<p>2. Complete contract documentation</p>	<p>2.1.Requirements of the contract are clearly documented and understood by the relevant parties.</p> <p>2.2.Areas of ambiguity or concern are clarified and resolved.</p> <p>2.3.Conditions for service or supply are agreed between the parties including the determination of key performance indicators.</p> <p>2.4.Alternative processes are undertaken where agreement is unable to be reached in accordance with enterprise procedures.</p> <p>2.5.Negotiations conform to established enterprise requirements and relevant legislation.</p> <p>2.6.Contract documentation is signed and exchanged between the relevant parties.</p>
<p>3. Monitor the performance of contracts</p>	<p>3.1.The rights and obligations of parties to a contract are identified, and appropriate methods of addressing non-performance are implemented.</p> <p>3.2.Professional and regulatory bodies available to support commercial grievance processes are identified and consulted when required.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3.Completion of contract against key performance indicators is monitored. 3.4.Issues in respect to non-compliance are advised to the other party in writing.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- establish agreements with sources external to the enterprise
- complete contract documentation
- monitor the performance of contracts
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- contract/commercial law applicable to the type of agreement
- processes of formulation and negotiation of contracts
- enterprise business policies and plans including procedures for maintenance of confidentiality
- selection and appropriate application of technology, information systems and procedures.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish agreements with sources external to the enterprise</li> <li>• complete contract documentation</li> <li>• monitor the performance of contracts.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Contract requirements may include:	<ul style="list-style-type: none"> <li>• quality or enterprise work specifications and procedures</li> <li>• manufacturer's specifications and/or supplier's handling and storage advice</li> <li>• workplace operating procedures and policies</li> <li>• supplier and/or client instructions</li> <li>• legal and contract documentation</li> <li>• Materials Safety Data Sheets (MSDSs)</li> <li>• communications technology equipment</li> <li>• personal and work area work procedures and practices</li> <li>• relevant State, Territory and Commonwealth</li> </ul>

<b>RANGE STATEMENT</b>	
	legislative <ul style="list-style-type: none"> <li>• framework concerning contracts and trade practices</li> <li>• Occupational Health and Safety (OHS) in terms of duties of employers, employees, suppliers and contractors contracts</li> <li>• hazardous substances and dangerous goods</li> <li>• environment protection</li> <li>• equal opportunity</li> <li>• equal employment opportunity</li> <li>• affirmative action standards</li> <li>• certification requirements</li> <li>• license, patent or copyright arrangements</li> <li>• quality assurance procedures</li> <li>• emergency procedures.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out preliminary planning activities for estimating, quoting and/or tendering	<p>1.1. Nature and scope of the project are identified in consultation with the client according to enterprise policy.</p> <p>1.2. Format, specifications and deadline for submission of the estimate, quote or tender are identified and confirmed with the client.</p> <p>1.3. Available relevant documentation is obtained and interpreted.</p> <p>1.4. Project site is inspected and reconciled with scaled drawings, project and other site plans in consultation with the client, agent or other authority.</p>
2. Determine resource requirements	<p>2.1. Detailed project information and monetary sums are interpreted and recorded from client specifications.</p> <p>2.2. Size, type and quantity of required project resources are identified and estimated according to client specifications.</p> <p>2.3. Sources are identified and evaluated for the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>procurement of suitable project resources consistent with client requirements.</p> <p>2.4. Appropriate tools and equipment are selected and used to calculate the correct size, type and quantity of each resource item.</p> <p>2.5. Unit and total cost for each resource item are calculated and documented.</p> <p>2.6. Necessary and appropriate contingency sums to complete the estimate, quote or tender are interpreted and documented.</p> <p>2.7. Calculations are accurately recorded on a price summary sheet.</p>
3. Prepare schedules for the estimate, quote or tender	<p>3.1. Works schedule is documented according to client specifications.</p> <p>3.2. Scheduling of resources is accurately documented consistent with the requirements of the works schedule.</p> <p>3.3. Scheduling of financial requirements is accurately documented according to enterprise guidelines.</p>
4. Prepare and document the estimate, quote or tender for submission to the client	<p>4.1. Estimate, quote or tender price is calculated and checked according to enterprise guidelines.</p> <p>4.2. Costed summaries and works, resource and financial schedules are compiled according to client specifications.</p> <p>4.3. Quality assurance requirements, enterprise customer service procedures, conventional formatting and industry standards are strictly adhered to in the development of documentation.</p> <p>4.4. Total estimate, quotation and/or tender is completed accurately and submitted to the client within the specified deadline.</p> <p>4.5. Further information is provided and adjustments made according to client requirements.</p>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Evaluate commercial information	<p>1.1.Relevant information is researched and analysed to identify market trends.</p> <p>1.2.Competing products are identified and evaluated to determine strengths and weaknesses of own products.</p> <p>1.3.Collated information is presented in a manner which provides clear and concise information.</p> <p>1.4.Market and situation analysis is conducted using established techniques in accordance with available budget and the need for external assistance.</p>
2. Identify marketing requirements	<p>2.1.Promotional materials are created that enhance the product and commercial presentation.</p> <p>2.2.Priorities, responsibilities, timelines and budgets are recorded and communicated to appropriate colleagues.</p>
3. Determine promotional strategies	<p>3.1.Detailed plans for promotional activities are prepared and recorded according to enterprise guidelines.</p> <p>3.2.Outlined in the promotional plan are objectives, level of exposure to be achieved and available markets.</p> <p>3.3.Strategies take account of feedback from operational staff, time management and scheduling issues, and resource constraints.</p> <p>3.4.Marketing objectives are established based on new and retained business consistent with product and operational business plans.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Organise implementation	4.1. Criteria are established to measure impact and success of promotional activities. 4.2. Adjustments to the promotional strategy product distribution are made promptly to ensure consistency of promotion. 4.3. Required distribution channels are defined and established. 4.4. Product documentation is distributed on time in the specified quantities.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analyse, research information and develop a marketing plan
- implement and evaluate a marketing plan
- research and determine the best marketing options in order to achieve the organisations objectives
- problem solve to overcome impediments
- manage time
- evaluate performance targets and recommend modifications or improvements
- collect and analyse data to assess marketing alternatives
- make presentations to groups
- plan to manage promotional activities
- manage budgets
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• financial management and budgeting</li> <li>• rural organisations policies and procedures for marketing and promotions</li> <li>• sales and marketing principles and practices</li> <li>• sound knowledge of promotional activities including, trade shows, in-house promotions, advertising, public relations, familiarisations, signage and display</li> <li>• relevant State/Territory legislative requirements with regard to Occupational Health and Safety (OHS) and risk management procedures for management of promotional activities</li> <li>• legal issues that affect marketing activities (trade practices, Fair Trading Acts, Sales of Goods Acts)</li> <li>• industry and marketing knowledge including sales networks and distribution systems, and customer trends and preferences</li> <li>• demographic studies and their application in the development of a marketing plan.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Evaluate commercial performance	<p>1.1.Data relating to enterprise performance is gathered and analysed to identify historical and current performance.</p> <p>1.2.Operational structures are reviewed and analysed to determine the suitability of organisational processes to enterprise objectives.</p> <p>1.3.Enterprise strengths and weaknesses are evaluated against market conditions to determine current and future capacities.</p> <p>1.4.Enterprise objectives are evaluated to identify variations and scope for future development.</p>
2. Allocate and co-ordinate business resources	<p>2.1.Roles and responsibilities of personnel are identified and communicated.</p> <p>2.2.Resource requirements for enterprise are identified and costed using standard financial analysis techniques.</p> <p>2.3.Costs of ensuring sustainability of enterprise operations are calculated and factored into business planning for the enterprise.</p>
3. Identify performance requirements	<p>3.1.Performance indicators are developed and are realistic within available timeframes and resources.</p> <p>3.2.Factors inhibiting performance against objectives are identified and minimised.</p> <p>3.3.Market conditions are monitored and assessed based on relevant data and assumptions that are transferable and justifiable.</p> <p>3.4.Strategies and programs to promote the sustainability</p>

ELEMENT	PERFORMANCE CRITERIA
	of operations are prepared and incorporated into enterprise procedures.
4. Review business performance	<p>4.1. Enterprise operations are regularly reviewed to identify opportunities for improvements in performance.</p> <p>4.2. Impact of natural conditions on enterprise are monitored and anticipated to assess sustainability of resource use.</p> <p>4.3. Costs and estimates are compared with resource allocation.</p> <p>4.4. Operational plans are reviewed to determine schedule of activities.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analyse market requirements
- match the enterprise to resources
- set enterprise objectives and make financial and economic determinations
- monitor and manage resources (human, physical, environmental)
- evaluate land capability and natural resources (where applicable to the enterprise)
- research, analyse and evaluate enterprise information and requirements
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- rates of return for products and/or services

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• financial analysis techniques</li> <li>• structure and operation of small businesses relevant State/Territory Occupational Health and Safety (OHS)</li> <li>• legislative requirements</li> <li>• environmental conditions, positive environmental practices and negative impact minimisation measures</li> <li>• human resource requirements for the enterprise</li> <li>• transport requirements for the enterprise</li> <li>• enterprise/property improvement requirements.</li> <li>• market performance in commodities</li> <li>• statutory marketing requirements</li> <li>• regulations related to exports of Australian agricultural products</li> <li>• animal husbandry.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• gather and analyse data relating to enterprise performance</li> <li>• review operational structures to determine effectiveness</li> <li>• identify available resources to assess capacity</li> <li>• develop realistic performance indicators</li> <li>• review enterprise operations against performance indicators</li> <li>• plan to improve business performance by addressing results of review.</li> </ul>

**EVIDENCE GUIDE****Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Data that may be gathered for analysis may include::

- sales figures
- expected revenues
- expenditures
- attributable costs
- market share figures
- trends in consumer purchases
- borrowing costs
- transport costs
- delivery times.

The operational structures that may be included for review and analysis include:

- management processes
- reporting arrangements
- decision-making authorities
- financial accounting procedures
- promotional activities
- operational resources.

Factors in market conditions that may be considered include:

- product and service demand
- availability of funds
- cost of financing
- supplier costs
- delivery constraints
- availability of substitutes
- competitors.

Standard financial analysis techniques may include:

- cost benefit analysis
- 'what if?' analyses
- time series and trend
- expenditure and revenue ratios
- break-even analysis

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• accounting standards</li> <li>• cash flow schedules.</li> </ul>
The indicators of business performance may include:	<ul style="list-style-type: none"> <li>• sales targets</li> <li>• revenue estimates</li> <li>• waste reduction</li> <li>• erosion replacement and reversal</li> <li>• environmental sustainability</li> <li>• variable cost ratios</li> <li>• investment returns</li> <li>• diversification.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare a budget	<p>1.1. Information on past receipts and payments is obtained from previous records, compared to current prices and cost trends, and compiled in a form that enables projections of future receipts and expenditures.</p> <p>1.2. A plan is prepared for a period which allows for expected expenditure and financial reporting requirements, using the 'most likely' prices and costs.</p>
2. Implement and monitor a budget	<p>2.1. Receipts and payments are monitored and reconciled against the original budget.</p> <p>2.2. Variances against the original plan are identified, and the impact on overall profit/loss and cash flow is calculated.</p> <p>2.3. Funds are allocated in accordance with budget objectives and parameters.</p> <p>2.4. Adjustments are made where necessary to respond to unacceptable variations.</p> <p>2.5. Budgets and plans are renegotiated/ restructured where necessary to optimise enterprise performance.</p>
3. Prepare financial report	<p>3.1. Records of financial performance are properly maintained within enterprise systems.</p> <p>3.2. Information with source documents is assembled according to the requirements of the report recipient.</p> <p>3.3. Documentation is forwarded in a timely and efficient manner.</p> <p>3.4. Non-financial objectives are reported in the context of overall enterprise performance.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare a budget
- monitor receipts and payments
- negotiate and restructure budgets
- implement and monitor a budget
- maintain financial records
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- budget formulation
- financial information systems
- business transactions
- banking and reconciliation
- standards for organisational recordkeeping and audit requirements.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Competence in preparing and monitoring budgets and financial reports requires evidence that budgets have been successfully and appropriately developed and monitored in an enterprise, and that financial reports meet industry standards in their content and structure. The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• prepare a budget using most likely costs and income</li> <li>• develop and monitor budgets in an enterprise</li> <li>• prepare financial reports to meet industry standards.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Budgets may include:	<ul style="list-style-type: none"> <li>• recurrent operating or project based funds.</li> </ul>
Financial reports may be:	<ul style="list-style-type: none"> <li>• prepared for Taxation Commissioner</li> <li>• financing agencies</li> <li>• boards of management</li> <li>• committees</li> <li>• councils</li> <li>• executive management.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify scope of capital works	<p>1.1. Analysis is undertaken as required and the results are analysed to determine the scope of the proposed capital works.</p> <p>1.2. Planning is initiated in accordance with organisational and other relevant policies and guidelines and the organisation's strategic direction in consultation with stakeholders.</p> <p>1.3. Conceptual and analytical skills are applied to develop a strategy to achieve objectives, outcomes and client requirements for the capital works.</p> <p>1.4. An effective risk management system is developed and applied to ensure objectives can be met within the enterprises allocated budget.</p>
2. Acquire resources	<p>2.1. Resources, equipment and infrastructure are identified, acquired and allocated.</p> <p>2.2. Scope and objectives of works are analysed to determine the tasks to achieve agreed outcomes on time and within budget.</p> <p>2.3. Processes for monitoring, evaluating and reporting performance against objectives are developed and applied.</p> <p>2.4. Roles and responsibilities of team members and stakeholders are identified and agreed.</p>
3. Manage construction activities	<p>3.1. Tasks are implemented in accordance with plans and specifications.</p> <p>3.2. Communication process is established including responsibilities for conflict resolution.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Progress is monitored to ensure time, performance, cost and quality of works is achieved. 3.4. Proposed variations are investigated and negotiated in consultation with stakeholders.
4. Complete capital works and evaluate and report on activities	4.1. Inspection is undertaken to ensure all outcomes are met. 4.2. Evaluation of completed project is undertaken against agreed objectives and reported to stakeholders.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Determine mechanisms and criteria for reviewing management plans and strategies</p>	<p>1.1.Reasons for reviewing management plans and strategies are clearly established.</p> <p>1.2.Analysis of data is carried out to recognise internal policy and procedural influences impacting on management plans and strategies.</p> <p>1.3.Trends are interpreted to identify changes occurring in the management plans and strategies beyond normal variations.</p> <p>1.4.Industry information is regularly reviewed to establish the need for reviewing management plans and strategies within the organisation.</p> <p>1.5.Realistic timeframes for review process are determined.</p>
<p>2. Analyse existing management plans and strategies</p>	<p>2.1.Trends and threats are assessed against the objectives of the management plans and strategies.</p> <p>2.2.Existing management plans and strategies relevant to the issue under consideration are identified and assessed for their effectiveness, relevance, and impact on resource management.</p> <p>2.3.Gaps in management plans and strategies are identified and prioritised.</p> <p>2.4.Management plans and strategies are analysed taking account of the relevant historical, social, cultural, political and economic contexts in which they apply.</p> <p>2.5.Persons contributing to review of management plans and strategies are fully informed regarding relevant enterprise requirements.</p> <p>2.6.Consultation with stakeholders is undertaken to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>ensure support for implementation of adjusted management plans and strategies.</p> <p>2.7.Problems are clearly identified and resolved taking into consideration the views of stakeholders.</p>
3. Modify management plans and strategies	<p>3.1.Modified management plans and strategies are prepared covering required aspects using clear and concise language in a standardised format.</p> <p>3.2.Modified management plans and strategies developed are consistent with business plan and identified needs.</p> <p>3.3.Feedback from employees on existing management plans and strategies is evaluated.</p> <p>3.4.Staff are instructed and trained in changes to management strategies and monitoring recording processes.</p> <p>3.5.Proposed changes to management plans and strategies are submitted for approval according to enterprise procedures.</p> <p>3.6.Amended management plans and strategies incorporate outcomes of the consultative process, and agreement is sought from stakeholders where appropriate.</p> <p>3.7.Modified management plans and strategies comply with relevant legislation.</p>
4. Implement modified management plans and strategies	<p>4.1.Modifications are made to operational processes to obtain additional key data and/or to monitor changes to conservation strategies and plans.</p> <p>4.2.Education and training is given to employees to ensure effective implementation.</p> <p>4.3.Education and information is provided to stakeholders to promote implementation.</p> <p>4.4.Implementation of modifications is made in a timely manner to reflect the need for changes confirmed through the review process.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- assess current strategies and plans
- adjust on-going monitoring plan
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- ecosystems including the interrelationship of geophysical, hydrological, biological and meteorological factors
- normal and abnormal life cycles of the biodiversity
- knowledge of the monitoring parameters and techniques utilised in biological monitoring
- threats, both natural and from human activity, to places of natural significance
- international, national and local standards and codes of practice
- monitoring processes for particular types of land
- pollution sources and damage potential
- general understanding of range of cultural issues
- legislation under which enterprise operates
- accepted scientific processes.

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

<b>EVIDENCE GUIDE</b>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• determine mechanisms and criteria for reviewing management plans and strategies</li> <li>• analyse existing management plans and strategies</li> <li>• modify management plans and strategies</li> <li>• implement modified management plans and strategies.</li> </ul>

	systematically introduced. 3.4.Strategic plan initiatives and desired outcomes are clearly communicated to all relevant parties. 3.5.Strategic performance is evaluated for gaps and strengths, and appropriate remedial action implemented.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- set goals and directions for a business
- analyse information and results
- consider and evaluate alternatives
- design performance criteria
- manage projects
- think logically and strategically
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the external environment
- working knowledge of market forces
- resource availability and accessibility
- feasible enterprises and opportunities
- business structures
- forecasting
- value adding concepts

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• strategic planning methodologies</li> <li>• data collection and analysis methods</li> <li>• risk management techniques</li> <li>• knowledge of legislation codes and by-laws relevant to the organisations operation and potential expansion</li> <li>• organisational design and change processes.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Compare enterprise systems and processes with industry benchmarks	1.1. Industry benchmarks for best practice are sourced and acquired. 1.2. Production performance is examined using comparative analysis techniques. 1.3. Relevant codes of practice are identified and implemented. 1.4. Business systems are audited against best practice criteria. 1.5. Marketing plans are analysed and Quality Assurance (QA) schemes evaluated. 1.6. Human Resources management practices are audited against best practice criteria. 1.7. Environmental/natural resources parameters are identified and assessed against best practice.
2. Identify areas for improvement within the enterprise	2.1. Measurable targets and performance indicators are established. 2.2. Systematic strategic planning is implemented within the business. 2.3. An ethos for producing quality products is embedded in the enterprise culture. 2.4. Quality standards are defined for products, physical and natural resources, and inputs. 2.5. Targets and performance indicators are established. 2.6. Commitment to knowledge and learning is established.

ELEMENT	PERFORMANCE CRITERIA
	2.7. Effective communication strategies are implemented with staff and other stakeholders.
3. Undertake continuous monitoring of systems and processes	3.1. Mechanisms for gaining feedback information are implemented. 3.2. Performance is reviewed against targets and performance indicators in an appropriate evaluation cycle. 3.3. Reporting and documenting procedures are designed. 3.4. Improvements to systems and processes are implemented.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement strategies for personal development and appropriate self-management	1.1. Own management strengths and weaknesses are regularly audited and addressed through training and family and professional support. 1.2. Priorities in management and operations are determined, and time is allocated to achieve effective outcomes. 1.3. Strategies for managing conflicting demands and pressure are investigated and implemented.
2. Identify skill requirements and prepare task descriptions and person specifications	2.1. Tasks are identified and described along with the range of conditions under which performance may need to occur. 2.2. Most appropriate employment arrangements are determined based on employer and employee needs, responsibilities and rights. 2.3. Person specifications are prepared with due regard to Equal Opportunity Employment Legislation, OHS and work based harassment regulations. 2.4. Opportunities to use government-supported employment and training programs are explored and applied as appropriate.
3. Arrange employment of workforce members	3.1. Options for filling job vacancies are assessed. 3.2. Resources and materials for recruitment are prepared and placed with media and employment agencies as appropriate. 3.3. Criteria for assessing job applicants are determined,

ELEMENT	PERFORMANCE CRITERIA
	<p>and applicant evaluation processes and procedures are prepared.</p> <p>3.4.Applicants are assessed against the criteria and selection decision is finalised.</p> <p>3.5.All applicants are advised appropriately.</p>
4. Manage workforce performance	<p>4.1.Induction programs are designed for each employee consistent with legislative requirements and effective management.</p> <p>4.2.Terms of engagement for consultants and contractors are clarified and established.</p> <p>4.3.Induction programs are conducted for new appointees and appropriate records established.</p> <p>4.4.Work plans are developed with all members of the workforce (family and non-family).</p> <p>4.5.Strategies for communicating with workers are designed and implemented.</p> <p>4.6.Performance management strategies are designed and implemented.</p> <p>4.7.Processes for the termination of non-performing staff are identified and followed as necessary.</p>
5. Support personal development, training and career development of workers	<p>5.1.Strategies to identify skill and knowledge gaps are designed and implemented with workers, and strategies to address these are implemented.</p> <p>5.2.On-job training is provided to optimise worker performance and to ensure safety and fairness in the workplace.</p> <p>5.3.Off-job training requirements are identified and training is sourced and supported as appropriate.</p> <p>5.4.Opportunities for career development are identified and provided and strategies for succession are designed and implemented.</p> <p>5.5.Prior learning, experience and training is recognised and rewarded where appropriate.</p>
6. Manage administrative support	<p>6.1.Processes and procedures for the administration of staff records are designed and implemented.</p> <p>6.2.Administrative procedures and processes to meet legislated requirements are designed and implemented.</p> <p>6.3.Industrial relations are established and monitored, awards adhered to, enterprise agreements and/or contracts of employment negotiated, and disputes</p>

ELEMENT	PERFORMANCE CRITERIA
	and conflicts resolved.
7. Implement OHS priorities and procedures	7.1. Safety policies are developed and communicated within the enterprise. 7.2. Safe work practices are identified/ designed for all aspects of the operation of the enterprise. 7.3. Safe work practices are communicated and enforced among all members of the workforce.
8. Review labour productivity	8.1. Strategies for monitoring labour costs are established. 8.2. Benchmarks for labour productivity are sourced and analysed to review the performance of the enterprise. 8.3. Opportunities to develop more efficient work practices are established by consulting peers, staff and consultants as appropriate. 8.4. Appropriate industrial relations are established and monitored, awards adhered to, enterprise agreements and/or contracts of employment negotiated, and disputes and conflicts resolved. 8.5. Strategies for improving labour productivity are implemented.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- implement strategies for personal development and appropriate self-management
- identify skill requirements and prepare task descriptions and person specifications
- arrange employment of workforce members
- implement OHS priorities and procedures
- review labour productivity
- terminate employment of particular staff as necessary
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <p>clarification, negotiating solutions and responding to a range of views</p> <ul style="list-style-type: none"> <li>• use numeracy skills to estimate, calculate and record complex workplace measures</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• personal development</li> <li>• time management</li> <li>• task descriptions and person specifications</li> <li>• equal opportunity and Equal Employment Opportunity legislation</li> <li>• OHS legislation</li> <li>• relevant industrial awards</li> <li>• employee induction programs</li> <li>• interviewing strategies and protocols</li> <li>• works compensation instance and superannuation</li> <li>• contracts of employment</li> <li>• unfair dismissal legislation.</li> </ul>

## Evidence Guide

<p><b>EVIDENCE GUIDE</b></p>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• implement strategies for personal development and appropriate self-management</li> <li>• identify skill requirements and prepare task descriptions and person specifications</li> <li>• arrange employment of workforce members</li> <li>• support career and professional development of</li> </ul>

<b>EVIDENCE GUIDE</b>	
	workforce members <ul style="list-style-type: none"> <li>• implement OHS priorities and procedures</li> <li>• review labour productivity.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Strategies may include:	<ul style="list-style-type: none"> <li>• implementing strategies for personal development and appropriate self-management</li> <li>• identify skill requirements</li> <li>• prepare task descriptions and person specifications</li> <li>• arrange employment of workforce members</li> <li>• implement OHS priorities and procedures</li> <li>• review labour productivity.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Define terms of reference & evaluation context	1.1. Identify and clarify the outcomes sought, who will use the information and for what purpose. 1.2. Identify the key stakeholders who will be consulted. 1.3. Select evaluation and monitoring methods which are suitable to the size and significance of the program, and the terms of reference. 1.4. Complete a review of existing evidence and literature relevant to the proposed evaluation. 1.5. Develop an evaluation methodology that supports broader management targets, Natural Resource Management (NRM) standards, targets and outputs.
2. Identify the key stages and outcomes of the program	2.1. Define key stages, milestones and timeframe. 2.2. Communicate with clients and stakeholders the details of the program and delivery timeline for endorsement. 2.3. Identify potential risks which may impact on the proposed program. 2.4. Refine targets and objectives as required.
3. Define reporting and record keeping requirements for data management	3.1. Identify data collection, management and reporting requirements to meet the objectives of the program. 3.2. Identify existing data sets that may be accessed for the program. 3.3. Design data collection protocols so relevant standards and required formats are met. 3.4. Identify how data will be stored to ensure security and appropriate access taking into account required formats.

ELEMENT	PERFORMANCE CRITERIA
	3.5. Identify the information products required taking into account clients and stakeholders needs and use in decision making. 3.6. Produce reports to suit program audience types.
4. Identify the resources needed to implement the program	4.1. Identify the personnel and skills sets required to implement the monitoring and evaluation program. 4.2. Assess the material resources required to undertake the work. 4.3. Determine the cost of the program and develop a budget.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- scoping a project
- data collection and management
- budgeting and identifying program costs
- project management and design
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- program design considerations (cost, equality, technically valid, ethics)
- quantitative and qualitative methods for monitoring and evaluation
- data management.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement a monitoring and evaluation strategy	1.1. Collect relevant baseline data. 1.2. Consult with stakeholders and the community. 1.3. Brief colleagues, staff and contractors who will be involved in implementing the program on the monitoring and evaluation methods selected and justification. 1.4. Implement chosen monitoring and evaluation methods in accordance with defined strategy. 1.5. Ensure standard procedures and recording templates are available for use. 1.6. Ensure program timelines are communicated and monitored. 1.7. Monitor program expenditure and compare with budget.
2. Collect and analyse data	2.1. Ensure data and information is collected following relevant standards and format. 2.2. Assess if further data or information is needed to answer key evaluation questions and adjust design as required. 2.3. Ensure data is appropriately stored and can be accessed as needed. 2.4. Facilitate colleagues and contractors involved in the monitoring and evaluation process. 2.5. Evaluate the effectiveness, efficiency and appropriateness of investment and project priorities as required by the evaluation design.
3. Prepare reports and	3.1. Report against milestones and outputs.

ELEMENT	PERFORMANCE CRITERIA
information products	3.2. Produce appropriate information products to keep stakeholders informed and engaged. 3.3. Communicate findings and activities to stakeholder groups according to program schedule. 3.4. Negotiate changes to projects and programs with stakeholders. 3.5. Apply findings to improve the delivery and alignment of projects and policy decisions with organisational targets and mission. 3.6. Ensure the style of reporting reflects the audience and how the information is to be used.
4. Review the monitoring and evaluation process	4.1. Foster a culture of self-evaluation and learning through encouraging ongoing participation, consultation and communication with stakeholders. 4.2. Review and adapt ongoing evaluation strategy and processes and provide feedback on the implementation and the evaluation design.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- application of monitoring and evaluation methods to ensure integrity and validity
- data collection and management
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- quantitative and qualitative methods for monitoring and evaluation

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish risk context	1.1. Review organisational processes, procedures and requirements for undertaking risk management. 1.2. Determine scope for risk management process. 1.3. Identify internal and external stakeholders and their issues. 1.4. Review political, economic, social, legal, technological and policy context. 1.5. Review strengths and weaknesses of existing arrangements 1.6. Document critical success factors, goals or objectives for area included in scope. 1.7. Obtain support for risk management activities. 1.8. Communicate with relevant parties about the risk management process and invite participation.
2. Identify risks	2.1. Invite relevant parties to assist in the identification of risks. 2.2. Research risks that may apply to scope. 2.3. Use tools and techniques to generate a list of risks that apply to the scope, in consultation with relevant parties.
3. Analyse risks	3.1. Assess likelihood of risks occurring. 3.2. Assess impact or consequence if risks occur. 3.3. Evaluate and prioritise risks for treatment.
4. Select and implement treatments	4.1. Determine and select most appropriate options for treating risks. 4.2. Develop an action plan for implementing risk

ELEMENT	PERFORMANCE CRITERIA
	treatment. 4.3. Communicate risk management processes to relevant parties. 4.4. Ensure all documentation is in order and appropriately stored. 4.5. Implement and monitor action plan. 4.6. Evaluate risk management process.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication and literacy skills to consult and negotiate, to prepare communications about risk management, and to encourage stakeholder involvement
- organisational and management skills to plan and implement risk management processes
- problem-solving and innovation skills to find practical ways to manage identified risks
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- AS/NZS 4360:2004 Risk management.
- legislation, codes of practice and national standards, for example:
  - duty of care
  - company law
  - contract law
  - environmental law
  - freedom of information
  - industrial relations law

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• privacy and confidentiality</li> <li>• legislation relevant to organisation's operations</li> <li>• legislation relevant to operation as a business entity</li> <li>• organisational policies and procedures, including:                             <ul style="list-style-type: none"> <li>• risk management strategy</li> <li>• policies and procedures for risk management</li> </ul> </li> <li>• overall operations of organisation</li> <li>• reasonable adjustment in the workplace for people with a disability</li> <li>• types of available insurance and insurance providers.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• risk management plan which includes a detailed stakeholder analysis, explanation of the risk context, critical success factors, identified and analysed risks, and treatments for prioritised risks</li> <li>• details of monitoring arrangements for risk management plan and an evaluation of the risk management plan's efficacy in treating risks</li> <li>• knowledge of relevant legislation, codes of practice and national standards.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Risks may include those relating to:	<ul style="list-style-type: none"> <li>• commercial relationships</li> <li>• economic circumstances and scenarios</li> <li>• human behaviour</li> <li>• individual activities</li> <li>• legislation</li> <li>• management activities and controls</li> <li>• natural events</li> <li>• political circumstances</li> <li>• technology.</li> </ul>
Scope may apply to:	<ul style="list-style-type: none"> <li>• given project</li> <li>• specific business unit or area</li> <li>• specific functional such as:                             <ul style="list-style-type: none"> <li>• financial management</li> <li>• Occupational Health and Safety (OHS) governance</li> </ul> </li> <li>• external environment</li> <li>• internal environment</li> <li>• whole organisation.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish acquittal records	1.1. Records of materials, equipment and labour that are provided by group for project are established prior to project commencement to obtain information for acquittal report.
2. Identify transactions and reports relating to project	2.1. Accounting transactions and reports incorporated in group accounts and relating to project are identified for use in acquittal. 2.2. Funds provided by program and the group are identified to develop separate statements of program and group contributions. 2.3. In kind donations of materials, loan of equipment and donation of labour are identified and financial values are estimated for use in acquittal statements.
3. Prepare acquittal in required format	3.1. Acquittal is prepared from accounting and other information to program and contract requirements. 3.2. Program funds and expenditure are reported to show use on project and group operations, separately from group contributions to project. 3.3. Group contributions to project are reported to program and contract requirements. 3.4. Report is consolidated for approval and auditing.
4. Arrange audit of acquittal and transaction	4.1. Audit of report is arranged to program and contract requirements. 4.2. Approval of report is arranged to group, program and contract requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- program objectives and guidelines
- group procedures and recording, including group management and committee procedures
- project background, processes and outcomes
- agency procedures
- basic financial reporting format and procedures
- knowledge of capability of word processing and spreadsheet packages.

## Evidence Guide

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify project processes and outcomes	<p>1.1.Scope of report and target audience is identified in contract, program guidelines, agency procedures, and group committee decisions.</p> <p>1.2.Background to project is researched from available records.</p> <p>1.3.Information is collated from project records, monitoring records, and information provided by group and other stakeholders.</p>
2. Prepare report	<p>2.1.Framework of report is prepared to required scope, target audience and guidelines.</p> <p>2.2.Project report is prepared from researched information to contract, agency and group requirements.</p> <p>2.3.Conclusions are prepared in consultation with informed personnel.</p> <p>2.4.Draft report is circulated to identify stakeholders for comment according to group requirements and agency procedures.</p>
3. Revise report for distribution	<p>3.1.Draft report is revised to address comments from consultation.</p> <p>3.2.Any unresolved issues are submitted to group committee for decisions.</p> <p>3.3.Approval is obtained for revised report in accordance with contract, group and agency requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research through records and oral reports
- collate qualitative and quantitative information
- develop report framework to suit requirements
- implement consultation processes to obtain information and obtain consensus on report
- use word processing and spreadsheet packages
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- program objectives and guidelines
- group procedures and recording, including group management and committee procedures
- monitoring approaches
- project background, processes and outcomes
- agency procedures
- knowledge of capability of word processing packages.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify sponsorship opportunities	<p>1.1.Potential sponsors are targeted on the basis that they would be appropriate partners to the program.</p> <p>1.2.A rationale for sponsoring the program and/or activities is developed which achieves a balance between the sponsors' requirements and the program goals, and benefits to the sponsor and program.</p> <p>1.3.Feasibility of sponsorship opportunities is confirmed by research and analysis.</p> <p>1.4.Mutual benefits are itemised and list of targets is developed.</p> <p>1.5.Community, cultural and equity requirements in the group operations are considered in developing list of targets.</p>
2. Prepare and deliver sponsorship pitch	<p>2.1.Contact with potential sponsor is made in accordance with program and enterprise procedures and guidelines.</p> <p>2.2.The best interests of the program, group and agency are maintained in sponsorship approach.</p> <p>2.3.Presentation support materials are prepared with appropriate accuracy, style and degree of information.</p> <p>2.4.Presentation and approach demonstrates an understanding of and respect for sponsors' business, and shows how sponsorship will be mutually beneficial.</p> <p>2.5.Outcomes of any prior sponsorship arrangements are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>appropriately included in pitch and negotiations.</p> <p>2.6.Presentation is followed up in a professional manner that preserves the integrity of the negotiations.</p>
3. Successfully negotiate sponsorship deal	<p>3.1.Terms are agreed which satisfy both the sponsor and the program and the associated agency where appropriate.</p> <p>3.2.Nature of sponsorship and of the benefits to the sponsor are expressed in explicit terms and understood by both parties.</p> <p>3.3.Commitments under the sponsorship arrangements are clearly identified to assist maintenance of relationship.</p>
4. Maintain sponsorship deal	<p>4.1.Legal, financial, cultural, ethical, equity and other requirements are met throughout the sponsorship period.</p> <p>4.2.Commitments under the sponsorship arrangements are met promptly and benefits are delivered to the sponsor as agreed.</p> <p>4.3.Role of sponsor in supporting program/project is recognised in literature, reports and on-site as appropriate.</p> <p>4.4.Timing for the start of discussions to extend or complete the sponsorship is identified.</p>

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
<p>This section describes the skills and knowledge required for this unit.</p>
<p><b>Required skills</b></p>
<ul style="list-style-type: none"> <li>• conduct effective presentations</li> <li>• undertake face-to-face and written marketing techniques</li> <li>• develop presentation support materials</li> <li>• negotiate and close contracts</li> <li>• coordinate others to develop presentation</li> <li>• coordinate others to deliver commitments</li> <li>• use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly</li> </ul>

**REQUIRED SKILLS AND KNOWLEDGE**

- information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
  - use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
  - use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- sources of information about the community and organisations, businesses, groups and individuals
- strategy, goals, ethics, program and activities of community group and/or agency
- effective marketing techniques
- acts, policies and guidelines governing programs and activities
- relevant Occupational Health and Safety (OHS) and public safety requirements
- sources of legal and financial advice
- understanding of operation of contracts and agreements
- approach to other people that creates professional image.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify sponsorship opportunities through mutual benefits to organisations
- screen potential sponsors in terms of cultural protocols and community sensibilities

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• negotiate an appropriate sponsorship arrangement to support a project</li> <li>• document a sponsorship arrangement, detailing all arrangements and responsibilities</li> <li>• meet legal, financial, cultural, ethical, equity and other requirements for the duration of the sponsorship arrangement</li> <li>• review a sponsorship arrangement and plan its renegotiation.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Sponsorship may include:	<ul style="list-style-type: none"> <li>• arrangements covering cash or kind and may be offered in support of a particular event, activity or project, or towards the general running costs of the community group, program or park/reserve.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor association activities	<p>1.1. Activities undertaken by group are monitored to ensure:</p> <p>1.1.1. association objectives are being adhered to</p> <p>1.1.2. resolutions of committee and members meetings are being followed</p> <p>1.1.3. finances are properly managed</p> <p>1.1.4. any employees are managed and volunteers are appropriately supervised</p> <p>1.1.5. legislative requirements are being met</p> <p>1.1.6. ethical requirements are being met</p> <p>1.1.7. group operations and approaches are sensitive to and inclusive of community and sections within the community.</p> <p>1.2. Variations from expected standards are noted, and where required, immediate or routine action taken.</p>
2. Identify opportunities, threats and risks	<p>2.1. Opportunities for the group to commence new projects or activities are identified and submitted to the committee.</p> <p>2.2. Threats to the ongoing operation of the group are identified and raised at committee meetings.</p> <p>2.3. Risks associated with the group's activities and ongoing operation is identified.</p> <p>2.4. Risks and proposed risk control measures are submitted to the committee.</p>
3. Participate in board/committee meeting	<p>3.1. Committee agendas are reviewed prior to meetings.</p> <p>3.2. Agenda items and reports to committee are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>submitted as required.</p> <p>3.3. Committee meetings are attended and issues discussed as placed on the agenda or as modified.</p> <p>3.4. Good communications are established and maintained with other committee members to ensure competent management of group affairs.</p> <p>3.5. Personal observations and concerns including opportunities, threats and risks are raised at committee meetings.</p> <p>3.6. Actions are taken on personal commitments made at committee meeting and reported to the committee.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare brief verbal and written reports
- contribute to conflict resolution
- requires knowledge of relevant legislation, basic financial statements, committee meeting and members meeting procedures, objectives and rules of association and community goals and plans, and diversity in community and range of views and goals
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- requirements of relevant legislation
- interpretation of basic financial statements

**REQUIRED SKILLS AND KNOWLEDGE**

- requirements of programs
- committee meeting and members meeting procedures
- objectives and rules of association
- basic management practice including practices in employing people
- community goals and plans
- diversity in community and range of views and goals
- Occupational Health and Safety (OHS) and corporate governance legislation and codes of practice
- public safety requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- complete a checklist for association governance covering meeting procedure, finances, staff management, legislative compliance, ethical conduct and community consultation
- conduct a SWOT analysis for the associations operations
- participate in board/committee meetings.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole.

Areas of employee supervision may include:

- direct supervision and appropriateness
- recruitment of paid employees and volunteers
- appraisal of paid employees including any disciplinary actions
- employment conditions including remuneration and benefits
- training provided
- relationships and cooperation between employees
- employees and volunteers
- committee.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Make contacts within community	<p>1.1. Connections are made through business, social and personal contacts and programs to the community.</p> <p>1.2. Connections are identified for the potential in regard to some group program or activity.</p> <p>1.3. Plans for developing contacts and relationships are formulated in conjunction with relevant group members and leaders.</p> <p>1.4. Equity requirements and cultural backgrounds of people being contacted are respected.</p> <p>1.5. Appropriate cultural protocols are observed to establish positive contacts.</p> <p>1.6. Appropriate mechanisms are followed to establish contacts with Indigenous communities.</p> <p>1.7. Community requests for information on or participation in programs or activities are addressed to promote the group(s) and program.</p>
2. Form and create links	<p>2.1. Contact is developed through promotional activities, programs and activities of mutual interest to community members and groups.</p> <p>2.2. Activities, programs and personal contact are structured to allow trust and understanding to develop within group and community.</p> <p>2.3. Working relationships are developed in areas of common interest and goals to bring benefit to all</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>parties.</p> <p>2.4.Feedback on programs and community group activities is sought from participants and community, and used to modify their application.</p> <p>2.5.Appropriate records are developed to maintain ongoing contracts and relationships.</p>
3. Build networks	<p>3.1.Individual contacts and contacts with other groups are used to establish networks of common interest.</p> <p>3.2.Programs and activities are reviewed to incorporate networks and the network resources in areas of common interest and goals.</p> <p>3.3.Progress in establishing links and networks is evaluated and opportunities for further action are identified.</p> <p>3.4.Relationships and networks are managed to ensure compliance with cultural protocols and with agency/enterprise procedures and guidelines.</p>
4. Report on community liaison	<p>4.1.Community liaison activities are evaluated in terms of their costs, benefits to the group(s) program and contribution to the community.</p> <p>4.2.Reports on community liaison activities are prepared and submitted in line with group and program/agency guidelines.</p>

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>
<ul style="list-style-type: none"> <li>• identify community cultures and goals</li> <li>• use manual or electronic index systems</li> <li>• give presentations to diverse groups of people</li> <li>• handle contentious issues raised by others in conjunction with strong views</li> <li>• use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks</li> <li>• use oral communication skills/language competence to fulfil the job role as</li> </ul>

**REQUIRED SKILLS AND KNOWLEDGE**

specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views

- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- community structures, organisations and cultures
- relevant government community action program(s)
- process of delivery of program(s)
- broad Australian and regional history
- current social and environmental affairs for local community and wider region
- rural industry operations and structures (for rural programs)
- relevant legislation
- affirmative action and anti-discrimination policies
- occupational health and safety requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify groups in the community and key contacts within the community
- investigate equity requirements and cultural protocols for dealing with community groups
- establish networks of common interests through individual contacts and contacts with other groups

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain contact on group activities	<p>1.1. Contact is maintained with group leaders/officers on current and proposed group activities and projects.</p> <p>1.2. Advice on group operation and opportunities is provided when sought by leaders/officers.</p> <p>1.3. Role of facilitator/coordinator in group operations is clearly defined with the management committee to avoid misunderstanding.</p>
2. Provide fresh input into group	<p>2.1. Relevant new initiatives and ideas from other groups and program areas are identified for input into/suggestion to the group.</p> <p>2.2. New initiatives and ideas are systematically sought from appropriate sources.</p> <p>2.3. Any suggestions are developed before submission to include local group and program context.</p>
3. Maintain network of contacts	<p>3.1. Contacts with members of the group and community are maintained to provide interchange of ideas and information.</p>
4. Facilitate resolution of group operating difficulties	<p>4.1. Group issues with potential to hinder group operations are identified before damage has occurred.</p> <p>4.2. External threats are assessed to facilitate negotiation of solutions between the group and external parties.</p> <p>4.3. Internal operating difficulties are resolved where possible through facilitation and use of relevant expert advice.</p> <p>4.4. Groups requiring major restructuring are identified</p>

ELEMENT	PERFORMANCE CRITERIA
	to implement change management processes.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- develop network of contacts in groups and communities
- resolve conflict
- negotiate within the group
- negotiate on behalf of the group
- implement change management processes
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- group development and facilitation techniques
- basic financial statements and procedures
- program guidelines
- general understanding of natural resource management, sciences and technologies associated with program
- legislative requirements for group operations, programs and projects
- Strengths, Weaknesses, Opportunities and Threats (SWOT) analyses
- risk analysis
- committee and group procedures
- legislative requirements associated with operation of incorporated groups
- community and sector cultures and perspectives.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify target markets	<p>1.1.Potential of program to appeal to sections of community or industry is identified in terms of benefits and costs.</p> <p>1.2.Sectors of local community and industry that are potential users/customers/audiences of program are identified.</p> <p>1.3.A plan to promote program and/or local projects and/or group activities is developed in conjunction with other communication activities.</p>
2. Develop promotional materials	<p>2.1.Range of promotional channels to reach target sectors is identified.</p> <p>2.2.Promotional materials to suit promotional channels and target sectors are sourced or developed.</p> <p>2.3.Impact of promotional materials is tested with group or community members.</p> <p>2.4.Specialist marketing support is obtained to address specific marketing issues within budget, and program and agency guidelines.</p>
3. Promote program to potential users	<p>3.1.Potential users of program and services are approached through promotional channels and directly.</p> <p>3.2.Impact of promotional activities is assessed to determine any changes required.</p> <p>3.3.Promotional plan and activities are adjusted to</p>

ELEMENT	PERFORMANCE CRITERIA
	achieve an improved impact.
4. Obtain commitment to use program services where appropriate	4.1. Proposals for delivery of program services are presented to interested potential users in terms of benefits, costs and other factors. 4.2. Issues raised by potential users are addressed to overcome objections. 4.3. Commitments to use program services or support program are obtained to agency or program guidelines.
5. Respond to enquiries	5.1. Enquiries by members of community, industry and program are addressed in terms of good customer service and to program and agency guidelines. 5.2. Records are kept of contacts, enquiries and presentations for reporting and follow-up. 5.3. Enquiries and presentations are followed up to obtain commitments to program services and objectives.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- develop a promotional plan
- develop a range of written/graphic materials
- present in a range of direct promotional situations
- present a specific proposal
- overcome objections
- maintain office records, especially of programs, enquiries, contacts and presentations
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data

**REQUIRED SKILLS AND KNOWLEDGE**

- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- program services, objectives, goals and guidelines
- group goals and plans
- project and other activities
- basic marketing principles
- local advertising channels
- local or regional community and industries.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify the potential of a program to appeal to sections of community or industry based on benefits and costs
- identify communication channels appropriate for promotion
- present in a range of direct promotional situations
- develop promotional materials including a range of audio/written/graphic materials
- evaluate the promotion program based on stakeholder feedback and effectiveness
- respond to queries and enquiries generated by the promotion program.

**Context of and specific resources for**

Competency requires the application of work practices

## AHCCCF409A Participate in assessments of project submissions

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of participating in the submission assessment process at regional and State/Territory levels for public-funded community programs. It requires the ability to participate in committees, appropriately question and discuss cultural and social issues, rank competing projects, and maintain probity of the assessment. Participating in assessments of project submissions requires knowledge of rural industries and/or natural resource management principles, scope of programs, regional areas, community and issues in areas of communities.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those who participate in the submission assessment process at regional and State/Territory levels for public-funded community programs.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Research the applicable program guidelines	<p>1.1. Policy and program information required to participate in the assessment of projects within a region or State/Territory is obtained and reviewed.</p> <p>1.2. Own role and responsibilities are identified within applicable program guidelines and legislative requirements.</p> <p>1.3. Own knowledge of policy and program information and legislative requirements is built through involvement in development activities to achieve an understanding of the program aims and goals.</p> <p>1.4. Changes in policy and program information are identified for impact on assessment processes.</p>
2. Review the submissions	<p>2.1. Project submissions are reviewed prior to the assessment committee meeting in the context of policy and program information.</p> <p>2.2. Personal review and ranking of projects is completed in preparation for the assessment committee meeting, in accordance with program guidelines.</p>
3. Participate in committee assessment process	<p>3.1. Projects which meet program guidelines are identified by the committee for further assessment.</p> <p>3.2. Submissions seeking further funding for existing projects are identified and reviewed under separate criteria according to program guidelines.</p> <p>3.3. Assessments of projects, which have been processed</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>through a local or regional assessment panel, are given a balanced consideration to manage the time taken on the assessment, and to ensure equity and fairness in the process.</p> <p>3.4. Projects are reviewed and ranked by the committee in terms of the priorities and other factors defined in the program guidelines.</p> <p>3.5. Active listening approaches and appropriate questioning techniques are used to develop an understanding and a team approach across a diverse committee/panel.</p> <p>3.6. Projects are selected for recommendation in accordance with program guidelines and available funds.</p>
4. Maintain probity of assessment	<p>4.1. Confidentiality requirements of the assessment process are maintained.</p> <p>4.2. Ethical and legislative standards and procedures of the assessment process are followed.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- participate in committees
- understand team development
- rank competing projects
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- rural industries and/or natural resource management principles
- scope of programs
- regional areas, community and issues in areas of communities
- wide understanding of legislative and program guidelines at appropriate local, regional and State levels.
- project assessment processes
- program probity requirements
- awareness of diversity in community
- relevant legislation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- use monitoring techniques suitable for the environment and species
- install and use monitoring equipment
- develop systems to capture, maintain and analyse data
- make observations and record data on species diversity and abundance
- review data to ensure the monitoring process is correctly targeted and implemented.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

**EVIDENCE GUIDE**

enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Submissions may include:

- a community group or a number of community groups. Submissions may be for a local area or for a wider region, and may incorporate funding from more than one program.

**Unit Sector(s)****Unit sector**

Community coordination and facilitation

# AHCCCF410A Support individuals in resource management change processes

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers supporting individuals in resource management change processes and defines the standard required to: assess the resource management change and its potential impact on individuals; predict issues that are likely to arise from change, based on community feedback and statistical information; provide information and support to individuals and families facing resource management changes; review the methodology and effectiveness of support to improve support services for resource management change.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit applies to persons who provide support for a person or business to change their management of resources within the context of the program.
--------------------------------	--

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify change processes	<p>1.1.Changes that will impact individuals' and families' business operations and private lives are identified to assess their impact.</p> <p>1.2.Impacts are assessed in terms of the degree of impact on businesses and personal lives.</p>
2. Conceptualise impact of changes	<p>2.1.Discussions are initiated with individuals and families to identify their life-style, values and views on resource management and program issues to identify potential for change.</p> <p>2.2.Potential difficulties individuals and families may have in implementing change in their business and private lives are identified.</p> <p>2.3.Appropriate information and support approaches that address potential difficulties and are inclusive of cultural and equity are identified as part of change process.</p>
3. Implement support techniques	<p>3.1.Information is obtained to support individuals and families facing change.</p> <p>3.2.Information is provided in appropriate format and context to support individuals and families considering the change.</p> <p>3.3.Individuals and families are given positive encouragement and support as they consider and implement change.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4.Support approach and information given is provided in a culturally sensitive and equitable manner. 3.5.People are invited to seek additional assistance and provided with avenues of assistance where this will assist in their management of change.
4. Review support outcomes	4.1.Results of support provided are progressively assessed in terms of resources spent, change achieved and potential for further change. 4.2.Support approach is modified in light of results.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify change processes
- conceptualise impact of changes
- conduct informal discussions/interviews
- develop networks
- implement personal support techniques and processes
- review support outcomes
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant rural business practices and best practice within local context
- local natural resource management issues
- community lifestyle and practices, some with impact on natural resources

**REQUIRED SKILLS AND KNOWLEDGE**

- relevant approaches to different cultures
- change management theory and practices
- action learning approaches
- networks of assistance.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- assess the resource management change and its potential impact on individuals
- predict issues that are likely to arise from change, based on community feedback and statistical information
- provide information and support to individuals and families facing resource management changes
- review the methodology and effectiveness of support to improve support services for resource management change.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.

## AHCCCF411A Develop approaches to include cultural and human diversity

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers developing approaches to include cultural and human diversity and defines the standard required to: identify the range of cultural and social groups in a land management area; determine the linkages and potential impacts between natural resource issues and cultures; negotiate and maintain cultural protocols for dealing with land management issues; develop working relationships with representatives of cultural groups; and facilitate the involvement of culturally diverse groups in community issues related to land management.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes identifying and accessing culturally diverse groups in the community so that they are included in program development and implementation. A high level of cultural awareness and the need to observe cultural protocols are important parts of the process. Note: for indigenous contexts, the delivery and assessment against this unit must comply with community protocols and guidelines and be supported by elders and custodians of country.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify potential for cultural diversity	<p>1.1.Information on the population is used to identify the range of cultural diversity.</p> <p>1.2.Potential involvement of individuals and groups of people are identified in the context of the program.</p> <p>1.3.Adjustments to program and program promotional materials are identified to meet cultural frameworks of different peoples.</p>
2. Develop processes to include culturally diverse groups	<p>2.1.Cultural protocols are identified to ensure contacts with individuals/communities are successful.</p> <p>2.2.Key persons who may influence relationships are identified.</p> <p>2.3.Steps to develop and maintain contact with culturally diverse groups are formulated in line with understanding of the cultures, goals of the relationship, and any relevant enterprise guidelines.</p> <p>2.4.Processes are inclusive of an equitable involvement of various sections of the community and their</p>

ELEMENT	PERFORMANCE CRITERIA
	perspectives.
3. Communicate potential and support for culturally diverse group	3.1. People and groups of culturally diverse background in the area are approached to promote their potential involvement in groups and programs in line with formulated steps. 3.2. Potential of program and group activities is communicated in a culturally relevant manner. 3.3. Approaches are adjusted in light of any new information on cultural groups and protocols. 3.4. Links between individuals and culturally diverse groups are facilitated to ensure good community relationships and development of the program.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- flexibility in the application of program guidelines and policy
- conflict resolution
- negotiation skills
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- sources of culturally relevant materials and verbal information
- understanding of indigenous peoples and history
- cultural protocols and perspectives

**REQUIRED SKILLS AND KNOWLEDGE**

- relevant legislation and guidelines
- principles of equal opportunity and affirmative action
- current relationships between culturally diverse groups in the area
- understanding of the role of various sections of the community in historical and relationship terms.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify the range of cultural and social groups in a land management area
- determine the linkages and potential impacts between natural resource issues and cultures
- negotiate and maintain cultural protocols for dealing with land management issues
- develop working relationships with representatives of cultural groups
- facilitate the involvement of culturally diverse groups in community issues related to land management.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan social events	<p>1.1.Place of social events within group's activities is identified to ensure contribution to group goals.</p> <p>1.2.Group members' preferences for activities and frequency are obtained to obtain their support.</p> <p>1.3.Concept, timing and resources required for social event are developed in cooperation with others to suit members' wishes and any community involvement.</p> <p>1.4.Community views and safety issues are reviewed to ensure risk to group image and public safety is managed.</p> <p>1.5.Social event is promoted to members and relevant section of the community.</p> <p>1.6.Personnel and required resources are coordinated for availability at social event.</p>
2. Coordinate activities	<p>2.1.Location of social activity is prepared to cater for activity and people.</p> <p>2.2.Coordination between people assisting in the social event is facilitated to provide a pleasant environment consistent with purpose of activity.</p> <p>2.3.Availability of resources is checked to ensure event will occur as planned.</p> <p>2.4.Shortages in personnel and resources are managed to minimise impact on social event.</p> <p>2.5.Visitors to events and members are welcomed and introduced to others to develop positive social environment.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.6. Personnel are coordinated to restore location of social activity to its original condition.</p> <p>2.7. Members' opinions of event are obtained to determine whether even should be repeated or altered.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- facilitate small ad-hoc group to complete activities
- coordinate group officers to perform appropriate roles in events
- timely plan and follow-up tasks to be completed for event
- manage any conflict
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- basic catering requirements
- resources available in the community
- basic costing for events
- basic money handling and group financial procedures
- resources required for different types of events
- negotiation of arrangements with caterers, hotels and clubs
- hiring and borrowing equipment
- group goals and aim of events
- community views and cultures.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop course of action and documentation	1.1.Course of action related to goal, action strategy, project or issue is identified to solve a problem or to advance the group. 1.2.Alternative courses of action are identified and compared to proposed course of action to find best alternative. 1.3.Known legislative and ethical requirements and diverse viewpoints are identified for inclusion in course of action. 1.4.Reason(s) for proposed course of action are identified including costs and benefits, for inclusion in presentation.
2. Present recommendation(s)	2.1.Recommendations are presented to committee with reasons for approval. 2.2.Reasons for selection of preferred course of action over alternatives are presented to committee as required for its consideration.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- seek information from sources of knowledge and advice
- develop solutions on own or in small groups
- develop course of action and documentation

**REQUIRED SKILLS AND KNOWLEDGE**

- prepare presentation on course of action with supporting reasoning and information
- present recommendations to a meeting
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- sources of knowledge and advice appropriate to submission, e.g., library, coordinator/leader
- structure for presenting reasoned submissions
- basic brainstorming techniques
- basic costing
- basic cost/benefit analysis
- cultural viewpoints in the community.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- seek information from sources of knowledge and advice

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• develop solutions on own or in small groups</li> <li>• design a course of action and documentation</li> <li>• present recommendations to a meeting.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Actions may include:	<ul style="list-style-type: none"> <li>• formal or semi-formal presentations to a meeting to obtain consent for a course of action or as part of a program submission.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Review previously planned project outcomes	<p>1.1. Proposed project outcomes and evaluation approaches are identified from original approved application and any updates.</p> <p>1.2. Consultations are conducted with community group leaders, coordinators and facilitators as required to identify any changes to original plan, timelines, outcomes, and to evaluation.</p> <p>1.3. Timing and evaluation in terms of project progress are determined to identify availability of data and suitable range of evaluation methods.</p>
2. Develop evaluation approach	<p>2.1. Evaluation approach is developed to include resources used and processes applied within the available data collection opportunities.</p> <p>2.2. Evaluation approach is developed around prior project evaluations, and program and agency requirements.</p> <p>2.3. Proposed evaluation approach is discussed with stakeholders to obtain comments and consent.</p> <p>2.4. Proposed evaluation approach is modified to cater for stakeholder views without compromising program and agency requirements and the evaluation results.</p> <p>2.5. Approval is obtained for evaluation approach and timing according to program and agency</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements.
3. Organise data collection	<p>3.1.Data is collected on project inputs, processes and outcomes according to evaluation approach.</p> <p>3.2.Appropriate instructions are provided to others for them to collect data on behalf of the evaluator.</p> <p>3.3.Appropriate forms and questionnaires are designed to implement the evaluation.</p> <p>3.4.Interviews are conducted and observations made according to the planned evaluation approach.</p> <p>3.5.Data is recorded in format suitable for analysis and reporting.</p> <p>3.6.Accuracy of data is checked according to evaluation practice and program and agency requirements.</p>
4. Analyse data	<p>4.1.Data is analysed according to the evaluation plan to obtain required information on inputs, processes and outputs.</p> <p>4.2.Data is analysed progressively during evaluation to identify any deficiencies.</p> <p>4.3.Any deficiencies in data are rectified where possible by changes in evaluation and data collection methods.</p> <p>4.4.Appropriate software is used for quantitative analysis.</p> <p>4.5.Analysis is recorded to program and agency requirements.</p>
5. Report on and implement conclusions	<p>5.1.Report is prepared to program, agency and project requirements.</p> <p>5.2.Analysis and report conclusions are checked with key stakeholders to identify any deficiencies to be removed or additional information that should be included.</p> <p>5.3.Report meets required program and agency standards in terms of layout, format, style and process.</p> <p>5.4.Data collection, analysis and reporting are timely to project agency requirements.</p> <p>5.5.Report is submitted according to project, program and agency requirements.</p> <p>5.6.Report on conclusions is implemented to project, program and agency requirements and within the scope of the group resources and authority.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- review previously planned project outcomes
- develop evaluation approach
- organise data collection
- analyse data and report on conclusions
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- evaluation techniques and appropriate reporting methods
- concepts of maintaining valid evaluations
- identifying and documenting limitations
- natural resource management technologies
- data collection methods
- program and agency requirements, including reporting requirements
- agency procedures
- standard form of contract and agreement requirements.

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Promote the identification of environmental issues	<p>1.1. Group members are encouraged to identify local environmental issues within the context of the group's activities and program scope.</p> <p>1.2. Identified issues are developed in terms of the problem(s), the cause(s), and actions required.</p> <p>1.3. Group members are given opportunities to learn about environmental matters and to acquire additional related skills.</p>
2. Facilitate development of priorities for action	<p>2.1. Group members are facilitated to develop potential action strategies from identified issues to comply with program scope.</p> <p>2.2. Different action strategies are given priorities in terms of members' interests and skills, the impact in terms of solving environmental issues and promotion of solutions to environmental issues, and compliance with the program guidelines.</p> <p>2.3. Facilitation processes used are sensitive to the level of group development.</p>
3. Facilitate development of goals	<p>3.1. Group members are facilitated to develop goals of the group in terms of the locality and region environmental contexts, and to link these to action strategies to develop a cohesive action plan.</p> <p>3.2. Group is encouraged to document their goals and action strategies and to obtain membership approval.</p> <p>3.3. Group is encouraged to review previous goals and action plans as part of the development of new goals</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and action plans.</p> <p>3.4.Role of facilitator/coordinator in group development and management is clearly identified to reduce unrealistic expectations and conflict.</p> <p>3.5.Minority views and interests are managed to ensure group cohesion is maintained.</p> <p>3.6.Group is facilitated to develop its goals and projects within its rules of association and program guidelines.</p> <p>3.7.Goals and action strategies are correlated to regional plans and initiatives.</p>
4. Support group to identify and evaluate potential projects	<p>4.1.Group is facilitated to identify a range of potential projects within goals and action strategy.</p> <p>4.2.Group is facilitated through an evaluation process of alternative projects to determine: compliance with members' interests and skills, project scope within the resources of the group or network of regional groups, compliance within program scope, available funding and potential for acceptance.</p> <p>4.3.Group is encouraged to review the results of previous projects and submissions for funds as part of the development of new projects.</p> <p>4.4.Facilitation process is sensitive to individual members viewpoints, perspectives and cultures, and considerate of community goals and plans to manage any potential conflict.</p>
5. Support group in development of project proposals and submissions	<p>5.1.Group is facilitated to develop broad project plan within program guidelines and to develop costing.</p> <p>5.2.Group is assisted to prepare project proposal in terms of the program requirements and to complete submission for lodgement by the due date to the authorities.</p> <p>5.3.Group is assisted to document project evaluation requirements in accordance with program and proposal requirements.</p> <p>5.4.Relevant information is sourced to assist the group in the submission.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- facilitate groups
- present to groups
- develop strategic plans
- promote the identification of land management issues
- assist in setting priorities for action
- support a group to identify and evaluate potential projects
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the range of group facilitation styles
- previous group history
- regional and national environmental issues
- regional community, groups and cultures
- local and broader politics
- strategic planning principles
- program guidelines
- national, State and regional funding priorities
- legislative requirements
- community and sector perspectives.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

<b>EVIDENCE GUIDE</b>	
performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify and discuss land management issues with local groups</li> <li>• work with groups to identify local actions that they can become involved in to promote improved land management outcomes</li> <li>• provide support to a group in preparing project proposals and submissions.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify potential for group	<p>1.1. Community research is carried out to determine potential interest in forming group in a locality or region.</p> <p>1.2. Members of existing groups are encouraged to use their networks of contacts to promote the group and program, and to obtain new members.</p>
2. Develop approach to create and maintain interest	<p>2.1. Community organisations and media are identified as potential avenues for promotion.</p> <p>2.2. Program is promoted in region or locality to create interest in it and its objectives.</p> <p>2.3. Approaches to diverse sections of the community are modified to cater for their perspectives and cultures.</p> <p>2.4. People interested in forming new groups are brought together to explore their potential.</p>
3. Communicate group potential and achievements	<p>3.1. Environmental issues that have the potential to be addressed by the community and group are identified and promoted to raise interest.</p> <p>3.2. Group and regional achievements are recorded and used to promote the group and the program.</p> <p>3.3. Any tension and/or conflict between people in group formation and development is identified and addressed using appropriate and consistent conflict resolution approaches.</p>
4. Enlist members and volunteers	<p>4.1. Contacts are invited to join the group and program to increase community involvement and resources.</p> <p>4.2. Interests and skills of community members are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>identified to introduce them to relevant program activities and others with mutual interests.</p> <p>4.3. People who wish to form new groups are given advice, support and access to information and program resources to form the new group.</p> <p>4.4. Approaches and dealings with individuals and groups include appropriate regard for cultural issues, equity and disability.</p> <p>4.5. Minority interests within the group are managed to develop group cohesiveness in line with program requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify the potential for the group
- facilitate groups
- speak and present in public
- use the media
- develop approaches to create and maintain interest
- facilitate meetings and discussion during group formation and development phases
- facilitate formation and development of committees
- attract members and volunteers
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- sources of local information

**REQUIRED SKILLS AND KNOWLEDGE**

- environmental issues
- structure and operation of community organisations
- range of one to one presentation methods
- range of group presentation methods
- group formation processes
- public relations principles
- principles of negotiation and conflict resolution
- program objectives, scope and guidelines
- agency procedures and related requirements
- public safety requirements
- local media outlets
- public relations principles
- legislative, agency and program requirements including occupational health and safety, equal opportunity and special requirements to support women, migrants and indigenous peoples
- principles of negotiation and conflict resolution.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- investigate forming a group to progress a land management issue or project
- promote the land management initiative to assist group formation and gain support from existing groups
- use activities to facilitate group formation and bonding and to attract new members
- respond to and solve conflict constructively

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify changes occurring at group and community levels	1.1.Changes occurring or due to occur at group and community level due to voluntary initiatives or legislative requirements are identified in terms of impact.
2. Identify potential impacts and reactions	2.1.Potential impact of changes and reactions at group and community level are identified. 2.2.Support in terms of change management initiatives that may be required to implement change in the group or community is identified. 2.3.Cultural and sector perspectives and viewpoints are identified to address different reactions to change.
3. Facilitate change management processes	3.1.Information related to the changes is distributed in terms that assist understanding and acceptance. 3.2.Group is facilitated to develop understanding of change, to manage reactions and to develop response(s). 3.3.Group is encouraged to develop and implement a plan to address change and its impacts.

## Required Skills and Knowledge

### **REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>	
<b>Required skills</b>	
<ul style="list-style-type: none"> <li>• make formal and informal presentations</li> <li>• manage minority viewpoints and interests</li> <li>• chair meetings</li> <li>• lead discussion groups</li> <li>• prepare materials that target specific issues, especially in plain English for diverse groups.</li> <li>• use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views</li> <li>• use numeracy skills to estimate, calculate and record complex workplace measures</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>	
<b>Required knowledge</b>	
<ul style="list-style-type: none"> <li>• change management theories at individual and group level</li> <li>• meeting procedures</li> <li>• local networks and groups</li> <li>• community viewpoints and cultures.</li> </ul>	

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p>

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• identify required or impending changes and potential impacts on a group or community</li> <li>• develop change management strategies to deal with potential change issues</li> <li>• distribute information about changes and provide advice and response to queries</li> <li>• facilitate a group through a process of change.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Change management may be brought about and include:	<ul style="list-style-type: none"> <li>• consultation</li> <li>• provision of information</li> <li>• negotiation</li> <li>• provision of alternative operating methods</li> <li>• identification of people requiring individual support.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Participate in panels and group discussion on the planning process	<p>1.1.Natural resource management issues, economic and social factors, and potential solutions/directions are submitted to panels/groups for discussion.</p> <p>1.2.Contributions to discussions and panels/groups are positive to assist panel/group to develop course of action and recommendations.</p> <p>1.3.Contributions to discussions and panels and groups are structured to comply with legislative, program and agency requirements.</p>
2. Collect data and background information	<p>2.1.Information on local natural resource management issues is collected through monitoring and surveys conducted in conjunction with local groups, projects and programs.</p> <p>2.2.Arrangements are made for additional data on natural resource management issues and associated economic, industry and social factors to be collected for input into analysis and the planning process.</p>
3. Contribute to the plan	<p>3.1.Local natural resource management issues are highlighted to the planning team for inclusion in planning considerations.</p> <p>3.2.Relationship between local and wider issues is explored to submit views on natural resource management priorities and solutions.</p> <p>3.3.Draft plans are reviewed in terms of impact on the local and wider region to identify deficiencies and propose solutions.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Participation in community consultation assists the facilitator/regional planner to obtain feedback on the draft plan.</p> <p>3.5. Proposals for improvement to draft plans are based on natural resource management within relevant economic, industry and social contexts.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- interpret technical advice.
- research information.
- establish data collection processes.
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- local community including economic, industry and social factors.
- group development.
- natural resource management issues for local area/region.
- legislative, program and other requirements for regional plans and the planning process.
- regional planning concepts.
- natural resource management processes.
- consultation approaches.
- cross cultural and cultural factors relevant to social structures.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify association requirements	<p>1.1. Legislative requirements for incorporation are obtained from relevant authorities.</p> <p>1.2. Readiness of group to proceed with incorporation is assessed against program and legislative requirements.</p> <p>1.3. Appropriate government agency and legal advice is sought during incorporation procedures.</p> <p>1.4. Changes required in group structure, membership and operating processes are documented for presentation to the group.</p>
2. Seek incorporation approvals	<p>2.1. Consents of members and committee are obtained at the various stages of incorporation in accordance with legislative requirements.</p> <p>2.2. Committee, public officer, treasurer, auditor and other officers are elected or appointed in accordance with proposed association rules.</p> <p>2.3. Consent to apply for incorporation and to advertise group's intention is obtained from membership in accordance with legislative requirements.</p>
3. Execute incorporation requirement	<p>3.1. Group's objectives and operating rules are defined in accordance with the legislation and program guidelines.</p> <p>3.2. Group name is selected and reserved in accordance with legislative requirements.</p> <p>3.3. Appropriate notice of incorporation is given in accordance with legislative requirements.</p> <p>3.4. Appropriate forms and fees are paid to implement incorporation according to legislative requirements.</p> <p>3.5. Changes in association documents and processes are implemented in accordance with legislative requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- present proposals to group
- establish groups and operating procedures
- seek and interpret advice
- give instructions for preparation of documents
- resolve conflict
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- basic legal processes and related legislation
- reporting procedures for incorporated groups and for groups in programs
- basic organisational structures and processes
- basic financial processes
- incorporation principles and local legislation
- incorporation and reporting requirements of program
- establishment of groups and operating procedures
- basic management and probity principles.

## AHCCCF601A Map regional issues and stakeholders

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of coordinating the development of regional plans in the context of natural resource management: review existing planning documents and sources of information to inform the plan; identify land management issues and potential solutions; identify stakeholders to form discussion groups and seek individual input to planning; organise for the collection and analysis of data to inform planning and monitor progress; work with stakeholders and technical advisers to develop goals and performance criteria; develop a draft plan for widespread consultation and feedback; finalise the regional resource management plan.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit relates to the ability to scope requirements of a mapping process, determine regional boundaries, identify regional resource management issues, determine the stakeholders in a regional resource management planning process, and develop proposals for a regional plan.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Scope requirements	<p>1.1.Reasons for development of a regional plan are determined to identify broad goals and legislative requirements.</p> <p>1.2.Prior regional planning work is identified as input to proposed regional planning process.</p>
2. Determine regional boundaries	<p>2.1.Regional boundaries are determined from economic, environmental and social factors that will produce a coherent plan.</p> <p>2.2.Economic, environmental and social factors that overlap the proposed regional boundaries are identified to develop a scope and weighting of the factors.</p> <p>2.3.Prior plans and reports are reviewed to verify the suitability of the proposed regional boundaries.</p> <p>2.4.Program requirements for the development of regional plans are met in the identification of regional boundaries.</p>
3. Identify regional resource management issues	<p>3.1.Regional natural resource issues are researched from prior documentation and from stakeholder views.</p> <p>3.2.Economic, industry, environmental and social</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>factors are included in research to assess current and potential impacts of the natural resource management issues.</p> <p>3.3.The likely depth of research required is estimated to obtain sufficient information on issues for planning purposes.</p>
4. Scope stakeholders in regional resource management planning process	<p>4.1.Economic, industry, social and government activities are scoped to identify influential organisations, groups and people and their particular interests.</p> <p>4.2.Organisations and groups are approached to determine their interests, viewpoints on natural resource management issues, and willingness to participate in regional planning process.</p> <p>4.3.Nature of community involvement in planning process is identified from understanding of issues and community.</p>
5. Develop proposal for regional plan	<p>5.1.The objectives of the plan are reviewed after scoping to determine feasibility of proposed processes.</p> <p>5.2.Proposal for a new or revised plan is developed to obtain funding.</p> <p>5.3.Estimates are made of time to complete tasks including time for consultations and approvals, and including any discussion with Indigenous communities and groups.</p> <p>5.4.Costs associated with development of regional plan are identified from preliminary research.</p> <p>5.5.Proposal is prepared to address the requirements of program(s) and relevant legislation and agency policies and processes.</p> <p>5.6.Proposal for regional plan is submitted for approval and funding according to agency and program procedures.</p>

# AHCCFI501A Provide technical advice on the Carbon Farming Initiative

## Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

## Unit Descriptor

This unit covers the development and maintenance of knowledge on the Carbon Farming Initiative (CFI) and the provision of accurate and relevant advice to land managers about participation in the CFI. This knowledge will be broadly relevant to any other programs that generate carbon credits for land based activities.

## Application of the Unit

The unit applies to carbon service providers responsible for advising and informing land managers about participation in the Carbon Farming Initiative to generate carbon credits. Note that the 'advice' referred to in this unit does not relate to financial advice which requires an Australian financial services license. This unit does not address the skills or the generic knowledge requirements in "ASIC Regulatory Guide 146: Training of Financial Product Advisors".

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

## Pre-Requisites

Nil.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes of a unit of competency.

demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop knowledge about the Carbon Farming Initiative	1.1 Information on the CFI is researched and maintained 1.2 Knowledge of climate change science and markets as it relates to carbon farming is developed 1.3 The distinction between carbon farming advice and advice about carbon credits that requires holding a financial services license is understood
2. Provide information to land managers	2.1 Information compliant with carbon farming legislation is interpreted and presented to land managers 2.2 Appropriate interpersonal skills are used to facilitate the exchange of information 2.3 Work practices reflect sensitivity to land managers' requirements, specific needs and cultural, family and individual differences 2.4 Stakeholder feedback is sought and evaluated
3. Respond to land managers' enquiries	3.1 Enquirers' needs are identified, analysed and clarified 3.2 Response is comprehensive, clear and delivered in the most appropriate form and within the agreed timeframe 3.3 Enquiries outside area of responsibility and knowledge are identified and assistance is sought or the enquiry is referred on to a relevant party
4. Maintain a professional relationship with land managers	4.1 Stakeholder requests and concerns are responded to positively, appropriately and consistently 4.2 Confidentiality and discretion is maintained 4.3 Discussions with land managers are handled in a professional manner 4.4 Formal and informal networks at local, regional and state levels are established and maintained

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

---

- communication skills to:
  - liaise with others and share information about the CFI
  - use language and concepts appropriate to cultural differences
  - determine and respond to client requests for information
  - provide presentations to individuals and groups on the CFI
- language, literacy and numeracy skills to:
  - read and interpret CFI documentation and legislation
  - analyse information on CFI to ensure currency, accuracy and appropriateness to client needs
- interpersonal skills to:
  - establish rapport with clients
  - relate to people from diverse backgrounds and people with diverse abilities
  - positively interact with clients, other stakeholders, including regulatory personnel and technical experts
  - establish networks with relevant technical experts
- organising and time-management skills to:
  - sequence tasks
  - meet timelines
  - arrange meetings and visits to properties

## Required knowledge

---

- climate change science overview
  - the impacts of increased carbon emissions on climate
  - basic mitigation and adaptation principles
- the carbon cycle and the land sector
  - the carbon cycle
  - the role of the land sector in the carbon cycle and Australia's emissions profile
  - the role of different land sector industries and regions within the land sector's emissions profile
  - the role of carbon as it relates to agricultural productivity
- carbon pricing and markets and the domestic and international policy and legal framework overview
  - the Australian Carbon Pricing Mechanism and link with the CFI
  - voluntary markets and the National Carbon Offset Standard
  - the Securing a Clean Energy Future Plan, including the land sector measures
  - the Kyoto protocol and emerging post-Kyoto framework and Australia's obligations - overview
- CFI and the requirements of the *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations relating to:
  - CFI scope, eligible activities and the types of carbon credits generated (Kyoto and non-Kyoto Australian Carbon Credit Units)
  - crediting periods
  - CFI offset integrity standards
    - additionality, the positive list and the common practice test
    - permanence and risk of reversal buffer, Carbon Maintenance Obligations
    - accounting for leakage
    - accounting for variability
    - conservative
    - international consistency and peer-reviewed
  - managing negative impacts
    - negative list
    - compliance with relevant laws, natural resource management plans
  - co-benefits
  - methodology requirements, methodology development and approval, including the role of the Domestic Offsets Integrity Committee
  - the role of the Clean Energy Regulator (CER)
  - project proponent requirements
    - become a Recognised Offsets Entity
    - creating and using an Australian National Register of Emissions Units account
  - project requirements

- applying for an Eligible Offsets Project
- implementing the project in accordance with the applicable approved offsets methodology
- writing and submitting offsets reports and arrange audit reports
- applying for a certificate of entitlement and receive credits
- closing a project
- varying a project
- withdrawing a project from the CFI
- relinquishing carbon credits
- scheme oversight, institutions and governance
- the Carbon Farming Initiative handbook
- guidelines for submitting methodologies
- approved methodologies for carbon sequestration and emissions avoidance - overview of approach and requirements
- role of different service providers under the CFI, including advisors, project developers, project aggregators, CFI auditors and carbon brokers
- circumstances when a financial services license is required to provide advice about carbon farming credits
- carbon farming project initiation
  - project feasibility analysis
  - project application and approval process
  - design, planning and implementation processes
- profiles of key stakeholder groups
- responsibilities under consumer law, workplace health and safety, privacy legislation, codes of conduct
- professional ethics
- cultural protocols and perspectives of land managers from a range of cultural, social and religious backgrounds

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• Provide accurate and contemporary knowledge of the CFI</li> <li>• Research and maintain information on the CFI</li> <li>• Provide information and respond to land managers and others enquirers</li> </ul>
Context of and specific resources for assessment	<p>Assessment must be undertaken in the context of the Carbon Farming Initiative.</p> <p>Assessment resources must be developed to determine the candidates' depth and breadth of knowledge of the CFI as well as their ability to provide accurate and up to date information to others in a professional manner.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> <li>• evaluating workplace documents and samples of work</li> <li>• simulated projects, scenarios or case studies</li> <li>• obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	<p>Assessment with other units relevant to the job role is recommended. The unit of competency can be assessed in the workplace or a simulated workplace environment.</p>

## Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>An approved offset methodology includes:</p>	<p>a methodology for which a determination has been made under the <i>Carbon Credits (Carbon Farming Initiative) Act 2011</i>.</p>
<p>Carbon service provider includes:</p>	<p>a person who provides advice about participation in or develops or manages a project under the Australian Government's Carbon Farming Initiative.</p>

## Unit Sector(s)

Carbon Farming.

# AHCCFI502A Assess the feasibility of a Carbon Farming Initiative project

## Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

## Unit Descriptor

This unit covers the process of analysing and assessing the feasibility of a carbon farming project using methodologies approved under the Carbon Farming Initiative (CFI).

## Application of the Unit

The unit applies to carbon service providers who determine the feasibility of a carbon farming project in the context of an approved CFI offsets methodology and the requirements of the CFI. Note that this unit does not relate to financial advice which requires an Australian financial services license. This unit does not address the skills or the generic knowledge requirements in "ASIC Regulatory Guide 146: Training of Financial Product Advisors".

When this unit is taught as part of the following Skill Sets, it applies in the context of at least one approved sequestration methodology and one approved emissions avoidance methodology under the Carbon Farming Initiative:

- Carbon Farming Initiative Advisor Skill Set
- Carbon Farming Initiative Business Skill Set

When this unit is taught as part of the following Skill Sets, it applies in the context of the methodologies relevant to the particular Skill Set. It should also apply the skills and knowledge applicable to new approved CFI methodologies relevant to these Skill Sets as they become available:

- Carbon Farming Initiative Vegetation Project Implementer Skill Set
- Carbon Farming Initiative Livestock Project Implementer Skill Set
- Carbon Farming Initiative Waste or Manure Project Implementer Skill Set
- Carbon Farming Initiative Soil or Biochar Project Implementer Skill Set
- Carbon Farming Initiative Savannah Burning, Feral Animal or Rangelands Project Implementer Skill Set
- Carbon Farming Initiative Soil or Crops Emissions Avoidance Project Implementer Skill Set

When this unit is taught as part of the Carbon Farming Initiative Business Skill Set, it applies in the context of assessing the feasibility of an aggregated CFI project.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

## Pre-Requisites

AHCCFI501 Provide technical advice on the Carbon Farming Initiative

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify the rights of the project proponent and the stakeholder	1.1 The right of the project proponent to undertake the project on the proposed land is determined 1.2 The rights to the land, project boundaries and if appropriate the applicable carbon sequestration right are determined, with legal advice sought where required 1.3 All interest holders in the land are identified and their likely agreement to the project determined 1.4 The ownership of carbon sequestration rights, if relevant, is determined
2. Identify the project and its eligibility	2.1 The nature and scope of the project is confirmed 2.2 Approved CFI methodologies are assessed to determine if one is applicable to the project

- 2.3 Any negative impacts of the project are determined and checked against the CFI negative list
- 2.4 Whether the project, or any part of it, is required by law is determined
- 2.5 How the project is in accordance with relevant regional Natural Resource Management plans is determined
- 2.6 The project is checked for compliance with an approved offset methodology
3. Identify the contractual arrangements for the project
  - 3.1 Contract parties are identified
  - 3.2 The responsibilities of owning and managing a CFI project are identified
  - 3.3 The managerial and governance structure of the project is determined and roles of the parties are clarified
  - 3.4 Responsibilities and obligations of the parties under relevant carbon farming legislation are identified
  - 3.5 Financial relationships between the parties are identified, including for transfer of carbon rights if relevant
4. Analyse the project
  - 4.1 Specialist technical advice is sought as required
  - 4.2 Operational capabilities to successfully implement the project are assessed
  - 4.3 Means of calculating the baseline and project emissions in accordance with the relevant methodology are established
  - 4.4 Frequency of data collection, monitoring, ratification and verification requirements are determined
  - 4.5 The impact of differing crediting and reporting periods on project feasibility is assessed
  - 4.6 Approvals and restrictions associated with project implementation are determined
  - 4.7 Timelines for the application, development, approval and implementation of the project are estimated
  - 4.8 Potential risks in the project cycle and mitigation strategies are identified and responsibility assigned between parties involved in the project
  - 4.9 Analysis of stakeholders and their expectations is undertaken.
  - 4.10 The scope for project design, planning and implementation is defined
5. Evaluate project viability
  - 5.1 The distinction between administrative advice on CFI projects and advice about carbon credits that requires holding a financial services license is stated
  - 5.2 The impact of project location on the type of carbon credits generated, where relevant, is ascertained
  - 5.3 Funding requirements for the application, development and

- implementation of the project are calculated
- 5.4 The potential abatement and short and long term returns are identified
- 5.5 Capacity to complete project activities within timeframes is assessed
- 5.6 Issues that impact on project business viability, including methods of valuing carbon credits, are assessed
- 5.7 A business viability case for the project identifying the source and cost of project capital, long term project costs and revenue and non-carbon economic benefits of the project is developed
- 5.8 Project feasibility is determined and advised in a written report to project proponent

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

---

- administration and management skills to:
  - manage documents
  - manage time, including planning and prioritising work
  - coordinate work across a range of disciplines
- communication skills to:
  - liaise with others, share information, seek advice and guidance
  - determine and confirm client requirements, using questioning and active listening as required
  - liaise with others, share information, listen and understand
- language, literacy and numeracy skills to:
  - read and interpret documentation from a variety of sources
  - access, interpret and manage complex information
  - use internet to research information
  - analyse information to ensure currency, accuracy and appropriateness to client needs
  - complete documentation accurately
  - estimate costs
  - interpret and apply complex information, including legislation, regulations, and codes and standards
- interpersonal skills to:
  - establish rapport with clients

- liaise with other team members and specialists
- relate to people from diverse backgrounds and people with diverse abilities
- interact with clients and other stakeholders, including planning and regulatory personnel and technical experts
- establish networks with relevant technical experts
- research and evaluative skills to:
  - apply outcomes of research
  - access, interpret and manage complex information

## Required knowledge

---

Knowledge of:

- the *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations, particularly provisions that impact on the ability to undertake the project and the cost and benefits of doing so, including:
  - eligible projects
  - land tenure requirements, including for freehold, leasehold and native title
  - carbon sequestration rights requirements
  - project requirements
  - participant requirements e.g. Recognised Offset Entity
  - reporting and auditing requirements
  - crediting (e.g. obtaining credits, and monitoring and enforcement)
- details of relevant CFI methodologies that impact on the cost and benefits of undertaking a project including requirements for:
  - project eligibility
  - capital works and machinery
  - inputs including labour and resources
  - project establishment
  - ongoing maintenance, data collection, monitoring and reporting
  - calculation of baselines and project abatement
- productivity or other benefits of undertaking a project in accordance with the relevant CFI methodologies and their monetary value
- carbon farming project initiation and development:
  - project feasibility analysis
  - project application and approval process
  - administration and reporting requirements for the project
  - design, planning and implementation processes
  - the CFI negative list
- the types of relevant requirements of regional Natural Resource Management Plans and how to assess them
- circumstances when an Australian financial services license is required to provide advice

- about carbon farming credits
- legal and regulatory requirements relevant to the type of project, for example necessary permits and their costs
  - project design and implementation
  - risk management
  - principles of cost/benefit analysis
  - possible terms and conditions under a purchase and sales agreement including:
    - possible pricing mechanisms such as payment on delivery, spot, forward, upfront payment options, floor price, cap, fixed price, variable price
    - each contract party's obligations and responsibilities
    - delivery schedules
    - event of default

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• undertake background and preparatory work for a feasibility assessment</li> <li>• assess the feasibility of a CFI project for clients and land managers</li> <li>• develop a business viability case for a CFI project</li> </ul>
Context of and specific resources for assessment	<p>Assessment must be undertaken in the context of at least one approved sequestration methodology and one approved emissions avoidance methodology under the Carbon Farming Initiative.</p> <p>Assessment resources must be developed to determine the candidate's depth and breadth of knowledge of carbon farming project feasibility as well as their ability to evaluate a project's feasibility.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> </ul>

	<ul style="list-style-type: none"> <li>evaluating workplace documents and samples of work</li> <li>simulated projects, scenarios or case studies</li> <li>obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	Assessment with other units relevant to the job role is recommended. The unit of competency can be assessed in the workplace or a simulated workplace environment.

## Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
An approved offset methodology includes:	a methodology for which a determination has been made under the <i>Carbon Credits (Carbon Farming Initiative) Act 2011</i>
Contract parties include:	<ul style="list-style-type: none"> <li>land managers</li> <li>leaseholders</li> <li>project developers</li> <li>aggregators</li> <li>others</li> </ul>
Carbon service provider includes:	a person who provides advice about participation in or develops or manages a project under the Australian Government's Carbon Farming Initiative

## Unit Sector(s)

Carbon farming.

# AHCCFI503A Advise on Carbon Farming Initiative project planning and implementation

## Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

## Unit Descriptor

This unit covers the development and maintenance of knowledge on the processes involved for land managers and project proponents in planning, implementing and monitoring Carbon Farming Initiative (CFI) projects and providing accurate and relevant technical advice to land managers and project proponents about the administrative requirements of these processes.

## Application of the Unit

The unit applies to carbon service providers responsible for advising and informing land managers and project proponents about implementing CFI projects. Note that the 'advice' referred to in this unit does not relate to financial advice which requires an Australian financial services license. This unit does not address the skills or the generic knowledge requirements in "ASIC Regulatory Guide 146: Training of Financial Product Advisors".

This unit applies in the context of at least one sequestration methodology and at least one emissions avoidance methodology approved under the CFI.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

## Pre-Requisites

AHCCFI501 Provide technical advice on the Carbon Farming Initiative

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define requisites for planning a CFI project	1.1 Project phases for planning a CFI project are described 1.2 Equipment, specialist services and service providers required to plan and implement a CFI project are defined 1.3 The means of determining the project area for sequestration and emissions avoidance methodologies are specified 1.4 The need for and use of relevant tools such as the CFI mapping tool and CFI rainfall map are determined 1.5 The impact of project location on the type of carbon credits generated, where relevant, is ascertained 1.6 The impact of differing crediting and reporting periods on project planning and implementation is assessed 1.7 The steps required to determine the baseline and project emissions are determined 1.8 The responsibilities of owning and managing a CFI project are outlined
2. Determine requisites for implementing a CFI project	2.1 The requirements and process for becoming a Registered Offsets Entity are detailed 2.2 The requirements and process for applying for an eligible offsets project are defined 2.3 Methods of data collection for emissions avoidance and sequestration projects are outlined 2.4 Systems and procedures for accurately measuring and recording project abatement are outlined 2.5 Procedures for maintaining records of procedures undertaken and abatement achieved under a CFI project are specified 2.6 Equipment maintenance and calibration requirements are established 2.7 Project audit requirements and the providers of audit services are detailed

- 3. Provide information on applying for carbon credits
  - 3.1 Requirements for completing an offsets report for the Clean Energy Regulator are outlined
  - 3.2 Steps involved in commissioning an audit report are defined
  - 3.3 Process for applying for a certificate of entitlement is specified
  - 3.4 Information on the circumstances under which the Clean Energy Regulator will issue carbon credits and their maintenance on the Australian Register of Emissions Units is provided
- 4. Provide information on CFI administration and implementation
  - 4.1 CFI project processes and administrative and compliance requirements are described
  - 4.2 Responses to stakeholder inquiries are comprehensive, clear and delivered in the most appropriate form and within the agreed timeframe
  - 4.3 Enquiries outside area of responsibility and knowledge are identified and assistance is sought or the enquiry is referred onto a relevant party

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

---

- communication skills to:
  - liaise with others and share information about the CFI
  - use language and concepts appropriate to cultural differences
  - determine and respond to client requests for information
  - provide presentations to individuals and groups on CFI project administration
- language, literacy and numeracy skills to:
  - read and interpret CFI documentation and legislation
  - analyse information on CFI to ensure currency, accuracy and appropriateness to client needs
  - interpret and advise on complex information, including legislation, regulations, and codes and standards
- interpersonal skills to:
  - establish rapport with clients
  - relate to people from diverse backgrounds and people with diverse abilities
  - positively interact with clients, other stakeholders, including regulatory personnel and technical experts
  - establish networks with relevant technical experts
- organising and time-management skills to:
  - sequence tasks
  - meet timelines
  - arrange meetings and visits to properties
- leadership skills to:
  - build an effective project team
  - lead the team in the implementation of the project
  - anticipate, plan and organise required materials and resources
- 

## Required knowledge

---

Knowledge of:

- requirements of approved CFI methodologies, including:
  - project eligibility and scope
  - identifying the baseline scenario
  - project area
  - estimating abatement
  - monitoring, record keeping and offsets reporting
- CFI and the requirements of the *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations relating to:

- project proponent requirements:
  - become a Recognised Offsets Entity
  - creating and using an Australian National Register of Emissions Units account
- project requirements:
  - applying for an Eligible Offsets Project
  - implementing the project in accordance with the applicable approved offsets methodology
  - writing and submitting offsets reports and arrange audit reports
  - applying for a certificate of entitlement and receive credits
  - closing a project
  - varying a project
  - withdrawing a project from the CFI
  - relinquishing carbon credits
- scheme oversight, institutions and governance
- phases in a CFI project
- equipment, specialist services and service providers required to plan and implement a CFI project
- impact of project location on the type of carbon credits generated
- impact of differing crediting and reporting periods on project planning and implementation
- stakeholder responsibilities of owning and managing a CFI project
- application process to become a Recognised Offsets Entity
- procedures for maintaining records of procedures undertaken and abatement achieved under a CFI project
- project audit requirements and the providers of audit services
- commissioning of audit reports
- application process for certificates of entitlement
- CER procedures for issuing carbon credits and maintenance on the Australian Register of Emissions Units
- CFI project processes and administrative and compliance requirements
- distinction between administrative advice on CFI projects and advice about carbon credits that requires holding a financial services license

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and	Evidence of the ability to:

evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> <li>• define requisites for planning a CFI project</li> <li>• apply for approval of a CFI project</li> <li>• define requisites for implementing a CFI project</li> <li>• apply for carbon credits</li> <li>• provide information on CFI administrative requirements</li> </ul>
Context of and specific resources for assessment	<p>Assessment must be undertaken in the context of the relevant CFI methodologies.</p> <p>Assessment resources must be developed to determine the candidate's depth and breadth of knowledge of the administrative requirements of the CFI as well as their ability to provide accurate and up to date information to others in a professional manner.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> <li>• evaluating workplace documents and samples of work</li> <li>• simulated projects, scenarios or case studies</li> <li>• obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	<p>Assessment with other units relevant to the job role is recommended.</p> <p>The unit of competency can be assessed in the workplace or a simulated workplace environment.</p>

## Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
An approved offset methodology includes:	a methodology for which a determination has been made under the <i>Carbon Credits (Carbon Farming Initiative)</i>

	<i>Act 2011</i>
Carbon service provider includes:	a person who provides advice about participation in or develops or manages a project under the Australian Government's Carbon Farming Initiative
CFI project processes include:	planning, implementing and monitoring of CFI project works
CFI administrative requirements include:	those covered in the <i>Carbon Credits (Carbon Farming Initiative) Act 2011</i> and regulations

## Unit Sector(s)

Carbon farming.

# AHCCFI504A Monitor and report on a Carbon Farming Initiative project

## Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

## Unit Descriptor

This unit covers the monitoring, calculation, verification and reporting of abatement for Carbon Farming Initiative (CFI) projects in compliance with the requirements of the approved CFI methodology within the required reporting timeframe.

## Application of the Unit

The unit applies to carbon service providers responsible for ensuring that greenhouse gas abatement is accurately measured and reported in accordance with relevant carbon farming methodologies. Assessment must be undertaken in the context of at least one approved CFI methodology relevant to the subject matter of the Skill Set the unit is being taught under. This unit does not cover auditing a project.

When this unit is taught as part of the following Skill Sets, it applies in the context of the methodologies relevant to the particular Skill Set. It should also apply the skills and knowledge applicable to new approved CFI methodologies relevant to these Skill Sets as they become available:

- Carbon Farming Initiative Vegetation Project Implementer Skill Set
- Carbon Farming Initiative Livestock Project Implementer Skill Set
- Carbon Farming Initiative Waste or Manure Project Implementer Skill Set
- Carbon Farming Initiative Soil or Biochar Project Implementer Skill Set
- Carbon Farming Initiative Savannah Burning, Feral Animal or Rangelands Project Implementer Skill Set
- Carbon Farming Initiative Soil or Crops Emissions Avoidance Project Implementer Skill Set

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

## Pre-Requisites

AHCCFI501 Provide technical advice on the Carbon Farming Initiative

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor a CFI project	<p>1.1 Procedures and requirements of the methodology for monitoring abatement and collecting data are confirmed and observed</p> <p>1.2 Systems and procedures for accurately measuring and recording project abatement are outlined</p> <p>1.3 Procedures for maintaining records of procedures undertaken and abatement achieved under a CFI project are specified</p> <p>1.4 Equipment maintenance and calibration requirements are established</p> <p>1.5 Project audit requirements and the providers of audit services are detailed</p> <p>1.6 Equipment, technology and procedures for undertaking the monitoring are prepared and checked</p>
2. Verify collected data	<p>2.1 Data are collected and organised in a format suitable for calculating abatement and determining whether relevant methodology requirements have been met</p> <p>2.2 Methods of data analysis are reliable and compliant with the carbon farming methodology and any other relevant regulatory requirements</p> <p>2.3 Appropriate records are kept</p> <p>2.4 Abatement is calculated in accordance with the requirements</p>

- of the methodology
3. Submit an offsets report
    - 3.1 An offsets report is prepared as prescribed in the regulations and by the relevant methodology determination
    - 3.2 An audit of the offsets report is commissioned
    - 3.3 The Certificate of Entitlement form is completed

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

---

- administration and management skills to:
  - manage documents
  - manage time, including planning and prioritising work
- communication skills to:
  - liaise with others, share information, seek advice and guidance
  - use language and concepts appropriate to cultural differences
  - determine and confirm client requirements, using questioning and active listening strategies
  - communicate with clients and contacts
- language, literacy and numeracy skills to:
  - read and interpret documentation from a variety of sources
  - complete documentation accurately
  - access, interpret and manage complex information
- IT & technology skills to access and use appropriate software, such as spread sheets and databases
- technical skills to:
  - use carbon methodology tools
  - interpret the methodology data collection, abatement calculation and verification requirements

- interpersonal skills to:
  - establish rapport with clients
  - relate to people from diverse backgrounds and people with diverse abilities
  - positively interact with clients and other stakeholders, including regulatory personnel and technical experts
  - establish networks with relevant technical experts

Required knowledge

---

Knowledge of:

- procedures and requirements of the relevant methodologies for:
  - collecting data, monitoring and reporting on abatement
  - calculating abatement
  - equipment and technology and required standards for undertaking the monitoring
  - data verification
- offsets report preparation as prescribed in the regulations and/or by the relevant methodology determination
- requirements of the Certificate of Entitlement
- types of records required to be kept
- requirements for an audit report as specified in the project declaration, the relevant methodology and the CFI legislation
- project proponent responsibilities for an audit report
- how to engage a CFI auditor
- requirements and role of a CFI auditor
- requirements of an audit report
- National Greenhouse and Energy Reporting Act 2007 and National Greenhouse and Energy Reporting Regulations 2008
- 

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment

## AHCCFI505A Aggregate Carbon Farming Initiative projects

### Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

### Unit Descriptor

This unit covers the process of aggregating Carbon Farming Initiative (CFI) projects using approved methodologies across multiple sites.

### Application of the Unit

The unit applies to project aggregators involved in the design and implementation of CFI projects using approved methodologies across multiple sites. It does not apply to those who wish to aggregate by purchasing carbon credits from multiple smaller projects and selling them, a role performed by carbon brokers.

Note that the 'advice' referred to in this unit does not relate to financial advice which requires an Australian financial services license. This unit does not address the skills or the generic knowledge requirements in "ASIC Regulatory Guide 146: Training of Financial Product Advisors".

This unit applies in the context of at least one sequestration methodology and at least one emissions avoidance methodology approved under the CFI.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Pre-Requisites

Nil.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Incorporate aggregation into the scope and design of the project	1.1 The project type and circumstances in which aggregation is a viable or preferred option are identified 1.2 The scope and design of aggregation for different project types is determined 1.3 The means of aggregation for different project types that is confirmed as compliant with the legislation and regulations is determined 1.4 The nature of contractual arrangements with all parties is determined, landholder and project proponent responsibilities are negotiated, clearly defined and agreed, and aggregator obligations are detailed and identified 1.5 Costs associated specifically with aggregated projects are identified 1.6 Risks associated specifically with an aggregated project are identified 1.7 A business case for individual and/or groups of landholders is developed and presented
2. Identify potential project sites and communities	2.1 A strategy to identify potential landholders is prepared and implemented 2.2 Landholders are informed of the need to get independent legal and financial advice 2.3 For sequestration projects, the means of transfer of carbon rights is agreed 2.4 Appropriate terms for contracts with landholders are agreed
3. Document the aggregated project	3.1 Means of representing the form of aggregation in the project feasibility analysis, project design and project plan are determined 3.2 Project documentation is designed to meet both the needs of the Clean Energy Regulator and contracts formed with participating landholders.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

---

- administration and management skills to:
  - manage documents
  - lead the building of a team and related project professionals
  - manage time, including planning and prioritising work
  - coordinate work across a range of disciplines
- communication skills to:
  - liaise with others, share information, seek advice and guidance
  - use language and concepts appropriate to cultural differences
  - determine and confirm client requirements, using questioning and active listening strategies
- language, literacy and numeracy skills to:
  - read and interpret documentation from a variety of sources
  - complete documentation accurately
  - access, interpret and manage complex information
  - estimate costs
- interpersonal skills to:
  - establish rapport with clients
  - liaise with other team members and specialists
  - relate to people from diverse backgrounds and people with diverse abilities
  - interact with clients and other stakeholders, including planning and regulatory personnel and technical experts
  - establish networks with relevant technical and other experts
- organising and time-management skills to:
  - sequence tasks
  - meet timelines
  - arrange meetings
- leadership skills to:
  - build an effective project team
  - lead the team in the implementation of the project
  - anticipate, plan and organise required materials and resources

### Required knowledge

---

Knowledge of:

- requirements of approved CFI methodologies, including:
  - project eligibility and scope
  - how to identify the baseline scenario
  - project area
  - estimating abatement
  - monitoring, record keeping and offsets reporting.
- CFI and the requirements of the *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations relating to:
  - project proponent requirements
    - becoming a Recognised Offsets Entity
    - creating and using an Australian National Register of Emissions Units account
  - project requirements
    - applying for an Eligible Offsets Project
    - implementing the project in accordance with the applicable approved offsets methodology
    - writing and submitting offsets reports and arrange audit reports
    - applying for a certificate of entitlement and receive credits
    - closing a project
    - varying a project
    - withdrawing a project from the CFI
    - relinquishing carbon credits
  - scheme oversight, institutions and governance
- carbon rights
- Clean Energy Regulator (CER) requirements for project application and reporting
- options for aggregating CFI projects and the implications for the roles of landholders and aggregators in delivering the project including ownership of carbon sequestration rights where relevant
- contract management
- public liability, personal and professional liability and duty of care
- managing risk
- relevant obligations under Australian Securities and Investments Commission legislation, including potential requirements for an Australian financial services license as well as registering and reporting requirements for managed investment funds
- circumstances when an Australian financial services license is required to provide advice about carbon farming credits

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify sources of finance</li> <li>• prepare suitable contractual arrangements with landholders</li> <li>• manage multiple projects</li> </ul>
Context of and specific resources for assessment	<p>Assessment must be undertaken in the context of the Carbon Farming Initiative.</p> <p>Assessment resources must be developed to determine the candidate's depth and breadth of knowledge of the CFI as well as their ability to identify potential projects and develop a business case for an aggregated project.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> <li>• evaluating workplace documents and samples of work</li> <li>• simulated projects, scenarios or case studies</li> <li>• obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	<p>Assessment with other units relevant to the job role is recommended. The unit of competency can be assessed in the workplace or a simulated workplace environment.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Project aggregator includes:	A person who acquires the legal right to carry out a carbon farming project on someone else's land and/or facility and is the project proponent. As the project proponent the aggregator receives the carbon credits. The project may be undertaken on one or more parcels of land/facilities owned by different people and aggregated into one project. If the project is a sequestration project, the aggregator must acquire the carbon rights to the land
The form and means of aggregation includes:	the means of calculating baseline and project emissions; project mapping where relevant; and monitoring, data collection and reporting arrangements for multiple sites

## Unit Sector(s)

Carbon farming.

## AHCCFI506A Plan a Carbon Farming Initiative livestock project

### Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

### Unit Descriptor

This unit covers the process of managing the design, planning and costing of a Carbon Farming Initiative (CFI) project to avoid emissions from livestock.

### Application of the Unit

The unit applies to those who wish to manage the implementation of or provide advice on implementing an approved CFI methodology to avoid emissions from livestock. Note that the 'advice' referred to in this unit does not relate to financial advice which requires an Australian financial services license. This unit does not address the skills or the generic knowledge requirements in "ASIC Regulatory Guide 146: Training of Financial Product Advisors".

Application of this unit must cover the skills and knowledge to plan for projects to avoid emissions from livestock as approved CFI methodologies for them become available.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Pre-Requisites

Nil.

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes of a unit of competency.

demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage the project design	1.1 Areas of expertise and specialist services required to carry out the project are identified 1.2 A design brief is prepared 1.3 Project design and contract arrangements are agreed 1.4 Site elements and features that impact on project design and establishment are assessed 1.5 The impact of project location on the type of carbon credits generated, where relevant, is ascertained 1.6 The impact of differing crediting and reporting periods on project planning and implementation is assessed 1.7 A design is prepared that describes the detailed features, specifications and approach of the project 1.8 The design is checked for compliance with the relevant approved methodology and CFI requirements and agreed with the stakeholder
2. Carry out preliminary planning activities	2.1 The responsibilities of owning and managing a CFI project are identified 2.2 Project design and contract requirements are confirmed 2.3 The availability and quantity of materials and resources listed in the project specifications are verified 2.4 The availability of personnel with appropriate expertise to assist with or undertake project work is confirmed
3. Prepare a project plan	3.1 Resources, tools, labour and equipment required for project implementation are identified 3.2 Project risks are assessed and controls are established 3.3 A project plan outlining allocation of resources, work tasks and timing is prepared 3.4 Interdependencies, seasonal factors and impacts are identified and incorporated in the staging strategy
4. Cost implementation works	4.1 Current prices for project resources, tools, labour and equipment required for project implementation are obtained 4.2 Unit and total cost for each item is calculated

- 4.3 Total project costs are accurately calculated and documented
- 4.4 Adjustments are made where required to reconcile costs with project budget
- 4.5 The costed plan is agreed with the project proponent
- 4.6 The costed plan is checked with the relevant auditor to ensure that the methods proposed in applying the methodology will meet audit requirements

## **Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

## Required skills

---

- communication skills to:
  - determine and confirm client requirements using questioning and active listening as required
  - liaise with others, share information, listen and understand
- literacy skills to:
  - read and interpret documentation from a variety of sources
  - analyse information to ensure currency, accuracy and appropriateness to client needs
  - complete documentation accurately
- research and analytical skills to access, interpret and manage complex information
- numeracy and IT skills to:
  - interpret financial information and calculate client costs
  - access and use appropriate software
  - use the internet to research information
- information management skills to capture and record key project information
- interpersonal skills to:
  - establish rapport with clients
  - liaise with other team members and specialists
  - establish networks with relevant technical experts
- judgement skills to:
  - apply ethical principles to decision making in the advisory process
  - form suitable recommendations when advising
- self-management and team coordination skills to comply with ethical, legal and procedural requirements
- organising and time-management skills to:
  - sequence tasks
  - meet timelines and deliver agreed outcomes
  - arrange meetings
- leadership skills to:
  - build an effective project team
  - lead the team in the implementation of the project
  - anticipate, plan and organise required materials and resources

## Required knowledge

---

Knowledge of:

- *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations, particularly provisions relevant to project planning and implementation, and including relevant eligible activities on the positive list
- any regulatory guidance included on the Clean Energy Regulator website for the relevant methodologies

- the science of livestock digestion, rumen physiology, rumination and eructation
- details of approved CFI livestock methodologies including eligibility requirements, project area requirements, net abatement calculation requirements, monitoring, reporting and auditing requirements and further information sources
- current pricing and options for project resources, tools, equipment and contractors
- formats for organising and presenting financial, qualitative and quantitative information
- stocking and feed-based strategies for reducing livestock methane production
- best practice livestock management
- relevant animal welfare standards
- rumen manipulation techniques relevant to the methodologies
- information about project implementation or changes in environmental conditions that are required to determine whether the project remains within the scope of the methodology
- carbon accounting in the land sector
  - Australia's national carbon accounting framework
  - need for consistency of abatement calculations under the CFI with methods in the National Greenhouse and Energy Reporting determination and the National Inventory Report
  - requirements for measuring emissions from land-based sources relevant to the methodologies

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• manage the project design</li> <li>• plan the implementation of a CFI livestock project</li> <li>• prepare a project plan</li> <li>• cost implementation of the project</li> <li>• identify resources for a program of works</li> </ul>
Context of and specific resources for assessment	<p>Assessment must be undertaken in the context of the Carbon Farming Initiative.</p> <p>Assessment resources must be developed to determine the candidate's depth and breadth of knowledge of approved livestock methodologies as well as their ability to provide accurate and up-to-date information</p>

	to others in a professional manner.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> <li>• evaluating workplace documents and samples of work</li> <li>• simulated projects, scenarios or case studies</li> <li>• obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	Assessment with other units relevant to the job role is recommended. The unit of competency can be assessed in the workplace or a simulated workplace environment.

## Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Seasonal factors and impacts includes:	material handling, rainfall requirements, machinery use, fire hazards, growing conditions and establishment period
Design brief includes:	a brief that outlines project objectives, outcomes, scope, constraints and assumptions, dependencies, design options and preferred option, business case, success indicators, project approach and governance arrangements (including compliance requirements with the standards of the applicable auditor)
Positive list includes:	a register, contained in the CFI regulations, of abatement activities, that are eligible to earn carbon credits under the CFI

## **Unit Sector(s)**

Carbon farming.

## AHCCFI507A Plan a Carbon Farming Initiative waste or manure management project

### Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

### Unit Descriptor

This unit covers the process of managing the design, planning and costing of a Carbon Farming Initiative (CFI) project using a methodology approved under the CFI for the management of livestock manure, or waste that was deposited to landfill prior to 1 July 2012, or waste that would have been deposited to landfill prior to 1 July 2012 but was instead diverted to an alternative waste treatment facility.

### Application of the Unit

The unit applies to those who wish to manage the implementation of or provide advice on implementing a CFI project for the avoidance of emissions from livestock urine or dung, or waste that was deposited to landfill prior to 1 July 2012, or waste that would have been deposited to landfill prior to 1 July 2012 but was instead diverted to an alternative waste treatment facility.

Note that the 'advice' referred to in this unit does not relate to financial advice which requires a financial services license. This unit does not address the skills or the generic knowledge requirements in "ASIC Regulatory Guide 146: Training of Financial Product Advisors".

Application of this unit must cover the skills and knowledge to plan for projects as relevant approved CFI methodologies for them become available.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Pre-Requisites

Nil.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage the project design process	1.1 Areas of expertise and specialist services required to carry out the project are identified 1.2 A design brief is prepared 1.3 Project design and contract arrangements are agreed 1.4 Site elements and features that impact on project design and establishment are assessed 1.5 The impact of project location on the type of carbon credits generated, where relevant, is ascertained 1.6 The impact of differing crediting and reporting periods on project planning and implementation is assessed 1.7 A design is prepared that describes the detailed features, specifications and approach of the project 1.8 The design is checked for compliance with the relevant approved methodology and CFI requirements and agreed with the stakeholder
2. Carry out preliminary planning activities	2.1 The responsibilities of owning and managing a CFI project are identified 2.2 Project design and contract requirements are confirmed 2.3 The availability and quantity of materials and resources listed in the project specifications are verified 2.4 The availability of personnel with appropriate expertise to assist with or undertake project work is confirmed
3. Prepare a staged plan of work	3.1 Resources, tools, labour and equipment required for project implementation are identified 3.2 Project risks are assessed and controls are established 3.3 A project plan outlining allocation of resources, work tasks

- and timing is prepare
- 3.4 Interdependencies, seasonal factors and impacts are identified and incorporated in the staging strategy
- 4.1 Cost implementation works
- 4.1 Current prices for project resources, tools, labour and equipment required for project implementation are obtained
- 4.2 Unit and total cost for each resource item is calculated
- 4.3 Total project costs are accurately calculated and documented
- 4.4 Adjustments are made where required to reconcile resource costs with project budget
- 4.5 The costed plan is agreed with the project proponent
- 4.6 The costed plan is checked with the relevant auditor to ensure that the methods proposed in applying the methodology will meet audit requirements

## **Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

## Required skills

---

- communication skills to:
  - determine and confirm client requirements using questioning and active listening as required
  - liaise with others, share information, listen and understand
- literacy skills to:
  - read and interpret documentation from a variety of sources
  - analyse information to ensure currency, accuracy and appropriateness to client needs
  - complete documentation accurately
- research and analytical skills to access, interpret and manage complex information
- numeracy and IT skills to:
  - interpret financial information and calculate costs and benefits of the project
  - access and use appropriate software
  - use the internet to research information
- information management skills to capture and record key project information
- interpersonal skills to:
  - establish rapport with clients
  - liaise with other team members and specialists
- judgement skills to:
  - apply ethical principles to decision making in the advisory process
  - form suitable recommendations when advising
- self-management skills to comply with ethical, legal and procedural requirements
- organising and time-management skills to:
  - sequence tasks
  - meet timelines and deliver agreed outcomes
  - arrange meetings
- leadership skills to:
  - build an effective project team
  - lead the team in the implementation of the project
  - anticipate, plan and organise required materials and resources

## Required knowledge

---

Knowledge of:

- *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations, particularly provisions relevant to project planning and implementation, and including relevant eligible activities on the positive list
- any regulatory guidance included on the Clean Energy Regulator website for the relevant methodologies
- science of methane formation from waste and manure
- means of reducing methane emissions from landfill, including gas capture and flaring,

gas destruction in internal combustion engines and gas boilers, the use of bio-covers and bio-filters and other means including an understanding of the nature and purpose of the required equipment and processes

- means of reducing methane emissions from livestock manure, including gas capture and flaring, gas destruction in internal combustion engines, the use of bio-digestors and other means including an understanding of the nature and purpose of the required equipment and processes
- details of relevant approved CFI landfill gas, waste diversion and livestock manure management methodologies including eligibility requirements, project area requirements, net abatement calculation requirements, monitoring, reporting and auditing requirements and further information sources
- current pricing and options for project resources, tools, equipment and contractors
- formats for organising and presenting financial, qualitative and quantitative information
- carbon accounting in the waste and land sectors, including
  - Australia's national carbon accounting framework
  - need for consistency of abatement calculations under the CFI with methods in the National Greenhouse and Energy Reporting determination and the National Inventory Report
  - requirements for measuring emissions from land-based sources relevant to the methodologies
- *For landfill gas methodologies*
  - guidelines for calculating regulatory baselines for legacy waste landfill methane projects
  - CFI landfill gas calculator
  - CFI landfill methane regulatory baseline calculator
  - solid waste calculator
  - National Greenhouse and Energy Reporting (Measurement) Determination
- *For livestock manure management methodologies*
  - PigBal version specified on the Clean Energy Regulator website
  - Dairy Greenhouse Gas Abatement Strategies Calculator, Advisor version 1.4, produced by the Tasmanian Institute of Agricultural Research
  - Effluent and Manure Management Database for the Australian Dairy Industry published by Dairy Australia in 2008
  - an understanding of the daily operation of piggeries, dairies and other livestock operations as necessary to understand the context and application of the relevant methodologies

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• manage the project design process</li> <li>• plan the implementation of a landfill gas, waste diversion or livestock manure management project</li> <li>• prepare a project plan</li> <li>• identify resources for a program of works</li> <li>• cost implementation of the project</li> </ul>
Context of and specific resources for assessment	<p>Assessment must be undertaken in the context of the Carbon Farming Initiative.</p> <p>Assessment resources must be developed to determine the candidate's depth and breadth of knowledge of approved landfill gas, waste diversion and livestock manure management methodologies and the knowledge required to plan their implementation, as their ability to provide accurate and up-to-date information to others in a professional manner.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> <li>• evaluating workplace documents and samples of work</li> <li>• simulated projects, scenarios or case studies</li> <li>• obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	<p>Assessment with other units relevant to the job role is recommended.</p> <p>The unit of competency can be assessed in the workplace or a simulated workplace environment.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may

<p>be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Seasonal factors and impacts include:</p>	<ul style="list-style-type: none"> <li>• material handling</li> <li>• rainfall requirements</li> <li>• machinery use</li> <li>• fire hazards</li> <li>• growing conditions</li> <li>• establishment period</li> </ul>
<p>Design brief includes:</p>	<p>a brief that outlines project objectives, outcomes, scope, constraints and assumptions, dependencies, design options and preferred option, business case, success indicators, project approach and governance arrangements (including compliance requirements with the standards of the applicable auditor)</p>
<p>Positive list includes:</p>	<p>a register, contained in the CFI regulations, of abatement activities, that are eligible to earn carbon credits under the CFI</p>

## Unit Sector(s)

Carbon farming.

## AHCCFI508A Plan a Carbon Farming Initiative project to sequester carbon in soil or biochar

### Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

### Unit Descriptor

This unit covers the process of managing the design, planning and costing of a Carbon Farming Initiative (CFI) project using a methodology approved under the CFI for the sequestration of carbon in soil or biochar.

### Application of the Unit

The unit applies to those who wish to manage the implementation of or provide advice on implementing a CFI soil carbon or biochar project.

Note that the 'advice' referred to in this unit does not relate to financial advice which requires an Australian financial services license. This unit does not address the skills or the generic knowledge requirements in ASIC Regulatory Guide 146: Training of Financial Product Advisors".

Application of this unit must cover the skills and knowledge to plan for projects as relevant approved CFI methodologies for them become available.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Pre-Requisites

Nil.

### Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Manage the project design	<ul style="list-style-type: none"><li>1.1 Areas of expertise and specialist services required to carry out the project are identified</li><li>1.2 A design brief is prepared</li><li>1.3 Project design and contract arrangements are agreed</li><li>1.4 Site elements and features that impact on project design and establishment are assessed</li><li>1.5 The site is stratified as per the methodology requirements, if relevant</li><li>1.6 The impact of project location on the type of carbon credits generated, where relevant, is ascertained</li><li>1.7 The impact of differing crediting and reporting periods on project planning and implementation is assessed</li><li>1.8 A design is prepared that describes the detailed features, specifications and approach of the project</li><li>1.9 The design is checked for compliance with the relevant approved methodology and CFI requirements and agreed with the stakeholder</li></ul>
2. 3. Prepare a project plan	<ul style="list-style-type: none"><li>3.1 Resources, tools, labour and equipment required for project implementation are identified</li><li>3.2 Project risks are assessed and controls are established</li><li>3.3 A project plan outlining allocation of resources, work tasks</li></ul>

- and timing is prepared
- 3.4 Interdependencies, seasonal factors and impacts are identified and incorporated in the staging strategy
4. Cost implementation works
- 4.1 Current prices for project resources, tools, labour and equipment required for project implementation are obtained
  - 4.2 Unit and total cost for each resource item is calculated
  - 4.3 Total project costs are accurately calculated and documented
  - 4.4 Adjustments are made where required to reconcile resource costs with project budget
  - 4.5 The costed plan is agreed with the project proponent
  - 4.6 The costed plan is checked with the relevant auditor to ensure that the methods proposed in applying the methodology will meet audit requirements

## **Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

## Required skills

---

- communication skills to:
  - determine and confirm client requirements using questioning and active listening as required
  - negotiate financial service transactions with clients
  - liaise with others, share information, listen and understand
- literacy skills to:
  - read and interpret documentation from a variety of sources
  - analyse information to ensure currency, accuracy and appropriateness to client needs
  - complete documentation accurately
- research and analytical skills to access, interpret and manage complex information
- numeracy and IT skills to:
  - interpret financial information and calculate client costs
  - access and use appropriate software
  - use the internet to research information
- information management skills to capture and record key project information
- interpersonal skills to:
  - establish rapport with clients
  - liaise with other team members and specialists
  - establish networks with relevant technical experts
- judgement skills to:
  - apply ethical principles to decision making in the advisory process
  - form suitable recommendations when advising
- self-management skills to comply with ethical, legal and procedural requirements
- organising and time-management skills to:
  - sequence tasks
  - meet timelines and deliver agreed outcomes
  - arrange meetings
- leadership skills to:
  - build an effective project team
  - lead the team in the implementation of the project
  - anticipate, plan and organise required materials and resources

## Required knowledge

---

Knowledge of:

- *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations, particularly provisions relating to the permanence of sequestration activities, including carbon maintenance obligation, and including relevant eligible activities on the positive list and provisions relevant to project planning and implementation
- any regulatory guidance included on the Clean Energy Regulator website for the relevant

methodologies

- details of approved CFI soil carbon and biochar methodologies including eligibility requirements, project area requirements, net abatement calculation requirements, monitoring, reporting and auditing requirements and further information sources
- science of sequestering and maintaining and measuring carbon in soil
- current pricing and options for project resources, tools, equipment and contractors
- formats for organising and presenting financial, qualitative and quantitative information
- overview of farm management practices that can enhance and maintain carbon sequestration in the soil
- overview of means of manufacturing biochar and the properties of various feedstocks
- information about project implementation or changes in environmental conditions that are required to determine whether the project remains within the scope of the methodology
- CFI guidelines for sampling and measuring soil carbon
- an understanding of geographic information systems (GIS)
- carbon accounting in the land sector, including:
  - Australia's national carbon accounting framework
  - need for consistency of abatement calculations under the CFI with methods in the National Greenhouse and Energy Reporting determination and the National Inventory Report
  - requirements for measuring emissions from land-based sources relevant to the methodologies

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: <ul style="list-style-type: none"> <li>• manage the project design</li> <li>• plan the implementation of a soil carbon or biochar project</li> <li>• prepare a project plan</li> <li>• identify resources for a program of works</li> <li>• cost implementation of the project</li> </ul>
Context of and specific resources for assessment	Assessment must be undertaken in the context of the Carbon Farming Initiative.  Assessment resources must be developed to determine the candidate's depth and breadth of knowledge of

	approved cropping or soil methodologies as well as their ability to provide accurate and up-to-date information to others in a professional manner.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> <li>• evaluating workplace documents and samples of work</li> <li>• simulated projects, scenarios or case studies</li> <li>• obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	Assessment with other units relevant to the job role is recommended. The unit of competency can be assessed in the workplace or a simulated workplace environment.

## Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Seasonal factors and impacts includes:	<ul style="list-style-type: none"> <li>• material handling</li> <li>• rainfall requirements</li> <li>• machinery use</li> <li>• fire hazards</li> <li>• growing conditions</li> <li>• establishment period</li> </ul>
Design brief includes:	a brief that outlines project objectives, outcomes, scope, constraints and assumptions, dependencies, design options and preferred option, business case, success indicators, project approach and governance arrangements (including compliance requirements with the standards of the applicable auditor)
Positive list includes:	a register, contained in the CFI regulations, of

	abatement activities, that are eligible to earn carbon credits under the CFI
--	--

## Unit Sector(s)

Carbon farming.

## AHCCFI509A Plan a Carbon Farming Initiative savannah burning, feral animal or rangelands project

### Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

### Unit Descriptor

This unit covers the process of managing the design planning and costing of a Carbon Farming Initiative (CFI) project using a methodology approved under the CFI for avoiding emissions from savannah burning or feral animals or a project for avoiding emissions or sequestering carbon in the rangelands.

### Application of the Unit

The unit applies to those who wish to manage the implementation of or provide advice on implementing a CFI savannah burning, feral animal or rangelands project.

Application of this unit must cover the skills and knowledge to plan for savannah burning and feral animal and rangelands projects as approved CFI methodologies for them become available.

Note that the 'advice' referred to in this unit does not relate to financial advice which requires an Australian financial services license. This unit does not address the skills or the generic knowledge requirements in "ASIC Regulatory Guide 146: Training of Financial Product Advisors".

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Pre-Requisites

Nil

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Manage the project design process	<p>1.1 Areas of expertise and specialist services required to carry out the project are identified</p> <p>1.2 A design brief is prepared</p> <p>1.3 Project design and contract arrangements are agreed</p> <p>1.4 Site elements and features that impact on project design and establishment are assessed</p> <p>1.5 The impact of project location on the type of carbon credits generated, where relevant, is ascertained</p> <p>1.6 The impact of differing crediting and reporting periods on project planning and implementation is assessed</p> <p>1.7 A design is prepared that describes the detailed features, specifications and approach of the project</p> <p>1.8 The design is checked for compliance with the relevant approved methodology and CFI requirements and agreed with the stakeholder</p>
2. Carry out preliminary planning activities	<p>2.1 The responsibilities of owning and managing a CFI project are identified</p> <p>2.2 Project design and contract requirements are confirmed</p> <p>2.3 The availability and quantity of materials and resources listed in the project specifications are verified</p> <p>2.4 The availability of personnel with appropriate expertise to assist with or undertake project work is confirmed</p>
3. Prepare a project plan	<p>3.1 Resources, tools, labour and equipment required for project implementation are identified</p> <p>3.2 Project risks are assessed and controls are established</p> <p>3.3 A project plan outlining allocation of resources, work tasks</p>

- and timing is prepared
- 3.4 Interdependencies, seasonal factors and impacts are identified and incorporated in the staging strategy
4. Cost implementation works
- 4.1 Current prices for project resources, tools, labour and equipment required for project implementation are obtained
  - 4.2 Unit and total cost for each resource item is calculated
  - 4.3 Total project costs are accurately calculated and documented
  - 4.4 Adjustments are made where required to reconcile costs with project budget
  - 4.5 The costed plan is agreed with the project proponent
  - 4.6 The costed plan is checked with the relevant auditor to ensure that the methods proposed in applying the methodology will meet audit requirements

## **Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

## Required skills

---

- communication skills to:
  - determine and confirm client requirements using questioning and active listening as required
  - negotiate financial service transactions with clients
  - liaise with others, share information, listen and understand
- literacy skills to:
  - read and interpret documentation from a variety of sources
  - analyse information to ensure currency, accuracy and appropriateness to client needs
  - complete documentation accurately
- research and analytical skills to access, interpret and manage complex information
- numeracy and IT skills to:
  - interpret financial information and calculate client costs
  - use the internet to research information
  - use a geographic information system to interpret fire mapping products
  - use a spreadsheet to calculate annual emissions from fire on a project
  - drive an automated savannah burning methodology tool
- information management skills to capture and record key project information
- interpersonal skills to:
  - establish rapport with clients
  - liaise with other team members and specialists
  - establish networks with relevant technical experts
- judgement skills to:
  - apply ethical principles to decision making in the advisory process
  - form suitable recommendations when advising
- self-management skills to comply with ethical, legal and procedural requirements
- organising and time-management skills to:
  - sequence tasks
  - meet timelines and deliver agreed outcomes
  - arrange meetings
- leadership skills to:
  - build an effective project team
  - lead the team in the implementation of the project
  - anticipate, plan and organise required materials and resources

## Required knowledge

---

Knowledge of:

- *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations, particularly provisions relevant to project planning and implementation, and including relevant

eligible activities on the positive list

- any regulatory guidance included on the Clean Energy Regulator website for the relevant methodologies
- details of relevant approved CFI savanna burning, feral animal and rangelands methodologies including eligibility requirements, project area requirements, net abatement calculation requirements, monitoring, reporting and auditing requirements and further information sources
- dealing with multiple land interest holders (e.g. Indigenous groups, pastoralists and the Crown)
- carbon rights protocols for exclusive and non exclusive native title holders
- consent rights for native title, Crown land and mining leases
- funding arrangements for assisting Indigenous communities in establishing or participating in carbon farming projects
- sources of culturally relevant materials and verbal information
- history, cultural protocols and perspectives of indigenous stakeholders in the area
- current relationships between culturally diverse groups in the area
- current pricing and options for project resources, tools, equipment and contractors
- formats for organising and presenting financial, qualitative and quantitative information
- public liability and legal responsibilities
- personal and professional liability
- duty of care
- managing environmental risk
- workplace health and safety
- carbon accounting in the land sector, including:
  - Australia's national carbon accounting framework
  - need for consistency of abatement calculations under the CFI with methods in the National Greenhouse and Energy Reporting determination and the National Inventory Report
  - requirements for measuring emissions from land-based sources relevant to the methodologies
- *For savannah burning methodologies*
  - detailed understanding about fire behaviour in the landscapes covered by the savanna burning methodology, including how to obtain and understand the fire history of the site, the effects of burning the site at various times of the year, the effects of burning the site's various vegetation communities, the effects of burning the site at different times of the day
  - how to plan and implement a large scale program of strategic fire management
  - Geographic Information System operation, including how to operate the North Australian Fire Information website ([www.firenorth.org.au](http://www.firenorth.org.au))
  - and experience in fire prevention, precautions, control and management in rural situations as applied in district Rural Fire services
  - community building and coordination in the management of implementation of fire burning projects affecting nearby towns, part time farmers, conservationists and local authorities

- remote sensing
- mapping requirements including vegetation maps, monthly fire maps and seasonal fire maps
- vegetation classes, characteristic species and substrates
- geographic information systems (GIS)
- automated savannah burning methodology tool (once it has been developed in mid 2013)
- *For feral animal methodologies*
  - aerial survey and data recording
  - geographic information systems (GIS)
  - relevant animal welfare standards
  - feral animal population dynamics and ecology in the project area
  - relevant licences, permits and legislation regarding feral animal control
  - population dynamics and ecology for the relevant feral animals in the project area
- *For rangelands methodologies*, geographic information systems (GIS)

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• manage the project design process</li> <li>• plan the implementation of a savannah burning, feral animal or rangelands project</li> <li>• prepare a project plan</li> <li>• identify resources for a program of works</li> <li>• cost implementation of the project</li> </ul>
Context of and specific resources for assessment	<p>Assessment must be undertaken in the context of the Carbon Farming Initiative.</p> <p>Assessment resources must be developed to determine the candidate's depth and breadth of knowledge of approved savannah burning, feral animal and rangelands methodologies and the knowledge required to plan their implementation, as well as their ability to provide accurate and up-to-date information to others in a professional manner.</p>

Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> <li>• evaluating workplace documents and samples of work</li> <li>• simulated projects, scenarios or case studies</li> <li>• obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	<p>Assessment with other units relevant to the job role is recommended.</p> <p>The unit of competency can be assessed in the workplace or a simulated workplace environment.</p>

## Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Seasonal factors and impacts include:	<ul style="list-style-type: none"> <li>• material handling</li> <li>• rainfall requirements</li> <li>• machinery use</li> <li>• fire hazards</li> <li>• growing conditions</li> <li>• establishment period</li> </ul>
Design brief includes:	<p>a brief that outlines project objectives, outcomes, scope, constraints and assumptions, dependencies, design options and preferred option, business case, success indicators, project approach and governance arrangements (including compliance requirements with the standards of the applicable auditor)</p>
Positive list includes:	<p>a register, contained in the CFI regulations, of abatement activities, that are eligible to earn carbon credits under the CFI</p>

## Unit Sector(s)

Carbon farming.

# AHCCFI510A Plan a Carbon Farming Initiative vegetation project

## Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

## Unit Descriptor

This unit covers the process of managing the design, planning and costing of a project using an approved Carbon Farming Initiative (CFI) vegetation methodology such as the permanent environmental planting of native species.

## Application of the Unit

The unit applies to those who wish to manage the implementation of or provide advice on implementing a vegetation methodology approved for the CFI.

Note that the 'advice' referred to in this unit does not relate to financial advice which requires an Australian financial services license. This unit does not address the skills or the generic knowledge requirements in "ASIC Regulatory Guide 146: Training of Financial Product Advisors".

Application of this unit must cover the skills and knowledge to plan for projects as relevant approved CFI methodologies for them become available.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

## Pre-Requisites

Nil.

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage the project design process	1.1 Areas of expertise and specialist services required to carry out the project are identified 1.2 A design brief is prepared 1.3 Project design and contract arrangements are agreed 1.4 Site elements and features that impact on project design and establishment are assessed 1.5 The site is stratified as per the methodology requirements 1.6 The impact of project location on the type of carbon credits generated, where relevant, is ascertained 1.7 The impact of differing crediting and reporting periods on project planning and implementation is assessed 1.8 A design is prepared that describes the detailed features, specifications and approach of the project 1.9 The design is checked for compliance with the relevant approved methodology and CFI requirements and agreed with the stakeholder
2. Carry out preliminary planning activities	2.1 The responsibilities of owning and managing a CFI project are identified 2.2 Project design and contract requirements are confirmed 2.3 The availability, quantity and costs of materials and resources listed in the project specifications developed during project design are verified
3. Prepare a staged plan of work	3.1 Resources, tools, labour and equipment required for project implementation are identified 3.2 Project risks are assessed and controls are established 3.3 A project plan outlining allocation of resources, work tasks and timing is prepared 3.4 Interdependencies, seasonal factors and impacts are

- identified and incorporated in the staging strategy
4. Cost implementation works
    - 4.1 Current prices for project resources, tools, labour and equipment required for project implementation are obtained
    - 4.2 Unit and total cost for each resource item is calculated
    - 4.3 Total project costs are accurately calculated and documented
    - 4.4 Adjustments are made where required to reconcile resource costs with project budget
    - 4.5 The costed plan is agreed with the project proponent
    - 4.6 The costed plan is checked with the relevant auditor to ensure that the methods proposed in applying the methodology will meet audit requirements

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

---

- communication skills to:
  - determine and confirm client requirements using questioning and active listening as required
  - liaise with others, share information, listen and understand
- literacy skills to:
  - read and interpret documentation from a variety of sources
  - analyse information to ensure currency, accuracy and appropriateness to client needs
  - complete documentation accurately
- research and analytical skills to access, interpret and manage complex information
- numeracy and IT skills to:
  - interpret financial information and calculate client costs
  - access and use appropriate software
  - use the internet to research information
- information management skills to capture and record key project information
- interpersonal skills to:
  - establish rapport with clients
  - liaise with other team members and specialists
  - establish networks with relevant technical experts
- judgement skills to:
  - apply ethical principles to decision making in the advisory process
  - form suitable recommendations when advising
- self-management skills to comply with ethical, legal and procedural requirements
- organising and time-management skills to:
  - sequence tasks
  - meet timelines and deliver agreed outcomes
  - arrange meetings
- leadership skills to:
  - build an effective project team
  - lead the team in the implementation of the project
  - anticipate, plan and organise required materials and resources

## Required knowledge

---

Knowledge of:

- *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations, particularly provisions relating to the definition and eligibility of crediting periods for vegetation based activities and permanence requirements for sequestration activities, and including relevant eligible activities on the positive list and provisions relevant to project planning and implementation
- any regulatory guidance included on the Clean Energy Regulator website for the relevant

methodologies

- approved vegetation based methodologies under the CFI including eligibility requirements, project area requirements, net abatement calculation requirements, monitoring, reporting and auditing requirements and further information sources
- the science of sequestering and maintaining carbon in vegetation
- current pricing and options for project resources, tools, equipment and contractors
- formats for organising and presenting financial, qualitative and quantitative information
- overview of forestry and farm management practices that can enhance and maintain carbon sequestration in vegetation
- geographic information systems (GIS)
- remote sensing
- CFI Mapping Tool and CFI Rainfall Map
- Reforestation Modelling Tool and FULLCAM
- guidelines for the development of field-based reforestation methodologies: Part 1: Methodologies that use single tree allometrics and sample-based estimates of dependent variables
- carbon accounting in the land sector, including:
  - Australia's national carbon accounting framework
  - need for consistency of abatement calculations under the CFI with methods in the National Greenhouse and Energy Reporting determination and the National Inventory Report
  - requirements for measuring emissions from land-based sources relevant to the methodologies

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• manage the project design process</li> <li>• plan the implementation of a vegetation project</li> <li>• prepare a project plan</li> <li>• identify resources for a program of works</li> <li>• cost the implementation of the project</li> </ul>
<p>Context of and specific resources for assessment</p>	<p>Assessment must be undertaken in the context of the Carbon Farming Initiative.</p> <p>Assessment resources must be developed to determine the candidate's depth and breadth of knowledge of</p>

	approved vegetation methodologies as well as their ability to provide accurate and up-to-date information to others in a professional manner.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> <li>• evaluating workplace documents and samples of work</li> <li>• simulated projects, scenarios or case studies</li> <li>• obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	<p>Assessment with other units relevant to the job role is recommended.</p> <p>The unit of competency can be assessed in the workplace or a simulated workplace environment.</p>

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Seasonal factors and impacts include:	<ul style="list-style-type: none"> <li>• material handling</li> <li>• rainfall requirements</li> <li>• machinery use</li> <li>• fire hazards</li> <li>• growing conditions</li> <li>• establishment period</li> </ul>
Design brief includes:	a brief that outlines project objectives, outcomes, scope, constraints and assumptions, dependencies, design options and preferred option, business case, success indicators, project approach and governance arrangements (including compliance requirements with the standards of the applicable auditor)

Positive list includes:	a register, contained in the CFI regulations, of abatement activities, that are eligible to earn carbon credits under the CFI

## Unit Sector(s)

Carbon farming.

## AHCCFI511A Plan a Carbon Farming Initiative project to avoid emissions from soil or crops

### Modification History

Release	TP Version	Comments
1	AHC10v6	Initial release

### Unit Descriptor

This unit covers the process of managing the design, planning and costing of a Carbon Farming Initiative (CFI) project using a methodology approved under the CFI to avoid greenhouse gas emissions from soil, the burning of crop residues or rice fields or rice plants.

### Application of the Unit

The unit applies to those who wish to manage the implementation of or provide advice on implementing a CFI project to avoid emissions of methane or nitrous oxide from soil, burning crop residues or rice fields or rice plants.

Note that the 'advice' referred to in this unit does not relate to financial advice which requires an Australian financial services license. This unit does not address the skills or the generic knowledge requirements in "ASIC Regulatory Guide 146: Training of Financial Product Advisors".

Application of this unit must cover the skills and knowledge to plan for projects to avoid emissions from soil or crops as approved CFI methodologies for them become available.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Pre-Requisites

Nil.

## Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage the project design	1.1 Areas of expertise and specialist services required to carry out the project are identified 1.2 A design brief is prepared 1.3 Project design and contract arrangements are agreed 1.4 Site elements and features that impact on project design and establishment are assessed 1.5 The impact of project location on the type of carbon credits generated, where relevant, is ascertained 1.6 The impact of differing crediting and reporting periods on project planning and implementation is assessed 1.7 A design is prepared that describes the detailed features, specifications and approach of the project 1.8 The design is checked for compliance with the relevant approved methodology and CFI requirements and agreed with the stakeholder
2. Carry out preliminary planning activities	2.1 The responsibilities of owning and managing a CFI project are identified 2.2 Project design and contract requirements are confirmed 2.3 The availability and quantity of materials and resources listed in the project specifications are verified 2.4 The availability of personnel with appropriate expertise to assist with or undertake project work is confirmed
3. Prepare a project plan	3.1 Resources, tools, labour and equipment required for project implementation are identified 3.2 Project risks are assessed and controls are established 3.3 A project plan outlining allocation of resources, work tasks

- and timing is prepared
- 3.4 Seasonal factors, impacts and interdependencies are identified and incorporated in the staging strategy
4. Cost implementation works
- 4.1 Current prices for project resources, tools, labour and equipment required for project implementation are obtained
  - 4.2 Unit and total cost for each resource item is calculated
  - 4.3 Total project costs are accurately calculated and documented
  - 4.4 Adjustments are made where required to reconcile resource costs with project budget
  - 4.5 The costed plan is agreed with the project proponent
  - 4.6 The costed plan is checked with the relevant auditor to ensure that the methods proposed in applying the methodology will meet audit requirements

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

---

- communication skills to:
  - determine and confirm client requirements using questioning and active listening as required
  - negotiate financial service transactions with clients
  - liaise with others, share information, listen and understand
- literacy skills to:
  - read and interpret documentation from a variety of sources
  - analyse information to ensure currency, accuracy and appropriateness to client needs
  - complete documentation accurately
- research and analytical skills to access, interpret and manage complex information
- numeracy and IT skills to:
  - interpret financial information and calculate client costs
  - access and use appropriate software
  - use internet to research information
- interpersonal skills to:
  - establish rapport with clients
  - liaise with other team members and specialists
  - establish networks with relevant technical experts
- judgement skills to:
  - apply ethical principles to decision making in the advisory process
  - form suitable recommendations when advising
- self-management skills to comply with ethical, legal and procedural requirements
- organising and time-management skills to:
  - sequence tasks
  - meet timelines
  - arrange meetings
- leadership skills to:
  - build an effective project team
  - lead the team in the implementation of the project
  - anticipate, plan and organise required materials and resources

## Required knowledge

---

Knowledge of:

- *Carbon Credits (Carbon Farming Initiative) Act 2011* and regulations, particularly provisions relevant to project planning and implementation, and including relevant eligible activities on the positive list
- any regulatory guidance included on the Clean Energy Regulator website for the relevant methodologies
- details of approved CFI methodologies to avoid emissions from soil, burning crop

residues and rice crops including eligibility requirements, project area requirements, net abatement calculation requirements, monitoring, reporting and auditing requirements and further information sources

- current pricing and options for project resources, tools, equipment and contractors
- formats for organising and presenting financial, qualitative and quantitative information
- information about project implementation or changes in environmental conditions that are required to determine whether the project remains within the scope of the methodology
- carbon accounting in the land sector, including:
  - Australia's national carbon accounting framework
  - need for consistency of abatement calculations under the CFI with methods in the National Greenhouse and Energy Reporting determination and the National Inventory Report
  - requirements for measuring emissions from land-based sources relevant to the methodologies
- *For methodologies to reduce emissions from soil*
  - best management practices and any relevant regulatory requirements for reducing emissions from nitrogen based fertiliser use
  - the science of releasing greenhouse gas emissions from the soil
- *For methodologies to reduce emissions from burning crop residues*
  - the soil processes affecting methane and nitrous oxide evolution in the particular crop system (different in aerobic [e.g. sugar cane] versus partly anaerobic or facultative systems [e.g. rice])
  - the reasons for burning, its timing and factors affecting intensity
  - and experience in fire prevention, precautions, control and management in rural situations as applied in district Rural Fire services
  - community building and coordination in the management of implementation of fire burning projects affecting nearby towns, part time farmers, conservationists and local authorities
- *For methodologies to reduce emissions from burning rice fields and rice plants:* best management practices for reducing methane (and nitrous oxide) in rice production

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate	Evidence of the ability to: <ul style="list-style-type: none"> <li>• manage the project design</li> </ul>

competency in this unit	<ul style="list-style-type: none"> <li>• plan the implementation of a project to avoid emissions from soil, burning crop residues or rice crops</li> <li>• prepare a project plan</li> <li>• identify resources for a program of works</li> <li>• cost implementation of the project</li> </ul>
Context of and specific resources for assessment	<p>Assessment must be undertaken in the context of the Carbon Farming Initiative.</p> <p>Assessment resources must be developed to determine the candidate's depth and breadth of knowledge of approved methodologies to avoid emissions from soil, burning crop residues or rice crops as well as their ability to provide accurate and up-to-date information to others in a professional manner.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observing processes and procedures in workplaces</li> <li>• oral or written questioning on required knowledge and skills</li> <li>• evaluating workplace documents and samples of work</li> <li>• simulated projects, scenarios or case studies</li> <li>• obtaining and validating third party references and reports</li> </ul>
Guidance information for assessment	<p>Assessment with other units relevant to the job role is recommended.</p> <p>The unit of competency can be assessed in the workplace or a simulated workplace environment.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Seasonal factors and impacts includes:	<ul style="list-style-type: none"> <li>• material handling,</li> <li>• rainfall requirements</li> <li>• machinery use</li> </ul>
--	--

	<ul style="list-style-type: none"><li>• fire hazards</li><li>• growing conditions</li><li>• establishment period</li></ul>
Design brief includes:	a brief that outlines project objectives, outcomes, scope, constraints and assumptions, dependencies, design options and preferred option, business case, success indicators, project approach and governance arrangements (including compliance requirements with the standards of the applicable auditor)
Positive list includes:	a register, contained in the CFI regulations, of abatement activities, that are eligible to earn carbon credits under the CFI

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Follow workplace requirements and instructions concerning chemicals	1.1.Roles and responsibilities of people in the workplace are identified. 1.2.Safety procedures involved in chemical handling and use are recognised and followed as required. 1.3.Occupational Health and Safety (OHS) hazards are identified and reported to the supervisor. 1.4.Organisational procedures are followed with regard to chemicals.
2. Recognise risks associated with chemicals	2.1.Functions of chemicals in the workplace are recognised. 2.2.Chemical labels and symbols are recognised and hazards identified. 2.3.Chemical storage locations are identified. 2.4.Instructions for transport, handling and storage of chemicals are recognised and observed. 2.5.Instructions for use, maintenance and storage of personal protective equipment and application equipment are identified and observed.
3. Follow chemical handling and storage rules	3.1.Chemical handling and storage instructions on labels are followed. 3.2.Safety rules are followed when working in areas where chemicals are stored. 3.3.Appropriate personal protection equipment is obtained and used when working in areas where chemicals are stored. 3.4.Procedures are followed in the event of an accident or spillage.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- interpret labels and instructions
- follow workplace instructions and directions from the chemical label or Material Safety Data Sheets (MSDSs)
- communicate information about spillages, accidents or deficiencies in procedures and practice
- use appropriate Personal Protective Equipment (PPE)
- recognise caution or hazard signs and symbols
- interpret tasks or information from labels, manuals or written instructions
- record information accurately or verbally report information
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- basic occupational health&safety rules required to work near and around chemicals
- level of hazard and the Poisons Schedule in the relevant State or Territory
- chemicals being used for the control of pests and weeds
- personal protection equipment and when and how it should be used, stored and maintained
- correct wearing/fit of personal protective equipment
- environmental impacts of chemical use
- OHS, environmental and pesticides legislation and enterprise procedures.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

<b>EVIDENCE GUIDE</b>	
Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• interpret chemical safety rules</li> <li>• follow safety instructions including handling and storage</li> <li>• use personal protective equipment</li> <li>• communicate information about spillage or accidents.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Safety rules may include:	<ul style="list-style-type: none"> <li>• those about labels</li> <li>• transport</li> <li>• handling</li> <li>• storage</li> <li>• personal protective equipment.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Check application and personal protective equipment	<p>1.1. Carry out pre-operational checks of application equipment in accordance with manufacturer's specification and OHS requirements.</p> <p>1.2. Prepare application equipment for use in accordance with manufacturer's specification and directions.</p> <p>1.3. Identify and replace any damaged or worn components.</p> <p>1.4. Check personal protective equipment in accordance with manufacturer's specification and OHS requirements.</p>
2. Prepare application equipment	<p>2.1. Apply label information regarding precautions for the chemical mix/substance being used.</p> <p>2.2. Select and use appropriate personal protective and mixing equipment in accordance with MSDSs and chemical label.</p> <p>2.3. Measure, mix and load chemical mix or substances in accordance with directions on chemical label.</p> <p>2.4. Follow legislative and regulatory requirements regarding chemical use including OHS.</p> <p>2.5. Confirm instructions from chemical MSDSs in the event of a spill.</p> <p>2.6. Check that output of application equipment is correct and in accordance with application/spray plan.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Apply chemicals	3.1. Assess and record meteorological conditions and forecasts prior to and during application. 3.2. Select and use appropriate personal protective equipment in accordance with MSDSs and chemical label. 3.3. Apply chemical in accordance with the application/spray plan and/or instructions. 3.4. Assess and minimise risks to others, product integrity and the environment prior to and during application.
4. Finalise work	4.1. Clean and store Personal Protective Equipment (PPE) and application equipment in accordance with manufacturer's specification and OHS requirements. 4.2. Dispose of excess chemicals and use triple rinse drums in accordance with label and MSDSs requirements. 4.3. Complete incident reports as required in accordance with legislative and/or regulatory requirements. 4.4. Complete application records. 4.5. Store unused chemical/products in accordance with label requirements and MSDSs. 4.6. Adhere to all re-entry and withholding periods.
5. Transport and handle chemical	5.1. Confirm precautions for the transport and handling of chemicals. 5.2. Transport and handle chemicals in accordance with legislative and/or regulatory requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and adopt safe work practices
- conduct pre-operational checks of application equipment
- use and maintain personal protective equipment
- measure, mix and load chemical mixes

**REQUIRED SKILLS AND KNOWLEDGE**

- use hand held and small powered application equipment relevant to the industry sector using safe and environmentally responsible work practices
- interpret labels, record relevant information and measure application amounts
- follow chemical label requirements and application/spray plan
- record activities and maintain records
- transport and handling techniques
- respond to emergencies and apply first aid in the event of pesticide poisoning
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- applied principles of Integrated Pest/Resistance Management
- structure of chemical label and MSDS
- types, applications, storage and fitting of personal protective equipment
- legislation and regulations including OHS and licensing requirements in relation to chemical use
- features and functions of a range of application equipment relevant to the industry sector
- risk factors including human and animal health, spillage and environmental
- principles of transport, handling and storage for chemicals
- requirements for disposal of excess chemicals, clearing spillages and equipment clean up
- transport and handling requirements
- environmental effects of selected chemicals and how to minimise damaging effects of chemicals
- different broad chemical types, eg, insecticides, herbicides and fungicides and their mode of action symbols on the label
- paths of entry of poisons into the body and methods of limiting exposure
- methods of minimising risk during application
- Regulations and Codes of Practices with regard to hazardous substances of the use of chemicals
- OHS concerning personal safety and safety of others in the workplace
- alternatives to chemicals for pest management
- possible effects on health of bystanders/public in addition to applicators
- weather conditions and means of assessing them in line with risks, and recognising when they become unsuitable for application to continue.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• apply chemicals using handheld or small powered equipment</li> <li>• check, prepare, use and maintain application equipment and personal protective equipment</li> <li>• measure, mix, transport, handle store and dispose of chemicals</li> <li>• comply with OHS, chemical label and MSDSs requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Chemicals may include:	<ul style="list-style-type: none"> <li>• the application of liquid chemical mixes</li> <li>• granular products</li> <li>• and/or biological agents used in the control of pest, weeds and diseases including animal health products.</li> </ul>

## AHCCHM301A Conduct fumigation in enclosed spaces

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of fumigation of grain, seed, crops and plants in enclosed spaces and defines the standard required to: assess the need for fumigation; select appropriate fumigant and application method; prepare and monitor storage facility and equipment; apply fumigant; restore facility and clean equipment; record work activities.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit relates to the control of insects and other pests by means of fumigation of grain and seed in storage and crops and plants grown in protected environments. These storage areas and protected environments may be deemed to be confined spaces "in situ" or be deemed to be confined spaces because of the impact of the fumigation activities.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess the need for fumigation.	1.1. Ascertain the threshold level of infestation against quality requirements and industry practice. 1.2. Determine the need for fumigation as an option within an Integrated Pest Management (IPM) and IRM strategy. 1.3. Determine the appropriate fumigation method with regard to pest type, facility and storage/growing conditions. 1.4. Undertake a cost-benefit analysis of fumigation.
2. Determine type and method of fumigation	2.1. Select method of fumigant application to suit type of pests, facility and grain/plant type in accordance with manufacturer's specifications, environmental, legislative, Occupational Health and Safety (OHS) requirements and industry practice. 2.2. Determine type of fumigant and application rate in accordance with manufacturer's specifications, standards and environmental, legislative, OHS and industry practice. 2.3. Assess appropriateness of facility and conditions for selected fumigation method. 2.4. Identify and report any factors affecting the safe application of fumigants. 2.5. Determine facility capacity to ensure fumigation conditions are in accordance with manufacturer's

ELEMENT	PERFORMANCE CRITERIA
	specifications and environmental, legislative, OHS and industry practice.
3. Prepare storage facility for fumigation	<p>3.1. Assess hazards and control risks in relation to the use of fumigants in accordance with legislative, environmental, OHS requirements and industry practice.</p> <p>3.2. Establish security measures to control access during fumigation and prescribed re-entry periods in accordance with label directions.</p> <p>3.3. Erect signage and barriers to control risk of inadvertent entry to facility.</p> <p>3.4. Apply sealing methods as appropriate to contain fumigant in accordance with label and industry practice.</p> <p>3.5. Check seal, calculate volume of storage facility, and take appropriate measurement to ensure the required concentration of fumigant is retained in accordance with label directions.</p> <p>3.6. Set up emergency and confined spaces systems in accordance with legislative and OHS and requirements.</p>
4. Prepare application equipment and fumigant(s)	<p>4.1. Select and use appropriate personal protective equipment in accordance with label and Material Safety Data Sheets (MSDSs) requirements.</p> <p>4.2. Select application equipment appropriate for the fumigation in accordance with label directions and industry practice.</p> <p>4.3. Check operational effectiveness of equipment in accordance with manufacturer's specifications and industry practice.</p> <p>4.4. Calibrate fumigation equipment to application rate in accordance with label directions.</p> <p>4.5. Prepare fumigant in accordance with label legislative and OHS requirements and industry practice.</p>
5. Conduct fumigation	<p>5.1. Apply fumigation using appropriate equipment, fumigation methods and sealing methods in accordance with label and industry practice.</p> <p>5.2. Respond to emergency situations using emergency response procedures in accordance with legislative and OHS requirements and industry practice.</p>
6. Monitor fumigation	6.1. Monitor fumigation site during exposure time and

ELEMENT	PERFORMANCE CRITERIA
	<p>ventilation to prevent unauthorised access in accordance with legislative and OHS requirements and industry practice.</p> <p>6.2. Maintain integrity of seals throughout the active fumigation period in accordance with label, legislative and OHS requirements and industry practice.</p>
7. Ventilate storage facility	<p>7.1. Establish ventilation and re-entry times and control risks to public health and safety in accordance with label, legislative, OHS requirements and industry practice.</p> <p>7.2. Ventilate facility to remove fumigant in a safe and controlled manner in accordance with label, legislative, OHS and industry practice.</p> <p>7.3. Test for evidence of residual gas using appropriate equipment.</p> <p>7.4. Notify appropriate person(s) of any further risk control measures required in accordance with label, legislative, OHS and industry practice.</p>
8. Restore storage facility	<p>8.1. Collect and remove all equipment, fumigants and waste in accordance with label, legislative, OHS and industry practice.</p> <p>8.2. Remove signage and barriers when facility is available for re-use in accordance with legislative and industry practice.</p> <p>8.3. Restore storage facility in accordance with legislative and industry practice.</p>
9. Clean, safety-check and store equipment and fumigants	<p>9.1. Clean, decontaminate, check and store equipment and Personal Protective Equipment (PPE) in accordance with manufacturer's specifications, OHS and industry practice.</p> <p>9.2. Transport and store fumigants in accordance with label, OHS and industry practice.</p> <p>9.3. Dispose of all waste in accordance with label, legislative, OHS environmental and industry practice.</p>
10. Record fumigation details	<p>10.1. Record details of fumigant applications in accordance with legislative and quality assurance requirements and industry practice.</p> <p>10.2. Record and report gas escapes, safety incidents or poisoning to the appropriate person or authority in accordance with legislative</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare fumigants
- conduct pre-operational checks, clean up and storage of fumigation equipment and PPE
- prepare and seal facility
- set up and calibrate fumigation equipment
- apply fumigants
- check for residual fumigant gas
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- primary and secondary pests relevant to grain, seed, crops or plants to be treated
- threshold pest levels and cost benefit options
- fumigant free options for pest control including Integrated Pest/Resistance Management principles
- fumigant label and MSDSs formats
- interpretation and application of fumigant label requirements
- factors and considerations in relation fumigation of relevant grain, seed, crops and plants
- techniques for sealing facility
- types and application of personal protective equipment
- legislation and regulations including OHS and licensing requirements in relation to fumigant use

**REQUIRED SKILLS AND KNOWLEDGE**

- confined space regulations including, signage, gas detection and entry procedures
- features, functions, calibration and set up of fumigation equipment
- risk factors including human and animal health, weather, leakage, spillage and environmental
- assessment of residual gas and safe re-entry periods
- consequence of fumigant residues and Maximum Residue Limits (MRLs)
- ventilation processes
- requirements for disposal of excess fumigants, clearing spillages and equipment clean up.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- assess the need for fumigation
- select appropriate fumigant and application method
- prepare and monitor storage facility and equipment
- apply fumigant
- restore facility and clean equipment
- record work activities.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Operating procedures may include:	<ul style="list-style-type: none"> <li>Standard Operating Procedures (SOPs) used for fumigation in storage areas and in protected environments.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess the need for fumigation	<p>1.1. Ascertain the threshold level of infestation against quality requirements and industry practice.</p> <p>1.2. Determine the need for fumigation as an option within an Integrated Pest Management (IPM) and Integrated Resource Management (IRM) strategy.</p> <p>1.3. Determine the appropriate fumigation method with regard to the target pest and soil conditions.</p> <p>1.4. Assess cost-benefit of fumigation.</p>
2. Determine type and method of fumigation	<p>2.1. Select method of fumigant application to suit type of pests and soil/media type in accordance with manufacturer's specifications, environmental, legislative, Occupational Health and Safety (OHS) requirements and industry practice.</p> <p>2.2. Determine type of fumigant and application rate in accordance with manufacturer's specifications, standards and environmental, legislative, OHS and industry practice.</p> <p>2.3. Assess appropriateness of site and soil conditions for selected fumigation method.</p> <p>2.4. Identify and report any factors affecting the safe application of fumigants.</p> <p>2.5. Determine application rate to ensure fumigation conditions are in accordance with manufacturer's specifications and environmental, legislative, OHS and industry practice.</p>
3. Prepare site for fumigation	<p>3.1. Assess hazards and control risks in relation to the use of fumigants in accordance with legislative, environmental, OHS requirements and industry</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>practice.</p> <p>3.2. Establish site security measures to control access during fumigation and prescribed re-entry periods in accordance with label directions.</p> <p>3.3. Set up emergency system in accordance with legislative and OHS and requirements.</p> <p>3.4. Prepare soil, measure soil temperature and check soil moisture to ensure that the required concentration of fumigant is retained in the soil for the required period of time in accordance with label directions.</p>
4. Prepare application equipment and fumigant(s)	<p>4.1. Select and use appropriate personal protective equipment in accordance with label and Material Safety Data Sheets (MSDSs) requirements.</p> <p>4.2. Select application equipment appropriate for the fumigation in accordance with label directions and industry practice.</p> <p>4.3. Check operational effectiveness of fumigation machinery and equipment in accordance with manufacturer's specifications and industry practice.</p> <p>4.4. Calibrate fumigation equipment to application rate in accordance with label directions.</p> <p>4.5. Prepare fumigant in accordance with label legislative and OHS requirements and industry practice.</p>
5. Conduct fumigation	<p>5.1. Apply fumigant using appropriate equipment and fumigation methods in accordance with label and industry practice.</p> <p>5.2. Respond to emergency situations using emergency response procedures in accordance with legislative and OHS requirements and industry practice.</p> <p>5.3. Apply appropriate soil sealing methods to contain fumigant in accordance with label and organisational requirements.</p>
6. Monitor site	<p>6.1. Monitor fumigation site during exposure time to prevent unauthorised access in accordance with legislative and OHS requirements and industry practice.</p> <p>6.2. Aerate soils fully and accurately test for evidence of residual gas by conducting germination test or sowing indicator crop in accordance with label.</p> <p>6.3. Establish re-entry times and control risks to human</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and animal health in accordance with label, legislative, OHS requirements and industry practice.</p> <p>6.4. Notify appropriate person(s) of any further risk control measures required in accordance with label, legislative, OHS and industry practice.</p> <p>6.5. Ventilate fumigation enclosure to remove fumigant in safe and controlled manner in accordance with label, legislative, OHS and organisation requirements.</p>
7. Restore site	<p>7.1. Collect and remove all equipment, fumigants and waste in accordance with label, legislative, OHS and industry practice.</p> <p>7.2. Remove signage when site is available for re-use in accordance with legislative and industry practice.</p> <p>7.3. Restore site in accordance with legislative and industry practice.</p>
8. Clean, safety-check and store equipment and fumigants	<p>8.1. Clean, decontaminate, check and store equipment and Personal Protective Equipment (PPE) in accordance with manufacturers specifications, OHS and industry practice.</p> <p>8.2. Transport and store fumigants in accordance with label, OHS and industry practice.</p> <p>8.3. Dispose of all waste in accordance with label, legislative, OHS environmental and industry practice.</p>
9. Record fumigation details	<p>9.1. Record details of fumigant applications in accordance with legislative and quality assurance requirements and industry practice.</p> <p>9.2. Record and report safety incidents or poisoning to the appropriate person or authority in accordance with legislative requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

## REQUIRED SKILLS AND KNOWLEDGE

- identify hazards and implement safe operating procedures
- prepare fumigants
- conduct pre-operational checks, clean up and storage of fumigation equipment and PPE
- prepare site
- set up and calibrate fumigation equipment
- apply fumigants
- aerate soils and check for residual fumigant gas
- ventilate fumigation enclosure
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- primary and secondary soil/media pests
- threshold pest levels and cost benefit
- fumigant free options for pest control including Integrated Pest/Resistance Management principles
- fumigant label and MSDSs formats
- interpretation and application of fumigant label requirements
- soil/media type, moisture and temperature factors in relation to fumigation
- types and application of personal protective equipment
- legislation and regulations including OHS and licensing requirements in relation to fumigant use
- features, functions, calibration and set up of fumigation equipment
- risk factors including human and animal health, weather, leakage, spillage and environmental
- requirements for disposal of excess fumigants, clearing spillages and equipment clean up.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine the need for chemical use	1.1.Nature and level of the pest, weed infestation or disease is identified. 1.2.Need for control is assessed. 1.3.The requirement for chemical use as an option within an integrated pest management strategy is assessed. 1.4.Hazard and risk analysis of different chemical options is undertaken. 1.5.Requirement for chemical application is identified and confirmed.
2. Prepare application/spray plan	2.1.Mixing rates for chemical is defined and calculated. 2.2.Application equipment type and set up requirements are determined for intended application. 2.3.The quantity of mix required is determined. 2.4.Meteorological conditions and forecasts prior to and during application are accessed. 2.5.An application/spray plan is completed. 2.6.Notify neighbours as required in accordance with industry practice or regulatory requirements

ELEMENT	PERFORMANCE CRITERIA
3. Prepare chemical mixes	<p>3.1. Requirements from chemical labels and Material Safety Data Sheets (MSDSs) are interpreted and applied.</p> <p>3.2. Appropriate first aid supplies are at hand.</p> <p>3.3. Appropriate personal protective and mixing equipment is selected and used in accordance with MSDSs and chemical label.</p> <p>3.4. A suitable location for mixing and loading is selected.</p> <p>3.5. Chemicals are prepared in accordance with registered use.</p> <p>3.6. MSDSs are followed in the event of a spill.</p>
4. Calibrate application equipment	<p>4.1. Pre-operational checks of application equipment are carried out.</p> <p>4.2. Equipment is calibrated in accordance with manufacturer specifications and application/spray plan.</p> <p>4.3. Calibration is checked for conformity to the requirements of the application/spray plan.</p> <p>4.4. Chemical is loaded wearing appropriate Personal Protective Equipment (PPE) and controlling risks to human health and the environment.</p>
5. Apply chemicals	<p>5.1. Appropriate personnel protective equipment is selected and used in accordance with MSDSs and chemical label.</p> <p>5.2. Chemical is applied in accordance with the application/spray plan and/or instructions and legislative and/or regulatory requirements.</p> <p>5.3. Risks to others, product integrity and the environment are assessed and minimised.</p>
6. Clean up equipment and complete records	<p>6.1. Excess chemical is disposed of in accordance with label and MSDSs requirements.</p> <p>6.2. Application equipment is cleaned and decontaminated.</p> <p>6.3. Requirements for the disposal of unused chemical, containers spilled materials are determined and implemented</p> <p>6.4. PPE and mixing equipment is cleaned and stored.</p> <p>6.5. Incidents are reported as required in accordance with legislative and/or regulatory requirements.</p> <p>6.6. All records, e.g. calibration, application, DG/hazard</p>

ELEMENT	PERFORMANCE CRITERIA
	substances, risk assessments, are completed in accordance with legislative, industry and enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement risk control procedures
- identify appropriate treatment for pest, disease or weed
- mix and load chemicals
- conduct pre-operational checks of application equipment
- calibrate handheld and/or powered application equipment relevant to the industry sector
- interpret and apply chemical label requirements in the preparation of an application/spray plan
- apply chemicals
- use and maintain PPE
- dispose of surplus chemical and containers
- record activities and maintain records
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- options for pest control based on Integrated Pest/Resistance Management principles
- plant, pest, weed and/or diseases relative to industry sector
- chemical label and MSDSs formats
- meteorological and other conditions and impacts on safe and effective chemical

**REQUIRED SKILLS AND KNOWLEDGE**

- application
- types and application of personal protective equipment
  - features, functions and calibration techniques for a range of hand held and/or powered application equipment relevant to the industry sector
  - risk factors including human and animal health, weather, spray drift, spillage and environmental
  - spray nozzle identification, selection, operation and use
  - chemical mix including mixing order, adjuvants, water quality, efficacy etc
  - application techniques for a range of equipment types
  - requirements for disposal of excess chemicals, clearing spillages and equipment clean up
  - legislation including Occupational Health and Safety (OHS) and environment, and licensing requirements, in relation to chemical use.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- assess the need for chemical use
- comply with safety, chemical label and MSDSs requirements
- prepare an application/spray plan
- prepare and apply chemicals
- calibrate application equipment
- maintain chemical records

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

**EVIDENCE GUIDE**

	enterprise circumstances.
--	---------------------------

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Chemical types may include:

- all types of chemical mixes used in the control of pests, weeds and diseases including animal health products.

