding if necessary
- monitor debeaked birds
- record details.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Chickens may include:

- all poultry species and breeds used for meat or egg production.

**Unit Sector(s)**

<b>Unit sector</b>	Poultry

## AHCPLY306A Clean and fumigate intensive production sheds

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of cleaning and fumigating sheds used for the intensive production of livestock and defines the standard required to: implement biosecurity procedures; operate high pressure washing equipment; treat all surfaces inside and outside the shed so that they are visually clean; apply sanitisers to cleaned surfaces; ensure minimum risk of contamination from previous flock/herd.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit is necessary to provide a hygienic and disease free environment for each new batch of livestock. It is likely to be under limited supervision from others, with checking only related to overall progress. It is usually done within routines, methods and procedures where some discretion and judgement is required in the selection of equipment and materials, organisation of work, services and actions, and the achievement of outcomes within time constraints.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to clean shed	<p>1.1. Requirements for the work to be undertaken are interpreted and confirmed with supervisor.</p> <p>1.2. Occupational Health and Safety (OHS) hazards are identified, risks assessed and suitable controls are implemented.</p> <p>1.3. Suitable personal protective equipment is selected, used and maintained.</p> <p>1.4. The environmental implications of cleaning the shed are identified, likely outcomes assessed and, if necessary, responsible action is taken.</p> <p>1.5. Equipment is raised, dismantled or removed from the shed without damage for cleaning.</p> <p>1.6. Feed and watering equipment is raised or removed from shed, cleaned and sanitised to remove contamination.</p> <p>1.7. Electrical switchboards and other equipment are covered or sealed to prevent entry of water.</p> <p>1.8. Biosecurity protocols and procedures are complied with in cleaning and fumigation.</p>
2. Clean shed and	2.1. OHS hazards are identified, risks assessed and

ELEMENT	PERFORMANCE CRITERIA
surrounds	<p>suitable controls are implemented.</p> <p>2.2.Machinery is available, serviced and prepared for operation according to established operating practice, and operated inside and outside the shed.</p> <p>2.3.Litter is removed and disposed of according to establishment hygiene practice and using the available on-farm resources, and the floors are thoroughly swept.</p> <p>2.4.Filters are serviced and drinker lines and tanks are flushed.</p> <p>2.5.Silos are emptied and cleaned, as required by hygiene and production programs.</p> <p>2.6.Chemicals, detergents and disinfectants are mixed according to instructions.</p> <p>2.7.Chemical agents are safely handled and applied in compliance with OHS standards and in line with property quality assurance program.</p> <p>2.8.Electrical equipment is dry-cleaned.</p> <p>2.9.Run-off from cleaning activity is managed according to the organisations effluent and waste management procedures.</p> <p>2.10. Checks are made to ensure that all cleaning and hygiene processes are completed to standard.</p>
3. Fumigate shed	<p>3.1.Need for fumigation is determined from supervisors instructions, production/hygiene management plan, or management practice.</p> <p>3.2.OHS hazards are identified, risks assessed and suitable controls are implemented.</p> <p>3.3.Fumigant and apparatus are prepared according to manufacturer's instructions and in line with established safe working procedures.</p> <p>3.4.Shed is sealed and fumigated to ensure maximum exposure of the fumigant to disease-causing organisms.</p> <p>3.5.Shed is aired to ensure evacuation of toxicants prior to re-entry of staff and re-installation of equipment.</p>
4. Complete hygiene and administration tasks	<p>4.1.Equipment is cleaned in accordance with manufacturer's specifications, organisational procedures and regulations.</p> <p>4.2.Attachments and other ancillary equipment are cleaned and stored to minimise damage and to maximise hygiene according to manufacturer's</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>specifications, organisational procedures and regulations.</p> <p>4.3. Insecticides are applied, as required by the organisation and the harvest strategy.</p> <p>4.4. All required records and documentation are completed accurately and promptly in accordance with organisational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- operate high pressure washing equipment
- carry out cleaning and fumigation
- observe, identify and react appropriately to environmental implications and OHS hazards
- make shed environment secure from accidental entry of personnel until fumigants have dispersed
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- types of sheds and production systems
- relevant OHS legislation, regulations and codes of practice
- environmental impacts and controls of cleaning and fumigating sheds
- chemical spillage management and safety equipment and clothing.

## AHCPLY401A Supervise free-range poultry operations

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers supervising free-range poultry operations and defines the standard required to: implement a Hazard Analysis program to cover bio-security, animal welfare and food safety codes of practice; recognise abnormal behaviour and common diseases such as coccidiosis, Marek's disease, infectious bronchitis, chronic respiratory disease; implement a feeding strategy for free range poultry; protect birds from predators; collect, record and assess data and information required to meet animal management and food safety requirements.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to supervisors of free-range poultry enterprise whose job role includes scheduling activities and operations for a free-range poultry organisation providing some supervision of staff, and to co-ordinating the delivery of product with sellers or distributors.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan free-range poultry operation	<p>1.1. Accommodation construction is selected that complies with food safety, animal welfare and bio-security codes of practice, environmental practice and cost benefit.</p> <p>1.2. Number of birds per unit of space for grazing/pasture is in line with industry and animal welfare codes of practice.</p> <p>1.3. Number of birds per unit of space in the shed is in line with industry and animal welfare codes of practice.</p> <p>1.4. Method of managing poultry in a free-range environment is selected.</p> <p>1.5. Feeding strategy is based on animal health and welfare, industry Quality Assurance (QA) standards and codes of practice, cost benefit analysis, and production requirements.</p> <p>1.6. Method of managing and monitoring bird health and disease is determined in line with industry QA standards and bio-security code of practice.</p> <p>1.7. Strategies for protecting poultry from predators are devised suitable to the birds under production and the constraints of the property in line with the animal welfare and bio-security codes of practice.</p> <p>1.8. Strategies for managing pasture are prepared and schedules for monitoring them are devised in</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with standard industry pasture management practices.</p> <p>1.9. Enterprise plan for production is developed and documented in line with industry QA program, state and Commonwealth legislation, codes of practice.</p> <p>1.10. An enterprise environmental plan is prepared to meet enterprise, industry and regulatory requirements.</p> <p>1.11. Occupational Health and Safety (OHS) hazards are identified, assessed, and risk management implemented.</p> <p>1.12. Any approvals that are required for the operations are identified, sought and obtained.</p> <p>1.13. Measurable indicators, specifications and targets are determined, based on the production/management plan.</p> <p>1.14. The plan and its performance indicators are clearly articulated and documented.</p>
<p>2. Determine scheduling and key responsibilities</p>	<p>2.1. Accommodation construction is selected that complies with food safety, animal welfare and bio-security codes of practice, environmental practice and cost benefit.</p> <p>2.2. Number of birds per unit of space for grazing/pasture is in line with industry and animal welfare codes of practice.</p> <p>2.3. Number of birds per unit of space in the shed is in line with industry and animal welfare codes of practice.</p> <p>2.4. Method of managing poultry in a free-range environment is selected.</p> <p>2.5. Feeding strategy is based on animal health and welfare, industry QA standards and codes of practice, cost benefit analysis, and production requirements.</p> <p>2.6. Method of managing and monitoring bird health and disease is determined in line with industry QA standards and bio-security code of practice.</p> <p>2.7. Strategies for protecting poultry from predators are devised suitable to the birds under production and the constraints of the property in line with the animal welfare and bio-security codes of practice.</p> <p>2.8. Strategies for managing pasture are prepared and schedules for monitoring them are devised in accordance with standard industry pasture</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>management practices.</p> <p>2.9. Enterprise plan for production is developed and documented in line with industry QA program, state and Commonwealth legislation, codes of practice.</p> <p>2.10. An enterprise environmental plan is prepared to meet enterprise, industry and regulatory requirements.</p> <p>2.11. OHS hazards are identified, assessed, and risk management implemented.</p> <p>2.12. Any approvals that are required for the operations are identified, sought and obtained.</p> <p>2.13. Measurable indicators, specifications and targets are determined, based on the production/management plan.</p> <p>2.14. The plan and its performance indicators are clearly articulated and documented.</p>
3. Monitor free-range poultry operation	<p>3.1. Monitoring points outlined in the implementation plan are met.</p> <p>3.2. Checks are made to ensure that OHS requirements are being observed and followed.</p> <p>3.3. Checks are made to ensure that animal health and welfare requirements are being observed and followed.</p> <p>3.4. Checks are made to ensure that site environmental requirements are being observed and followed.</p> <p>3.5. Checks are made to ensure that food safety requirements are being observed and followed.</p> <p>3.6. Operational staff and any contractors are communicated with regularly to ensure smooth operation and progress.</p> <p>3.7. Checks are made to ensure that the documentation required by the organisation, or other regulating bodies, is completed clearly and accurately.</p> <p>3.8. Where any corrective action or amendment to the plan is required, the action is initiated and taken.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- identify hazards and implement safe systems of work for the enterprise
- identify the conditions which affect poultry management and development
- recognise common diseases, of poultry such as coccidiosis, Marek's disease, infectious bronchitis, chronic respiratory disease
- recognise normal bird behaviour
- collect, record and assess data and information required according to specific criteria
- complete data, quality control and other documentation clearly and accurately
- read and act on written information including plans, maps, plans and reports
- read and interpret laboratory reports informing of health status
- interpret soil tests
- construct hazards tables and prepare other reporting requirements
- explain, and deliver instructions about, the plans and scheduling of the operations to both staff and contractors
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- environmental controls and codes of practice
- poultry diseases including zoonoses
- animal welfare code of practice and industry standards
- biosecurity code of practice and industry standards
- food safety code of practice and industry standards.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