This unit does not cover:

- operation of specialised equipment and machinery transport
- handling and storage of chemicals set up of advanced operation
- specialised on-board control equipment.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Transport and handle chemicals and biological agents	<p>1.1. Transport requirements are identified and followed from legislative and regulatory requirements, including Occupational Health and Safety (OHS).</p> <p>1.2. Risks involved in the transport and handling of chemical and biological agents are assessed and minimised.</p> <p>1.3. Containers are confirmed as being in a sound condition to transport.</p> <p>1.4. PPE is used as required according to manufacturer specifications and OHS requirements.</p> <p>1.5. Instructions from chemical material safety data sheets (MSDS) are followed in the event of a spill.</p> <p>1.6. Transport incidents are reported as required according to legislative and/or regulatory requirements.</p> <p>1.7. Appropriate first aid kit and spill kit are confirmed as being on hand for all stages of transport, handling and storage.</p>
2. Store chemicals in the workplace	<p>2.1. Appropriate storage methods are used according to chemical labels, MSDS, and/or legislative and regulatory requirements.</p> <p>2.2. Risks involved in storage of chemical and biological agents are assessed and minimised.</p> <p>2.3. Storage area is maintained according to legislative</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and regulatory requirements, including OHS and environmental protection.</p> <p>2.4. Products are retained in original containers with labels intact.</p> <p>2.5. Storage methods are utilised to prevent contact with people or animals, contamination of produce or the environment.</p> <p>2.6. Correct disposal procedures are applied for used chemical drums and storage containers.</p> <p>2.7. Unwanted and/or out-of-date chemicals are disposed of according to legislative and/or regulatory requirements and industry programs.</p>
3. Record storage details	<p>3.1. Chemical storage inventory and records are maintained according to legislative and regulatory requirements, including OHS.</p> <p>3.2. Storage incidents are reported as required according to legislative and/or regulatory requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- transport, handle and store chemicals safely
- follow chemical label and MSDS requirements for transport handling and storage
- maintain records
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

- transport handling and storage requirements on chemical labels and MSDS
- types and application of PPE used in transport and handling
- legislation and regulations, including OHS and licensing requirements in relation to chemical storage and transport
- risk factors, including human, animal health and environmental associated with transport, handling and storage
- requirements for disposal of excess, unwanted and/or out-of-date chemicals
- requirements for disposal of used chemical containers and/or drums
- processes for clearing spillages and clean up.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- transporting, handling and storing chemicals safely
- identify the standard required to correctly maintain and use PPE according to label
- follow emergency procedures for chemical spillage
- follow legislative requirements for the safe transport of chemicals
- maintain storage area and chemical manifest.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole.	
Chemicals handling may include:	<ul style="list-style-type: none"> <li>requirements for the safe transport, handling and storage of chemicals and products used in the control of pest, weeds and diseases, including animal health products.</li> </ul>
This unit does not cover:	<ul style="list-style-type: none"> <li>operation of specialised chemical application equipment and machinery, application of chemicals. See separate units of competency under the appropriate category.</li> </ul>

## AHCCHM305A Conduct manual fumigation of vertebrate and invertebrate pests

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of manual fumigation of vertebrate pests and invertebrate pests in stored grain, the apiary industry, agricultural lands and natural landscapes and defines the standard required to: assess the need for fumigation; select appropriate fumigant and application method; apply fumigant and monitor site; record work activities.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit relates to the control of vertebrate and invertebrate pests in grain storage, rabbit warrens and beehives by means of manual fumigation. It involves applying well-developed skills with some discretion and judgement under routine supervision. It requires taking responsibility for own work output. This unit may be deemed to have a time limit when used as part of an accreditation or licence process.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine type and method of fumigation	<p>1.1. Identify the nature and level of pest presence.</p> <p>1.2. Determine need for fumigant use within an integrated pest management strategy.</p> <p>1.3. Select method of fumigant application to suit type of pests and site in accordance with registered product labels, environmental, legislative, Occupational Health and Safety (OHS) requirements and industry practice.</p> <p>1.4. Determine type of fumigant and application rate in accordance with registered product labels and Material Safety Data Sheets (MSDSs) and environmental, legislative, OHS and industry practice.</p> <p>1.5. Identify and report any factors affecting the safe application of fumigants.</p> <p>1.6. Determine storage capacity to ensure fumigation conditions are in accordance with manufacturers' specifications and environmental, legislative, OHS and industry practice.</p> <p>1.7. Conduct and record OHS risk assessment for both fumigation and post fumigation re entry.</p>

ELEMENT	PERFORMANCE CRITERIA
2. Prepare to use fumigant according to label and MSDS	2.1. Select and check for use Personal Protective Equipment (PPE) according to label and MSDSs. 2.2. Define and calculate application/dosage rates. 2.3. Prepared fumigation site to control inadvertent entry or exposure. 2.4. Put in place emergency and confined spaces procedures.
3. Conduct fumigation	3.1. Assess weather conditions and forecasts prior to and during application. 3.2. Created airtight seal in fumigation area to ensure site health and safety, and maximum effectiveness of fumigation in accordance with label and industry practice. 3.3. Where required fumigation site is signposted and barricaded to prevent access. 3.4. Control site until area is suitable for re-use in accordance with label, legislation, standards and enterprise policy. 3.5. Apply fumigant safely and effectively according to label and industry practice. 3.6. Ensure First Aid equipment is available onsite.
4. Monitor fumigation	4.1. Monitored fumigation site to control access and maintain safe conditions during active period for time specified on registered label. 4.2. Monitor fumigation site for pest activity. 4.3. Assess fumigant escape for health and safety implications and take immediate action if required.
5. Ventilate fumigated area	5.1. Calculate time required for ventilation from directions on registered label. 5.2. Determine conditions are suitable for ventilation to minimise risk to health and safety. 5.3. Ventilation method followed is in accordance with registered label, MSDSs, Code of Practice (COP) and enterprise standards. 5.4. Ventilate site in controlled and safe manner.
6. Clean up following fumigation	6.1. Removed barriers, signs and locks and store for future use. 6.2. Clean, decontaminate, check and store equipment and PPE in accordance with manufacturer's specifications, OHS and industry practice. 6.3. Transport and store fumigants in accordance with

ELEMENT	PERFORMANCE CRITERIA
	<p>label, OHS and industry practice.</p> <p>6.4. Dispose of all waste in accordance with label, legislative, OHS environmental and industry practice.</p>
7. Record application details	<p>7.1. Record details of fumigant applications in accordance with legislative requirements, label directions, safe operating procedures (SOPs), and industry practice.</p> <p>7.2. Record details of fumigant used in the chemical inventory/register according to legislation.</p> <p>7.3. Maintain inventory of PPE.</p> <p>7.4. Follow procedures and requirements for reporting fumigation details to management/employer.</p> <p>7.5. Record and report safety incidents or poisoning to the appropriate person or authority in accordance with legislative requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- interpret and apply chemical label requirements in the preparation of fumigants
- prepare fumigants
- storage and disposal of fumigants
- use of PPE
- prepare site including signage
- mentoring and ventilation of sites
- application of fumigants
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural,

**REQUIRED SKILLS AND KNOWLEDGE**

social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- primary vertebrate and invertebrate pests controlled by manual fumigation methods (rabbits, pests of beehives and stored grain) and their life cycles
- fumigant types
- threshold pest levels and cost benefit options
- fumigant label and MSDSs formats
- interpretation and application of fumigant label requirements
- site factors in relation to fumigation
- types and application of personal protective equipment
- legislation and regulations including OHS and licensing requirements in relation to fumigant use
- regulations including, signage and entry restrictions
- risk factors including human and animal health, weather, leakage, spillage and environmental
- requirements for disposal of excess fumigants, clearing spillages and equipment clean up.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- assess the need for fumigation
- select appropriate fumigant and application method
- apply fumigant and monitor site
- record work activities.

**Context of and specific resources for**

Competency requires the application of work practices

**EVIDENCE GUIDE****assessment**

under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Manual fumigation may include:

- vertebrate and invertebrate pests of stored grain
- rabbits
- pests of beehives.

The fumigants that apply include

- aluminium phosphide tablets and chloropicrin.

## AHCCHM401A Minimise risks in the use of chemicals

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers minimising risks in the use of chemicals and defines the standard required to: implement, monitor and evaluate a chemical risk control strategy; identify potential hazards and assess risks; develop risk control procedures; and monitor and evaluate the risk control strategy.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role include the assessment and mitigation of risks associated with the use of chemicals across a range of industry sectors. This unit may be deemed to have a time limit when used as part of an accreditation or licence process.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify hazards and risks	<p>1.1.Guidelines, legislation, regulations and industry requirements relating to chemical use are identified and sourced.</p> <p>1.2.Hazards involved in chemical handling and application are identified.</p>
2. Assess risks and develop control procedures	<p>2.1.Risks associated with chemicals used are assessed.</p> <p>2.2.Risk control measures and emergency action plans are developed.</p> <p>2.3.Control procedures are developed for transport, handling, storage, application, decontamination and disposal.</p> <p>2.4.A continuous improvement strategy is developed to minimise risk.</p>
3. Implement and monitor adherence to chemical risk procedures	<p>3.1.Appropriate personal protective equipment (PPE) is provided for people in the workplace using chemicals.</p> <p>3.2.Select application equipment is selected according to procedures.</p> <p>3.3.Restrictions on chemical use, application, decontamination and disposal are followed according to procedures.</p> <p>3.4.Risk control procedures are followed in the workplace.</p>
4. Evaluate risk control measures and maintain record	<p>4.1.Procedures for evaluating the effectiveness of risk control measures are developed.</p> <p>4.2.Shortfalls identified during evaluation are addressed and rectified.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3.Risk assessment records are maintained according to industry, label, legislative and regulatory requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- develop procedures
- evaluate implementation
- identify hazards, assess risks, and implement and monitor risk control procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- sources of information relating to chemical use, including:
  - guidelines
  - legislation and regulations
  - industry requirements
- hazard identification and risk assessment strategies
- risk factors, including human and animal health, product integrity, weather, spray drift, spillage and environmental
- principles of transport, handling and storage for chemicals
- requirements for disposal of excess chemicals, clearing spillages and equipment clean up
- chemical application equipment capabilities and limitations.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• implement, monitor and evaluate a chemical risk control strategy</li> <li>• identify potential hazards and assess risks</li> <li>• develop risk control procedures</li> <li>• monitor and evaluate the risk control strategy.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Develop and document an application/spray plan	1.1. Assess risks associated with proposed control strategy. 1.2. Select preferred control procedures. 1.3. Document preferred control procedures as application/spray plan.
2. Identify requirements for chemical use	2.1. Identify and interpret guidelines, legislation and regulations and industry requirements relating to chemical use. 2.2. Assess the need for chemical use as an option within an integrated pest management and/or animal health strategy. 2.3. Ensure that personnel are adequately trained in chemical use.
3. Ensure that risk control measures are followed	3.1. Provide appropriate Personal Protective Equipment for people in the workplace using chemicals. 3.2. Monitor the implementation of safe practice in the workplace including preparation and application of chemicals. 3.3. Monitor implementation of procedures for transport, handling, storage, decontamination and disposal. 3.4. Monitor implementation of procedures to mitigate residues in produce and the environment.
4. Plan and implement a maintenance program for chemical use equipment	4.1. Develop and implement a maintenance strategy for application equipment and personal protective equipment. 4.2. Monitor implementation of maintenance procedures.

ELEMENT	PERFORMANCE CRITERIA
	4.3.Ensure that faulty or damaged equipment is repaired or replaced.
5. Ensure the correct selection and application of chemicals	5.1.Ensure that the correct chemicals and equipment is selected in accordance with the application/spray plan. 5.2.Ensure that pre-operational checks of application equipment are carried out. 5.3.Check to ensure that calibration conforms to the requirement of the application/spray plan. 5.4.Ensure that meteorological conditions are monitored and assessed during application where relevant. 5.5.Monitor the application procedures in the event of a chemical spill.
6. Ensure work activities are finalised in accordance with procedure	6.1.Ensure that excess chemical are disposed of in accordance with label and Material Safety Data Sheet requirements. 6.2.Ensure incident reports are completed as required in accordance with legislative and/or regulatory requirements. 6.3.Ensure all required records are completed.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- develop strategies to monitor the implementation of procedures
- evaluate conformance with procedures
- identify hazards and oversee the safety of the working environment
- develop and document an application/spray plan
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex

**REQUIRED SKILLS AND KNOWLEDGE**

workplace measures and data

- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- sources of information relating to chemical use including:
  - guidelines
  - legislation and regulations
  - industry requirements
  - hazard identification and risk assessment strategies
  - methodologies for the development of procedures
  - risk factors including human and animal health, weather, spray drift, spillage, residue, product integrity and environmental
  - transport, handling and storage for chemicals
  - requirements for disposal of excess chemicals, clearing spillages and equipment clean up
  - OHS, environmental and pesticides legislation, codes of practice and enterprise procedures.
  - chemical application equipment capabilities and limitations.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- plan and implement a program for chemical use
- supervise others in chemical use
- apply and monitor risk control procedures
- select and manage chemical application equipment

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify needs	<p>1.1. Equipment requiring calibration procedures is identified correctly in line with manufacturers' instructions, enterprise practice and regulatory requirements as appropriate.</p> <p>1.2. Skill levels of operators relating to calibration are assessed in consultation with operators and supervisors where appropriate.</p>
2. Compile relevant information	2.1. Information required for procedures is acquired from appropriate sources.
3. Prepare procedure	<p>3.1. Information in procedures complies with relevant regulatory requirements, manufacturers' instructions and industry practice as applicable.</p> <p>3.2. Procedures are in a form clearly understandable to the intended users.</p> <p>3.3. OHS issues relevant to the activities in the procedures are made clear to the users.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify needs for calibration
- analyse tasks involved in calibration
- prepare procedures for calibration clearly and accurately in a manner suited to the users
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant OHS, pesticides and environmental legislation, codes of practice and enterprise procedures
- chemical handling and application
- OHS issues involved in calibration
- mechanical and electronic controls on application equipment.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify and evaluate need for chemical use	<p>1.1. Integrated Pest Management (IPM) and Integrated Resistance Management (IRM) strategies are interpreted and the organisational chemical requirements are identified.</p> <p>1.2. External requirements for chemical use are identified and relevant information obtained and interpreted.</p> <p>1.3. Requirements for chemical use are documented.</p> <p>1.4. Chemicals available to meet requirements are identified and information concerning their application is reviewed.</p>
2. Develop a chemical use risk management strategy	<p>2.1. Hazards in the transportation, storage and handling of chemicals are identified and assessed.</p> <p>2.2. Risk factors associated with the use of chemicals are identified and documented.</p> <p>2.3. Risk control measures are identified and developed in accordance with regulatory requirements.</p> <p>2.4. A risk management strategy for chemical use is</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>developed in accordance with legislation and IPM, IRM, and Integrated Animal Health Management principles.</p> <p>2.5. Appropriate insurance policies covering intended chemical use are researched and documented according to enterprise guidelines.</p>
<p>3. Develop and implement procedures for chemical management and use</p>	<p>3.1. Procedures for management and use of chemicals are developed in accordance with directions and standards.</p> <p>3.2. Required precautions and risk control measures are documented.</p> <p>3.3. Procedures for communicating and negotiating with the community are developed.</p> <p>3.4. Information on procedures and precautions in the management and use of chemicals is distributed to relevant staff.</p>
<p>4. Identify training and supervision needs and solutions for chemical use in the workplace</p>	<p>4.1. An appropriate strategy is developed for the training, assessment and supervision of staff involved in chemical use including correct use/fit of personal protective equipment.</p> <p>4.2. Suitable internal on-the-job training and monitoring of performance in the implementation of the chemical use strategy is organised and provided.</p> <p>4.3. Appropriate external training and assessment in the management and use of chemicals is organised.</p>
<p>5. Monitor and evaluate the implementation of a chemical use strategy</p>	<p>5.1. The implementation of the established chemical use strategy is monitored in terms of regulatory requirements and established criteria.</p> <p>5.2. The effectiveness of the established chemical use strategy is evaluated.</p> <p>5.3. Appropriate action is initiated where there are identified problems or where required procedures/precautions are not being correctly followed.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- accurately read and interpret labels on chemicals and Materials Safety Data Sheets (MSDSs)
- determine the level of hazard and risk associated with chemical use in terms of human health, environment, fauna, flora and produce
- apply risk management techniques
- develop and evaluate management plans and organisational procedures
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- hazards to human health, agricultural produce, and all aspects of the environment and non-target species of flora and fauna associated with the transport, storage, handling, application and disposal of chemicals
- factors that contribute to spray drift, measures to assess the potential for spray drift and prevent or control its occurrence, and the elements of a spray drift management strategy
- routes of entry of chemicals into the body and the implications of this on chemical use management strategies
- safety procedures including the maintenance, use, fit and decontamination of personal protective clothing and equipment
- influence of meteorological factors (temperature, humidity, rain) on quality of chemical application, drift potential, effectiveness and efficacy of use
- precautions and risk control measures that may be used to minimise risks and hazards associated with the use of chemicals
- principles of IPM/IRM/IAM and their benefits in terms of chemical use risk management
- emergency procedures for safety incidents involving chemicals
- requirements and options for the keeping of records on chemical use and equipment maintenance and repair.
- principles of residue effects and their management including persistence in soil and water, accumulation in agricultural produce, rate of breakdown of residues in produce and in the environment, withholding periods, and ways in which residues

**REQUIRED SKILLS AND KNOWLEDGE**

can occur

- movement of and persistence and degradation of different types of chemicals in various areas of the environment such as soil, air and water
- industry waste agreements, for example drum MUSTER, and Chem Collect
- OHS legislative requirements and Codes of Practice
- appropriate insurances covering chemical use, transportation and storage
- correct wearing/fit of personal protective equipment
- use of chemicals as part of a comprehensive Quality Assurance (QA) system, Industry QA programs and performance standards.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- legislation, Codes of practice and industry requirements covering OHS, hazardous substances, environment and food safety/market access requirements related to the use of chemicals use have been incorporated into enterprise procedures
- the role of chemical labels and MSDSs has been conveyed to staff and the information on them used in determining chemical transport, storage, handling, application, and disposal procedures and practices in the workplace. MSDSs are held for all agricultural chemicals transported, stored or used in the workplace and relevant staff have been given access
- procedures have been put in place to assess the risk of chemical transport, storage, handling, application and disposal to human health, environment, fauna and flora, and market acceptability of produce.

**EVIDENCE GUIDE**

- label and MSDSs for each chemical have been developed and distributed to all affected staff a communication strategy has been put in place to remind relevant staff of their responsibilities in chemical use, to inform all staff exposed to agricultural chemicals of the need to minimise exposure and how to act in a chemical emergency, to inform neighbours when chemical spraying is planned to take place, and to make agencies aware when a chemical spill has occurred.
- an induction program has been developed that covers the enterprise OHS system and roles and responsibilities of all workers within that system
- the roles and responsibilities of all staff handling or applying farm chemicals has been documented and training needs and completions have been recorded for each staff member
- health monitoring of staff exposed to chemicals has been carried out according to regulatory requirements
- the need for chemical application and selection of chemicals for a purpose is in line with the enterprises documented IPM and IRM strategies
- application techniques selected are based on spray drift management principles, accurate placement of chemical, and the correct use of PPE
- application to authorities has been made in the case of off label use and all conditions and requirements on permits have been implemented
- chemical application is carried out by trained staff as required by legislation
- all withholding periods and requirements to limit access to sprayed areas have been met and can be supported by the organisations recording system
- chemical storage systems meet industry and legislative requirements and access to storage areas is covered by enterprise procedures
- chemical emergency procedures have been documented, displayed and conveyed to staff
- all requirements for chemical signage have been met for the transport and storage of chemicals and for areas affected by chemical application
- chemical persistence in vegetation, soil and water has been accounted for in managing environmental risk
- recording procedures have been developed and

<b>EVIDENCE GUIDE</b>	
	<p>maintained covering all aspects of the transport, storage, handling, application and disposal of chemicals in the workplace</p> <ul style="list-style-type: none"> <li>• reviews of chemical procedures based on enterprise records have been conducted periodically and, where issues have emerged, necessary changes made and communicated to staff.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances. Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Chemicals may include:	<ul style="list-style-type: none"> <li>• insecticides</li> <li>• fungicides</li> <li>• herbicides</li> <li>• bactericides</li> <li>• algaecides</li> <li>• biologicals</li> <li>• nematocides</li> <li>• rodenticides</li> <li>• fumigants</li> <li>• antimicrobial agents</li> <li>• anthelmintics</li> <li>• hormone growth promotants</li> <li>• the range of veterinary chemicals used to treat animals for disease.</li> </ul>

## AHCCOM201A Assess and receive raw materials for composting

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of receiving raw material for processing at a compost facility, including measuring quantity for billing and assessing material quality for acceptability against specified enterprise requirements and defines the standard required to: inspect and assess raw materials for contamination and acceptability against established criteria; measure and assess quantity of raw material; record raw material quantity and calculate fee; maintain appropriate documentation; provide clear directions to drivers entering site.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to an employee of an enterprise engaged in commercial-scale composting operations. Tasks are likely to be performed by a yard hand or general hand under supervision of an operations team leader or site foreman. Work is likely to be performed as a part of a team.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>	

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Organise for work	<p>1.1. Specifications for raw materials for composting operation, acceptance criteria and receipt procedures are confirmed according to supervisor instructions and enterprise procedures.</p> <p>1.2. Hand tools appropriate to job requirements are selected and checked for serviceability according to manufacturer specifications and enterprise procedures.</p> <p>1.3. Existing and potential hazards to health and safety are identified, assessed and reported according to Occupational Health and Safety (OHS) and enterprise procedures.</p> <p>1.4. Suitable Personal Protective Equipment (PPE) is selected, used, maintained and stored according to OHS procedures.</p>
2. Receive raw materials	<p>2.1. Raw materials are accurately identified and assessed against specified acceptance criteria.</p> <p>2.2. Unacceptable (non-conforming) materials are rejected according to enterprise procedures.</p> <p>2.3. Non-conformances are documented and reported</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to enterprise procedures.</p> <p>2.4. Acceptable raw materials are measured, and quantity is recorded according to enterprise procedures.</p> <p>2.5. Fee is calculated based on raw material type and quantity, and charged to customer according to enterprise procedures.</p> <p>2.6. Correct fee payment is received and recorded, and receipt is provided according to enterprise procedures.</p>
3. Unload raw materials	<p>3.1. Drivers are given clear directions for unloading safely at a specific location.</p> <p>3.2. Unloading assistance is provided as required.</p> <p>3.3. Raw materials are inspected and assessed against specified acceptance criteria according to enterprise procedures.</p> <p>3.4. Unacceptable (non-conforming) materials are rejected according to enterprise procedures.</p> <p>3.5. Non-conformances are documented and reported according to enterprise procedures.</p> <p>3.6. Designated unloading areas are clearly identified and monitored to ensure compliance with unloading instructions, containment and segregation of materials, and availability of storage capacity.</p>
4. Remove contaminants and stockpile acceptable raw material	<p>4.1. Physical contaminants are removed from raw materials according to enterprise procedures.</p> <p>4.2. Raw materials are segregated, stockpiled and contained in appropriate areas or otherwise managed according to enterprise procedures.</p> <p>4.3. Raw material stockpiles are monitored to ensure adequate available storage capacity and containment, and non-conformances are reported to supervisor.</p> <p>4.4. Raw material stockpiles are clearly labelled according to job and enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- basic mathematics for volume estimation and calculation of quantities and fees
- literacy levels sufficient to:
  - read and follow enterprise policies and procedures
  - read site operating guidelines to confirm acceptance criteria
- operating a weighbridge
- oral communication skills to:
  - give directions to drivers
  - confirm instructions from supervisor
- performing basic administration procedures such as producing a receipt and operating a cash register
- OHS and environmental legislative and enterprise requirements
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- characteristics of a range of raw materials
- enterprise policies and procedures, including OHS procedures
- safety risks to self and product posed by contaminants in raw materials and products
- standard risk control measures used in the industry to minimise risk associated with handling raw materials and products.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>inspect and assess raw materials for contamination and acceptability against established criteria</li> <li>measure and assess quantity of raw material</li> <li>record raw material quantity and calculate fee</li> <li>maintain appropriate documentation</li> <li>provide clear directions to drivers entering site.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Composting may include:	<ul style="list-style-type: none"> <li>aerobic composting</li> <li>vermiculture technologies.</li> </ul>

## AHCCOM202A Recognise and respond to fire emergencies on a composting site

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of preventing, recognising and providing first response to fire in material or compost piles and defines the standard required to: recognise and report fire risks and incidents; follow emergency procedures, including procedure for contacting fire brigade; read and interpret site operations plan or map, including safety and fire signs; operate pumps and set up water delivery system.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the application of knowledge and skills to a limited range of defined tasks and responsibility. Tasks are likely to be performed by a yard hand or general hand under supervision of an operations team leader or site foreman and fire brigade personnel. The outcomes do not substitute for the attendance of fire brigade personnel in the event of a fire emergency.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Recognise a fire risk and undertake preventative actions	<p>1.1.Procedures for first response to fire are obtained from supervisor and clarified if required.</p> <p>1.2.Location of basic firefighting equipment on site is identified and checks made to ensure all equipment is available and ready for use.</p> <p>1.3.Conditions that can lead to fire and signs of fire are recognised and reported to supervisor.</p> <p>1.4.Enterprise procedures for emergencies are observed.</p> <p>1.5.Temperature and moisture management procedures are implemented according to enterprise requirements.</p>
2. Recognise and initiate response to fire	<p>2.1.Nature and extent of fire are identified.</p> <p>2.2.Fire details are reported and alarm is raised according to enterprise procedures.</p> <p>2.3.Preparations for water availability for fire brigade attendance are implemented as directed by supervisor and according to enterprise procedures.</p> <p>2.4.Occupational Health and Safety (OHS) hazards associated with fire emergency are identified and appropriate action is taken to minimise risks to self,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>others and property.</p> <p>2.5.Immediate area of the emergency is secured as directed by supervisor and in line with enterprise procedures to ensure no further loss occurs.</p> <p>2.6.Where safe to do so, machinery and equipment are removed from area.</p> <p>2.7.Firefighting equipment is selected and set up in line with enterprise procedures, as directed by fire brigade personnel and supervisor.</p>
3. Attack fire under direction of fire brigade	<p>3.1.Appropriate firefighting and containment media are applied to attack and control fire, as directed and in a safe and coordinated manner.</p> <p>3.2.Firefighting methods and tactics are employed as directed.</p> <p>3.3.Potential for change in fire behaviour is reported to fire brigade and supervisor and acted upon under supervision to ensure safety of personnel and protection of property.</p> <p>3.4.Clear line of retreat is identified and maintained at all times.</p> <p>3.5.Conditions at fire are observed and their effects on fire development are reported according to company guidelines.</p> <p>3.6.Significant changes to status of fire are immediately reported to supervisor and fire brigade.</p>
4. Carry out post-fire activities	<p>4.1.Smouldering fire residuals are identified and controlled as required according to enterprise procedures and fire brigade directions.</p> <p>4.2.Break-up of windrows, buildings or structures is carried out as directed by supervisor and enterprise procedures.</p> <p>4.3.Enterprise procedures for removal of spent fuel or burnt compost and debris are followed.</p> <p>4.4.Activities to complement post-fire operations and prevent further damage are carried out as directed and according to enterprise procedures.</p> <p>4.5.Site and equipment are cleared and cleaned to enterprise and manufacturer guidelines.</p> <p>4.6.Assistance is given to fire brigade to complete and record appropriate incident information.</p> <p>4.7.Effectiveness of tactics employed is reported to supervisor.</p>

ELEMENT	PERFORMANCE CRITERIA
	4.8. As part of one's participation in an incident debrief, feedback on performance is sought and any required improvements are noted for future action.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- following emergency procedures, including procedure for contacting fire brigade
- following verbal instructions from fire brigade and supervisor
- observing signs of fire
- operating pumps
- reading and interpreting site operations plan or map
- reading written instructions sufficient to select and use correct firefighting media such as fire extinguishers
- recognising and reporting fire risks and incidents
- setting up water delivery system
- understanding and following safety and fire signs
- using communications equipment
- using Personal Protective Equipment (PPE) correctly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- characteristics and operation of joints, hoses, valves and sprinkler components
- enterprise operating procedures, including OHS and emergency management plan
- fire behaviour, extinguishing media and operating firefighting equipment
- fire control tactics and techniques, fire hazards and safety techniques
- operation of pumps
- pile size, moisture and porosity as causes of combustion
- procedures for safe use of equipment, such as power and hand tools
- standard risk control measures used in the industry to minimise risk associated with fire response.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• recognise and report fire risks and incidents</li> <li>• follow emergency procedures, including procedure for contacting fire brigade</li> <li>• read and interpret site operations plan or map, including safety and fire signs</li> <li>• operate pumps and set up water delivery system.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Recognise, handle and locate raw materials on site	1.1.Raw materials are identified for potential purpose. 1.2.Characteristics of raw materials, including handling risks and potential or common contaminants are compared to site operating guidelines. 1.3.Potential hazards in handling raw materials are identified and reported to supervisor. 1.4.Initial handling requirements, stockpiling location and arrangement on site are confirmed from site operating guidelines. 1.5.Visible or physical contaminants present in raw materials are identified and recorded. 1.6.Physical contaminant handling, stockpiling location and arrangement on site are confirmed from site operating guidelines.
2. Recognise and locate key processes and technologies	2.1.Composting technologies and methods, key process control steps and technologies are identified and locations on site are confirmed from site map. 2.2.Windrows or vessels are identified by reference to

ELEMENT	PERFORMANCE CRITERIA
	<p>batch or code numbers.</p> <p>2.3.Machinery, plant and equipment and their functional uses are confirmed from site operating guidelines.</p>
<p>3. Recognise, handle and locate compost and other products on site</p>	<p>3.1.Compost and other products are identified for their intended use.</p> <p>3.2.Characteristics of products, including handling risks and potential or common contaminants are compared to site operating guidelines.</p> <p>3.3.Potential hazards in handling products are identified and reported to supervisor.</p> <p>3.4.Handling requirements, stockpiling location and arrangement on site are confirmed from site operating guidelines.</p> <p>3.5.Potential for contamination of products is identified and action is taken according to enterprise procedures.</p> <p>3.6.Batching sheets or other product formulas are matched to end product.</p> <p>3.7.Visible or physical contaminants present in products are identified and reported to supervisor.</p> <p>3.8.Physical contaminant handling, stockpiling location and arrangement on site are identified.</p>
<p>4. Identify and carry out site maintenance requirement</p>	<p>4.1.Site maintenance requirements are identified and carried out according to enterprise procedures.</p> <p>4.2.Traffic access routes and site traffic/pedestrian safety rules are identified from site operating plan and maintained according to enterprise and Occupational Health and Safety (OHS) procedures.</p> <p>4.3.Vehicle access routes on site are maintained according to enterprise procedures.</p> <p>4.4.Machinery and site security requirements are identified and maintained according to enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- applying communication skills including active listening, questioning and asking for clarification from supervisor
- applying literacy and numeracy skills sufficient to read and follow enterprise policies and procedures
- identifying and handling physical contaminants
- identifying and handling raw materials and products
- recognising and complying with site traffic and security requirements
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- characteristics of a range of raw materials
- key process control stages critical to consistent quality in compost production
- overview of systems and technologies used in compost production, particularly as relevant to workplace
- range and characteristics of products
- company policies and procedures, including OHS requirements
- safety risks associated with movement of vehicles and machinery on site
- safety risks to self and product posed by contaminants in raw materials and products
- standard operating procedures to minimise risk associated with handling raw materials and products.

## Evidence Guide

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Organise plant, machinery and equipment operations	<p>1.1. Job sheet or work order is reviewed to clearly identify operating requirements.</p> <p>1.2. Equipment, materials and personnel requirements for safe, effective and efficient operation are identified and organised.</p> <p>1.3. Suitable Personal Protective Equipment (PPE) and clothing are selected, used, maintained and stored according to Occupational Health and Safety (OHS) requirements.</p>
2. Prepare plant, machinery and equipment for use	<p>2.1. Service log is checked to ensure service requirements have been</p> <p>2.2. Communication equipment, safety devices, lighting and alarm systems are checked for correct operation according to manufacturer specifications and enterprise and statutory requirements.</p> <p>2.3. Routine pre-operational checks are carried out to enterprise requirements and manufacturer specifications.</p> <p>2.4. Operational systems are checked and calibrated for correct operation according to enterprise requirements and manufacturer specifications.</p> <p>2.5. Faulty plant, machinery or equipment is identified, safety tagged and reported promptly according to enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.6.OHS hazards associated with plant, machinery and equipment operation are identified, and risk is assessed and handled according to enterprise requirements.</p> <p>2.7.Environmental implications associated with operations are identified, assessed and reported according to enterprise requirements.</p>
3. Start and operate plant, machinery and equipment	<p>3.1.Operational area is checked and personnel in that area are informed of initiation of operation.</p> <p>3.2.Plant, machinery and equipment are started up using correct sequence and according to manufacturer specifications and enterprise requirements.</p> <p>3.3.Plant, machinery and equipment are operated in a safe and controlled manner according to manufacturer specifications and monitored for performance and efficiency.</p> <p>3.4.Input materials are monitored and non-conformances clearly identified and handled according to enterprise requirements.</p> <p>3.5.Processing outputs are monitored and adjustments to plant operation are made to meet job specifications.</p> <p>3.6.Out-of-specification product or process outcomes are identified, rectified and reported to maintain the process within specification.</p>
4. Shut down plant, machinery and equipment	<p>4.1.Plant, machinery and equipment shut-down procedures are carried out to manufacturer specifications and enterprise requirements.</p> <p>4.2.Routine maintenance of plant, machinery and equipment is carried out to remove debris and contaminants and to ensure safe and efficient operation.</p> <p>4.3.Plant, machinery and equipment are cleaned, secured and stored according to manufacturer specifications and enterprise requirements.</p> <p>4.4.Unsafe plant, machinery or equipment is tagged or locked.</p>
5. Maintain records	<p>5.1.Plant, machinery and equipment operational records are maintained accurately and promptly according to enterprise requirements.</p> <p>5.2.Required maintenance, damage, malfunctions or irregular performance, and unsafe plant, machinery or equipment are recorded and/or reported according</p>

ELEMENT	PERFORMANCE CRITERIA
	to enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- basic computer and software skills
- demonstrating safe and environmentally responsible workplace practices
- identifying and handling raw materials and contaminants
- operating plant, machinery and equipment according to manufacturer specifications and OHS standards
- using emergency and personal protective equipment
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- enterprise guidelines associated with operation of plant, machinery and equipment
- environmental licenses, impacts and procedures identification of contaminants
- lock-out and tag-out procedures for plant, machinery and equipment
- manufacturer specifications for servicing of plant, machinery and equipment
- operating principles and operating methods for plant, machinery and equipment
- potential risks and hazards associated with operation of plant, machinery and equipment
- principles of weight distribution with regard to load-shifting and machinery movement
- procedures for cleaning, securing and storing machinery, equipment and materials
- product types and characteristics
- raw material types and characteristics
- relevant legislation, regulations and codes of practice with regard to operator

**REQUIRED SKILLS AND KNOWLEDGE**

licensing, roads and traffic requirements

- relevant legislation, regulations and codes of practice with regard to workplace OHS and the use and control of hazardous substances, such as fuel and recipe inputs
- OHS legislation, codes of practice and specific hazards such as hazardous substances and exposure to organic micro particles.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select and use various features and controls of a range of plant, machinery and equipment
- implement work and equipment maintenance plans
- determine appropriate operating methods
- monitor input materials and report non-conformances
- monitor outputs and report out-of-specification product
- perform shutdown procedures and maintain records.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Types of machinery and equipment may include:	<ul style="list-style-type: none"> <li>• machinery and equipment used to prepare raw materials in order to produce compost products.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Organise for loading and dispatch of product	<p>1.1. Dispatch order is obtained and reviewed for completeness.</p> <p>1.2. Product dispatch requirements are checked with product and transport availability.</p> <p>1.3. Request is made to designated personnel for specified quantity of specified product to be prepared and/or delivered to dispatch area.</p> <p>1.4. Product dispatch is scheduled and confirmed with contractor or driver to ensure maximisation of load.</p> <p>1.5. enterprise Occupational Health and Safety (OHS) and site policies and procedures.</p> <p>1.6. Appropriate machinery, equipment and labour required for dispatch activity are identified and organised according to enterprise procedures.</p> <p>1.7. Hazards are identified and controlled according to job requirements and enterprise procedures.</p> <p>1.8. Emergency and Personal Protective Equipment (PPE) is selected and fitted according to job requirements, manufacturer specifications, OHS procedures and enterprise requirements.</p>
2. Coordinate loading of product	<p>2.1. Loading site is organised to ensure safe and efficient loading of product.</p> <p>2.2. Products to be loaded and specific loading requirements are clearly communicated to drivers.</p> <p>2.3. Signalling and instructions are provided to drivers to ensure safe and efficient loading.</p> <p>2.4. Loading site is monitored to ensure compliance with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>loading instructions, containment of product within designated loading area, and availability of space for loading.</p> <p>2.5.Product is accurately measured and loaded into dispatch vehicle according to enterprise procedures.</p> <p>2.6.Product is recorded as loaded for dispatch according to enterprise requirements.</p> <p>2.7.Load is checked to ensure that it is adequately covered, contained and/or secured according to enterprise and regulatory requirements.</p> <p>2.8.Load is weighed to ensure dispatch order is met.</p> <p>2.9.Driver is provided with load documentation and delivery note according to enterprise requirements.</p>
3. Clean up loading area	<p>3.1.Loader and vehicle hygiene are maintained between loads.</p> <p>3.2.Area and equipment are monitored for cleaning and clearing to ensure safe and effective operation according to enterprise requirements.</p>
4. Document product dispatch	<p>4.1.Dispatch information is recorded accurately and promptly, and provided to sales office according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- demonstrating safe and efficient work practices
- operating load-shifting equipment
- organising a site
- using a computer to obtain and record dispatch information
- using PPE
- using signalling and communication techniques and equipment
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as

**REQUIRED SKILLS AND KNOWLEDGE**

specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required

- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- bulk density and moisture effects on weight and volume
- communication techniques and equipment
- customer service
- measurements, including weights, volumes and bucket volumes
- OHS requirements
- provisions of the Trade Practices Act in regard to weights and measurements of bulk product
- relevant regulations governing site operation
- types and performance characteristics of vehicles and loading equipment used in a composting enterprise.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- organise a loading site
- correctly interpret dispatch orders
- organise and coordinate loading
- measure product quantity for dispatch
- load correct product for dispatch.

**Context of and specific resources for**

Competency requires the application of work practices

**EVIDENCE GUIDE****assessment**

under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Product types may include:

- composts
- mulches
- natural and blended soils for landscaping
- potting mixes
- soft fall or loose fill playground surfacing
- soil conditioners
- special purpose soils
- various recycled organic products for a range of specialised applications.

Machinery and equipment used in product dispatch may include:

- calculator
- communications equipment
- hoppers and conveyors
- load-shifting machinery
- recording equipment
- storage containers such as bins and skips
- weighbridge.

Potential hazards may include:

- biological hazards
- dust
- electricity and overhead powerlines
- ergonomic hazards associated with posture and vibration
- exposure to loud noise and fumes
- extreme weather conditions
- hazardous substances such as:
  - fertiliser
  - fuel
  - oil
- machinery, including hydraulics

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"><li>• mechanical malfunctions and exposed moving parts</li><li>• oil and grease spills.</li></ul>

## AHCCOM303A Operate a compost bagging process

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of setting up, operating, adjusting and shutting down a compost bagging process and defines the standard required to: select and use various features and controls of a range of bagging plant; monitor compost inputs; monitor compost production against compost specifications; carry out routine maintenance on plant and equipment; monitor the temperature of bagged compost.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to working as an employee of an enterprise engaged in commercial-scale composting operations. Work is likely to be performed as a part of a team. This unit must be read in conjunction with the National Guidelines for Occupational Health and Safety Competency Standards for Operation of Load-Shifting Equipment and Other Types of Specified Equipment [NOHSC: 7019 (1992)]. Where work requires the use of load-shifting equipment, appropriate training/certification must be provided according to state and territory safety and licensing requirements.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Organise for bagging operations	<p>1.1. Job sheet or work order is reviewed to clearly identify product bagging requirements.</p> <p>1.2. Product for bagging is confirmed and available to meet job requirements.</p> <p>1.3. Equipment, materials and personnel requirements for safe, effective and efficient bagging operations are identified and organised.</p> <p>1.4. Suitable personal protective clothing and equipment are selected, used, maintained and stored according to Occupational Health and Safety (OHS) procedures.</p>
2. Prepare bagging plant for use	<p>2.1. Machine components and related attachments are fitted and adjusted to meet safety requirements.</p> <p>2.2. Materials for bag are fitted and adjusted to ensure efficient operation, according to manufacturer specifications.</p> <p>2.3. Safety devices and alarm systems are checked for correct operation according to manufacturer specifications, enterprise procedures and relevant</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>statutory requirements.</p> <p>2.4. Routine pre-operational checks are carried out to meet enterprise procedures and manufacturer specifications.</p> <p>2.5. Operational systems are checked, cleaned and calibrated, and batch number and operating parameters are entered as required to meet production requirements.</p> <p>2.6. Faulty plant or machinery is identified, safety tagged and reported promptly to supervisor according to enterprise procedures.</p> <p>2.7. OHS hazards are identified, reported to supervisor and managed according to enterprise procedures.</p> <p>2.8. Environmental implications associated with machinery operation are identified and reported to supervisor.</p> <p>2.9. Product to be bagged is obtained and positioned as required to meet production requirements.</p>
<p>3. Start and operate bagging plant</p>	<p>3.1. Operational area is checked, and personnel in operational area are informed of initiation of plant operation.</p> <p>3.2. Risks to self, others and the environment are recognised and minimised according to enterprise and OHS procedures.</p> <p>3.3. Product for bagging is loaded into the bagging plant hopper in required quantities.</p> <p>3.4. Bagging plant is started up using correct sequence according to manufacturer specifications and enterprise procedures.</p> <p>3.5. Bagging plant is operated in a safe and controlled manner, and monitored for performance and efficiency.</p> <p>3.6. Input materials are monitored, and non-conformances clearly identified and handled according to enterprise procedures and manufacturer specifications.</p> <p>3.7. Processing outputs are monitored and adjustments to plant operation are made to meet job specifications.</p> <p>3.8. Out-of-specification product or process outcomes are identified and reported to supervisor and appropriate action is taken as directed.</p> <p>3.9. Bagged product is labelled, palletised or stacked and wrapped according to enterprise procedures and</p>

ELEMENT	PERFORMANCE CRITERIA
	customer requirements.
4. Shut down bagging plant	<p>4.1. Bagging plant and machinery shut-down procedures are carried out to manufacturer specifications and enterprise procedures.</p> <p>4.2. Routine maintenance of bagging plant and machinery is carried out to remove debris and contaminants and ensure safe and efficient operation.</p> <p>4.3. Bagging plant and equipment is cleaned, secured and stored according to manufacturer specifications and enterprise procedures.</p> <p>4.4. Unsafe plant or equipment is reported to supervisor and tagged or locked out.</p>
5. Maintain records	<p>5.1. Bagging plant operational records are maintained accurately and promptly according to enterprise procedures.</p> <p>5.2. Any required maintenance, damage, malfunctions and irregular performance of machinery is recorded and addressed according to enterprise procedures.</p>
6. Check product to confirm readiness for distribution	<p>6.1. Product is transported to and positioned in holding area with labels and bar codes clearly visible.</p> <p>6.2. Supervisor or product dispatcher is informed of product readiness for dispatch according to enterprise procedures.</p> <p>6.3. Product awaiting distribution is checked for temperature rise during storage and any out-of-range readings are reported to supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identifying hazards and Implementing safe operating procedures
- calibrating bagging components
- correctly using emergency and personal protective equipment
- demonstrating batch/product changeovers that maintain product quality and hygiene

## REQUIRED SKILLS AND KNOWLEDGE

- demonstrating safe and environmentally responsible workplace practices
- maintaining work area to meet housekeeping standards
- operating machinery and equipment to industry standards
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- basic principles of the bagging process
- characteristics of product that is fit for bagging
- product quality and hygiene
- purpose of packaging, coding requirements and related legal requirements, including product weight
- basic operating principles of the equipment which may include:
- operational understanding of main equipment components, status and purpose of guards, equipment operating capacities and applications
- purpose and location of sensors and related feedback instrumentation
- knowledge of services required and action to take if services are not available
- methods used to monitor the process
- inspection or test points (control points) in the process and related procedures and recording requirements
- equipment cleaning requirements
- flow of this process and effect on downstream processes
- packaging quality and seal integrity
- effect of variation in inputs which may include ingredient quality and condition, packaging components and consumables, and/or services on process performance
- OHS hazards and controls
- emergency and routine shutdowns and procedures to follow in the event of a power outage
- product and batch changeover procedures
- lock-out and tag-out procedures and responsibilities
- environmental legislative and enterprise requirements.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• select and use various features and controls of a range of bagging plant</li> <li>• monitor compost inputs</li> <li>• monitor compost production against compost specifications</li> <li>• carry out routine maintenance on plant and equipment</li> <li>• monitor the temperature of bagged compost.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Types and processes may include:	<ul style="list-style-type: none"> <li>• the full range of commercial compost types and compost bagging processes.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify and characterise raw materials	<p>1.1.Raw materials are visually identified and categorised against established enterprise criteria.</p> <p>1.2.Raw material characteristics are entered into enterprise compost recipe calculator to achieve a balanced recipe.</p> <p>1.3.Where raw material identity or characteristics are uncertain or, designated personnel are requested to take representative samples of material for laboratory analysis.</p> <p>1.4.Receivable and handling requirements for raw materials are determined.</p>
2. Establish production objectives	<p>2.1.Identified market requirements and priorities are translated into product specifications using product performance data and enterprise records.</p> <p>2.2.Raw material combinations that can potentially meet market requirements are identified.</p>
3. Calculate compost recipe	<p>3.1.Raw material characteristics are recorded in enterprise compost recipe.</p> <p>3.2.Raw material proportions or ratios suitable for composting by the enterprise by a particular technology and method are specified by weight in resulting compost recipe.</p> <p>3.3.Pre-processing requirements of raw materials, feasible volumes of compost upon formation, and compost production plan are determined.</p> <p>3.4.Composting batch management procedures are reviewed and any required variations to standard management procedures are defined and documented</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>as a new procedure.</p> <p>3.5.Compost production schedule is estimated and documented.</p> <p>3.6.Compatibility of resulting compost recipe and production schedule is confirmed against documented customer requirements and priorities.</p> <p>3.7.Density of pre-processed raw materials is quantified, and weight-based recipe is translated into volume-based recipe for production.</p> <p>3.8.Volumetric compost recipe and production procedures are recorded as operational batch or bucket recipe and procedure.</p>
4. Validate compost recipe	<p>4.1.Raw materials are pre-prepared and mixed according to new compost recipe to form feedstock for composting.</p> <p>4.2.Composting batch is managed according to revised enterprise procedure.</p> <p>4.3.Composting process is monitored for efficiency in relation to estimated production schedule and enterprise requirements.</p> <p>4.4.Environmental and Occupational Health and Safety (OHS) aspects and impacts are monitored for compliance with enterprise plan and regulatory requirements.</p> <p>4.5.Faults, variations or problems observed at any stage of process are identified and remedial action is carried out to maintain effective compost production.</p> <p>4.6.Sampling and testing of material during composting is conducted to determine completion of production process.</p> <p>4.7.End product quality is evaluated against established product specifications.</p> <p>4.8.Compost recipe, production schedule and procedures are revised to improve process efficiency and reliability, and product compliance with defined specifications.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- documenting procedures
- interpreting and applying written procedures and formulas
- reading and interpreting laboratory results
- reading and interpreting sampling and testing data
- using a computer
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- control of hazards in handling raw materials and composting materials
- processing duration required for various raw materials
- range of commercial compost-based products
- raw materials and their characteristics
- relationship between key compost recipe variables and compost production
- systems, technologies and methods in compost production.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish production requirements	<p>1.1.Raw material supply contracts and receival data, sales and market trend information, and corporate marketing plan and strategy are reviewed to quantify production requirements.</p> <p>1.2.Conditions that may affect production requirements are identified in consultation with executive management and designated sales and marketing personnel.</p> <p>1.3.Production requirements across product portfolio to meet customer requirements and site and equipment capacity are estimated in consultation with executive management and designated sales and marketing personnel.</p> <p>1.4.Environmental and Occupational Health and Safety (OHS) impacts are monitored for compliance with enterprise plan and licence conditions.</p> <p>1.5.Production plan is documented and submitted for executive management approval.</p> <p>1.6.Facilities, personnel, machinery and equipment required for compost production are confirmed as being available.</p> <p>1.7.Contingency plan to address potential oversupply or undersupply of raw material or product is developed and documented.</p>
2. Schedule production to meet requirement	<p>2.1.Batch types and volumes of compost-based products to be produced are calculated.</p> <p>2.2.Laboratory and field test data of compost materials during and post-production is obtained.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3. Production schedule is monitored and adjusted according to field and laboratory test results.</p> <p>2.4. Product is made available to customer in required quantities, to required quality and at required time.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analysing and interpreting supply contract documents, production data, weighbridge/receival data, field and laboratory results
- identifying and diagnosing problems with production
- using a computer
- visually recognising problematic mixtures of raw materials for composting
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- control of hazards in handling raw materials and product
- processing duration required for various raw materials
- raw materials and their characteristics
- relationship between key compost recipe variables and compost production
- systems, technologies and methods in compost production.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine characteristics of raw materials required	<p>1.1.Relevant corporate documents are reviewed to identify commercial objectives, product range and specifications, compliance requirements and enterprise constraints.</p> <p>1.2.Current raw material supplies are reviewed for suitability for production of defined compost products.</p> <p>1.3.Compost recipe calculations are conducted as a gap analysis to identify complementary raw material characteristics and quantities required to manufacture defined products.</p> <p>1.4.Characteristics and quantities of additional complementary raw materials required are specified and documented.</p> <p>1.5.Complementary or substitute raw material types that are consistent with requirements are identified through review of relevant literature and enterprise information/records.</p>
2. Identify and prioritise raw materials required for production	<p>2.1.Raw material options are identified and assessed in order to determine relative priority according to product range and specifications.</p> <p>2.2.Representative samples of prioritised raw materials are gained from potential sources of supply, and characteristics/risks are evaluated and confirmed.</p> <p>2.3.Where required, revisions to raw materials and product specifications are submitted to executive</p>

ELEMENT	PERFORMANCE CRITERIA
	management for incorporation into corporate business plan, marketing plan and marketing strategy.
3. Secure access to raw materials	3.1.Executive management approval is gained for securing preferred raw materials. 3.2.Specifications for raw material characteristics and acceptability criteria for receipt are documented for incorporation into supply contract. 3.3.Preferred suppliers of raw materials are determined. 3.4.Supply contracts are negotiated and secured on suitable trading terms according to enterprise practice.
4. Prepare for receipt and processing of raw materials	4.1.Receipt, containment, handling and management requirements are documented and incorporated into enterprise procedures and training. 4.2.Availability of site infrastructure, plant and equipment requirements is confirmed.
5. Maintain supply of raw material	5.1.Effective communication is maintained with raw material suppliers to support reliable and secure supply of raw materials of consistent and required quality.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- assessing and characterising raw materials
- negotiating prices and supply of materials
- using a compost recipe calculator
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures

**REQUIRED SKILLS AND KNOWLEDGE**

- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- basic technical and industry literacy to source and interpret test data
- capabilities and limitations of site and plant
- environmental and site licenses and associated risks and restrictions
- potential risks and hazards related to various raw materials
- raw material assessment and characterisation
- raw materials used in compost production
- regulations and standards governing raw materials
- standard forms of supply contracts.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- develop criteria and identify raw material requirements from corporate documents
- review processes, plant and site capabilities against requirements for processing raw materials
- assess characteristics of different raw materials as relevant to manufacture of particular products according to compliance requirements
- define raw material specifications and acceptance criteria
- draft a supply contract.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Handle and store velvet	<p>1.1. Equipment required for handling, storing and grading velvet is checked to ensure that it is available, serviceable and functioning correctly.</p> <p>1.2. Harvested velvet is handled according to food safety and NVAS requirements.</p> <p>1.3. Individual pieces of velvet are cleaned, weighed and stored according to industry quality assurance and NVAS criteria.</p>
2. Grade and sell velvet	<p>2.1. Factors affecting grade of velvet are identified and applied in grading process.</p> <p>2.2. Industry-accepted grading specifications are used.</p> <p>2.3. Frozen velvet is transported according to industry quality assurance procedures and sold through national pool or to private clients.</p> <p>2.4. Sales and personal grading assessments are reviewed and compared with grades and feedback provided by professional graders.</p>

## Required Skills and Knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• accurately assessing velvet style and quality</li> <li>• establishing and maintaining consistent methods of grading</li> <li>• laying out a grading area for efficient operation</li> <li>• recording grading results</li> <li>• use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views</li> <li>• use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• food safety requirements</li> <li>• grading specifications</li> <li>• requirements for handling and storing velvet to maximise quality.</li> </ul>

## Evidence Guide

<p><b>EVIDENCE GUIDE</b></p>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• handle and store velvet carefully according to food safety legislation</li> <li>• accurately grade velvet using industry grading specifications</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>sell velvet and review the grading and marketing of the product.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Grading specifications may include:	<ul style="list-style-type: none"> <li>those detailed in Australian Deer Industry Velvet Antler and Venison Co-products Language and Specifications Guide (grading chart) developed by the Rural Industries Research and Development Corporation.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Demonstrate knowledge of deer velvet industry requirements	1.1.Relevant legislation and codes of practice are identified and applied to deer farm activities and in particular to deer velveting. 1.2.Industry accreditation and quality assurance schemes are identified and implemented according to industry requirements. 1.3.Relationships with external parties are established and maintained. 1.4.A bona fide legal relationship with a registered veterinarian is established and maintained. 1.5.Record keeping system is established and maintained according to industry and legislative requirements.
2. Apply knowledge of industry-accredited deer velveting process	2.1.Animals are handled according to Occupational Health and Safety (OHS) and animal welfare requirements. 2.2.Restraint facilities and equipment suitable for handling animals for velvet harvesting are selected and used. 2.3.Stag/buck management process is established and followed before and after velveting. 2.4.Deer antler growth rates and optimum time for cutting are determined. 2.5.Relevant drugs and equipment used in velveting are identified and dosage rates are calculated.

ELEMENT	PERFORMANCE CRITERIA
	2.6.Human emergency response procedures are established according to legislative and organisational requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- Comply with deer industry national velvet accreditation requirements applies to the outcomes of drug administration
- complying with the NVAS and quality assurance program of the DIAA
- dealing with aggressive or difficult animals
- during velveting, recognising signs of stress and pain and their effect and taking appropriate action
- implementing emergency response procedures such as Cardiopulmonary Resuscitation (CPR)
- using handling and restraint facilities and equipment
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- animal welfare issues and legislation relating to velvet antler harvesting
- basic and applied principles of anatomy, physiology, pain control and pharmacology relevant to velvet harvesting
- DIAA's NVAS and quality assurance program
- definitions and requirements with respect to veterinary supervision and legal responsibilities of deer producers and veterinarians
- drug withholding periods and tissue residues
- management of deer before and after velveting

**REQUIRED SKILLS AND KNOWLEDGE**

- nature of a bona fide legal relationship
- principles and process of velveting, including potential complications
- relevant action of drugs used for velveting on body function, and detrimental results of drug administration
- relevant legislation relating to restricted drugs
- OHS legislation, codes of practice and enterprise requirements.

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- apply the NVAS to own enterprise
- establish and maintain a bona fide client-veterinarian relationship
- apply relevant state and territory legislation and industry codes of practice as they relate to own enterprise
- demonstrate knowledge of legal aspects of possession and use of approved drugs
- establish systems to satisfy the DIAA's quality assurance program.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances. The candidate must also have access to the following resources:

- supervision by a registered veterinarian
- relevant legislation and industry codes of practice

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• organisational policies and procedures</li> <li>• facilities, materials and equipment for velvetting normally available on a deer farm, including:                             <ul style="list-style-type: none"> <li>• access to deer</li> <li>• drug charts</li> <li>• drugs and equipment for velvetting</li> <li>• biohazard sharps container</li> <li>• record keeping system</li> <li>• freezer and storage facilities for harvested velvet</li> <li>• velvet grading chart</li> <li>• grading equipment and NVAS tags.</li> </ul> </li> </ul>

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Animals may include:	<ul style="list-style-type: none"> <li>• all breeds of deer covered by the NVAS and quality assurance program of the DIAA.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for velveting	<p>1.1. Facilities, materials and equipment to be used in velveting are checked to ensure that they are available, serviceable, set up and functioning correctly and will contribute to a safe, hygienic and stress free environment for animals and operators.</p> <p>1.2. Veterinary supervision is arranged and appropriate drugs, equipment, emergency equipment and Personal Protective Equipment (PPE) are made ready for use.</p> <p>1.3. Animals selected for velveting are drafted and restrained according to animal welfare and occupational health and safety requirements.</p>
2. Harvest velvet	<p>2.1. Volume of analgesic or anaesthetic drug is determined for each animal and administered under supervision of attending veterinarian.</p> <p>2.2. Antler is surgically removed under supervision of attending veterinarian and following National Velvet Accreditation Scheme (NVAS) requirements, using hygienic techniques and applying appropriate standards.</p> <p>2.3. Human and animal emergency procedures are ready for implementation if required.</p> <p>2.4. Work is conducted according to Occupational Health and Safety (OHS) procedures.</p> <p>2.5. Information is collected during harvesting process for annual return/audit.</p> <p>2.6. Velvet is tagged for identification and cross-referenced to the animal velveted to allow for</p>

ELEMENT	PERFORMANCE CRITERIA
	full trace back.
3. Complete harvesting process	3.1. Animal is released into recovery area and monitored closely for adverse reactions, and appropriate action is taken as required. 3.2. Velveting area and equipment are cleaned and waste is disposed of according to organisational and OHS procedures. 3.3. Hazardous substances and used equipment are disposed of according to legislative requirements and codes of practice. 3.4. Equipment is stored, drug usage is recorded and remaining drugs are placed in a secure locked facility. 3.5. In the event of an animal's post-velveting death, industry procedures are followed.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- administering analgesics and anaesthetics under veterinary supervision
- complying with the NVAS and quality assurance program of the Deer Industry Association of Australia (DIAA)
- dealing with aggressive or difficult animals
- developing and maintaining a bona fide veterinarian-client working relationship
- handling and restraining animals
- implementing emergency response procedures such as cardiopulmonary resuscitation (CPR)
- performing unassisted deer velveting under veterinary supervision
- recognising stress and pain in deer and their effect during velveting
- setting up and maintaining a clean work environment
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <p>clarification, negotiating solutions and responding to a range of views</p> <ul style="list-style-type: none"> <li>• use numeracy skills to estimate, calculate and record complex workplace measures</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>

## AHCDES501A Design sustainable landscapes

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of designing sustainable landscapes and defines the standard required to: assess a land area for sustainable land use and threats to sustainability; protect water resources, riparian zones and vegetation in a development area; prepare a detailed plan or design, specifications and where appropriate a proposal or quotation for sustainable land improvement; design for the health and sustainability of soils and plants; outline an integrated approach to land and water management; conduct a sustainability audit.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the design for improvement of long-term ecological sustainability of landscapes, land under production, land areas in business use, natural resource areas and recreational amenity spaces essential for long-term economic and cultural viability.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess requirements for sustainable land use	1.1. Client is consulted to establish a brief for the design. 1.2. Legislative and regulatory requirements are researched, identified and documented in the improvement plan. 1.3. Specific requirements for sustainability are identified from the brief, business plan and management plan or policy documentation. 1.4. The land area is assessed for biophysical factors, biodiversity, historical and cultural attributes, services, site modifications and threats to sustainability. 1.5. Environmental implications of the planned works are identified and, if necessary, reported to relevant personnel for further research and recommendations.
2. Prepare an integrated design to improve land use	2.1. Concept plan for improvement is developed that reflects client preferences and requirements and takes into account heritage issues, site factors and any identified environmental requirements and presented to the client/land owner for discussion and approval. 2.2. Other professionals are consulted to assist in research and planning of works in areas of technical expertise, energy efficiency and use, current technologies and legislative and enterprise requirements.

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3.Design considerations for products, materials and finishes are efficient, low risk and cyclic and are confirmed available from local sources.</p> <p>2.4.Resources, products, equipment and machinery required for the works are evaluated for their impact on the sustainable use of the site.</p> <p>2.5.Plants and soils are selected for their integrated roles for the designed outcomes in the specific site conditions, system of irrigation and environmental parameters.</p> <p>2.6.Environmental conditions are reviewed for a functional analysis of the site and the planned design.</p> <p>2.7.Detailed plan or design, specifications and quotation are prepared and are presented to the client/land owner for acceptance.</p>
3. Plan the implementation into the design	<p>3.1.Staged implementation and development are outlined with appropriate access for future works.</p> <p>3.2.Timelines for development are incorporated taking into account the needs of the implementation plan and principles of sustainability.</p> <p>3.3.Schedules for planting and post-planting care are determined in accordance with the requirements of the plant species and cultivars, site conditions, and any other planning requirements.</p> <p>3.4.Protection of water resources, riparian zones, specified trees and existing vegetation are integrated into the design plan.</p> <p>3.5.Chemical, non-chemical, amelioration application and waste disposal procedures and processes are reviewed to select designs of minimal environmental consequence and minimise potential contamination of soils and ground water.</p> <p>3.6.Implementation outline is reviewed for integration of approach to land and water management.</p>
4. Audit the implementation for sustainability of use	<p>4.1.All work materials, waste and debris from site works have low risk and energy efficient disposal methods.</p> <p>4.2.Soil and ground water quality are sampled and tested and recommendations implemented.</p> <p>4.3.Soil conservation measures and erosion sediment controls are confirmed.</p> <p>4.4.Protection measures for specified trees, protected fauna and areas and objects of cultural significance</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>are verified.</p> <p>4.5. Biodiversity, heritage and cultural attributes, soil and water quality are maintained or improved.</p> <p>4.6. Client is informed and provided with a report according to the brief or contractual requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- implement sustainable practices
- identify and select an extensive range of plants, shrubs and trees
- identify and select an extensive range of soils and growing media
- select plants and soils for their integrated functional roles
- research, interpret and apply appropriate legislation and regulations
- use a range of graphic techniques for illustrating landscape design components
- perform a land area assessment
- conduct soil and water quality tests
- design plans for sustainable improvement
- interpret specifications and plans
- assess landscape sites
- identify hazards and assess risk
- conduct a sustainability audit
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- specific requirements for sustainability

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• sustainable land and water use principles and practices applicable in the region</li> <li>• types, properties and characteristics of a wide range of soils and growing media</li> <li>• identification and selection of an extensive range of soils, growing media, plants, shrubs and trees</li> <li>• ethnobotany, plant physiology, taxonomy and nomenclature</li> <li>• surface hydrology</li> <li>• assessment techniques</li> <li>• irrigation practices</li> <li>• environmental controls and codes of practice applicable to the business and to the improvement works</li> <li>• relevant legislation and regulations relating to soil and water degradation issues and construction</li> <li>• specific legislation and regulations for landscape design and development</li> <li>• relevant Occupational Health and Safety (OHS) legislation and regulations.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assess a land area for sustainable land use and threats to sustainability</li> <li>• protect water resources, riparian zones and vegetation in a development area</li> <li>• prepare a detailed plan or design, specifications and where appropriate a proposal or quotation for sustainable land improvement</li> <li>• design for the health and sustainability of soils and plants</li> <li>• outline an integrated approach to land and water</li> </ul>

## AHCDES502A Prepare a landscape project design

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of preparing a landscape design for a large project and defines the standard required to: consult with client/s to develop a landscape design brief; apply landscape design criteria and principles to produce a scaled and annotated designs including details of hard landscaping construction features; specify plants and other hard landscaping requirements including demolition and removal of existing features, installation of new works, irrigation and hard landscaping components; prepare a concept design and specifications; document a final design plan.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to landscape designers involved in the process of preparation of a landscape design for a large project on residential, commercial or public open spaces.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Develop a design brief	1.1. Client is consulted to establish the purpose and requirements of design. 1.2. Relevant architectural designs, styles and details are interpreted and incorporated. 1.3. Design brief is developed and agreed with the client. 1.4. Cost structures and timelines are negotiated with the client.
2. Assess the project site	2.1. Site where the landscape project is to be located is inspected. 2.2. Physical elements and features of the site are recorded on a base plan. 2.3. Assessment of soil, topography, aspect, existing vegetation and climatic factors is analysed and recorded on a base plan. 2.4. Functional analysis of the site is completed and recorded on the base plan. 2.5. Other relevant information is assessed and recorded on a base plan. 2.6. Legal requirements and constraints on development are assessed.
3. Prepare a concept design	3.1. Concept design is prepared to illustrate location and layout of proposed landscape project works according to the design brief.

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2.Consultation with the client is undertaken to establish agreement on options and approaches for development.</p> <p>3.3.Planting schedules are compiled for incorporation into the design plan.</p> <p>3.4.Construction techniques are researched and prepared according to the design brief.</p> <p>3.5.Consistent graphic styles are used to present the concept design.</p>
4. Produce a final design	<p>4.1.Specifications and notes are included on the design to assist in interpretation.</p> <p>4.2.Appropriate construction and engineering principles are applied to landscape design according to industry standards.</p> <p>4.3.Detailed design plan is finalised and documented according to the design brief, concept design and client consultations.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- design scale concept and/or construction plans including sections and elevations
- use a range of graphic techniques for illustrating landscape design components
- research, interpret and apply appropriate legislation and regulations
- identify and select an extensive range of plants, shrubs and trees
- design plans detailing construction techniques
- identify dimensions and qualities of materials
- interpret architectural designs and details
- specify landscape materials and finishes
- determine survey levels and site grading
- implement professional practices
- design sustainable landscapes
- prepare bills of quantities
- assess landscape sites
- operate Computer-Aided Design (CAD) software

## REQUIRED SKILLS AND KNOWLEDGE

- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- landscape design principles
- landscape design process
- construction and engineering principles
- principles of surveying
- plant identification, selection and culture
- ethno botany and botanical geography, plant physiology, taxonomy and nomenclature
- identification and treatment of soils
- drafting techniques
- environmental implications of landscape project works
- federal, state and territory legislation
- local government regulations and processes
- Occupational Health and Safety (OHS) risk in office and outdoor environments
- cost estimating.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance

<b>EVIDENCE GUIDE</b>	
	<p>criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• consult with client/s to develop a landscape design brief</li> <li>• apply landscape design criteria and principles to produce a scaled and annotated designs including details of hard landscaping construction features</li> <li>• specify plants and other hard landscaping requirements including demolition and removal of existing features, installation of new works, irrigation and hard landscaping components</li> <li>• prepare a concept design and specifications</li> <li>• document a final design plan.</li> </ul>

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Collect and collate initial information	<p>1.1. Client-stakeholder is consulted and objectives are confirmed.</p> <p>1.2. Site plans and maps are sourced and verified.</p> <p>1.3. Required resources are identified and acquired.</p> <p>1.4. Base plan is prepared of the site and relevant surrounds.</p> <p>1.5. Location, ownership and site boundaries are verified.</p> <p>1.6. Current land use and environmental threats and problems are identified and recorded.</p> <p>1.7. Covenants that could affect the project, design or report are identified and recorded.</p> <p>1.8. Climate and weather conditions are ascertained from historical data.</p>
2. Undertake initial site visit	<p>2.1. Site entry conditions are met and approval obtained if required.</p> <p>2.2. Site hazards are identified and risk assessed for current visit.</p> <p>2.3. Site orientation is undertaken.</p> <p>2.4. Existing on-site and adjacent site features that may impact upon the project, plan or report objectives are identified and recorded.</p> <p>2.5. Site dimensions, levels and gradients are identified, and measured and recorded, or confirmed.</p>
3. Compile a site inventory	<p>3.1. Soil and growing media types, properties and relevant physical characteristics are identified and recorded on site inventory.</p> <p>3.2. The species, health, age and location of vegetation</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>are recorded</p> <p>3.3. Structural elements are located and existing services and facilities confirmed.</p> <p>3.4. The presence, location and/or extent of other relevant site constraints are recorded.</p> <p>3.5. Areas of homogeneous soils and growing media are sampled for testing by others for analysis of soil content and contamination on request by the client or as required in the brief provided.</p>
<p>4. Determine the impact of development for trees on site</p>	<p>4.1. Consulting arborist report is obtained to assess trees on site.</p> <p>4.2. Tree protection zones are determined and recorded.</p> <p>4.3. Impact of proposed development on each tree is documented.</p> <p>4.4. Trees exempt from approval requirements are identified.</p> <p>4.5. Trees impacted by development are identified and located on the site plan according to regulations applying in the local jurisdiction.</p> <p>4.6. Trees identified by the consultant arborist report as requiring pruning or removal are included in a development application.</p>
<p>5. Document a site assessment report</p>	<p>5.1. Site information is documented into a site assessment report or site plan.</p> <p>5.2. Assessment report incorporates all relevant data from the site assessment in line with client needs and the requirements of relevant legislation and regulations.</p> <p>5.3. Soil and growing media tests results are interpreted and analysed for further testing requirements.</p> <p>5.4. Specific recommendations of remedial action for site problems are provided and recorded.</p> <p>5.5. Recommendations for appropriate risk controls of site hazards are formulated and documented.</p> <p>5.6. Survey and assessment data are stored and maintained as part of professional practice.</p> <p>5.7. Client-stakeholder is informed and advised of the content and implications of the report and a copy is presented.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- consult with and advise clients
- interpret and produce plans
- identify vegetation and soils
- sampling soils and growing media
- analysing laboratory results
- obtain a consultant arborist report
- exhibit professional work practices
- assess risk
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- protocols of site access
- identification of a wide range of vegetation common within the region
- botanical and regionally accepted common names, age, health and conditions of vegetation
- soil and growing media types, structure, texture and pH
- soil chemical and physical properties
- basic soil field tests and soil sampling techniques
- techniques to ameliorate soil properties
- plant nutrition
- measurement and surveying techniques
- interpretation of results from assessment and testing
- current land use and environmental threats and problems to site
- occupational health and safety hazards associated with undertaking a site assessment
- local, state and federal laws and regulations.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• verify existing site details</li> <li>• collect and collate information on site features</li> <li>• carry out a site assessment</li> <li>• record assessment data and develop recommendations to rectify identified problems</li> <li>• document assessment data and recommendations in a site plan or assessment report</li> <li>• maintain assessment data records.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Site assessment may include:	<ul style="list-style-type: none"> <li>• all vegetation forms.</li> </ul>
Site assessment reports may include:	<ul style="list-style-type: none"> <li>• reports and plans such as landscape and project designs</li> <li>• flora and fauna assessments</li> <li>• site audits</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• development applications</li> <li>• vegetation assessment and management reports</li> <li>• biodiversity assessments</li> <li>• restoration projects</li> <li>• expert witness statements.</li> </ul>

## AHCDES504A Design for construction of landscape features

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of designing for the construction of landscape features and defines the standard required to: interpret detail architectural and landscape design drawings; construct a small scale model; specify dimensions, footings and qualities of materials; develop a concept design for the construction; draw plans to construction standards; and develop a final design and project report.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to the process of designing for the construction of landscape features.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Interpret detail architectural and landscape design drawings	<p>1.1.Detail architectural and landscape design drawings are interpreted for construction features.</p> <p>1.2.Survey levels are defined and any site gradients recorded.</p> <p>1.3.A small scale model is constructed from detail drawings.</p> <p>1.4.Detail plans are drawn from pre-constructed landscape features, including cross-sections.</p> <p>1.5.Drainage plans for a green site and a developed site are drawn to construction standards.</p>
2. Design aspects of construction for landscape features in a range of materials	<p>2.1.A concept design is developed for the construction of the selected landscape feature.</p> <p>2.2.Aspects of construction for landscape features are illustrated.</p> <p>2.3.A range of materials used in the construction of landscape features are utilised into the design.</p> <p>2.4.Appropriate plants are selected for incorporation into the design.</p>
3. Specify dimensions, footings and qualities of materials	<p>3.1.The difference in quality of available materials is determined and quality criterion specified in the design.</p> <p>3.2.Dimensions, footings and qualities of materials selected are identified and specified.</p> <p>3.3.The consequences and costs involved in using poor quality materials are determined.</p> <p>3.4.The construction standards are specified in the design.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Develop the required project management skills	4.1. A site strategy is developed for the design project. 4.2. Timelines for the project are identified and documented. 4.3. Project costs are determined and recorded. 4.4. Contractors on site are consulted and issues resolved. 4.5. A final design and project report are developed and documented.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify and specify dimensions, footings and quantities of materials
- interpret detail architectural and landscape design drawings
- interpret surveying and drainage plans
- design components of construction
- identify and document project timelines
- calculate project costs
- liaise with contractors
- select appropriate materials and plants
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- construction standards
- site services
- principles of surveying
- selection of appropriate plants and materials

**REQUIRED SKILLS AND KNOWLEDGE**

- drainage issues
- available resources to resolve drainage problems
- paving process
- stone walling, including gabions
- materials available in the marketplace
- drainage issues and available resources to resolve drainage problems
- site services, for example, electrical and water provision
- essentials of retaining walls
- plant specifications.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- interpret detail architectural and landscape design drawings
- construct a small scale model
- specify dimensions, footings and qualities of materials
- develop a concept design for the construction
- draw plans to construction standards
- develop a final design and project report.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Landscape designs may include:	<ul style="list-style-type: none"> <li>• a wide range of contexts and styles of presentation</li> <li>• design elements</li> <li>• styles</li> <li>• design plans and models.</li> </ul>
Graphics may include:	<ul style="list-style-type: none"> <li>• a wide range of manual and electronic drafting techniques</li> <li>• computer-assisted drawings (CAD).</li> </ul>
Constructions may include:	<ul style="list-style-type: none"> <li>• all landscape construction works.</li> </ul>
Sites may include:	<ul style="list-style-type: none"> <li>• all areas of project works.</li> </ul>
Landscape features may include:	<ul style="list-style-type: none"> <li>• all constructions, installations and structures.</li> </ul>

## AHCDRG201A Maintain drainage systems

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of carrying out routine maintenance activities for drainage systems and defines the standard required to: carry out cleaning and maintenance of drainage systems; inspect and maintain simple drainage system components; monitor and control weeds and silt build up; inspect components for wear and record and report damage, blockages and leakages.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in all industry sectors maintaining drainage systems usually working under supervision in a support role as directed.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Inspect drainage systems	<p>1.1. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p> <p>1.2. Personal Protective Equipment (PPE) is used and maintained according to procedures.</p> <p>1.3. Drainage system is visually inspected for blockages, leaks and operating faults.</p>
2. Maintain system components	<p>2.1. Components are inspected for wear or blockage.</p> <p>2.2. Mechanical equipment is serviced as directed.</p> <p>2.3. Simple components are replaced as directed.</p>
3. Remove silt and weed growth	<p>3.1. Silt is cleaned from channels, drains, sumps and crossings.</p> <p>3.2. Weed growth is removed as directed.</p> <p>3.3. Drainage system is flushed.</p> <p>3.4. Unobstructed water flow is observed through channels and from outlets.</p>
4. Record and report maintenance activities	<p>4.1. Blockage or leakage is recorded by type and location of the section of the system affected.</p> <p>4.2. Damaged or faulty equipment is recorded and reported.</p> <p>4.3. All routine maintenance activities are recorded and reported.</p> <p>4.4. Drainage system is checked regularly according to directions.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards
- follow safe work practices relating to drainage system maintenance
- read and follow operational procedures for drainage system maintenance
- record and report maintenance observations and activities
- use hand or powered equipment
- use a range of weed control methods
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- basic types of drainage systems
- drainage system cleaning procedures
- OHS procedures relating to drainage system maintenance
- manual, mechanical and chemical weed control methods
- equipment used to clean and maintain drainage systems
- legislation regarding the use of chemicals near waterways
- disposal procedures for chemical containers and residues, oils/grease and used parts
- environmental impacts of drainage system maintenance.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for drainage system installation activities	<p>1.1.The construction site for the drainage system and construction method is identified according to the site and drainage system plans and enterprise work procedures.</p> <p>1.2.Materials, tools, equipment and machinery are selected according to drainage system design requirements and enterprise work procedures.</p> <p>1.3.Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturer's specifications and enterprise work procedures.</p> <p>1.4.Occupational Health and Safety (OHS) hazards are identified, risks assessed and risk controls implemented.</p> <p>1.5.Suitable safety and Personal Protective Equipment (PPE) are selected, used and maintained.</p>
2. Co-ordinate installation work	<p>2.1.Enterprise work team, contractors and design consultants are identified and work tasks are co-ordinated in a sequential, timely and effective manner in consultation with the supervisor.</p> <p>2.2.Installation of the drainage system is undertaken according to OHS requirements and with due consideration of the environmental implications and relevant legislation and regulations.</p> <p>2.3.A clean and safe work area is maintained throughout and on completion of work.</p>
3. Prepare the site for installation of	<p>3.1.Symbols and terminology are interpreted to ensure the concept of the drainage system plan is clearly</p>

ELEMENT	PERFORMANCE CRITERIA
drainage system	<p>understood according to industry practice.</p> <p>3.2. Layout of services is identified, depths checked against the site or drainage system plan and discrepancies are reported to the supervisor and the relevant authority.</p> <p>3.3. Survey, measurement and marking out of the site and confirmation of soil characteristics relevant to the planned drainage system are completed according to plan specifications and enterprise work procedures.</p>
4. Undertake installation of drainage system	<p>4.1. Excavations are completed without damage to services, facilities, features and established plants according to plan specifications and enterprise work procedures.</p> <p>4.2. The drainage system is installed according to the drainage system plan and enterprise work procedures.</p> <p>4.3. The drainage system is tested for configuration, flow rates and capacity consistent with the drainage system plan and according to enterprise work procedures.</p> <p>4.4. The supervisor is consulted and remedial action is taken when the drainage system operation does not meet the plan specifications.</p>
5. Complete installation of drainage system	<p>5.1. Earthworks are finished off to the plan specifications and enterprise work procedures.</p> <p>5.2. The site is restored and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to enterprise work procedures.</p> <p>5.3. Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures.</p> <p>5.4. Work outcomes are recorded or reported to the supervisor according to enterprise work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- identify hazards and implement safe work procedures
- set out drainage system works
- level and align earthworks
- use equipment, tools and machinery
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- the purposes of drainage systems and the application of drainage system plans to the physical situation
- drain types, components and installation techniques
- environmental impacts of irrigation and drainage systems
- soil characteristics
- enterprise OHS procedures
- environmental impacts of installing drainage systems.

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess drainage and collection systems	<p>1.1.A visual inspection is undertaken to determine damaged or broken components and results are recorded in accordance with Occupational Health and Safety (OHS) and enterprise policy and procedures.</p> <p>1.2.Areas being drained are inspected for signs of water pooling and problems are recorded in accordance with OHS and enterprise policy and procedures.</p> <p>1.3.Measurements are taken with appropriate equipment to determine drainage performance.</p> <p>1.4.Drainage/tail water quality is measured in accordance with OHS and enterprise policy and procedures.</p> <p>1.5.Water table depth is measured where required in accordance with OHS and enterprise policy and procedures.</p> <p>1.6.Soil salinity is measured where required in accordance with OHS and enterprise policy and procedures.</p> <p>1.7.Factors external to the system, which may cause interference, are identified and recorded in accordance with OHS and enterprise policy and procedures.</p>
2. Monitor supply of equipment and spare parts	<p>2.1.Supply and part usage are recorded in accordance with enterprise policy and procedures.</p> <p>2.2.Purchases of spare parts and materials are within budget constraints.</p> <p>2.3.Parts requirements outside of budget constraints are reported.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4.Purchases and orders are recorded in accordance with enterprise procedures and systems.
3. Record and report system performance status	3.1.Water quality is recorded in accordance with enterprise procedures. 3.2.Water table depth, soil moisture and salinity are recorded in accordance with enterprise procedures. 3.3.Strategies that minimise the negative environmental impacts and maximise the positive impacts of the drainage system, are documented.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- apply measuring and testing techniques
- identify adverse environmental impacts of drainage systems and appropriate remedial action
- use computers for recording and reporting drainage system data
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- OHS guidelines
- measuring and monitoring procedures for factors contributing to drainage system performance
- positive and negative environmental impacts of drainage systems

**REQUIRED SKILLS AND KNOWLEDGE**

- water table and salinity measures
- water quality monitoring methods and techniques
- soil moisture measurement procedures
- water authority standards and procedures
- enterprise policies and procedures
- environmental role of drainage systems.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify and correcting system problems
- measure, record and report soil moisture, salinity and water table depth to determine system performance and efficiency
- apply measuring and testing techniques
- record and report system performance
- use computers for recording and reporting drainage system data.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan job	<p>1.1. Equipment is selected and checked for safe operation.</p> <p>1.2. Appropriate personal protective equipment and tools are selected and used according to Occupational Health and Safety (OHS) requirements.</p>
2. Inspect site	<p>2.1. Site is inspected to locate blocked section of drainage lines.</p> <p>2.2. Work requirements and responsibility for repair is determined and appropriate authorities/persons notified of the intention to commence work.</p>
3. Determine access to drainage lines	<p>3.1. Plan of plumbing system is determined and access points located.</p> <p>3.2. Digging is carried out without unnecessary damage to buildings, site, environment or existing fixtures/fittings.</p>
4. Carry out job	<p>4.1. Manual lifting and handling techniques are used according to OHS requirements.</p> <p>4.2. Hand tools and equipment are selected to perform work.</p> <p>4.3. Mechanical equipment is assembled and used according to manufacturer's instructions and OHS requirements.</p> <p>4.4. Access to drainage lines is obtained to allow blockage to be cleared.</p> <p>4.5. Blockage is cleared or blocked section is replaced according to enterprise, environmental and OHS procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Check job	5.1. Drainage line is tested to confirm blockage is cleared from pipe system. 5.2. Drainage line is repaired/resealed to permit normal use. 5.3. Relevant persons/authorities are advised that repairs have been completed and the drainage line has been commissioned for use.
6. Clean up site, materials and equipment	6.1. Work area is cleaned and aligned, with debris/waste disposed of according to enterprise, environmental and OHS procedures. 6.2. Materials and equipment are maintained according to enterprise, environmental and OHS procedures, and returned to store.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- isolate appliances/fixtures/fittings and related assemblies (where required)
- repair or remove blockages
- use manual and mechanical drain clearing equipment
- level and align site
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- types and operational parameters of drains

**REQUIRED SKILLS AND KNOWLEDGE**

- components used in drainage systems
- isolation processes and procedures
- levelling and alignment processes
- regulatory requirements, codes of practice and relevant enterprise service standards relating to blockage removal, disconnection and reconnection activities
- environmental impacts of drainage systems
- application of OHS procedures when locating and clearing line blockages, use of personal protective equipment and materials handling.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- plan and prepare for the work
- inspect the site to determine access to drainage lines
- isolate appliances/fixtures/fittings and related assemblies (where required)
- use manual and mechanical drain clearing equipment
- test the system and clean up after locating and clearing any blockages.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Drainage systems may include:	<ul style="list-style-type: none"> <li>• surface drains</li> <li>• culverts</li> <li>• mole drains</li> <li>• sand slit</li> <li>• sub-surface traps</li> <li>• pit and trap systems</li> <li>• dune and swale systems</li> <li>• reed beds</li> <li>• water-recycling pumps and baffles.</li> </ul>

## AHCDRG501A Design drainage systems

### Modification History

Not Applicable

### Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit covers the process of identifying design requirements, determining specifications for drainage systems, and designing drainage systems and defines the standard required to: develop specifications for water transfer, recharge, reuse and harvesting systems; assess the requirements for pumping capacity in a drainage system and power requirements; identify performance indicators for the drainage system; predict volumes and rates of surface run-off and system leakage; design a drainage system that factors in the characteristics of the irrigated landscape and soil.</p>
-------------------------------	--

### Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit applies to enterprise managers and technical design personnel who identify design requirements, determine specifications for drainage systems and design drainage systems.</p>
---------------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<p><b>Prerequisite units</b></p>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine design requirements	<p>1.1. Water transfer, recharge, reuse and harvesting systems are designed to conserve natural resources.</p> <p>1.2. The process of collecting or storing water does not degrade the water quality for the enterprise or the environment.</p> <p>1.3. Construction specifications define the work required to make suitable water available to the enterprise in accordance with environmental and Occupational Health and Safety (OHS) requirements.</p> <p>1.4. Environmentally sensitive areas are identified and protected according to local, State and National legislation.</p> <p>1.5. Design calculations and decisions are documented to enterprise requirements.</p>
2. Define pumping and power systems	<p>2.1. Pumps are selected to move water efficiently when needed to water storage or treatment, at the flow and pressure required to design specifications.</p> <p>2.2. The pump motor combinations are efficient, and the pumps are reliable, functional, serviceable and flexible for the intended application.</p> <p>2.3. Energy requirements are determined, and layout of electricity lines are determined and checked with local authority.</p> <p>2.4. The relationship between capital and operational</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>costs are optimised including a comparison of energy sources.</p> <p>2.5.Structures, valves and accessories are selected and integrated into a functional system that can be monitored and maintained according to enterprise guidelines.</p> <p>2.6.Performance indicators, design calculations and decisions are documented according to enterprise guidelines.</p> <p>2.7.Construction specifications define work required to make suitable pumping and power system available to enterprise.</p> <p>2.8.Power supply design specification is checked with power authorities.</p>
<p>3. Design a drainage system</p>	<p>3.1.Regional geology and geography is investigated to predict drainage parameters.</p> <p>3.2.Site investigations to assess depth of clay, depth of ground water, soil and water salinity, and structural or chemical impediments are used to determine the most cost effective drainage system.</p> <p>3.3.Predictions of leaching fractions and salt movements are documented, and soil amelioration and drainage management plans are developed.</p> <p>3.4.The need for leachate interception and dewatering system is determined and if required, construction specification prepared for interception and collection, disposal, reuse or recycle.</p> <p>3.5.Drains and structures are capable of carrying the design water volumes and intensities according to enterprise standards.</p> <p>3.6.Damage from water logging is minimised according to enterprise standards.</p> <p>3.7.Hydrological calculations predict volumes and rates of surface run-off according to enterprise standards.</p>
<p>4. Determine capital expense budget</p>	<p>4.1.Design calculations and decisions are documented and relevant information is communicated clearly through plans, specifications and manuals.</p> <p>4.2.Design output is checked by a competent designer against enterprise objectives.</p> <p>4.3.Materials requirements are determined and documented from plans and specifications.</p> <p>4.4.Labour requirements are estimated based upon</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>documented work schedule with reasonable allowance for variances in work schedules.</p> <p>4.5. Costing attributed to each component is based upon quoted information from suppliers, or sound analysis of individual elements.</p>
5. Determine operating expense budget	5.1. Operating expense budget indicates all expenses applicable to the completed drainage system.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect and analyse information
- identify adverse environmental impacts of drainage and appropriate remedial action
- identify design requirements
- complete hydrological calculations
- develop specifications
- develop budgets
- develop and implement relevant enterprise OHS and environmental procedures
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- design processes
- developments in drainage technology
- leaching fractions and salt movements prediction
- monitoring systems

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• waste management and environmental issues</li> <li>• purpose of leachate interception and dewatering systems</li> <li>• budgeting, contractual development and obligations</li> <li>• environmental impacts of drainage</li> <li>• cost/benefit analysis</li> <li>• enterprise policies and procedures</li> <li>• water transfer, recharge, reuse and harvesting systems.</li> <li>• OHS and environmental protection legislation.</li> </ul>

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for milking	<p>1.1. Dairy sheds, yards and equipment are prepared for milking operations according to supervisor's instructions and industry requirements.</p> <p>1.2. Teat sprays are prepared according to manufacturer's specifications and supervisor's instructions.</p> <p>1.3. Livestock are moved and yarded in readiness for milking operations.</p> <p>1.4. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p>
2. Carry out milking	<p>2.1. Livestock are moved into position and checked and prepared for milking according to industry and hygiene standards.</p> <p>2.2. Livestock unsuitable for milking are segregated and reported to the supervisor.</p> <p>2.3. Milking is conducted hygienically and is monitored to prevent over-milking.</p> <p>2.4. Unsuitable milk is identified and isolated from bulk supplies according to industry standards and the supervisor's direction.</p> <p>2.5. Livestock health problems such as mastitis are identified and reported to the supervisor for treatment.</p> <p>2.6. Livestock on heat are reported to the supervisor if required.</p> <p>2.7. Safe workplace practices are observed according to OHS and enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Complete milking operation	3.1.Livestock are safely moved and returned to paddocks without causing undue stress or injury to animal or handler. 3.2.Suitable detergents and cleaning supplies are selected according to the supervisor's instructions. 3.3.Basic cleaning procedures are carried out to maintain hygiene standards of dairy facilities according to OHS, industry and enterprise requirements. 3.4.Machinery and equipment malfunctions are identified and reported to the supervisor for repair or replacement.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify abnormal behaviour or health problems in livestock including mastitis
- calculate livestock numbers and measure milk production
- prepare cows for milking
- undertake milking procedures
- move livestock to pastures
- carry out cleaning and hygiene procedures for milking equipment
- identify machinery faults and malfunctions
- interpret and apply task instructions
- read and comprehend written information and instructions
- identify hazards and implement safe work procedures
- communicate with the supervisor and staff
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- functions, capacities and cleaning requirements of milking machinery and equipment
- livestock behavioural characteristics and handling techniques
- identification of animal health problems encountered during milking such as

**REQUIRED SKILLS AND KNOWLEDGE**

- mastitis
- lactation and milking routines
- udder development and secretion of milk
- milk quality attributes and quality assurance standards
- dairy hygiene requirements
- reporting requirements and procedures
- OHS legislative requirements
- environmental impacts and procedures for milking livestock.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare dairy facilities and equipment to safe and hygienic standards
- operate milking equipment in an effective and efficient manner
- clean dairy facilities and equipment to industry standards
- recognise and isolate unsuitable milk
- identify sickness or abnormal behaviour in livestock.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Milking may include:	<ul style="list-style-type: none"> <li>dairy cattle</li> <li>sheep or goats in the range of dairy types and configurations.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine requirements	<p>1.1. Production requirements are identified and clarified according to enterprise objectives.</p> <p>1.2. Requirements for the maintenance of milk quality are identified and complied with according to industry standards.</p> <p>1.3. Resources and equipment requirements are determined and maintained according to enterprise budgetary constraints.</p>
2. Determine milking procedures	<p>2.1. Milking schedules and milking policy is determined according to enterprise requirements.</p> <p>2.2. Water supplies are checked for availability, and milking equipment is checked and adjusted, as required, to ensure correct operating order.</p> <p>2.3. Milking procedures are implemented under a range of conditions, with minimum stress to livestock and maximum yield within reasonable timeframes.</p> <p>2.4. Minor malfunctions of equipment or milking systems are rectified to manufacturer's specifications, and more complex repairs are reported for specialist attention.</p> <p>2.5. Occupational Health and Safety (OHS) hazards for milking are identified, risks assessed and risk controls are implemented.</p>
3. Implement livestock health treatment program	<p>3.1. Livestock health and condition is monitored according to health strategy and enterprise requirements.</p> <p>3.2. Livestock testing is carried out according to health strategy and remedial action is taken, as required,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to veterinary guidelines and enterprise requirements.</p> <p>3.3.Livestock health treatments during drying off are carried out as directed with minimal stress and weight loss according to veterinary guidelines and enterprise requirements.</p> <p>3.4.Handling practices are implemented to prevent cross-infection during milking operations according to enterprise requirements.</p> <p>3.5.Milk samples are taken in accordance with industry standards and guidelines and labelled correctly.</p> <p>3.6.Livestock health records are accurately maintained according to industry standards and enterprise requirements.</p>
4. Coordinate and monitor milking operations	<p>4.1.Milking procedures are monitored for efficiency, effectiveness and compliance with enterprise requirements.</p> <p>4.2.Milk quality is monitored and maintained according to industry standards and enterprise requirements.</p> <p>4.3.Costs are monitored to ensure operations are completed and maintained within budget.</p> <p>4.4.Work areas and equipment are cleaned to industry standards and waste disposed of in an environmentally responsible manner.</p> <p>4.5.Relevant data is documented for analysis and effecting planning management.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- operate milking and refrigeration equipment
- maintain satisfactory milk quality
- analyse and interpret livestock testing data
- monitor livestock health and identify health problems
- identify hazards and implement safe operating procedures

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• determine machinery maintenance requirements</li> <li>• anticipate emergencies and remove hazards in the workplace</li> <li>• implement strict standards of hygiene</li> <li>• use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required</li> <li>• use numeracy skills to estimate, calculate and record routine workplace measures</li> <li>• use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• functions and controls of the components of milk harvesting, cooling and refrigeration, and ancillary equipment</li> <li>• mechanical operation of a milking plant and the steps necessary for operation</li> <li>• industry standards and relevant codes of practice with regard to milking operations</li> <li>• procedures for testing milk quality</li> <li>• causes of poor milk quality</li> <li>• type and control of health problems in dairy cattle including mastitis prevention</li> <li>• factors impacting on livestock stress and minimisation procedures</li> <li>• water quality and affecting factors</li> <li>• hygiene requirements and cleaning systems used for milking equipment</li> <li>• livestock behaviour and nutritional requirements</li> <li>• lactation in livestock and effect of body reserves, and dietary energy intake on lactation</li> <li>• milk quality tests</li> <li>• relevant OHS legislation, regulations and codes of practice.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to work with dairy waste disposal equipment	<p>1.1. Work to be undertaken is interpreted from the work program where necessary, and confirmed with management.</p> <p>1.2. Discussions are held with other workers who may be affected by the maintenance activities to ensure continued smooth operation of the production process.</p> <p>1.3. OHS hazards are identified, risks assessed and suitable controls implemented.</p> <p>1.4. Suitable Personal Protective Equipment (PPE) is selected, used and maintained.</p> <p>1.5. Tools and equipment suitable for the work to be undertaken are selected, checked, and maintained if necessary.</p>
2. Maintain and operate a dairy waste storage and disposal system	<p>2.1. Organisational OHS procedures, practices, policies and precautions are observed and followed, including the use of PPE.</p> <p>2.2. Dairy waste removal and disposal equipment is correctly serviced and maintained.</p> <p>2.3. Dairy waste disposal systems are used according to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>system design in compliance with approval granted by local government and the State environment protection authority.</p> <p>2.4. Recognised techniques for irrigation from dairy waste storages are carried out according to establishment practice.</p> <p>2.5. In-shed dairy waste pits are flushed and drained as required.</p>
3. Monitor dairy waste disposal system	<p>3.1. Organisational OHS procedures, practices, policies and precautions are observed and followed, including the use of personal protective equipment.</p> <p>3.2. Flow rates, pit levels and equipment are regularly checked to maintain effective operation of the system.</p> <p>3.3. Cleaning procedures and hygiene practices are carried out according to established practice.</p> <p>3.4. Monitoring reflects an understanding of environmental duty of care.</p>
4. Conduct hygiene and administration activities	<p>4.1. Equipment is cleaned in accordance with manufacturer's specifications, organisational procedures and regulations.</p> <p>4.2. Attachments and other ancillary equipment are cleaned and stored in accordance with manufacturer's specifications, organisational procedures and regulations.</p> <p>4.3. All containers, leftover fluids, waste and debris from the operations are disposed of safely and appropriately.</p> <p>4.4. All required records and documentation are completed accurately and promptly in accordance with organisational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- operate dairy waste management systems in accordance with OHS and

<b>REQUIRED SKILLS AND KNOWLEDGE</b>	
<p>environmental legislation, regulations and codes of practice</p> <ul style="list-style-type: none"> <li>• maintain and monitor gauges and instruments that control the dairy waste recycling system</li> <li>• implement dairy waste management plans</li> <li>• observe, identify and react appropriately to environmental implications and OHS hazards</li> <li>• apply safe work procedures</li> <li>• use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required</li> <li>• use numeracy skills to estimate, calculate and record routine workplace measures</li> <li>• use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>

## AHCDRY401A Manage milking shed routines

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers managing milking shed routines and defines the standard required to: oversee the routine maintenance and service of milking equipment and replacement of consumables; oversee the conduct of milking operations; identify possible causes of decline in milk quality including animal infection and teat damage; identify and rectify faults in milking equipment; clean and disinfect milk area and equipment after milking; maintain records of the milking operation.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in the dairy industry managing in-shed milking operations including the oversight of routine maintenance procedures and replacement of consumables.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage routine maintenance	<p>1.1.Maintenance schedules are planned in accordance with manufacturer's recommendations and industry minimum standards.</p> <p>1.2.The programmed replacement of consumables is implemented in line with recorded usage and replacement schedule.</p> <p>1.3.Worn or unsafe components are identified and replaced as required.</p> <p>1.4.Milking equipment maintenance problems are identified, and strategies for their rectification are implemented.</p> <p>1.5.Specialised services are engaged for non-routine service and repairs.</p>
2. Manage shed milking routines	<p>2.1.Milking shed routines and schedules are determined in line with available labour and resources.</p> <p>2.2.Staff responsibilities are allocated and communicated to maximise labour efficiency and ensure safe systems of work within the milking shed.</p> <p>2.3.Milk production recording procedures are established and implemented.</p> <p>2.4.Industry or supplier quality assurance practices and procedures are utilised in programmed shed routines.</p>
3. Manage procedures for handling cows unsuitable for	<p>3.1.Shed procedures for the identification of cow herd health problems are established in line with industry guidelines.</p>

ELEMENT	PERFORMANCE CRITERIA
milking	3.2.Milk from at risk cows is isolated to maintain overall milk quality. 3.3.Appropriate treatments are selected and implemented according to veterinary advice. 3.4.Strategies for the isolation or drying off of at risk or mastitis infected cows are determined in consultation with appropriate specialist advice.
4. Maintain milk quality practice	4.1.In shed hygiene routines are determined according to standards for industry best practice. 4.2.Hygiene procedures are implemented to minimise cross infection and teat or udder damage. 4.3.Milk quality is constantly monitored to comply with specified supplier standards. 4.4.Milk cooling equipment and storage is regularly monitored to maximise milk quality. 4.5.Environmental implications of milking operations are identified and actions are put in place to minimise adverse effects.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- effectively and efficiently oversee the conduct of milking operations
- work in co-operation with dairy factory personnel to implement milk quality procedures
- identify possible causes of declines in milk quality
- oversee the routine maintenance and service of milking equipment and replacement of consumables
- identify hazards and oversee the adoption of safe work practices
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• milking equipment types and their components</li> <li>• factors that affect milk quality</li> <li>• characteristics of effective and efficient milking operations</li> <li>• possible causes of deterioration in milk quality</li> <li>• components/specification of milk quality assurance programs</li> <li>• cow health problems that affect milk quality</li> <li>• cow udder health treatments</li> <li>• safe work systems in the dairy</li> <li>• on-farm milk cooling procedures and practice.</li> </ul>

## Evidence Guide

<p><b>EVIDENCE GUIDE</b></p>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• oversee the routine maintenance and service of milking equipment and replacement of consumables.</li> <li>• oversee the conduct of milking operations</li> <li>• identify possible causes of decline in milk quality including animal infection and teat damage</li> <li>• identify faults in milking equipment and rectify</li> <li>• clean and disinfect milk area and equipment after milking</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>maintain records of the milking operation.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Milking facilities may include:	<ul style="list-style-type: none"> <li>all sizes, designs and types of milking facilities for cows, ewes and does.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for the handling of explosives	<p>1.1. Legislative requirements for the handling, storage and transport of explosives are identified and actioned in line with specified quantities of explosives.</p> <p>1.2. Signage and placarding on vehicles or storage facilities for explosives are prepared and displayed as directed by legislative requirements.</p> <p>1.3. Monitoring and recording systems for authorisation to handle, store and transport explosives are established according to legislative requirements.</p>
2. Transport explosives	<p>2.1. Arrangements to maintain the integrity and security of transported explosives are established in line with enterprise requirements.</p> <p>2.2. Security procedures to ensure explosives arrive at the destination intact according to specified time and condition are instituted.</p> <p>2.3. Workplace strategies to carry out emergency procedures as required are implemented in compliance with legislative requirements.</p> <p>2.4. Explosives are loaded and transported in accordance with all prevailing legislation and individual enterprise requirements.</p>
3. Store explosives	<p>3.1. The requirements for the safe and secure storage of explosives are defined and actioned in accordance with legislative requirements.</p> <p>3.2. Requirements for personnel authorised to gain access are defined according to legislative requirements.</p> <p>3.3. Security is monitored and maintained in accordance</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>with legislative requirements and the enterprise.</p> <p>3.4. Recording systems for the handling and storage of explosives products are accurately implemented in line with legislative requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- identify and accurately state the requirements for the handling, storage and transport of explosive products
- correctly identify essential components of requirements for the loading and transport of explosives
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- local conditions and factors in the handling, transporting and storage of explosives
- actual performance of correct loading and transporting components of explosive products
- care and preventive measures required to eliminate risk of fire and deterioration of stored materials
- procedures for buying commercial explosives and blasting agents from licensed dealers and Government agencies
- Australian Explosives Code (issued by Commonwealth Dept. of Transport and Regional Services)
- identification of defective or damaged explosives
- environmental conditions required for safe storage.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish monitoring and recording systems for handling, storing and transporting explosives according to legislative requirements</li> <li>• display placarding on vehicles transporting explosives</li> <li>• implement security procedures for all explosives on hand</li> <li>• develop procedures for dealing with an emergency with transported or stored explosives.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Security procedures and systems may include:	<ul style="list-style-type: none"> <li>• the provisions of AS Explosives Code Storage and Transport; Australian Code for the transport of explosives by Road and Rail (ATE Code); and/or other State or Territory</li> </ul>

<b>RANGE STATEMENT</b>	
	legislation. The Australian Standards relevant to this standard include AS2187.1 - 1998, Part 1: Storage and land transport. AS2187.2 - 1993, Explosives - Storage, transport and use. AS2187.0 - 1998, Explosives Glossary of terms. AS1216 1995, Class labels for dangerous goods, and/or in any the relevant State and Territory legislation.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify explosives applications	<p>1.1.The job application requiring the use of explosives is identified in consultation with the field manager or supervisor.</p> <p>1.2.The site for blasting is accurately identified and the surrounding area checked to confirm that all aspects of safety have been considered and actioned.</p> <p>1.3.Potential side effects of the blast are identified in consideration of all site characteristics and are used in the planning of blasting operations.</p> <p>1.4.Environmental implications of the intended explosives usage are considered in the planning of blasting activities.</p> <p>1.5.Alternatives to the use of explosives are considered in the planning of the application and are utilised as appropriate.</p>
2. Select explosives components	<p>2.1.Explosives are selected to match the application, site and identified hazards at the blasting site.</p> <p>2.2.The quantity of explosive energy required is established in line with the site characteristics and the designated application.</p> <p>2.3.Initiator device selection reflects industry best practice and is matched to explosives selection.</p> <p>2.4.Safety fuses are utilised as required to suit the application.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- examine explosives and determine their classification
- select explosives for particular tasks
- estimate the likely effect of explosives on structures, personnel and livestock in the site vicinity
- select appropriate fly-rock control devices, e.g., blasting mats as required
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- identification of the components of various explosive products
- indications for the uses of various explosive products
- performance of various explosive products, the behaviour of the substrate material (e.g., sand, soil, rock, etc.) when subject to blasting
- jobs requiring the use of explosives (e.g., blowing stumps, rabbit warrens, excavating a dam site and excavation requirements, fence post holes, tree or vine holes, rock floaters, etc.)
- particular properties of explosives/blasting agents and their suitability for particular purposes
- Australian Standards - A218
- 7.1 1998: Storage and land transport
- Australian Standards - A2187.2 1993: Explosives - storage, transport and use
- Australian Standards - A2187.0 1998: Explosives - Glossary of terms
- other State and Territory legislation.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish the need to use explosives</li> <li>• identify the risks and environmental implications of using explosives</li> <li>• select explosives and initiator devices to match the application, site and identified hazards at the blasting site</li> <li>• utilise safety fuses as required</li> <li>• select appropriate fly-rock control devices.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Types of explosive charges may include:	<ul style="list-style-type: none"> <li>• bulk charges that are commercially procured such as: <ul style="list-style-type: none"> <li>• explosives/blasting agents or ammonium nitrate/Fuel Oil (ANFO)</li> <li>• compounds mixed on site.</li> </ul> </li> <li>• explosive compounds such as: <ul style="list-style-type: none"> <li>• water gels</li> <li>• slurries</li> </ul> </li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• emulsions</li> <li>• ammonium nitrate explosives (ANFO)</li> <li>• black powder</li> <li>• special purpose explosives.</li> </ul>
Relevant legislation may include:	<ul style="list-style-type: none"> <li>• Australian Standards and legislation that relate to this standard are Australian Standards - A2187.1 1998: Storage and land transport. -----------------------------	--

### Elements and Performance Criteria Pre-Content

Not Applicable

### Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for blasting	1.1.Permits/ licences are obtained and approved warning signs installed and prominently displayed according to legislative requirements. 1.2.Property manager and relevant controlling authorities are notified of blasting plans and timing as required by legislation. 1.3.The area where the charges are to be used is cleared of stones and other potential missiles. 1.4.The blast site is cleared and made safe prior to charges being placed. 1.5.All explosive products are placed at the required safety distance from any identified hazards. 1.6.Appropriate holes are drilled/dug to place the charge(s) in line with blasting plans. 1.7.Drilling/digging equipment is removed to the prescribed safe distance in accordance with Australian Standards, Acts and Regulations. 1.8.Neighbours and members of the public likely to be concerned or disturbed by shock effects are advised of the blasting program.

ELEMENT	PERFORMANCE CRITERIA
2. Prepare explosives	<p>2.1. Quantities of explosives components required are calculated to match the application and prevailing conditions.</p> <p>2.2. Required explosives are assembled on site, or an explosives mix (of homogenous composition) is calculated precisely to ensure minimum residual mix to be destroyed, and is prepared in accordance with defined requirements.</p> <p>2.3. Required fusing and detonating components are assembled to match the established explosive requirements in preparation for blasting.</p>
3. Place charges	<p>3.1. Explosives elements are placed in holes or packed using safe working procedures and methods and in accordance with Australian Standards, Acts and Regulations.</p> <p>3.2. All holes are stemmed and tamped prior to the attachment of the firing system to maximise safety to all personnel and the efficiency of the blasting.</p> <p>3.3. Electrical firing circuits or fire fuses are checked for continuity and/or earthing as required.</p> <p>3.4. All extraneous materials are cleared from the site to safe distances in accordance with enterprise standards.</p> <p>3.5. Routine re-checks of the site and surrounds are performed to ensure that no non-essential personnel are endangered.</p> <p>3.6. Blasting mats or other control devices are placed as appropriate according to the blasting plan.</p> <p>3.7. Blast area is guarded according to legislative requirements and enterprise practices.</p>
4. Fire charges	<p>4.1. Prescribed warning notification procedures are carried out in accordance with enterprise and industry standards.</p> <p>4.2. The blasting site is re-checked to ensure correct placement of explosives and ensure that all safety procedures have been implemented according to supervisor or shot firer's instructions.</p> <p>4.3. Warning signals including audible and visual signals are issued to ensure that the site is clear.</p> <p>4.4. Firing procedures are initiated through manual or electric firing systems.</p>
5. Conduct post-firing	<p>5.1. Charges are counted as they fire or are inspected</p>

ELEMENT	PERFORMANCE CRITERIA
procedures	<p>safely post blasting to ensure that misfires are readily identified prior to all clear signals being given.</p> <p>5.2. Misfire procedures are implemented after prescribed timing and/or practice drills conducted using water jets or additional charges in accordance with Australian Standards, Acts and Regulations.</p> <p>5.3. Site checks are carried out to ensure that the site is safe and the all-clear signal is given in line with industry practice and legislative requirements.</p> <p>5.4. Surplus, unserviceable and defective explosives and detonators are destroyed or discarded or stored in line with prescribed procedures and in consideration of the environmental impact.</p> <p>5.5. Accurate records are completed and kept in line with enterprise and legislative requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- use explosives safely and effectively according to enterprise requirements
- dispose of surplus, defective or unwanted detonators or explosives safely
- correctly and uniformly mix explosives components
- apply the regulations relating to explosives use according to enterprise requirements
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- fire precautions and prevention procedures

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• appropriate explosives mixing procedures</li> <li>• the calculation of explosives quantities</li> <li>• explosives preparation, placement, firing and post firing procedures</li> <li>• the regulations relating to explosives use in the enterprise</li> <li>• relevant standards issued by Standards Association of Australia</li> <li>• related environmental issues and risks to livestock (including poisoning).</li> </ul>
---

## Evidence Guide

<p><b>EVIDENCE GUIDE</b></p>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p><b>Overview of assessment</b></p>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• obtain the appropriate permits and licenses for blasting</li> <li>• inform neighbours and post notices for blasting</li> <li>• prepare the blast site to place the explosive</li> <li>• prepare explosives and the initiator device according to best safety practice and regulations</li> <li>• place and fire charges according to best safety practice and regulations</li> <li>• conduct post-firing procedures for misfires, site checks, the disposal of surplus, unserviceable and defective explosives, and recording procedures.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole.

Requirements and scope may include:

- the Australian Standard relating to preparing and using explosives (AS 2187, Part 2 1993) which includes:
  - operations prior to charging
  - charging
  - preparation for firing
  - firing
  - misfires
  - preparation of primers.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for fauna recognition	<p>1.1. Range of fauna requiring recognition is identified according to supervisors/customers needs.</p> <p>1.2. Resources and equipment for use in recognition activity are located and identified.</p> <p>1.3. Available processes for fauna recognition are identified, selected and prepared for use.</p>
2. Recognise specified fauna	<p>2.1. Specified fauna are recognised and named according to their identifiable characteristics.</p> <p>2.2. Brief descriptions of fauna habits, characteristics and significant features are recorded.</p> <p>2.3. The advice of supervisors is sought when necessary and where appropriate in the identification activity.</p>
3. Complete identification of fauna	<p>3.1. Information about identified fauna is documented according to enterprise requirements and added to the reference collection.</p> <p>3.2. Field notes are updated as new fauna are recognised.</p> <p>3.3. Rare, uncommon or notifiable pest fauna are reported to supervisor according to enterprise guidelines.</p> <p>3.4. Handling, transporting and housing of fauna comply with fauna ethics guidelines, fauna welfare regulations and statutory requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- recognise fauna specific to the enterprise and describe their features and main occurrence within the enterprise
- use simple fauna identification keys
- communicate with customers and clients, interpret questions effectively, and provide limited advice and information about the fauna specific to the enterprise
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- fauna identification techniques and nomenclature
- fauna behaviour
- fauna habitats
- fauna tracks and traces
- techniques for observing, collecting/catching and reporting fauna
- enterprise procedures for obtaining and supplying advice and information about fauna
- enterprise expectations about the range and number of fauna to be recognised
- fauna welfare, Occupational Health and Safety (OHS) and environmental management requirements.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate

Competence in recognising fauna requires evidence that a person can identify and utilise available resources and

<b>EVIDENCE GUIDE</b>	
<b>competency in this unit</b>	<p>equipment to identify fauna accurately. The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• move through a nominated natural area in a manner suitable for fauna observation</li> <li>• select sites and situations where fauna are likely to be present</li> <li>• observe and record the details of fauna</li> <li>• survey a natural area causing minimal disruption to the environment and fauna that inhabit it.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Fauna will comprise those encountered within the industry workplace and may include:	<ul style="list-style-type: none"> <li>• native or introduced species and can include: <ul style="list-style-type: none"> <li>• mammals</li> <li>• birds</li> <li>• reptiles</li> <li>• amphibians</li> <li>• fish</li> <li>• arthropods</li> <li>• micro fauna.</li> </ul> </li> </ul>

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Evaluate wildlife emergency	<p>1.1.Nature of emergency is investigated from eyewitness reports and/or inspection to determine what procedures should be implemented.</p> <p>1.2.Assessment of the incident is made to identify key factors that may impact on an appropriate response.</p> <p>1.3.State/Territory authorities are notified of incident according to enterprise guidelines.</p> <p>1.4.Interim care of animals is implemented where appropriate and according to enterprise procedures pending instructions from authorities.</p> <p>1.5.Appropriate staff is deployed in interim care for animals according to assessment of incident and enterprise guidelines.</p> <p>1.6.Personnel assisting in interim care are appropriately equipped and briefed according to enterprise and legislative requirements.</p> <p>1.7.Care instructions from authorities and/or veterinarians are implemented according to legislative and enterprise requirements.</p> <p>1.8.Information is collected about the reported situation to determine response.</p> <p>1.9.Informants are interviewed to obtain necessary details about the reported situations.</p>
2. Implement response to emergency	<p>2.1.Nature of emergency is investigated from eyewitnesses and/or inspection to determine what procedures should be implemented.</p> <p>2.2.Communications to manage situation are established</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>to enterprise policies and procedures.</p> <p>2.3. Resources and personnel are transported to site to implement action to enterprise procedures.</p> <p>2.4. Site procedures are established to legislative requirements, enterprise procedures and emergency plans to control risks to people, the environment and to property.</p> <p>2.5. Live fauna are moved in accordance with legislative and enterprise procedures.</p> <p>2.6. Dead fauna are removed from site and biological matter is disposed of in accordance with enterprise procedures and health and safety requirements.</p> <p>2.7. Site is cleaned in accordance with enterprise procedures to maintain public and environmental health and safety.</p> <p>2.8. Measures are implemented that minimise risk to significant places, area, habitats, species and communities.</p>
3. Coordinate response	<p>3.1. General public and media are informed of the nature of the incident and agency decisions in accordance with enterprise guidelines.</p> <p>3.2. Volunteers and staff are briefed on Occupational Health and Safety (OHS) hazards, preventive measures and reporting requirements.</p> <p>3.3. Volunteers are coordinated and deployed according to their skills and available personal protective equipment.</p> <p>3.4. Physical barriers are established to keep public away from animals to minimise distress to it and to protect the public.</p> <p>3.5. Media is managed until authorities provide instructions.</p> <p>3.6. Media is utilised according to instructions and enterprise procedures.</p>
4. Care for affected animals	<p>4.1. Team(s) are allotted to animals according to incident assessment, care instructions and skills within teams.</p> <p>4.2. Animal first aid is applied.</p> <p>4.3. Role in wildlife operations team is performed according to the command structure and procedures of the management plan.</p> <p>4.4. Animal is cared for using a range of skills and according to veterinary instructions and enterprise</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>procedures.</p> <p>4.5.OHS procedures are followed according to legislative, management plan and enterprise requirements.</p>
5. Determine management options	<p>5.1.Veterinary advice is sought where appropriate and according to enterprise guidelines.</p> <p>5.2.Biological and incident data on animals is collected according to enterprise procedures and scientific standards.</p> <p>5.3.Management options are evaluated according to advice, condition of animal, risk assessment and according to enterprise guidelines.</p> <p>5.4.Where required for scientific purposes and under enterprise procedures, released animals are humanely banded or tagged.</p> <p>5.5.Selected management option is implemented according to enterprise guidelines, OHS requirements and risk assessment.</p> <p>5.6.Equipment and staff required for returning animal to wild or temporary captive management are sourced to enterprise procedures.</p>
6. Remove carcass	<p>6.1.Where necessary, inter-agency agreement is developed with local authority for removal of carcass.</p> <p>6.2.Carcass is disposed of according to authority instructions.</p> <p>6.3.Equipment and staff for disposal are sourced to enterprise procedures.</p> <p>6.4.OHS requirements are met.</p>
7. Complete debrief and report	<p>7.1.Where applicable, incident management processes for debrief and wash-up are followed.</p> <p>7.2.Report provided to management according to enterprise guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- evaluate natural resource emergency
- implement and coordinate response to emergency
- care for affected animals
- determine management options
- remove animal carcasses
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- animal biology and general behaviour
- health risks associated with animals
- public relations and media management
- incident management systems
- State/Territory emergency procedures and networks
- machinery and equipment operation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• implement and coordinate an emergency response</li> <li>• care for affected animals</li> <li>• determine management options including return to wild or temporary captive management</li> <li>• remove animal carcasses</li> <li>• complete debrief and prepare reports.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Emergencies involving fauna may include:	<ul style="list-style-type: none"> <li>• marine animal incident management (whales and dolphins, seals and sea lions, turtles, sharks, dugongs, crocodiles, sea snakes, sea birds)</li> <li>• oil and chemical spills</li> <li>• injured or dangerous animals (small animals and birds causing nuisance to the public, animals, birds and reptiles behaving aggressively or likely to behave aggressively to the public or causing public fear, either due to their normal behaviour patterns and/or injury)</li> <li>• animals injured by flood, fire or disease.</li> </ul>

## AHCFAU501A Manage fauna populations

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of managing fauna populations and defines the standard required to: assess fauna populations and their habitat; determine the stability and importance of fauna populations for their species; plan intervention measures to improve species distribution, habitat and survivability; prepare a fauna management plan in accordance with legislative requirements and enterprise procedures, including informing staff and stakeholders; control or maintain fauna populations.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to managers of natural areas and technical specialists who manage and provide advice on fauna populations.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Access fauna populations	<p>1.1. Conduct surveys for distribution, ecology, viability, genetic diversity and threats.</p> <p>1.2. Increase or decrease in species population size and range is determined.</p> <p>1.3. Desirability of the population change is assessed in terms of impact on immediate environment.</p> <p>1.4. Condition of the environment and habitats is assessed for ongoing support of the species.</p> <p>1.5. Overall species numbers and other locations are researched to determine significance of local population.</p> <p>1.6. Attitudes of stakeholders to the species are assessed to determine acceptable range of population management options.</p> <p>1.7. Cost/benefit analysis of population management options is completed.</p>
2. Prepare management plan	<p>2.1. Plan of management is developed from assessment according to enterprise procedures.</p> <p>2.2. Submissions for funds are made to implement the plan of management according to enterprise procedures.</p> <p>2.3. Plan of management is assessed, endorsed and recommended according to enterprise procedures, costs and funds.</p>
3. Control or maintain fauna population	<p>3.1. Plan to control or maintain species is developed into a series of intervention measures in accordance with enterprise policy and resource constraints.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2.Measures to manage population are implemented according to legislative and enterprise requirements.</p> <p>3.3.Permits for population management are obtained according to legislative requirements.</p> <p>3.4.Stakeholders and staff are informed about population management measures according to enterprise procedures.</p> <p>3.5.Staff are trained, and where required, licensed to manage population.</p> <p>3.6.Occupational Health and Safety (OHS) and public safety requirements are met during process to manage population.</p> <p>3.7.Incidents with species are managed according to legislative, enterprise, occupational health and safety and public safety requirements.</p> <p>3.8.Plan of management is monitored and adjusted and results recorded in accordance with legislative requirements and enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- assess impacts of fauna population on the environment
- assess management options for fauna populations
- design intervention measures
- assess staff capability and provide training
- prepare management plan
- control or maintain fauna populations
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of

**REQUIRED SKILLS AND KNOWLEDGE**

cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- legislative and enterprise requirements
- biology of species, habitats, predators, competitors
- field monitoring and assessment techniques
- basic veterinary understanding of species
- management planning
- national and international research on fauna populations and genetic diversity
- firearms and/or trapping license requirements
- fauna capture and disposal techniques
- source information and implement instructions on the care of fauna
- Animal Care and Ethics Committee license requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Competence in managing fauna populations requires evidence that a fauna population has been successfully managed according to enterprise guidelines and industry best practice. The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- assess fauna populations and their habitat
- determine the stability and importance of fauna populations for their species
- plan intervention measures to improve species distribution, habitat and survivability
- prepare a fauna management plan in accordance with legislative requirements and enterprise procedures,

<b>EVIDENCE GUIDE</b>	
	including informing staff and stakeholders <ul style="list-style-type: none"> <li>control or maintain fauna populations.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Animals may include:	<ul style="list-style-type: none"> <li>all species in local fauna populations.</li> </ul>
Population increase may include:	<ul style="list-style-type: none"> <li>methods of control of predators</li> <li>physical protection</li> <li>removal of competitors</li> <li>breeding programs</li> <li>management of genetic diversity.</li> </ul>
Population decrease may include:	<ul style="list-style-type: none"> <li>methods of control by poisoning, shooting, trapping, physical removal of habitats, transfer to another location, biological agents, and sterilisation. Protection, regeneration and/or restoration of habitats and re-introduction of fauna to designated areas.</li> </ul>

## AHC FIR201A Assist with prescribed burning

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of assisting with prescribed burning for agricultural or natural resource purposes and defines the standard required to: prepare machinery and equipment before burning; undertake burn operations and monitor weather conditions; use Personal Protective Equipment (PPE) as required and check, clean and store on completion of the burn; carry out clean up operations and monitor the site.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to working under close supervision with constant checking. Responsibility for some roles and coordination within a team may be required.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assist with preparations for the burn	<p>1.1. Machinery and equipment to be used in the burn are prepared for use as directed.</p> <p>1.2. Safety equipment is checked and prepared for use.</p> <p>1.3. Information about contingency plans is read or listened to and clarification sought where required.</p> <p>1.4. Assets requiring protection during the burn are recognised and noted.</p> <p>1.5. Personal role and activities during the burn are checked with supervisor.</p> <p>1.6. Location and extent of the burn is discussed and clarified with the supervisor.</p>
2. Support conduct of burn	<p>2.1. Assistance with pre-burn checks is provided as directed by the supervisor.</p> <p>2.2. Burn operations are undertaken in a safe manner.</p> <p>2.3. Problems or concerns during the burn are raised with the supervisor.</p> <p>2.4. Communication is maintained at all times in accordance with the organisation's procedures.</p> <p>2.5. Conditions at the fire are observed and their effect on fire behaviour and development are noted and reported to the supervisor.</p> <p>2.6. Weather conditions and changes to fire behaviour are observed and reported to the supervisor.</p> <p>2.7. A safe escape route is identified and maintained at all times.</p> <p>2.8. Personal protective equipment is fitted properly and worn throughout the burn.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Participate in clean-up activities	3.1. Cleaning-up activities are carried out under direction in accordance with the organisation's procedures. 3.2. Personal protective equipment is cleaned and returned to storage. 3.3. Machinery and equipment used in the burn are cleaned and returned to storage. 3.4. Cleaning and maintenance are carried out in accordance with the organisation's procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and adopt safe work practices
- assist with preparations for the burn
- support conduct of the burn
- monitor fire behaviour and risk
- participate in clean-up activities
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- fire behaviour
- extinguishing media and equipment
- burning tactics and techniques
- fire hazards, safety techniques
- organisations operating procedures
- OHS and environmental legislative and enterprise requirements.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Develop wildfire prevention strategies	<p>1.1.Potential wildfire hazards to the environment are rated according to fuel loads, climate, location, accessibility, ecology and organisational priorities.</p> <p>1.2.Risks to buildings, structures and cultural sites from wildfires are rated in accordance to adjacent fuel loads, climate, location, accessibility and organisational priorities.</p> <p>1.3.Wildfire hazard reduction strategies take into account the local fire history, fuel loads, climate, location, accessibility, geophysical systems, ecology, organisational procedures and priorities, Occupational Health and Safety (OHS), local fire agencies and legislative requirements.</p> <p>1.4.Proposed wildfire hazard reduction strategy has local community support where appropriate.</p> <p>1.5.Strategies for wildfire hazard reduction proposed are in accordance with organisational priorities, local fire agencies and legislative requirements.</p> <p>1.6.Strategies comply with OHS, relevant regulatory requirements and enterprise guidelines.</p>
2. Implement and monitor wildfire hazard reduction	<p>2.1.Hazard reduction strategies implemented are appropriate to the enterprise's objectives, the nature of the site, location, resources and environmental conditions.</p> <p>2.2.Hazard reduction is undertaken in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>organisational plans and procedures, OHS, local fire agencies, and legislative requirements.</p> <p>2.3. Hazard reduction activities are coordinated with other relevant agencies.</p> <p>2.4. Progress of hazard reduction activities is monitored.</p> <p>2.5. Hazard reduction plans, strategies and operational procedures are reviewed and recommendations for change are processed in accordance with organisational procedures.</p>
3. Process records	<p>3.1. Suggested and/or required changes to plans and strategies are reported in accordance with organisational procedures.</p> <p>3.2. Records document quantities and type of chemicals/biological agents used and where they were applied.</p> <p>3.3. Records document hazard reduction actions taken and where.</p> <p>3.4. Incident reports are processed in accordance with organisational procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- develop wildfire prevention strategies
- implement and monitor wildfire hazard reduction
- process records
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental

**REQUIRED SKILLS AND KNOWLEDGE**

abilities.

**Required knowledge**

- wildfire prevention strategies.
- organisational environment and relative values.
- organisational procedures, legislative and OHS requirements.
- local authorities, agencies and other land users.
- hazards associated with wildfire prevention strategies.
- fire behaviour in a rural/bush environment.
- range of equipment applicable to wildfire hazard reduction.
- approved, safe use of equipment.
- environmental, public health and safety issues.
- types of chemical and biological hazards and how they should be handled.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- rate wildfire hazards to the environment, buildings, structures and cultural sites according to fuel loads, climate, location, accessibility and ecology
- develop strategies for wildfire hazard reduction
- coordinate hazard reduction plans, strategies and operational procedures with other agencies and reviewed
- maintain records of pesticides and chemical agents used, hazard reduction and fire incidents.

under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Wildfire hazards may include:

- the amount of flammable vegetation
- type of vegetation (e.g., grass, heath, peat, crops, scrub or forest)
- buildings
- structures
- mobile property.

Wildfire hazard reduction strategies may include:

- slashing
- clearing vegetation
- animal grazing
- spraying vegetation with chemical and biological agents
- insurance
- community education
- regular facilities and building maintenance
- safe storage or removal of hazardous materials.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare materials, tools and equipment for horse work	<p>1.1.The required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions.</p> <p>1.2.Checks are conducted on all materials, tools and equipment with insufficient or faulty items reported to the supervisor.</p> <p>1.3.Techniques used when loading and unloading materials demonstrate correct manual handling and minimise damage to the load and the vehicle.</p> <p>1.4.Suitable Personal Protective Equipment (PPE) is selected and checked prior to use.</p> <p>1.5.Work support is provided according to Occupational Health and Safety (OHS) requirements, and according to workplace information.</p> <p>1.6.OHS hazards are identified and reported to the supervisor.</p>
2. Undertake horse work as directed	<p>2.1.Instructions and directions provided by supervisor are followed and clarification sought when necessary.</p> <p>2.2.Work is undertaken in a safe and environmentally appropriate manner according to enterprise guidelines.</p> <p>2.3.Horses are handled safely and problems referred to supervisor.</p> <p>2.4.Horses are checked for feed and water supply and signs of discomfort.</p> <p>2.5.Enterprise policy and procedures in relation to workplace practices, handling and disposal of</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>materials is observed.</p> <p>2.6. Problems or difficulties in completing work to required standards or timelines are reported to supervisor.</p>
3. Handle materials and equipment	<p>3.1. Waste material produced during work is stored in a designated area according to supervisor's instructions.</p> <p>3.2. Materials and equipment are handled and maintained according to supervisor's instructions and enterprise guidelines.</p> <p>3.3. A clean and safe work site is maintained while working.</p>
4. Clean up on completion of work	<p>4.1. Materials are returned to store or disposed of according to supervisor's instructions.</p> <p>4.2. Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and supervisor's instructions.</p> <p>4.3. Work outcomes are reported to the supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- follow safety directions
- prepare materials, tools and equipment for work
- undertake horse work as directed
- handle materials and equipment
- clean up on completion of work
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

- safe work practices
- horse handling techniques
- horse care
- tools and equipment
- repair and maintenance of facilities
- OHS and animal welfare legislation and enterprise procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- apply safe work practices including animal welfare
- clean housing, equipment and gear
- handle and work around horses
- assist with the repair and maintenance of features
- prepare materials, tools and equipment for work.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Work may include:

- assistance with selecting, catching and tying up horses
- grooming and rugging horses
- cleaning and maintaining stable gear
- caring for horses
- feeding horses
- loading and unloading goods and materials
- carrying out routine maintenance on buildings, roads, troughs, fences
- cleaning yards, sheds, fixtures and fittings.

Tools and equipment may include:

- saddles
- ropes
- reins
- breastplates
- martingales
- bridles
- cruppers
- saddle bags
- headstalls
- saddle cloths
- feeders
- leads and rugs
- brushes and combs
- clippers
- bot knife
- scrapers
- soap
- hoof picks
- knives
- rasps
- pincers
- brushes
- hoof dressings.

Hazards may include:

- solar radiation
- dust
- noise
- air- and soil-borne micro-organisms
- chemicals and hazardous substances

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Follow procedures for horse health and welfare	<p>1.1.Regular checks are taken to assess horse health and welfare according to the requirements of the organisation.</p> <p>1.2.Procedures for handling horses calmly and professionally are followed.</p>
2. Carry out horse checks	<p>2.1.All horses are routinely checked for signs of ill health.</p> <p>2.2.Horses are examined for signs of lameness or soreness and abnormalities reported in the methods prescribed in the organisations work procedures.</p> <p>2.3.Evidence of heat or swelling in legs is reported to manager or foreman and treated under instruction.</p> <p>2.4.Hooves cleaned and shoes are examined for wear and damage.</p> <p>2.5.Faulty, broken or loose shoes removed and farriery assistance is called, when required, in line with the organisations work procedures.</p> <p>2.6.While handling the horses, Occupational Health and Safety (OHS) hazards are continually identified, risks assessed and suitable controls implemented.</p> <p>2.7.Horses are handled safely and all required horse restraints are within the organisations and industry guidelines for animal health and welfare.</p>
3. Deal with horse emergencies	<p>3.1.Common signs of injury or life threatening conditions are detected and the situation quickly analysed before notification or action is taken.</p> <p>3.2.Life threatening ailments requiring emergency</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>treatment are notified to the trainer, manager or veterinarian and immediate assistance is called.</p> <p>3.3. Basic emergency and/or first aid procedures are carried out until professional help arrives.</p> <p>3.4. Cast horse is calmed and returned to its feet in a safe manner.</p> <p>3.5. Serious cuts and abrasions are promptly shown to the veterinarian and assistance provided, as required, during professional treatment.</p>
4. Provide veterinary procedure support	<p>4.1. Cuts, abrasions and bruises are treated under instruction from the veterinarian, manager or foreman.</p> <p>4.2. Horse is examined for signs of distress or soreness after work or mating procedures, and all abnormalities are reported.</p> <p>4.3. Appropriate hoof care treatment is applied as instructed by the manager or foreman.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and apply safe work practices
- handle horses
- perform duties around horses in a firm but calm, gentle and unhurried manner
- identify signs of ill health or injury, or signs of abnormal or depressed appetite
- observe, identify and react appropriately to environmental implications and OHS hazards
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- horses of all classes and horse husbandry
- the range of ailments that may occur or affect horses in the property
- the application of a range of basic treatments under veterinary supervision
- environmental controls and codes of practice applicable to the enterprise
- the organisations livestock production and management plans
- sound management practices and processes to minimise noise, odours and debris from the horse operations
- relevant legislation and regulations relating to waste and environment management, animal health and welfare, and OHS.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- handle horses in a calm and professional manner
- check horses for signs of lameness or soreness and report problems
- carry out emergency procedures calmly and efficiently
- identify symptoms of ill health or injury
- treat minor injuries and apply hoof care treatment as instructed.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Horse health and welfare checks may include:	<ul style="list-style-type: none"> <li>• checking of nasal passages</li> <li>• vaginal or rectal discharge</li> <li>• rectal temperature</li> <li>• coughing</li> <li>• abnormal coat conditions</li> <li>• changes to pulse</li> <li>• respiration changes abnormal behaviour</li> <li>• vices such as weaving depraved appetite or other boredom conditions that may reflect on the health of stabled horses.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Safely catch and handle foals	1.1. Foals of various ages are caught safely. 1.2. Foals are restrained for routine health and husbandry procedures.
2. Assist with weaning foals	2.1. Suitable facilities for the safe handling, training and weaning of foals are identified. 2.2. Foals are fitted with a halter according to enterprise guidelines. 2.3. Weanling foals are led according to enterprise guidelines. 2.4. Weanling foals legs are handled according to enterprise guidelines. 2.5. Weanling foals feet are picked up according to enterprise guidelines. 2.6. Rugs are fitted to weanlings.
3. Safely and competently perform routine tasks in the preparation and presentation of yearlings for sale	3.1. Routine daily checks of yearlings are carried out. 3.2. Yearlings are safely led for exercise and presentation. 3.3. Yearlings are exercised, shampooed, and groomed according to enterprise guidelines. 3.4. Bridles, bits, rugs and safety gear are fitted according to enterprise guidelines. 3.5. Sale presentation techniques are demonstrated.

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- identify hazards and follow safe work procedures
- handle animals in a safe and humane manner
- monitor animal behaviour and recognise abnormalities
- demonstrate safe and environmentally responsible workplace practices
- teach a weanling to accept a halter
- teach a weanlings to lead
- maintain facilities and equipment to industry standards
- communicate effectively and maintain accurate reports and records
- fit rugs to weanlings&yearlings
- safely exercise weanlings&yearlings
- groom a yearling
- safely fit, in an appropriate manner, bits, bridles and halters
- teach a yearling to lead for exercise and presentation for sale
- teach a yearling to stand correctly for presentation at sale
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- suitable facilities for weaning
- potential dangers to the foal during weaning and appropriate actions to reduce them, such as the removal of troughs or other objects that may cause injury
- stress responses sometimes associated with weaning, such as fretting, over-heating, refusing food, overeating, self-inflicted injuries.
- suitable facilities for yearling preparation
- potential dangers to the yearlings during sale preparation and appropriate actions to reduce them, such as removing any potential hazards from stalls and handling areas, exercising in confined areas, monitoring exercise and the effects of exercise on joints and bones of the legs
- various responses in yearlings associated with sale preparation such as fretting, poor appetite, overeating, stable vices
- Occupational Health and Safety (OHS) and animal welfare legislation and enterprise requirements.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to work with horses	<p>1.1. Work to be undertaken is interpreted from the work program where necessary, and confirmed with management.</p> <p>1.2. Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of horse routines.</p> <p>1.3. Tools and equipment suitable for the work to be undertaken are selected, checked, and maintained if necessary.</p> <p>1.4. Suitable personal protective equipment is selected, used and maintained.</p>
2. Clean stables and surrounding areas	<p>2.1. Horse is checked for condition, health and soundness and removed from stable or secured appropriately.</p> <p>2.2. Manure, soiled bedding and stale feed are inspected, removed, and abnormal conditions are reported.</p> <p>2.3. Bedding is raked or forked and fresh quantities are added as required.</p> <p>2.4. Feed bins, hay nets/bins and water troughs are cleaned thoroughly and troughs are filled with fresh water.</p> <p>2.5. Walkways are swept and/or raked and manure removed.</p> <p>2.6. Stale feed and manure is safely disposed of according to the organisation's environmental and waste management procedures.</p> <p>2.7. Buildings or fixtures that are in need of maintenance or are unsafe are reported to the stable management.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Perform daily work program	<p>3.1. Work program for each stable horse is carried out as instructed by the stud master or stable manager.</p> <p>3.2. Horses are selected for professional services, prepared, and the contractor is contacted as required by organisational procedures or supervisors instructions.</p> <p>3.3. Horses are prepared for specified daily work program as required by organisational procedures or supervisors instructions.</p> <p>3.4. Horses are washed down after working, dried, rugged, returned to their stable and fed.</p> <p>3.5. Work routines and performance records are kept and maintained as an integral part of the stable business.</p>
4. Select, catch and tie up horses	<p>4.1. Individual characteristics of horses are identified according to specified criteria and nominated animals are selected.</p> <p>4.2. Selected horse is caught quickly and gently and working gear is fitted.</p> <p>4.3. Legs and hooves of selected horse are inspected for abnormalities, cuts or damage.</p> <p>4.4. Horse is led to work area or rail quietly and calmly and safely secured.</p> <p>4.5. OHS hazards for handling horses are identified and safety concerns reported.</p> <p>4.6. Horses are handled safely and within the organisation's and industry guidelines for animal health and welfare.</p>
5. Groom and rug horses	<p>5.1. Horses are groomed to enterprise standard.</p> <p>5.2. Hooves and shoes are cleaned and checked for cracks, heat and other abnormalities, and dirt removed from the outer walls of the hooves.</p> <p>5.3. Rugs appropriate to the conditions are fitted according to enterprises requirements, while taking care to avoid chafing and rubbing.</p>
6. Clean and maintain stable gear	<p>6.1. All gear is regularly checked for wear and damage.</p> <p>6.2. Gear is thoroughly cleaned and polished and oils or preservatives applied as required as required.</p> <p>6.3. Working gear is maintained or repaired as required to ensure safe horse working conditions.</p> <p>6.4. Working gear and saddlery is cleaned and stored after use in line with organisation policy.</p>

ELEMENT	PERFORMANCE CRITERIA
7. Monitor health and welfare of horses	7.1. Signs of good health and condition are identified. 7.2. Symptoms of common illnesses and injuries are recognised and reported. 7.3. The welfare of horses is monitored and maintained. 7.4. Basic first aid is provided for minor injuries.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- handle and care for horses
- complete basic hoof care procedures
- groom horses
- care for saddlery and equipment
- measure quantities required for feed
- identify hazards and follow safe work practices
- observe, identify and react appropriately to environmental implications and OHS hazards
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- horses and horse husbandry
- safe handling of horses
- horse health, horse behaviour and psychology
- care and maintenance of hooves and the lower limbs
- environmental controls and codes of practice applicable to the enterprise
- organisational procedures for care of horses
- sound management practices and processes to minimise noise, odours and debris from the livestock operations

**REQUIRED SKILLS AND KNOWLEDGE**

- relevant legislation and regulations relating to waste and environment management, animal health and welfare, and employment of staff and contractors.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- complete stable routines efficiently
- complete daily horse maintenance
- select horses for a range of purposes
- catch and tie up horses
- groom or rug horses as required by the organisation
- clean and maintain equipment
- work safely around horses.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Horses may include:

- all breeds and types of horses.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare mares for teasing and mating	<p>1.1. Mares displaying signs of oestrus in the paddock are identified and advice provided to supervisor.</p> <p>1.2. Mares are mustered safely and quietly from paddock to teasing yards using appropriate handling procedures.</p> <p>1.3. Mares are handled for teasing using appropriate handling procedures.</p> <p>1.4. Mare is restrained using appropriate restraining methods</p> <p>1.5. Mare's reaction to the teaser is noted and reported to supervisor.</p> <p>1.6. Suitable personal protective equipment is selected, used and maintained.</p> <p>1.7. Natural mating or artificial insemination procedures are implemented.</p> <p>1.8. Mares are returned to foals and settled after mating or AI.</p>
2. Handle mares for routine veterinary reproductive procedures	<p>2.1. Mares are led into crush, ensuring safety and wellbeing of both mare and foal, if present.</p> <p>2.2. Mare and foal are handled to ensure both are settled and safe.</p> <p>2.3. An appropriate restraint method in the crush is used.</p> <p>2.4. Assistance is provided to the veterinarian to prepare for examination of the mare when necessary.</p>
3. Care for and handle in-foal wet and dry mare	<p>3.1. External genitalia and udder of mares are examined using correct procedure.</p> <p>3.2. In-foal mares are examined for general health and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>wellbeing and possible signs of abortion.</p> <p>3.3.Mares close to foaling are identified and advice provided to supervisor.</p> <p>3.4.Mares with foals at foot and the foal are examined for general health and wellbeing.</p>
4. Assist with foaling down mares	<p>4.1.Observe for signs of impending parturition in the mare.</p> <p>4.2.Ensure foaling mares are in a secure place where they can be observed and assisted if required.</p> <p>4.3.Report variations to the normal foaling pattern that may suggest difficulties.</p> <p>4.4.Observe that the newborn foal is able to stand and then treat the broken umbilical cord.</p> <p>4.5.Observe the condition of the mare including the expulsion of the placenta and mothering behaviour.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe operating procedures
- handle mares and foals safely and quietly
- check for health and wellbeing of mares and possible signs of abortion
- use a variety of teasing methods
- use a variety of restraints
- use safe work practices
- ensure animal welfare practices are used
- communicate effectively with other team members, veterinarians and supervisors
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- caring for and handling in-foal mares

## REQUIRED SKILLS AND KNOWLEDGE

- caring for and handling mares with foals at foot
- signs of oestrus
- signs of abortion
- signs of imminent foaling in mares
- teasing methods
- restraint methods used during teasing
- restraint methods used in the crush
- general health and wellbeing signs in mares
- foaling process in mares and signs of abnormalities
- relevant State/Territory legislation, regulations and Codes of Practice with regard to workplace Occupational Health and Safety (OHS), environment and animal welfare
- enterprise and industry policies with regard to recording and reporting routines.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare and handle wet and dry mares for teasing
- detect oestrus cycles
- monitor mating or AI and take remedial action where needed
- record data of mare mating.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Mares may include:	<ul style="list-style-type: none"> <li>those who may be in-foal, wet or dry and be of any type or breed.</li> </ul>
Mating may include:	<ul style="list-style-type: none"> <li>mares mated naturally or artificially inseminated.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to perform hoof care on horses	<p>1.1. Work to be undertaken is interpreted from work program, where necessary, and confirmed with management.</p> <p>1.2. Organisation requirements for the care and handling of horses within the guidelines of animal health and welfare are recognised and understood.</p> <p>1.3. Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of the process.</p> <p>1.4. Tools and equipment suitable for the work to be undertaken are selected, checked, and maintained if necessary.</p> <p>1.5. Suitable personal protective equipment is selected, used and maintained.</p>
2. Provide hoof care to horse	<p>2.1. Basic farriery tools are selected for appropriate use.</p> <p>2.2. Horses feet are picked up and hooves picked and cleaned according to set leg routines.</p> <p>2.3. Legs are held and the hoof presented to allow treatment to be carried out efficiently and safely.</p> <p>2.4. Basic hoof care (including routine trimming) is provided according to organisation guidelines and procedures.</p> <p>2.5. Occupational Health and Safety (OHS) hazards are continually identified while handling horses, risks assessed and suitable controls implemented.</p>
3. Replace dislodged and loose shoes	<p>3.1. Loose shoe is removed and straightened if required.</p> <p>3.2. Loose shoes are tightened by re-nailing or</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>application of extra nails.</p> <p>3.3.Cast shoe is reapplied taking care to avoid injury to the animal and all nails are clinched.</p> <p>3.4.Farrier assistance is called where corrective trimming or shoe shaping is required.</p>
4. Complete maintenance and administration	<p>4.1.Equipment is cleaned in according to manufacturer's specifications, organisational procedures and regulations.</p> <p>4.2.Attachments and other ancillary equipment are cleaned and stored according to with manufacturer's specifications, organisational procedures and regulations.</p> <p>4.3.All containers, leftover fluids, waste and debris from the operations are disposed of safely and appropriately.</p> <p>4.4.All required documentation recorded accurately and promptly according to organisational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- competently handle and restrain horses of all classes for hoof procedures
- handle horses and duties around them in a firm but calm, gentle and unhurried manner
- observe, identify and react appropriately to environmental implications and OHS hazards
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

- the structure of the hoof and associated problems
- hoof care and shoeing procedures
- hoof injury
- the need to maximise hygiene practices and awareness.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- use appropriate oestrus detection methods
- handle mares to prepare and carry out mating or AI
- recognise disease, health or injury for mares and their foals
- humanely and safely handle broodmares
- observe, identify and react appropriately to environmental implications and OHS hazards
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural,

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
social and religious backgrounds and with a range of physical and mental abilities.
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• identify hazards and assess risks</li> <li>• oestrus cycle in mares and dioestrus behaviour and its detection</li> <li>• anatomy and physiology of male and female reproductive systems in horses</li> <li>• conception and gestation in the mare</li> <li>• basic reasons for infertility in mares and what may be treated by veterinarians</li> <li>• nutritional requirements of mares prior to and post- mating</li> <li>• appropriate handling restraints</li> <li>• procedures for preparation for mating</li> <li>• artificial insemination procedures</li> <li>• animal welfare requirements</li> <li>• mare identification methods</li> <li>• stud record keeping procedures</li> <li>• mare handling procedures</li> <li>• requirements of veterinarians in carrying out pregnancy testing</li> <li>• relevant legislation and regulations relating to waste and environment management, animal health and welfare</li> <li>• relevant OHS legislation, codes of practice and workplace procedures</li> <li>• appropriate manufacturer's instructions and organisation procedures/instructions</li> <li>• organisation recording and reporting procedures.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• use appropriate oestrus detection methods</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• handle mares for serving or artificial insemination and assist as appropriate</li> <li>• recognise disease, health or injury</li> <li>• humanely and safely handle broodmares and their foals</li> <li>• provide support to veterinarian or stallion manager.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Procedures to be completed includes:	<ul style="list-style-type: none"> <li>• work is interpreted from work program, where necessary, and confirmed with management.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to use horses for farm operations	<p>1.1. Work to be undertaken is interpreted from work program, where necessary, and confirmed with management.</p> <p>1.2. Horses are selected for the task.</p> <p>1.3. Horse's health and soundness is checked to ensure they are physically capable of the work required.</p> <p>1.4. Equipment is selected, checked, and maintained if necessary.</p> <p>1.5. Suitable personal protective equipment is selected, used and maintained.</p>
2. Ride horses	<p>2.1. Horses are caught and handled safely and humanely.</p> <p>2.2. Horses are ridden and educated to carry out stock work.</p> <p>2.3. Occupational Health and Safety (OHS) hazards for horse handling and riding are identified, risks assessed and risk controls are implemented.</p> <p>2.4. Personal Protective Equipment (PPE) is selected, used and maintained for horse handling and riding.</p>
3. Monitor horse health and condition	<p>3.1. Regular monitoring as a part of daily routines is carried out to identify signs of ill health and poor condition in horses.</p> <p>3.2. Horses in need of attention are mustered or caught as required, and condition reported and recorded.</p> <p>3.3. Prescribed treatments are administered for common ailments under supervision of the veterinarian or manager.</p> <p>3.4. Horses are checked for lameness and shoeing is</p>

ELEMENT	PERFORMANCE CRITERIA
	organised where required.
4. Care for saddlery and equipment	4.1. Basic working gear to suit the individual horse is selected and fitted. 4.2. Working gear is cleaned and checked as a part of regular daily routines. 4.3. Working gear is maintained or repaired as required to ensure safe horse working conditions. 4.4. Working gear and saddlery is cleaned and stored after use in line with organisation guidelines.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify common horse ailments
- develop an empathy with the horse or horses in their care
- handle horses for routine procedures
- effectively assess horse needs and capabilities
- ride and uneducated and experienced horses
- dress feet
- care for saddlery and equipment
- identify OHS hazards and implement safety procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- assessing horse conformation and work capabilities
- horse movement and behaviour
- signs of unsoundness and disease, work stress or other disorders in horses
- horse handling and riding techniques

**REQUIRED SKILLS AND KNOWLEDGE**

- relevant legislation and enterprise procedures relating to waste and environment management, animal health and welfare, and OHS.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- use calm and humane methods to minimise undue stress and risk to horses or handlers
- prepare horses for riding
- ride and educate horses as part of property operations
- monitor health and condition of horses
- maintain saddlery and horse equipment.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Types of horses may include:

- all breeds and types of horses and related equipment used to work and muster livestock.

<b>RANGE STATEMENT</b>	
Education and breaking of horses may include:	<ul style="list-style-type: none"> <li>grooming, rugging, shoeing, riding in confined and open areas, and stockwork in confined and open areas.</li> </ul>

## AHCHBR305A Handle and care for stallions

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of handling and caring for stallions, particularly through the mating process. It also includes collecting semen and caring for the horse to ensure minimal distress after mating and defines the standard required to: humanely and safely handle stallions; provide support to veterinarians for a range of procedures; maximise conception rates (and live foal outcomes) through efficient and well-managed stud activities.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit is likely to be carried out under routine supervision within organisation guidelines. The position may involve responsibility for highly valuable animals. Through the effective implementation of this standard, conception rates (and live foal outcomes) are maximised through efficient and well-managed stud activities. Stallion use and care ensures the success of the stud as a business.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to handle stallions	<p>1.1. Work to be undertaken is interpreted from work program, where necessary, and confirmed with management.</p> <p>1.2. Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of the mating process.</p> <p>1.3. Tools and equipment suitable for the work to be undertaken are selected, checked and maintained if necessary.</p> <p>1.4. Suitable personal protective equipment is selected, used and maintained.</p>
2. Care for stallions	<p>2.1. Stallions are caught, groomed, checked and exercised as a part of daily routines to maintain fitness and monitor injury, condition and general health.</p> <p>2.2. Regular checking and accurate observation ensures that all changes in stallion behaviour and health are identified and recorded.</p> <p>2.3. Feed and water requirements are applied in strict compliance with prescribed nutritional programs and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>details recorded.</p> <p>2.4. Occupational Health and Safety (OHS) hazards are continually identified while handling horses, risks assessed and suitable controls implemented.</p> <p>2.5. Horse health routines are maintained through and between breeding seasons as prescribed by the supervising veterinarian and/or stud manager.</p>
3. Handle stallion for mating procedures	<p>3.1. Selected stallion is caught and identified in line with mating requirements.</p> <p>3.2. Suitable restraint is applied to stallion for mating activities.</p> <p>3.3. All handling of the stallion is done within the guidelines of animal welfare codes and practices.</p> <p>3.4. Organisation hygiene practices are applied to ensure that risks of disease are minimal.</p> <p>3.5. Mating or semen collection is completed according to organisation standards, and to minimise stress to the stallion.</p> <p>3.6. Post-mating procedures are completed as instructed by stud master or veterinarian.</p>
4. Complete hygiene and administration activities	<p>4.1. Equipment is cleaned and stored according to manufacturer's specifications, organisational procedures and regulations.</p> <p>4.2. All containers, leftover fluids, waste and debris from the operations are disposed of safely and appropriately.</p> <p>4.3. All required records and documentation are completed accurately and promptly in accordance with organisational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- recognise disease, ill health or injury

## REQUIRED SKILLS AND KNOWLEDGE

- humanely and safely handle stallions and mares
- provide support to veterinarian for a range of procedures
- observe, identify and react appropriately to environmental implications and OHS hazards
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- the need for accurate identification and recording in the mating process
- common equine injury and disease that affects breeding horses
- relevant legislation and regulations relating to waste and environment management, animal health and welfare, and employment of staff and contractors
- relevant OHS and animal welfare legislation, regulations, codes of practice and enterprise procedures
- appropriate legislative requirements, manufacturer's instructions and organisation procedures/instructions
- organisation recording and reporting procedures.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• humanely and safely handle stallions</li> <li>• provide support to veterinarians for a range of procedures</li> <li>• maximise conception rates (and live foal outcomes) through efficient and well-managed stud activities.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to treat horses	<p>1.1. Work to be undertaken is interpreted from work program, where necessary, and confirmed with management.</p> <p>1.2. Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of the process.</p> <p>1.3. Tools and equipment suitable for the work to be undertaken are selected, checked and maintained if necessary.</p> <p>1.4. Suitable personal protective equipment is selected, used and maintained.</p>
2. Recognise and report common ailments	<p>2.1. Routine and regular checks are made of horses to detect abnormal conditions.</p> <p>2.2. Common ailments are distinguished through signs of distress, elevated temperatures, or skin or joint condition.</p> <p>2.3. Abnormal conditions are reported to the manager (or veterinary doctor) and actions are taken under instruction and supervision.</p> <p>2.4. Initial first aid procedures are carried out for horses until professional help arrives.</p>
3. Apply disease or ailment prevention procedures	<p>3.1. Stable/paddock quarantine procedures are carried out according to enterprise practice.</p> <p>3.2. Stable hygiene practices are maintained at high</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>levels in accordance with routine instructions.</p> <p>3.3. Routine annual or outbreak stimulated vaccination of horses is carried out under supervision of the veterinary practitioner with a minimum of stress to animals.</p> <p>3.4. Routine drenching and skin washing procedures are carried out to prevent or control external or internal parasites.</p> <p>3.5. While handling horses, Occupational Health and Safety (OHS) hazards are continually identified, risks assessed and suitable controls implemented.</p> <p>3.6. Comprehensive records of veterinary medication and treatment by other professionals are maintained for each individual animal.</p>
4. Treat equine injury and disease	<p>4.1. Twitches and other restraining devices are used, as required, depending upon the individual horse's temperament.</p> <p>4.2. Prescribed veterinary medicines are administered at correct dose, according to instructions, with minimal stress to the horse and under supervision by manager or veterinary doctor.</p> <p>4.3. All handling of the horses is done within the guidelines of animal welfare codes and practices.</p>
5. Complete hygiene and administration	<p>5.1. All equipment used in treating horses is cleaned hygienically and stored in accordance with manufacturer's specifications, organisational procedures and regulations.</p> <p>5.2. All containers, leftover fluids, waste and debris from the treatments are disposed of safely, hygienically and appropriately.</p> <p>5.3. All required records and documentation are completed accurately and promptly in accordance with operational requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- identify hazards and implement safe work procedures
- handle horses and duties around them in a firm but calm, gentle and unhurried manner
- identify signs of ill health and injury or signs of abnormal or depressed appetite
- handle and restrain horses for observation and treatment as required
- complete horse health and medication records clearly, accurately and in line with established practice for such records
- observe, identify and react appropriately to environmental implications and OHS hazards
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- common horse diseases
- the range of common ailments that may occur or affect horses
- the application of a range of treatments under veterinary supervision
- symptoms of life threatening conditions
- methods of horse handling
- indicators that can be used to assess horse health
- horse behavioural problems
- relevant legislation and regulations relating to waste and environment management, animal health and welfare, and employment of staff and contractors
- the need to maximise hygiene practices and awareness
- environmental controls and codes of practice applicable to the enterprise - processes to minimise noise, odours and debris from the livestock operations
- potential hazards associated with the operation of basic tools, and equipment
- relevant State/Territory legislation, regulations and codes of practice with regard to workplace OHS, and the use and control of machinery and equipment.

## Evidence Guide

3. Report on the way of going of horses	<p>3.1. Essential elements of the way of going of the horse are identified and reported on.</p> <p>3.2. Natural gaits of the horse are identified and reported on.</p> <p>3.3. Defects in the way of the going of the horse are identified and reported on.</p>
4. Report on the undesirable vices and habits of horses	<p>4.1. Vices dangerous to people are identified and reported on.</p> <p>4.2. Vices dangerous to horses are identified and reported on.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and work safely with horses
- identify horse conformation, soundness and temperament
- defer to veterinary advice if necessary
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant occupational health and safety legislation, regulations and codes of practice
- recognise and report on desirable and undesirable conformation using accepted conformation terminology
- recognise and report on common vices in horses
- safe horse handling techniques
- recognise and report on desirable and undesirable natural gaits.

# AHCHBR308A Maintain horses in a healthy state and safe environment

## Modification History

Release	TP Version	Comment
1	AHC10v6	Initial release

## Unit Descriptor

This unit describes the skills and knowledge required to maintain horse health and welfare through the application of regular programs.

In order to undertake this unit candidates should be capable of applying work health and safety procedures to the safe handling of horses.

## Application of the Unit

This unit of competency is intended to apply to any horse breeding environment and is generally applicable to most horse industry enterprises. It supports stud workers and supervisors, stud managers and others authorised to manage horse health and welfare.

In addition to legal and ethical responsibilities, it is a requirement that horses are handled gently and calmly. The individual is required to exhibit appropriate care for horses so that stress and discomfort is minimised.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

## Pre-Requisites

Nil

## Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain horse environment	<p>1.1 Housing is arranged to meet the individual <i>needs</i> of the animal</p> <p>1.2 The <i>animal environment</i> maintained in an appropriate manner which takes into consideration animal welfare principles and work health and safety procedures</p> <p>1.3 Food storage areas and water supply are cleaned and maintained to keep all areas are free of contaminants</p> <p>1.4 Routine cleaning and maintenance of stables, yards and paddocks is established and monitored to ensure an hygienic environment</p>
2. Monitor and maintain a horse vaccination program	<p>2.1 Vaccination requirements for different <i>horse classes</i> are identified and understood</p> <p>2.2 Vaccination program is maintained according to agreed schedule</p> <p>2.3 Vaccination schedule is documented and appropriate certification records are maintained</p>
3. Implement a horse health maintenance program	<p>3.1 Regular regime of checking animals for signs of illness/injury is carried out</p> <p>3.2 Causes and symptoms of <i>common illnesses, injuries and parasitic infections</i> are identified and treatment is provided under supervision</p> <p>3.3 Internal and external parasites are identified and their impact on horses is assessed</p> <p>3.4 Communicable diseases are identified and control measures are implemented under direction of appropriate personnel</p> <p>3.5 Maintenance program/s are established and monitored for internal and external parasite control</p>
4. Implement a hoof care and maintenance program	<p>4.1 Common hoof diseases and injuries are recognised and appropriate treatment or referral to specialist is arranged as required</p> <p>4.2 Common gait abnormalities are identified and reported and treatment is arranged in accordance with organisational procedures</p>

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	4.3 Hoof care and shoeing, including corrective measures, are appropriate to horses' welfare and training program
	4.4 Effective communication with farriers is maintained and all records of work carried out are kept according to organisational requirements
	4.5 Regular hoof care routine for horses is implemented

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills include:

- Verbal communication and interpersonal skills to:
  - liaise with employer, stable staff, horse health specialists and others regarding the health and welfare of the horse, including giving and receiving instructions and discussing treatment options
  - develop and maintain strong reporting relationships
  - support others in handling and providing treatment to horses
- Written skills to compile and maintain documentation
- Literacy skills to understand and apply written materials such as organisational procedures and workplace health and safety requirements
- Planning and organising skills to organise, conduct and maintain a program of regular parasite, health and injury checks
- Identification and problem solving skills to:
  - apply safe handling and work practices
  - administer medication and treatments
  - assess vital signs and respond to illnesses or injuries in horses
  - comply with animal welfare policies in the care and management of horses
  - recognise signs and symptoms of communicable diseases

### Required knowledge includes:

#### Knowledge of:

- horse handling and restraint techniques, common horse behaviour and social traits
- minimum welfare and/or council requirements and regulations for keeping animals
- workplace health and safety regulations relating to the use and storage of chemicals and pharmaceuticals
- vaccination requirements and any regulations established by controlling bodies or government agencies
- common illnesses and injuries in horses including first aid, types of medication and

treatments

- commonly used health parameters for the animal e.g. temperature, respiration rate, hydration, temperature control, heart rate
- the application of a range of basic treatments under veterinary supervision
- symptoms of and procedures for notifiable diseases
- regulations regarding the use of therapeutic substances
- principles of hygiene and best practice as they relate to animal care
- structure of the hoof/foot
- common hoof/foot disorders such as: thrush, corns, quarter cracks, bruising, and abscess
- infection transfer
- required quarantine procedures in case of localised infectious disease

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and include demonstration of candidates ability to perform the following:</p> <ul style="list-style-type: none"> <li>• knowledge of the requirements, procedures and instructions that are to apply when managing horse health and welfare</li> <li>• implementation of procedures and techniques for the safe, effective and efficient provision of horse health and welfare</li> <li>• working with others to implement and complete horse health and welfare procedures that meet required outcomes</li> <li>• treat common diseases and recognise common ailments, ill health and injury in horses</li> <li>• handle and restrain horses for observation and treatment as required</li> <li>• treat horse injury and disease</li> <li>• complete horse health and medication records</li> <li>• perform preventative actions such as stable hygiene practices and quarantine procedures</li> </ul>
<b>Context of and specific resources</b>	Assessment is to occur under standard and authorised work practices, safety requirements and environmental

<b>for assessment</b>	<p>constraints.</p> <p>Assessment must include observation of relevant skills.</p> <p>The following resources must be available:</p> <ul style="list-style-type: none"> <li>• materials and equipment relevant to assessing candidate's ability to manage horse health and welfare</li> <li>• safe handling areas, such as stables</li> <li>• work instructions and related documentation</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• written and/or oral assessment of candidate's required knowledge</li> <li>• observed, documented and first hand testimonial evidence of candidate's application of practical tasks</li> <li>• inspection of completed work</li> </ul> <p>Where performance is not directly observed any evidence should be authenticated by supervisors or other appropriate persons.</p>

## Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Needs</i></b> may include:	<ul style="list-style-type: none"> <li>• environmental</li> <li>• physical</li> <li>• security</li> <li>• emotional</li> </ul>
<b><i>Animal environment</i></b> includes:	<ul style="list-style-type: none"> <li>• housing</li> <li>• shelters</li> <li>• paddocks</li> <li>• fences</li> </ul>
<b><i>Horse classes</i></b> cover:	<ul style="list-style-type: none"> <li>• foals and weanlings</li> <li>• mares</li> <li>• stallions</li> <li>• other adult horses</li> </ul>

	<ul style="list-style-type: none"> <li>• previously vaccinated</li> <li>• unvaccinated</li> </ul>
<p><i>Common illnesses, injuries and parasitic infections</i> may include:</p>	<ul style="list-style-type: none"> <li>• illnesses: <ul style="list-style-type: none"> <li>• circulatory disorders</li> <li>• eye, nose and mouth disorders</li> <li>• digestive disorders</li> <li>• metabolic disorders</li> <li>• musculo-skeletal disorders</li> <li>• neurological disorders</li> <li>• respiratory disorders</li> <li>• skin disorders</li> </ul> </li> <li>• injuries: <ul style="list-style-type: none"> <li>• bruises</li> <li>• falls</li> <li>• girth galls</li> <li>• joint injuries</li> <li>• sprained ligaments or tendons</li> <li>• strained muscles</li> <li>• tack rubs</li> <li>• wounds</li> <li>• parasitic infections</li> <li>• external - lice, ticks</li> <li>• internal - worms</li> </ul> </li> </ul>

## Unit Sector(s)

Horse Breeding

## AHCHBR309A Determine nutritional requirements for horses

### Modification History

Release	TP Version	Comment
1	AHC10v6	Initial release

### Unit Descriptor

This unit involves the skills and knowledge required to interpret the nutritional requirements of horses and formulate appropriate rations to maintain suitable health.

### Application of the Unit

This unit of competency is intended to apply to any horse breeding environment and is generally applicable to most horse industry enterprises. It supports stud workers and supervisors, stud managers and others authorised to manage and maintain horse health.

In addition to legal and ethical responsibilities, it is a requirement that horses are handled gently and calmly. The individual is required to exhibit appropriate care for horses so that stress and discomfort is minimised.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

### Pre-Requisites

Nil

### Employability Skills Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a      Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used,

unit of competency further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the nutritional requirements for <i>different classes of horses</i>	<p>1.1 The nutritional requirements that meet the <i>individual needs of horse</i>, are identified according to <i>nutritional principles</i> and in consultation with appropriate personnel</p> <p>1.2 Rations are prepared as appropriate to the animal's condition, workload and age</p> <p>1.3 A <i>basic ration</i> is formulated for an individual horse</p> <p>1.4 Paddocked horses are provided with standing and <i>supplementary feed</i> according to their needs</p>
2. Assess feed, additives and supplements for horses	<p>2.1 Feed is selected on the basis of quality, nutritional and economic value, according to organisational policies and procedures</p> <p>2.2 Supplements and feed additives for specific animals are assessed on the basis of active ingredients, price and nutritional needs</p>
3. Establish and monitor individual feeding regimes for horses	<p>3.1 An <i>individual feeding regime</i> is established according to the needs of the horse</p> <p>Each animal's eating behaviour, food intake and work level is identified and documented in accordance with organisational policy and procedures</p> <p>3.3 Feed regime is monitored and adjusted when required</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills include:

- Problem-solving skills to:
  - select and formulate rations to meet individual horse's nutritional requirements
  - assess the effects of additives and supplements on the performance of horses
  - adjust feeding regimes in response to changing horse behaviour and needs
- Planning and organising skills to:
  - prepare individual rations based on nutritional requirements

- feed horses within required time frames
- monitor feeding regimes and make appropriate modifications
- Communication skills to liaise with relevant personnel to determine nutritional requirements of horses and appropriate feed, additives and supplements
- Literacy skills to maintain and monitor feed records and follow instructions to prepare feed rations
- Numeracy skills to identify and correctly prepare and weigh up feed components and supplements.