<b>EVIDENCE GUIDE</b>	
Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• implement a Hazard Analysis program to cover bio-security, animal welfare and food safety codes of practice</li> <li>• recognise abnormal behaviour and common diseases such as coccidiosis, Marek's disease, infectious bronchitis, chronic respiratory disease</li> <li>• implement a feeding strategy for free range poultry</li> <li>• protect birds from predators</li> <li>• collect, record and assess data and information required to meet animal management and food safety requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Poultry may include:	<ul style="list-style-type: none"> <li>• free range chickens</li> <li>• ducks</li> <li>• geese</li> <li>• quail</li> <li>• turkeys</li> <li>• pheasants</li> <li>• guinea fowl.</li> </ul>
Free range environments may be	<ul style="list-style-type: none"> <li>• produce eggs</li> <li>• produce meat</li> </ul>

**RANGE STATEMENT**

used to:

- produce feathers as by-product
- down as by-product
- manure as by-product.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to treat weeds	<p>1.1. Weeds which impact on commercial crops, gardens and turf, and natural areas are recognised by common name.</p> <p>1.2. Details of the weed occurrence are recorded and reported to the supervisor.</p> <p>1.3. Treatment methods are selected in consultation with the supervisor.</p> <p>1.4. Equipment is selected and prepared for use according to enterprise guidelines and manufacturers specifications.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p>
2. Treat weeds	<p>2.1. Personal Protective Equipment (PPE) is used and maintained according to procedures.</p> <p>2.2. Treatments are prepared according to supervisor's instructions and manufacturer's guidelines.</p> <p>2.3. Treatments are applied in such a way that non-target damage is minimised.</p> <p>2.4. Treatments are applied according to OHS and environmental regulatory requirements.</p>
3. Carry out post treatment operation	<p>3.1. Equipment is shut down and cleaned with full consideration of environmental impacts and OHS requirements.</p> <p>3.2. Treatment waste is disposed of causing minimal environmental damage.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- read and interpret chemical labels, Material Safety Data Sheets (MSDSs), manufacturer's specifications for setting up equipment
- use and maintain PPE
- prepare to treat weeds
- apply weed treatments
- carry out post treatment operations
- maintain spray records
- recognise caution or hazard signs and symbols
- interpret tasks or information from labels, manuals or written instructions
- record information accurately or verbally report information
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- recognition of common weeds for a particular enterprise/situation
- weed growth characteristics
- different types of control measures, treatments and their principles
- modes of action of different chemicals
- equipment capability and limitations
- legislation relation to the use of chemicals for weed control
- OHS responsibilities of employers and employees
- OHS legislative requirements and associated hazardous substances regulations and Codes of Practice
- correct wearing/fit of personal protective equipment
- environmental considerations when using chemicals for weed control.

## Evidence Guide

## AHCPMG301A Control weeds

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the control of weeds and defines the standard required to: identify a range of weeds and beneficial organisms; plan and coordinate weed control activities; prepare and calibrate equipment; conduct a site hazard identification and risk control assessment for weed control; apply a range of weed control methods and maintain records; monitor, record and report the effectiveness of controls.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in agriculture, horticulture or land management-based enterprises who are required to carry out the control of weed infestations using cultural, biological and chemical methods to provide effective, economical control of weeds while minimising damage to the environment.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess weed infestation	1.1. Identify the scope and size of the weed infestation that adversely impacts on the landscape. 1.2. Identify weeds and record details of the weeds and beneficial organisms. 1.3. Identify tolerable levels of infestation according to client, market, environmental and IPM requirements. 1.4. Determine if plant health or growth requirements are compromised by level of infestation. 1.5. Seek professional advice if required in the assessment of the weed infestation.
2. Plan control measures	2.1. Determine suitable control options according to Integrated Pest Management principles and industry practice. 2.2. Identify the hazards, assess and control risks to others and the environment. 2.3. Identify appropriate tools, equipment and machinery for the planned control measure. 2.4. Select appropriate Personal Protective Equipment (PPE) in accordance with Occupational Health and Safety (OHS) requirements. 2.5. Prepare a control plan for the control measure/strategy.
3. Implement control	3.1. Implement control measures in accordance with IPM

ELEMENT	PERFORMANCE CRITERIA
measures	principles, industry practice and control plan. 3.2.Ensure that control measures minimise non-target damage. 3.3.Maintain records of the control measure/s applied.
4. Monitor control measures	4.1.Monitor control measures to identify signs of adverse impact on humans, animals, non-target plants or environment. 4.2.Assess effectiveness of control measures in accordance with IPM guidelines and/or available industry standards. 4.3.Record assessment of control measures and report to client or organisation.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify a range of weeds and beneficial organisms
- identify threshold level of weeds for treatment
- conduct a site hazard identification and risk control assessment
- prepare a control plan
- use appropriate cultural, biological or chemical controls
- minimise damage to non-target species
- complete records of control treatments
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- economic, aesthetic and environmental threshold for a range of weeds
- IPM principles and strategies
- lifecycle and biology of weeds
- hazard identification and risk assessment methodologies