**Required knowledge includes:**

**Knowledge of:**

- common horse behaviour, social traits and vices to enable feeding regimes to be implemented effectively
- signs of changes in horse eating behaviour to enable problems to be identified and addressed
- horse digestive system such as mouth and teeth, stomach, small and large intestines to enable identification and correction of feeding problems
- nutritional composition of common foods
- sources and importance of energy, protein, fibre, minerals and vitamins in food rations to meet horse’s nutritional requirements
- feed additives and supplements and their composition to enable potential effects to be monitored
- nutritional requirements with respect to the animals age, and needs while breeding, growing and preparation for sale
- developing and modifying the feeding regimes of a range of horses at varying stages in life cycle, breeding, growing and preparation for sale

**Evidence Guide**

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and include demonstration of candidates ability to perform the following:</p> <ul style="list-style-type: none"> <li>• applying knowledge of factors affecting the nutritional requirements of different horses in the work environment, including the effects of additives and supplements, to prepare and</li> </ul>

	<p>provide balanced diets and food for horses demonstrating an understanding of quality, type and value of feed and needs of individual horses</p> <ul style="list-style-type: none"> <li>• completing tasks within nominated time frames and applies safe work practices when determining nutritional requirements of horses</li> <li>• applying effective contingency management techniques to make adjustments to feeding regimes in response to changing conditions, such as signs of problem eating displayed by individual horses</li> <li>• documenting and maintaining feed records and adjusting in response to changing requirements</li> </ul>
Context of and specific resources for assessment	<p>Assessment must include observation of carrying out and monitoring feeding regimes on individual horses on multiple occasions to demonstrate competency and consistency of performance.</p> <p>Assessment must also ensure access to:</p> <ul style="list-style-type: none"> <li>• a variety of horses in various stages of preparation including paddocked horses</li> <li>• information about the properties of additives and supplements</li> <li>• appropriate feed, additives and supplements and feeding equipment</li> <li>• organisational policies and procedures in relation to feeding horses</li> <li>• appropriate personnel</li> </ul>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observation of interaction with horses during assessment of nutritional needs, and implementation and monitoring of feeding regime</li> <li>• oral and or written questioning to assess knowledge of factors affecting the nutritional requirements of a range of horses</li> <li>• portfolio of feeding records</li> <li>• third-party reports from a supervisor detailing performance</li> </ul>

## Range Statement

The range statement relates to the Unit of Competency as a whole.	
<i>Individual needs of horses</i> may include:	<ul style="list-style-type: none"> <li>• work requirements</li> <li>• individual taste</li> <li>• behaviour</li> <li>• condition</li> <li>• age</li> <li>• environment</li> <li>• workload</li> <li>• stage of training</li> </ul>
<i>nutritional principles</i> may include:	<ul style="list-style-type: none"> <li>• nutrients:             <ul style="list-style-type: none"> <li>• protein</li> <li>• fat</li> <li>• trace elements</li> <li>• fibre</li> <li>• minerals</li> <li>• energy</li> <li>• grain and roughage balance</li> </ul> </li> </ul>
<i>Basic rations</i> may include:	<ul style="list-style-type: none"> <li>• local varieties or species of grass or pasture, hays and fodders</li> <li>• pre-packaged food or bulk base food</li> </ul>
<i>Supplementary feed</i> may include:	<ul style="list-style-type: none"> <li>• vitamins</li> <li>• oils</li> <li>• calcium</li> <li>• electrolytes</li> <li>• potassium citrate</li> <li>• iron</li> <li>• hoof hardener</li> <li>• molasses</li> <li>• mineral salt lick</li> <li>• herbal remedies</li> </ul>
<i>Individual feeding regimes</i> may include:	<ul style="list-style-type: none"> <li>• size</li> <li>• time and frequency</li> <li>• age effects</li> <li>• gender effects</li> <li>• level of work</li> <li>• individual taste</li> <li>• location of work and feeding</li> <li>• normal habitat</li> <li>• metabolism</li> </ul>

	<ul style="list-style-type: none"><li>• time of year and available natural feeds</li></ul>

## Unit Sector(s)

Horse Breeding

## AHCHBR401A Carry out stud stable management duties

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers procedures involved with carrying out stud stable management duties and defines the standard required to: complete appropriate forms and records; manage the nomination of horses for sale and exhibition; maintain operational and breeding records; supervise financial and business management affairs.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to horse stud staff who nominate horses for sale or exhibition, complete and forward required pedigrees, transfer forms and stud records for the property and other administrative matters.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Gather and manage information for managing the stable	<p>1.1. Work to be undertaken is interpreted from work program where necessary, and confirmed with management.</p> <p>1.2. Documents within the organisation that detail the requirements of the production program are identified and obtained.</p> <p>1.3. Record keeping systems in place within the stud are maintained and managed to ensure sound records may be accessed at any time.</p> <p>1.4. Discussions are held with operational personnel and immediate management to discuss the requirements of them in relation to record keeping and horse identification.</p>
2. Nominate horses for sales or exhibition	<p>2.1. Appropriate entry forms are obtained, completed and submitted for the specified activity.</p> <p>2.2. Horses are nominated manually or electronically through established systems and according to organisational procedures.</p> <p>2.3. Entry fees are paid up prior to the required nomination time.</p>
3. Apply relevant requirements	<p>3.1. Required pedigrees and histories are obtained from, or supplied to, the controlling agents.</p> <p>3.2. Horse transfer/ registration forms are completed and forwarded to the relevant controlling body.</p> <p>3.3. While working around the stud, all OHS procedures and practices are used to minimise risk.</p>
4. Maintain stud record	<p>4.1. Mares or horses arriving at stud are identified in line</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>with established stud protocols.</p> <p>4.2. Breeding and operational records are kept accurately either manually or electronically.</p> <p>4.3. Financial records of both receipts and expenditure are entered in the designated stud or property records.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- meet the needs of breed societies and stud book keepers for information, records and registrations
- collate information and report accurately on financial matters
- read and interpret cost sheets, production information, target statistics, quantities of feed and other inputs, and material Safety Data Sheets
- prepare and present production and other information in a manner that is readily accessible for both management and operators
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- requirements and procedures laid down by the relevant breed societies or the keeper of the relevant stud book
- the nature of actual stud business in which the individual works, and some understanding of the established processes and protocols
- relevant legislation and regulations relating to waste and environment management, animal health and welfare, and employment of staff and contractors
- appropriate legislative requirements, manufacturers' instructions and enterprise procedures/instructions
- relevant State/Territory legislation, regulations and codes of practice with regard to

**REQUIRED SKILLS AND KNOWLEDGE**

workplace Occupational Health and Safety (OHS), and the use and control of machinery and equipment.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- complete appropriate forms and records
- manage the nomination of horses for sale and exhibition
- maintain operational and breeding records
- supervise financial and business management affairs.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Management duties may include:

- the range of recording and administrative functions for horse studs for any breed, or breeding registered horses for any purpose.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor foal development	<p>1.1.Regular observations are taken to assess foal health and development according to the requirements of the organisation.</p> <p>1.2.Symptoms of ill health, common diseases and developmental disorders are recognised, reported and acted upon.</p> <p>1.3.Foal health and growth rate is recorded in accordance with enterprise requirements.</p> <p>1.4.Vaccination is carried out under instruction as required according to organisation procedures or by a veterinarian.</p> <p>1.5.Occupational health and safety hazards are identified, risk assessed and suitable controls implemented.</p>
2. Assess young horse conformation and correct where possible	<p>2.1.Conformation of foal is assessed using standard conformation terminology.</p> <p>2.2.Corrective action plan is developed and implemented at foal stage to address treatable undesirable conformation.</p>
3. Meet the dietary requirements of young horses	<p>3.1.Mares and foals are monitored to ensure adequate nutrition for the mare and milk supply for the foal.</p> <p>3.2.Foals are weaned onto suitable pasture and supplemented with appropriate feeds if required.</p> <p>3.3.Feed requirements of growing horses are met, with excessive protein and mineral deficiencies being avoided.</p> <p>3.4.Feeding plans for yearlings allow growth and</p>

ELEMENT	PERFORMANCE CRITERIA
	development for sale or growing on.
4. Supervise the handling and education of young horses	4.1. Young horses are kept in paddocks and facilities that minimise the risk of injury and blemishes. 4.2. Young horses are handled from foals to be able to be led and tied up. 4.3. Young horses are provided with the social support of other young horses or foster mares to help them settle and adapt from weaning. 4.4. Weanlings and yearlings are taught to parade for sale.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- handle foals from birth to yearlings
- recognise abnormal behavioural signs and signs of abnormal development
- maintain accurate data documentation
- report on foal conformation
- carry out conformation corrective action plans
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant legislation and regulations relating to waste and environment management, and animal health

**REQUIRED SKILLS AND KNOWLEDGE**

- relevant Occupational Health and Safety (OHS) and animal welfare legislation, codes of practice and enterprise requirements
- diseases and common illnesses associated with young horses
- developmental disorders of young horses
- desirable and undesirable conformation
- strategies to address undesirable conformation or characteristics.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- handle foals from birth to yearlings
- conduct detailed staff briefings with regard to tasks and safety issues
- supervise the raising of young horses
- recognise abnormal behavioural signs and signs of abnormal development
- carry out foal conformation corrective action
- monitor the health and well-being of foals, weanlings and yearlings

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor plant health	<p>1.1. Workplace information is interpreted and clarified with the supervisor.</p> <p>1.2. Growth rate of plants are assessed against targets set in the production plan.</p> <p>1.3. Plants are assessed for overall health according to sound horticultural practice.</p> <p>1.4. Plant is assessed for onset of fruit according to production plan.</p>
2. Monitor the hydroponic environment	<p>2.1. Environmental parameters are monitored according to the production plan and adjustments made as required.</p> <p>2.2. Samples are collected and sent off for analysis to identify potential sources of contamination.</p> <p>2.3. Hygiene procedures are monitored and adjusted according to enterprise guidelines.</p> <p>2.4. Disposal of materials is monitored to ensure it follows enterprise guidelines, and with due consideration of the environmental implications.</p>
3. Monitor nutrient solution	<p>3.1. Ingredients of the hydroponic nutrient solution are identified.</p> <p>3.2. Samples are taken for testing and analysis.</p> <p>3.3. Results are interpreted and discussed with the supervisor.</p> <p>3.4. Nutrient solution is modified in accordance with results to ensure the correct balance of ingredients for optimum growing conditions.</p>
4. Perform routine	<p>4.1. All buildings and structures are inspected and</p>

ELEMENT	PERFORMANCE CRITERIA
maintenance checks	<p>checked for wear and tear.</p> <p>4.2. Equipment for delivering the nutrient solution is checked according to enterprise guidelines.</p> <p>4.3. Equipment controlling the atmospheric and root zone environments is checked according to enterprise guidelines.</p> <p>4.4. OHS hazards are identified, risk assessed and suitable controls implemented according to enterprise guidelines.</p>
5. Complete monitoring activities	<p>5.1. Any significant problems are reported to the manager and/or owner operator.</p> <p>5.2. All checks are recorded according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- read and interpret design and layout plans
- test and calibrate hydroponic equipment
- monitor and test environment parameters and nutrient solutions
- read and interpret test results accurately
- record all test results clearly and concisely with attention to detail
- undertake minor repairs of equipment, e.g. pumps, pipes and drippers
- dispose of unused or waste materials from site in an environmentally safe and sensitive manner
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- equipment used in hydroponic systems

**REQUIRED SKILLS AND KNOWLEDGE**

- properties of a nutrient solution
- testing methods for the gauging of environmental parameters
- testing methods for a hydroponic nutrient solution
- recirculated and non-recirculated systems
- media choices and their properties
- characteristics of healthy plants
- potential problems associated with a range of crops grown in a hydroponic environment
- environmental implications of the disposal of chemicals or chemical containers, and the drainage of high nutrient effluent.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- read nutrient analysis information
- assist in performing nutrient measurement tests
- administer nutrients to a hydroponic system as instructed
- undertake hydroponic system maintenance and repairs of sheds, structures and other associated equipment.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

	<p>manufacturers specifications.</p> <p>2.5.Any problems associated with installation are communicated to the client and/or manager.</p>
3. Test and calibrate the system	<p>3.1.Hydroponic infrastructure and systems are checked to ensure they are in good working order and meet required specifications.</p> <p>3.2.Hydroponic equipment is calibrated to ensure readings are accurate.</p> <p>3.3.Media is installed according to enterprise guidelines.</p> <p>3.4.The hydroponic system is test run ready for the planting of the crop.</p> <p>3.5.Check list of all testing results is completed and approved by client/management.</p>
4. Complete installation operations	<p>4.1.All tools and equipment are cleaned and stored according to enterprise guidelines.</p> <p>4.2.Site is tidied and waste is removed and disposed of in a manner that minimises risk of damage to the environment.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- test and calibrate hydroponic equipment
- remove any waste material from site in an environmentally safe and sensitive manner
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

- recirculated and non-recirculated systems
- media choices and their properties
- legislation regarding the installation of hydroponic systems
- head pressure and flow rates
- environmental implications of the drainage of high nutrient effluents.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare a site for installation of a hydroponics system according to instructions and directions
- prepare materials and equipment for installation
- install components and structure associated with a hydroponic system
- commission system according to instructions and directions
- store and maintain associated installation equipment and materials.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
System may include:	<ul style="list-style-type: none"> <li>recirculating or non-recirculating hydroponic systems in glasshouses or shade houses.</li> </ul>

## Unit Sector(s)

<b>Unit sector</b>	Hydroponics

<b>Competency field</b>	
-------------------------	--

## AHCHYD501A Develop a plan for a hydroponic system

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of designing a hydroponic system and describes the standard required to: research the growing requirements, risks and returns of the proposed crop; survey the site for suitability and environmental impacts, and gain approvals; select or design s system and customise it for the site and purpose; develop a design plan including costings, specifications and on-site procedures and schedules.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those who design systems for hydroponic production of horticultural crops.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out preliminary research	<p>1.1.Type of crop to be grown is researched based on sound marketing principles.</p> <p>1.2.The growing requirements of the crop are researched based on sound horticultural practices.</p> <p>1.3.The associated risks of growing a particular crop are established based on sound horticultural practices.</p> <p>1.4.Estimated yield and crop turnover time is calculated from historical data and research statistics.</p> <p>1.5.Quantity of the plants to be grown is determined based on a cost benefit analysis.</p>
2. Assess the suitability of a site	<p>2.1.The physical characteristics of the site are assessed.</p> <p>2.2.The proximity of the site to markets is ascertained and assessed.</p> <p>2.3.Legal requirements in relation to the site and the development of a hydroponic farm are identified.</p> <p>2.4.The environmental implications of developing a hydroponic farm on the site are identified and considered.</p>
3. Select the required system	<p>3.1.Main types of hydroponic systems are researched.</p> <p>3.2.Analysis is carried out on each type of system for the chosen crops.</p> <p>3.3.A cost/benefit analysis is carried out on each system for each type of crop required.</p> <p>3.4.The type of hydroponic system to be installed is determined.</p>
4. Design the	4.1.The water collection and storage system is selected

ELEMENT	PERFORMANCE CRITERIA
hydroponic system	<p>and documented on the plan.</p> <p>4.2.The irrigation system and components are selected according to the required volume of water and flow rate.</p> <p>4.3.The fertigation system is selected and documented.</p> <p>4.4.The dimensions of the controlled environment structure are determined following full consideration of the relevant factors.</p> <p>4.5.Environmental control system is determined and specifications documented on the plan.</p>
5. Prepare and document the design	<p>5.1.A design plan drawn to scale is developed, which can be readily interpreted and understood.</p> <p>5.2.Specifications and detailed costings are determined with the help of experts, if required.</p> <p>5.3.Detailed on-site procedures and schedules required for production are developed and documented.</p> <p>5.4.Documentation is presented to the client or management for final approval.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- develop a plan for a hydroponic system applies to the
- organise information derived from the research process in a written report
- draw a scaled design by hand and/or on computer
- use a range of financial analysis tools to determine viability of the system
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
abilities
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• advantages and disadvantages of the different equipment used in hydroponic systems</li> <li>• technical requirements and operating parameters of recirculated and non-recirculated systems</li> <li>• media choices, their properties and enterprise specifications</li> <li>• legislation and regulations relating to the establishment of a hydroponic system</li> <li>• an awareness of the environmental implications of the disposal of chemicals or chemical containers, and the drainage of high nutrient effluent.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• research the growing requirements, risks and returns of the proposed crop</li> <li>• survey the site for suitability and environmental impacts, and gain approvals</li> <li>• select or design a system and customise it for the site and purpose</li> <li>• develop a design plan including costings, specifications and on-site procedures and schedules.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>

## AHCILM201A Maintain cultural places

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of maintaining cultural places as instructed by supervisors and defines the standard required to: assess the level of work required to maintain the cultural place; carry out maintenance activities in accordance with organisational and cultural requirements; report deterioration or damage to place; report incidents of breaches of legislation including vandalism.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to working under routine supervision and may involve operating in a team environment with deference to elders.  Note: For Indigenous cultural places, the delivery and assessment against this standard must comply with community protocols and guidelines and be supported by elders and custodians of country.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess maintenance work required	1.1. Works required under the plan of management and enterprise procedures are identified. 1.2. Machine, equipment and materials to carry out maintenance works are identified. 1.3. Type and amount of materials required for maintenance work are estimated.
2. Prepare for maintenance	2.1. Machine, equipment and materials to carry out maintenance works are organised. 2.2. Safety equipment and materials are prepared and assembled according to enterprise Occupational Health and Safety (OHS) policy.
3. Maintain condition of place	3.1. Maintenance work is undertaken according to work programs and according supervisor's instructions. 3.2. Presence of threats is reported to supervisor. 3.3. Evidence of deterioration and wear is reported to supervisor. 3.4. Site is made good on completion of maintenance works according to supervisor's instructions enterprise guidelines.
4. Protect cultural place	4.1. Any evidence of damage to place is reported to supervisor. 4.2. Any breach of legislation or enterprise regulations is reported to supervisor.

ELEMENT	PERFORMANCE CRITERIA
	4.3. Protective barriers and signs are maintained according to enterprise procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and adopt safe work practices
- assess maintenance work required
- maintain condition of place
- protect cultural places
- prepare for maintenance
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- OHS responsibilities
- common pests and diseases
- techniques of site protection
- range of maintenance works undertaken on cultural sites
- enterprise procedures relating to the reporting of deterioration or damage to place or reporting of incidents
- site recording systems used by the enterprise or community
- relevant archaeological practices and procedures.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assess the level of work required to maintain the cultural place</li> <li>• carry out maintenance activities in accordance with organisational and cultural requirements</li> <li>• report deterioration or damage to place</li> <li>• report incidents of breaches of legislation including vandalism.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

## AHCILM202A Observe and report plants and/or animals

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of observing, recording and reporting on the presence of plants and/or animals against criteria provided by a supervisor or as required under legislation or regulations, and defines the standard required to: observe and accurately identify species of animals in a natural area; observe and accurately identify species of plants in a natural area; record and report observations in required format; carry out a survey of plants and animals in a natural area causing minimal disruption to the environment.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to working under routine supervision with intermittent checking. Competency involves the application of knowledge and skills to a range of observation and reporting situations usually within established workplace routines.
--------------------------------	--

### Licensing/Regulatory Information

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan and organise observations	<p>1.1. Defined process for observation is prepared and agreed by supervisor.</p> <p>1.2. Equipment for observation is obtained according to enterprise procedures.</p> <p>1.3. Requirements under legislation, protection agreements and enterprise procedures for species are noted.</p>
2. Collect information and record	<p>2.1. Plants and animals and their presence are identified orally or from field guides to enterprise guidelines.</p> <p>2.2. Plants and animals and/or samples are collected as required under enterprise guidelines.</p> <p>2.3. Protection and quarantine requirements under legislation, protection agreements and enterprise procedures for species are observed.</p> <p>2.4. Observation activities minimise degradation and disturbance and comply with legislation and Occupational Health and Safety (OHS) requirements.</p>
3. Report data	<p>3.1. Information on observed plants and animals are recorded and organised according to enterprise guidelines.</p> <p>3.2. Information is communicated to supervisors according to enterprise guidelines.</p> <p>3.3. Records are compatible with enterprise recording and database arrangements.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Occurrence of an organism is plotted and described using maps and grid references.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- plan and organise observations
- recognise fauna and flora
- collect information and record
- interpret data
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- criteria used to group species
- common and scientific names of plants and animals
- biological species occurring in the study area
- the importance, value or potential impact of the species in a designated area
- rare and endangered species
- undesirable plants (weeds) and animals
- maps and grid references.

## Evidence Guide

### EVIDENCE GUIDE

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• observe and accurately identify species of animals in a natural area</li> <li>• observe and accurately identify species of plants in a natural area</li> <li>• record and report observations in required format</li> <li>• carry out a survey of plants and animals in a natural area causing minimal disruption to the environment.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Collect information	<p>1.1. Boundaries and extent of country are determined according to community guidelines and protocols.</p> <p>1.2. Plant and animal species are identified by local or common name.</p> <p>1.3. Special features and sites of country are identified.</p> <p>1.4. Knowledge on relationships of plants and animals is investigated from Indigenous land and sea management and cultural perspectives.</p> <p>1.5. Information on relevant management practices for country is investigated.</p> <p>1.6. History of dispossession is acquired from community sources and available literature.</p> <p>1.7. Simple food chains relevant to country are defined.</p>
2. Review changes	<p>2.1. Environmental changes since dispossession and the impacts of these changes on plant and animal communities are identified.</p> <p>2.2. Environmental trends and their potential impacts on country are documented.</p> <p>2.3. Land and sea management practices that address environmental change are recorded.</p>
3. Document information	<p>3.1. Information about country is recorded according to community guidelines and protocols.</p> <p>3.2. Access to information is provided to those who are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>authorised according to community guidelines and protocols.</p> <p>3.3. Ownership of information is appropriately recognised and recorded.</p> <p>3.4. Conditions and parameters defining use of information is clearly documented.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect information
- document information
- operate according to community guidelines and protocols
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- designated areas and features of country
- local and/or common names for plants and animals
- basic ecological concepts
- protocols and customs relating to disclosure of knowledge about country
- dispossession and land rights legislation
- OHS and environment legislative and enterprise requirements.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify the role of traditional customs in indigenous communities	<p>1.1. Specific impacts of traditional customs on a local community are investigated.</p> <p>1.2. The impact of role delineation of indigenous men and women on land management practices is defined according to community protocols.</p> <p>1.3. Current customs are compared with those of pre-European settlement to determine any impacts on the management of country.</p>
2. Outline impact of native title rights and interests recognised under non-Indigenous law	<p>2.1. Implications of the potential conflict of interest between people exercising their native title rights, which are in contravention of non-indigenous law, are investigated.</p> <p>2.2. Instances where people exercising their native title rights are contained within non-indigenous law are outlined.</p> <p>2.3. The limitations placed on the exercise of native title rights and interests by other valid grants of title under non-indigenous law, and how these different rights and interests in land might coexist are determined.</p> <p>2.4. The implications of the potential conflict of interest between the exercise of native title rights and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>interests and the rights of others with interests in land are assessed.</p> <p>2.5. Ramifications of the outcomes of practicing traditional customs and native title are discussed.</p>
3. Propose appropriate applications of traditional customs	<p>3.1. Situations involving traditional customs or native title which result in ethical implications in carrying out responsibilities are identified.</p> <p>3.2. The use of traditional customs as an alternative to or in conjunction with mainstream legal and management systems is outlined.</p> <p>3.3. Advice for legal representatives regarding the integration of traditional customs and mainstream legal and management systems is outlined.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- discuss matters relating to traditional customs with the appropriate people according to community protocols
- appropriately discuss gender roles in ways that do not offend any appropriate people
- analyse general situations in regard to interaction of mainstream law and management with traditional customs
- speak to persons with significant professional training in law
- carry out basic investigative research on areas of use of traditional customs
- observation of protocols for entry to traditional lands
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- cultural customs and heritage

**REQUIRED SKILLS AND KNOWLEDGE**

- relevant state land and resources acts/legislation
- legal representative's roles.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify the role of traditional customs in indigenous communities
- outline impact of native title rights and interests recognised under non-indigenous law
- propose appropriate applications of traditional customs.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Areas of traditional customs may include:

- indigenous rights to natural and cultural resources and their uses.
- indigenous understandings about country for

**RANGE STATEMENT**

	<p>certain groups.</p> <ul style="list-style-type: none"> <li>• indigenous means for dealing with abuse of rights and understandings about country.</li> <li>• indigenous means for dealing with enforcement of the rights and understandings about country.</li> <li>• indigenous means for solving problems or issues associated with use of natural and cultural resources on country.</li> </ul>

## AHCILM302A Provide appropriate information on cultural knowledge

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of maintenance of cultural knowledge by indigenous people and if and how this knowledge may be provided to others and defines the standard required to: investigate cultural knowledge in accordance with cultural protocols; investigate relationships between land features, seasons and spirituality; identify plants, animals and resources used for medicine and food; provide information on cultural knowledge in accordance with cultural protocols.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit is normally carried out within own area of responsibility. It requires some judgement and discretion, and would be carried out under minimal supervision within enterprise guidelines. Note: Delivery and assessment against this competency standard must comply with community protocols and guidelines and be supported by elders and custodians of country.
--------------------------------	---

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Investigate cultural knowledge	<p>1.1.Cultural knowledge is accessed through reference to an appropriate person according to community guidelines and cultural protocols.</p> <p>1.2.Key principles, values and practices of cultural knowledge are determined and recorded according to community protocols.</p> <p>1.3.The relationship between cultural knowledge and management of country is defined according to community protocols.</p> <p>1.4.Ownership of and parameters for transferring cultural knowledge are established according to community protocols.</p>
2. Identify locations and patterns of plants and animals in a specific area	<p>2.1.Relationships between land, rivers, lakes and sea management practices and seasonal cycles are identified and documented in an accessible record.</p> <p>2.2.Common and indigenous names are used to describe plants and animal according to community guidelines and cultural protocols.</p> <p>2.3.Relationships between spirituality and people to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>complement the accessible record are noted.</p> <p>2.4. Appropriate people are used to confirm findings.</p>
<p>3. Identify plants, animals and resources used for medicine and food</p>	<p>3.1. Bush foods and medicines for a specific area are identified and recorded.</p> <p>3.2. Common and indigenous names are used to describe plants and animal according to community guidelines and cultural protocols.</p> <p>3.3. Plant and animal samples are collected for future identification.</p> <p>3.4. Issues in relation to indigenous access and use are defined and documented.</p>
<p>4. Relate information on cultural knowledge to others</p>	<p>4.1. Information on cultural knowledge is provided to those who are authorised to possess that knowledge according to community guidelines and cultural protocols.</p> <p>4.2. Information on cultural knowledge is related in an appropriate format and medium according to community guidelines and cultural protocols.</p> <p>4.3. Requests for disclosure of information on cultural heritage that infringes intellectual property rights of a group or community are referred to appropriate persons according to community guidelines and cultural protocols.</p> <p>4.4. Requests for disclosure of information on aspects of cultural knowledge by unauthorised individuals are appropriately declined.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- investigate cultural knowledge
- identify locations and patterns of plants and animals in a specific area
- identify plants, animals and resources used for medicine and food
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible

**REQUIRED SKILLS AND KNOWLEDGE**

information collected and select and apply procedures for a range of tasks

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- cultural knowledge about plant and animals relating to a particular community, group or region
- common and indigenous names for plants and animals
- cultural protocols relevant to region, community and scope and type of cultural knowledge
- role and rights of indigenous peoples in maintaining and controlling cultural knowledge
- individuals who are authorised to possess cultural knowledge
- intellectual and cultural property rights.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- investigate cultural knowledge in accordance with cultural protocols
- investigate relationships between land features, seasons and spirituality
- identify plants, animals and resources used for medicine and food

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>provide information on cultural knowledge in accordance with cultural protocols.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Cultural knowledge may include:	<ul style="list-style-type: none"> <li>indigenous land, rivers, lakes and sea resources and their uses, and the relationships between plants, animals and community.</li> </ul>

# AHCILM305A Work with an Aboriginal Community or organisation

## Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release. Supersedes and is not equivalent to AHCILM303A

## Unit Descriptor

This unit covers the process of operating in an Aboriginal Community or organisation while demonstrating an awareness of Aboriginal identity, history and spirituality.

## Application of the Unit

This unit is normally carried out within own area of responsibility. It requires some judgement and discretion, and would be carried out under minimal supervision within enterprise guidelines. The unit applies to participants working in and with Aboriginal communities and organisations and is also applicable to the work of repatriation workers and anthropologists.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

## Pre-Requisites

AHCILM306A Follow Aboriginal cultural protocols

## Employability Skills Information

This unit contains employability skills

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define Australian history from an Aboriginal cultural and Community perspective	<p>1.1 Major characteristics of the social structures of Aboriginal societies are determined</p> <p>1.2 Impacts on Aboriginal social structures following European colonisation are identified</p> <p>1.3 Examples of resistance to European colonisation are recorded</p> <p>1.4 Positive and negative effects of European colonisation are documented</p> <p>1.5 Various approaches and resources which can be employed in order to identify cultural authorities for specific Country and Community are determined</p> <p>1.6 Contemporary Aboriginal social, economic and political trends are researched in the context of Community life</p>
2. Summarise actions of governments to deal with the effects of European colonisation on Aboriginal people	<p>2.1 Major legislation and/or policy directions of governments that affect Aboriginal people are identified</p> <p>2.2 Legal parameters relating to Aboriginal land ownership, acquisition and management are defined</p> <p>2.3 Impacts of laws and/or policies on social structures of Aboriginal peoples are documented</p>
3. Outline strategies for working with Aboriginal organisations and people	<p>3.1 Differences in relation to working as an Aboriginal person (or non-Aboriginal person) within Aboriginal and non-Aboriginal communities and organisations are acknowledged and considered</p> <p>3.2 Aboriginal ways of working are identified</p> <p>3.3 Potential conflicts are recognised</p> <p>3.4 <i>Strategies</i> for minimisation of conflicts are identified and implemented</p>
4. Operate effectively in a job role working with an Aboriginal Community or organisation	<p>4.1 <i>Aboriginal cultural protocols</i> are observed according to Community and/or organisational guidelines and procedures</p> <p>4.2 Community traditions and customs are respected according to workplace policies and procedures</p> <p>4.3 Productive relationships are built and maintained within the Aboriginal Community and organisation</p> <p>4.4 Mutual respect is created and given as evidenced by effective engagement and shared outcomes with the Community and/or organisation over time</p>

**ELEMENT****PERFORMANCE CRITERIA**

---

4.5 Feedback on personal *work* performance, interpersonal ways of relating and adherence to Aboriginal cultural protocols is valued and obtained

## Required Skills and Knowledge

### Required skills include:

---

**Ability to:**

- gather information about Aboriginal and non-Aboriginal social structures
- summarise actions of governments to deal with the effects of European colonisation
- deal with personal negative responses/reactions in a positive way
- implement strategies that support the concept/implementation of Aboriginal management (principles)
- understand and engage effectively in mediation and conflict resolution
- operate effectively within an Aboriginal Community or organisational job role
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities
- apply sustainable environmental practices
- apply workplace health and safety requirements

### Required knowledge includes:

---

**Knowledge of:**

- Aboriginal history, cultural values and interpersonal and Community protocols
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- Aboriginal communities and social structures
- Aboriginal cultural customs and heritage
- history of British society and dispossession in Australia
- Aboriginal history and impact of European colonisation
- legislation and its impact on Aboriginal communities
- Cultural and Heritage Legislation or relevant NPWS legislation

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment</p>
--

Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</b>	<p>The delivery and assessment of training of this unit must comply with Community protocols and be carried out in consultation with and in participation with Traditional Owners and/or Elders and Custodians of that specific Country.</p> <p>Candidates must demonstrate evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• work within and between Aboriginal and non-Aboriginal social structures</li> <li>• apply an understanding of the perceptions and impacts of government action to deal with the effects of European colonisation within Aboriginal communities</li> <li>• demonstrate empathy and respect in working with Aboriginal communities and organisations</li> <li>• build effective and productive working relationships with Aboriginal people and communities</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment events must be contextualised to meet the needs of the particular group, including:</p> <ul style="list-style-type: none"> <li>• an Aboriginal Community, educational or workplace setting</li> <li>• involvement of people approved by cultural authorities and/or Traditional Owners of the relevant local Community</li> <li>• candidates who have gained relevant knowledge and skills through their life experience</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess competency in following Aboriginal cultural protocols. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observation of the candidate relating to and engaging Aboriginal persons and Aboriginal Community</li> <li>• direct questioning combined with third-party workplace reports of on-the-job performance</li> <li>• verbal or written questioning</li> <li>• observation of work conducted in Aboriginal Community and/or organisation</li> <li>• evaluation of the outcomes of work conducted in</li> </ul>

	<p>Aboriginal Community and/or organisation</p> <p>Assessment methods should closely reflect workplace demands and the needs of particular client groups (consider the requirements of different age groups, clients with English as a second language, clients with disabilities, remote library users, etc.).</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <p>AHCILM306A Follow Aboriginal cultural protocols</p> <p>AHCILM404A Record and document Community history</p> <p>Assessment for this unit should comprise a combination of theory and practical application. Both aspects of assessment are best conducted on Country for this unit.</p>

## Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Strategies</i></b> may include:	<ul style="list-style-type: none"> <li>• ideas for ‘breaking the ice’ at first meetings</li> <li>• ways to demonstrate respect for cultural authority</li> <li>• ways of educating oneself about Aboriginal cultural protocols</li> <li>• discussing ideas with bi-culturally competent others</li> <li>• undertaking Aboriginal language courses</li> <li>• spending time in an Aboriginal Community</li> </ul>
<b><i>Aboriginal cultural protocols</i></b> may include:	<ul style="list-style-type: none"> <li>• gender roles in relation to knowledge and cultural practices</li> <li>• information sensitivity and access</li> <li>• appropriate information transfer</li> <li>• negotiations with local Aboriginal Community about information transfer</li> <li>• cultural diversity</li> <li>• natural resources and their importance for economy,</li> </ul>

	<p>religion, spirituality, art, environment, values, beliefs and lore/law.</p> <ul style="list-style-type: none"> <li>• rights and responsibilities associated with cultural knowledge, story, song, Site, and ceremony</li> <li>• interpersonal ways of relating</li> <li>• the talking of Community politics</li> <li>• repatriation of artefacts</li> <li>• issues of ownership (clans/nations)</li> <li>• ownership of intellectual property</li> <li>• acknowledging participation and ownership</li> <li>• communicating about cultural material</li> <li>• displaying cultural material</li> <li>• handling cultural material</li> <li>• identifying appropriate people to be consulted</li> <li>• occasions when consultation is required</li> <li>• ways in which consultations should be conducted</li> </ul>
<b>Work</b> may include:	<ul style="list-style-type: none"> <li>• a variety of forms of interaction with Aboriginal people and Community</li> <li>• presentations</li> <li>• consultations</li> <li>• research</li> <li>• mentoring</li> <li>• consulting</li> <li>• recording</li> <li>• sharing knowledge</li> <li>• writing reports</li> </ul>

## Unit Sector(s)

Indigenous land management

## AHCILM306A Follow Aboriginal cultural protocols

### Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release. Supersedes and is not equivalent to AHCILM304A

### Unit Descriptor

This unit provides an awareness of the protocols involved in Aboriginal culture, including the need to identify the appropriate person/s when approaching a Community and the cultural and social protocols associated with that task.

### Application of the Unit

This unit applies to following cultural protocols and details the specific cultural, gender and kinship sensitivities of working in Aboriginal communities and on Country with diverse cultural requirements. The unit applies to working with lore/law men and women either autonomously or under the supervision and cultural authority of Traditional Owner/s and/or Elder/s for specific Country. This unit is also applicable to the work of repatriation workers and anthropologists. Cultural beliefs and practices vary across locations and communities however and in some situations non-Aboriginal learners may not be able to access the cultural knowledge and/or materials required to achieve competency in this unit. This applies when restrictions are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will have to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

### Pre-Requisites

Nil

### Employability Skills Information

This unit contains employability skills

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify Aboriginal beliefs and associated cultural protocols for <i>different Country</i>	1.1 The importance of <i>Aboriginal beliefs</i> and the relationship of these beliefs with cultural landscapes are identified and documented 1.2 Gender roles are recognised and respected 1.3 Language groups and kinship networks within specific Country that inform the basis of social relationships and Community roles are respected 1.4 <i>Cultural taboos</i> , factions and avoidance relationships are recognised and respected 1.5 The rights of individuals within communities and on Country to hold specific knowledge and ceremony are acknowledged 1.6 The rights of individuals within communities and on Country to hold responsibility for Aboriginal-sites and the cultural rules associated with sharing that knowledge are acknowledged 1.7 The inherent diversity that exists within cultures and communities is respected and affirmed
2. Identify Aboriginal cultural authorities for specific Country in culturally appropriate ways	2.1 Various approaches and resources that can be employed in order to identify cultural authorities for specific Country are applied 2.2 Difficulties in identifying cultural authorities in various states and territories is researched 2.3 The appropriate cultural authorities are identified and consulted 2.4 The identification by <i>cultural authorities</i> of appropriate persons within communities who hold cultural knowledge relevant to determining the cultural significance of Aboriginal objects and/or places is applied 2.5 The provision of advice by cultural authorities is respected; with advice and decisions by cultural authorities on

ELEMENT	PERFORMANCE CRITERIA
	<p>identifying appropriate persons for consultation implemented</p> <p>2.6 Rights and responsibilities associated with cultural knowledge, story, song, site, and ceremony are respected and implemented</p> <p>2.7 Cultural knowledge holders inform the decision-making process to determine the cultural significance of objects and/or places</p> <p>2.8 Traditional knowledge and practices in managing Country and environment are acknowledged and respected</p>
<p>3. Relate <i>Aboriginal cultural protocols</i> to Community consultation</p>	<p>3.1 Key protocols required for Aboriginal Community consultation are identified and recorded</p> <p>3.2 Determination of Aboriginal people as the primary source of cultural information is acknowledged</p> <p>3.3 Decision making by Aboriginal cultural authorities for when consultation is required, the selection of participants, and ways in which consultations are conducted is determined</p> <p>3.4 Communication approaches that place Aboriginal cultural protocols and values as a principal concern are implemented</p> <p>3.5 Participation in Community consultation following appropriate cultural protocols for that Country and Community is undertaken</p>
<p>4. Recognise and administer Aboriginal ownership and intellectual property rights</p>	<p>4.1 Ownership rights and intellectual property rights of Aboriginal cultural information and material is established</p> <p>4.2 Rights to control cultural heritage by Aboriginal people as custodians of Aboriginal culture are recognised</p> <p>4.3 Access restrictions to cultural knowledge, information and material are applied</p> <p>4.4 Confidentiality measures for recording secret, sacred materials are followed</p> <p>4.5 The ownership of cultural knowledge, information and material, is determined and administered</p> <p>4.6 Any identified infringement of copyright is reported to appropriate personnel</p>
<p>5. Access, transfer and use cultural information and material</p>	<p>5.1 Permissions from cultural authorities, relevant individuals and organisations for access and use of Aboriginal cultural information and material are sought and may be obtained or denied</p> <p>5.2 Parameters for processes of transfer of cultural knowledge are established and implemented</p> <p>5.3 Adherence to cultural restrictions on Aboriginal cultural information and Aboriginal material is observed</p> <p>5.4 Copyright and licensing issues related to access and use of</p>

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	Aboriginal cultural material and cultural information are acknowledged and observed
	5.5 Aboriginal cultural requirements for communications about, and display, access and handling of, Aboriginal cultural information and material are followed
	5.6 The implications of consent for accessing, transferring and using cultural information and materials are known and agreed
6. Use appropriate personal and social protocols	6.1 Appropriate use of personal protocols of addressing persons and greetings, personal contact, and gestures is observed
	6.2 Personal presentation and conduct is guided by respect for local and Community traditions
	6.3 Personal communication styles for language, non-verbal communication, discussion, meaning, questioning, eye contact and silence reflect the customs and idioms of the local Community
	6.4 A flexible attitude is used to address situations of cultural diversity and cross-cultural differences

## Required Skills and Knowledge

### Required skills include:

#### Ability to:

- respect cultural diversity and sensitivity to social, cultural values and beliefs
- use technology to access written, oral or visual source material
- carry out library and internet research
- comprehend written, oral or visual source material
- interpret written, oral or visual source material
- apply listening skills
- apply oral communication skills
- relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- exercise discretion and confidentiality

### Required knowledge includes:

#### Knowledge of:

- Aboriginal history, cultural values and interpersonal and Community protocols
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared.
- Cultural and Heritage Legislation or relevant NPWS legislation
- sustainable environmental practices
- workplace health and safety requirements

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The delivery and assessment of this unit must comply with Community protocols and be carried out in consultation with and participation with Traditional Owners and/or Elders and custodians of that specific Country.

In accordance with Aboriginal cultural protocols, cultural knowledge copyright considerations and Aboriginal lore/law restrictions, it is essential that this requirement be respected and implemented in the

	<p>delivery and assessment of <i>Cultural Units</i> to guarantee cultural authenticity and quality control around the delivery of training and assessment for Aboriginal-sites workers.</p> <p>Candidates must demonstrate evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify and seek participation of appropriate cultural authorities for a Community, place or for a site</li> <li>• identify cultural information, material and cultural expression appropriate to be shared</li> <li>• describe elements of cultural diversity within Aboriginal communities</li> <li>• describe natural resources and how they relate to cultural protocol, spirituality, art, environment, values, beliefs and lore/law</li> <li>• describe the cultural rights and responsibilities when using Community knowledge, information and material</li> <li>• identify groups to be consulted in relation to owners/custodians of cultural and Community knowledge, information and/or material</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment events must be contextualised to meet the needs of the particular group, including:</p> <ul style="list-style-type: none"> <li>• a Community, educational or workplace setting</li> <li>• involvement of people approved by cultural authorities and/or Traditional Owners of the relevant local Community</li> <li>• candidates who have gained relevant knowledge and skills through their life experience</li> </ul>
<p><b>Method of assessment</b></p>	<p>A range of assessment methods should be used to assess competency in following Aboriginal cultural protocols. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observation of the candidate relating to and engaging Aboriginal persons and Aboriginal Community</li> <li>• direct questioning combined with third-party workplace reports of on-the-job performance</li> <li>• verbal or written questioning</li> <li>• observation of participation in Ceremony and/or Sites work related to the knowledge and skills outlined in this Unit</li> </ul>

	Assessment methods should closely reflect workplace demands and the needs of particular client groups (consider the requirements of different age groups, clients with English as a second language, clients with disabilities, remote library users, etc.).
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> <li>• AHCILM306A Follow Aboriginal cultural protocols</li> <li>• AHCASW308A Apply cultural significance to Aboriginal-sites and landscapes</li> <li>• AHCILM404A Record and document Community history</li> </ul> <p>Assessment for this unit should comprise a combination of theory and practical application. Both aspects of assessment are best conducted on Country for this unit.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Aboriginal beliefs*** may refer to:

- connection to Country
- creation events
- structure of Community such as lore/law men and women, elders and custodians
- practicality and purpose
- appropriate behaviour, protocols and restrictions
- spiritual value of knowledge and stories
- communal ownership of some knowledge and material
- intergenerational ownership of some knowledge and material
- oral tradition of passing on knowledge and responsibilities
- roles as custodians of specified knowledge, ceremony, designs, information

	<ul style="list-style-type: none"> <li>• kinship and relationships</li> <li>• storytelling</li> </ul>
<i>Different Country</i> may include:	<ul style="list-style-type: none"> <li>• adjoining local Aboriginal Land Council boundaries</li> <li>• remote Aboriginal communities in the same or different States and Territories</li> <li>• different spaces within the same geographical area</li> </ul>
<i>Cultural taboos</i> may include:	<ul style="list-style-type: none"> <li>• anything that is offensive to the group or person in question</li> <li>• naming deceased persons</li> <li>• speaking of persons and/or places and/or practices that are not to be spoken of in public</li> <li>• cross gender practices and/or proximity in some situations</li> </ul>
<i>Cultural authorities</i> may include:	<p>Cultural authority refers to the most appropriate senior person/s that is able to speak for particular Country, cultural objects, ceremony and/or materials in a specific place. A cultural authority could be a Traditional Owner, a Native Title Claimant, Aboriginal Culture and Heritage Body, Elder, Aboriginal Land Council, etc.</p> <p>A ceremonial/cultural manager in terms of Aboriginal customary law means someone who does the work either under the direct supervision of the Aboriginal Owner or does the work that is authorised by the Owner. In a ceremony for example, the ceremonial manager(s) may provide the food and do the performance (work). Traditional roles and responsibilities swap over depending on a person's status in any given situation – ie – whose land / estate one is on for business.</p>
<i>Aboriginal cultural protocols</i> may include:	<ul style="list-style-type: none"> <li>• gender roles in relation to knowledge and cultural practices</li> <li>• information sensitivity and access</li> <li>• appropriate information transfer</li> <li>• negotiations with local Aboriginal Community about information transfer</li> <li>• cultural diversity</li> <li>• natural resources and their importance for economy, religion, spirituality, art, environment, values, beliefs and lore/law.</li> <li>• rights and responsibilities associated with cultural knowledge, story, song, Site, and ceremony</li> <li>• interpersonal ways of relating</li> <li>• the talking of Community politics</li> <li>• repatriation of artefacts</li> </ul>

	<ul style="list-style-type: none"><li>• issues of ownership</li><li>• ownership of intellectual property</li><li>• copyright and copyright infringement</li><li>• acknowledging participation and ownership</li><li>• communicating about cultural material</li><li>• accessing, displaying and handling cultural material</li><li>• identifying appropriate people to be consulted</li><li>• occasions when consultation is required</li><li>• ways in which consultations should be conducted</li></ul>
--	---

## Unit Sector(s)

Indigenous land management

# AHCILM307A Implement Aboriginal cultural burning practices

## Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release

## Unit Descriptor

This unit covers the process of using traditional Aboriginal practices in controlled burning on Country to manage natural and cultural resources.

## Application of the Unit

This unit applies to Aboriginal-sites workers and Land Managers who burn on Country as part of their job role. The unit involves and requires a high level of awareness and experience with Aboriginal culture and communities and the need to observe Aboriginal cultural protocols. It is expected that this work will be undertaken as part of a team working under supervision in most cases. Cultural beliefs and practices vary across locations and communities however and in some situations non-Aboriginal learners may not be able to access the cultural knowledge and/or materials required to achieve competency in this unit. This applies when restrictions are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will have to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

## Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

## Pre-Requisites

AHCILM306A Follow Aboriginal cultural protocols

## Employability Skills Information

This unit contains employability skills

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan burn activities	1.1 Working relationships that will assist in the planning and implementation of traditional Aboriginal cultural burning on Country are developed with <i>stakeholders</i> 1.2 Appropriate <i>cultural authorities</i> are identified and consulted and approval to be on Country obtained 1.3 Cultural knowledge is accessed through the appropriate knowledge holder and/or cultural manager 1.4 A comprehensive <i>burning plan</i> and schedule for the <i>total land mass</i> is developed based on traditional cultural knowledge of seasonal conditions, Aboriginal ceremonial requirements, environmental sustainability considerations and safety concerns
2. Protect life, property and conserve fauna and flora species in burn area	2.1 Burn is implemented according to Aboriginal cultural burning techniques and consistent with the burn plan and schedule 2.2 Visitors are excluded from target areas, entertainment areas and areas possibly affected by smoke or risk from escaping fire 2.3 Field workers are instructed in <i>ignition techniques and patterns</i> , fire control and safety procedures to conduct the burn 2.4 Neighbours and agencies are advised of the intention to burn to ensure safety and maintain client relations 2.5 <i>Aboriginal sites</i> , assets and entertainment areas are protected according to <i>Aboriginal cultural protocols</i> and fire industry practices 2.6 If required, <i>fire breaks</i> are applied to the area to maintain control of the fire and <i>burn intensity</i> 2.7 Fauna in danger in the burn area is removed prior to the controlled cultural burn where possible 2.8 Flora is assessed for impact on fire-sensitive communities and species

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
3. Burn defined areas	<p>3.1 Weather forecasts and current <i>weather conditions</i> are assessed to determine appropriate conditions and timing for burn</p> <p>3.2 Fire is applied to targeted areas according to Aboriginal cultural burning techniques, traditional frequency and organisation requirements</p> <p>3.3 Targeted areas defined by <i>burn specification or limiting factors</i> are defined</p> <p>3.4 Area is checked to ensure all sections have received required burn in accordance with the burning plan</p> <p>3.5 Assessment of burn is completed and recorded</p> <p>3.6 Area burnt is <i>monitored</i> to organisation procedures to avoid wildfire outbreaks</p> <p>3.7 Seasonal conditions and life cycles of flora and fauna are assessed for the cessation of fire practices</p>

## Required Skills and Knowledge

### Required skills include:

---

#### Ability to:

- define the location and extent of fire application
- evaluate the cultural and economic benefits of fire management practices
- assess the quality of fire burns
- respect cultural diversity and sensitivity to social, cultural and professional values and beliefs
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views

### Required knowledge includes:

---

#### Knowledge of:

- Aboriginal history, cultural values and interpersonal and Community protocols
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- traditional Aboriginal rationale and techniques for cultural burning
- the life cycles of flora and fauna of forests/plantations and effect of burning operations
- required intensity and appropriate frequency of fire
- sequence, location and pattern of recent and historical fire burns
- the dependence of the terrestrial ecosystems on fire
- selection of existing and construction of additional fire breaks
- Aboriginal ceremonial requirements for fire practices
- seasonal cycle of weather patterns
- effects of fire on human physiology
- emergency fire services
- radio communication
- organisational and enterprise policies and procedures for conservation of places of cultural significance
- Cultural and Heritage Legislation or relevant NPWS legislation
- sustainable environmental practices
- safety procedures for conducting fire operations
- workplace health and safety requirements

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The delivery and assessment of this unit must comply with Community protocols and be carried out in consultation with and participation with Traditional Owners and/or Elders and custodians of that specific Country and follow any relevant Parks/Reserves policies and plan of management guidelines and culture and heritage legislation.</p> <p>In accordance with Aboriginal cultural protocols, cultural knowledge copyright considerations and Aboriginal lore/law restrictions, it is essential that this requirement be respected and implemented in the delivery and assessment of <i>Cultural Units</i> to guarantee cultural authenticity and quality control around the delivery of training and assessment for Aboriginal-sites workers.</p> <p>Candidates must demonstrate evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• identify appropriate cultural authorities for a Community, place or for a Site</li> <li>• develop working relationships with Aboriginal and non-Aboriginal stakeholders</li> <li>• apply traditional Aboriginal cultural burning techniques</li> <li>• control burning operations</li> <li>• protect life, property and conserve fauna and flora species during burning</li> <li>• achieve the correct intensity of burn</li> <li>• adhere to organisational safety and environmental protection policies and procedures</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Assessment events must be contextualised to meet the needs of the particular group, including:</p> <ul style="list-style-type: none"> <li>• on Country, a Community, educational or workplace setting including Aboriginal cultural keeping places</li> <li>• involvement of people approved by cultural authorities and/or Traditional Owners of the relevant local Community</li> </ul>

	<ul style="list-style-type: none"> <li>• candidates who have gained relevant knowledge and skills through their life experience</li> <li>• organisational safety and environmental policies and procedures</li> </ul>
<b>Method of assessment</b>	<p>A range of assessment methods should be used to assess competency in protecting Aboriginal places of cultural significance. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• observation of the candidate on Country participating in all aspects of a cultural burning operation</li> <li>• direct questioning combined with third-party workplace reports of on-the-job performance</li> <li>• verbal or written questioning</li> </ul> <p>Assessment methods should closely reflect workplace demands and the needs of particular client groups (consider the requirements of different age groups, clients with English as a second language, clients with disabilities, remote library users, etc.).</p>
<b>Guidance information for assessment</b>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <p>AHCILM306A Follow Aboriginal cultural protocols</p> <p>AHCASW308A Apply cultural significance to Aboriginal sites and landscapes</p> <p>Assessment for this unit should comprise a combination of theory and practical application. Both aspects of assessment are best conducted on Country for this unit.</p>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Stakeholders</b> may include:	<ul style="list-style-type: none"> <li>• Aboriginal Land Councils</li> <li>• Indigenous Ranger groups</li> <li>• Traditional Owners and Cultural managers</li> </ul>
----------------------------------	--

	<ul style="list-style-type: none"> <li>• Aboriginal communities and Clans</li> <li>• museums</li> <li>• Culture and Heritage government departments and representatives</li> <li>• National Parks personnel</li> <li>• sites workers</li> <li>• archaeologists</li> <li>• anthropologists</li> </ul>
<p><b><i>Cultural authorities</i></b> may include:</p>	<p>Cultural authority refers to the most appropriate senior person/s that is able to speak for particular Country, cultural objects, ceremony and/or materials in a specific place. A cultural authority could be a Traditional Owner, a Native Title Claimant, Aboriginal Culture and Heritage Body, Elder, Aboriginal Land Council, etc.</p> <p>A ceremonial/cultural manager in terms of Aboriginal customary law means someone who does the work either under the direct supervision of the Aboriginal Owner or does the work that is authorised by the Owner. In a ceremony for example, the ceremonial manager(s) may provide the food and do the performance (work). Traditional roles and responsibilities swap over depending on a person's status in any given situation – ie – whose land / estate one is on for business.</p>
<p><b><i>Burning plan</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• appropriate frequency of fire</li> <li>• sequence, locations and pattern of recent and historical fire burns</li> <li>• schedules and maps of burn areas</li> <li>• seasonal cycle of weather patterns</li> <li>• timing of ignition of burns and cessation of fire practices</li> <li>• defining the location and extent of fire application</li> <li>• selection of existing and construction of additional fire breaks</li> <li>• familiarity with local landscape</li> <li>• evaluating the cultural and economic benefits of fire management</li> <li>• assessing the quality of fire burns</li> <li>• safety procedures for conducting fire operations</li> <li>• risk management of fire operations</li> <li>• reasons for burning: <ul style="list-style-type: none"> <li>• cleaning out Country</li> <li>• cultural and economic benefits</li> <li>• ceremonial requirements</li> <li>• species diversity</li> <li>• species regeneration</li> <li>• hunting methods</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• facilitation of travelling through Country</li> <li>• creation of fire breaks</li> <li>• communication</li> <li>• land ownership</li> </ul>
<b>Total land mass</b> may include:	<ul style="list-style-type: none"> <li>• an entire National Park/Reserve</li> <li>• part of an entire National Park/Reserve</li> <li>• several burn sites mapped together</li> <li>• an Aboriginal Land Council boundary</li> </ul>
<b>Ignition techniques and patterns</b> may include:	<ul style="list-style-type: none"> <li>• ignition method</li> <li>• lighting pattern</li> <li>• ignition spacing</li> </ul>
<b>Aboriginal Sites</b> may include:	<ul style="list-style-type: none"> <li>• shelters with deposits</li> <li>• open camp site</li> <li>• midden</li> <li>• shelter with midden</li> <li>• shelter with art</li> <li>• isolated find</li> <li>• undefined sites</li> <li>• axe grinding grooves</li> <li>• bora/ceremonial ring</li> <li>• burial site</li> <li>• rock engraving</li> <li>• scarred tree</li> <li>• carved tree</li> <li>• natural mythological site</li> <li>• restricted site</li> <li>• quarry</li> <li>• ochre quarry</li> <li>• fish trap</li> <li>• stone arrangement</li> <li>• mound (oven)</li> <li>• mia mia</li> <li>• waterhole (well)</li> <li>• contact/mission</li> <li>• abraded grooves</li> <li>• Aboriginal Place (declared under NPW Act)</li> <li>• Aboriginal Area (declared under NPW Act)</li> <li>• protected archaeological site</li> <li>• Conservation agreement</li> <li>• massacre</li> <li>• reserve</li> </ul>

<p><b><i>Aboriginal cultural protocols</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• gender roles in relation to knowledge and cultural practices</li> <li>• information sensitivity and access</li> <li>• appropriate information transfer</li> <li>• negotiations with local Aboriginal Community about information transfer</li> <li>• cultural diversity</li> <li>• natural resources and their importance for economy, religion, spirituality, art, environment, values, beliefs and lore/law.</li> <li>• rights and responsibilities associated with cultural knowledge, story, song, Site, and ceremony</li> <li>• interpersonal ways of relating</li> <li>• the talking of Community politics</li> <li>• repatriation of artefacts</li> <li>• issues of ownership (clans/nations)</li> <li>• ownership of intellectual property</li> <li>• acknowledging participation and ownership</li> <li>• communicating about cultural material</li> <li>• displaying cultural material</li> <li>• handling cultural material</li> <li>• identifying appropriate people to be consulted</li> <li>• occasions when consultation is required</li> <li>• ways in which consultations should be conducted</li> </ul>
<p><b><i>Fire breaks</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• existing gaps in vegetation or fuel areas</li> <li>• barriers to slow or stop progress of fire</li> <li>• natural features of creeks, rivers, lakes, rock walls</li> <li>• constructed features of access tracks, roads, highways and landscaping</li> <li>• defensible spaces</li> </ul>
<p><b><i>Burn intensity</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• low intensity burns</li> <li>• high intensity burns</li> </ul>
<p><b><i>Weather conditions</i></b> to be monitored:</p>	<ul style="list-style-type: none"> <li>• temperature</li> <li>• relative humidity</li> <li>• wind</li> <li>• atmospheric stability</li> <li>• rainfall</li> <li>• seasonal cycle of weather patterns</li> </ul>
<p><b><i>Burn specification or limiting factors</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• size</li> <li>• area</li> <li>• location</li> <li>• name</li> <li>• physical landmarks</li> </ul>

	<ul style="list-style-type: none"><li>• ownership boundaries</li><li>• natural geographic locations</li></ul>
<i>Monitoring of burning</i> may include:	<ul style="list-style-type: none"><li>• observations</li><li>• predictions</li><li>• recording</li><li>• fuel moisture content</li><li>• wind speed and direction</li><li>• flame height</li><li>• rate of spread</li><li>• smoke development</li></ul>

## Unit Sector(s)

Indigenous land management

## AHCILM401A Protect places of cultural significance

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the protection of places of cultural significance and defines the standard required to: develop working relationships with stakeholders in cultural sites; canvass views in determining the heritage value and preservation issues of a cultural site; plan for the protection of a cultural site including resources required and submissions to be completed; observe cultural protocols in dealing with stakeholders and land managers; identify threats and develop action and emergency plans to mitigate and manage the risk of damaging incidents or loss of heritage value; document the submissions to implement conservation and restoration activities and support the incident management activities.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose work includes protecting indigenous peoples' places of culture in co-operation with stakeholders and protecting places of cultural significance with reference to indigenous communities and/or line management. A high level of cultural awareness and the need to observe cultural protocols are important in parts of the process. Note: for indigenous cultural places, the delivery and assessment against this standard must comply with community protocols and guidelines and be supported by elders and custodians of country.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Communicate with stakeholders	<p>1.1. Working relationships are developed with stakeholders that assist in the management of culturally significant places.</p> <p>1.2. Communication approaches are developed that accommodate cultural views.</p> <p>1.3. Views are regularly obtained on the way in which the cultural significance and resource can be conserved and used.</p> <p>1.4. Views obtained are conveyed into enterprise and park/reserve planning process.</p>
2. Conserve significance	<p>2.1. Enterprise conservation policies and plans are used with stakeholder views to plan ongoing conservation actions.</p> <p>2.2. Operational activities are developed and implemented to implement the conservation strategies and plans in a culturally sensitive manner.</p> <p>2.3. Staff are organised to implement conservation</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>actions that minimise deterioration and damage.</p> <p>2.4. Staff are supervised during restoration projects.</p> <p>2.5. Resources are obtained for conservation and restoration activities.</p> <p>2.6. Submissions are made to the enterprise budget process for funds to implement the conservation and restoration activities.</p>
3. Manage incident	<p>3.1. Operational plans are developed to manage incidents consistent with plan of management and risk management analysis.</p> <p>3.2. Staff responsibilities are assigned to manage types of incidents.</p> <p>3.3. Equipment and supplies are obtained and maintained to enable effective response to incidents.</p> <p>3.4. Staff are trained in the management of the types of incidents for which they have an involvement.</p> <p>3.5. Submissions are made to the enterprise budget process for funds to support the incident management activities.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- consult with indigenous communities
- observe cultural protocols
- plan ongoing conservation actions
- conserve significance of place of culture
- manage incidents and threats
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex

**REQUIRED SKILLS AND KNOWLEDGE**

workplace measures and data

- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- enterprise policies and procedures for conservation of places of cultural significance
- indigenous protocols, consultation processes and networks
- non-indigenous cultural groups
- budgetary and financial approval processes.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- develop working relationships with stakeholders in cultural sites
- canvass views in determining the heritage value and preservation issues of a cultural site
- plan for the protection of a cultural site including resources required and submissions to be completed
- observe cultural protocols in dealing with stakeholders and land managers
- identify threats and develop action and emergency plans to mitigate and manage the risk of damaging incidents or loss of heritage value
- document the submissions to implement conservation and restoration activities and support the incident

<b>EVIDENCE GUIDE</b>	
	management activities.
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Cultural places may include:	<ul style="list-style-type: none"> <li>• areas of non-indigenous activity</li> <li>• buildings and other structures</li> <li>• natural areas of indigenous cultural significance</li> <li>• historical events and monuments</li> <li>• areas of indigenous activity such as:               <ul style="list-style-type: none"> <li>• burial</li> <li>• occupation and contact sites</li> <li>• engravings</li> <li>• grinding grooves</li> <li>• rock pictures</li> <li>• fish traps</li> <li>• middens</li> <li>• mounds.</li> </ul> </li> </ul>

## AHCILM402A Report on place of potential cultural significance

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers reporting on place of potential cultural significance and defines the standard required to: survey an area for landforms and sites that may hold cultural significance; assess any physical signs, and source local information on human activity in the area, to indicate culturally significant sites; liaise with indigenous community to research indigenous history of sites and ensure cultural protocols are maintained; maintain field notes on the location and details of sites; implement protection measures pending further investigation; and development and documentation of an assessment report for places of cultural significance.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes investigating and reporting on places of potential cultural significance in consultation with stakeholders and/or traditional owners. A high level of cultural awareness and the need to observe cultural protocols are important parts of the process. Note: for indigenous cultural places the delivery and assessment against this standard must comply with community protocols and guidelines and be supported by elders and custodians of country.
--------------------------------	---

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Investigate evidence of past activities	<p>1.1.Movement through park/reserve is managed to minimise disturbance and degradation to the park/reserve and surrounding environments; especially in relation to known and potential places of significance; and complies with legislative requirements, Codes of Practice and the park/reserve management strategy and plan.</p> <p>1.2.Land forms including caves and potential sites for rock art, flora, fauna and settings are observed to identify potential places of previous human activity which could have cultural and/or natural significance, as part of operational duties.</p> <p>1.3.Signs of previous human activity are assessed and documented.</p> <p>1.4.Park/reserve activities are reviewed in light of potential significance and maintained, modified or halted to enterprise procedures to maintain significance.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5. Where activities have or may affect the potential significance, notes and records are made of the original state of the non-indigenous activities at the place, or directions are sought from indigenous stakeholders or cultural reference group in reference to indigenous activities.</p> <p>1.6. Where potential places of significance are identified, field notes are taken of location in terms of other park/reserve features, survey markers, and/or global positioning.</p> <p>1.7. Reasons for identifying potential significance are recorded.</p> <p>1.8. Location is referred to indigenous stakeholders or cultural reference group for any directions.</p>
2. Implement interim protection measures	<p>2.1. Immediate and longer-term risks associated with the conservation of the place are identified according to enterprise guidelines, relevant charters and Codes of Practice.</p> <p>2.2. Interim protective measures are taken to avoid degradation, disturbance, and deterioration, and any action which may break cultural protocols.</p> <p>2.3. Existing activities of personnel and visitors are modified to reduce/eliminate risks to the significance of the place.</p>
3. Report observation	<p>3.1. Field notes on location are collated and recorded to enterprise requirements.</p> <p>3.2. Enterprise records are reviewed to reveal any existing information about the non-indigenous significance of the place.</p> <p>3.3. Colleagues are notified in a report about finding and interim protective measures.</p> <p>3.4. Advice is sought on the potential cultural and natural significance of the place and any additional required protective measures from indigenous stakeholders or cultural reference group, from specialists in or external to the enterprise, according to enterprise procedures.</p> <p>3.5. Interim assessment of place is documented and reported to enterprise and legislative requirements and best practice guidelines and Codes of Practice.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify evidence of past activities
- consult with indigenous communities
- assess place of cultural significance
- implement interim protection measures
- document an assessment report
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- types of cultural places in land based, coastal zones and/or marine parks/reserves
- threats to cultural places from both natural causes and human activity
- applicable State/Territory and Commonwealth legislation
- international, national and local standards and best practice guidelines and relevant Codes of Practice
- accepted scientific processes, including conservation processes and charters
- enterprise procedures for reporting places of potential significance
- relevant protective measures
- methods of locating position of site
- field note use.

## AHCILM403A Contribute to the proposal for a negotiated outcome for a given area of country

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers contributing to the proposal for a negotiated outcome for a given area of country and defines the standard required to: gather information to support the proposal for a negotiated outcome for a given area of land; contribute to the development of the proposal; provide feedback on the development of proposal.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes supporting and contributing to the development of a proposal for a negotiated outcome for a given area of country. Note: delivery and assessment against this unit must comply with community protocols and guidelines and be supported by elders and custodians of country.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information to support the proposal for a negotiated outcome for a given area of land	1.1. Information required to support the proposal development is identified, gathered, recorded and stored as required. 1.2. Legislation and government policies and/or plans of management relevant to the proposal are reviewed. 1.3. Consultation about the proposal is undertaken with stakeholders according to community protocols. 1.4. Areas of conflict between the different legislation and traditional customs are identified and notified to the proposal developer according to community protocols. 1.5. The scope of available alternatives for management and/or resolution of land, rivers, lakes and sea use issues are defined. 1.6. A description of the types of circumstances under which different alternatives can be applied is outlined. 1.7. Processes that can be used to implement alternatives are defined and related to both mainstream ideas and culturally appropriate approaches for the area.
2. Contribute to the development of the proposal	2.1. Information relating to the expected outcomes of the proposal is identified, gathered, recorded, stored and analysed. 2.2. Information relating to the proposal development is identified, gathered, recorded, stored and analysed during its development as required.

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3. Information relating to the expected outcomes of the proposal is related to stakeholders during proposal development process.</p> <p>2.4. Main characteristics of any relevant State or Territory and Commonwealth Native Title Legislation and Lands Acts that apply to given area of country are identified.</p> <p>2.5. The implications of Native Title on given area of country are detailed using appropriate formats.</p>
<p>3. Provide feedback on the development of proposal</p>	<p>3.1. Oral or written feedback on the proposal is provided to the proposal developer.</p> <p>3.2. The proposal is explained to key stakeholders using appropriate formats according to community protocols.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- gather information to support the proposal for a negotiated outcome for a given area of land
- contribute to the development of the proposal
- provide feedback on the development of proposal
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- cultural customs and heritage

## REQUIRED SKILLS AND KNOWLEDGE

- relevant State land and sea resources acts/legislation
- relevant Local Government land and sea resources acts/legislation
- relevant Commonwealth land and sea resources acts/legislation
- community organisations
- roles of different organisations in land and sea management
- the existence of alternative forms of input and control in land and sea management
- the existence of legislative reform processes.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- gather information to support the proposal for a negotiated outcome for a given area of land
- contribute to the development of the proposal
- provide feedback on the development of proposal.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

### RANGE STATEMENT

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for interviews and group sessions	<p>1.1. Topic and events in research are identified according to enterprise guidelines.</p> <p>1.2. People who may be able to provide information on topic and events (narrators) are identified according to enterprise procedures and cultural protocols.</p> <p>1.3. Process of individual and/or group sessions with narrators is developed according to enterprise requirements, cultural protocols and topic and events to be covered.</p> <p>1.4. Basic questions for interviews with narrators are developed and checked according to enterprise procedures, cultural protocols and best practice.</p> <p>1.5. Equipment, locations and other resources are obtained and checked according to enterprise guidelines.</p> <p>1.6. Selected narrators are invited according to enterprise procedures and prior arrangements.</p>
2. Conduct interviews	2.1. Oral history process is explained to narrators to obtain their consent to record and use information

ELEMENT	PERFORMANCE CRITERIA
	<p>provided.</p> <p>2.2. Recording equipment is set up and tested for operation.</p> <p>2.3. Recording media is uniquely identified for later reference according to enterprise procedures.</p> <p>2.4. Basic questions are used to initiate the interview.</p> <p>2.5. Notes are taken to identify supplementary questions and to support recording media.</p> <p>2.6. Interview process is managed to obtain expected and unexpected information, including memories of incidents.</p> <p>2.7. Narrator is supported to express memories and opinions in an uncritical and positive setting.</p> <p>2.8. Interviewer provides positive feedback on the narrator's assistance, in line with enterprise procedures and cultural protocols.</p> <p>2.9. Interviewer manages the environment and distractions to maintain a positive response from the narrator.</p> <p>2.10. Session lengths are managed to avoid tiring narrators and interviewer.</p>
3. Conduct group sessions	<p>3.1. Oral history process is explained to group of narrators to obtain their consent to record and use information provided.</p> <p>3.2. Recording equipment is set up and tested for operation to cover all group members.</p> <p>3.3. Recording media and members voices are uniquely identified for later reference according to enterprise procedures.</p> <p>3.4. Basic questions are used to initiate the group session.</p> <p>3.5. Interaction between narrators and interviewer is managed to maintain flow of information from all narrators.</p> <p>3.6. Notes are taken to identify supplementary questions and to support recording media.</p> <p>3.7. Group discussion process is managed to obtain expected and unexpected information, including memories of incidents.</p> <p>3.8. Narrators are supported to express memories and opinions in an uncritical and positive setting, including identification of different aspects of one</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>incident.</p> <p>3.9. Interviewer manages the environment, group interactions and distractions to maintain a positive response from the group.</p> <p>3.10. Interviewer provides positive feedback on the narrators' assistance, in line with enterprise procedures and cultural protocols.</p> <p>3.11. Session lengths are managed to avoid tiring narrators and interviewer.</p>
4. Transcribe and edit information	<p>4.1. Recorded media and transcripts are handled to maintain recording quality and accuracy, and security and privacy requirements, according to enterprise procedures.</p> <p>4.2. Interviews and/or group sessions are transcribed to provide a draft transcription according to enterprise procedures and agreement(s) with narrator(s).</p> <p>4.3. Draft written and/or oral transcripts are provided to narrator(s) for editing according to enterprise procedures and agreement(s) with narrator(s).</p> <p>4.4. Editing is completed according to narrator(s) wishes.</p> <p>4.5. Information on narrator(s) doubts/hesitancy on certain facts, and conflicting information between interviews is recorded separately from transcripts and managed according to enterprise procedures and cultural protocols.</p>
5. Store records	<p>5.1. Recorded media and transcripts are stored to maintain recording quality and accuracy, and security and privacy requirements, according to enterprise procedures.</p> <p>5.2. Access to records is controlled according to the narrator(s) wishes.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

## REQUIRED SKILLS AND KNOWLEDGE

- prepare for interviews and group sessions
- conduct interviews
- conduct group sessions
- transcribe and edit information
- store records
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- subject areas covered in the interviews/sessions
- objectives of the natural and/or cultural resource research
- range of communication approaches
- relevant cultural protocols
- enterprise procedures relating to the recording, management and storage of oral and community information
- recording techniques and media
- set-up of microphones and video cameras
- use of still cameras.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy

<b>EVIDENCE GUIDE</b>	
<b>competency in this unit</b>	<p>holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• prepare for interviews and group sessions</li> <li>• conduct both individual and group interviews to elicit a wide range of information</li> <li>• take notes and details of conversations for further reference and to source supporting information</li> <li>• transcribe and edit information, accessing supporting documentation where possible</li> <li>• store recorded media and transcripts to maintain recording quality and accuracy and security and privacy requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Community history may include:	<ul style="list-style-type: none"> <li>• eyewitnesses to events relating to natural and/or cultural resource management</li> <li>• long time residents of a place or area who have observed natural and/or cultural processes</li> <li>• those knowledgeable about stories or customs handed down through generations.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Investigate government policies and practices relating to indigenous peoples since European settlement	<p>1.1.The intentions of government policies and practices since European settlement are outlined.</p> <p>1.2.The effects of these policies and practices on Aboriginal and Torres Strait Islander communities are summarised.</p> <p>1.3.How these policies and practices affected own community and/or family are outlined.</p>
2. Identify changes that have occurred in indigenous societies	<p>2.1.Government policies operating since European settlement are summarised and documented.</p> <p>2.2.The changes that have occurred to Aboriginal and Torres Strait Islander societies as a result of policies and practices, the responses and the views of indigenous groups are outlined.</p> <p>2.3.The impacts of these changes on the indigenous community and/or family are described.</p>
3. Outline effects of current work related issues on indigenous societies	<p>3.1.Key work related issues that impact on Aboriginal and Torres Strait Islander societies today are defined.</p> <p>3.2.The people involved in key issues are described and recorded.</p> <p>3.3.The community views on issues are summarised and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>recorded.</p> <p>3.4.Methods of addressing the keys issues are summarised.</p> <p>3.5.The future outcomes and/or resolutions for these issues are predicted.</p>
4. Determine the impacts of competing factors on self esteem/identity	<p>4.1.Events/occurrences in everyday life that give rise to feelings of both positive and negative self-esteem are described.</p> <p>4.2.Elements which affect self-esteem are listed.</p> <p>4.3.How these elements impact on self are described and recorded.</p> <p>4.4.Positive strategies for dealing with impacts on self-esteem/identity are developed.</p>
5. Design work practices to accommodate cultural identity	<p>5.1.Work practices, which enhance individual's morale, are defined and implemented.</p> <p>5.2.Elements which affect self-esteem in work environments are incorporated into the work practices.</p> <p>5.3.Staff are consulted in the preparation and design of these work practices according to community and organisational protocols and guidelines.</p> <p>5.4.Positive strategies for dealing with impacts on self-esteem/identity are developed.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- investigate government policies and practices relating to indigenous peoples since European settlement
- identify changes that have occurred in indigenous societies
- synthesise changes that have occurred in indigenous societies
- outline effects of current work related issues
- determine the impacts of competing factors on self-esteem/identity
- design work practices to accommodate cultural identity
- use literacy skills to read, interpret and follow organisational policies and

**REQUIRED SKILLS AND KNOWLEDGE**

procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- indigenous communities and protocols
- cultural customs and heritage
- connections between self-esteem, identity, community and work
- indigenous history
- legislation and policies impacting on indigenous communities and organisations
- key work issues
- work practices.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- outline effects of current work related issues for indigenous communities and individuals
- determine the impacts of competing factors on self esteem/identity
- design work practices to accommodate cultural

<b>EVIDENCE GUIDE</b>	
	identity <ul style="list-style-type: none"> <li>• incorporate elements to boost self esteem of indigenous workers</li> <li>• respond to workplace issues where work practices are poorly aligned to cultural identity.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Work practices may include:	<ul style="list-style-type: none"> <li>• selection procedures</li> <li>• promotion procedures</li> <li>• enforcement of legislation and regulations</li> <li>• consultative or participative mechanisms</li> <li>• cultural and intellectual property rights</li> <li>• training processes</li> <li>• work ethic</li> <li>• procedures and policies of the workplace.</li> </ul>

## AHCILM501A Conduct field research into natural and cultural resources

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of conducting field research into natural resource and cultural areas for resource management and related purposes and defines the standard required to: use a range of electronic and manual recording systems to support research; identify stakeholders including current tenure, Indigenous history and community interest; review existing knowledge; develop research objectives, staff, resources and design; conduct field investigations to investigate impacts on fauna, flora and natural resources of the site; report on the field investigation.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those who conduct field research into natural resource and cultural areas for resource management and related purposes. It is often done prior to, or in conjunction with, the development of a resource management plan.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Review existing knowledge	<p>1.1.Existing information gathered through investigation and enterprise recording processes is examined to determine key features.</p> <p>1.2.Oral evidence, where it exists, is reviewed.</p> <p>1.3.Sites are inspected to assess condition and availability of further information.</p> <p>1.4.Information, records and places previously destroyed or damaged or under threat are identified as factors to be incorporated in the assessment process, strategies and plans.</p> <p>1.5.Scope of information is assessed for adequacy against the requirements of legislation, Codes of Practice and protocols.</p> <p>1.6.Appropriate database, geographic information system and other electronic and manual recording systems are identified for data collection according to enterprise procedures.</p> <p>1.7.Sources of expertise in research environments, identification of pollution, degradation and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>disturbance, and national and international issues and agreements are identified and accessed within and external to the enterprise.</p> <p>1.8.Areas of inadequate information are identified and recorded.</p>
2. Identify stakeholders	<p>2.1.Stakeholders are identified in conjunction with local communities and groups, and government documentation and interviews.</p> <p>2.2.The current and relevant past land tenure for the place/area is investigated and recorded.</p> <p>2.3.Indigenous interests are determined through culturally appropriate approaches to regional and community organisations and individuals.</p> <p>2.4.Proper protocols are applied and key consultations conducted in approaches to regional and community organisations and individuals.</p> <p>2.5.Privacy requirements are complied within, according to the directions of stakeholders and according to legislative and enterprise requirements.</p> <p>2.6.Process of identifying stakeholders may be completed under the direction of a relevant cultural reference group.</p>
3. Develop research approach	<p>3.1.Objectives of the field research are determined in conjunction with those commissioning the research according to enterprise procedures.</p> <p>3.2.Objectives are used to identify specific types of investigation, techniques to be used, and physical areas of investigation.</p> <p>3.3.The types of investigation and techniques selected are assessed for hazards and risks in designated environment, including the special OHS requirements, access issues, and management of the research in a range of weather and area conditions.</p> <p>3.4.Existing information and data records are reviewed to determine the starting point(s) for the fieldwork.</p> <p>3.5.Research methodology is consistent with the research objectives and in accordance with established natural resource management practice.</p> <p>3.6.Required resources are identified to establish and maintain the research program within the required time schedules and are appropriate to the environments that will be encountered.</p> <p>3.7.Personnel are selected for their competency in</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>research techniques and safe operation in the expected environmental/cultural conditions.</p> <p>3.8.Stakeholders to be included in the consultation process are identified.</p> <p>3.9.Costs of field research are estimated and submitted for approval according to enterprise procedures.</p> <p>3.10. Sampling and recording processes are established for research information according to enterprise requirements, best practice and scientific standards.</p>
4. Conduct field investigations	<p>4.1.Consultation and fieldwork undertaken to obtain information required to meet investigation objectives.</p> <p>4.2.Previously determined methodology is adjusted in light of progressive results and stakeholder feedback.</p> <p>4.3.Observations, records and monitoring are in accord with scientific practice and coordinated to meet research objectives.</p> <p>4.4.Impacts from areas external to area under investigation are identified.</p> <p>4.5.Equipment, techniques and people deployed to carry out investigations.</p> <p>4.6.Each field operation is documented and approved according to legislative and enterprise requirements for work in the research environment.</p> <p>4.7.Where required, appropriate equipment and skills are sourced for the capture, management and sampling of animal species.</p> <p>4.8.Information is analysed for impact on previously held hypothesis and other resources.</p>
5. Develop process for involving decision-makers	<p>5.1.Information on stakeholders is used to determine interests held by organisations, groups and individuals, and cultural dimensions.</p> <p>5.2.Issues to be addressed with interest groups are defined.</p> <p>5.3.Consultation and decision-making process is developed to address the issues with individuals, groups and organisations in a culturally appropriate manner.</p> <p>5.4.Appropriate time is provided for consultative processes within groups and between individuals to occur and to obtain feedback on issues.</p> <p>5.5.Decision-making group, such cultural reference</p>

ELEMENT	PERFORMANCE CRITERIA
	groups and other groups are formed where assistance is required to direct investigation, access information, to address issues and/or review the significance of place/area.
6. Report on the field investigation	<p>6.1. Stakeholders are consulted on draft findings.</p> <p>6.2. The basis for the determination of outcomes is documented to legislative requirements, the organisation's policies and practices, and international and national processes.</p> <p>6.3. The determination of significance is submitted to the organisation and its external review processes, as required by legislation and Codes of Practice.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- review existing knowledge
- identify stakeholders
- develop research approach
- conduct field investigations
- develop process for involving decision-makers
- report on the field investigation
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- conservation legislation, charters, Codes of Practice relating to natural and cultural resource areas

## REQUIRED SKILLS AND KNOWLEDGE

- various systems and processes for assessing significance
- ecology and biological diversity including aspects of living organisms, habitats and communities, and interactions between species
- geological diversity including aspects of stratigraphy, palaeontology, paedology, and soil classification
- relationships between geology and flora/fauna in natural resource environments
- microbiology including entomology for the area under assessment
- population dynamics and control approaches
- monitoring including life cycles and food chains
- general understanding of range of cultural issues
- accepted scientific processes, including conservation processes and charters
- historical research processes
- research processes into cultures, religions, political systems, and arts and crafts.
- geography, societies and related economics
- general understanding of impacts of natural resources, such as geological settings, ecological processes, and interaction between natural and cultural processes
- monitoring including fabric deterioration, damage and likely causes of deterioration and damage
- relevant international, national and local legislation and agreements as applying to park/reserve, including a good understanding of the concepts and potential operation of the Burra Charter, guidelines associated with the Charter and other ICOMOS
- legislation under which enterprise operates and research is commissioned
- grouping of Indigenous peoples appropriate to the area under review, and their cultural heritage
- processes defined in the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Island Heritage Places
- links between Indigenous heritage and natural resources.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## AHCILM502A Develop conservation strategies for cultural resources

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of developing conservation strategies for cultural resources and defines the standard required to: development of conservation strategies and management policies for cultural resources as part of the overall park management and planning process and defines the standard required to review the cultural features in the area and level of deterioration; assess the compatibility of current utilisation with cultural and heritage values; investigate feasible land uses that maintain the cultural integrity of the site; carry out a risk assessment for damage/deterioration to cultural sites; consult with stakeholders according to cultural protocols; develop strategies for management of cultural resources.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those who develop conservation strategies and management policies for cultural resources as part of the overall park management and planning process.  Note: for indigenous cultural places, the delivery and assessment against this standard must comply with community protocols and guidelines and be supported by elders and custodians of country.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Define components of cultural heritage significance	<p>1.1. Geographic and operational boundaries for conservation policy are defined.</p> <p>1.2. Results of studies of cultural significance for places and areas within the boundaries are reviewed and collated to develop park/reserve/region significance.</p> <p>1.3. Limits of acceptable change in the forms of deterioration and damage to the places of cultural significance are developed to legislative and enterprise requirements.</p>
2. Review past strategies, plans and activities	<p>2.1. Previous strategies and plans are compared with collated assessment of significance to determine compatibility.</p> <p>2.2. Current activities in the area are reviewed to assess their compatibility with the collated assessment of significance.</p> <p>2.3. Areas of incompatibility are documented to enterprise procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Review current and potential resource uses	3.1. Impact of current uses on the cultural resources, including setting and surrounds, is assessed against the set limits of acceptable change to determine success of conservation approach. 3.2. Feasible uses and/or client requirements are assessed. 3.3. Possible changes to uses are developed to ensure cultural values are maintained.
4. Identify threats to cultural places	4.1. Threats to cultural significance, both external and internal to the area under consideration, are identified. 4.2. A risk assessment is made of all threats to determine potential impact on strategies. 4.3. Policy changes required to address the threats are documented to enterprise requirements.
5. Develop strategies for management of cultural resource	5.1. Draft policy is developed to address the cultural significance that meets any shortfalls in previous strategies, allows for compatible resource uses, and addresses risks associated with any threats to the cultural values of the area. 5.2. Consultations are conducted with stakeholders on draft policy in accordance with legislative, enterprise and good practice requirements. 5.3. Consultations comply with cultural protocols and enterprise approaches to stakeholders. 5.4. Draft strategies are modified to reflect stakeholder views as required in legislation, enterprise strategies and procedures and good practice. 5.5. Strategies are submitted for approval to legislative and enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- define components of cultural heritage significance

## REQUIRED SKILLS AND KNOWLEDGE

- review past strategies, plans and activities
- review current and potential resource uses
- identify threats to cultural places
- develop strategies for management of cultural resources
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- the range of conservation strategies for cultural areas
- the range of scientific and other concepts that are to be integrated into the policies
- policies applying across all levels of government and within the specific region, including those under catchment plans
- international treaties, agreements and charters
- Australian Natural Heritage Charter and the Burra Charter and the interpretation of the charters
- enterprise policies and procedures
- design and implementation of consultation processes
- policy analysis and impact statements
- tendering and contracting processes.

## Evidence Guide

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan required restoration measures	<p>1.1.Prior assessment of significance incorporated into strategies and plans for area and place are accessed to determine range of required and appropriate actions.</p> <p>1.2.Short term plan of management and conservation is developed from area strategies and plans according to legislative requirements, enterprise procedures, and national and international charters.</p> <p>1.3.Traditional building techniques and materials, and material availability are researched to plan maintenance of fabric in traditional styles.</p> <p>1.4.Any prior works not in keeping with significance are identified to determine appropriate maintenance actions.</p> <p>1.5.Any necessary structural engineering maintenance is determined from experts to incorporate actions into maintenance schedule.</p> <p>1.6.Maintenance schedule is developed to meet plan of management and conservation according to enterprise procedures.</p> <p>1.7.Submissions are made to obtain appropriate funds to complete works according to enterprise procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	1.8. Restoration work is planned in compliance with Occupational Health and Safety and relevant legislative requirements.
2. Managing restoration works	2.1. Expert advice is obtained on specific maintenance works and associated contracts to meet plan of management and conservation. 2.2. Special building and conservation requirements to maintain significance are specified in maintenance documentation. 2.3. Workers/contractors are informed and supervised to ensure significance of place is maintained in terms of no damage to surrounds, environment, fabric or building, re-use of traditional materials, use of traditional building techniques, introduction of appropriate new materials, and management of work areas, debris and working materials.
3. Clean-up after work	3.1. Workers/contractors are informed and supervised to ensure significance of place is maintained in terms of no damage to surrounds, environment, fabric or building, and removal of materials, equipment and tools.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- plan required restoration measures
- restore fabric
- clean up after work
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of

**REQUIRED SKILLS AND KNOWLEDGE**

cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- Burra Charter, heritage and building acts, and other relevant legislation
- conservation architecture
- historic archaeology
- relevant oral and community history
- traditional and current building practices
- managing projects
- building/maintenance requirements and specifications
- Occupational Health and Safety (OHS) risk management.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- incorporate the prior assessment of significance into an operational plan
- research traditional building techniques to carry out repairs and maintenance
- seek expert advice to meet special building and conservation requirements from the plan of management
- maintain the cultural integrity of the site and surrounds during and on completion of building.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

<b>EVIDENCE GUIDE</b>	
	enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
The plan of management and conservation may include:	<ul style="list-style-type: none"> <li>• strategies and actions included in the park/reserve plan of management for the maintenance and use of the place for activities such as tourism</li> <li>• actions requested by stakeholders</li> <li>• actions resulting from site inspection</li> <li>• actions to record current state of the place.</li> </ul>

## AHCILM504A Develop strategies for Indigenous land or sea management

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of developing strategies for contemporary land or sea management from an indigenous perspective and defines the standard required to: research contemporary indigenous land and sea management practices; develop management strategies for a specified area; source and apply for funds; consult with others on strategies, priorities and project works.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those who work in indigenous land management.  Note: Delivery and assessment against this standard must comply with community protocols and guidelines and be supported by elders and custodians of country.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Research contemporary indigenous land and sea management practices	<p>1.1.Relevant contemporary indigenous land and sea management practices are outlined according to community guidelines and cultural protocols.</p> <p>1.2.Relevant issues connected with this practice are defined.</p> <p>1.3.Relevant and appropriate people are consulted according to community guidelines and cultural protocols.</p> <p>1.4.Associated issues related to contemporary indigenous land and sea management practices are identified.</p> <p>1.5.Details of consultation/research are documented.</p>
2. Develop management strategies for a specified area	<p>2.1.Strategies are based on contemporary indigenous land and sea management practices.</p> <p>2.2.Priorities for management are identified according to level of importance or threats to area.</p> <p>2.3.New approaches to management are developed to address priorities within the context of legislation, cultural protocols and community needs.</p> <p>2.4.Timelines and steps to implementation of strategies are developed.</p> <p>2.5.Costs of resources, labour and materials required to action management strategies are defined.</p> <p>2.6.Preliminary project design is completed to identify</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>project steps and funding requirements.</p> <p>2.7. Arrangements for project implementation are made to enterprise requirements and legislation.</p>
3. Source and apply for funds	<p>3.1. Appropriate finding sources are investigated and identified.</p> <p>3.2. Applications are made for funds according to legislative, community and enterprise requirements.</p> <p>3.3. Applications are endorsed by appropriate persons before submission.</p>
4. Consult with others on strategies, priorities and project work	<p>4.1. Authorised persons are briefed on the strategies, priorities and actions planned according to community guidelines and cultural protocols.</p> <p>4.2. Staff is trained in new procedures developed to address strategies.</p> <p>4.3. Project implementation details are developed in consultation with staff, appropriate persons and communities.</p> <p>4.4. Endorsement from appropriate persons, groups and communities, and relevant government stakeholders is gained before works commence.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- conduct research.
- work to prescribed community protocols.
- coordinate and work within teams in community environments.
- research contemporary indigenous land and sea management practices
- develop management strategies for a specified area.
- source and apply for funds.
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for

**REQUIRED SKILLS AND KNOWLEDGE**

- clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
  - use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- indigenous land/sea management practices.
- cultural customs and heritage.
- application of protocols.
- Native Title Acts.
- relevant state land acts/legislation.
- research processes.
- interaction between natural and cultural processes.
- cultural knowledge on plants, animals and relationship to country.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- research contemporary indigenous land and sea management practices
- develop management strategies for a specified area
- source and apply for funds
- consult with others on strategies, priorities and project works.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources

**EVIDENCE GUIDE**

	for some worksites may differ due to the regional or enterprise circumstances.
--	--

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Indigenous cultural land and sea practices may include:

- flora and fauna management
- fire regimes
- site protection
- ceremonial practices
- rehabilitation
- endangered species management
- replanting projects
- education of non-indigenous people to carry on management practices
- aqua and vivi-culture techniques
- spiritual maintenance of country.

Areas relevant to this standard include:

- own country or area of choice, e.g., defined community area
- National Park
- state forest
- nature reserves
- Crown lands
- marine park
- private land.

## AHCILM505A Map relationship of business enterprise to culture and country

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of mapping the relationship of business enterprises to culture and country and defines the standard required to: describe the goals and activities of the indigenous business; define the legal parameters of the business organisation; analyse the positions and power relationships for decision-making within an indigenous community; relate indigenous community and business roles to the concept of country; develop strategies that support the concept/implementation of indigenous management (principles).
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit is likely to be carried out independently, with the need to work within cultural protocols. It includes a level of responsibility for communication with all stakeholders involved in the program.</p> <p>Note: Delivery and assessment against this standard must comply with community protocols and guidelines and be supported by elders and custodians of country.</p>
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish reasons for entering/establishing business	1.1.The reasons for entering business are described. 1.2.The relationship between culture and the reasons for entering business are mapped. 1.3.The business activity is explained as it relates to the structure of community and/or family grouping. 1.4.The business activity is explained as it relates to and with country.
2. Interpret the legal parameters of the business organisation	2.1.The organisational structure is defined. 2.2.The legal basis and appropriate documentation for the structure is identified. 2.3.The documentation is reviewed. 2.4.The powers and authorities of the business are analysed. 2.5.The legal limitations and requirements are described.
3. Investigate the roles of key positions in the organisation and/or	3.1.Titles of key positions in the organisation and/or community are identified and listed.

ELEMENT	PERFORMANCE CRITERIA
community	3.2.The duties of these positions are summarised. 3.3.The source of power or responsibility for these positions is outlined. 3.4.The limitations of the duties and decisions that may be made by these positions are described. 3.5.The role of these positions are analysed in terms of the structure of the community and/or family grouping. 3.6.The role of these positions are analysed in terms of relationship to country.
4. Evaluate the decision making process as it relates to the organisation and/or community	4.1.The decision-making process required to be followed in the organisation and/or community is described. 4.2.The responsibilities of each position in this decision-making process are identified. 4.3.Decisions that have been made using this process are described. 4.4.The effectiveness of the decision making process is evaluated. 4.5.The dynamics of the processes in making these decisions are explained. 4.6.Recommendations as to how this process can be improved are made.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- deal with personal negative responses/reactions in a positive way
- develop strategies that support the concept /implementation of indigenous management (principles)
- recognise and encourage the development of an individual's interpersonal skills
- analyse and evaluate skills
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports

**REQUIRED SKILLS AND KNOWLEDGE**

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- legislation formulation
- specific legislation
- legal aspects of business structures
- constitutions and other corporate documentation
- organisational structures theories
- decision-making processes
- community structure
- National Reconciliation Strategy on Economic Independence.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- describe the goals and activities of the indigenous business
- define the legal parameters of the business organisation
- analyse the positions and power relationships for decision-making within an indigenous community
- relate indigenous community and business roles to

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify community values	<p>1.1. Range of groups in community is identified through interaction with community members and groups to determine potential diversity of values.</p> <p>1.2. Values held by various sections of the community relevant to program activities are identified for planning of promotional and group activities.</p> <p>1.3. Cultural authority is identified in indigenous communities and groups to implement appropriate protocols.</p> <p>1.4. Community leaders in terms of community involvement and opinion making are identified from community interaction.</p>
2. Research community history and plans	<p>2.1. History of community relevant to program is identified for use in promotional, educational and group activities.</p> <p>2.2. Relevant documents, symbols, places of value and oral traditions are identified to place program and group in local context.</p> <p>2.3. Community plans are identified for use in promotional, educational and group activities.</p>
3. Establish role of group in community	<p>3.1. Potential roles of program and group to community are identified for use in group activities.</p> <p>3.2. Interaction with community is managed to build rapport with individuals and groups.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3. Consultation processes are established and maintained with community members and groups. 3.4. Image of group and program in community is maintained by acknowledging community concerns and promoting positive image of group and program.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify community values
- research community history and plans
- conform to social protocols for a range of cultures in the community
- develop an approach that is inclusive of indigenous gender issues
- source key information from community sources including approaching leaders
- establish role of groups within the community
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant government and community action programs
- processes for development and delivery of programs
- typical community and local government structures and organisation
- group processes
- broad Australian and regional history
- current social and environment affairs for local community and wider region
- rural industry operation and processes (for rural programs)
- process for identifying cultural protocols

**REQUIRED SKILLS AND KNOWLEDGE**

- understanding of what may be noteworthy to community and newsworthy to media.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- investigate the diversity of groups within a community and their culture
- identify the roles of informal leaders and influencers in community groups, as well as elders in indigenous communities
- research the background and goals of community groups, and their attitudes and perspectives on natural resource management issues
- plan for consultation within the community by working with the cultures and goals of the groups that comprise it.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify, select and define relevant issues related to the given area of country	<p>1.1. Community, government and agency perspectives, and issues likely to impact on proposals are accurately identified.</p> <p>1.2. The implications and impact of issues and perspectives on the given area of country are identified.</p> <p>1.3. Priority areas for further research, assessment and clarification of issues are recommended.</p> <p>1.4. Proposals for given area of country are defined in terms of context, issues to be addressed, expected outcomes, possible complications, precedents and key stakeholders.</p> <p>1.5. With the support of elders and other key stakeholders, an outline of the scope and appropriate processes for conducting negotiated outcomes for that area of country are detailed.</p>
2. Gather and analyse	2.1. Information required to support proposals is

ELEMENT	PERFORMANCE CRITERIA
information on given area of country	<p>identified according to community protocols.</p> <p>2.2.Information required to support proposals is gathered, analysed and interpreted according to community and agency guidelines and best practice procedures.</p> <p>2.3.An analytical framework for the development of an appropriate approach to the proposal is developed.</p> <p>2.4.Legislation, national and international protocols and conventions relevant to the given area of country are investigated and implemented, where appropriate.</p> <p>2.5.The implications for own people from these examples are described in ways that stakeholders can understand.</p>
3. Formulate and communicate proposals for given area of country	<p>3.1.A range of options is developed for the proposal, including mechanisms for implementation, monitoring and evaluation.</p> <p>3.2.The range of options is communicated in a timely and understandable way to those who are party to the negotiations.</p> <p>3.3.Relevant people to be included in the negotiation are kept informed of progress of work and consulted as appropriate.</p> <p>3.4.Recommendations are made for options based on likely effectiveness, implementation time frame and costs (including infrastructure), interaction with other proposals (existing or being developed), and consistency with government legislation and policy.</p> <p>3.5.Examples of instances where other indigenous peoples have used international legal systems to support environmental issues in their own countries are collated.</p>
4. Complete a proposal for a negotiated outcome for a given area of country	<p>4.1.Proposal is documented according to community and agency guidelines and best practice procedures.</p> <p>4.2.Possible alternatives to use are described ensuring compatibility with legal and administrative circumstances for the area of country.</p> <p>4.3.Relevant people to be included in the negotiation are consulted on final draft proposal and implications for the community.</p> <p>4.4.Proposal is completed following endorsement from key stakeholders for given area of country.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify, select and define relevant issues related to the given area of country
- gather and analyse information on given area of country
- formulate and communicate proposals for given area of country
- complete a proposal for a negotiated outcome for a given area of country
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- report preparation
- consultation approaches
- conflict resolution
- cultural customs and heritage
- relevant state land and resources acts/legislation
- international environment forums
- relevant international and national conventions and agreements
- management and use of the resources of the specific area.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify implications for an area of country for government agency and community</li> <li>• detail processes and proposals for resolving issues regarding access and use of land</li> <li>• gather and analyse information on a given area to develop an analytical framework for land use</li> <li>• formulate and communicate proposals for given area of country</li> <li>• document and seek endorsement for a proposal that seeks to negotiate an outcome for a given area of country.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Protect life and property	1.1. Burn is implemented according to the plan. 1.2. Visitors are excluded from target areas, entertainment areas and areas possibly affected by smoke or risk from escaping fire. 1.3. Field workers are instructed in burn and safety procedures to conduct the burn using the Incident Control System. 1.4. Neighbours and agencies are advised of the intention to burn to ensure safety and maintain client relations. 1.5. Cultural sites, assets and entertainment areas are protected according to fire industry practices. 1.6. Fire breaks are applied to the area to maintain control of the fire and burn intensity. 1.7. Standby fire units are available to control unexpected outbreaks.
2. Burn defined areas	2.1. Weather forecasts and current weather conditions are assessed to determine appropriate conditions and timing for burn. 2.2. Fire is applied to targeted areas to organisation requirements. 2.3. Area is checked to ensure all portions intended have received required burn. 2.4. Assessment of burn is completed and recorded to organisation procedures. 2.5. Area burnt is monitored to organisation procedures to avoid wildfire outbreaks.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- the life cycles of flora and fauna of forests/plantations and effect of burning operations
- required intensity of fire
- the dependence of the terrestrial ecosystems on fire
- emergency fire services
- radio communication
- effects of fire on human physiology
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- the life cycles of flora and fauna of forests/plantations and effect of burning operations
- required intensity of fire
- the dependence of the terrestrial ecosystems on fire
- emergency fire services
- radio communication
- effects of fire on human physiology.

## AHCILM510A Plan for successful cultural practice at work

### Modification History

Release	TP Version	Comments
1	AHC10v5	Initial release. Supersedes and is not equivalent to AHCILM507A

### Unit Descriptor

This unit covers the process of planning for culturally appropriate work practices to enable Aboriginal and non-Aboriginal practitioners to be successful in their chosen field of work or vocation.

### Application of the Unit

This unit applies to those persons who plan for culturally appropriate work practices that enable practitioners to be successful in their chosen field of work or vocation.

### Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

### Pre-Requisites

AHCILM306A Follow Aboriginal cultural protocols

### Employability Skills Information

This unit contains employability skills

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse essential features of Aboriginal families and cultures	1.1 Information about Australian Aboriginal history up to the present time is accessed and reviewed 1.2 Concepts such as Dreaming, connection to Country and other Aboriginal beliefs are researched 1.3 Traditional and contemporary social structures of Aboriginal families and societies are identified 1.4 <i>Elements of Aboriginal societies</i> (i.e. spirituality, land, ecology, social structure, political structure) are researched and used to inform interactions with Aboriginal people
2. Review changes to Aboriginal societies since <i>European settlement</i>	2.1 Colonisation and the impacts on Aboriginal peoples are researched and documented 2.2 Racist behaviours and the impact that these have had on Aboriginal peoples is identified 2.3 Personal responses to information about the positive and negative effects of colonisation are analysed 2.4 Research into the <i>impacts of colonisation, settlement and government policies on Aboriginal cultural practices</i> is conducted and analysed
3. Identify government efforts to address continuing effects of colonisation	3.1 Various policies implemented by governments in Aboriginal affairs are investigated and analysed 3.2 The processes involved in government consultation with Aboriginal people, communities and organisations are identified 3.3 Effects of government policies in Aboriginal affairs and their implementation processes on communities are evaluated 3.4 Effectiveness of a chosen government policy is investigated through Community consultation and evaluated 3.5 Strategies for addressing any public perception of 'special treatment' for Indigenous peoples in relation to the chosen policy are developed in consultation with Community
4. Apply understanding of Aboriginal cultural protocols and identity to daily work routines	4.1 Features of Aboriginal identity and personal <i>cultural maintenance</i> are identified 4.2 How these features are expressed in daily work life is analysed and used to inform workplace relationships and interactions 4.3 The obligations of cultural maintenance in relation to a work issue is identified and analysed 4.4 Allowances for absences due to family/seasonal cultural

ELEMENT	PERFORMANCE CRITERIA
5. Plan culturally appropriate work practices	<p>practices and bereavement are applied appropriately</p> <p>4.5 Workplace conflicts are worked through and dealt with in culturally appropriate ways</p> <p>4.6 Possible strategies for cultural maintenance in work and the workplace are collaboratively developed</p> <p>5.1 A vision/workplace goals for own work are developed</p> <p>5.2 Common culturally inappropriate work practices are identified and discussed</p> <p>5.3 Strategies to change these practices are collaboratively developed</p> <p>5.4 An implementation and evaluation plan for the strategies is developed</p> <p>5.5 Ways in which Aboriginal practitioners can effect change to create greater cultural awareness in the workplace are proposed</p>

## Required Skills and Knowledge

### Required skills include:

#### Ability to:

- identify essential features of Aboriginal families and cultures
- investigate impacts of changes on Aboriginal societies since European settlement
- analyse effects of examining isolated cultural elements of a holistic culture as individual doctrines
- participate in 'cultural maintenance'
- plan culturally appropriate work practices
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities

### Required knowledge includes:

#### Knowledge of:

- history and effects of European invasion on Aboriginal and Torres Strait Islander peoples
- the concept of cultural maintenance
- change processes
- planning work practices
- areas of overlap within sections of Aboriginal cultural life
- Aboriginal worldview, including the dimension of holistic notion of culture

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	The delivery and assessment of this unit must comply with Community protocols and be carried out in consultation with and in participation with Traditional Owners and/or Elders and custodians of that specific Country.

	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge. Candidates must demonstrate evidence of the ability to:</p> <ul style="list-style-type: none"> <li>• show comprehensive understanding of the essential features of Aboriginal families and culture applied in workplace relationships</li> <li>• review impacts on Aboriginal societies and communities of European settlement and subsequent government policies</li> <li>• describe and/or identify practices in the workplace aimed at sustaining Aboriginal cultural maintenance</li> <li>• plan culturally appropriate work practices</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Assessment events must be contextualised to meet the needs of the particular group, including:</p> <ul style="list-style-type: none"> <li>• a Community, educational or workplace setting</li> <li>• involvement of people approved by cultural authorities and/or Traditional Owners of the relevant local Community</li> <li>• candidates who have gained relevant knowledge and skills through their life experience</li> </ul>
<p><b>Method of assessment</b></p>	<p>A range of assessment methods should be used to assess competency in planning for successful cultural practice at work. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• direct questioning combined with third-party workplace reports of on-the-job performance</li> <li>• verbal or written questioning</li> <li>• observation of participation in workplace planning or activities</li> </ul> <p>Assessment methods should closely reflect workplace demands and the needs of particular client groups (consider the requirements of different age groups, clients with English as a second language, clients with disabilities, remote library users, etc.).</p>

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Elements of Aboriginal society</i></b> may refer to:</p>	<ul style="list-style-type: none"> <li>• connection to Country</li> <li>• creation events</li> <li>• structure of Community such as lore/law men and women, elders and custodians</li> <li>• practicality and purpose</li> <li>• appropriate behaviour, protocols and restrictions</li> <li>• spiritual value of knowledge and stories</li> <li>• communal ownership of some knowledge and material</li> <li>• intergenerational ownership of some knowledge and material</li> <li>• oral tradition of passing on knowledge and responsibilities</li> <li>• roles as custodians of specified knowledge, ceremony, designs, information</li> <li>• kinship and relationships</li> <li>• storytelling</li> </ul>
<p><b><i>European settlement</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• original 18<sup>th</sup> century encounters with Aboriginal peoples</li> <li>• pastoral settlement of Australia in the last 200 hundred years up to present time</li> </ul>
<p><b><i>Impacts on Aboriginal cultures and cultural practices</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• social, cultural, religious, economic, spiritual, language factors and outcomes</li> <li>• Aboriginal perspectives</li> </ul>
<p><b><i>Cultural maintenance</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• participation in personal and Community cultural activities and ceremonies</li> <li>• family and kinship obligations</li> <li>• time out on Country and time to fulfil cultural ceremony obligations and interests</li> <li>• obligations to cultural sites, landscapes and cultural materials</li> </ul>

## Unit Sector(s)

Indigenous land management

## AHCILM601A Manage cultural processes in an Indigenous organisation

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of managing cultural processes in an indigenous organisation according to community and organisational guidelines and best practice procedures: recognise differences between indigenous and non indigenous management processes; identify the accommodation required to meet non indigenous business requirements through indigenous management processes; apply a strategic/business planning model to an indigenous organisation.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit is carried out at a strategic level, with the need to work within cultural protocols and promote cultural diversity and integrity.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define indigenous management processes as compared with non indigenous strategies	<p>1.1.The framework/organisational structure for the organisation and/or the community is identified.</p> <p>1.2.Indigenous management processes are identified and described.</p> <p>1.3.Non indigenous management processes are identified and described.</p> <p>1.4.Comparisons between indigenous management process and non indigenous management processes are recognised and recorded.</p> <p>1.5.Differences between indigenous management structures and non indigenous management processes are recorded and analysed.</p>
2. Analyse strategies for working with non indigenous organisations and people	<p>2.1.Differences in relation to working as an indigenous person within a non indigenous organisation and/or person(s) are recorded.</p> <p>2.2.Potential conflicts are recognised.</p> <p>2.3.Strategies for minimisation of conflicts are identified and implemented.</p>
3. Analyse the impact of a non indigenous framework on an indigenous business structure	<p>3.1.Requirements of a non indigenous framework are identified and analysed.</p> <p>3.2.Indigenous ways of working are identified and analysed.</p> <p>3.3.Potential conflicts in relation to an indigenous organisation working within a non indigenous structure are identified and recorded.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4.Possible strategies to negotiate through the conflict are identified and implemented.
4. Develop and implement a vision for the business	4.1.Planning processes are identified and evaluated. 4.2.Identify goals and directions for the business. 4.3.Apply goals and directions to operate within a culturally appropriate framework. 4.4.A model for planning business activities is developed and presented.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- manage cultural processes in an indigenous organisation applies to the
- deal with personal negative responses/reactions in a positive way.
- develop strategies that support the concept/implementation of Indigenous management (principles).
- understand and engage effectively in mediation and conflict resolution.
- recognise and encourage the development of an individual's interpersonal skills.
- analyse and evaluate skills.
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- contemporary management practices and styles.
- indigenous management practices and styles.
- business planning and strategic planning practices.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• recognise differences between indigenous and non indigenous management processes</li> <li>• identify the accommodation required to meet non indigenous business requirements through indigenous management processes</li> <li>• apply a strategic/business planning model to an indigenous organisation.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Indigenous management processes involved may include:	<ul style="list-style-type: none"> <li>• indigenous ways of managing such as group decision making processes</li> <li>• "flatter" management structures (egalitarian)</li> <li>• focus of control</li> <li>• and organisational structures.</li> </ul>
Non indigenous management	<ul style="list-style-type: none"> <li>• decision-making processes top-down</li> <li>• formal management structures</li> </ul>

**RANGE STATEMENT**

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for fencing operations	<p>1.1. Tools and materials appropriate to meet job requirements are selected and checked against the work plan.</p> <p>1.2. Routine pre-operational checks of tools are carried out and adjustments made according to manufacturers specifications.</p> <p>1.3. Faulty or unsafe tools are identified and segregated for repair or replacement according to enterprise requirements.</p> <p>1.4. Potential and existing hazards in the workplace are risk assessed and minimised according to Occupational Health and Safety (OHS) and enterprise requirements.</p>
2. Carry out fencing operations	<p>2.1. Suitable personal protective equipment is selected, used and maintained according to OHS and workplace procedures.</p> <p>2.2. Dismantling operations are carried out, as required, with a focus on minimising unnecessary damage and recovering all re-useable materials.</p> <p>2.3. Repair requirements are identified and carried out according to work plan procedures.</p> <p>2.4. Sundry electric fences are erected to contour according to work plan and OHS requirements.</p> <p>2.5. Electric fence components are installed neatly according to manufacturer's specifications.</p> <p>2.6. All work is carried out safely according to OHS and enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Complete fencing operation	3.1. Post holes are firmly filled to remove potential hazards and minimise environmental impact. 3.2. Work site is cleared and tidied and all non-reusable materials are disposed of in an environmentally responsible manner. 3.3. Tools and re-usable materials are transported safely from the work site and stored according to enterprise and manufacturers recommendations. 3.4. Further identified work or repair requirements are reported according to enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work practices
- minimise environmental impact
- interpret and apply task instruction
- complete work efficiently within timeframes
- maintain physical fitness
- read and interpret work plans
- communicate with work team and supervisor
- calculate and measure fencing wire requirements
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- uses and structures of a range of electric fence types
- uses and types of standard fencing tools and materials
- common electric fencing hazards and safety precautions
- dangers posed by electricity to personnel and livestock
- difference between portable and mains power
- OHS legislative requirements
- relevant codes of practice with regard to protection of the environment.

## Evidence Guide

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for fencing work	<p>1.1. Appropriate tools and materials are selected in accordance with task requirements, manufacturer's guidelines and fence design.</p> <p>1.2. Faulty or unsafe tools are identified and put aside for repair or replacement.</p> <p>1.3. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p> <p>1.4. Transport of fencing materials, tools and equipment to worksite is arranged.</p>
2. Undertake fence installation	<p>2.1. Personal Protective Equipment (PPE) is used and maintained according to procedures.</p> <p>2.2. Posts and stays are installed and secured in accordance with industry practice.</p> <p>2.3. Wire is strung and tensioned in accordance with manufacturer's guidelines and industry practice.</p> <p>2.4. Wire netting or other fencing materials are attached in accordance with manufacturer's guidelines and industry practice.</p> <p>2.5. Gates are positioned and attached and checked for correct operation.</p>
3. Maintain and repair fencing	<p>3.1. Faults or structural damage are identified and necessary repairs are carried out in accordance with industry practice and manufacturer's guidelines.</p> <p>3.2. Dismantling operations are carried out recovering re-useable materials.</p> <p>3.3. Further maintenance or repair works are identified</p>

ELEMENT	PERFORMANCE CRITERIA
	and reported. 3.4. Used fencing material is packed for reuse or disposed of according to enterprise procedures.
4. Complete fencing work	4.1. Work area is cleared and tidied and all non re-useable materials are disposed of in an environmentally responsible manner. 4.2. Tools, personal protective equipment and re-useable materials are cleaned and stored. 4.3. Work activities are recorded in accordance with industry practice.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work practices
- site fencing materials and tools for efficient use
- use fencing tools safely and in accordance with manufacturer's guidelines
- install fence posts and stays
- tension fencing wire and netting in accordance with manufacturers guidelines
- string, strain and tie off wires safely and efficiently
- use hand tools safely
- operate powered fencing machinery in a safe, efficient and controlled manner
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- designs and purpose of a range of conventional fencing
- wire types, knots, tensions applications and limitations
- common hazards involved in fencing installation, maintenance and repair

**REQUIRED SKILLS AND KNOWLEDGE**

- uses and types of fencing tools and equipment
- fencing materials manufacturers specifications and guidelines
- OHS and environmental legislation, codes of practice and enterprise procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select the appropriate materials and tools
- erect fence, install gates and components
- assess the fencing site for environmental impacts of the fence
- undertake repairs
- record work activities
- clean up the fencing site and remove and dispose of, or recycle, waste.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Fences may include:

- post and wire
- wire netting.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify and confirm maintenance requirements	<p>1.1. Visual inspections are conducted of structures and facilities to locate and evaluate defects, deterioration and impending defects.</p> <p>1.2. Property infrastructure and resources are checked for correct operation, minor maintenance needs and damage.</p> <p>1.3. Maintenance plan is confirmed according to supervisor's instructions and enterprise requirements.</p>
2. Select and prepare tools, equipment and materials	<p>2.1. Tools, equipment and materials appropriate to the job requirements are selected and checked for serviceability according to manufacturer's specifications.</p> <p>2.2. Faulty or unsafe tools are identified and segregated for repair or replacement and reported according to enterprise requirements.</p> <p>2.3. Existing and potential hazards to health and safety are identified, assessed and reported according to Occupational Health and Safety (OHS) and enterprise requirements.</p>
3. Carry out routine maintenance	<p>3.1. Suitable personal protective equipment is selected, used, maintained and stored according to OHS requirements.</p> <p>3.2. Routine maintenance to structures and surroundings is carried out according to the maintenance plan and enterprise requirements.</p> <p>3.3. Minor repairs to building cladding, and treatments to structural finishes, are carried out as required to minimise deterioration.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Complete maintenance activities	<p>4.1. Worksite, tools and materials are cleaned, returned to operating order, and stored according to OHS and enterprise requirements.</p> <p>4.2. Unwanted materials and waste from maintenance activities is collected, treated and disposed or recycled according to enterprise, OHS and environmental requirements.</p> <p>4.3. Relevant information is documented according to industry, enterprise requirements and OHS requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work practices
- interpret and apply task instructions
- operate a broad range of tools and equipment
- carry out building and maintenance operations
- work in team environment
- observe and report on the condition of structures and equipment
- communicate with work team and supervisor
- estimate and calculate volumes and usage.

#### Required knowledge

- characteristics, capabilities and limitations of materials, equipment and tools
- operation of water taps and reticulation systems
- types of building cladding and finishes, purpose and use
- identification of defects and appropriate repair methods
- appropriate selection of repair materials
- OHS legislative requirements and Codes of Practice
- relevant Codes of Practice and procedures with regard to protection of the environment.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for fabrication and/or repair	<p>1.1.Items for repair or fabrication are identified against work plans using industry recognised techniques.</p> <p>1.2.Equipment appropriate to job requirements is selected and confirmed against work plan.</p> <p>1.3.Jointing/welding materials suitable to the job requirements are selected.</p> <p>1.4.Potential and existing hazards in the workplace are identified and reported to the supervisor.</p>
2. Assist with maintaining structures and facilities	<p>2.1.Suitable personal protective equipment is selected, used and maintained according to Occupational Health and Safety (OHS) and enterprise requirements.</p> <p>2.2.Equipment and structures are safely repaired or fabricated according to enterprise requirements and industry standards.</p> <p>2.3.Jointing methods used in the fabrication and/or repair structures and equipment are according to enterprise requirements and industry standards.</p>
3. Complete fabrication and repair	<p>3.1.Materials and equipment are cleaned and stored according to manufacturer's guidelines and enterprise policy.</p> <p>3.2.Work area is cleaned and maintained, and any hazardous materials removed in an environmentally responsible manner.</p> <p>3.3.Completed work is detailed and recorded according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- safely use welding and thermal cutting equipment
- demonstrate safe and environmentally responsible workplace practices
- read and interpret manufacturers specifications, work and maintenance plans, and MSDS
- effectively communicate information, interpret and apply task instructions, and maintain records and reports
- estimate and measure dimensions, and calculate volumes
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- types of fabrication materials and their various applications
- range of metals and non-metal materials that may be used in fabrication and repair
- industry jointing/welding techniques and fabrication and repair methods
- OHS legislative requirements
- environmental codes of practice with regard to equipment operation and maintenance activities
- operating principles and operating methods for equipment
- various types of welders and respective functions
- environmental impacts and minimisation measures.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy

<b>EVIDENCE GUIDE</b>	
<b>competency in this unit</b>	<p>holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify job requirements and select materials, tools and equipment</li> <li>• apply safe work practices including use of PPE</li> <li>• identify and use jointing methods and safe repair/fabrication techniques</li> <li>• clean up after operations.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Fabrication may include:	<ul style="list-style-type: none"> <li>• working with metal, fibreglass and plastic components in the manufacture, repair and/or installation of plant, equipment and structures.</li> </ul>
Equipment may include:	<ul style="list-style-type: none"> <li>• cutting tools</li> <li>• welding and thermal cutting equipment</li> <li>• soldering irons.</li> </ul>
Jointing methods may include:	<ul style="list-style-type: none"> <li>• silver soldering</li> <li>• soldering</li> <li>• solid rivets</li> <li>• pop rivets</li> <li>• folding</li> <li>• self tapping screws</li> <li>• glues</li> <li>• silicones.</li> </ul>
Materials may include:	<ul style="list-style-type: none"> <li>• iron and steel</li> <li>• copper or brass</li> <li>• aluminium</li> <li>• cast iron</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• high tensile steel</li> <li>• gun metal</li> <li>• plastics.</li> </ul>
Fabrication techniques may include:	<ul style="list-style-type: none"> <li>• cutting</li> <li>• forming</li> <li>• jointing</li> <li>• welding</li> <li>• brazing</li> <li>• soft soldering</li> <li>• thermal cutting</li> <li>• hot air welding</li> <li>• drilling</li> <li>• plastic welding and forming</li> <li>• brazing or welding cast iron including the use of pre-heating and controlled cooling</li> <li>• the use of the full range of jointing techniques</li> <li>• the use of masonry anchors and bolts</li> <li>• silver soldering of high tensile materials</li> <li>• gas welding or silver soldering copper piping</li> <li>• metal forming and wrought iron fabrication</li> <li>• hard facing techniques</li> <li>• thread cutting or tapping.</li> </ul>
Welding techniques may include:	<ul style="list-style-type: none"> <li>• manual metal arc welding (MMAW)</li> <li>• gas metal arc welding (MGAW)</li> <li>• gas tungsten arc welding (GTAW)</li> <li>• oxy acetylene (or fuel gas) welding (OAW).</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess property condition	<p>1.1. Property structures are assessed for soundness and recorded according to enterprise requirements.</p> <p>1.2. Property improvements and maintenance requirements are identified and determined according to enterprise objectives.</p> <p>1.3. Budgetary parameters are identified and maintained according to enterprise requirements.</p>
2. Prepare tools and equipment	<p>2.1. Tools, equipment and materials required to carry out property improvements are identified and arranged on site.</p> <p>2.2. Tools and equipment are checked for serviceability according to manufacturer's specifications.</p> <p>2.3. Faulty or unsafe tools and equipment are identified and segregated for repair or replacement according to enterprise requirements.</p> <p>2.4. Existing and potential hazards to health and safety are identified, assessed and reported according to Occupational Health and Safety (OHS) and enterprise requirements.</p>
3. Carry out property	3.1. Suitable personal protective equipment is selected,

ELEMENT	PERFORMANCE CRITERIA
improvements	<p>used, maintained and stored according to OHS and enterprise requirements.</p> <p>3.2. Property structures are constructed, repaired or dismantled as required according to manufacturer's specifications and/or work plan and regulations (e.g., demolition code).</p> <p>3.3. Basic concrete, masonry or metal repairs are carried out according to manufacturer's specifications and work plan.</p> <p>3.4. Maintenance to roads and tracks are determined and carried out according to work plan and enterprise requirements.</p>
4. Complete maintenance and improvement activities	<p>4.1. Property structures and surrounds are monitored, maintained and improved as required.</p> <p>4.2. Worksite, tools and equipment are cleaned, returned to operating order, and stored according to OHS and enterprise requirements.</p> <p>4.3. Unwanted materials and waste from maintenance activities is collected, treated and disposed of or recycled according to enterprise environmental and OHS requirements.</p> <p>4.4. Relevant information is documented and reported according to industry and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- operate a broad range of tools and equipment
- apply hand/eye coordination
- construct assemblies
- assess the nature and priority of required repairs and maintenance
- complete a range of earthworks to specification
- lay and tie reinforcing to specifications
- observe and report on the condition of structures and equipment
- interpret and apply task instructions

## REQUIRED SKILLS AND KNOWLEDGE

- communicate with work team and supervisor
- read and interpret maps, plans, site drawings and simple technical drawings
- record and report on damage and recommend repairs
- estimate and calculate volumes, usage and measurements
- identify and report hazards and demonstrate safe workplace practices
- minimise impacts to the environment
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- machinery and equipment required to carry out property improvements, construction and repairs
- types of building materials
- concreting procedures and techniques
- wood and steel fabrication procedures
- drainage requirements around structures, tracks and roads
- legislative requirements with regard to construction and structural improvements
- types of building cladding and finishes, purpose and use
- relevant Codes of Practice with regard to protection of the environment
- OHS and environmental legislative and enterprise procedures.

## Evidence Guide

## AHCINF302A Plan and construct an electric fence

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of planning, constructing and maintaining an electric fence in a rural enterprise and defines the standard required to: develop an electric fencing plan for the enterprise; calculate and measure fencing requirements and calculate costings off the fencing plan; construct an electric fence that meets specifications and the needs of the livestock enterprise; test and monitor the electric fence for earthing and current flow, resistance and leakage.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to farm workers and fencing contractors and is likely to be carried out under routine supervision within enterprise guidelines. It requires the application of skills and knowledge to identify and incorporate the topographical features of a property into an efficient and cost-effective fencing plan for construction.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine electric fencing requirements	<p>1.1.Fencing requirements are assessed according to property maps, legislative requirements and enterprise objectives.</p> <p>1.2.Equipment, materials and labour requirements are determined, and estimated costings are maintained within budgetary constrains.</p> <p>1.3.Alternative electric fencing options are determined and compared to ensure cost-effectiveness.</p> <p>1.4.Plan is prepared giving consideration to siting fences in relation to natural features and proposed uses.</p>
2. Prepare for construction	<p>2.1.Work plan is accessed and clarification sought where required.</p> <p>2.2.Tools and fencing equipment are arranged, and safely and efficiently transported to the work site.</p> <p>2.3.Labour requirements are arranged and confirmed according to enterprise requirements.</p> <p>2.4.Potential and existing hazards in the workplace are risk assessed and minimised according to Occupational Health and Safety (OHS) requirements.</p>
3. Construct electric fence	<p>3.1.Suitable personal protective equipment is selected, used and maintained according to OHS and enterprise requirements.</p> <p>3.2.Electric fence is constructed according to work plan, OHS and enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3.Gates are attached and appropriately positioned for correct operation and function according to work plan.</p> <p>3.4.Energiser is installed according to manufacturer's specifications, OHS and enterprise requirements.</p> <p>3.5.All work is carried out safely according to OHS and enterprise requirements.</p>
4. Complete fencing operations	<p>4.1.Fencing is checked for correct installation and performance.</p> <p>4.2.Electric fence faults are identified and rectified according to manufacturer's specifications, OHS and enterprise requirements, and level of complexity.</p> <p>4.3.Work site is cleared and tidied and all waste is disposed of in an environmentally responsible manner.</p> <p>4.4.Tools and fencing equipment are transported safely from the work site and checked and stored according to manufacturer's recommendations and enterprise requirements.</p> <p>4.5.Relevant information is recorded and maintained according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- draft fencing plans and specifications
- operate fencing tools and construction equipment
- mark fencing lines
- install strainer assemblies and posts
- tension and terminate line wires
- fit post insulators
- use effective knots for joining and tying off wires to avoid short circuits
- test electric fences for current and leakage
- minimise environmental impacts

## REQUIRED SKILLS AND KNOWLEDGE

- read and interpret plans
- read plans
- arrange and purchase materials
- calculate and measure fencing requirements and calculate costings of fencing plan
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- basic operation of electric fences including earthing and current flow, resistance and leakage
- difference between portable and mains power
- issues affecting electric fencing in relation to the whole property plan
- range of electric fencing designs, construction methods and materials
- dangers posed by electricity to personnel and livestock
- conditions under which electric fences may cause fire
- safe methods for diagnosing routine faults
- common electric fencing hazards and safety precautions
- relevant State/Territory legislation and regulations regarding electric fences
- OHS legislative requirements
- relevant codes of practice with regard to protection of the environment.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• develop an electric fencing plan for the enterprise</li> <li>• calculate and measure fencing requirements and calculate costings off the fencing plan</li> <li>• construct an electric fence that meets specifications and the needs of the livestock enterprise</li> <li>• test and monitor the electric fence for earthing and current flow, resistance and leakage.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- construct end assemblies
- construct gate assemblies and swing gates
- string and strain wires to manufacturer's recommended tension
- tie fencing knots
- use and maintain fencing machinery and equipment
- select fencing materials
- arrange and purchase supplies
- demonstrate safe workplace practices
- consult with and report to management
- minimise environmental impacts
- use literacy skills to read, interpret and follow organisational policies and

**REQUIRED SKILLS AND KNOWLEDGE**

procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- issues affecting property fence planning and construction
- procedures for planning fencing in relation to the whole property plan
- range of fencing designs, construction methods and materials
- types of fencing construction tools and equipment
- fencing materials and costings
- common fencing hazards and safety precautions
- OHS legislative requirements and Codes of Practice
- relevant Codes of Practice with regard to the protection of the environment
- hazard identification, assessment and control.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare materials, tools and equipment for irrigation work	<p>1.1. The required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions.</p> <p>1.2. Checks are conducted on all materials, tools and equipment with insufficient or faulty items reported to the supervisor.</p> <p>1.3. Techniques used when loading and unloading materials demonstrate correct manual handling and minimise damage to the load and the vehicle.</p> <p>1.4. Suitable Personal Protective Equipment (PPE) is selected and checked prior to use.</p> <p>1.5. Irrigation support is provided according to Occupational Health and Safety (OHS) requirements and according to workplace information.</p> <p>1.6. OHS hazards are identified and reported to the supervisor.</p>
2. Undertake irrigation work as directed	<p>2.1. Instructions and directions provided by supervisor are followed, and clarification sought when necessary.</p> <p>2.2. Irrigation work is undertaken in a safe and environmentally appropriate manner according to enterprise guidelines.</p> <p>2.3. Interactions with other staff and customers are carried out in a positive and professional manner.</p> <p>2.4. Enterprise policy and procedures in relation to workplace practices, handling and disposal of materials is observed.</p> <p>2.5. Problems or difficulties in completing work to</p>

ELEMENT	PERFORMANCE CRITERIA
	required standards or timelines are reported to supervisor.
3. Handle materials and equipment	3.1. Waste material and debris produced during irrigation work is stored in a designated area according to supervisor's instructions. 3.2. Materials, equipment and machinery are handled and transported according to supervisor's instructions and enterprise guidelines. 3.3. A clean and safe work site is maintained while undertaking irrigation activities.
4. Clean up on completion of irrigation activities	4.1. Materials are returned to store or disposed of according to supervisor's instructions. 4.2. Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and supervisor's instructions. 4.3. Site is made good according to supervisor's instructions and good environmental practices. 4.4. Work outcomes are reported to the supervisor.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- follow safe work procedures
- prepare materials, tools and equipment for irrigation work
- undertake irrigation work as directed
- handle materials and equipment
- clean up on completion of work
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

- safe work practices
- preparing for irrigation work and cleaning up on completion
- basic construction techniques
- irrigation tools and equipment
- maintenance practices for planted areas
- basic repair and maintenance of irrigation components and systems
- OHS legislation and enterprise requirements.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- apply safe irrigation work practices
- support installation and maintenance activities
- handle materials and equipment
- clean up following work activities.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Work tasks may include:

- assisting with installation of irrigation and/or drainage pipes and components for gravity fed or pressurised systems, including digging trenches, back filling of trenches and completing other basic tasks as instructed.
- assisting with maintenance of irrigation and/or drainage systems including clearing blockages, and completing other basic tasks as instructed.
- work with a range of materials including plastic and metal pipes and components using hand tools commonly used in irrigation work.
- associated irrigation activities including:
  - assisting in establishing work base
  - clearing site
  - erecting barriers and signs
  - unloading and loading of materials
  - setting out of works
  - cleaning up site
  - disposal of debris and materials.
- make site good including:
  - paths are swept and cleaned
  - work area is left in a good state
  - disturbed areas are repaired
  - all materials, debris, tools and equipment are removed from site
  - other signs of disturbance or damage are corrected.

Tools and equipment may include:

- levelling equipment
- wheelbarrow
- string lines
- tape measures
- marking gauges
- spades
- shovels
- crow bars
- rakes
- brooms
- sanding blocks
- hacksaws.

**RANGE STATEMENT**

Hazards may include	<ul style="list-style-type: none"> <li>• solar radiation</li> <li>• dust</li> <li>• noise</li> <li>• air- and soil-borne micro-organisms</li> <li>• chemicals and hazardous substances</li> <li>• sharp hand tools and equipment</li> <li>• manual handling</li> <li>• holes</li> <li>• slippery and uneven surfaces.</li> </ul>

## AHCIRG201A Assist with the operation of gravity fed irrigation

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of assisting with the operation of gravity fed irrigation systems under routine supervision and defines the standard required to: handle and shift loads; operate, check, clean and store irrigation equipment; set up field for gravity fed irrigation; estimate and monitor water levels and volumes/flow; identify adverse environmental impacts of gravity fed irrigation system and take appropriate action.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to working under routine supervision, within enterprise guidelines.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Set up field for gravity fed irrigation	<p>1.1.Irrigation equipment is handled safely in accordance with Occupational Health and Safety (OHS) practices.</p> <p>1.2.Irrigation equipment is positioned in accordance with enterprise requirements.</p> <p>1.3.Rotobuck area is checked for irrigation set up and action taken as required in accordance with enterprise policy and procedures.</p> <p>1.4.Pumps, bores and other water delivery mechanisms are checked for irrigation set up and action taken as required in accordance with enterprise policy and procedures.</p> <p>1.5.Tarpaulins or other water control devices are positioned and secured as required in accordance with enterprise procedures.</p>
2. Carry out irrigation operations	<p>2.1.Gates and/or valves are opened and shut as necessary in accordance with enterprise procedures.</p> <p>2.2.Required head and water levels in head ditch are achieved and maintained to ensure sufficient water flow and availability to crops.</p> <p>2.3.Required number of siphons are started/opened in accordance with enterprise procedures.</p> <p>2.4.Progress of water flow in furrows is monitored in accordance with enterprise procedures.</p> <p>2.5.Siphons are lifted where irrigation is complete in accordance with enterprise procedures.</p> <p>2.6.Irrigation change is carried out and marked as</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>required.</p> <p>2.7.Irrigation equipment is shifted, as required, for irrigation changes in accordance with OHS guidelines.</p>
3. Clean and store irrigation equipment as require	<p>3.1.Equipment is cleaned and prepared for storage, as necessary, in accordance with enterprise policy and procedures.</p> <p>3.2.Equipment is loaded for transport safely, if necessary, in accordance with OHS practices.</p> <p>3.3.Equipment is stored as required, in accordance with enterprise policy and procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and adopt safe work practices for using gravity fed irrigation systems.
- start up and close down the system
- monitor progress of water flow
- handle and shift loads
- clean and store system components
- follow enterprise policy and procedures relating to irrigation duties
- estimate water levels and volumes/flow
- identify adverse environmental impacts and take appropriate remedial action
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- basic operation of gravity fed irrigation system

**REQUIRED SKILLS AND KNOWLEDGE**

- irrigation times for enterprise fields to deliver sufficient volume without over watering
- components of a gravity fed irrigation system including cleaning and storage requirements
- manual handling procedures
- required head and water levels in head ditch
- OHS procedures relating to general activities involved in irrigating field crops using gravity fed irrigation.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- handle and shift loads
- operate, check, clean and store irrigation equipment
- set up field for gravity fed irrigation
- estimate and monitor water levels and volumes/flow
- identify adverse environmental impacts of gravity fed irrigation system and take appropriate action.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Gravity fed irrigation may include:	<ul style="list-style-type: none"> <li>• border check systems</li> <li>• contour irrigation</li> <li>• furrow irrigation</li> <li>• hillside flooding</li> <li>• basin irrigation</li> <li>• ebb and flow</li> <li>• flood systems.</li> </ul>
Border check systems may include:	<ul style="list-style-type: none"> <li>• either permanent or temporary earth, plastic or concrete devices for insertion in a drain for reticulating water</li> <li>• contour banks used to collect and distribute water along the perimeter of an irrigation plot</li> <li>• contour banks within a plot to collect/distribute water</li> <li>• larger scale systems to stop water exiting one area to another.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assist with setting up of irrigation components	<p>1.1. Irrigation equipment is handled safely in accordance with Occupational Health and Safety (OHS) practices.</p> <p>1.2. Irrigation equipment is positioned, if necessary, in accordance with enterprise requirements.</p> <p>1.3. Irrigation components are checked and action taken, as required, in accordance with enterprise policy and procedures.</p> <p>1.4. Assemble and join irrigation system components where required.</p> <p>1.5. Water outlets are checked in accordance with enterprise practices.</p>
2. Carry out irrigation operations	<p>2.1. Valves are opened and shut, as necessary, in accordance with enterprise procedures.</p> <p>2.2. Required pressures and water flows are achieved and maintained to ensure sufficient water availability.</p> <p>2.3. Equipment is relocated, if necessary, in accordance with enterprise procedures and OHS guidelines.</p>
3. Clean and store irrigation equipment as require	<p>3.1. Equipment is cleaned and prepared for storage, as necessary, in accordance with enterprise policy and procedures.</p> <p>3.2. Equipment is loaded for transport safely, if necessary, in accordance with OHS practices.</p> <p>3.3. Equipment is stored, as required, in accordance with enterprise policy and procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work practices
- shift and transfer loads
- follow enterprise policy and procedures relating to irrigation duties
- assemble and join irrigation system components
- operate irrigation systems (i.e., turn on and off)
- regulate system to achieve and maintain correct operating pressures and water flows
- estimate water flow
- monitor the environmental impacts of pressurised irrigation
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- basic operation of pressurised irrigation system
- irrigation times to deliver sufficient volume without over watering
- manual handling procedures
- OHS and environmental procedures relating to using pressurised irrigation systems.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## AHCIRG203A Install micro-irrigation systems

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of installing micro-irrigation systems under routine supervision and defines the standard required to: organise equipment and materials for installation work; set out and prepare site; install and test the irrigation system; monitor effectiveness and environmental impacts of the micro-irrigation system.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in production or amenity horticulture enterprises that operate under limited supervision and within enterprise guidelines.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare tools and materials for installation work	<p>1.1. Materials, tools, equipment and machinery are selected according to irrigation design requirements and supervisors instructions.</p> <p>1.2. The site for installation of the micro-irrigation system is identified according to enterprise plans and work procedures.</p> <p>1.3. Parts and equipment delivered to the site are checked according to system drawings and specifications.</p> <p>1.4. Water supply is checked to ensure that it is compatible with system specifications.</p>
2. Set out and prepare site	<p>2.1. Measurement and marking out of irrigation lines is undertaken as directed by supervisor.</p> <p>2.2. Equipment operation and work practices conform to enterprise and legislative Occupational Health and Safety (OHS) requirements.</p> <p>2.3. Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturer's specifications and enterprise work procedures.</p> <p>2.4. OHS hazards are identified, risks assessed and risk controls are implemented.</p> <p>2.5. Personal Protective Equipment (PPE) is selected, used and maintained according to procedures</p>
3. Install irrigation components	<p>3.1. Work is undertaken according to plan and supervisor's instructions.</p> <p>3.2. Components are assembled and connected according to plan, with joints completed and tested.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. A clean and safe work area is maintained while installation work is carried out.</p> <p>3.4. Tools are chosen appropriate to the task being undertaken, and used according to guidelines and safe working practices.</p>
4. Complete installation work	<p>4.1. Earthworks are finished off to plan specifications and enterprise work procedures.</p> <p>4.2. The site is restored and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to enterprise work procedures.</p> <p>4.3. Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures.</p> <p>4.4. System is flushed and commissioned as directed.</p> <p>4.5. Operating faults are identified and reported to supervisor and/or corrective actions taken.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and adopt safe work practices
- organise equipment and materials for installation work
- set out and prepare site
- install irrigation components
- complete installation work
- communicate with work team members, supervisors, contractors and consultants
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- methods and techniques of micro-irrigation

**REQUIRED SKILLS AND KNOWLEDGE**

- components of an micro-irrigation system
- characteristics and operation of joints, valves and sprinkler components
- operation of pumps and water flow rates
- behaviour of water on varying terrain and soil types
- soil moisture testing techniques
- OHS and environmental legislation and enterprise procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- organise equipment and materials for installation work
- set out and prepare site
- install and test the irrigation system
- monitor effectiveness and environmental impacts of the micro-irrigation system.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Micro-irrigation systems include:	<ul style="list-style-type: none"> <li>• low pressure micro-sprays</li> <li>• drippers.</li> </ul>
Irrigation equipment may include:	<ul style="list-style-type: none"> <li>• pumps</li> <li>• delivery equipment</li> <li>• system controllers.</li> </ul>
Water supplies may include:	<ul style="list-style-type: none"> <li>• underground</li> <li>• mains</li> <li>• surface storage</li> </ul> <p>including fixtures such as:</p> <ul style="list-style-type: none"> <li>• dams</li> <li>• bores</li> <li>• windmills</li> <li>• tanks</li> <li>• channels.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan and prepare job	<p>1.1. Materials required for the job are transported to the location and stacked in a safe position.</p> <p>1.2. Tools, equipment and machinery are selected consistent with the requirements of the job.</p> <p>1.3. Quality Assurance requirements are recognised and adhered to.</p> <p>1.4. Personal Protective Equipment (PPE) is used and maintained according to procedures.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.</p>
2. Set out and excavate trenches	<p>2.1. Location and depths of trenches is determined from job drawings.</p> <p>2.2. Trench location is set out with pegs and string line and clearly marked with appropriate marking material.</p> <p>2.3. Manual support is provided to machine operator with excavation of trenches, shoring or battering in accordance with OHS requirements.</p> <p>2.4. Trenches are cleaned out by hand and corners left square.</p> <p>2.5. Trench depths and grades are checked for conformity to job requirements.</p>
3. Lower and position pipes	<p>3.1. Bedding materials are laid and consolidated to specified depths and grades.</p> <p>3.2. Pipes are installed/lowered into position with appropriate mechanical equipment according to</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications. 3.3.Pipe joints and fittings are installed to job specification. 3.4.Pipes are back filled to specifications and cover left level with surrounding ground.
4. Clean up	4.1.Site is cleared and excess soil, debris and unwanted materials removed in accordance with organisational procedures and environmental requirements. 4.2.Tools and equipment are cleaned, maintained and stored.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and adopt safe work practices
- read and interpret scale drawings and specifications
- use hand signals for communicating with machine operator
- measure trench width, depth, grade and location
- lay and join irrigation pipe
- level cover with existing ground
- use power tools and hand tools
- handle materials safely
- work safely to instructions
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- OHS requirements for excavating, filling trenches and laying pipes, including relevant legislation regulations and codes
- irrigation and/or drainage pipes, types and sizes
- hand and power tools and equipment
- bedding and backfill materials and handling methods

**REQUIRED SKILLS AND KNOWLEDGE**

- scale drawings for laying irrigation and/or drainage pipes
- hand signals for communication
- OHS issues and procedures related to trenching and pipe laying
- Quality Assurance procedures for excavating, filling trenches and laying pipes
- environmental impacts and procedures for laying pipe.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- set out and excavate trenches using manual equipment and a machine operator
- check trench depth and grade
- lay bedding materials
- position irrigation and/or drainage of varying types and sizes
- install pipe joints and fittings to job specification.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Irrigation and drainage pipes may include:	<ul style="list-style-type: none"> <li>• concrete</li> <li>• metal</li> <li>• polythene</li> <li>• polyvinylchloride (PVC)</li> <li>• the type and size of pipe will vary with the terrain, soil type and traffic load.</li> </ul>
Fittings may include:	<ul style="list-style-type: none"> <li>• valves</li> <li>• outlets</li> <li>• thrust blocks and connecting surfaces such as O-rings.</li> </ul>
Mechanical equipment may include:	<ul style="list-style-type: none"> <li>• equipment for lowering irrigation and/or drainage pipes but does not include operating excavation machinery such as trench diggers or ditch witches.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Carry out pre and post season maintenance	<p>1.1. Equipment is prepared pre-season for effective operation in accordance with design specifications and enterprise standards.</p> <p>1.2. System is closed and made resistant to damage post-season in accordance with design specifications and enterprise standards.</p> <p>1.3. Equipment is stored post-season according to enterprise standards.</p>
2. Carry out routine maintenance activities on gravity fed irrigation delivery systems	<p>2.1. All maintenance activities are carried out according to the maintenance program, Occupational Health and Safety (OHS) requirements and the manufacturer's specifications.</p> <p>2.2. Mechanical equipment is serviced in accordance with the operator's manual or as directed.</p> <p>2.3. Supply and distribution system is flushed and cleaned as directed.</p> <p>2.4. System inlets, outlets, structures and fittings are maintained as directed.</p> <p>2.5. System is checked for smooth running and is free of damage, leaks and blockages in channels, drains and outlets, as necessary, in accordance with design specifications and enterprise procedures.</p> <p>2.6. Silt is cleared from channels, drains, sumps and crossings with no disruption to gradients and levels, as necessary.</p> <p>2.7. Adverse environmental impacts of the irrigation system are identified and reported.</p> <p>2.8. Appropriate materials are used for backfilling and</p>

ELEMENT	PERFORMANCE CRITERIA
	building/repairing banks in accordance with enterprise standards.
3. Clear system of weeds using mechanical or chemical methods	3.1. Weeds are removed/controlled in accordance with enterprise standards, OHS and environmental requirements. 3.2. Crops and plants are protected from damage in accordance with enterprise standards. 3.3. Water flow from outlets is checked, as necessary, to verify freedom from blockage.
4. Record and report maintenance activities	4.1. All damage and blockage caused by pests and vermin are recorded by damage type, location and the section of the system affected. 4.2. Damage or faulty pumps, valves, electrical components and computer systems are recorded and reported, and action taken to effect repairs. 4.3. All routine maintenance activities are recorded and reported in accordance with enterprise standards.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and adopt safe work practices
- read and follow operational procedures for gravity fed irrigation system maintenance
- identify adverse environmental impacts of gravity fed irrigation system and take appropriate remedial action
- read instructions and safely use chemicals for weed control
- use mechanical equipment to build/repair banks and for weed removal
- record and report maintenance observations and activities
- follow OHS procedures relating to gravity fed irrigation maintenance
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor

**REQUIRED SKILLS AND KNOWLEDGE**

- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- OHS and environmental legislative and enterprise procedures relating to gravity fed irrigation maintenance
- types of channels, furrows, borders, fittings and outlets
- system cleaning procedures
- damage and problems that can occur with gravity-fed irrigation systems
- weed types encountered in gravity fed irrigation systems and their control
- environmentally safe disposal procedures for chemical containers and residues, oils/grease and used parts.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- check for problems and return the system to smooth running
- build or repair banks
- control weeds and silt build-up
- carry out maintenance activities.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out pre- and post-season maintenance	<p>1.1. Equipment is prepared pre-season for effective operation in accordance with design specifications and enterprise standards.</p> <p>1.2. System is flushed, cleaned, closed down and maintained post-season in accordance with design specifications and enterprise standards.</p> <p>1.3. Equipment requiring storage is dismantled, loaded, transported and stored without damage according to enterprise standards and safe working practices.</p>
2. Carry out routine maintenance activities on pressurised irrigation delivery systems	<p>2.1. All maintenance activities are carried out according to the maintenance program and the manufacturer's specifications.</p> <p>2.2. Mechanical equipment is serviced in accordance with the operator's manual or as directed.</p> <p>2.3. Supply and distribution systems are flushed and cleaned with sprinklers, emitters and/or drip line tapes replaced as directed.</p> <p>2.4. Outlets, strainers, pump screens and filters are cleaned and replaced as directed.</p> <p>2.5. System is visually inspected for leaks, operating faults and dry areas, and observations recorded in the maintenance book.</p> <p>2.6. Operation area is maintained in a clean and safe condition, and Occupational Health and Safety (OHS) procedures are followed.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Maintain system components	<p>3.1. System maintenance is carried out at scheduled times using equipment and materials in accordance with enterprise standards and manufacturer's specifications.</p> <p>3.2. Parts are inspected for wear or blockage and reported or replaced according to enterprise guidelines.</p> <p>3.3. Outlets are removed and cleaned and damaged ones are reassembled and replaced according to manufacturer's specifications.</p> <p>3.4. Operation area is maintained in a clean and safe condition, and OHS procedures are followed.</p>
4. Record and report maintenance activities	<p>4.1. All damage and blockage caused by pests and vermin is recorded by damage type, location and the section of the system affected.</p> <p>4.2. Damage or faulty pumps, valves, electrical components and computer systems are recorded and reported, and action taken to effect repairs.</p> <p>4.3. All routine maintenance activities are recorded and reported in accordance with enterprise standards.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and adopt safe work practices
- read and follow an operator's manual and manufacturer's specifications for pressurised irrigation systems
- maintain selected irrigation system components
- rectify damage caused by weeds or pests
- record and report maintenance observations and activities
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures

**REQUIRED SKILLS AND KNOWLEDGE**

- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- OHS and environmental legislative and enterprise procedures relating to pressurised irrigation system maintenance
- major components of a pressurised irrigation delivery system
- maintenance requirements and procedures for system components
- environmentally safe disposal procedures for chemical containers and residues, oils/grease and used parts.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- read and follow an operators manual and manufacturers specifications for pressurised irrigation systems
- maintain irrigation system components including supply and distribution systems, outlets, strainers, pump screens and filters
- inspect for dry areas and leaks
- clear or replace worn or blocked parts and outlets
- record and report maintenance observations and activities.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Pressurised irrigation systems include:	<ul style="list-style-type: none"> <li>• micro-irrigation systems and spray irrigation systems ranging from manual operation and monitoring to fully automated with computer control and monitoring.</li> </ul>
Micro-irrigation systems may include:	<ul style="list-style-type: none"> <li>• mains pressure</li> <li>• low pressure</li> <li>• below or above ground</li> <li>• sprays systems</li> <li>• drip emitter trickle</li> <li>• t-tape</li> <li>• mini-sprinklers</li> <li>• capillary.</li> </ul>
Spray irrigation systems may include:	<ul style="list-style-type: none"> <li>• travelling irrigators (soft hose, hard hose boom type)</li> <li>• centre pivot</li> <li>• linear move</li> <li>• powered side roll hand shift permanent (installed)</li> <li>• bike shift/easy shift.</li> </ul>

## AHCIRG207A Carry out irrigation site preparation tasks

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of carrying out site preparation tasks under routine supervision and defines the standard required to: assemble work materials and unload safely; identify hazards and follow OHS procedures; assist in marking out site boundaries and clearing the site; and assist in checking layout and levels against the site plan.

### Application of the Unit

This Unit applies to workers in irrigation servicing, food or fibre production or amenity horticulture enterprises that operate under supervision and within enterprise guidelines.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for work on an installation site	<p>1.1 The required materials, <i>tools and equipment</i> are identified according to lists provided and/or supervisor's instructions</p> <p>1.2 Techniques used when loading and unloading materials demonstrate correct manual handling and minimise damage to the load and the vehicle</p> <p>1.3 Suitable <i>personal protective equipment (PPE)</i> is selected and checked prior to use</p> <p>1.4 <i>OHS hazards</i> are identified and reported to the supervisor</p>
2 Clear and clean a site for work	<p>2.1 Assistance is provided in marking out the boundaries of the site</p> <p>2.2 Existing infrastructure is identified and removed or reported on</p> <p>2.3 Vegetation is cleared from the site in accordance with the irrigation plan and procedures</p> <p>2.4 Assistance is provided with <i>site preparation tasks</i></p>
3 Apply work procedures to prepare the site	<p>3.1 Soil characteristics and environmental hazards are noted to apply sustainable work practices</p> <p>3.2 Features on the site are aligned to symbols and terminology on the site plan</p> <p>3.3 Assistance is provided to check layout of services and checking of depths and levels</p> <p>3.4 Marking out of the site is carried out as directed</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- prepare materials, tools and equipment for irrigation work
- handle materials and equipment
- undertake site preparation tasks as directed
- peg out a site boundary
- identify soil texture and risk of erosion
- assist in site preparation tasks
- identify adverse environmental impacts and take appropriate remedial action
- use literacy skills to follow sequenced written instructions and record information

accurately and legibly

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

#### Knowledge of:

- interpretation of symbols and use of a legend on site plans and specifications, particularly in relation to the location of existing features
- understanding of compass directions and how to locate North from a site plan
- an awareness of other plans that may be referred to when setting out a site for irrigation
- recognition of site features and actions that can be taken to either clear the site or adjust the system to fit
- hazard identification and safe work procedures.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assemble work materials and unload safely</li> <li>• identify hazards and follow OHS procedures</li> <li>• assist in marking out site boundaries and clearing the site</li> <li>• assist in checking layout and levels against the site plan.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Tools and equipment</i></b> may include:</p>	<p>levelling equipment, wheelbarrow, string lines, tape measures, marking gauges, spades, shovels, crow bars, rakes, brooms, sanding blocks and hacksaws.</p>
<p><b><i>Personal protective clothing and equipment (PPE)</i></b> may include:</p>	<p>steel capped boots/shoes, overalls, gloves, sun hat, sunscreen lotion, safety goggles, face mask and hearing protection, and any protection required for the use of equipment.</p>
<p><b><i>OHS hazards</i></b> should be identified through site risk assessment and organisational procedures and may include:</p>	<p>solar radiation, dust, noise, air- and soil-borne micro-organisms, chemicals and hazardous substances, sharp hand tools and equipment, manual handling, holes, and slippery and uneven surfaces.</p>
<p><b><i>Site preparation tasks</i></b> may include:</p>	<p>assisting with taking levels and marking out boundaries or key features from a site plan.</p>

## Unit Sector(s)

Irrigation

# **AHCIRG208A Assist with the installation and maintenance of pumps and flow control devices for irrigation**

## **Modification History**

Not applicable.

## **Unit Descriptor**

This Unit describes the outcomes required to assist with the installation and maintenance of pumps and flow control devices for irrigation systems and defines the standard required to: assemble equipment and materials for installation work; assist with the installation of pumps and flow control devices; assist with maintenance tasks for pumps and flow-control devices; and identify basic faults related to pumping and flow control and fix or report.

## **Application of the Unit**

This Unit applies to workers in irrigation servicing, food or fibre production or amenity horticulture enterprises that operate under supervision and within enterprise guidelines.

## **Licensing/Regulatory Information**

Not applicable.

## **Pre-Requisites**

Not applicable.

## **Employability Skills Information**

This Unit contains employability skills.

## **Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare for work on <i>pumping and flow control systems</i>	<p>1.1 Apply work requirements for installation of <i>pumps</i> and <i>flow control devices</i> in irrigation systems from plans, specifications and instructions</p> <p>1.2 Prepare work plans and identify <i>OHS hazards</i> to ensure safety within the workplace</p> <p>1.3 Select and check equipment and tools to meet safety requirements of the task and site</p> <p>1.4 Select, fit and use personal protective equipment (<i>PPE</i>)</p>
2 Carry out installation tasks for pumps and flow control devices.	<p>2.1 Carry out installation tasks as directed for pumps according to manufacturer guidelines and legislative requirements</p> <p>2.2 Carry out installation tasks as directed for flow control devices according to manufacturer guidelines</p>
3 Carry out maintenance tasks for pumps and flow control devices.	<p>3.1 Carry out routine inspections of flow control and metering facilities in irrigation systems according to organisational procedures</p> <p>3.2 Carry out preventative maintenance and service of equipment and facilities according to manufacturer guidelines and organisational requirements</p>
4 Review, record and report activities.	<p>4.1 Check, maintain and store equipment, tools and materials according to manufacturer guidelines and organisational procedures</p> <p>4.2 Restore work site to meet environmental and organisational requirements</p> <p>4.3 Record and report activities according to organisational procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- follow plans, charts and instructions
- perform work-related calculations
- organise equipment and materials for installation work
- use power tools and hand tools
- handle materials safely

- install irrigation components
- identify hazards and adopt safe work practices
- identify and respond to operational problems
- communicate with work team members, supervisors, contractors and consultants
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge includes:**

---

**Knowledge of:**

- types of pumps and their function and use
- types of flow control devices and their purpose
- basic principles of hydraulics and the operation of flows
- system layout
- principles of electricity and safe work procedures
- lock-out procedures for mechanical and electrical installations
- organisational communication systems
- effective workplace communication processes
- materials handling
- environmental, landscape and ground structure of work area
- risk factors and potential hazards
- equipment operation, capacity and limitations
- effects of weather and conditions on operation of system, site and plant
- flow measurement principles and procedures
- layout and performance of pipes and fittings
- function of control systems.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and

	<p>knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assemble equipment and materials for installation work</li> <li>• assist with the installation of pumps and flow-control devices</li> <li>• assist with maintenance tasks for pumps and flow-control devices</li> <li>• identify basic faults related to pumping and flow control and fix or report.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Pumping and flow control systems</i></b> may include:	all types of pumps and pumping systems (including filters and valves) used to move water to or through an irrigation system
<b><i>Pumps</i></b> may include:	<ul style="list-style-type: none"> <li>• centrifugal</li> <li>• Archimedes screw type</li> <li>• submersible</li> <li>• positive displacement</li> <li>• maintenance pumps and flow-control devices.</li> </ul>
<b><i>Flow control devices</i></b> may include:	<ul style="list-style-type: none"> <li>• flow directional gates</li> <li>• regulators</li> <li>• valves: <ul style="list-style-type: none"> <li>• sluice</li> <li>• gate</li> <li>• blade</li> <li>• non-return</li> <li>• doors, drop structures and bars.</li> </ul> </li> </ul>
<b><i>OHS hazards</i></b> should be identified through site risk assessment and	solar radiation, dust, noise, air- and soil-borne micro-organisms, chemicals and hazardous

organisational procedures and may include:	substances, sharp hand tools and equipment, manual handling, holes, and slippery and uneven surfaces.
Personal protective clothing and equipment ( <i>PPE</i> ) may include:	steel capped boots/shoes, overalls, gloves, sun hat, sunscreen lotion, safety goggles, face mask and hearing protection, and any protection required for the use of equipment.

## Unit Sector(s)

Irrigation

## **AHCIRG209A Carry out installation tasks for low volume irrigation**

### **Modification History**

Not applicable.

### **Unit Descriptor**

This Unit covers the process of assisting with the installation of low volume irrigation systems under supervision and defines the standard required to: assemble equipment and materials for installation work; assemble components and flush the irrigation system; identify faults and fix or report.

### **Application of the Unit**

This Unit applies to workers in irrigation servicing, food or fibre production or amenity horticulture enterprises that operate under supervision and within enterprise guidelines.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

### **Employability Skills Information**

This Unit contains employability skills.

### **Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for work on a <i>low volume irrigation</i> installation site	1.1 The required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions 1.2 Techniques used when loading and unloading materials demonstrate correct manual handling and minimise damage to the load and the vehicle 1.3 Suitable <i>personal protective equipment (PPE)</i> is selected and checked prior to use 1.4 <i>OHS hazards</i> are identified and reported to the supervisor
2 Prepare the site	2.1 Irrigation lines are measured and marked out 2.2 Irrigation components are laid out 2.3 Trenches are dug or tidied up
3 Install irrigation components	3.1 Work is undertaken according to plan and supervisor's instructions 3.2 <i>System components</i> are assembled and connected according to plan, with joints completed and tested 3.3 A clean and safe work area is maintained while installation work is carried out 3.4 Tools are chosen appropriate to the task being undertaken, and used according to guidelines and safe working practices
4 Complete installation tasks	4.1 The site is restored and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to enterprise work procedures 4.2 Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures 4.3 System is connected to water supply 4.4 System is flushed and commissioned as directed 4.5 Operating faults are identified and reported to supervisor and/or corrective actions taken

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- identify hazards and adopt safe work practices
- organise equipment and materials for installation work

- install irrigation components
- complete installation work
- communicate with work team members, supervisors, contractors and consultants
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

#### Knowledge of:

- methods and techniques of low volume irrigation
- components of low volume irrigation systems
- characteristics and operation of joints, valves and drip and low volume sprinkler components, including controllers
- use of recycled water and colour coding of pipes
- basic energy efficiency and water efficiency factors
- safe work procedures and PPE
- OHS and environmental legislation and enterprise procedures.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assemble equipment and materials for installation work</li> <li>• assemble components and flush the irrigation system</li> <li>• identify faults and fix or report.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances. This unit may be assessed in

	the context of installing domestic micro-irrigation.
--	--

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Low volume irrigation</i></b> may include:</p>	<p>systems that operate under comparatively low volume and pressure including micro irrigation, pop-ups at less than 0.1 litres/second, and drippers.</p>
<p><b><i>Personal protective clothing and equipment (PPE)</i></b> may include:</p>	<p>steel capped boots/shoes, overalls, gloves, sun hat, sunscreen lotion, safety goggles, face mask and hearing protection, and any protection required for the use of equipment.</p>
<p><b><i>OHS hazards</i></b> should be identified through site risk assessment and organisational procedures and may include:</p>	<p>solar radiation, dust, noise, air- and soil-borne micro-organisms, chemicals and hazardous substances, sharp hand tools and equipment, manual handling, holes, and slippery and uneven surfaces.</p>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for work on installing <i>sprinkler irrigation systems</i>	1.1 The required materials, tools and equipment are identified according to lists provided and/or supervisor's instruction 1.2 Techniques used when loading and unloading materials demonstrate correct manual handling and minimise damage to the load and the vehicle 1.3 Suitable <i>personal protective equipment (PPE)</i> is selected and checked prior to use 1.4 <i>OHS hazards</i> are identified and reported to the supervisor
2 Assemble and lay out components	2.1 Equipment is checked to confirm readiness for use 2.2 Materials are selected according to instructions 2.3 Irrigation components are laid out in accordance with instructions 2.4 Trenches are dug or tidied up in accordance with instructions where required
3 Install irrigation components	3.1 Pipeline is joined or finished according to instructions 3.2 <i>System components</i> are added or inserted according to instructions 3.3 Lines are positioned and secured according to instructions 3.4 Pumps and valves are fitted according to instructions
4 Complete installation activities	4.1 The irrigation system is commissioned and observed 4.2 Problems and anomalies are recognised and reported 4.3 Equipment is cleaned and stored according to instructions 4.4 Materials are stored according to instructions 4.5 Waste is collected and disposed of or recycled according to workplace procedures 4.6 Workplace information is recorded in the appropriate format

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- organise equipment and materials for installation work
- use power tools and hand tools
- handle materials safely

- use hand signals for communicating with machine operator
- identify hazards and adopt safe work practices
- install irrigation components
- complete installation work
- communicate with work team members, supervisors, contractors and consultants
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

#### Knowledge of:

- sprinkler irrigation components and their function
- types of sprinklers and where they are used
- sprinkler spacing, coverage and pressure
- irrigation and/or drainage pipes, types and sizes
- bedding and backfill materials and handling methods
- set out procedures
- installation techniques and procedures
- safe use of hand and power tools and equipment
- working around machinery and hand signals for communication work safely to instructions
- OHS issues and procedures related to installation.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assemble equipment and materials for installation work</li> <li>• assemble components</li> <li>• identify faults and fix or report.</li> </ul>

--	--

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<b><i>Sprinkler irrigation systems</i></b> may include:	systems that use spray or rotor type sprinklers to distribute irrigation water at higher volume including pop-up sprinklers, fixed, and movable sprinklers (e.g. K Line and Ezy Shift).
<b><i>Personal protective clothing and equipment (PPE)</i></b> may include:	PPE may include steel capped boots/shoes, overalls, gloves, sun hat, sunscreen lotion, safety goggles, face mask and hearing protection, and any protection required for the use of equipment.
<b><i>OHS</i></b> should be identified through site risk assessment and organisational procedures and hazards may include:	solar radiation, dust, noise, air- and soil-borne micro-organisms, chemicals and hazardous substances, sharp hand tools and equipment, manual handling, holes, and slippery and uneven surfaces.
<b>System components</b> may include:	<ul style="list-style-type: none"> <li>• sprinklers</li> <li>• lines</li> <li>• filters and valves</li> <li>• pumps</li> <li>• delivery equipment</li> <li>• system controllers.</li> </ul>

## Unit Sector(s)

Irrigation

## AHCIRG211A Assist with low volume irrigation operations

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of assisting with the operation of low volume irrigation systems under routine supervision and defines the standard required to: identify the purpose of low volume irrigation system components; monitor irrigation times and plant response; maintain low volume irrigation systems; store and maintain equipment; and regulate a low volume irrigation system to achieve and maintain correct emitter output.

### Application of the Unit

This Unit applies to working under supervision, within enterprise guidelines.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare materials, tools and equipment for low volume irrigation work	1.1 Irrigation equipment is handled safely in accordance with Occupational Health and Safety (OHS) practices 1.2 Irrigation components are checked and action taken, as required, in accordance with enterprise policy and procedures 1.3 Water outlets are checked in accordance with enterprise practices
2 Undertake low volume irrigation work as directed	2.1 Valves are opened and shut, as necessary, in accordance with enterprise procedures 2.2 Required pressures and water flows are achieved and maintained to ensure sufficient water availability 2.3 Equipment is relocated, if necessary, in accordance with enterprise procedures and OHS guidelines
3 Observe and report on soil moisture and plant growth response	3.1 Soil moisture levels are assessed to determine watering requirement 3.2 Plant moisture requirements and signs of stress are established 3.3 Plant growth and condition is monitored to indicate over or under watering 3.4 Inadequate plant response to watering is recorded and reported
4 Maintain a low volume irrigation system	4.1 Flushing procedures are followed for clearing the system 4.2 Emitters are checked for serviceability and output 4.3 Lines are maintained 4.4 Water supply and pumping system is checked periodically 4.5 Maintenance records are kept up to date

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

**Required skills include:****Ability to:**

- prepare materials, tools and equipment for irrigation work
- assemble and join low volume irrigation system components
- operate and adjust low volume irrigation components
- operate a simple irrigation controller
- operate the water delivery system, including pumps
- estimate water output
- observe for leaks and faulty emitters
- report faults
- record and report maintenance activities clean up on completion of work.

**Required knowledge includes:****Knowledge of:**

- purpose and principles of low volume irrigation
- identification, characteristics and operation of replaceable components of low volume irrigation systems
- basic operational procedures for low volume irrigation systems
- principles of pumps and pumping systems
- the range of emitters and their output and purpose
- system malfunctions and their likely causes
- environmental impacts of irrigation, using water from any ground or underground source
- OHS requirements and safe work procedures.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare materials, tools and equipment for <i>sprinkler irrigation systems</i>	1.1 Irrigation equipment is handled safely in accordance with Occupational Health and Safety (OHS) practices 1.2 Irrigation equipment is positioned, if necessary, in accordance with enterprise requirements 1.3 Irrigation components are checked and action taken, as required, in accordance with enterprise policy and procedures 1.4 Irrigation system components are assembled and joined where required 1.5 Water outlets are checked in accordance with enterprise practices
2 Undertake sprinkler irrigation work as directed	2.1 Valves are opened and shut, as necessary, in accordance with enterprise procedures 2.2 Required pressures and water flows are achieved and maintained to ensure sufficient water availability 2.3 Equipment is relocated, if necessary, in accordance with enterprise procedures and OHS guidelines
3 Observe and report on soil moisture and plant growth response	3.1 Soil moisture levels are assessed to determine watering requirement 3.2 Environmental hazards from surface irrigation are identified and reported where necessary 3.3 Plant moisture requirements and signs of stress are established 3.4 Plant growth and condition is monitored to indicate over or under watering 3.5 Inadequate plant response to watering is recorded and reported
4 Carry out start up and shutdown procedures as directed	4.1 Start-up sequence is followed 4.2 System components are shut down in sequence 4.3 System is drained 4.4 Irrigation activity is recorded
5 Assist with sprinkler system maintenance	5.1 Sprinklers are checked for serviceability and output 5.2 Delivery components are maintained 5.3 Water supply and pumping system is checked periodically 5.4 Maintenance records are kept up to date
6 Store irrigation equipment and materials	6.1 Equipment is cleaned and prepared for storage, as necessary, in accordance with enterprise policy and procedures. 6.2 Equipment is loaded for transport safely, if necessary, in

- accordance with OHS procedures
- 6.3 Equipment is stored, as required, in accordance with enterprise policy and procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- prepare materials, tools and equipment for sprinkler irrigation work
- handle materials and equipment
- carry out sprinkler irrigation operating tasks as directed
- follow directions to operate pumps, filters and valves
- observe for leaks and faulty sprinklers
- carry out basic maintenance tasks
- use tools and equipment
- report faults
- record and report maintenance activities
- clean up on completion of work
- follow safe work procedures.

### Required knowledge includes:

---

#### Knowledge of:

- purpose and principles of sprinkler irrigation
- identification, characteristics and operation of replaceable components of sprinkler irrigation systems
- sprinkler spacing and coverage
- sprinkler volume and pressure
- use of simple irrigation controllers
- system malfunctions and their likely causes
- environmental impacts of irrigation, using water from any ground or underground source.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment</p>
--

Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify the purpose of irrigation system components</li> <li>• monitor irrigation times and plant response</li> <li>• start up and shut down irrigation systems</li> <li>• store and maintain equipment</li> <li>• regulate a sprinkler irrigation system to achieve and maintain correct operating pressures and water flows.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Sprinkler irrigation systems</i></b> may include:</p>	<p>systems that use spray or rotor type sprinklers to distribute irrigation water at higher volume including pop-up sprinklers, fixed, and movable sprinklers (e.g. K Line and Ezy Shift).</p>

## Unit Sector(s)

Irrigation

## AHCIRG213A Assist with surface irrigation operations

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of assisting with the operation of surface irrigation systems under routine supervision and defines the standard required to: handle and shift loads; operate, check, clean and store surface irrigation equipment; set up field for surface irrigation; estimate and monitor water levels and volumes/flow; identify adverse environmental impacts of surface irrigation system and take appropriate action.