**REQUIRED SKILLS AND KNOWLEDGE**

- types of control measures (cultural, biological, chemical) commonly used in industry/sector
- types of equipment including personal protective equipment appropriate to the control measure
- risk factors including human, animal health and environmental associated with a range of control measures/options
- OHS requirements pertaining to the use of cultural, biological, chemical agents.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify a range of weeds and beneficial organisms
- plan and coordinate weed control activities
- prepare and calibrate equipment
- conduct a site hazard identification and risk control assessment for weed control
- apply a range of weed control methods and maintain records
- monitor, record and report the effectiveness of controls.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Weeds may include:	<ul style="list-style-type: none"> <li>the range of significant and noxious weeds of agricultural and horticultural crops, pastures and native vegetation.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess pests and disease infestation	1.1.Scope and size of the infestation is assessed. 1.2.Plants pests, diseases and disorders and beneficial organisms are identified and reported or recorded in field notes. 1.3.Levels of pest infestations tolerated by the client, market or environment are identified from the IPM strategy.
2. Plan the implementation of control measures	2.1.Control measures suitable for the infestation are selected from IPM strategy. 2.2.Tools, equipment and machinery are selected for each work activity according to enterprise work procedures. 2.3.Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls are implemented. 2.4.Personal Protective Equipment (PPE) is selected, used and maintained according to procedures. 2.5.Control measures selected need to be in full consideration of OHS and environmental implications.
3. Implement control measures	3.1.Enterprise work team, contractors and IPM product suppliers are coordinated in a sequential, timely and effective manner in consultation with the supervisor. 3.2.Control measures are implemented according to the

ELEMENT	PERFORMANCE CRITERIA
	IPM standards or industry Code of Practice. 3.3.A clean and safe work area is maintained throughout and on completion of each activity. 3.4.Records are maintained as required by legislation and enterprise guidelines.
4. Monitor control methods	4.1.Control methods are monitored to identify side effects to other plants, animals or external environment. 4.2.Effectiveness of control methods are assessed in reference to specified industry, OHS and enterprise standards. 4.3.Adjustments to IPM control methods are implemented where necessary to meet enterprise specifications.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- recognise a range of pests, diseases and beneficial organisms within a particular enterprise
- communicate with work team members, supervisors, contractors and consultants
- understand IPM symbols and information
- interpret and apply an IPM- based program
- utilise proforma reporting, analysis and work procedure documents
- interpret and apply plant pest and disease spatial and logistical specifications
- interpret and apply test results, and calculate the quantities and application rates of control materials
- coordinate work groups, contractors and own activities to sequentially and effectively complete activities in a timely and cost effective manner
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- pests and disease recognition
- economic, aesthetic or environmental thresholds for a range of plant pests, diseases

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<p>and disorders</p> <ul style="list-style-type: none"> <li>• chemical, biological and cultural control methods and treatments available to the enterprise within the parameters of an IPM program</li> <li>• range and use of tools, equipment and machinery available to the enterprise for implementing the control measures</li> <li>• range of site monitoring and analysis techniques that may be used to implement and IPM program</li> <li>• choice of plant pest and disease methods with site limitations, environmental implications, end market and production or environmental objectives for the site</li> <li>• IPM standards or industry Code of Practice</li> <li>• occupational health and safety responsibilities for employees and employers</li> <li>• correct use and maintenance of personal protective equipment.</li> <li>• OHS and environmental legislative requirements including hazardous substances regulations.</li> </ul>

### Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit covers the process of maintaining biological control agents for weed control prior to release in an experimental or field situation and defines the standard required to: prepare and propagate bioagent media; obtain bioagent cultures; maintain and monitor cultures; harvest and store cultures.</p>
-------------------------------	---

### Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit relates to maintaining biological cultures under limited supervision from others with checking only related to overall progress.</p>
---------------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<p><b>Prerequisite units</b></p>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare and propagate bioagent media	<p>1.1. Bioagent media to suit the host and target species are identified, selected and accessed consistent with enterprise procedures or integrated weed management strategy where applicable.</p> <p>1.2. Required media are prepared in line with established procedures and laboratory policy.</p>
2. Obtain bioagent cultures	<p>2.1. Cultures are procured from established sources and microclimate maintained in transport to the laboratory.</p> <p>2.2. Cultures are transferred to growing environment in strict compliance with laboratory policy.</p>
3. Maintain and monitor cultures	<p>3.1. Cultures are regularly checked as an integral part of work routines.</p> <p>3.2. Optimum environmental conditions are maintained to maximise culture growth and condition.</p> <p>3.3. Observations are recorded and abnormalities are reported to the appropriate authority.</p>
4. Harvest and store cultures	<p>4.1. Routine monitoring of culture growth identifies the need for harvest and agent release.</p> <p>4.2. Harvesting program is determined in line with program requirements.</p> <p>4.3. Harvest operations are completed and cultures are transferred to storage in accordance with laboratory policy.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify Occupational Health and Safety (OHS) hazards and implement safe work practices
- prepare and propagate bioagent media
- obtain bioagent cultures
- maintain and monitor cultures
- harvest and store cultures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the range of media available for culture maintenance
- culturing and media preparation techniques
- laboratory and glasshouse procedures
- available biological control agents and their use
- the broad range of pest species that are to be targeted
- biosecurity and quarantine requirements.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and

The evidence required to demonstrate competency in this

<b>EVIDENCE GUIDE</b>	
<b>evidence required to demonstrate competency in this unit</b>	unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following: <ul style="list-style-type: none"> <li>• prepare and propagate bioagent media</li> <li>• obtain bioagent cultures</li> <li>• maintain and monitor cultures</li> <li>• harvest and store cultures.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Biological control agents may include:	<ul style="list-style-type: none"> <li>• control agents for weed control, their maintenance and culture.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish the scope of agent release	<p>1.1.Target plant species are located and identified consistent with integrated pest management strategy where applicable.</p> <p>1.2.Incidence and density of the target population are estimated and recorded according to enterprise procedures where appropriate.</p> <p>1.3.Suitable biological control agents are identified and sourced consistent with enterprise procedures and/or integrate pest management strategy.</p>
2. Identify the site and release methodology	<p>2.1.Release site is identified in line with target species and integrated pest management strategy.</p> <p>2.2.Release methodology is established and scheduled in line with established agency advice or enterprise practice.</p>
3. Carry out on-site tasks	<p>3.1.Permits and landholder co-operation are established to facilitate release program.</p> <p>3.2.Release is carried out within enterprise or industry guidelines regarding weather or other conditions.</p> <p>3.3.Release is completed as scheduled according to release methodology and details are recorded in laboratory and field records following enterprise procedure or industry standard.</p>
4. Monitor and report on biological agent releases	<p>4.1.Biological agent release site is monitored to evaluate effectiveness and spread to target species consistent with the integrated pest management strategy where appropriate.</p> <p>4.2.Regular reports are provided to landholder and</p>

ELEMENT	PERFORMANCE CRITERIA
	regulatory authorities. 4.3. Records are completed as required by agency requirements. 4.4. Biological agent releases are scheduled according to agent and target biology consistent with the integrated pest management strategy.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- establish the scope of agent release
- establish the scope of agent release
- work effectively in a team situation in the lab or field
- identify relevant pest species
- identify the site and release methodology
- operate relevant vehicles and plant
- carry out on-site tasks
- observe effectively and report accurately
- monitor and report on biological agent releases
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- insect, animal and/or plant identification principles
- use of identification keys
- pest physiology and growth
- relevant legislative requirements