### Application of the Unit

This Unit applies to working under routine supervision, within enterprise guidelines.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Set up field for surface irrigation systems	1.1 Irrigation equipment is handled safely in accordance with Occupational Health and Safety (OHS) practices 1.2 Irrigation equipment is positioned in accordance with enterprise requirements 1.3 Rotobuck area is checked for irrigation set up and action taken as required in accordance with enterprise procedures 1.4 Pumps, bores and other water delivery mechanisms are checked for irrigation set up and action taken as required in accordance with enterprise procedures 1.5 Tarpaulins or other water control devices are positioned and secured as required in accordance with enterprise procedures
2 Undertake surface irrigation work as directed	2.1 Gates and/or valves are opened and shut as necessary in accordance with enterprise procedures 2.2 Required head and water levels in head ditch are achieved and maintained to ensure sufficient water flow and availability to crops 2.3 Required number of siphons are started/opened in accordance with enterprise procedures 2.4 Progress of water flow in furrows is monitored in accordance with enterprise procedures 2.5 Siphons are lifted where irrigation is complete in accordance with enterprise procedures 2.6 Irrigation change is carried out and marked as required 2.7 Irrigation equipment is shifted, as required, for irrigation changes in accordance with OHS guidelines 2.8 <b>Basic maintenance tasks</b> are carried out as directed
3 Monitor soil moisture and drainage	3.1 Soil moisture levels are assessed to determine watering requirement 3.2 Soil drainage and recycling of tailwater is observed and problems reported 3.3 Environmental hazards from surface irrigation are identified and reported where necessary
4 Observe and report on plant response	4.1 Plant moisture requirements and signs of stress are established 4.2 Plant growth and condition is monitored to indicate over or under watering 4.3 Inadequate plant response to watering is recorded and reported
5 Clean and store surface	5.1 Equipment is cleaned and prepared for storage, as

- irrigation equipment necessary, in accordance with enterprise policy and procedures
- 5.2 Equipment is loaded for transport safely, if necessary, in accordance with OHS practices
- 5.3 Equipment is stored as required, in accordance with enterprise policy and procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- prepare materials, tools and equipment for surface irrigation work
- handle materials and equipment
- observe required head and water levels in head ditch
- monitor irrigation times for enterprise fields to deliver sufficient volume
- open and close check valves
- carry out surface irrigation operating tasks as directed
- follow directions to operate pumps and valves
- start and pull siphons
- check siphons for even water flow
- observe for uneven water distribution or drainage
- record and report maintenance activities
- report faults
- follow safe work procedures including manual handling.

### Required knowledge includes:

---

#### Knowledge of:

- purpose and principles of surface irrigation
- identification, characteristics and operation of surface irrigation structures and components
- system malfunctions and their likely causes
- environmental impacts of irrigation, using water from any ground or underground source
- OHS procedures relating to general activities involved in irrigating field crops using surface irrigation.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• handle and shift loads</li> <li>• operate, check, clean and store irrigation equipment</li> <li>• set up field for gravity fed irrigation</li> <li>• estimate and monitor water levels and volumes/flow</li> <li>• identify adverse environmental impacts of gravity fed irrigation system and take appropriate action.</li> </ul>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this Unit</p>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Surface <i>irrigation systems</i> may include:</p>	<p>any systems that apply water across the surface of a levelled or contoured area. These include furrow, border and basin irrigation.</p>
<p><i>Basic maintenance tasks</i> may include:</p>	<p>performing basic maintenance tasks under supervision to maintain structures such as banks, head walls and canals, and to maintain equipment such as pumps, gates and siphons.</p>

## Unit Sector(s)

Irrigation

# AHCIRG214A Install micro-irrigation systems for landscaping

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of installing domestic micro-irrigation systems under routine supervision and defines the standard required to: organise equipment and materials for installation work; set out and prepare site; install and test the irrigation system; monitor effectiveness and environmental impacts of the micro-irrigation system.

## Application of the Unit

This Unit applies to workers in amenity horticulture enterprises that operate under limited supervision and within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare tools and materials for installation work	1.1 Materials, tools, equipment and machinery are selected according to irrigation design requirements and supervisor's instructions 1.2 The site for installation of the <i>micro-irrigation system</i> is identified according to enterprise plans and work procedures 1.3 Parts and <i>equipment</i> delivered to the site are checked according to system drawings and specifications 1.4 <i>Water supply</i> is checked to ensure that it is compatible with system specifications
2 Set out and prepare site	2.1 Measurement and marking out of irrigation lines is undertaken as directed by supervisor 2.2 Equipment operation and work practices conform to enterprise and legislative Occupational Health and Safety (OHS) requirements 2.3 Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturer's specifications and enterprise work procedures 2.4 OHS hazards are identified, risks assessed and risk controls are implemented 2.5 Personal Protective Equipment (PPE) is selected, used and maintained according to procedures
3 Install irrigation components	3.1 Work is undertaken according to plan and supervisor's instructions 3.2 Components are assembled and connected according to plan, with joints completed and tested 3.3 A clean and safe work area is maintained while installation work is carried out 3.4 Tools are chosen appropriate to the task being undertaken, and used according to guidelines and safe working practices
4 Complete installation work	4.1 Earthworks are finished off to plan specifications and enterprise work procedures 4.2 The site is restored and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to enterprise work procedures 4.3 Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures 4.4 System is flushed and commissioned as directed 4.5 Operating faults are identified and reported to supervisor and/or corrective actions taken

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- identify hazards and adopt safe work practices
- organise equipment and materials for installation work
- set out and prepare site
- install irrigation components
- complete installation work
- communicate with work team members, supervisors, contractors and consultants
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

#### Knowledge of:

- methods and techniques of micro-irrigation
- components of an micro-irrigation system
- characteristics and operation of joints, valves and sprinkler components
- basic calculations for water delivery
- indicators of over and under watering
- water requirements of relevant plants
- OHS and environmental legislation and enterprise procedures.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this Unit

The evidence required to demonstrate competency in this Unit must be relevant to commercial landscaping operations and satisfy holistically all of the

	<p>requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• organise equipment and materials for installation work</li> <li>• set out and prepare site</li> <li>• install and test the irrigation system</li> <li>• monitor effectiveness and environmental impacts of the micro-irrigation system.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Micro-irrigation systems</i></b> include:	<ul style="list-style-type: none"> <li>• low pressure micro-sprays</li> <li>• drippers.</li> </ul>
Irrigation <b><i>equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• pumps</li> <li>• delivery equipment</li> <li>• system controllers.</li> </ul>
<b><i>Water supplies</i></b> may include:	<ul style="list-style-type: none"> <li>• underground</li> <li>• mains</li> <li>• surface storage</li> </ul> <p>including fixtures such as:</p> <ul style="list-style-type: none"> <li>• dams</li> <li>• bores</li> <li>• windmills</li> <li>• tanks</li> <li>• channels.</li> </ul>

## AHCIRG301A Implement a maintenance program for an irrigation system

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of implementing a maintenance program for an irrigation system and defines the standard required to: inspect irrigation systems; test irrigation equipment; undertake minor repairs of equipment; record and report maintenance activities; dispose of unused or waste materials from site.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit is likely to be carried out under routine supervision within enterprise guidelines.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Interpret an irrigation maintenance program	<p>1.1.Scope of maintenance works is determined according to the irrigation maintenance program.</p> <p>1.2.Frequency of maintenance works is determined and implemented according to the irrigation maintenance program.</p> <p>1.3.Irrigation maintenance standards are established in line with the irrigation maintenance program.</p> <p>1.4.Maintenance works are planned and prepared.</p> <p>1.5.Occupational Health and Safety (OHS) requirements are identified, associated hazards and risks assessed, and suitable controls implemented.</p> <p>1.6.Environmental considerations of irrigation maintenance activities are identified.</p>
2. Inspect irrigation system	<p>2.1.An inspection checklist is established according to the irrigation maintenance program.</p> <p>2.2.System is regularly inspected according to the checklist.</p> <p>2.3.Remedial action and repairs are identified and undertaken to restore system to full effectiveness.</p> <p>2.4.Servicing of mechanical equipment is undertaken according to the irrigation maintenance program.</p> <p>2.5.Results of maintenance works are assessed and recorded to ensure repairs or maintenance standards have been achieved according to the irrigation maintenance program.</p> <p>2.6.Surroundings are tidied and materials and equipment cleared from the site on completion of maintenance</p>

ELEMENT	PERFORMANCE CRITERIA
	works.
3. Record and report maintenance activities	3.1. Damage and blockage caused by pests and animals are recorded by damage type, location and the section of the system affected. 3.2. Damage or faulty pumps, valves, electrical components and computer systems are recorded and reported, and action taken to effect repairs. 3.3. Routine and preventative maintenance activities are recorded and reported in accordance with enterprise standards.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- inspect irrigation system
- test irrigation equipment
- record all test results clearly and concisely with attention to detail
- undertake minor repairs of equipment
- dispose of unused or waste materials from site in an environmentally safe and sensitive manner
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- soil/plant/water relationships
- environmental impacts of irrigation
- irrigation system components

**REQUIRED SKILLS AND KNOWLEDGE**

- common operational and maintenance problems
- enterprise, OHS and environmental policies and procedures
- environmentally safe disposal procedures for chemical containers and residues, oils/grease and used parts.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- inspect irrigation systems
- test irrigation equipment
- undertake minor repairs of equipment
- record and report maintenance activities
- dispose of unused or waste materials from site.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

System may include:

- pressurised irrigation systems such as

**RANGE STATEMENT**

	micro-irrigation and spray irrigation systems, or gravity-fed systems. They may range from manual operation and monitoring to fully automated with computer control and monitoring.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise resources for installation work	<p>1.1. Materials, tools, equipment and machinery are selected according to the irrigation system design requirements and enterprise work procedures.</p> <p>1.2. The construction site for the irrigation system and construction method is identified according to the site and irrigation system plans and enterprise work procedures.</p> <p>1.3. Parts and equipment delivered to site are checked according to system drawings and specifications.</p> <p>1.4. Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturer specifications and enterprise work procedures.</p> <p>1.5. Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor.</p> <p>1.6. Suitable safety and personal protective equipment (PPE) are selected, used and maintained.</p> <p>1.7. Water supply is checked to ensure that it is compatible with system specifications.</p>
2. Set out and prepare site	<p>2.1. Measurement and marking out of irrigation lines are consistent with the plan.</p> <p>2.2. Trenches, where constructed, are at the specified depth without damage to services, facilities, features and established plants.</p> <p>2.3. Equipment operation and work practices conform to enterprise and legislative OHS requirements.</p> <p>2.4. Regulations and legislation relevant to the situation</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>are observed.</p> <p>2.5. Work practices reflect sustainable horticulture principles and respond to local community requirements.</p>
3. Install irrigation components	<p>3.1. Plan is interpreted and, where applicable, contractors are supervised and work is monitored to conform to the plan.</p> <p>3.2. Components are assembled and connected according to the plan, and joints are completed and tested according to manufacturer specifications.</p> <p>3.3. Fittings and valves are fitted and adjusted to the requirements of the installation plan, and all joints are secured according to enterprise guidelines.</p> <p>3.4. A clean and safe work area is maintained while installation work is carried out.</p> <p>3.5. Tools appropriate to the task being undertaken are chosen and used according to guidelines and safe working practices are employed.</p>
4. Complete installation work	<p>4.1. Earthworks are finished off to plan specifications and enterprise work procedures.</p> <p>4.2. The system configuration and capacity matches the installation plan.</p> <p>4.3. The site is restored and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to enterprise work procedures.</p> <p>4.4. Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures.</p>
5. Commission irrigation system	<p>5.1. Start-up sequence is in accordance with operations manual.</p> <p>5.2. System is flushed as required.</p> <p>5.3. Operating faults are identified and corrective actions taken according to the operations manual.</p> <p>5.4. Testing and monitoring equipment are calibrated to manufacturer specifications.</p> <p>5.5. Work outcomes are recorded or reported to the supervisor according to enterprise work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- organise resources for installation work
- set out and prepare site
- install irrigation components
- complete installation work
- commission irrigation system
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- methods and techniques of irrigation
- components of an irrigation system
- characteristics and operation of joints, valves and sprinkler components
- operation of pumps and water flow rates
- behaviour of water on varying terrain and soil types
- soil water retention testing techniques
- water quality and water filtration techniques
- calculations for installing irrigation systems
- soil characteristics
- environmental impacts of installing irrigation systems
- enterprise OHS procedures.

## Evidence Guide

# AHCIRG303A Measure irrigation delivery system performance

## Modification History

June 2012: minor edits to Range Statement to improve clarity and consistency with other AHCIRG Units.

## Unit Descriptor

This Unit covers the process of measuring pressures, flows and distribution uniformity of an irrigation system and defines the standard required to: apply measuring and testing techniques; measure pressures; flows and distribution uniformity of an irrigation system; calculate pressure differentials; flow rates and water usage; record and report system performance.

## Application of the Unit

This Unit is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Measure <i>irrigation system</i> performance	1.1 System pressures are measured and recorded in accordance with Occupational Health and Safety (OHS) and enterprise policy and procedures 1.2 Variations in pressures are identified and recorded in accordance with enterprise policy and procedures 1.3 Water flow rates are measured and recorded in accordance with enterprise policy and procedures 1.4 Variations in water flow and distribution are identified and recorded in accordance with enterprise policy and procedures 1.5 Pump performance parameters are measured as necessary and recorded in accordance with enterprise policy and procedures 1.6 Variations in pump performance parameters are measured where relevant and recorded in accordance with enterprise policy and procedures 1.7 Distribution and delivery systems are inspected and malfunctions in system are identified, fixed and actions recorded in accordance with enterprise policy and procedures 1.8 Factors external to the system that may cause interference are identified and recorded in accordance with enterprise policy and procedures
2 Monitor supply of equipment and spare parts	2.1 Supply and part usage are recorded in accordance with enterprise policy and procedures 2.2 Spare parts meet demand 2.3 Purchases are within budget constraints 2.4 Parts requirements outside of budget constraints are reported 2.5 Purchases and orders are recorded in accordance with enterprise procedures and systems
3 Record and report system performance status	3.1 System pressures and variations are recorded in accordance with enterprise policy and procedures 3.2 System flow rates and variations are recorded in accordance with enterprise policy and procedures 3.3 Distribution uniformity and mean application rates are calculated and recorded in accordance with enterprise policy and procedures 3.4 Watering depth is determined and recorded in accordance with enterprise policy and procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- access and prepare data records for both print-based and computer-based data
- use computers for recording and reporting data
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- calculate pressure differentials, flow rates, crop yields, estimated water usage/actual water usage
- apply measuring and testing techniques
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes

#### Knowledge of:

- OHS guidelines
- soil water retention testing techniques
- measuring and monitoring procedures for factors contributing to irrigation system delivery
- water authority standards and procedures
- environmental impacts of irrigation, using water from any ground or underground source
- enterprise policies and procedures.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Perform pre-start checks for gravity fed irrigation system	<p>1.1. Checks of water, power, fuel and lubricants ensure that all are available and the control system is operational.</p> <p>1.2. Pumps are primed, if necessary, and gates and controls are open or closed in accordance with enterprise procedures.</p> <p>1.3. Pipes, system equipment and outlets are positioned and set up in accordance with enterprise standards and OHS requirements.</p>
2. Start up and inspect system	<p>2.1. Syphons and other delivery mechanisms are primed and started in accordance with enterprise procedures.</p> <p>2.2. Start up sequence is implemented in accordance with operations manual and water levels, and pressure built up slowly as directed.</p> <p>2.3. Pressure at the headworks and control valves is within design specifications indicating efficient filter operation, and water is distributed evenly to the targeted areas with minimal wastage and run-off.</p> <p>2.4. All malfunctions, leaks, damage to water courses and blockages are corrected or repaired immediately and reported in accordance with Occupational Health and Safety (OHS) and enterprise procedures.</p> <p>2.5. Head water levels are monitored and maintained.</p> <p>2.6. If used, pumps are monitored during operation, rubbish is cleared from outlets, and pump is backflushed in accordance with enterprise procedures.</p> <p>2.7. Irrigation changes are implemented in accordance</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>with enterprise procedures.</p> <p>2.8. Water reuse systems are checked for clearance and freedom from weeds.</p>
3. Shut down system based upon irrigation indicators	<p>3.1. Area is irrigated in accordance with enterprise procedures, and time lag between shut down and end of watering is observed to minimise run-off and deep percolation.</p> <p>3.2. System components are shut down in sequence in accordance with manufacturer's and enterprise procedures.</p> <p>3.3. Drainage and treatment systems are checked in accordance with enterprise procedures.</p> <p>3.4. Tailwater control systems are implemented in accordance with statutory requirements and enterprise standards.</p> <p>3.5. Irrigation activities are reported and recorded in accordance with regulatory requirements and enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- set up pipes, system equipment and outlets
- start up the system
- use syphons
- check pressure at the headworks and control valves
- carry out running repairs on irrigation delivery and drainage systems
- carry out shut down procedures
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- implement OHS and environmental policies and procedures relating to the operation of gravity fed irrigation systems
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible

## REQUIRED SKILLS AND KNOWLEDGE

information collected and select and apply procedures for a range of tasks

- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- general irrigation methods for gravity fed irrigation systems
- main components of gravity fed irrigation systems
- pump types used in gravity fed irrigation systems and their operation
- environmental impacts of irrigation, using water from any ground or underground source
- inspection procedures
- soil/plant/water relationships
- water requirements of plants/crops consistent with sound environmental management
- shutdown sequence
- OHS, environmental and enterprise policies and procedures relating to the operation of gravity fed irrigation systems.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence is required in the process of operating gravity fed irrigation systems. The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- read and follow operations manual and irrigation

<b>EVIDENCE GUIDE</b>	
	schedules <ul style="list-style-type: none"> <li>• use pre-start checks</li> <li>• operate and inspect the system</li> <li>• check pressure at the headworks and control valves</li> <li>• carry out running repairs on irrigation delivery and drainage systems</li> <li>• shut down in response to irrigation indicators.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Systems may require:	<ul style="list-style-type: none"> <li>• gravity fed irrigation systems such as border check, contour irrigation, furrow irrigation, hillside flooding, and basin irrigation. Gravity fed systems may range from manual operation and monitoring to fully automated with computer control and monitoring.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Perform pre-start checks for pressurised irrigation system	<p>1.1. Checks of water, power, fuel and lubricants ensure that all are available and the control system is operational.</p> <p>1.2. Pumps are primed, if necessary, and valves and controls are open or closed as directed.</p> <p>1.3. Pressure and flow testing equipment are calibrated and available as required.</p> <p>1.4. Other pre-start system checks are carried out in accordance with manufacturer's requirements and enterprise procedures.</p>
2. Start up and inspect system	<p>2.1. Start up sequence is implemented in accordance with operations manual.</p> <p>2.2. All malfunctions, leaks and blockages are corrected or repaired immediately and reported in accordance with enterprise procedures.</p> <p>2.3. Pressure at the headworks and control valves is checked against design specifications</p> <p>2.4. Water distributed is checked for even coverage over the targeted areas with minimal wastage and run-off.</p>
3. Shut down system based upon irrigation indicators	<p>3.1. Water is applied for sufficient time to achieve required soil moisture levels in accordance with irrigation schedule, environmental considerations and allowing for weather conditions.</p> <p>3.2. System components are shut down and drained in sequence in accordance with manufacturer's specifications and enterprise procedures.</p> <p>3.3. Drainage and treatment systems are checked in</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with enterprise procedures.</p> <p>3.4. Irrigation activities are recorded and in reported accordance with regulatory requirements and enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- read and follow operations manual and irrigation schedules
- calibrate pressure and flow testing equipment
- carry out pre-start checks and prime pumps
- start up system and carry out operational checks
- measure and interpret flow rates and pressures
- perform shut down procedures
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- implement and follow relevant OHS and environmental policies and procedures relating to the operation of pressurised irrigation systems
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- general irrigation methods for pressurised systems
- main components of pressurised irrigation systems
- pump types used in pressurised irrigation systems and their operation
- environmental impacts of irrigation using water from any ground or underground source
- soil/plant/water relationships

**REQUIRED SKILLS AND KNOWLEDGE**

- water requirements of plants/crops consistent with sound environmental management
- shutdown sequence
- OHS, environmental and enterprise policies and procedures relating to the operation of pressurised irrigation systems.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- read and follow operations manual and irrigation schedules
- carry out pre-start checks
- operate and inspect the system
- measure and interpret flow rates and pressures
- identify adverse environmental impacts of irrigation activities and take appropriate remedial action
- shut down in response to irrigation indicators.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Locate and identify faulty components and blockages	<p>1.1.Irrigation system and component function is determined by reference to system specifications and technical manuals.</p> <p>1.2.Monitoring and maintenance records are checked and reviewed.</p> <p>1.3.Operational tests are carried out according to system specifications, technical manuals and Occupational Health and Safety (OHS) requirements.</p> <p>1.4.Faulty components and blockages are identified and documented according to enterprise policy and procedures.</p>
2. Shut down/isolate component	<p>2.1.Shut own sequence and isolation procedures are applied as required according to system specifications and technical manuals.</p> <p>2.2.Safe shutdown or isolation is verified.</p> <p>2.3.Safety/security lock off devices and signage is installed according to enterprise policy and procedures.</p>
3. Replace faulty components and clear blockages	<p>3.1.Access to faulty components and blockages is arranged.</p> <p>3.2.Faulty components are removed from the system, according to system specifications and technical manuals, and repaired or disposed of in an environmentally responsible way.</p> <p>3.3.Replaceable components are selected from</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer catalogues and procured using enterprise procedures.</p> <p>3.4.Replacement components are installed to meet system specifications according to technical manuals.</p> <p>3.5.Replace faulty components and clear blockages are carried out without unnecessary damage to surrounding site and structures.</p> <p>3.6.Blockages are cleared or blocked sections replaced according to enterprise procedures.</p>
4. Return system to normal operating status	<p>4.1.Isolated or shutdown components are returned to service.</p> <p>4.2.Operational tests are carried out according to system specifications, technical manuals and OHS requirements.</p> <p>4.3.System is returned to normal operational set-up.</p> <p>4.4.Repair activities are reported and recorded according to enterprise policy and procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- operate, maintain and repair irrigation systems
- shut down and isolate components
- replace components
- carry out operational tests
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required

**REQUIRED SKILLS AND KNOWLEDGE**

- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- identification, characteristics and operation of replaceable components of irrigation systems
- system malfunctions and their likely causes
- environmental impacts of irrigation, using water from any ground or underground source
- purchasing procedures
- isolation procedures
- enterprise policies and procedures
- irrigation, OHS and environmental guidelines.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Research store product range	<p>1.1.Product knowledge developed by accessing relevant sources of information.</p> <p>1.2.Products correctly identified according to relevant product information.</p> <p>1.3.Operation of store products, machinery and equipment safely and accurately demonstrated according to store policy and legislative requirements.</p> <p>1.4.Knowledge of irrigation product range accurately demonstrated.</p>
2. Recommend irrigation products	<p>2.1.Customer's needs accurately identified.</p> <p>2.2.Detailed manufacturer's product specifications provided, when applicable, and explained to customers to assist buying decisions according to legislative requirements.</p> <p>2.3.Features and benefits of products demonstrated to customers to create a buying environment.</p>
3. Estimate quantities	<p>3.1.Quantities of irrigation products required accurately estimated from measurements/information provided by customer according to product requirements and store procedures.</p> <p>3.2.Measuring tools accurately applied using imperial or metric measures relevant to specific products.</p> <p>3.3.Customer provided with accurate quotation for quantities estimated.</p>
4. Advise on irrigation product warranties	<p>4.1.Comparisons between product/manufacturers warranties clearly explained to customer.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Individual product warranty terms and conditions confirmed from relevant sources of information and accurately conveyed to customer.</p> <p>4.3. Customer provided with written information regarding individual product warranty terms and conditions, especially extended or promotional warranties, according to store policies and procedures.</p>
5. Negotiate price and payment options	<p>5.1. Payment options including store recommended retail pricing for various brand options accurately conveyed to customers according to legislative requirements.</p> <p>5.2. Individual product prices negotiated where necessary according to store policy to achieve sales.</p> <p>5.3. Store payment options accurately conveyed to customers and a preferred option negotiated following store procedures.</p>
6. Advise on and arrange product service and repairs	<p>6.1. Customer questioned to determine nature of problem.</p> <p>6.2. Problem diagnosed by accessing manufacturer's information.</p> <p>6.3. Solutions offered according to nature of problem, available product information and store policy.</p> <p>6.4. Service/repair process identified and accurately described to customer as required, according to store policy.</p> <p>6.5. Price and timeline for basic service/repairs identified and quoted to customer where applicable.</p> <p>6.6. Customer details identified and accurately transcribed to repair form, according to store policy and legal requirements.</p> <p>6.7. Item for repair labelled and securely stored according to store policy.</p> <p>6.8. Customer notified without undue delay on arrival/completion of service/repair.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- identify hazards and inform customers of Occupational Health and Safety (OHS) issues
- determination of pump capacities in relation to proposed application
- demonstration and assembly of irrigation products and components
- basic diagnostic techniques
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- store irrigation products and pump range
- interpretation of manufacturers specifications
- price negotiation and payment options
- store product and service and repair policy
- pump and irrigation equipment characteristics, technical capabilities and limitations
- pump and irrigation equipment components, controls, features and functions.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include

<b>EVIDENCE GUIDE</b>	
	achievement of the following: <ul style="list-style-type: none"> <li>• identify and interpret customer needs</li> <li>• recommend appropriate products including pumps</li> <li>• estimate quantities and negotiate price</li> <li>• provide advice on warranty, payment, service and repair.</li> </ul>

## AHCIRG308A Monitor soils under irrigation

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the skills and knowledge required to monitor the impact of irrigation on the soil plant growing environment, and to provide for the needs of irrigated plants. The Unit requires the ability to assess the physical and chemical properties of irrigated soils; assess the capacity of the soil to hold plant available moisture; monitor and adjust soil moisture levels; estimate plant watering requirements; and report on irrigated plant growth issues.

### Application of the Unit

This Unit applies to skilled workers in the irrigation servicing, food and fibre production and amenity horticulture industries.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Assess the physical properties of an irrigated soil	1.1 The profile of an irrigated soil is described 1.2 Soil texture and structure within the soil layers is determined 1.3 Tests for organic matter level in a soil are interpreted 1.4 Test for slaking and dispersion in an irrigated soil is undertaken 1.5 The infiltration rate for an irrigated soil is assessed 1.6 Soil moisture levels are measured 1.7 The impacts of cultivation and watering practices on the physical properties of a soil are described
2 Define soil moisture properties using industry terms	2.1 Soil moisture tension and its role in determining water availability to plants is described 2.2 The field capacity of an irrigated soil is assessed 2.3 The wilting point for a plant species in an irrigated soil is observed 2.4 Readily available water (RAW) in an irrigated soil is calculated
3 Monitor soil chemical properties	3.1 Soil test results for salinity and sodicity levels in an irrigated soil is interpreted 3.2 pH tests and the potential impact of pH on soil structure and nutrient availability is interpreted
4 Assess soil health and plant growth under irrigation	4.1 The risk of erosion in an irrigated soil is assessed 4.2 An assessment of soil biology in an irrigated soil is carried out 4.3 The growing requirements for a plant species is established
5 Implement strategies to optimise the irrigation growing environment for plants	5.1 Soil husbandry practices to reduce risks of compaction and erosion are undertaken 5.2 Watering schedule is implemented and monitored 5.3 Frequency of watering is adjusted if necessary, based on available moisture, soil properties and plant response 5.4 Soil and plant moisture status and irrigation requirement is reported to supervisor

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

**Required skills include:**

---

**Ability to:**

- conduct soil structure and texture assessment
- apply the results of soil testing to assessing soil properties
- use soil moisture monitoring equipment
- calculate moisture holding capacity of plants, including RAW
- assess the erosion potential of an irrigated soil
- assess the health of an irrigated soil
- adjust watering practices to meet plant needs
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge includes:**

---

**Knowledge of:**

- soil moisture monitoring procedures
- soil moisture definitions and calculations
- interpreting salinity, sodicity and pH tests
- soil structure and texture
- critical measures for moisture availability
  - readily available water
  - wilting point
  - field capacity
- effect of dispersible soils under irrigation
- signs moisture stress & nutrient deficiency in plants
- soil biology
- types of erosion
- adverse environmental impacts of irrigated plant production.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• assess the physical and chemical properties of irrigated soils</li> <li>• assess the capacity of the soil to hold plant available moisture</li> <li>• monitor and adjust soil moisture levels</li> <li>• estimate plant watering requirements</li> </ul> <p>report on irrigated plant production issues.</p>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Irrigation systems may include:	<ul style="list-style-type: none"> <li>• low volume irrigation systems such as micro-irrigation</li> <li>• sprinkler irrigation</li> <li>• moving sprinkler irrigation</li> <li>• surface irrigation.</li> </ul>
Interpretation of soil tests may include:	field measurements of moisture levels, infiltration rate and organic matter levels.
Soil assessment may include:	physical tests for soil structure and texture, slaking and dispersion.
Soil moisture measuring equipment	<ul style="list-style-type: none"> <li>• tensiometers</li> <li>• gypsum blocks</li> </ul>

may include:	<ul style="list-style-type: none"><li>• watermark</li><li>• capacitance probes</li><li>• neutron probes.</li></ul>

## Unit Sector(s)

Irrigation

# AHCIRG309A Interpret and apply instructions to install pumps

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of interpreting instructions to install pumps and defines the standard required to: organise resources for installation work; set out and prepare site; site the pump and place it on a base; connect suction and discharge lines; and commission the pumping system.

## Application of the Unit

This Unit applies to skilled workers in the irrigation servicing, food and fibre production and amenity horticulture industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Source irrigation system requirements	1.1 Location of pump is determined following site inspection 1.2 Pump base requirements are identified from drawings and specifications using relevant information 1.3 Required materials and equipment are identified, ordered and collected in accordance with workplace procedures 1.4 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition 1.5 Sustainability principles and concepts are applied to work preparation and application
2 Plan and sequence installation tasks from instructions	2.1 Drawings and specifications are obtained 2.2 <b>OHS requirements</b> associated with installing water pump sets, and workplace environmental requirements, are adhered to throughout the work 2.3 Workplace instructions are identified and adhered to 2.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authority requirements 2.5 Work area is prepared to support efficient installation of <b>water pump sets</b>
3 Select and check tools and equipment for serviceability	3.1 Tools and equipment for installing water pumps are selected and checked for serviceability 3.2 <b>PPE</b> is selected and used to meet workplace OHS requirements
4 Install and commission <b>pumping and flow control components</b>	4.1 Pump base is set out to comply with drawings and specifications 4.2 Pump base is constructed in accordance with drawings and specifications 4.3 Pump and <b>pump controls</b> are installed in accordance with relevant Australian standards, drawings, specifications and manufacturer instructions 4.4 Suction and discharge lines and <b>flow control devices</b> are connected 4.5 Delivery and distribution components connected to pump comply with relevant specifications and manufacturer instructions 4.6 Pressure testing of pumping system is conducted in accordance with specifications 4.7 Pump is tested in accordance with specifications and test data is recorded in required format

- |   |   |
|---|---|
| 5 Clean up after installation           | 5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification |
|   | 5.2 Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace procedures          |
|   | 5.3 Documentation is completed in accordance with workplace requirements  |
| 6 Review, record and report activities. | 6.1 Equipment, tools and materials are checked, maintained and stored according to manufacturer guidelines and organisational procedures              |
|   | 6.2 Work site is restored to meet environmental and organisational requirements   |
|   | 6.3 Activities are recorded and reported according to organisational procedures   |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- match pump output and flow rate to pipe diameter
- position pumps and valves
- prime and operate pumps
- open and close valves
- monitor performance of valves
- follow plans, charts and instructions
- perform work-related calculations
- organise equipment and materials for installation work
- use power tools and hand tools
- handle materials safely
- install irrigation components
- identify hazards and adopt safe work practices
- identify and respond to operational problems
- communicate with work team members, supervisors, contractors and consultants
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge includes:**

**Knowledge of:**

- properties of water including pressure and flow rates
- basic principles of hydraulics (flow vs. pressure), energy loss due to friction
- types of pumps and application in irrigation
  - centrifugal
  - vertical turbine
  - submersible
  - propeller
- advantages and disadvantages of each pump type
- types suitable as booster and floating pumps
- discharge and flow rates
- pump components and their principles of operation
- pump gauges and controls
- types of valves
- automatic pump switches
  - timers
  - pressure switches
  - irrigation controllers
  - flow switches
- impellers, rotors, stators
- pump performance and pressure testing
- the SI system of measurement
- characteristics and application of different valves, pipes and fittings including fixing and joining techniques and methods
- JSA's/Safe work method statements
- electrical licensing requirements
- installation procedures for irrigation pumps
- welding skills (poly and steel)
- servicing requirements
- workplace and equipment safety requirements.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
------------------------	--

Critical aspects for assessment and evidence required to demonstrate competency in this Unit	The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following: <ul style="list-style-type: none"> <li>• organise resources for installation work</li> <li>• set out and prepare site</li> <li>• site the pump and place it on a base</li> <li>• connect suction and discharge lines</li> <li>• commission the pumping system.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<b><i>OHS requirements</i></b> may include:	solar radiation, dust, noise, air- and soil-borne micro-organisms, chemicals and hazardous substances, sharp hand tools and equipment, manual handling, holes, and slippery and uneven surfaces.
<b><i>Water pump sets</i></b> may include:	<ul style="list-style-type: none"> <li>• centrifugal</li> <li>• Archimedes screw type</li> <li>• submersible</li> <li>• positive displacement.</li> </ul>
Personal protective clothing and equipment ( <b><i>PPE</i></b> ) may include:	steel capped boots/shoes, overalls, gloves, sun hat, sunscreen lotion, safety goggles, face mask and hearing protection, and any protection required for the use of equipment.
<b><i>Pumping and flow control components</i></b> may include:	all types of pumps and pumping systems (including filters and valves) used to move water to or through an irrigation system.

<i>Flow control devices</i> may include:	<ul style="list-style-type: none"><li>• flow directional gates</li><li>• regulators</li><li>• valves<ul style="list-style-type: none"><li>• sluice</li><li>• gate</li><li>• blade</li><li>• non-return</li></ul></li><li>• doors, drop structures and bars.</li></ul>
--	---

## Unit Sector(s)

Irrigation

# AHCIRG310A Operate and maintain irrigation pumping systems

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of operating and maintaining irrigation pumping systems and defines the standard required to: maintain pumps and pumping equipment; operate an irrigation pumping system; monitor pumping operations; isolate the pumping system; carry out basic repairs and replacement of parts; and dispose of waste.

## Application of the Unit

This Unit applies to skilled workers in the irrigation servicing, food and fibre production and amenity horticulture industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to maintain pumps	<p>1.1 Work requirements for the satisfactory completion of operations are obtained and interpreted</p> <p>1.2 Site, manufacturer's and legislative requirements and procedures necessary to complete the allocated work are accessed and interpreted</p> <p>1.3 Items and tools required for the safe, effective and efficient conduct of servicing and maintenance tasks are identified</p> <p>1.4 Support required for the safe completion of the servicing and maintenance tasks are identified and arranged</p> <p>1.5 Isolation and lock-out of all equipment necessary for the safe execution of tasks is carried out in accordance with site requirements and procedures</p>
2 Carry out pump <i>maintenance</i>	<p>2.1 Pumps are inspected and any faults reported in accordance with site and manufacturer's requirements and procedure</p> <p>2.2 Maintenance tools and equipment are selected and used safely</p> <p>2.3 <i>Servicing</i> and maintenance of pumps is carried out in accordance with the work requirements, manufacturer's current specifications and site requirement</p> <p>2.4 <i>Hazardous and emergency situations</i> are recognised and responded to in accordance with legislative, site and manufacturer's requirements and procedures</p> <p>2.5 Used oil, lubricant and other waste is disposed of in accordance with legislative and site requirements</p> <p>2.6 Servicing and maintenance records are maintained in accordance with site requirements</p>
3 Prepare the pumping system	<p>3.1 Operation and function of pump and driver is checked by applying principles of operation and procedures</p> <p>3.2 The operational area is checked to ensure that any potential hazards which may affect the operation of the equipment are removed</p> <p>3.3 Pre-start-up checks are conducted on <i>the pumping system</i> to ensure valves are correctly sequenced and filters are clear before commencing pumping operations, and that all safety requirements are met</p>
4 Start up and shutdown pumping system	<p>4.1 <i>Ancillary equipment</i> is operated in accordance with procedures.</p> <p>4.2 Pump is started up and shutdown in line with procedures</p> <p>4.3 Emergency shutdown procedures are implemented when required</p>

- |   |   |
|---|---|
| 5 Operate and monitor pumping and ancillary systems | 5.1 Flanges, gaskets and seals are checked and maintained within stated operational tolerances and to avoid any environmental damage  |
|   | 5.2 Pump pressures and flows are monitored for conformance  |
|   | 5.3 Amperage testing equipment is used to monitor and identify variations in the operating conditions of the pumping systems/equipment  |
|   | 5.4 Pumping systems/equipment performance and all components are monitored and regularly checked to identify any signs of excessive wear and diminution of performance  |
|   | 5.5 Operational valves and valve assemblies are checked for possible leakages   |
|   | 5.6 Filter systems are periodically checked and cleaned to remove any potential blockages or impurities entering the pumping system/equipment and causing it to cavitate or malfunction during operation                |
|   | 5.7 Lubrication oil is inspected and sampled to check that operating levels are correct and to determine if any contamination has taken place which may affect the operational capacity of the pumping system/equipment |
|   | 5.8 Appropriate action is taken resulting from checks and monitoring  |
| 6 Shut down the pumping system                      | 6.1 Injection equipment is shut down according to workplace procedures  |
|   | 6.2 The pump is shut down according to workplace procedures   |
|   | 6.3 Pumping equipment is cleaned according to workplace procedures  |
|   | 6.4 Waste generated by both the pumping process and cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures  |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- inspect and clean pumps
- clear blockages
- lubricate pumps
- check and top-up fluids, including:

- coolants
- lubricants
- hydraulic oils
- replace wear components, including pump seals, liners and impellers
- replace v belts
- tension fasteners and y-belts
- adjust pump settings
- set valves and check for wear and leakages
- monitor pressures and flows
- use amperage testing equipment
- check and clear or replace filters
- check oil quality and levels
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

---

**Required knowledge includes:**

---

**Knowledge of:**

- properties of water including pressure and flow rates
- types of pumps and application in irrigation
  - centrifugal
  - vertical turbine
  - submersible
  - propeller
- advantages and disadvantages of each pump type
- pumps suitable as booster and floating pumps
- basic principles of hydraulics (flow vs. pressure)
- discharge and flow rates
- pump components and their principles of operation
- automatic pump switches
  - timers
  - pressure switches
  - irrigation controllers
  - flow switches
- impellers, rotors, stators

- pump gauges and controls
- pump performance and fault finding
- types of valves
- opening and closing valves
- monitoring performance of valves
- priming and operating pumps
- servicing requirements
- workplace and equipment safety requirements.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• maintain pumps and pumping equipment</li> <li>• operate an irrigation pumping system</li> <li>• monitor pumping operations</li> <li>• isolate the pumping system</li> <li>• carry out basic repairs and replacement of parts</li> <li>• dispose of waste.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be

included.	
<b>Maintenance</b> of pumps may include:	<ul style="list-style-type: none"> <li>• replacing wear components, including pump seals, liners and impellers</li> <li>• replacing v-belts</li> <li>• tensioning fasteners and v-belts</li> <li>• adjust pump settings.</li> </ul>
<b>Servicing</b> of pumps may include:	<ul style="list-style-type: none"> <li>• inspection</li> <li>• cleaning</li> <li>• clearing blockages</li> <li>• greasing</li> <li>• check and top-up fluids, including: <ul style="list-style-type: none"> <li>• coolants</li> <li>• lubricants</li> <li>• hydraulic oils.</li> </ul> </li> </ul>
<b>Hazardous and emergency situations</b> may include:	<ul style="list-style-type: none"> <li>• confined spaces</li> <li>• working alone</li> <li>• personal injury</li> <li>• electrical</li> <li>• dust</li> <li>• noise</li> <li>• environmental</li> <li>• chemical</li> <li>• fire.</li> </ul>
<b>Pumping systems</b> may include:	all types of pumps and components (including filters and valves) used to move water to or through an irrigation system.
<b>Ancillary equipment</b> may include:	any systems that are part of the irrigation system (such as computerised scheduling) or work with the irrigation system (such as fertigation).

## Unit Sector(s)

Irrigation

# AHCIRG311A Install low volume irrigation components

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of installing low volume irrigation systems and defines the standard required to: organise resources for installation work; set out and prepare site; install irrigation components; complete installation work; and assist in commissioning irrigation systems.

## Application of the Unit

This Unit applies to skilled workers in the irrigation servicing, food and fibre production and amenity horticulture industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Organise resources for installation of a <i>low volume irrigation system</i>	1.1 Materials, tools, equipment and machinery are selected according to the irrigation system design requirements and enterprise work procedures 1.2 The construction site for the irrigation system and construction method is identified according to the site and irrigation system plans and enterprise work procedures 1.3 Parts and equipment delivered to site are checked according to system drawings and specifications 1.4 Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturer specifications and enterprise work procedures 1.5 Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor 1.6 Suitable safety and personal protective equipment (PPE) are selected, used and maintained 1.7 Water supply is checked to ensure that it is compatible with system specifications
2 Set out and prepare site	2.1 Measurement and marking out of irrigation lines are consistent with the plan 2.2 Trenches, where constructed, are at the specified depth without damage to services, facilities, features and established plants 2.3 Equipment operation and work practices conform to enterprise and legislative OHS requirements 2.4 Regulations and legislation relevant to the situation are observed 2.5 Work practices reflect sustainable horticulture principles and respond to local community requirements
3 Install <i>low volume irrigation components</i>	3.1 Plan is interpreted and, where applicable, contractors are supervised and work is monitored to conform to the plan 3.2 Components are assembled and connected according to the plan, and joints are completed and tested according to manufacturer specifications 3.3 Fittings and valves are fitted and adjusted to the requirements of the installation plan, and all joints are secured according to enterprise guidelines 3.4 A clean and safe work area is maintained while installation work is carried out 3.5 Tools appropriate to the task being undertaken are chosen

- and used according to guidelines and safe working practices are employed.
- 4 Complete installation work
    - 4.1 The system configuration and capacity matches the installation plan
    - 4.2 The site is restored and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to enterprise work procedures
    - 4.3 Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures
  - 5 Assist in commissioning a low volume irrigation system
    - 5.1 Pumping system is connected
    - 5.2 Start-up sequence is in accordance with operations manual
    - 5.3 System is flushed as required
    - 5.4 Operating faults are identified and corrective actions taken according to the operations manual
    - 5.5 Work outcomes are recorded or reported to the supervisor according to enterprise work procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- identify hazards and implement safe work procedures
- organise resources for installation work
- set out and prepare site
- install low volume irrigation components
- complete installation work
- perform start up and commissioning tasks
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge includes:****Knowledge of:**

- methods and techniques of low volume irrigation
- components of a low volume irrigation system
- characteristics and operation of pipes, joints, valves, micro jets and drippers
- operation of pumps and water flow rates
- soil characteristics
- behaviour of water on varying terrain and soil types
- soil water retention testing techniques
- water quality and water filtration techniques
- calculations for installing irrigation systems
- environmental impacts of installing irrigation systems
- OHS legislation and enterprise OHS procedures.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Organise resources for installation of <i>moving sprinkler irrigation systems</i>	1.1 Materials, tools, equipment and machinery are selected according to the irrigation system design requirements and enterprise work procedures 1.2 The construction site for the irrigation system and construction method is identified according to the site and irrigation system plans and enterprise work procedures 1.3 Parts and equipment delivered to site are checked according to system drawings and specifications 1.4 Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturer specifications and enterprise work procedures 1.5 Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor 1.6 Suitable safety and personal protective equipment (PPE) are selected, used and maintained 1.7 Water supply is checked to ensure that it is compatible with system specifications
2 Set out and prepare site	2.1 Measurement and marking out of irrigation lines are consistent with the plan 2.2 Trenches, where constructed, are at the specified depth without damage to services, facilities, features and established plants 2.3 Equipment operation and work practices conform to enterprise and legislative OHS requirements 2.4 Regulations and legislation relevant to the situation are observed 2.5 Work practices reflect sustainable principles and respond to local community requirements
3 Assemble spans	3.1 Span pipes with correctly tensioned bolts are joined 3.2 Vjack trusses in sequence to bow the span are connected 3.3 Goose necks and hose connectors are connected 3.4 Pre-cut drop hoses and connect sprinklers are fitted
4 Complete assembly of <i>moving sprinkler components</i>	4.1 Sprinklers, pressure regulators and hose directors are assembled 4.2 Gear box and control panel are fitted 4.3 Wheels are fitted and tensioned
5 Complete installation work	5.1 Earthworks are finished off to plan specifications and enterprise work procedures

- 5.2 The system configuration and capacity matches the installation plan
- 5.3 The site is restored and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to enterprise work procedures
- 5.4 Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures
- 6 Assist in commissioning a moving sprinkler irrigation system
  - 6.1 Pumping system is connected
  - 6.2 Start-up sequence is in accordance with operations manual
  - 6.3 System is flushed as required
  - 6.4 Operating faults are identified and corrective actions taken according to the operations manual
  - 6.5 Testing and monitoring equipment are calibrated to manufacturer specifications
  - 6.6 Work outcomes are recorded or reported to the supervisor according to enterprise work procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- identify hazards and implement safe work procedures
- organise resources for installation work
- set out and prepare site
- install movable sprinkler irrigation components
- tension span pipes with Vjack trusses
- fit control panel and wheels
- complete installation work
- perform system commissioning tasks
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social

and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

#### Knowledge of:

- methods and techniques of moving sprinkler irrigation
- components of a moving sprinkler irrigation system
- characteristics and operation of each component
- operation of pumps and water flow rates
- soil characteristics
- behaviour of water on varying terrain and soil types
- soil water retention testing techniques
- water quality and water filtration techniques
- calculations for installing irrigation systems
- environmental impacts of installing irrigation systems
- OHS legislation and enterprise OHS procedures.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• organise resources for installation work</li> <li>• set out and prepare site</li> <li>• install spans and tension correctly</li> <li>• assemble water distribution, pumping, and locomotion components</li> <li>• complete installation work</li> <li>• commission a moving sprinkler irrigation system.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Moving sprinkler irrigation systems</i></b> may include:</p>	<p>any systems that use specifically hard and soft reel self-travelling irrigators, lateral move systems and centre pivots. Moving sprinkler systems do not include movable sprinkler systems such as K-Line.</p>
<p><b><i>Moving sprinkler system components</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• pipes</li> <li>• joints</li> <li>• valves</li> <li>• sprinklers</li> <li>• Vjack trusses</li> <li>• span pipes</li> <li>• pressure regulators</li> <li>• hose directors</li> <li>• gear box</li> <li>• control panel</li> <li>• wheels.</li> </ul>

## Unit Sector(s)

Irrigation

# AHCIRG314A Install surface irrigation structures and components

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of installing surface irrigation structures and components and defines the standard required to: organise resources for installation work; set out and prepare site; construct earthworks and install structures; prepare beds and water distribution equipment; and assist in commissioning surface irrigation systems.

## Application of the Unit

This Unit applies to skilled workers in the irrigation servicing, and food and fibre production industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Organise resources for installation of <i>surface irrigation systems</i>	1.1 Materials, tools, equipment and machinery are selected according to the irrigation system design requirements and enterprise work procedures 1.2 The construction site for the irrigation system and construction method is identified according to the site and irrigation system plans and enterprise work procedures 1.3 Parts and equipment delivered to site are checked according to system drawings and specifications 1.4 Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturer specifications and enterprise work procedures 1.5 Occupational Health and Safety (OHS) hazards are identified, risks assessed, controls implemented and reported to the supervisor 1.6 Suitable safety and personal protective equipment (PPE) are selected, used and maintained 1.7 Water supply is checked to ensure that it is compatible with system specifications
2 Interpret the surface irrigation plan and mark up	2.1 Plan is interpreted and levels are taken 2.2 Structures are marked out and earthworks pegged 2.3 A clean and safe work area is maintained while installation work is carried out 2.4 Tools appropriate to the task being undertaken are chosen and used according to guidelines and safe working practices are employed
3 Prepare and maintain diversion and conveyancing structures	3.1 Excavations are completed according to plan specifications and enterprise work procedures 3.2 Channels are installed according to the irrigation plan and enterprise work procedures 3.3 <i>Diversion and conveyancing structures</i> are installed 3.4 Structures are tested for configuration, flow rates and capacity consistent with the system plan and according to enterprise work procedures
4 Prepare beds	4.1 Excavations are completed according to plan specifications and enterprise work procedures 4.2 Beds are installed according to the irrigation plan and enterprise work procedures 4.3 Bed surface is prepared with use of roto-buck 4.4 <i>Field distribution structures</i> are installed or prepared 4.5 The supervisor is consulted and remedial action is taken

- when beds do not meet the plan specifications
- 5 Complete water measurement and tailwater works
    - 5.1 Excavations are completed according to plan specifications and enterprise work procedures
    - 5.2 *Water measurement structures* are installed according to the irrigation plan and enterprise work procedures
    - 5.3 Channels and tailwater storages are installed according to the irrigation plan and enterprise work procedures
    - 5.4 Pumping equipment, lines and filters are installed for recycling
  - 6 Complete installation work
    - 6.1 Earthworks and structures are finished off to plan specifications and enterprise work procedures
    - 6.2 The system configuration and capacity matches the installation plan
    - 6.3 The site is restored and waste material is removed from the site and disposed of in an environmentally aware and safe manner according to enterprise work procedures
    - 6.4 Tools, equipment and machinery are cleaned, maintained and stored according to enterprise work procedures
  - 7 Assist in commissioning a surface irrigation system
    - 7.1 Water is supplied from channels or head ditches
    - 7.2 Watering sequence is in accordance with organisational procedures
    - 7.3 Testing and monitoring equipment are calibrated to manufacturer specifications
    - 7.4 System is monitored for watering efficiency, deep percolation and tailwater
    - 7.5 Operating faults are identified and corrective actions taken.
    - 7.6 Work outcomes are recorded or reported to the supervisor according to enterprise work procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- read, interpret and follow organisational policies and procedures
- use roto-buck for bed preparation
- construct earthworks
- build irrigation structures
- prepare irrigation beds

- install pumps and pipelines
- complete installation work
- perform system commissioning tasks
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

#### Knowledge of:

- water quality and water filtration techniques
- calculations for installing surface irrigation systems
- components of a surface irrigation system
- characteristics and operation of components
- behaviour of water on varying terrain and soil types
- soil water retention testing techniques
- water quality and water filtration techniques
- basic calculations for installing surface irrigation systems
- soil characteristics
- environmental impacts of surface irrigation installation
- enterprise OHS procedures.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

	<ul style="list-style-type: none"> <li>organise resources for installation work</li> <li>set out and prepare site</li> <li>construct earthworks and install structures</li> <li>prepare beds and water distribution equipment</li> <li>assist in commissioning surface irrigation systems.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Surface irrigation systems</i> may include:	any systems that apply water across the surface of a levelled or contoured area. These include furrow, border and basin irrigation.
<i>Diversion and conveyancing structures</i> may include:	<ul style="list-style-type: none"> <li>intake structures</li> <li>diversion weirs and gates.</li> </ul>
<i>Field distribution structures</i> may include:	<ul style="list-style-type: none"> <li>canals</li> <li>pipelines</li> <li>drop structures and chutes</li> <li>division boxes and turnouts</li> <li>checks</li> <li>crossing structures</li> <li>flumes</li> <li>culverts</li> <li>inverted siphons.</li> </ul>
<i>Water measurement structures</i> may include:	<ul style="list-style-type: none"> <li>weirs</li> <li>parshall flumes</li> <li>cut-throat flumes.</li> </ul>

## Unit Sector(s)

Irrigation

# AHCIRG315A Interpret irrigation plans and drawings

## Modification History

Not applicable.

## Unit Descriptor

This Unit of Competency specifies the outcomes required to read and interpret plans and drawings applicable to installing irrigation systems and defines the standard required to: interpret symbols and abbreviations on plans, and technical drawings; orientate a site plan; mark out boundaries and features on a site from a plan; and list the irrigation components required for installation from a plan.

## Application of the Unit

This Unit applies to skilled workers in the irrigation servicing, food and fibre production and amenity horticulture industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit has employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Apply commonly used symbols and abbreviations	1.1 Commonly used symbols and abbreviations on plans are identified, understood and applied 1.2 Common irrigation terms used on plans are identified, understood and applied 1.3 Key features of irrigation plans, elevations and sections are identified 1.4 Scale, elevations and sections are identified from drawings
2 Locate and identify key features on a site plan	2.1 Irrigation site is identified from location drawings 2.2 True north and system orientation are identified from details provided on site plan 2.3 Key features of site plan are identified
3 Mark out and peg the site from a plan	3.1 Boundaries of the site are marked 3.2 Existing irrigation infrastructure on the site is identified 3.3 Electricity and communications infrastructure is identified on the site plan, marked out and safety procedures implemented 3.4 Pipelines identified on the plan are pegged out 3.5 Earthworks identified on the plan are pegged out
4 Identify required components for installation	4.1 Pipeline components required are annotated from plans and drawings 4.2 Water supply, distribution and delivery components are annotated from plans and drawings 4.3 Provision is made for receipt and storage of materials on site 4.4 Installation requirements and details of plans and drawings are confirmed with supervisor

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- interpret symbols and abbreviations used on plans
- interpret scale and specifications from plans and drawings
- recognise and mark out features on a site from a plan

- mark out boundaries and infrastructure position from a plan
- translate documented requirements into on-site activities and site and structural features from two-dimensional to three-dimensional formats
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

#### Knowledge of:

- identify types of drawings and their functions
- recognise commonly used scales, symbols and abbreviations
- a range of drawings and specifications relevant to the irrigation industry
- tools, equipment and materials relative to drawings/specifications
- measurements, calculations and quantities
- workplace safety requirements
- relevant acts, regulations and Codes of Practice
- basic industry calculations.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• interpret symbols and abbreviations on plans</li> <li>• orientate a site plan for an irrigation system</li> <li>• mark out boundaries and features on a site from irrigation installation plans and drawings</li> <li>• list the irrigation components required for</li> </ul>

	installation from a plan.
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Irrigation plans may include:	plans for low volume, sprinkler and surface irrigation systems that may cover water supply, distribution, conveyancing and drainage.
Irrigation drawings	drawings may be part of the irrigation plan and cover the range of irrigation components (hardware) and structures (earthworks) used in commercial irrigation.

## Unit Sector(s)

Irrigation

# **AHCIRG316A Implement a low volume irrigation maintenance program**

## **Modification History**

Not applicable.

## **Unit Descriptor**

This Unit covers the process of implementing a maintenance program for a low volume irrigation system and defines the standard required to: inspect irrigation systems; maintain irrigation equipment; troubleshoot and undertake minor repairs of equipment; record and report maintenance activities; dispose of unused or waste materials from site.

## **Application of the Unit**

This Unit applies to skilled workers in the irrigation servicing, food and fibre production and amenity horticulture industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## **Licensing/Regulatory Information**

Not applicable.

## **Pre-Requisites**

Not applicable.

## **Employability Skills Information**

This Unit contains employability skills.

## **Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Interpret a low volume irrigation maintenance program	1.1 Scope of maintenance works is determined according to the irrigation maintenance program 1.2 Frequency of maintenance works is determined and implemented according to the irrigation maintenance program 1.3 Irrigation maintenance standards are established in line with the irrigation maintenance program 1.4 Maintenance works are planned and prepared 1.5 Occupational Health and Safety (OHS) requirements are identified, associated hazards and risks assessed, and suitable controls implemented 1.6 Environmental considerations of irrigation maintenance activities are identified
2 Inspect a <i>low volume irrigation system</i>	2.1 An inspection checklist is established according to the irrigation maintenance program 2.2 System is regularly inspected according to the checklist 2.3 Remedial action and repairs are identified and undertaken to restore system to full effectiveness 2.4 Servicing of mechanical equipment is undertaken according to the irrigation maintenance program 2.5 Results of maintenance works are assessed and recorded to ensure repairs or maintenance standards have been achieved according to the irrigation maintenance program 2.6 Surroundings are tidied and materials and equipment cleared from the site on completion of maintenance works
3 Carry out periodic system maintenance	3.1 Damage and blockages with contaminants are recorded by damage type, location and the section of the system affected 3.2 Damaged or faulty <i>components</i> and computer control systems are recorded and reported, and action taken to effect repairs 3.3 The system is chlorinated as per procedures 3.4 Filters are checked, cleaned and backflushed 3.5 Submains and laterals are flushed
4 Record and report maintenance activities	4.1 Maintenance and servicing records are completed 4.2 Parts removed and/or replaced are recorded 4.3 Faults and breakages are recorded or reported

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- interpret and apply enterprise maintenance procedures
- inspect irrigation system
- test irrigation equipment
- test emitter output and function
- check connections
- service filter strainer periodically
- ensure proper operation of automatic flush valves
- confirm operational pressures
- record all test results clearly and concisely with attention to detail
- undertake minor repairs of equipment
- dispose of unused or waste materials from site in an environmentally safe and sensitive manner
- identify hazards and implement safe work procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

---

#### Knowledge of:

- methods and techniques of sprinkler irrigation
- components of a sprinkler irrigation system
- characteristics and operation of pipes, joints, valves, emitters
- operation of pumps and water flow rates
- low volume irrigation system components
- common operational and maintenance problems
- environmental impacts of irrigation maintenance
- OHS legislation and safe work procedures.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- interpret and apply enterprise maintenance procedures
- complete regular and end of season maintenance tasks
  - change the engine oil and filter
  - replace the air and fuel filters
  - grease drive shafts on pump, and motor
  - check spark plugs on gas, propane or natural gas motors
  - drain, flush and refill the cooling system
  - refill the drip oil reservoir and allow oil to drain into the drip line based on pump column length
  - ensure that the right-angle gear head is free moving and clean and lubricate non-reverse pins
  - check for malfunctioning sprinklers
  - check injection pump and safety equipment operation
  - inspect lift base and arms for any stress marks or cracks
  - check all bolts for correct torques
- record all test results clearly and concisely with attention to detail
- undertake minor repairs of equipment
- dispose of unused or waste materials from site in an environmentally safe and sensitive manner
- identify hazards and implement safe work procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge includes:****Knowledge of:**

- methods and techniques of moving sprinkler irrigation
- components of a moving sprinkler irrigation system and their maintenance requirements
- routine and end of season maintenance requirements for moving sprinkler systems
- common operational and maintenance problems
- environmental impacts of irrigation maintenance
- OHS legislation and safe work procedures.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• inspect moving sprinkler irrigation systems</li> <li>• maintain irrigation equipment</li> <li>• troubleshoot and undertake minor repairs of equipment</li> <li>• record and report maintenance activities</li> <li>• dispose of unused or waste materials from site.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement**

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<b><i>Moving sprinkler irrigation systems</i></b> may include:	any systems that use specifically hard and soft reel self-travelling irrigators, lateral move systems and centre pivots. Moving sprinkler systems do not include movable sprinkler systems such as K-Line.
System components may include:	<ul style="list-style-type: none"> <li>• pipes</li> <li>• joints</li> <li>• valves</li> <li>• sprinklers</li> <li>• Vjack trusses</li> <li>• span pipes</li> <li>• pressure regulators</li> <li>• hose directors</li> <li>• gear box</li> <li>• control panel</li> <li>• wheels.</li> </ul>

## Unit Sector(s)

Irrigation

# AHCIRG319A Implement a surface irrigation maintenance program

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of implementing a maintenance program for a surface irrigation system and defines the standard required to: inspect irrigation systems; control unwanted vegetation within the irrigation system; carry out regular and end of season maintenance; troubleshoot and undertake minor repairs of equipment; record and report maintenance activities; and dispose of unused or waste materials from site.

## Application of the Unit

This Unit applies to skilled workers in the irrigation servicing and food and fibre production industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Interpret an irrigation maintenance program	1.1 Scope of maintenance works is determined according to the irrigation maintenance program 1.2 Frequency of maintenance works is determined and implemented according to the irrigation maintenance program 1.3 Irrigation maintenance procedures are followed in line with the irrigation maintenance program 1.4 Maintenance works are planned and prepared 1.5 Occupational Health and Safety (OHS) requirements are identified, associated hazards and risks assessed, and suitable controls implemented 1.6 Environmental considerations of irrigation maintenance activities are identified
2 Inspect a surface irrigation system	2.1 An inspection checklist is established according to the irrigation maintenance program 2.2 System is regularly inspected according to the checklist 2.3 Remedial action and repairs are identified and undertaken to restore system to full effectiveness 2.4 Servicing of mechanical equipment is undertaken according to the irrigation maintenance program 2.5 Results of maintenance works are assessed and recorded to ensure repairs or maintenance standards have been achieved according to the irrigation maintenance program 2.6 Surroundings are tidied and materials and equipment cleared from the site on completion of maintenance works
3 Carry out system maintenance	3.1 Damage and blockage caused by pests and animals are recorded by damage type, location and the section of the system affected 3.2 Damage or faulty pumps, valves, electrical components and computer systems are recorded and reported, and action taken to effect repairs 3.3 Vegetation control is carried out to keep all system components clear 3.4 <b><i>Water measuring, diversion and conveyancing, and distribution structures</i></b> are serviced as directed 3.5 End of season maintenance procedures are implemented in accordance with enterprise standards 3.6 Routine and preventative maintenance procedures are implemented in accordance with enterprise standards
4 Record and report	4.1 Herbicide records are maintained to meet legislative and

- maintenance activities      quality assurance requirements
- 4.2 Maintenance and servicing records are completed
  - 4.3 Parts removed and/or replaced are recorded
  - 4.4 Faults and breakages are recorded or reported

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- interpret and apply enterprise maintenance procedures
- inspect irrigation system
- test irrigation equipment
- undertake minor repairs of equipment
- carry out earthworks maintenance on irrigation channels and beds
- remove and replace valves and filters
- check serviceability of siphons
- remove and replace gates/slides/doors
- control weeds and unwanted vegetation
- dispose of unused or waste materials from site in an environmentally safe and sensitive manner
- record all test results clearly and concisely with attention to detail
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

---

- surface irrigation system components
- common operational problems
- maintenance requirements – routine and end of season
- weed control methods
- common operational and maintenance problems
- environmental impacts of irrigation maintenance
- OHS legislation and safe work procedures.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• inspect irrigation systems</li> <li>• control unwanted vegetation within the irrigation system</li> <li>• carry out regular and end of season maintenance</li> <li>• troubleshoot and undertake minor repairs of equipment</li> <li>• record and report maintenance activities</li> <li>• dispose of unused or waste materials from site.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Water measurement structures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• weirs</li> <li>• parshall flumes</li> <li>• cut-throat flumes.</li> </ul>
<p><b><i>Diversion and conveyancing structures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• intake structures</li> <li>• diversion weirs and gates.</li> </ul>

Field <i>distribution structures</i> may include:	<ul style="list-style-type: none"><li>• canals</li><li>• pipelines</li><li>• drop structures and chutes</li><li>• division boxes and turnouts</li><li>• checks</li><li>• crossing structures</li><li>• flumes</li><li>• culverts</li><li>• inverted siphons.</li></ul>
Surface irrigation systems may include:	any systems that apply water across the surface of a levelled or contoured area. These include furrow, border and basin irrigation.

## Unit Sector(s)

Irrigation

# AHCIRG320A Maintain and repair irrigation drainage systems

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of maintaining and repairing irrigation drainage systems and defines the standard required to: plan and prepare for the work; inspect the site to determine access to drainage lines; use mechanical drain clearing equipment; troubleshoot drainage problems and implement repair/replacement strategies; maintain drainage infrastructure and vegetative cover.

## Application of the Unit

This Unit applies to skilled workers in irrigation servicing, food and fibre production and amenity horticulture industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to carry out <b>irrigation drainage system</b> maintenance	1.1 Equipment is selected and checked for safe operation 1.2 Appropriate personal protective equipment and tools are selected and used according to Occupational Health and Safety (OHS) requirements 1.3 Site is inspected and drainage is assessed 1.4 Necessity for repair is established and authorities/persons notified of the intention to commence work 1.5 Work requirements are determined from plans, drawings, specifications or instructions 1.6 Appropriate drainage and inflow diversion arrangements are made without damage to environment 1.7 Equipment and excavation methods are selected and checked to meet safety requirements of task and site
2 Determine access to drainage lines	2.1 Plan of irrigation system is determined and access points located 2.2 Access to drainage lines is obtained to allow blockage to be cleared 2.3 Digging is carried out without unnecessary damage to buildings, site, environment or existing fixtures/fittings
3 Carry out repairs on an irrigation drainage system	3.1 Routine inspections of designated work areas are conducted according to maintenance schedules 3.2 System faults are identified and corrective actions are taken according to structure type, location, specification and legislative and organisational requirements 3.3 Mechanical equipment is used to open and close drains 3.4 Components and associated fittings are repaired or replaced according to manufacturer specifications and organisational requirements 3.5 Cast in situ components are constructed according to specifications and organisational requirements
4 Clear blockages in an irrigation drainage system	4.1 Blockages are cleared 4.2 Drainage lines are tested to confirm blockages have been cleared from pipe system 4.3 Drainage lines are repaired/resealed to permit normal use 4.4 Work area is cleaned and aligned, with debris/waste disposed of according to enterprise, environmental and OHS procedures
5 Maintain drainage earthworks and	5.1 <b>Earthworks and embankments</b> are checked to meet system requirements

- equipment
- 5.2 Drainage area vegetation is managed and maintained
  - 5.3 Weeds are controlled on drainage areas
  - 5.4 A maintenance program for drainage equipment is implemented and recorded

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- isolate appliances/fixtures/fittings and related assemblies
- repair or remove blockages
- use manual and mechanical drain clearing equipment
- level and align site
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

---

#### Knowledge of:

- types and operational parameters of irrigation drains
- components used in irrigation drainage systems
- isolation processes and procedures
- levelling and alignment processes
- regulatory requirements, codes of practice and relevant enterprise service standards relating to blockage removal, disconnection and reconnection activities
- environmental impacts of drainage systems
- application of OHS procedures when locating and clearing line blockages, use of personal protective equipment and materials handling.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• plan and prepare for the work</li> <li>• inspect the site to determine access to drainage lines</li> <li>• isolate appliances/fixtures/fittings and related assemblies</li> <li>• use manual and mechanical drain clearing equipment</li> <li>• troubleshoot drainage problems and implement repair/replacement strategies</li> <li>• maintain drainage infrastructure and vegetative cover.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Irrigation drainage systems</b> may include:	both surface and sub-surface drainage installed to handle water which is excess to plant requirements in an irrigated area.
<b>Drainage earthworks and embankments</b> may include:	<ul style="list-style-type: none"> <li>• surface drains</li> <li>• culverts</li> </ul>

	<ul style="list-style-type: none"><li>• mole drains</li><li>• sand slit</li><li>• sub-surface traps</li><li>• pit and trap systems</li><li>• dune and swale systems</li><li>• reed beds</li><li>• water-recycling pumps and baffles.</li></ul>

## Unit Sector(s)

Irrigation

# AHCIRG321A Operate low volume irrigation systems

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of operating low volume irrigation systems and defines the standard required to: carry out pre-start checks; operate and monitor the system; measure and interpret flow rates and pressures; identify environmental hazards; and shut down in response to irrigation indicators.

## Application of the Unit

This Unit applies to skilled workers in the food and fibre production and amenity horticulture industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Carry out pre-start checks	1.1 Checks of water, power, fuel and lubricants ensure that all are available and the control system is operational 1.2 Pumps are primed, if necessary, and valves and controls are open or closed as directed 1.3 Pressure and flow testing equipment are calibrated and available as required 1.4 Other pre-start system checks are carried out in accordance with manufacturer's requirements and enterprise procedures
2 Inspect and operate the system	2.1 Start up sequence is implemented in accordance with enterprise procedures 2.2 Emitter spacing is checked against the irrigation plan 2.3 Water pressure is adjusted as required 2.4 Filters are kept clear and replaced as required 2.5 All malfunctions, leaks and blockages are corrected or repaired immediately and reported in accordance with enterprise procedures
3 Monitor <i>low volume irrigation system</i> performance	3.1 Emitters are checked for output 3.2 Application rate of water is calculated 3.3 The water distribution pattern in the irrigated area is checked 3.4 Moisture levels in the root zone are monitored 3.5 Environmental impacts of the operation are minimised
4 Shut down irrigation system	4.1 Water is applied for sufficient time to achieve required soil moisture levels in accordance with irrigation schedule, environmental considerations and allowing for weather conditions 4.2 <i>System components</i> are shut down and drained in accordance with manufacturer's specifications and enterprise procedures 4.3 Irrigation activities are recorded and reported in accordance with regulatory requirements and enterprise procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

**Required skills include:**

---

**Ability to:**

- read and follow operations manual and procedures
- start up system and carry out operational checks
- monitor system effectiveness
  - application rates
  - irrigation times
  - emitter output
  - pressure variations and blockages
  - salinity levels and water quality
  - depth of irrigation
- measure and interpret flow rates and pressures
- perform shut down procedures
- assess soil moisture levels
- carry out measurements for output and distribution
- record data.

**Required knowledge includes:**

---

**Knowledge of:**

- principles of irrigation and the water cycle
- general irrigation methods for low volume systems
- main components of low volume irrigation systems
- pump types used in low volume irrigation systems and their operation
- shutdown sequence and flushing procedures
- energy efficiency indicators/ benchmarks for low volume irrigation
- soil characteristics
- soil/plant/water relationships
- water requirements of plants/crops consistent with sound environmental management
- critical measures for moisture availability
  - readily available water
  - water holding capacity
  - wilting point
  - field capacity
  - infiltration rates
  - evapotranspiration
- environmental impacts of irrigation using water from any ground or underground source.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• carry out pre-start checks</li> <li>• operate and monitor the system</li> <li>• measure and interpret flow rates and pressures</li> <li>• identify environmental hazards</li> <li>• shut down in response to irrigation indicators.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Carry out pre-start checks	1.1 Checks of water, power, fuel and lubricants ensure that all are available and the control system is operational 1.2 Pumps are primed, if necessary, and valves and controls are open or closed as directed 1.3 Pressure and flow testing equipment are calibrated and available as required 1.4 Other pre-start system checks are carried out in accordance with manufacturer's requirements and enterprise procedures
2 Inspect and operate the system	2.1 Start up sequence is implemented in accordance with operations manual 2.2 Sprinkler spacing is checked against the irrigation plan 2.3 Water pressure and volume is adjusted as required 2.4 Water is delivered as per irrigation schedule 2.5 All malfunctions, leaks and blockages are corrected or repaired immediately and reported in accordance with enterprise procedures
3 Monitor <i>sprinkler irrigation system</i> performance	3.1 Pressure at sprinkler nozzles and on main and lateral pipelines is checked against specifications 3.2 Application rate of water is calculated 3.3 The water distribution pattern in the irrigated area is checked 3.4 Moisture levels in the root zone are checked 3.5 Identify and report any environmental hazards identified
4 Shut down sprinklers in response to irrigation indicators	4.1 Water is applied for sufficient time to achieve required soil moisture levels in accordance with irrigation schedule, environmental considerations and allowing for weather conditions 4.2 <b>System components</b> are shut down and drained in sequence in accordance with manufacturer's specifications and enterprise procedures 4.3 Drainage and treatment systems are checked in accordance with enterprise procedures 4.4 Irrigation activities are recorded and in reported accordance with regulatory requirements and enterprise procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

**Required skills include:**

---

**Ability to:**

- read and follow operations manual and irrigation schedules
- operate pressure and flow testing equipment
- carry out pre-start checks and prime pumps
- start up system and carry out operational checks
- measure and interpret flow rates and pressures
- monitor system effectiveness
  - application rates
  - irrigation times
  - sprinkler output
  - pressure variations
  - salinity levels and water quality
  - depth of irrigation
  - energy efficiency
- connect, calibrate and operate the equipment, and monitor and adjust the delivery of fertilisers
- shut down, clean equipment and dispose of waste
- use personal protective equipment
- perform shut down procedures
- carry out measurements for output and efficiency
- take and record measurements of output and efficiency
- record data.

**Required knowledge includes:**

---

**Knowledge of:**

- general irrigation methods for sprinkler systems
- main components of sprinkler irrigation systems
- pump types used in sprinkler irrigation systems and their operation
- energy efficiency indicators/ benchmarks for sprinkler irrigation
- shutdown sequence
- environmental impacts of irrigation using water from any ground or underground source
- soil characteristics
- soil/plant/water relationships
- water requirements of plants/crops consistent with sound environmental management
- critical measures for moisture availability
  - readily available water
  - water holding capacity
  - wilting point
  - field capacity

- infiltration rates
- evapotranspiration
- OHS legislation and procedures
- electrical hazards
  - contact with pumps, motors, other live components
  - short circuits
  - standing laterals to remove blockages
  - water spray onto powerlines.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• read and follow operations manual and irrigation schedules</li> <li>• carry out pre-start checks</li> <li>• operate and inspect the system</li> <li>• measure and interpret flow rates and pressures</li> <li>• identify environmental hazards</li> <li>• shut down in response to irrigation indicators.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<i>Sprinkler irrigation systems</i> may include:	any systems that use spray or rotor type sprinklers to distribute irrigation water at higher volume including pop-up sprinklers, fixed, and movable sprinklers (e.g. K Line and Ezy Shift).
<i>System components</i> may include:	<ul style="list-style-type: none"> <li>• pumps</li> <li>• sprinklers</li> <li>• nozzles</li> <li>• risers</li> <li>• pipe or tubing</li> <li>• valves</li> <li>• regulators and gauges</li> <li>• laterals</li> <li>• controllers.</li> </ul>

## Unit Sector(s)

Irrigation

# AHCIRG323A Operate moving sprinkler irrigation systems

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of operating moving sprinkler irrigation systems and defines the standard required to: read and follow operations manual and irrigation schedules; carry out pre-start checks; operate and inspect the system; measure and interpret flow rates and pressures; identify adverse environmental impacts of irrigation activities and take appropriate remedial action; shut down in response to irrigation indicators.

## Application of the Unit

This Unit applies to skilled workers in the irrigation servicing, and food and fibre production industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Carry out pre-start checks	1.1 Checks of water, power, fuel and lubricants ensure that all are available and the control system is operational 1.2 Pumps are primed, if necessary, and valves and controls are open or closed as directed 1.3 Pressure and flow testing equipment are calibrated and available as required 1.4 Regular maintenance is carried out 1.5 Other pre-start system checks are carried out in accordance with manufacturer's requirements and enterprise procedures
2 Inspect and operate the system	2.1 Start up sequence is implemented in accordance with operations manual 2.2 Emitter spacing is checked against the irrigation plan 2.3 The transport mechanism is monitored and serviced 2.4 The irrigation controller is checked for programming and efficiency 2.5 All malfunctions, leaks and blockages are corrected or repaired immediately and reported in accordance with enterprise procedures
3 Monitor the irrigation operation	3.1 The irrigation schedule is applied and soil profile monitored for wetting 3.2 Sprinkler performance is measured using catch cans 3.3 Flow rates are measured using containers of known volume 3.4 Operating pressures are measured using pressure gauges 3.5 The irrigated area is checked for wheel ruts and other signs of waterlogging
4 Shut down the system in response to irrigation indicators	4.1 Water is applied for sufficient time to achieve required soil moisture levels in accordance with irrigation schedule, environmental considerations and allowing for weather conditions 4.2 System components are shut down and drained in sequence in accordance with manufacturer's specifications and enterprise procedures 4.3 Drainage and treatment systems are checked in accordance with enterprise procedures 4.4 Irrigation activities are recorded and reported in accordance with regulatory requirements and enterprise procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- read and follow operations manual and irrigation schedules
- operate pressure and flow testing equipment
- carry out pre-start checks and prime pumps
- start up system and carry out operational checks
- measure and interpret flow rates and pressures
- monitor system effectiveness
  - application rates
  - irrigation times
  - sprinkler output
  - pressure variations
  - salinity levels and water quality
  - depth of irrigation
  - energy efficiency
- use control systems
- shut down, clean equipment and dispose of waste
- use personal protective equipment
- perform shut down procedures
- take and record measurements of output and efficiency
- record data.

### Required knowledge includes:

---

#### Knowledge of:

- general irrigation methods for moving sprinkler systems
- main components of moving sprinkler irrigation systems
- pump types used in moving sprinkler irrigation systems and their operation
- energy efficiency indicators/ benchmarks for moving sprinkler irrigation
  - Application Efficiency
  - Average Application Rate
  - Instantaneous Application Rate
- shutdown sequence
- environmental impacts of irrigation using water from any ground or underground source
- soil characteristics
- soil/plant/water relationships
- water requirements of plants/crops consistent with sound environmental management
- critical measures for moisture availability

- readily available water
- wilting point
- field capacity
- monitoring soil compaction and drainage
- environmental hazards of moving sprinkler systems including soil compaction and guttering
- OHS legislation and safe work procedures.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• read and follow operations manual and irrigation schedules</li> <li>• carry out pre-start checks</li> <li>• operate and inspect the system</li> <li>• measure and interpret flow rates and pressures</li> <li>• identify environmental hazards</li> <li>• shut down in response to irrigation indicators.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be

included.	
Moving sprinkler systems may include:	specifically hard and soft reel self-travelling irrigators, lateral move systems and centre pivots.
Moving sprinkler system components include:	spans tower tower wheels outlets emitters droppers pressure regulator irrigation controller.

## Unit Sector(s)

Irrigation

# AHCIRG324A Operate surface irrigation systems

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of operating surface irrigation systems and defines the standard required to: read and follow operations manual and irrigation schedules; use pre-start checks; operate and inspect the system; check pressure at the headworks and control valves; carry out running repairs on irrigation delivery and drainage systems; shut down in response to irrigation indicators.

## Application of the Unit

This Unit applies to skilled workers in the irrigated food and fibre production industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Carry out pre-start checks	1.1 Checks of water, power, fuel and lubricants ensure that all are available and the control system is operational 1.2 Pumps are primed, if necessary, and gates and controls are open or closed in accordance with enterprise procedures 1.3 Pipes, system equipment and outlets are positioned and set up in accordance with enterprise standards and OHS requirements
2 Operate and monitor the <i>surface irrigation system</i>	2.1 Syphons and other delivery mechanisms are primed and started in accordance with enterprise procedures 2.2 Start up sequence is implemented in accordance with operations manual and water levels, and pressure built up slowly as directed 2.3 Pressure at the headworks and control valves is checked 2.4 Water is distributed evenly to the targeted areas with minimal wastage and run-off 2.5 Area is irrigated in accordance with enterprise procedures, and time lag between shut down and end of watering is observed to minimise run-off and deep percolation 2.6 All malfunctions, leaks, damage to water courses and blockages are corrected or repaired immediately and reported in accordance with enterprise procedures
3 Measure and interpret water levels, flow rates and volume of water used	3.1 Head water levels are monitored and maintained 3.2 All water outlets are operating in accordance with operating procedures 3.3 Blocked inlets and outlets are replaced or cleared 3.4 Flow rates and water usage are measured and recorded 3.5 Irrigation changes are implemented in accordance with enterprise procedures
4 Monitor drainage and tailwater systems	4.1 Water intake, conveyance and distribution, drainage and tailwater is monitored 4.2 Water reuse systems are checked for clearance and freedom from weeds 4.3 If used, pumps are monitored during operation, rubbish is cleared from outlets, and pump is backflushed in accordance with enterprise procedures
5 Shut down surface irrigation in response to irrigation indicators	5.1 System <i>components</i> are shut down in sequence in accordance with manufacturer's and enterprise procedures 5.2 Irrigation activities are reported and recorded in accordance with regulatory requirements and enterprise procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- carry out running repairs on irrigation delivery and drainage systems
- inspection procedures
- start up the system
- start and move syphons and spiles and check flow
- operate surface irrigation equipment
- check pressure at the head works and control valves
- carry out running repairs on irrigation delivery and drainage systems
- adjust and monitor check valves
- carry out shut down procedures, clean equipment and dispose of waste
- measure water usage
- identify variations in water flow and distribution.

### Required knowledge includes:

---

#### Knowledge of:

- general irrigation methods for surface irrigation systems
- main components of surface irrigation systems
- possible environmental impacts of fertigation activities
- energy efficiency indicators/ benchmarks for surface irrigation
- soil characteristics
- soil/plant/water relationships
- water requirements of plants/crops consistent with sound environmental management
- critical measures for moisture availability
  - readily available water
  - water holding capacity
  - wilting point
  - field capacity
  - infiltration rates
  - evapotranspiration
- environmental impacts of irrigation, using water from any ground or underground source
- OHS, environmental and enterprise policies and procedures relating to the operation of gravity fed irrigation systems.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>Evidence is required in the process of operating gravity fed irrigation systems. The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• read and follow operations manual and irrigation schedules</li> <li>• use pre-start checks</li> <li>• operate and inspect the system</li> <li>• check pressure at the headworks and control valves</li> <li>• carry out running repairs on irrigation delivery and drainage systems</li> <li>• shut down in response to irrigation indicators.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Surface irrigation systems</i></b> may include:</p>	<p>any systems that apply water across the surface of a levelled or contoured area. These include furrow, border and basin irrigation.</p>

<i>System components</i> may include:	diversion and conveyancing structures: <ul style="list-style-type: none"><li>• intake structures</li><li>• diversion weirs and gates</li></ul> field distribution structures: <ul style="list-style-type: none"><li>• canals</li><li>• pipelines</li><li>• drop structures and chutes</li><li>• division boxes and turnouts</li><li>• checks</li></ul> crossing structures: <ul style="list-style-type: none"><li>• flumes</li><li>• culverts</li><li>• inverted siphons</li><li>• water measurement structures</li><li>• weirs</li><li>• parshall flumes</li><li>• cut-throat flumes.</li></ul>
---------------------------------------	--

## Unit Sector(s)

Irrigation

## AHCIRG325A Operate irrigation technology

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers operating irrigation technology as part of irrigation installation and construction and/or irrigation operations and defines the standard required to: maintain and check irrigation equipment for accuracy; take representative samples for measurement; operate technology to measure and monitor the irrigation system or the growing environment; and record the results of testing.