**REQUIRED SKILLS AND KNOWLEDGE**

- safe handling techniques
- environmental legislation and risks of releasing biological agents.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- source suitable biological control agents for target plant species
- suitable biological control agents are sourced for target plant species
- identify the site and release methodology
- documentation of release is kept and effected landholders informed
- biological agent releases are monitored and follow up planned.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

<b>RANGE STATEMENT</b>	
Biological control agents may include:	<ul style="list-style-type: none"> <li>control agents for insects, fungi, plants, and pest animals.</li> </ul>

## AHCPMG401A Define the pest problem in a local area

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers defining the pest problem in a local area and defines the standard required to: determine the lifecycle, distribution and loss of production caused by the pest; document the economic losses and environmental risks and impacts of the pest; develop control measures based on a combination of strategies to control the pest at its most vulnerable stage with minimal environmental impact; establish the costs and benefits of implementing the selected control strategies; select management options to eradicate or manage the pest across a local region; and negotiate an action plan to implement the management options across the local area.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to control officers who define the pest problem in a local area.
--------------------------------	--

### Licensing/Regulatory Information

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Define the land use process for the local area affected by the target pest problem	1.1.Consultation with local land users and other relevant stakeholders in the affected area is documented. 1.2.Desired land management and/or production outcomes are identified. 1.3.Performance criteria for measuring local land management and/or production outcomes are determined. 1.4.Critical activities required to achieve the desired outcomes are identified. 1.5.Local land management and/or production process is mapped against the annual planning cycle. 1.6.Local land management and/or production process budget is determined.
2. Analyse the pest problem in the local area	2.1.Target pest population distribution within the affected local area is determined in consultation with stakeholders. 2.2.Target pest population data supplied by stakeholders is validated. 2.3.Other relevant data on target pest population are obtained. 2.4.Factors which influence the target pest population and distribution within the local area are described. 2.5.Pest life cycle is documented.

ELEMENT	PERFORMANCE CRITERIA
3. Determine critical control points for management of the pest problem	3.1.Periods of greatest risk in the local land management and/or production process are identified in consultation with stakeholders. 3.2.Periods of target pest vulnerability within the life cycle are identified. 3.3.Local land management and/or production process map and target pest life cycle map are consolidated. 3.4.Critical points for controlling pest populations and/or changing land management or production practices within the annual planning cycle are determined in consultation with other stakeholders.
4. Document and collate the impacts of the pest	4.1.Economic losses resulting from the pest presence are measured or estimated in consultation with stakeholders. 4.2.Environmental impacts from the pest presence are measured or estimated in consultation with stakeholders. 4.3.Potential risks relating to exotic disease are defined. 4.4.Pest problem is documented according to industry and enterprise standards and guidelines.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- define the land use process for the local area affected by the target pest problem
- analyse the pest problem in the local area
- determine critical control points for management of the pest problem
- analyse local problems
- plan strategically for local context
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine land management/production objectives	<p>1.1.Land users and other stakeholders are consulted regarding local objectives.</p> <p>1.2.Objectives address major land uses and production activities in the local area affected by the impacts of the target pests.</p> <p>1.3.Objectives relate to the problem definition and the reduction in the pest impacts and associated losses.</p> <p>1.4.Objectives comply with national, state and regional legislation and regulations.</p> <p>1.5.Objectives support strategies for land and pest management.</p>
2. Estimate costs and advantages for management units	<p>2.1.The diversity of land management and production values that the target pests affect within the local area is defined.</p> <p>2.2.The likely costs of preferred options for control of pest populations and/or changes to land management or production activities associated with each value are estimated.</p> <p>2.3.The likely costs are compared with the impacts and losses caused by the target pests.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4.The management units most affected, both actually and potentially, by the target pests are defined and prioritised.
3. Define the performance level for each land management/production objective	3.1.Performance levels are defined in accordance with sustainable land use principles to address target pests population levels, economic impacts and environmental impacts. 3.2.Performance levels are realistic and measurable.
4. Select management options for the target pests	4.1.Options for controlling pest populations and/or changing land management or production practices are assessed in terms of economic factors, technical difficulty, practical feasibility, social and/or environmental acceptability. 4.2.A range of management options are assessed in terms of current and future financial support, when control activities are to be implemented, level of target pests population reduction required, and the most suitable control methods and techniques. 4.3.A management option is selected in accordance with sustainable land use principles, economic feasibility, environmental acceptability, Integrated Pest Management (IPM) principles, and statutory requirements for pest control.
5. Negotiate possible actions with relevant stakeholder	5.1.The action is based on the definition of the problem using data from measurement of abundance and impacts. 5.2.The action clearly documents the pest problem, the objectives, the stakeholders, the prioritised management units, the performance criteria, and the most suitable management options.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- determine land use objectives

## REQUIRED SKILLS AND KNOWLEDGE

- estimate costs and advantages for areas affected by the target pest/s
- define performance levels for pest management for each land use
- select management control options for the target pest/s
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- relevant local, regional, state and national strategies for pest management including those for individual species
- motivational effects of stakeholder involvement
- community facilitation processes
- local land management process
- relevant legislative and regulatory requirements including statutory requirements for pest control
- environmental protection legislation
- principles of IPM
- pest control methods and techniques
- defining local land management and production values
- determining cost benefit analysis of management options
- sustainable land use principles
- Occupational Health and Safety (OHS), environmental and pesticides legislation, codes of practice and enterprise procedures.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine the time period and milestones for the implementation of the local pest management strategy	1.1. Local stakeholders are consulted regarding time period and milestones. 1.2. The time period complies with the objectives in the local management strategy. 1.3. The time period is realistic to allow achievement of the objectives while taking account of target pest's life cycle and behaviour patterns, and local land management and production activity cycles. 1.4. Milestones are aligned to critical control points in the target pest's life cycle and behaviour patterns, and the local and management and production activity cycles. 1.5. Milestones identify a key, measurable point in the time period.
2. Determine specific objectives for the local pest management strategy	2.1. Objectives to be achieved at each milestone are defined in consultation with local land users. 2.2. Performance criteria for objectives at each milestone are determined. 2.3. Objectives and performance criteria are measurable.
3. Identify activities required to achieve specific objectives	3.1. Activities required to achieve objectives by proposed deadlines are listed in consultation with local land users. 3.2. Activities are selected and scheduled to comply with the pest management strategy, in consideration of

ELEMENT	PERFORMANCE CRITERIA
	<p>community attitudes and in accordance with relevant statutory and regulatory requirements.</p> <p>3.3. Monitoring and measurement activities are selected and scheduled to comply with the pest management strategy and in accordance with relevant statutory and regulatory requirements.</p>
<p>4. Estimate resources required to complete the required activities</p>	<p>4.1. Personnel required to carry out activities are estimated.</p> <p>4.2. Plant and machinery required to carry out activities are estimated.</p> <p>4.3. Materials required to carry out activities are estimated.</p> <p>4.4. Personnel, plant, machinery and materials are sourced and costed in consultation with other stakeholders.</p>
<p>5. Develop an action plan to guide implementation of the strategic plan</p>	<p>5.1. The action plan documents the time period, milestones, objectives, activities, required resources and budget to implement the strategy.</p> <p>5.2. Potential contingencies are addressed in the action plan.</p> <p>5.3. Agreement to the action plan and commitment by other stakeholders is documented.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- determine the time period and milestones for the implementation of the local pest management strategy
- determine specific objectives for the local pest management strategy
- identify activities required to achieve specific objectives
- develop an action plan to guide implementation of the strategic plan
- manage time
- monitor budgets
- use literacy skills to read, interpret and follow organisational policies and

<b>REQUIRED SKILLS AND KNOWLEDGE</b>	
<p>procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks</p> <ul style="list-style-type: none"> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views</li> <li>• use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Schedule pest management activities	<p>1.1. Activities identified in the action plan are scheduled within the monthly, weekly or daily work plans.</p> <p>1.2. Work time is allocated to complete the activities in accordance with the requirements of the action plan, and within realistic expectations.</p> <p>1.3. Employees or contracted personnel with relevant skills and competency are allocated for the completion of required activities.</p> <p>1.4. Plant, machinery, equipment and materials required to complete required activities are procured for the time the activities are to be carried out.</p> <p>1.5. Relevant stakeholders are consulted regarding the scheduling of activities.</p> <p>1.6. Relevant Occupational Health and Safety (OHS) standards and other Federal, State and local legislation &amp; regulations are applied in the allocation and procurement of human and physical resources.</p> <p>1.7. Milestones are aligned to critical control points in the target pests' life cycle, behaviour patterns and the local land management and production activity cycles.</p> <p>1.8. Measurable performance criteria for objectives at each milestone are determined.</p> <p>1.9. Activities required to achieve objectives by proposed deadlines are listed in consultation with local land users.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.10. Activities are selected and scheduled to comply with the pest management strategy, in consideration of community attitudes, and in accordance with relevant statutory and regulatory requirements.</p> <p>1.11. Monitoring and measurement activities are selected and scheduled to comply with the vertebrate pest management strategy and in accordance with relevant statutory and regulatory requirements.</p>
2. Estimate resources required to complete the required activities	<p>2.1. Personnel required to carry out activities are estimated.</p> <p>2.2. Plant and machinery required to carry out activities are estimated.</p> <p>2.3. Materials required to carry out activities are estimated.</p> <p>2.4. Personnel, plant, machinery and materials are sourced and costed in consultation with other stakeholders.</p>
3. Brief employees or contracted personnel regarding the pest management activities	<p>3.1. Employees or contracted personnel are informed of the requirements of the pest management plan and action plan.</p> <p>3.2. Employees or contracted personnel are informed of land owner/manager expectations and reporting and recording requirements.</p> <p>3.3. Employees or contracted personnel are advised of OHS standards and other statutory and regulatory requirements to be applied in carrying out the required activities.</p>
4. Supervise employees or contracted personnel in carrying out the pest management activities	<p>4.1. Plant, machinery and equipment are checked for serviceability in accordance with manufacturer's specifications and statutory and regulatory requirements.</p> <p>4.2. Materials are checked for compliance with OHS standards and other statutory and regulatory requirements.</p> <p>4.3. Personal protective equipment and clothing used or worn by employees or contracted personnel are checked for compliance with OHS standards and other statutory and regulatory requirements.</p> <p>4.4. Procedures and skills applied by employees and contracted personnel are monitored for compliance with OHS standards and other statutory and regulatory requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.5. Feedback, advice and coaching are provided to employees and contracted personnel as required to improve or correct procedures and skills.
5. Coordinate contingency management activities	5.1. First aid procedures are initiated and coordinated in response to accident or injury to employees or contracted personnel. 5.2. Relevant authorities are notified and arrangements made in the event of the need for rescue of injured employees or contracted personnel. 5.3. Activities that are not carried out due to accidents, injury, other incidents or unfavourable conditions are rescheduled within the monthly, weekly or daily work plans.
6. Report progress in relation to pest management action plan	6.2 Reports and records are compiled and documented in accordance with employer or organisational requirements and statutory and regulatory requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- plan and manage resources and time
- organise the work of others
- identify hazards and control risks
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• OHS, environmental and pesticides legislation, codes of practice and enterprise procedures</li> <li>• pest control methods and techniques</li> <li>• integrated pest management</li> <li>• pest biology</li> <li>• social and environmental issues</li> <li>• contingency management principles</li> <li>• first aid and rescue procedures</li> <li>• ecological systems</li> <li>• sustainable production systems.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• schedule activities with milestones aligned to the target pests and the local land management and production cycles</li> <li>• estimate equipment, pesticides and labour required to complete the work</li> <li>• brief and supervise employees or contractors and consult with stakeholders</li> <li>• coordinate contingency management activities to minimise the damage caused by accidents or spillage</li> <li>• report progress in relation to the pest management action plan.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess treatment failure	<p>1.1.Pre treatment pest infestation levels are ascertained from monitoring program records where available.</p> <p>1.2.Post treatment population is ascertained from monitoring records and/or inspection.</p> <p>1.3.Expected pest population after treatment is determined from available information.</p> <p>1.4.Significance of difference between expected and monitored population analysed consistent with enterprise guidelines where appropriate.</p> <p>1.5.Treatment used and application technique ascertained from records and assessed against manufacturer's instructions.</p>
2. Investigate and report on causes of failure	<p>2.1.Conditions impacting on effectiveness of treatment prevailing at time of treatment are ascertained from enterprise records where available.</p> <p>2.2.Known conditions at application are analysed against manufacturers' recommendations.</p> <p>2.3.Level of control required by project specifications or permit is compared against results.</p> <p>2.4.Report containing all relevant information known on application of treatment, operators' qualifications and results is produced following enterprise procedure.</p> <p>2.5.Remaining product and report are returned to supplier or manufacturers agent for investigation if treatment appears to have been within guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analyse statistics on pest populations
- assess treatment failure
- investigate and report on causes of failure
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- pest treatment techniques
- surveying population of pests
- treatment characteristics and modes of action
- basic statistical analysis
- report preparation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance

<b>EVIDENCE GUIDE</b>	
	<p>criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• compare the results of pest treatment with the predicted response in published work</li> <li>• ensure the control product has been used in accordance with manufacturers directions, and is either registered for the purpose or used under permit</li> <li>• check conditions at application against records and manufacturers directions</li> <li>• refer pest failure to manufacturer.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collate all available data	1.1.Data on pests' abundance are collated. 1.2.Date on economic impacts of pests is collated. 1.3.Data on environmental impacts of pests are collated. 1.4.Data on pest management action plan operating costs are collated.
2. Assess data against objectives and performance criteria	2.1.Actual results are compared with objectives and performance criteria for the action plan. 2.2.Actual costs are compared with budget for the strategy. 2.3.Cost and benefits of the action plan are documented.
3. Compile report of strategy evaluation	3.1.Report is compiled following enterprise procedures. 3.2.Indicators of good performance of the action plan are isolated and discussed. 3.3.Causes of poor performance are examined. 3.4.Conclusions about the pest management action plan in relation to changes in pest abundance and impacts are clearly stated. 3.5.Conclusions are supported by the data.
4. Recommend modifications	4.1.Conclusions are supported by the data. 4.2.Recommendations provided to supervisor or other authority in format that complies with enterprise guidelines.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collate available data
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- local land management process
- local production process
- relevant legislative and regulatory requirements
- environmental protection legislation
- weed control methods and techniques
- social and environmental issues
- statutory requirements for weed control.

## Evidence Guide

# AHCPMG408A Assess and monitor weed, pest and/or disease control programs

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers assessing and monitor week, pest and/or disease control programs and covers the process of planning for the control of weed, pests and/or disease and defines the standard required to: assess the level of weed, pest and/or disease infestation; implement weed, pest and/or disease strategies based on Integrated Pest Management (IPM) principles; monitor the effectiveness of weed, pest and/or disease strategies; maintain records of the weed, pest and/or disease program.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit is likely to be undertaken without supervision, with only general guidance sought from others.
--------------------------------	--

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for implementation	<p>1.1. Documents within the organisation that detail the requirements of the IPM program are identified and obtained.</p> <p>1.2. The frequency of assessment, the size of any sample area, the available budgets for operations, and the target species for assessment are identified from the organisations weed, pest and/or disease control plans.</p> <p>1.3. The method(s) of assessment/measurement and of control for each target species is identified from the organisations weed, pest and/or disease control plans.</p> <p>1.4. The resources required for the assessment and control operations are assessed and calculated from the area to be assessed, the available timelines, the available resources, and the methods of control required.</p> <p>1.5. Measurable indicators, specifications and targets are determined, based on the target species and the potential impacts on growth.</p> <p>1.6. A plan to implement the IPM program is developed, and clearly describes its scheduling, resources, responsibilities, target species, specific location(s) and performance targets for both the assessment and the control phases.</p> <p>1.7. Discussions are held with operational personnel and immediate management to discuss the implementation plan.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.8. Any approvals that are required for the control operations are identified, sought and obtained.</p> <p>1.9. The implementation plan is clearly articulated and documented, as required, by the organisations policies and procedures.</p>
2. Assess weed, pest and/or disease infestations	<p>2.1. People, materials and equipment required for the assessment are coordinated and scheduled according to the prepared plan.</p> <p>2.2. The procedures and tools to be used, the kind of records that are to be taken, and any potential hazards that might be faced are clearly communicated to operational personnel.</p> <p>2.3. Observations are made and data collected according to the requirements of the implementation plan.</p> <p>2.4. The size and scope of any infestations, and the potential impact on plant growth are assessed and calculated.</p> <p>2.5. Treatments for the infestation are selected from the options detailed in the IPM plan.</p>
3. Implement weed, pest and/or disease control strategies	<p>3.1. People, materials and equipment required for the implementation of the selected control strategies are coordinated and scheduled according to the prepared plan.</p> <p>3.2. All control operations are undertaken in a manner which ensures that potential negative environmental impacts are minimised or eliminated, including the proper disposal of containers and drums.</p> <p>3.3. Occupational Health and Safety (OHS) hazards are identified, assessed, and responsible action taken throughout the control operations.</p> <p>3.4. The procedures and tools to be used, the kind of records that are to be taken, and any potential hazards that might be faced are clearly communicated to operational personnel, and confirmation of the clear communication is sought.</p> <p>3.5. Any documentation that is required to be kept by either the organisation or OHS guidelines is completed clearly and accurately.</p> <p>3.6. Operational staff and any contractors are communicated with regularly to ensure smooth operation and progress.</p> <p>3.7. Advice is given to operational staff and any contractors during the control operations when</p>

ELEMENT	PERFORMANCE CRITERIA
	requested, or when the need is identified.
4. Monitor weed, pest and/or disease control operations	4.1. Monitoring points outlined in the implementation plan are adhered to. 4.2. Checks are made to ensure that the OHS requirements are being observed and followed. 4.3. Checks are made to ensure that the site environmental requirements are being observed and followed. 4.4. Operational staff and any contractors are communicated with regularly to ensure smooth operation and progress. 4.5. Checks are made to ensure that the documentation required by the organisation, or other regulating bodies, is completed clearly and accurately during the progress of the control operations. 4.6. Where any corrective action or amendment to the implementation plan is required the action is initiated and taken.
5. Complete weed, pest and/or disease control operation	5.1. All waste materials and substances are removed from site and stored or disposed of responsibly. 5.2. Documentation is collated and stored according to the requirements of the organization. 5.3. Recommendations for future control operations are prepared based on the conduct of the operation, the data collected, and the discussions had during the operation. 5.4. Where it is required, a report on the conduct of the assessment and control operations is made including the key aspects of the operation.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- interpret monitored information on pest and weed numbers, density and control

## REQUIRED SKILLS AND KNOWLEDGE

- plan and schedule weed, pest and/or disease control including amending plans during the operations
- recognise poor growth and lack of vigour caused by nutrient deficiency
- observe, identify and react appropriately to environmental implications and OHS hazards
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- pest and weed species, including their life cycles and reproduction/multiplication capability
- integrated pest and weed management techniques
- the effects on plants of weeds, pests and/or diseases, including competitive effects on plant growth; threshold levels; and the effects of alternative methods of control
- environmental controls and codes of practice applicable to the enterprise
- plant physiology
- OHS, contractor engagement, chemical use and application, and environmental legislation, codes of practice and enterprise procedures
- environmental controls and codes of practice applicable to the business and to the weed, pest and/or disease control operations
- sound management practices and processes to minimise noise, odours, and debris from weed, pest and/or disease control operations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assess the level of weed, pest and/or disease infestation</li> <li>• implement weed, pest and/or disease strategies based on IPM principles</li> <li>• monitor the effectiveness of weed, pest and/or disease strategies</li> <li>• maintain records of the weed, pest and/or disease program.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole.</p>	
<p>Targeted pests may include:</p>	<ul style="list-style-type: none"> <li>• insects</li> <li>• weeds</li> <li>• pathogens</li> <li>• vertebrates</li> <li>• nematodes and molluscs</li> <li>• weeds may be those which are:                             <ul style="list-style-type: none"> <li>• annual</li> <li>• perennial</li> <li>• broad leaf</li> <li>• narrow leaf</li> <li>• grasses</li> </ul> </li> <li>• invertebrate pests may include:                             <ul style="list-style-type: none"> <li>• thrips</li> </ul> </li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• mites</li> <li>• nematodes</li> <li>• locusts or caterpillars</li> <li>• vertebrate pests might include:                             <ul style="list-style-type: none"> <li>• rabbits</li> <li>• rats</li> <li>• mice</li> <li>• macropods</li> <li>• birds</li> </ul> </li> <li>• diseases may include:                             <ul style="list-style-type: none"> <li>• foliar pathogens</li> <li>• soil borne pathogens.</li> </ul> </li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine the time period and milestones for the implementation of the pest management strategy	<p>1.1.Stakeholders are consulted regarding time period and milestones.</p> <p>1.2.Time period and milestones are documented according to enterprise guidelines.</p> <p>1.3.The time period complies with the objectives in the management strategy.</p> <p>1.4.The time period is realistic to allow achievement of the objectives while taking account of target pests life cycle and behaviour patterns, and land management and production activity cycles.</p> <p>1.5.Milestones are aligned to critical control points in the target pest's life cycle, and the land management and production activity cycles.</p> <p>1.6.Milestones identify a key, measurable point in the time period.</p>
2. Determine specific objectives for the pest management strategy	<p>2.1.Objectives to be achieved at each milestone are defined in consultation with other relevant stakeholders.</p> <p>2.2.Performance criteria for objectives at each milestone are documented.</p> <p>2.3.Objectives and performance criteria are measurable.</p>
3. Identify activities required to achieve specific objectives	<p>3.1.Activities required to achieve objectives by proposed deadlines are determined and documented in consultation with other stakeholders.</p> <p>3.2.Activities are selected and scheduled to comply with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>the pest management strategy, in consideration of community attitudes, and in accordance with relevant statutory and regulatory requirements.</p> <p>3.3. Monitoring and measurement activities are selected and scheduled to comply with the pest management strategy, and in accordance with relevant statutory and regulatory requirements.</p>
<p>4. Estimate resources required to complete the required activities</p>	<p>4.1. Estimates of personnel required to carry out activities are documented.</p> <p>4.2. Plant and machinery required to carry out activities are estimated.</p> <p>4.3. Materials required to carry out activities are estimated.</p> <p>4.4. Personnel, plant, machinery and materials are sourced and costed in consultation with other stakeholders.</p>
<p>5. Develop an action plan to guide implementation of the strategic plan</p>	<p>5.1. The action plan documents the time period, milestones, objectives, activities, required resources and budget to implement the strategy.</p> <p>5.2. Potential contingencies are addressed in the action plan.</p> <p>5.3. Agreement to the action plan and commitment by other stakeholders is documented.</p>

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
<p>This section describes the skills and knowledge required for this unit.</p>
<p><b>Required skills</b></p>
<ul style="list-style-type: none"> <li>• determine the time period and milestones for the implementation of the pest management strategy</li> <li>• determine specific objectives for the pest management strategy</li> <li>• identify activities required to achieve specific objectives</li> <li>• develop an action plan to guide implementation of the strategic plan</li> <li>• use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports</li> </ul>

## REQUIRED SKILLS AND KNOWLEDGE

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- land management and production processes
- relevant legislative and regulatory requirements
- pest control methods and techniques
- social and environmental issues
- exotic diseases
- human resource management principles
- budgetary management
- pest biology
- project planning and management processes
- development of objectives and timelines.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- carry out pest monitoring
- determine the time period and milestones for the implementation of the pest management strategy
- set specific objectives for the pest management strategy

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• identify activities required to achieve specific objectives</li> <li>• estimate resources required to complete the required activities</li> <li>• develop an action plan to guide implementation of the strategic plan.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Pests to be targeted may include:	<ul style="list-style-type: none"> <li>• insects</li> <li>• weeds</li> <li>• pathogens</li> <li>• vertebrates</li> <li>• nematodes</li> <li>• molluscs.</li> </ul>
Pest management strategies may include:	<ul style="list-style-type: none"> <li>• changing land management or production processes and practices e.g.:                             <ul style="list-style-type: none"> <li>• changing lambing times</li> <li>• changing sowing times</li> <li>• changing crops</li> </ul> </li> <li>• modifying habitat</li> <li>• pasture management</li> <li>• pest population control e.g.:                             <ul style="list-style-type: none"> <li>• shooting</li> <li>• poisoning</li> <li>• trapping</li> <li>• mustering</li> <li>• relocation</li> <li>• fumigation</li> <li>• sedation</li> </ul> </li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• exclusion fencing</li> <li>• biological controls</li> <li>• harvesting</li> <li>• tagging</li> <li>• weed control including:                             <ul style="list-style-type: none"> <li>• chemical</li> <li>• biological control</li> <li>• mechanical removal.</li> </ul> </li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define the land management and/or production process for the area affected by the target pest problem	<p>1.1. Consultation with other land users, regional land management bodies and other relevant stakeholders in the affected area is documented.</p> <p>1.2. Desired land management and/or production outcomes are identified.</p> <p>1.3. Performance criteria for measuring land management and/or production outcomes are determined.</p> <p>1.4. Critical activities required to achieve the desired outcomes are identified.</p> <p>1.5. Land management and/or production process is mapped against the annual planning cycle.</p> <p>1.6. Land management and/or production process budget is determined.</p>
2. Analyse the pest problem	<p>2.1. Target pest(s) distribution within the affected area is determined in consultation with other stakeholders.</p> <p>2.2. Target pest distribution data supplied by stakeholders is validated.</p> <p>2.3. Factors that influence the target pest(s) population and distribution within the affected area are described.</p> <p>2.4. Pest life cycle is mapped.</p>
3. Determine critical control points for management of the	<p>3.1. Periods of greatest risk in the land management and/or production process are identified in consultation with other stakeholders.</p>

ELEMENT	PERFORMANCE CRITERIA
pest problem	3.2.Periods of target pest vulnerability within its life cycle are identified. 3.3.Land management and/or production process map and target pest life cycle map are consolidated. 3.4.Critical points for controlling pest populations and/or changing land management or production practices within the annual planning cycle are determined in consultation with other stakeholders.
4. Analyse the impacts of the pest	4.1.Economic losses resulting from the pest presence are measured or estimated in consultation with other stakeholders. 4.2.Environmental impacts from the pest presence are measured or estimated in consultation with other stakeholders. 4.3.Potential risks relating to disease or toxicity are defined.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analyse problems
- plan strategically
- define the land management and/or production process for the area affected by the target pest problem
- analyse the pest problem
- determine critical control points for management of the pest problem
- analyse the impacts of the pest
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
abilities.
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• land use processes, ecological systems and production systems</li> <li>• relevant legislative and regulatory requirements</li> <li>• environmental protection legislation</li> <li>• plant and animal identification</li> <li>• ecological systems and production systems</li> <li>• pest biology</li> <li>• survey techniques</li> <li>• target pest distribution and characteristics</li> <li>• statutory requirements for pest control</li> <li>• environmental and OHS legislation, codes of practice and enterprise procedures.</li> </ul>

# AHCPMG503A Develop a strategy for the management of target pests

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers developing a strategy for the management of target pests and defines the standard required to: determine land management/production objectives; estimate costs and advantages for the management units most affected by the target pests; define and prioritise the management units most affected, both actually and potentially, by the target pests; define the performance criteria for each land management/production objective; select management options for the target pests; negotiate strategies with relevant stakeholders in the affected area.
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	This unit applies pest control officers and managers for work carried out independently within organisational guidelines.
--------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine land management/production objectives	<p>1.1. Other land users, regional land management bodies, landcare committees and relevant stakeholders are consulted regarding regional and local objectives.</p> <p>1.2. Outcomes of consultation incorporating regional and local objectives are recorded according to enterprise guidelines.</p> <p>1.3. Objectives address major land uses and production activities affected by the impacts of the target pests.</p> <p>1.4. Objectives relate to the problem definition and the reduction in the pest impacts and associated losses.</p> <p>1.5. Objectives comply with national, State and regional strategies for land and pest management.</p>
2. Estimate costs and advantages for the management units most affected by the target pests	<p>2.1. The diversity of land management and production values that the target pests affect within the affected region or area is defined.</p> <p>2.2. The likely costs of preferred options for control of pest populations and/or changes to land management or production activities associated with each value are documented.</p> <p>2.3. The likely costs of control are compared with the impacts and losses caused by the target pests.</p> <p>2.4. The management units most affected, both actually</p>

ELEMENT	PERFORMANCE CRITERIA
	and potentially, by the target pests are defined and prioritised.
3. Define the performance criteria for each land management/production objective	<p>3.1. Performance criteria are defined in accordance with sustainable land use principles to address target pests population levels, economic impacts and environmental impacts.</p> <p>3.2. Performance criteria are realistic and measurable.</p>
4. Select management options for the target pests	<p>4.1. Options for controlling pest populations and/or changing land management or production practices are assessed and documented in terms of economic factors, technical difficulty, practical feasibility, social and/or environmental acceptability.</p> <p>4.2. A range of management options are assessed in terms of current and future financial support, when control activities are to be implemented, level of target pests population reduction required, and the most suitable control methods and techniques.</p> <p>4.3. A management option is selected in accordance with sustainable land use principles, economic feasibility, integrated pest management principles, environmental acceptability, and statutory requirements for pest control.</p>
5. Negotiate strategies with relevant stakeholders in the affected area	<p>5.1. The strategy is based on the definition of the problem using data from measurement of abundance and impacts.</p> <p>5.2. The strategy clearly documents the pest problem, the objectives, the prioritised management units, the performance criteria, and the most suitable management options.</p> <p>5.3. Strategies are agreed and confirmed through relevant stakeholder consultation and negotiation.</p> <p>5.4. Strategies are published and distributed to relevant stakeholders, organisations and interest groups.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- estimate costs and advantages
- plan
- report and document strategies
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- relevant legislative and regulatory requirements
- environmental protection legislation
- pest control methods and techniques
- social and environmental issues
- statutory requirements for pest control
- land use processes, ecological systems and production systems
- pest management options and strategies
- plant and animal identification
- pest biology
- Occupational Health and Safety (OHS) and environmental legislation, codes of practice and enterprise procedures.

## AHCPMG506A Manage the implementation of legislation

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the management of the implementation of legislation and defines the standard required to: establish ownership and contact parties where legislation is contravened for control of pests; serve notices for failing to comply with relevant legislation and regulations; provide pest management advice to landholders; follow guidelines to collect evidence for court proceedings.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to officers who administer legislation and involves the provision of both support and advice to landholders to ensure compliance within enterprise guidelines or legislative requirements.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish procedures to identify infestations and location	<p>1.1. Monitoring program identifies infestations in contravention of existing legislation.</p> <p>1.2. Procedures to establish land ownership and responsibilities of all parties are established in line with State legislation.</p> <p>1.3. Procedures to contact landowners and notify of infestation and control requirements are prepared consistent with enterprise and regulatory guidelines.</p> <p>1.4. Policies detailing right of entry in communicating with landowners are explained clearly to relevant workers.</p> <p>1.5. Record keeping documents are in line with agency policies.</p>
2. Administer the implementation of ruling legislation	<p>2.1. Procedures for the serving of notices complying with relevant legislation and regulations and agency policy are prepared and implemented.</p> <p>2.2. Guidelines on the collection of evidence and reporting of findings are prepared and implemented in accordance with legislation or legal advice where appropriate.</p> <p>2.3. Pest management advice is provided to landholders consistent with enterprise guidelines and legislative requirements.</p> <p>2.4. Enterprise policy providing assistance and advice to landholders in the implementation of pest management programs is established.</p> <p>2.5. Evidence and findings are collated for presentation in court or to legal representatives following</p>

ELEMENT	PERFORMANCE CRITERIA
	enterprise policy.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- establish procedures to identify infestations and location
- administer the implementation of ruling legislation
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant commonwealth, state and local legislation and regulations
- pest control treatments relating to pests dealt with under legislation and regulation
- integrated pest management principles
- legislation relating to gathering and presentation of evidence
- conflict resolution
- group skills relating to presentation of advice
- record keeping systems
- time management for self and others
- protection of the environment
- use of pest control agents
- ecological and production systems
- policy and procedure development
- presenting evidence in court.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish ownership and contact parties where legislation is contravened for control of pests</li> <li>• serve notices for failing to comply with relevant legislation and regulations</li> <li>• provide pest management advice to landholders</li> <li>• follow guidelines to collect evidence for court proceedings.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole.</p>	
<p>Legislation covered in this standard may include:</p>	<ul style="list-style-type: none"> <li>• State Noxious Weeds Acts</li> <li>• Clean Water Acts</li> <li>• Local Authority regulations</li> <li>• Occupational Health and Safety (OHS).</li> <li>• the standard covers pest situations for weeds and vertebrate pests of crops, pastures, rangelands, native vegetation and waterways.</li> </ul>
<p>Practices include:</p>	<ul style="list-style-type: none"> <li>• those relating to pest management and pesticide use.</li> </ul>

<b>RANGE STATEMENT</b>	
Responsibilities include:	<ul style="list-style-type: none"> <li>the process of administering legislation and the provision of both support and advice to landholders to ensure compliance within enterprise guidelines or legislative requirements.</li> </ul>

## AHCPMG601A Develop a plant pest survey strategy

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers developing a plant pest survey strategy and specifies the outcomes required to develop a strategy for plant pest surveys. It specifies elements for determining the presence, distribution and/or prevalence of a plant pest or for confirming that the pest is not detectable. This work may be conducted as part of an emergency response to an incursion or as part of routine surveillance, and will be conducted in line with established standards and protocols.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to personnel who have been appointed or engaged to undertake a role within a plant pest incursion. This unit may also apply to personnel involved with planning responses to emergency animal diseases and aquatic animal diseases.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Obtain and analyse biological information for survey design	1.1. Biological and dispersal characteristics of pest are identified. 1.2. Impact of climate on reproduction rate and predicted distribution of pest are determined. 1.3. Geographical distribution of the host(s) is identified. 1.4. Information is analysed to determine priority areas to be surveyed.
2. Develop survey methodology	2.1. Particular type of survey to be designed is determined according to phase of incursion. 2.2. Appropriate biometric design that will satisfy confidence limits is selected in consultation with technical experts and according to relevant standards and protocols. 2.3. Field data collection methodology is determined. 2.4. Quality assurance standards that will apply to survey are identified and incorporated in survey methodology and documentation. 2.5. Appropriate diagnostic tests are selected for use in confirming pest presence in samples to be collected. 2.6. Instructions for survey teams are developed.
3. Determine the resources required	3.1. Resources required for survey activities are determined in conjunction with technical experts and are documented.

ELEMENT	PERFORMANCE CRITERIA
4. Obtain approval for the survey design	4.1. Survey design is documented according to protocols and standards. 4.2. Survey design is submitted to appropriate authorities for approval.
5. Determine post-survey review processes	5.1. Review processes are determined to evaluate conduct and effectiveness of survey program.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- high level interpretation of information to determine distribution of pests in relation to biology, climate and vegetation
- working with other technical experts
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- detailed knowledge of a range of biological survey methods
- detailed knowledge of application of biometric principles to biological survey design
- detailed knowledge of biology of groups of pests and pathogens relevant to survey
- detailed knowledge of types and distribution of hosts relevant to survey
- knowledge of plant and animal industries and potential impact of incursions
- legislation and regulations defining and affecting management of incursions
- Australian Emergency Plant Pest Response Plan (PLANTPLAN).

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The critical requirements for this unit of competency as a whole are listed below:</p> <ul style="list-style-type: none"> <li>assessment must confirm one's ability to develop and document a plant pest survey strategy according to prevailing standards and protocols.</li> </ul>