### Application of the Unit

This Unit applies to skilled workers in the food and fibre production and amenity horticulture industries, and is likely to be carried out under routine supervision within enterprise guidelines.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Operate <i>water metering equipment</i>	1.1 Equipment is maintained and checked for accuracy according to established procedures 1.2 Samples are collected according to established procedures 1.3 Readings and observations are recorded and interpreted 1.4 Equipment is transported and stored correctly
2 Operate <i>pressure testing equipment</i>	2.1 Equipment is maintained and checked for accuracy according to established procedures 2.2 Sampling points are identified 2.3 Readings and observations are recorded and interpreted 2.4 Equipment is transported and stored correctly
3 Operate water testing equipment	3.1 Equipment is maintained and checked for accuracy as per procedures 3.2 Samples are collected according to established procedures 3.3 Readings and observations are recorded and interpreted 3.4 Equipment is transported and stored correctly
4 Operate <i>soil moisture testing equipment</i>	4.1 Equipment is maintained and checked for accuracy according to established procedures 4.2 Samples are collected according to established procedures 4.3 Readings and observations are recorded and interpreted 4.4 Equipment is transported and stored correctly
5 Operate <i>irrigation controllers and sensors</i>	5.1 Sensors are linked to controllers by wiring or radio signals 5.2 Controllers are programmed 5.3 Accuracy and reliability of electronic flow control equipment is monitored 5.4 Discrepancies or malfunctions are reported to management

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- operate water metering equipment
- operate pressure testing equipment
- operate water testing equipment

- operate soil moisture testing equipment
- operate irrigation controllers and sensors
- check accuracy and calibrate equipment if necessary
- take samples for testing
- record observations and data.

### Required knowledge includes:

#### Knowledge of:

- sampling techniques
- equipment maintenance and operation
- measurement procedures
- operational procedures
- data recording procedures
- safe work practices including working with low voltage wiring
- environmental procedures for use, storage and recycling of electronic equipment and batteries.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• maintain and check irrigation equipment for accuracy</li> <li>• take representative samples for measurement</li> <li>• operate technology to measure and monitor the irrigation system or the growing environment</li> <li>• record the results of testing.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Water metering equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>the range of meters that are commercially available for measuring irrigation water.</li> </ul>
<p><b><i>Pressure testing equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>the range of pressure gauges.</li> </ul>
<p><b><i>Soil moisture testing equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>tensiometers</li> <li>electrical resistance blocks</li> <li>capacitance probe</li> <li>neutron probes.</li> </ul>
<p>Electronic componentry may include:</p>	<ul style="list-style-type: none"> <li>remote control valves</li> <li>sensing equipment.</li> </ul>
<p><b><i>Irrigation controllers</i></b> may include:</p>	<p>the range from a simple time switch connected to one valve to programmable computers operating multiple valves to a schedule.</p>

## Unit Sector(s)

Irrigation

# AHCIRG326A Operate irrigation injection equipment

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of operating injection equipment as part of an irrigation system and defines the standard required to: carry out pre-start checks; identify OHS and environmental hazards; operate and monitor the injection system; shut down the injection system; and keep records.

## Application of the Unit

This Unit applies to skilled workers in the food and fibre production and amenity horticulture industries, and is likely to be carried out under routine supervision within enterprise guidelines.

## Licensing/Regulatory Information

Workers are required by legislation to have completed training in chemical handling and use before using agricultural chemicals.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare equipment for <i>injection operation</i>	1.1 Materials and services are confirmed as available and ready for operation 1.2 Materials are prepared to meet injection requirements 1.3 Equipment is checked to confirm readiness for use 1.4 Equipment is set to meet injection requirements
2 Operate the injection process	2.1 Safety procedures are put in place including the use of PPE 2.2 The injection process is started up according to workplace procedures 2.3 Control points are monitored to confirm performance is maintained within specification 2.4 Out-of-specification equipment performance is identified, rectified and/or reported 2.5 Injection requirements are delivered according to instructions 2.6 Equipment is maintained in good working order 2.7 Emergency procedures are put in place for spillage or chemical accidents
3 Shut down injection equipment	3.1 Injection equipment is shut down according to workplace procedures 3.2 Injection equipment is cleaned according to workplace procedures 3.3 Waste generated by both the process and cleaning procedures is collected, treated, disposed of or recycled according to workplace procedures
4 Monitor plant response and environmental impacts of injection	4.1 Plant response to injection is monitored 4.2 Environmental hazards of injection are recorded and reported 4.3 Withholding periods for chemical application on food crops are maintained 4.4 Access is restricted to areas where chemicals have been applied through injection if required
5 Record information	5.1 Workplace information is recorded in the appropriate format 5.2 Chemical application and storage details are recorded as per legislative requirements

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- access workplace information to identify injection requirements
- select, fit and use personal protective clothing and/or equipment
- select and prepare injection materials as required
- complete relevant calculations such as dilution rates
- monitor usage and dilution rates
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record corrective action as required
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- demonstrate safe handling of hazardous chemicals
- implement routine maintenance and minor repairs of the system
- implement routine system cleaning requirements
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

---

#### Knowledge of:

- chemicals, cleaning agents and fertilisers used for injection and their purpose
- label and MSDS information for substances to be injected
- purpose and operation of equipment and instrumentation components
- basic operating principles and process control systems where relevant
- services required
- control points and significance and methods of monitoring
- common causes of variation and corrective action required
- process specifications, procedures and operating parameters
- correct chemical handling techniques
- backflow prevention

- OHS hazards and controls
- lock-out and tag-out procedures
- environmental issues and controls
- procedures for prevention of backflow
- cleaning requirements of system
- maintenance requirements of system
- shutdown sequence
- recording requirements and procedures
- cleaning procedures.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• carry out pre-start checks</li> <li>• identify OHS and environmental hazards</li> <li>• operate and monitor the system</li> <li>• shut down the injection system</li> <li>• keep records.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Injection operations* may include:

- fertilisers
- chlorine
- acids
- cleaning agents.

## Unit Sector(s)

Irrigation

## AHCIRG327A Implement an irrigation schedule

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the skills and knowledge required to monitor available soil moisture and implement a documented irrigation schedule, including consultation with the manager. The Unit requires the ability to: estimate water availability for plants/crops; determine irrigation shifts and rates from the irrigation schedule; test soil moisture levels; monitor and record irrigation data; and evaluate effectiveness of irrigation.

### Application of the Unit

This Unit applies to skilled workers in the food and fibre production and amenity horticulture industries. Supervision of others and assessment of the impact of the irrigation program on the irrigated area and surrounding areas are likely to be required.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Interpret the <i>irrigation schedule</i>	1.1 Information on plant growing requirements is obtained 1.2 Moisture requirement throughout the growing season is interpreted 1.3 Predicted seasonal moisture deficit and watering requirements are read and checked with management 1.4 Parameters for the irrigation system are recorded
2 Determine irrigation shifts	2.1 The irrigated area is subdivided into the smallest units capable of individual irrigation and area, and irrigation equipment characteristics are noted for each 2.2 Each unit is defined for its soil irrigation capability 2.3 The crop/plant water requirement is defined for each unit 2.4 Units requiring similar irrigation are combined to form a shift that does not exceed the water delivery capacity of the property irrigation infrastructure 2.5 Water volume required to meet irrigation needs over specified period is determined
3 Implement irrigation schedule	3.1 Resources are coordinated and personnel briefed to deliver requirements 3.2 Watering program is implemented
4 Monitor irrigation	4.1 Plants and crops are inspected for growth rate and signs of stress 4.2 Frequency of irrigation is recorded 4.3 Water usage is measured and recorded, and does not exceed water allocation for a given period 4.4 Differences between estimated water use and actual water used are calculated 4.5 Water quality is measured according to enterprise OHS policy and procedures 4.6 Plant or crop growth and water use efficiency is assessed 4.7 Soil is measured for readily available water 4.8 Climate and weather conditions are recorded 4.9 Watering program is adjusted in response to rainfall events and changes to evapotranspiration rates
5 Record irrigation information and activities	5.1 Plant or crop environment data is recorded 5.2 Water usage is recorded 5.3 Irrigation shifts are recorded 5.4 System process data is recorded

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- access and discuss irrigation schedule
- interpret the information in an irrigation schedule
- liaise with other work areas
- consult with appropriate senior personnel or consultants
- compare plant health and growth to benchmark requirements
- identify irrigation requirements throughout the growing season by monitoring:
  - soil moisture levels
  - watertable level
  - water quality
  - signs of plant nutrient deficiencies
  - climatic conditions
  - frost risk
  - plant varietal characteristics and requirements
  - soil type and depth
  - crop stage and requirements if applicable
  - symptoms of water stress
  - effective root depth
- implement the irrigation schedule. This may include consideration of:
  - resources, including operators with appropriate skills
  - application rates
  - timing and length
  - materials, chemicals, services
  - maintenance programs and supplies
  - interaction between different irrigation employees or shifts.
- instruct irrigation system operator(s) as required
- apply sampling techniques
- conduct soil moisture tests
- monitor irrigation activities. This may include:
  - identifying soil moisture content and depth to which water will reach
  - identifying emitter output consistency
- take corrective action in response to out-of-specification results or non-compliance
- report and/or record problems and/or corrective action taken
- monitor the effectiveness of irrigation activities

- monitor the environmental impact of irrigation activities
- identify, rectify and/or report environmental non-compliance
- maintain workplace records
- maintain work area to meet housekeeping standards
- implement and follow relevant enterprise OHS and environmental policies and procedures.

### Required knowledge includes:

#### Knowledge of:

- effect of irrigation techniques on plant growth
- visual symptoms of plant nutrient deficiencies, water stress and frost
- principles of soil moisture monitoring eg volumetric soil moisture content, percentage compared to soil moisture tension
- water budgeting tools
- irrigation strategies
- sampling techniques and procedures
- testing techniques and procedures
- interpretation of routine soil moisture tests
- procedures and responsibility for reporting problems
- resource requirements and availability
- recording requirements and procedures
- consultation requirements and procedures
- OHS hazards and controls
- environmental impacts, hazards and controls for irrigation.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• estimate water availability for plants/crops</li> <li>• determine irrigation shifts and rates</li> <li>• test soil moisture levels</li> </ul>

	<ul style="list-style-type: none"> <li>• monitor and record irrigation data</li> <li>• evaluate effectiveness of irrigation.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Irrigation schedules</i></b> may include:	<p>any system that schedules irrigation water through a growing season. Schedules may be based on:</p> <ul style="list-style-type: none"> <li>• soil-based systems, monitoring soil moisture</li> <li>• climate-based systems</li> <li>• plant-based systems, monitoring the plant</li> <li>• a combination of the above.</li> </ul>
---	--

## Unit Sector(s)

Irrigation

## AHCIRG401A Acquire resources for irrigation installation and construction

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers acquiring resources for irrigation installation and construction and defines the standard required to: organise resources for irrigation installation and construction; obtain resources for irrigation installation and construction; arrange connection of temporary services; organise on site labour.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to irrigation installers who acquire resources for irrigation installation and construction including completion of formalities for commencing work.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Notify client, authorities and agencies of the schedule of works	1.1.All fees due are paid and parking restrictions arranged as appropriate. 1.2.Insurance cover is established and provision for security made. 1.3.Irrigation installation and construction date is confirmed with client. 1.4.All authorities requiring formal notification of commencement of work are contacted.
2. Organise delivery of site accommodation	2.1.Site facilities are delivered and positioned on site. 2.2.Site signage is erected to comply with local government regulations.
3. Organise delivery of plant	3.1.On-site plant delivery dates are confirmed. 3.2.Rubbish removal facility is set up.
4. Arrange connection of temporary services	4.1.Temporary power and water connections are arranged with service providers, as required. 4.2.Temporary site access and egress is authorised by local authority, as required.
5. Organise on-site labour	5.1.Construction work supervisor is engaged/appointed. 5.2.Occupational Health and Safety (OHS) and industrial relation matters are addressed as required. 5.3.Appropriate installation/construction workers are employed according to contract.
6. Order material	6.1.Orders for materials are placed and site delivery dates organised using approved enterprise procedures and documentation. 6.2.Final pre-construction adjustments are made to

ELEMENT	PERFORMANCE CRITERIA
	satisfy the schedule as required by contract.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- use the project schedule to organise a sequence of pre-construction operations making allowances for any constraints
- place and check orders for materials
- negotiate start dates and manage resources to minimise delays and down-time
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- follow relevant enterprise OHS and environmental procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- requirements of statutory authorities and agencies
- local government regulations
- project resources budget
- ordering procedures
- labour hiring requirements and procedures
- environmental impacts of irrigation system installation using water from any ground or underground source
- relevant enterprise OHS and industrial relations requirements.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• organise resources for irrigation installation and construction</li> <li>• obtain resources for irrigation installation and construction</li> <li>• arrange connection of temporary services</li> <li>• organise on site labour.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm water delivery specifications for irrigation system	1.1. Soil characteristics are confirmed and hydraulic properties determined. 1.2. Plant/crop water requirements are gathered for various stages of growth. 1.3. Peak water requirements are determined for each area to be irrigated.
2. Determine pressures required to deliver required amount of water over specified area	2.1. Static pressures between water source and delivery points are determined. 2.2. Dynamic pressure necessary to achieve required water volume is calculated.
3. Analyse technical drawings to determine pressure losses through system	3.1. Losses resulting from fittings, laterals and elevation differences are calculated. 3.2. Losses resulting from flow through canals, culverts and pipes of varying sizes and diameters within a system are determined. 3.3. Total friction loss is calculated. 3.4. Hydraulic parameters for system are determined.
4. Select system components to deliver water efficiently	4.1. Water delivery components are selected to achieve the most efficient delivery rate and pressure. 4.2. Flow direction and control components are selected to be compatible with pipes and to achieve minimal friction losses.

## Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- read contour maps and interpret elevations and distances
- calculate pressures, flows, velocities and friction losses
- determine efficiency of the system with varying system components
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- apply hydraulic principles to manual and computerised irrigation systems
- follow relevant enterprise Occupational Health and Safety (OHS) and environmental procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record information collected accurately and legibly, and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- intermediate hydraulic principles, such as static and dynamic pressure, pressure loss, friction loss, flow rate and velocity, effect of gradient on flow rate, contact time and drainage
- irrigation system components
- types and pressure ratings for pipes, fittings and outlets
- environmental impacts of irrigation, using water from any ground or underground source
- enterprise and environmental requirements.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• calculate water volumes and pressure required to deliver water</li> <li>• select system components to deliver the required rate of irrigated water.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
This standard covers:	<ul style="list-style-type: none"> <li>• pressurised irrigation systems, such as micro-irrigation systems and spray irrigation systems</li> <li>• gravity-fed irrigation systems.</li> </ul>
Irrigation systems may include	<ul style="list-style-type: none"> <li>• manual operation and monitoring to fully automated with computer control and monitoring.</li> </ul>

## AHCIRG404A Implement an irrigation-related environmental protection program

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the implementation of an irrigation related environmental protection program and defines the standard required to: identify adverse environmental impacts of irrigation activities and appropriate remedial action; apply and comply with environmental requirements; provide and explain information on the irrigation and drainage environmental plan; explain and demonstrate enterprise environmental record systems and procedures; calculate stormwater control requirements.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to persons whose job role includes implementing procedures to reduce the impacts of irrigation and drainage systems on the environment and responding to potential and actual environmental pollution events.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Provide information to workers involved in irrigation and related work	<p>1.1. Information on the irrigation and drainage environmental plan is provided and explained to all workers involved in irrigation and related work.</p> <p>1.2. Relevant codes of practice, legislation and regulations and their application are explained to all workers involved in irrigation and related work.</p> <p>1.3. Information about known risks to the environment and work practices associated with enterprise irrigation practices and related activities are explained and demonstrated.</p> <p>1.4. Enterprise environmental record systems and procedures are explained and demonstrated.</p> <p>1.5. Environmental protection induction and training needs are identified and arrangements made to fulfil those needs.</p>
2. Implement and monitor procedures for identifying risks to the environment and maintaining effective control	<p>2.1. Risks to the environment are identified and reported so that adequate risk assessment and control measures are implemented.</p> <p>2.2. Work procedures to control risks to the environment are implemented, and regular monitoring occurs to ensure ongoing adherence and effectiveness of risk</p>

ELEMENT	PERFORMANCE CRITERIA
measures	control. 2.3. Inadequacies in existing risk control measures are identified, and measures to reduce exposure to environmental pollution events through improved work processes and procedures are raised with the owner/manager. 2.4. Inadequacies in allocation of resources to ensure environmental protection are identified and reported to the owner/manager.
3. Implement procedures for responding to potential and actual environmental pollution events	3.1. Procedures for responding to potential and actual pollution events are implemented, where necessary, to ensure that prompt and effective control action is taken. 3.2. Pollution events are investigated and reported to identify their cause according to established investigation procedures and Occupational Health and Safety (OHS) requirements. 3.3. Stormwater control requirements are calculated, as necessary, according to environmental protection authority requirements. 3.4. Suitable measures to prevent recurrence and minimise risk of pollution events are discussed with the owner/manager, and revised procedures implemented as necessary.
4. Implement and monitor procedures for maintaining environmental protection record	4.1. Environmental protection records are kept according to enterprise and legal requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- apply and comply with environmental requirements

<b>REQUIRED SKILLS AND KNOWLEDGE</b>	
<ul style="list-style-type: none"> <li>• provide and explain information on the irrigation and drainage environmental plan</li> <li>• explain and demonstrate enterprise environmental record systems and procedures</li> <li>• calculate stormwater control requirements</li> <li>• follow relevant enterprise OHS and environmental procedures</li> <li>• use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>	
<b>Required knowledge</b>	
<ul style="list-style-type: none"> <li>• environmental legislation, regulations and guidelines</li> <li>• environmental impacts of irrigation, using water from any ground or underground source</li> <li>• OHS procedures relating to investigation of irrigation-related hazards and implementation of an environmental protection program.</li> </ul>	

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan irrigation activities	<p>1.1. Work crews are briefed to carry out the required gravity fed irrigation activities in accordance with enterprise, environmental and Occupational Health and Safety (OHS) requirements.</p> <p>1.2. Sufficient irrigation equipment is checked and available for the allocated fields to be irrigated.</p> <p>1.3. Water availability is checked.</p> <p>1.4. Pumps, bores and other water delivery mechanisms are checked for serviceability.</p> <p>1.5. Irrigation sequence is determined.</p>
2. Coordinate irrigation activities	<p>2.1. Crew activities are monitored for efficient team work, and direction provided as necessary.</p> <p>2.2. Water levels in ditches and channels are monitored and maintained to provide sufficient head.</p> <p>2.3. Pumps and other mechanical equipment are monitored and operating problems identified and corrected as necessary.</p>
3. Record irrigation activities	<p>3.1. Personnel hours and activities are recorded in accordance with enterprise practice.</p> <p>3.2. Irrigation start and finish times are recorded in accordance with enterprise practice.</p> <p>3.3. Water storage levels are recorded in accordance with enterprise practice.</p> <p>3.4. Monitoring activities and data are recorded in accordance with enterprise practice.</p> <p>3.5. Recommendations for service and maintenance activities are recorded in accordance with enterprise practice.</p>

ELEMENT	PERFORMANCE CRITERIA
	practice.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and monitor safe systems of work
- operate gravity fed irrigation systems
- apply enterprise monitoring procedures
- brief, monitor and direct work crews
- identify adverse environmental impacts of irrigation activities and take appropriate remedial action
- coordinate a range of activities and procedures
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- soil/plant/water relationships
- environmental impacts of irrigation using water from any ground or underground source
- irrigation system components
- common operational problems
- OHS and environmental legislation, codes of practice and enterprise procedures.

## AHCIRG406A Plan on-site irrigation system installation and construction work

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers planning on-site irrigation system installations and construction work and defines the standard required to: identify operational requirements from contract documentation; develop strategies and plan procedures for installation and construction; develop a project plan with tasks, responsibilities, timelines and costs.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to irrigation installers who plan on-site irrigation system installation and construction work.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Appraise contract documentation and translate into operational requirements	<p>1.1. Copy of building approval and conditions is obtained as required.</p> <p>1.2. Contract documentation is reviewed for any unusual aspects of construction, use of materials and penalties.</p> <p>1.3. Availability of sub-contractors is ascertained and selected to suit job requirements.</p> <p>1.4. Availability of materials is checked with suppliers.</p> <p>1.5. Site access limitations are assessed.</p> <p>1.6. Relevant authorities controlling construction work advised of commencement date for project as required.</p>
2. Develop strategies for implementing the construction operations	<p>2.1. Procedures for controlling and recording site deliveries are established.</p> <p>2.2. Procedures for recording the hire of plant and equipment are determined.</p> <p>2.3. Occupational Health and Safety (OHS) procedures are established, including hazard/risk management.</p> <p>2.4. Procedures are established for dealing with environmental issues associated with irrigation construction work.</p> <p>2.5. Procedures required for the control of multiple projects are determined.</p>
3. Prepare project schedule for irrigation installation and construction	<p>3.1. Construction operations are prepared in sequence.</p> <p>3.2. Operations are entered into a manually prepared schedule or computer based software package.</p> <p>3.3. 'Critical path' is identified and schedule revised with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>new activities/projects, as needed, and documented.</p> <p>3.4. Timeframe is adjusted to take account of anticipated delays.</p>
<p>4. Determine all the required resources for project</p>	<p>4.1. Temporary services and site accommodation is determined as required.</p> <p>4.2. Plant requirements and dates are selected and accessed.</p> <p>4.3. On site labour requirements are determined.</p>
<p>5. Prepare dilapidation report</p>	<p>5.1. Records are made of the condition of existing building(s) to be retained and structures on the adjacent site boundaries.</p> <p>5.2. Copies of reports are submitted to adjacent building owners prior to commencing construction.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analyse contract conditions
- develop strategies
- schedule projects
- determine resources
- identify adverse environmental impacts of irrigation activities and appropriate remedial/preventative action
- incorporate legislative and enterprise OHS and environmental procedures into planning
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
abilities.
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• installation and construction processes for on-site irrigation systems</li> <li>• logical construction sequence for the system</li> <li>• analysis of the required project resources</li> <li>• environmental impacts of irrigation using water from any ground or underground source</li> <li>• relevant enterprise OHS and environmental procedures</li> <li>• relevant Australian Standards (e.g. AS3500)</li> <li>• effect of main soil types on approach to excavation work and installation of irrigation components.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify operational requirements from contract documentation</li> <li>• develop strategies and plan procedures for installation and construction</li> <li>• develop a project plan with tasks, responsibilities, timelines and costs.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Implement effective communication	<p>1.1.Site instructions for irrigation installation and construction work are recorded to comply with quality management requirements.</p> <p>1.2.Dates, times and personnel to attend site meetings are organised.</p>
2. Implement and monitor Occupational Health and Safety (OHS) and risk management procedures	<p>2.1.First aid facilities are established as necessary.</p> <p>2.2.Plant and equipment requiring certificated operators are identified to comply with risk management procedures.</p> <p>2.3.Likely hazards are identified and precautions taken.</p> <p>2.4.Role of Construction Safety Supervisor is identified.</p> <p>2.5.Documentation for safety reporting is instigated.</p>
3. Organise the supply and installation of materials and equipment	<p>3.1.Material orders are placed according to appropriate schedule.</p> <p>3.2.Equipment is hired according to planned schedule.</p> <p>3.3.Maintenance procedures are established for equipment.</p>
4. Supervise on-site operations	<p>4.1.Operations are implemented according to appropriate schedule and contract.</p> <p>4.2.Sub-contractor operations are co-ordinated and monitored, including all aspects of materials used and standards of workmanship.</p> <p>4.3.Problems and delays are addressed as they arise and action recorded.</p> <p>4.4.Industrial relations are monitored continuously and issues resolved to minimise impact on job progress.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.5. Revisions are made to project schedule, when required, and variations documented to comply with quality management procedures.</p> <p>4.6. Quality management procedures are applied continuously as per adopted standards for job.</p> <p>4.7. Safety procedures are monitored continuously, reports analysed and procedures reviewed as required.</p> <p>4.8. Reports on current project status are prepared for management.</p> <p>4.9. Supervision of multiple projects is planned.</p>
5. Administer progress claims/payment	<p>5.1. Summary records are prepared for progress claims.</p> <p>5.2. Actual expenditure and earnings are checked against scheduled projected costs.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe systems of work
- order materials and equipment to meet schedule
- administer the contract on site
- supervise construction operations in the most efficient sequence
- identify adverse environmental impacts of irrigation installation activities and take appropriate remedial action
- comply with statutory requirements
- follow environmental procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of

**REQUIRED SKILLS AND KNOWLEDGE**

cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- communication procedures for on site labour and authorities
- safety procedures and quality assurance programs
- local government regulations
- on-site contract provisions
- projected costs
- environmental impacts of irrigation system installation using water from any ground or underground source
- OHS and environmental legislation, codes of practice and environmental procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- organise supplies and labour
- organise the installation of supplies and equipment
- implement and monitor on site operations
- test the installation or construction against specifications
- carry out any remediation work required.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

## AHCIRG408A Schedule irrigations

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of determining the timing and amount of each irrigation to meet crop or plant needs and environmental requirements, and defines the standard required to: use and maintain in-field equipment that monitors the plant environment; incorporate data from monitoring sources into scheduling systems; monitor crop/plant water use; assess efficacy of irrigation; record irrigation and scheduling parameters; plan for extremes of weather.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit relates to scheduling for an irrigation system will be carried out without supervision but with general guidance on progress.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor crop/plant water use	<p>1.1. Water use is measured or estimated from one or more systems.</p> <p>1.2. Water is accumulated as a soil water deficit in the root zone.</p>
2. Apply a measured amount of water	<p>2.1. A pre-determined deficit is predicted using a scheduling system(s).</p> <p>2.2. Irrigation is applied to partly or fully replace the deficit.</p> <p>2.3. Where appropriate, water quantities are increased to ensure dilution and transport of toxic solutes below the root zone.</p>
3. Assess efficacy of irrigation and repeat cycles of irrigation	<p>3.1. Effectiveness of irrigation application with in-field equipment is measured.</p> <p>3.2. The estimated soil moisture level in scheduling system is adjusted to match that measured.</p> <p>3.3. Where necessary, the scheduling system(s) is recalibrated.</p> <p>3.4. Cycles of irrigation are repeated until schedule is correctly established.</p>
4. Record irrigation and scheduling parameters	<p>4.1. Each irrigation and significant rainfall event, plus other appropriate parameters used in scheduling system, are recorded.</p> <p>4.2. Drainage amount below root zone at each irrigation is estimated and recorded.</p> <p>4.3. System performance data is recorded.</p>
5. Plan for extremes of	<p>5.1. Estimated deficits are modified to cater for any</p>

ELEMENT	PERFORMANCE CRITERIA
weather	<p>prolonged saturation following heavy rainfall.</p> <p>5.2.Shift areas, and where applicable, application rates, are altered to suit appropriate irrigation schedules that minimise frost damage.</p> <p>5.3.Strategies involving prioritising of plants/crops and intermittent irrigation are implemented at times of extreme heat.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- use and maintain in-field equipment that monitors the plant environment
- incorporate data from monitoring sources (such as in-field equipment and remote sources) into scheduling systems that compute irrigation requirement
- monitor crop/plant water use
- apply a measured amount of water
- assess efficacy of irrigation and repeat cycles of irrigation
- record irrigation and scheduling parameters
- plan for extremes of weather
- follow environmental procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- inter-relationship between plant, soil and the aerial environments in the determination of water budgets
- plant/crop response to moisture stress at different stages of growth

**REQUIRED SKILLS AND KNOWLEDGE**

- possible adverse impacts on the crop and environment from inefficient scheduling or unpredictable weather effects
- recognition of moisture stress effects (sometimes desired) on plants
- physical soil characteristics such as infiltration rate, water holding capacity and wetted volume in the root zone
- weather forecasting of extreme weather events such as heat waves, frosts and storms, and appropriate contingency tactics to minimise impacts
- in-field irrigation reticulation performance and its capacity limits
- water quality monitoring methods and acceptable quality limits
- water authority standards and procedures
- enterprise and environmental policies and procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- use and maintain in-field equipment that monitors the plant environment
- incorporate data from monitoring sources into scheduling systems
- monitor crop/plant water use
- assess efficacy of irrigation
- record irrigation and scheduling parameters
- plan for extremes of weather

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Types of irrigation systems may include:	<ul style="list-style-type: none"> <li>• micro</li> <li>• spray</li> <li>• gravity fed</li> <li>• border check systems</li> </ul>
Irrigation systems may range from:	<ul style="list-style-type: none"> <li>• manual operation and monitoring to fully automated with computer control and monitoring.</li> </ul>

## AHCIRG410A Select and manage pumping systems for irrigation

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of operating and maintaining irrigation pumping systems and defines the standard required to: select pumps and pumping equipment to meet design requirements; install and test pumps; develop procedures to maintain pumping systems; commission and test the pumping system; and carry out troubleshooting.

### Application of the Unit

This Unit applies to irrigation installation site managers and managers of irrigation systems in the irrigation servicing, amenity horticulture and food and fibre production industries.

### Licensing/Regulatory Information

All high voltage electrical work must be carried out by a qualified electrician.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify irrigation system requirements from the irrigation design	1.1 The components for an <i>irrigation pumping system</i> are identified 1.2 The water source and height of pull for water into the system are determined 1.3 The water output for irrigation is determined 1.4 The total friction loss of irrigation components is calculated
2 Select pump according to type, installation, range of flow rates, operating head and delivery distance	2.1 The basic <i>type of pump</i> is selected based on the pump task and placement and the power source 2.2 The total operating head required is calculated 2.3 The required discharge for the pump is calculated based on the irrigation output required and friction losses in the system 2.4 The speed and power requirements of the pump motor are determined 2.5 The limiting suction lift of the pump is determined 2.6 Pump performance curves are interpreted in selecting an efficient irrigation pump 2.7 Size of impeller is determined from the pump curve
3 Install pumps	3.1 Pump is sited as close as possible to water source and level 3.2 Suction and delivery pipes are attached correctly 3.3 Pump connections are airtight 3.4 The pump is anchored on a base 3.5 Pump and motor connection are correctly aligned 3.6 Ventilation is provided for the motor 3.7 <i>Filters and valves</i> are fitted and valves are correctly oriented 3.8 Pump is connected to the <i>irrigation controller</i> if required
4 Commission and test irrigation pumps	4.1 Procedures are developed and implemented for carrying out pre-start checks 4.2 Pump start up procedures are developed and implemented 4.3 Pumps are pressure tested to check delivery performance 4.4 Power usage and water output is checked against requirements and pump specifications 4.5 Pumping system is checked for leakages and cavitation 4.6 Pump control systems are checked for accurate operation
5 Develop maintenance procedures for the pumping system	5.1 Routine maintenance procedures are developed to rectify the effects of normal wear 5.2 Periodic inspection checklists are developed to assist in

- 5.3 Pump overhaul or repairs are carried out
- 5.4 A pump maintenance record is kept, including details of the pump and all pumping system components for ordering
- 6 Carry out troubleshooting on pumping systems
  - 6.1 Lack of discharge and/or pressure are investigated and settings or components changed
  - 6.2 Loss of water suction is investigated and alteration made to placement or leakages fixed
  - 6.3 Cavitation in pumps is investigated and settings or components changed
  - 6.4 Excessive power consumption is investigated and design and pump selection reviewed and checks made for mechanical defects

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- interpret pump curves
- calculate pumping requirements
- select pumps, filters and valves
- calculate pressure loss due to irrigation components
- position pumps, valves and filters
- open and closing valves
- pressure test pumps
- monitor performance of pumps, valves and filters
- service, maintain and replace pumps, valves and filters
- use pressure testing equipment
- use recorded information to review energy and water efficiency for an irrigation system
- identify adverse environmental impacts of irrigation pumping activities and appropriate remedial action
- implement and follow relevant enterprise OHS and environmental policies and procedures.

### Required knowledge includes:

---

#### Knowledge of:

- the relevant statutory and authority requirements related to the installation of commissioning domestic irrigation pumps

- levelling and alignment processes
- the application of mechanical, hydraulic and electrical principles
- properties of water including pressure and flow rates
- selection factors for pumps
  - source of water and lift
  - the required pumping flow rate and pressure
  - the total suction head
  - the total dynamic head
- types of pumps and application in irrigation
  - centrifugal
  - vertical turbine
  - submersible
  - propeller
- advantages and disadvantages of each pump type
- types suitable as booster and floating pumps
- pump power requirements
- discharge and flow rates
- pump efficiency
- minimum pressures for emitters and sprinkler heads
- types of impellers and their use
- cavitation - cause and effect
- net positive suction head (NPSH)
- pump positioning (driver alignment and suction length)
- pump components and their principles of operation
- pump gauges and controls
- types of valves
- automatic pump switches
  - timers
  - pressure switches
  - irrigation controllers
  - flow switches
- installation factors
  - adequate space, head room, ventilation and lighting
  - correct alignment procedures of pump and motor shafts with direct coupled units
  - provision for adjustment and ease of dismantling
- priming and operating pumps
- pump performance and pressure testing
- the sources of information and the processes for the calculation of material requirements and flow rates
- the process of installing and commissioning domestic irrigation pumps
- routine preventative maintenance

- overhaul or repair operations
- environmental procedures for installing and maintaining irrigation pumping systems
- OHS legislation.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• select pumps and pumping equipment to meet design requirements</li> <li>• install and test pumps</li> <li>• develop procedures to maintain pumping systems</li> <li>• commission and test the pumping system</li> <li>• carry out troubleshooting.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<b><i>Irrigation pumping systems</i></b> may include:	all types of pumps and components (including filters and valves) used to move water to or through an irrigation system.

<p><i>Types of pumps</i> may include:</p>	<ul style="list-style-type: none"> <li>• centrifugal (belt driven or coupled) <ul style="list-style-type: none"> <li>• volute</li> <li>• diffuser</li> <li>• turbine</li> <li>• mixed flow</li> <li>• axial flow</li> <li>• radial flow propeller</li> <li>• electro-submersible</li> </ul> </li> <li>• rotary <ul style="list-style-type: none"> <li>• gear</li> <li>• lobe</li> <li>• screw</li> <li>• vane</li> </ul> </li> <li>• reciprocating <ul style="list-style-type: none"> <li>• piston</li> <li>• plunger</li> <li>• simplex</li> <li>• duplex</li> <li>• multiplex.</li> </ul> </li> </ul>
<p><i>Types of valves</i> may include:</p>	<ul style="list-style-type: none"> <li>• air release valves</li> <li>• air replenishment valves</li> <li>• backflow prevention valves</li> <li>• ball valves</li> <li>• butterfly valves</li> <li>• check valves</li> <li>• float valves</li> <li>• flow control valves</li> <li>• flow measuring valves</li> <li>• foot valves</li> <li>• gate valves</li> <li>• globe valves</li> <li>• pressure regulating valves</li> <li>• pressure relief valves</li> <li>• Schrader valves</li> <li>• scour valves</li> <li>• solenoid valves (pilot operated or direct acting).</li> </ul>
<p><i>Types of filters</i> may include:</p>	<ul style="list-style-type: none"> <li>• centrifugal sand filters</li> <li>• media filters</li> <li>• screen or disc filters.</li> </ul>
<p><i>Irrigation controllers</i> may include:</p>	<p>a range from simple time switches operating a single</p>

	valve to programmable controllers operating a large number of valves on a complex schedule.

## Unit Sector(s)

Irrigation

# **AHCIRG411A Construct and install a low volume irrigation system**

## **Modification History**

Not applicable.

## **Unit Descriptor**

This Unit covers the process of constructing and installing a low volume irrigation system and defines the standard required to: establish the requirements of the system; implement operational procedures for the project; establish and organise resources; supervise on-site construction; and commission the system.

## **Application of the Unit**

This Unit applies to irrigation site supervisors and installation project managers who are responsible for the construction and installation of low volume irrigation systems.

## **Licensing/Regulatory Information**

Not applicable.

## **Pre-Requisites**

Not applicable.

## **Employability Skills Information**

This Unit contains employability skills.

## **Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop and implement construction procedures	1.1 Employment procedures and contract management procedures are developed 1.2 Procedures for controlling and recording site deliveries are established 1.3 Procedures for recording the hire of plant and equipment are determined 1.4 OHS procedures are established, including risk assessment 1.5 Client, authorities and agencies are notified of the schedule of works 1.6 Procedures for dealing with environmental issues associated with construction work are determined
2 Interpret the <i>low volume irrigation system</i> design for the site	2.1 The purpose, scale and required output of the irrigation system is determined 2.2 The landscape of the site is assessed 2.3 Construction requirements are determined and verified with the designer 2.4 Components are selected to meet design specifications and site requirements
3 Organise resource requirements	3.1 Tasks and timelines are nominated with resources required for each 3.2 Labour requirements are organised 3.3 Parts and equipment are delivered to the site and checked 3.4 Equipment and machinery is selected and maintained 3.5 Jobs and tasks are allocated to the work team 3.6 Safety induction is carried out for the task and site
4 Supervise installation and construction	4.1 The site is prepared and set out 4.2 The main lateral line is laid out 4.3 Submains and flushing manifold are inserted 4.4 Risers, emitters and other components are installed
5 Complete installation work and test components	5.1 Water supply is connected 5.2 Emitters are checked for optimal coverage and efficiency 5.3 Valves are set to allow water to targeted areas 5.4 The low volume system is started up and flushed 5.5 Measuring devices and controllers are attached to the system
6 Commission system	6.1 Operating faults are identified and corrective actions taken to meet design specifications 6.2 Testing/monitoring equipment is calibrated to

manufacturer's specifications

6.3 Test procedures are carried out and recorded

6.4 System is handed over operating in accordance with design specifications

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- interpret irrigation designs
- develop operational procedures
- implement employment procedures
- conduct OHS risk assessment
- supervising installation tasks:
  - set out and prepare site
  - lay out and mark lateral location
  - inserting submains and flushing manifold
  - inserting risers and emitters
  - install irrigation components
  - complete installation work and test components
  - checking and cleaning backwash filter
  - start-up procedures
  - checking and cleaning backwash filter
  - operating specifications for pressures and flow rates
  - setting up irrigation controllers
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a wide range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

---

#### Knowledge of:

- characteristics and operation of joints, valves and sprinkler components

- water quality and water filtration techniques
- calculations for installing low volume irrigation systems
- behaviour of water on varying terrain and soil types
- distribution uniformity
- soil water retention testing techniques
- volume and pressure requirements
- pump capacity
- types of pumps and water flow rates
- start-up procedures
- operating specifications for pressures and flow rates
- setting up irrigation controllers
- setting up fertigation equipment
- commissioning procedures
- employment procedures
- project management principles
- design interpretation
- safe work practices for construction
- licensing requirements for electrical work.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish the requirements of the system</li> <li>• implement operational procedures for the project</li> <li>• establish and organise resources</li> <li>• supervise on-site construction</li> <li>• commission the system.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Low volume irrigation systems</i> may include:	any systems that operate under comparatively low volume and pressure including micro irrigation, pop-ups at less than 0.1 litres/second, and drippers.

4 Supervise installation and construction	4.1 Plan is interpreted and installers are supervised and work is monitored to conform to the plan. 4.2 Components are assembled and connected according to the plan, and joints are completed and tested according to manufacturer specifications. 4.3 Fittings and valves are fitted and adjusted to the requirements of the installation plan, and all joints are secured according to enterprise guidelines. 4.4 Pumping system is installed and tested
5 Complete installation work and test components	5.1 Water supply is connected 5.2 The system is started up and flushed 5.3 Sprinklers are checked for optimal coverage and efficiency 5.4 Measuring devices and controllers are attached to the

system

- 6 Commission system
- 6.1 Operating faults are identified and corrective actions taken to meet design specifications
  - 6.2 Testing/monitoring equipment is calibrated to manufacturer's specifications
  - 6.3 Pressure testing is carried out and compared to specifications
  - 6.4 Adjustments are made as required
  - 6.5 The system is handed over in compliance with design specifications

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- interpret irrigation designs
- develop operational procedures
- implement employment procedures
- conduct OHS risk assessment
- supervise operational tasks
  - earth moving and construction
  - power and pumping plant installation
  - supply and distribution pipeline laying and joining
  - sprinkler lateral pipelines laying and joining
  - setting up irrigation controllers
  - pressure testing of the system
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

---

#### Knowledge of:

- calculations for installing sprinkler irrigation systems

- behaviour of water on varying terrain and soil types
- soil water retention testing techniques
- organising equipment and materials for installation work
- water quality and water filtration techniques
- pump capacity
- types of pumps and water flow rates

4 Supervise installation and construction	4.1 Installers are supervised and work is monitored to conform to the design specification 4.2 Components are assembled and connected according to the plan, and joints are completed and tested according to manufacturer specifications 4.3 Sprinklers, pressure regulators and hose directors are fitted and adjusted to comply with the requirements of the installation plan, and all joints are secured 4.4 Gear box and control panel are fitted 4.5 Wheels are fitted and tensioned 4.6 Pumping system is installed and tested
5 Complete installation work and test components	5.1 Water supply is connected 5.2 Sprinklers are checked for optimal coverage and efficiency

- 5.3 The system is started up and flushed
- 5.4 Measuring devices are attached to the system
- 6 Commission system
  - 6.1 Operating faults are identified and corrective actions taken to meet design specifications
  - 6.2 Testing/monitoring equipment is calibrated to manufacturer's specifications
  - 6.3 Testing is carried out and compared to specifications
  - 6.4 Adjustments are made as required
  - 6.5 The system is handed over in compliance with design specifications

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- interpret irrigation designs
- develop operational procedures
- implement employment procedures
- conduct OHS risk assessment
- supervision of workers and use of machinery to
  - lay out components for construction
  - join span pipes with correctly tensioned bolts
  - connect Vjack trusses in sequence to bow the span
  - connect goose necks and hose connectors
  - fit pre-cut drop hoses and connect sprinklers
  - assemble sprinklers, pressure regulators and hose directors
  - fit gear box and control panel
  - fit and tension wheels
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge includes:****Knowledge of:**

- pump capacity
- types of pumps and water flow rates
- volume and pressure requirements
- characteristics and operation of moving sprinkler systems
- calculations for installing moving sprinkler irrigation systems
- components and sequence of construction
- water quality and water filtration techniques
- commissioning procedures
- system operation and testing for distribution uniformity
- safe work practices for construction
- licensing requirements for electrical work.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## AHCIRG414A Construct and install a surface irrigation system

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of constructing and installing a surface irrigation system and defines the standard required to: establish the requirements of the system; implement operational procedures for the project; establish and organise resources; supervise on-site construction; and commission the system.

### Application of the Unit

This Unit applies to irrigation site supervisors and installation project managers who are responsible for the construction and installation of surface irrigation systems.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop and implement construction procedures	1.1 Employment procedures and contract management procedures are developed 1.2 Procedures for controlling and recording site deliveries are established 1.3 Procedures for recording the hire of plant and equipment are determined 1.4 OHS procedures are established, including risk assessment 1.5 Client, authorities and agencies are notified of the schedule of works 1.6 Procedures for dealing with environmental issues associated with construction work are determined
2 Interpret the <i>surface irrigation system</i> design for the site	2.1 The purpose, scale and required output of the irrigation system is determined 2.2 The landscape of the site is assessed 2.3 Construction requirements are determined and verified with the designer 2.4 Components are selected to meet design specifications and site requirements
3 Organise resource requirements	3.1 Tasks and timelines are nominated with resources required for each 3.2 Labour requirements are organised 3.3 Parts and equipment are delivered to the site and checked 3.4 Equipment and machinery is selected and maintained 3.5 Jobs and tasks are allocated to the work team 3.6 Safety induction is carried out for the task and site
4 Supervise installation and construction	4.1 Trenches are excavated to specifications 4.2 Earth works are carried out 4.3 Bay outlets and gates are constructed 4.4 Pipes are laid and joined 4.5 Fittings and valves are fitted and adjusted to the requirements of the installation plan, and all joints are secured according to enterprise guidelines 4.6 Pumping system is installed and tested
5 Complete installation work and test components	5.1 System is checked for water movement and volume 5.2 Measuring devices and controllers are attached to the system
6 Commission system	6.1 The system is started up and flushed 6.2 Valves are set allowing for water to targeted areas

- 6.3 Operating faults are identified and corrective actions taken to meet design specifications
- 6.4 Testing/monitoring equipment is calibrated to manufacturer's specifications
- 6.5 Adjustments are made as required
- 6.6 The system is handed over in compliance with design specifications

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- interpret irrigation designs
- develop operational procedures
- implement employment procedures
- conduct OHS risk assessment
- supervise workers in:
  - earth moving and construction procedures
  - power and pumping plant installation
  - pump and gated pipe installation
  - construction of canals, channels, head ditches, beds, check structures, tailwater holding ponds
- estimate quantities and volumes of soil to be moved
- document requirements for structures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

---

#### Knowledge of:

- water quality and water filtration techniques
- site preparation and construction procedures
- calculations for installing surface irrigation systems

- behaviour of water on varying terrain and soil types
- soil water retention testing techniques
- organising equipment and materials for installation work
- water quality and water filtration techniques
- labour requirements and management
- irrigation system components and operating specifications
- environmental impacts of surface irrigation
- OHS legislation and safe work procedures.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish the requirements of the system</li> <li>• implement operational procedures for the project</li> <li>• establish and organise resources</li> <li>• supervise on-site construction</li> <li>• commission the system.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Surface irrigation systems</i> may include:	any systems that apply water across the surface of a levelled or contoured area. These include furrow, border and basin irrigation.
--	---

## Unit Sector(s)

Irrigation

# AHCIRG415A Interpret and apply irrigation designs

## Modification History

Not applicable.

## Unit Descriptor

This Unit of Competency specifies the outcomes required to interpret the irrigation design for an installation site and defines the standard required to: interpret symbols and abbreviations on plans and drawings; define the placement and function of irrigation structures; plan for construction works on the site; select and verify system components; and provide instructions to staff on the site.

## Application of the Unit

This Unit applies to irrigation site supervisors and installation project managers who are responsible for interpreting irrigation designs, plans, drawings and specifications and translating them into an installation site operations plan

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify the key features on an <i>irrigation design</i>	1.1 Commonly used symbols and abbreviations on plans are identified, understood and applied 1.2 Common irrigation terms used on plans are identified, understood and applied 1.3 Key features of irrigation plans, elevations and sections are identified 1.4 Scale, elevations and sections are identified from drawings
2 Define the placement and function of the irrigation system	2.1 The proposed purpose and capacity of the irrigation system is identified 2.2 The designed system is positioned in relation to the landscape of the site 2.3 Environmental impacts of the irrigation system, and its installation, are identified from the design 2.4 The plans, drawings and specifications for an irrigation design are interpreted 2.5 'As constructed' drawings are prepared
3 Mark out structures	3.1 Boundaries of the site are marked 3.2 Existing irrigation infrastructure on the site is identified 3.3 Electricity and communications infrastructure is identified on the site plan, marked out and safety procedures developed 3.4 Remnant vegetation to be retained is marked out 3.5 Proposed pipelines identified on the plan are pegged out 3.6 Proposed irrigation structures identified on the plan are pegged out
4 Estimate earth moving requirements for construction	4.1 Levels are taken and earthworks drawings are interpreted 4.2 Earth to be relocated or removed from the site is estimated 4.3 Sequence of earthworks is established and communicated 4.4 Materials required for irrigation structures are listed and quantified 4.5 Construction requirements are verified with designer
5 Select pumps and system components	5.1 Design specifications are interpreted for water volume, pressure and delivery pattern required 5.2 Pumping system is selected to meet design specifications and site requirements 5.3 Irrigation system components are selected to meet design specifications and site requirements 5.4 Component selection is verified with designer

- |  |   |
|--|---|
| 6 Mark out locations of all components | 6.1 The sequence of operations for installation is established                              |
|  | 6.2 The delivery and storage area for components is identified                              |
|  | 6.3 Placement of all components is identified from the design and markings made on the site |
| 7 Develop instructions for staff       | 7.1 Environmental hazards and strategies are included in instructions                       |
|  | 7.2 Sequence of activities and work duties is documented                                    |
|  | 7.3 OHS hazards and risk controls are communicated  |
|  | 7.4 Construction schedule is provided to staff  |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- read contour maps and interpret elevations and distances
- marking out procedures
- interpret technical drawings and site plans
- calculate pressures, flows, velocities and friction losses
- determine efficiency of the system with varying system components
- follow relevant enterprise OHS and environmental procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

---

#### Knowledge of:

- interpretation of plans and general and technical specifications
- hydraulic calculations
- selection of water pumping and distribution components delivery based on specifications and requirements
- pumps and pumping system components
- erosion control and design principles
- levels and levelling

- earthmoving principles
- principles of native topsoil conservation and protection
- Occupational Health and Safety (OHS) and environmental legislation, codes of practice and enterprise procedures.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• interpret symbols and abbreviations on plans and drawings</li> <li>• define the placement and function of irrigation structures</li> <li>• plan for construction works on the site</li> <li>• select and verify system components</li> <li>• provide instructions to staff on the site.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<b><i>Irrigation designs</i></b> may include:	plans, drawings and specifications covering low volume, sprinkler, moving sprinkler, surface or

	irrigation drainage systems.
--	------------------------------

## Unit Sector(s)

Irrigation

## AHCIRG416A Supervise low volume irrigation maintenance

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of supervising a maintenance program for a low volume irrigation system and defines the standard required to: develop maintenance procedures; supervise maintenance of irrigation components and testing equipment; supervise maintenance of the irrigation area; and record and report maintenance activities.

### Application of the Unit

This Unit applies to irrigation site supervisors and managers who are responsible for the maintenance program for low volume irrigation.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop a <i>maintenance program</i> for a <i>low volume irrigation system</i>	1.1 Maintenance requirements for irrigation components and structures are established 1.2 Maintenance requirements for the irrigation site are established 1.3 The frequency of maintenance activities required are determined and a schedule is developed 1.4 Maintenance activities are costed out in terms of required staff, materials and equipment 1.5 OHS risks associated with the maintenance program are assessed and suitable controls implemented 1.6 The environmental impacts of maintenance activities are minimised 1.7 A system for reporting maintenance activities is developed
2 Supervise maintenance of low volume irrigation components	2.1 Maintenance checklists are developed for irrigation components 2.2 Component operation is systematically monitored and operating faults are identified and appropriate action taken 2.3 Abnormal operation or frequent and recurring breakdowns are identified, investigated and maintenance organised as required 2.4 Situations requiring expert advice are identified and specialist assistance sought in accordance with site procedures 2.5 Equipment condition is routinely reviewed to ensure and maintain efficient operations
3 Carry out <i>maintenance of testing equipment</i>	3.1 Preventative maintenance is performed 3.2 Equipment wear and faults are identified and reported 3.3 Minor repairs are performed within limits of authorisation 3.4 Defective parts are replaced and adjustments made 3.5 Expert help is sought where difficulties are encountered 3.6 Maintenance and calibration records are updated
4 Supervise pest and weed control in an irrigated area	4.1 Evidence of pests is assessed and integrated control measures appropriate to type and species of infestation are determined 4.2 Areas of weed infestation, which may be reduced or eradicated, are located and species identified 4.3 Integrated control methods are selected to control pests and weeds 4.4 Control methods are scheduled at the optimum time with

- minimal damage to the crop
- 4.5 Records of the severity of infestations and treatments are maintained
- 5 Complete records of irrigation system maintenance
- 5.1 Records of maintenance activities are maintained
- 5.2 Results of maintenance works are assessed against the maintenance program

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- inspect irrigation system
- test irrigation equipment
- test emitter output and function
- check connections
- service filter strainer periodically
- ensure proper operation of automatic flush valves
- confirm operational pressures
- maintain testing equipment
- identify pests and weeds in the irrigated area
- use pest and weed control strategies
- carry out control systems checks
- supervise minor repairs of equipment
- identify the need for, and schedule, major repairs or replacements
- maintain testing equipment
- record all test results clearly and concisely with attention to detail
- dispose of unused or waste materials from site in an environmentally safe and sensitive manner
- collate records and analyse performance
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- implement and follow relevant enterprise OHS and environmental policies and procedures.

### Required knowledge includes:

---

#### Knowledge of:

- irrigation system components
- operational and maintenance requirements

- develop enterprise procedures for pre-season, irrigation and post-season maintenance
- pre and post-season maintenance covering
  - emitter parts
  - emitter operating pressures
  - emitter output
  - emitter distribution uniformity
  - pumping and distribution systems
- visual checks for blockages or signs of wear in emitters
- pressure testing as per procedures
- flushing and checking of lines
- developing a maintenance program and checklists
- pest and weed control
- environmental procedures for irrigation maintenance
- OHS hazard identification and risk assessment.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• develop maintenance procedures</li> <li>• supervise maintenance of irrigation components and testing equipment</li> <li>• supervise maintenance of the irrigation area</li> <li>• record and report maintenance activities.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Maintenance programs</i></b> may include:	preventative maintenance carried out at end of season or throughout the irrigation season, including the regular replacement of irrigation components.
<b><i>Low volume irrigation systems</i></b> may include:	low volume irrigation systems include systems that operate under comparatively low volume and pressure including micro irrigation, pop-ups at less than 0.1 litres/second, and drippers.
<b><i>Maintenance of testing equipment</i></b> may include:	replacing 'remove and replace' components; lubrication; working adjustments to tolerances; cleaning and storing; and completing usage records.

## Unit Sector(s)

Irrigation

## AHCIRG417A Supervise sprinkler irrigation maintenance

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of supervising a maintenance program for a sprinkler irrigation system and defines the standard required to: develop maintenance procedures; supervise maintenance of irrigation components and structures; check and service testing equipment; supervise maintenance of the irrigation area; and record and report maintenance activities.

### Application of the Unit

This Unit applies to irrigation site supervisors and managers of irrigation systems who are responsible for maintenance programs for sprinkler irrigation.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop a <i>maintenance program</i> for a <i>sprinkler irrigation system</i>	1.1 Maintenance requirements for irrigation components and structures are established 1.2 Maintenance requirements for the irrigation site are established 1.3 The frequency of maintenance activities required are determined and a schedule is developed 1.4 Maintenance activities are costed out in terms of required staff, materials and equipment 1.5 OHS risks associated with the maintenance program are assessed and suitable controls implemented 1.6 The environmental impacts of maintenance activities are minimised 1.7 A system for reporting maintenance activities is developed
2 Supervise maintenance of sprinkler irrigation components	2.1 Maintenance checklists are developed for irrigation components 2.2 Component operation is systematically monitored and operating faults are identified and appropriate action taken 2.3 Abnormal operation or frequent and recurring breakdowns are identified, investigated and maintenance organised as required 2.4 Situations requiring expert advice are identified and specialist assistance sought in accordance with site procedures 2.5 Equipment condition is routinely reviewed to ensure and maintain efficient operations
3 Supervise maintenance of sprinkler irrigation structures	3.1 Maintenance checklists are developed for irrigation components 3.2 Structures are inspected as necessary to locate and evaluate defects 3.3 Appropriate repair methods are identified to ensure defect is repaired effectively 3.4 Structures are repaired or replaced according to requirements 3.5 Materials required for job are identified and organised as required to enable appropriate maintenance of components 3.6 <i>Testing equipment</i> is maintained
4 Supervise pest and weed control in an irrigated area	4.1 Evidence of pests is assessed and integrated control measures appropriate to type and species of infestation are determined 4.2 Areas of weed infestation on irrigation works are located

- and species identified
- 4.3 Integrated control methods are selected to control pests and weeds
- 4.4 Control methods are scheduled at the optimum time with minimal damage to desired plants
- 4.5 Severity of infestations and records of treatments are maintained
- 5 Complete records of irrigation system maintenance
  - 5.1 Records are maintained of maintenance activities
  - 5.2 Results of maintenance works are assessed against the maintenance program

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- develop enterprise procedures for pre-season, irrigation and post-season maintenance
- inspect irrigation system
- test irrigation equipment
- service irrigation equipment
- check sprinkler output and function
- remove and replace valves and filters
- check controllers
- carry out control systems checks
- supervise minor repairs of equipment
- identify the need for, and schedule, major repairs or replacements
- record all test results clearly and concisely with attention to detail
- dispose of unused or waste materials from site in an environmentally safe and sensitive manner
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- implement and follow relevant enterprise OHS and environmental policies and procedures
- identify OHS hazards and implement safe work procedures.

### Required knowledge includes:

---

#### Knowledge of:

- irrigation system components
- operational and maintenance requirements

- develop enterprise procedures for pre-season, irrigation and post-season maintenance
- pre and post-season maintenance covering
- system components
- sprinkler operating pressures
- sprinkler output
- sprinkler distribution uniformity
- pumping and distribution systems
- drainage systems
- visual checks for blockages or signs of wear in components
- pressure testing as per procedures.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• develop maintenance procedures</li> <li>• supervise maintenance of irrigation components and testing equipment</li> <li>• supervise maintenance of irrigation structures</li> <li>• supervise maintenance of the irrigation area</li> <li>• record and report maintenance activities.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may

be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<i>Maintenance programs</i> may include:	preventative maintenance carried out at end of season or throughout the irrigation season, including the regular replacement of irrigation components.
<i>Sprinkler irrigation systems</i> may include:	describe systems that use spray or rotor type sprinklers to distribute irrigation water at higher volume including pop-up sprinklers, fixed, and movable sprinklers (e.g. K Line and Ezy Shift).
Maintenance of <i>testing equipment</i> may include:	replacing 'remove and replace' components; lubrication; working adjustments to tolerances; cleaning and storing; and completing usage records.

## Unit Sector(s)

Irrigation

# AHCIRG418A Supervise moving sprinkler irrigation maintenance

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of supervising a maintenance program for a sprinkler irrigation system and defines the standard required to: develop maintenance procedures; supervise maintenance of irrigation components and structures; check and service testing equipment; supervise maintenance of the irrigation area; and record and report maintenance activities.

## Application of the Unit

This Unit applies to irrigation site supervisors and managers of irrigation systems who are responsible for maintenance programs for moving sprinkler irrigation.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop a <i>maintenance program</i> for a <i>moving sprinkler irrigation system</i>	1.1 Maintenance requirements for irrigation components and structures are established 1.2 Maintenance requirements for the irrigation site are established 1.3 The frequency of maintenance activities required are determined and a schedule is developed 1.4 Maintenance activities are costed out in terms of required staff, materials and equipment 1.5 OHS risks associated with the maintenance program are assessed and suitable controls implemented 1.6 The environmental impacts of maintenance activities are minimised 1.7 A system for reporting maintenance activities is developed
2 Supervise maintenance of moving sprinkler irrigation components	2.1 Maintenance checklists are developed for irrigation components 2.2 Component operation is systematically monitored and operating faults are identified and appropriate action taken 2.3 Abnormal operation or frequent and recurring breakdowns are identified, investigated and maintenance organised as required 2.4 Situations requiring expert advice are identified and specialist assistance sought in accordance with site procedures 2.5 Equipment condition is routinely reviewed to ensure and maintain efficient operations
3 Supervise maintenance of moving sprinkler irrigation structures	3.1 Maintenance checklists are developed for irrigation components 3.2 Structures are inspected as necessary to locate and evaluate defects 3.3 Appropriate repair methods are identified to ensure defect is repaired effectively 3.4 Structures are repaired or replaced according to requirements 3.5 Materials required for job are identified and organised as required to enable appropriate maintenance of components 3.6 <i>Testing equipment</i> is maintained
4 Complete records of irrigation system maintenance	4.1 Records are maintained of maintenance activities 4.2 Results of maintenance works are assessed against the maintenance program

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- develop maintenance procedures and demonstrate the skills for regular and end of season maintenance tasks to:
  - change the engine oil and filter
  - replace the air and fuel filters
  - grease drive shafts on pump, and motor
  - check spark plugs on gas, propane or natural gas motors
  - drain, flush and refill the cooling system
  - refill the drip oil reservoir and allow oil to drain into the drip line based on pump column length
  - ensure that the right-angle gear head is free moving and clean and lubricate non-reverse pins
  - check for malfunctioning sprinklers
  - check injection pump and safety equipment operation
  - inspect lift base and arms for any stress marks or cracks
  - check all bolts for correct torques
- develop enterprise procedures for pre-season, irrigation and post-season maintenance
- inspect irrigation system
- test irrigation equipment
- carry out visual checks for blockages or signs of wear in components
- pressure test as per procedures
- carry out control systems checks
- supervise minor repairs of equipment
- identify the need for, and schedule, major repairs or replacements
- record all test results clearly and concisely with attention to detail
- dispose of unused or waste materials from site
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- implement and follow relevant enterprise OHS and environmental policies and procedures.

### Required knowledge includes:

---

#### Knowledge of:

- irrigation system components

- operational and maintenance requirements
- pre and post-season maintenance covering:
  - system components
  - sprinkler operating pressures
  - sprinkler output
  - sprinkler distribution uniformity
  - pumping and distribution systems
  - drainage systems
- environmental impacts of irrigation maintenance
- OHS hazards and safe work procedures.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• develop maintenance procedures</li> <li>• supervise maintenance of irrigation components and testing equipment</li> <li>• supervise maintenance of irrigation structures</li> <li>• supervise maintenance of the irrigation area</li> <li>• record and report maintenance activities.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may

be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<i>Moving sprinkler systems</i> may include:	moving sprinkler irrigation systems describe specifically hard and soft reel self-travelling irrigators, lateral move systems and centre pivots.
<i>Maintenance programs</i> may include:	preventative maintenance carried out at end of season or throughout the irrigation season, including the regular replacement of irrigation components.
Maintenance of <i>testing equipment</i> may include:	replacing 'remove and replace' components; lubrication; working adjustments to tolerances; cleaning and storing; and completing usage records.

## Unit Sector(s)

Irrigation

## **AHCIRG419A Supervise surface irrigation maintenance**

### **Modification History**

Not applicable.

### **Unit Descriptor**

This Unit covers the process of supervising a maintenance program for a surface irrigation system and defines the standard required to: develop maintenance procedures; supervise maintenance of irrigation components and structures; check and service testing equipment; supervise maintenance of the irrigation area; and record and report maintenance activities.

### **Application of the Unit**

This Unit applies to irrigation site supervisors and managers who are responsible for the maintenance program for surface irrigation.

### **Licensing/Regulatory Information**

Not applicable.

### **Pre-Requisites**

Not applicable.

This Unit contains employability skills.

### **Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop a <i>maintenance program</i> for a <i>surface irrigation system</i>	1.1 Maintenance requirements for irrigation components and structures are established 1.2 Maintenance requirements for the irrigation site are established 1.3 The frequency of maintenance activities required are determined and a schedule is developed 1.4 Maintenance activities are costed out in terms of required staff, materials and equipment 1.5 OHS risks associated with the maintenance program are assessed and suitable controls implemented 1.6 The environmental impacts of maintenance activities are minimised 1.7 A system for reporting maintenance activities is developed
2 Supervise maintenance of surface irrigation components	2.1 Maintenance checklists are developed for irrigation components 2.2 Component operation is systematically monitored and operating faults are identified and appropriate action taken 2.3 Abnormal operation or frequent and recurring breakdowns are identified, investigated and maintenance organised as required 2.4 Situations requiring expert advice are identified and specialist assistance sought in accordance with site procedures 2.5 Equipment condition is routinely reviewed to ensure and maintain efficient operations
3 Supervise maintenance of surface irrigation structures	3.1 Maintenance checklists are developed for irrigation components 3.2 Structures are inspected as necessary to locate and evaluate defects 3.3 Appropriate repair methods are identified to ensure defect is repaired effectively 3.4 Structures are repaired or replaced according to requirements 3.5 Materials required for job are identified and organised as required to enable appropriate maintenance of components 3.6 <i>Testing equipment is maintained</i>
4 Supervise pest and weed control in an irrigated area	4.1 Evidence of pests is assessed and integrated control measures appropriate to type and species of infestation are determined 4.2 Areas of weed infestation on irrigation works are located

- and species identified
- 4.3 Integrated control methods are selected to control pests and weeds
- 4.4 Control methods are scheduled at the optimum time with minimal damage to desired plants
- 4.5 Severity of infestations and records of treatments are maintained
- 5 Complete records of irrigation system maintenance
  - 5.1 Records are maintained of maintenance activities
  - 5.2 Results of maintenance works are assessed against the maintenance program

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- develop enterprise procedures for pre-season, irrigation and post-season maintenance
- carry out control systems checks
- supervise minor repairs of equipment
- identify the need for, and schedule, major repairs or replacements
- maintain testing equipment
- identify pests and weeds in the irrigated area
- use pest and weed control strategies
- record all test results clearly and concisely with attention to detail
- dispose of unused or waste materials from site in an environmentally safe and sensitive manner
- collate records and analyse performance
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- implement and follow relevant enterprise OHS and environmental policies and procedures.

### Required knowledge includes:

---

#### Knowledge of:

- irrigation system components
- operational and maintenance requirements
- pre and post-season maintenance covering:
  - system components
  - irrigation beds

- pumping systems
- drainage systems
- head and tail water structures
- irrigation systems inspection
- irrigation equipment testing
- visual checks for blockages or signs of wear in gates and valves
- volume testing as per procedures
- environmental impacts of irrigation maintenance
- hazards and implement safe work procedures.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• develop maintenance procedures</li> <li>• supervise maintenance of irrigation components and testing equipment</li> <li>• supervise maintenance of irrigation structures</li> <li>• supervise maintenance of the irrigation area</li> <li>• record and report maintenance activities.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<i>Maintenance programs</i> may include:	preventative maintenance carried out at end of season or throughout the irrigation season, including the regular replacement of irrigation components.
<i>Surface irrigation</i> may include:	systems that apply water across the surface of a levelled or contoured area. These include furrow, border and basin irrigation.
<i>Maintenance of testing equipment</i> may include:	replacing 'remove and replace' components; lubrication; working adjustments to tolerances; cleaning and storing; and completing usage records.

## Unit Sector(s)

Irrigation

## AHCIRG420A Manage a low volume irrigation system

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of managing a low volume irrigation system and defines the standard required to: develop procedures for system operation; troubleshoot faults and blockages; measure performance of the system; and benchmark energy and water efficiency of the system.

### Application of the Unit

This Unit applies to irrigation managers in the amenity horticulture and food and fibre production industries.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Ensure the <i>low volume irrigation system</i> is prepared for operation	1.1 Staff are trained in carrying out pre-start checks and routine servicing 1.2 The irrigation controller is programmed and/or adjusted to meet the required schedule 1.3 Procedures are established for adjusting valves and checking filters and emitters
2 Develop and implement start-up and shutdown procedures for a low volume irrigation system	2.1 Start-up procedures for a low volume irrigation system are developed according to system specifications and technical manuals 2.2 Shut down sequence and isolation procedures are developed according to system specifications and technical manuals 2.3 Safety/security lock off devices and signage is installed according to enterprise policy and procedures 2.4 Instructions are provided for flushing the system as required
3 Carry out trouble shooting for faults and blockages	3.1 Access to faulty components and blockages is arranged 3.2 Faulty components are removed from the system, according to system specifications and technical manuals, and repaired or disposed of in an environmentally responsible way 3.3 Replaceable components are selected from manufacturer catalogues and procured using enterprise procedures 3.4 Replacement components are installed to meet system specifications according to technical manuals
4 Measure performance of a low volume irrigation system	4.1 Variations in pressures are identified and recorded in accordance with enterprise policy and procedures 4.2 Water flow rates are measured and recorded in accordance with enterprise policy and procedures 4.3 Variations in water flow and distribution are identified and recorded in accordance with enterprise policy and procedures 4.4 Pump performance parameters are measured as necessary and recorded in accordance with enterprise policy and procedures 4.5 Variations in pump performance parameters are measured where relevant and recorded in accordance with enterprise policy and procedures 4.6 Distribution and delivery systems are inspected and malfunctions in system are identified, fixed and actions recorded in accordance with enterprise policy and procedures 4.7 Factors external to the system that may cause interference

- are identified and recorded in accordance with enterprise policy and procedures
- 5 Review system performance status
- 5.1 System pressures and variations are recorded in accordance with enterprise policy and procedures
  - 5.2 System flow rates and variations are recorded in accordance with enterprise policy and procedures
  - 5.3 Distribution uniformity and mean application rates are calculated and recorded in accordance with enterprise policy and procedures
  - 5.4 Watering depth is determined and recorded in accordance with enterprise policy and procedures
  - 5.5 Calculations are made for energy use and water efficiency and compared to industry benchmarks

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- develop and supervise procedures for starting up, carrying out operational checks and shutting down
- carry out operational tests
- measure, interpret and adjust flow rates and pressures
- operate, maintain and repair irrigation systems
- shut down and isolate components
- replace components
- access and prepare data records for both print-based and computer-based data
- use computers for recording and reporting data
- apply measuring and testing techniques
- measure output and efficiency of an irrigation system
- calculate pressure differentials, flow rates, crop yields, estimated water usage/actual water usage
- use recorded information to review energy and water efficiency for an irrigation system
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- implement and follow relevant enterprise OHS and environmental policies and procedures.

**Required knowledge includes:****Knowledge of:**

- irrigation schedules
- application rates
- irrigation times
- dripper output
- pressure variations and blockages
- salinity levels and water quality
- depth of irrigation
- low volume irrigation technologies
- component specifications
- pump types used in low volume irrigation systems and their output and efficiency ratings
- soil water retention testing techniques
- measuring and monitoring procedures for factors contributing to irrigation system delivery
- water authority standards and procedures
- best practices for reducing environmental impacts of irrigation
- OHS risk assessment.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• develop procedures for system operation</li> <li>• troubleshoot faults and blockages</li> <li>• measure performance of the system</li> <li>• benchmark energy and water efficiency of the system.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

	enterprise circumstances.
--	---------------------------

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Low volume irrigation systems*** may include:

low volume irrigation systems include systems that operate under comparatively low volume and pressure including micro irrigation, pop-ups at less than 0.1 litres/second, and drippers.

## Unit Sector(s)

Irrigation

## AHCIRG421A Manage a sprinkler irrigation system

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of managing a sprinkler irrigation system and defines the standard required to: develop procedures for system operation; troubleshoot faults and blockages; measure performance of the system; and benchmark energy and water efficiency of the system.

### Application of the Unit

This Unit applies to irrigation managers in the amenity horticulture and food and fibre production industries.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Ensure <i>sprinkler irrigation system</i> is prepared for operation	1.1 Staff are trained in carrying out pre-start checks and routine servicing 1.2 The irrigation controller is programmed and/or adjusted to meet the required schedule 1.3 Procedures are established for adjusting valves and checking filters and emitters
2 Develop and implement start-up and shutdown procedures for a sprinkler irrigation system	2.1 Start-up procedures for a sprinkler irrigation system are developed according to system specifications and technical manuals 2.2 Shut down sequence and isolation procedures are developed according to system specifications and technical manuals 2.3 Safety/security lock off devices and signage is installed according to enterprise policy and procedures
3 Carry out trouble shooting for faults and blockages	3.1 Access to faulty components and blockages is arranged 3.2 Faulty components are removed from the system, according to system specifications and technical manuals, and repaired or disposed of in an environmentally responsible way 3.3 Replaceable components are selected from manufacturer catalogues and procured using enterprise procedures 3.4 Replacement components are installed to meet system specifications according to technical manuals
4 Measure performance of a sprinkler irrigation system	4.1 Variations in pressures are identified and recorded in accordance with enterprise policy and procedures 4.2 Water flow rates are measured and recorded in accordance with enterprise policy and procedures 4.3 Variations in water flow and distribution are identified and recorded in accordance with enterprise policy and procedures 4.4 Pump performance parameters are measured as necessary and recorded in accordance with enterprise policy and procedures 4.5 Variations in pump performance parameters are measured where relevant and recorded in accordance with enterprise policy and procedures 4.6 Distribution and delivery systems are inspected and malfunctions in system are identified, fixed and actions recorded in accordance with enterprise policy and procedures 4.7 Factors external to the system that may cause interference are identified and recorded in accordance with enterprise

- policy and procedures
- 5 Review system performance status
- 5.1 System pressures and variations are recorded in accordance with enterprise policy and procedures
  - 5.2 System flow rates and variations are recorded in accordance with enterprise policy and procedures
  - 5.3 Distribution uniformity and mean application rates are calculated and recorded in accordance with enterprise policy and procedures
  - 5.4 Watering depth is determined and recorded in accordance with enterprise policy and procedures
  - 5.5 Calculations are made for energy use and water efficiency and compared to industry benchmarks

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- develop and supervise procedures for starting up, carrying out operational checks and shutting down
- carry out operational tests
- measure, interpret and adjust flow rates and pressures
- operate, maintain and repair irrigation systems
- shut down and isolate components
- replace components
- access and prepare data records for both print-based and computer-based data
- use computers for recording and reporting data
- apply measuring and testing techniques
- measure output and efficiency of an irrigation system
- calculate pressure differentials, flow rates, crop yields, estimated water usage/actual water usage
- measure output and efficiency of an irrigation system
- use recorded information to review energy and water efficiency for an irrigation system
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- implement and follow relevant enterprise OHS and environmental policies and procedures.

**Required knowledge includes:****Knowledge of:**

- develop and supervise procedures for starting up, carrying out operational checks and shutting down
- monitor system effectiveness:
  - application rates
  - irrigation times
  - sprinkler coverage and output
  - soil moisture levels
  - pressure variations and blockages
  - salinity levels and water quality
  - depth of irrigation
  - infiltration and runoff
- measure, interpret and adjust flow rates and pressures
- sprinkler irrigation technologies
- component specifications
- pump types used in sprinkler irrigation systems and their output and efficiency ratings
- weather patterns
- soil moisture testing techniques
- irrigation schedules
- environmental impacts of irrigation using water from any ground or underground source
- best practices for reducing environmental impacts of irrigation
- water in soils and plants
- water requirements of plants/crops consistent with sound environmental management
- using records to review an irrigation system.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• develop procedures for system operation</li> </ul>

	<ul style="list-style-type: none"> <li>• troubleshoot faults and blockages</li> <li>• measure performance of the system</li> <li>• benchmark energy and water efficiency of the system.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Sprinkler irrigation systems</i></b> may include:</p>	<p>sprinkler irrigation systems describe systems that use spray or rotor type sprinklers to distribute irrigation water at higher volume including pop-up sprinklers, fixed, and movable sprinklers (e.g. K Line and Ezy Shift).</p>

### Unit Sector(s)

Irrigation

## AHCIRG422A Manage a moving sprinkler irrigation system

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers the process of managing a moving sprinkler irrigation system and defines the standard required to: develop procedures for system operation; troubleshoot faults and blockages; measure performance of the system; and benchmark energy and water efficiency of the system.

### Application of the Unit

This Unit applies to irrigation managers in the food and fibre production industries.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Ensure the <i>moving sprinkler irrigation system</i> is prepared for operation	1.1 Staff are trained in carrying out pre-start checks and routine servicing 1.2 The irrigation controller is programmed and/or adjusted to meet the required schedule 1.3 Procedures are established for adjusting valves and checking filters and emitters
2 Develop and implement start-up and shutdown procedures for a moving sprinkler irrigation system	2.1 Start-up procedures for a sprinkler irrigation system are developed according to system specifications and technical manuals 2.2 Shut down sequence and isolation procedures are developed according to system specifications and technical manuals 2.3 Soil conditions for operation are specified, or tracks maintained, to reduce compaction
3 Carry out trouble shooting for faults and blockages	3.1 Access to faulty components and blockages is arranged 3.2 Faulty components are removed from the system, according to system specifications and technical manuals, and repaired or disposed of in an environmentally responsible way 3.3 Replaceable components are selected from manufacturer catalogues and procured using enterprise procedures 3.4 Replacement components are installed to meet system specifications according to technical manuals
4 Measure performance of a moving sprinkler irrigation system	4.1 Variations in pressures are identified and recorded in accordance with enterprise policy and procedures 4.2 Water flow rates are measured and recorded in accordance with enterprise policy and procedures 4.3 Variations in water flow and distribution are identified and recorded in accordance with enterprise policy and procedures 4.4 Pump performance parameters are measured as necessary and recorded in accordance with enterprise policy and procedures 4.5 Variations in pump performance parameters are measured where relevant and recorded in accordance with enterprise policy and procedures 4.6 Distribution and delivery systems are inspected and malfunctions in system are identified, fixed and actions recorded in accordance with enterprise policy and procedures 4.7 Factors external to the system that may cause interference are identified and recorded in accordance with enterprise

- policy and procedures
- 5 Review system performance status
- 5.1 System pressures and variations are recorded in accordance with enterprise policy and procedures
  - 5.2 System flow rates and variations are recorded in accordance with enterprise policy and procedures
  - 5.3 Distribution uniformity and mean application rates are calculated and recorded in accordance with enterprise policy and procedures
  - 5.4 Watering depth is determined and recorded in accordance with enterprise policy and procedures
  - 5.5 Calculations are made for energy use and water efficiency and compared to industry benchmarks

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- measure output and efficiency of an irrigation system
- develop and supervise procedures for starting up, carrying out operational checks and shutting down
- monitor system effectiveness:
  - application rates
  - irrigation times
  - sprinkler coverage and output
  - soil moisture levels
  - pressure variations and blockages
  - salinity levels and water quality
  - depth of irrigation
  - infiltration and runoff
- measure, interpret and adjust flow rates and pressures
- fix blockages and replace components
- use records to review an irrigation system.

## Required knowledge includes:

### Knowledge of:

- moving sprinkler irrigation technologies
- component specifications
- pump types used in moving sprinkler irrigation systems and their output and efficiency ratings
- servicing and maintenance of travelling mechanism
- environmental hazards of runoff and compaction
- general irrigation methods for moving sprinkler systems
- main components of moving sprinkler irrigation systems
- pump types used in moving sprinkler irrigation systems and their operation
- energy efficiency indicators/ benchmarks for moving sprinkler irrigation:
  - Application Efficiency
  - Average Application Rate
  - Instantaneous Application Rate
- soil moisture testing techniques
- soil/plant/water relationships
- water requirements of plants/crops consistent with sound environmental management
- critical measures for moisture availability:
  - readily available water
  - wilting point
  - field capacity
- monitoring soil compaction and drainage
- physical soil characteristics such as infiltration rate, water holding capacity and wetted volume in the root zone
- irrigation schedules
- environmental impacts of irrigation using water from any ground or underground source
- best practices for reducing environmental impacts of irrigation
- water requirements of plants/crops consistent with sound environmental management.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate	The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and

competency in this Unit	<p>satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• read and follow operations manual and irrigation schedules</li> <li>• carry out pre-start checks</li> <li>• operate and inspect the system</li> <li>• measure and interpret flow rates and pressures</li> <li>• identify environmental hazards</li> <li>• shut down in response to irrigation indicators.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Moving sprinkler irrigation systems</i></b> may include:</p>	<p>moving sprinkler irrigation systems describe specifically hard and soft reel self-travelling irrigators, lateral move systems and centre pivots.</p>

## Unit Sector(s)

Irrigation

# AHCIRG423A Manage a surface irrigation system

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of managing a surface irrigation system and defines the standard required to: develop procedures for system operation; troubleshoot faults and blockages; measure performance of the system; and benchmark energy use and water efficiency of the system.

## Application of the Unit

This Unit applies to irrigation managers of irrigation systems in the amenity horticulture and food and fibre production industries.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Ensure <i>the surface irrigation system</i> is prepared for operation	1.1 Staff are trained in carrying out pre-start checks and routine servicing 1.2 The irrigation controller is programmed and/or adjusted to meet the required schedule 1.3 Procedures are established for adjusting valves and checking filters and emitters
2 Develop and implement start-up and shutdown procedures for a surface irrigation system	2.1 Start-up procedures for a sprinkler irrigation system are developed according to system specifications and technical manuals 2.2 Training is provided in priming pumps and setting gates to commence irrigating 2.3 Shut down sequence and isolation procedures are developed according to system specifications and technical manuals 2.4 Soil conditions for operation are specified, or tracks maintained, to reduce compaction
3 Measure performance of a surface irrigation system	3.1 Variations in pressures at the headworks and control valves are recorded in accordance with enterprise policy and procedures 3.2 Water flow rates are measured and recorded in accordance with enterprise policy and procedures 3.3 Variations in water flow and distribution are identified and recorded in accordance with enterprise policy and procedures 3.4 Pump performance parameters are measured as necessary and recorded in accordance with enterprise policy and procedures 3.5 Variations in pump performance parameters are measured where relevant and recorded in accordance with enterprise policy and procedures 3.6 Distribution, drainage and water measurement systems are inspected and malfunctions in system are identified, fixed and actions recorded in accordance with enterprise policy and procedures 3.7 Factors external to the system that may cause interference are identified and recorded in accordance with enterprise policy and procedures
4 Review system performance status	4.1 System pressures and variations are recorded in accordance with enterprise policy and procedures 4.2 System flow rates and variations are recorded in accordance with enterprise policy and procedures

- 4.3 Distribution uniformity and mean application rates are calculated and recorded in accordance with enterprise policy and procedures
- 4.4 Watering depth is determined and recorded in accordance with enterprise policy and procedures
- 4.5 Quantity and quality of tailwater are measured, and amount of water reused
- 4.6 Calculations are made for energy use and water efficiency and compared to industry benchmarks

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- develop procedures and provide training to staff to
- set up pipes, system equipment and outlets
- use syphons
- check pressure at the headworks and control valves
- carry out running repairs on irrigation delivery and drainage systems
- carry out shut down procedures
- develop procedures for starting up, carrying out operational checks and shutting down
- provide supervision and training
- measure and record water flow rates
- identify and record variations in water flow and distribution
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- implement and follow relevant enterprise OHS and environmental policies and procedures.

## Required knowledge includes:

### Knowledge of:

- main components of surface irrigation systems
- set up of headwater, tailwater, channels and beds
- pump types used in surface irrigation systems and their operating requirements
- physical soil characteristics such as infiltration rate, water holding capacity and wetted volume in the root zone
- water in soils and plants
- water requirements of plants/crops consistent with sound environmental management
- critical measures for moisture availability:
  - readily available water
  - water holding capacity
  - wilting point
  - field capacity
  - infiltration rates
  - evapotranspiration
- soil moisture testing techniques
- environmental impacts of irrigation using water from any ground or underground source
- pump types used in surface irrigation systems and their operation
- in accordance with enterprise policy and procedures
- calculating irrigation efficiency
- using records to review an irrigation system.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• develop procedures for system operation</li> <li>• troubleshoot faults and blockages</li> <li>• measure performance of the system</li> <li>• benchmark energy use and water efficiency of the</li> </ul>

	system
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
<i>Surface irrigation systems</i> may include:	any systems that apply water across the surface of a levelled or contoured area. These include furrow, border and basin irrigation.

## Unit Sector(s)

Irrigation

# AHCIRG424A Construct and install an irrigation drainage system

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of constructing and installing an irrigation drainage system and defines the standard required to: establish the requirements of the drainage system; implement operational procedures for the project; establish and organise resources; supervise on-site construction; commission the drainage system; and rehabilitate the site.

## Application of the Unit

This Unit applies to irrigation site supervisors and installation project managers who are responsible for the construction and installation of irrigation drainage systems.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop and implement construction procedures	1.1 Employment procedures and contract management procedures are developed 1.2 Procedures for controlling and recording site deliveries are established 1.3 Procedures for recording the hire of plant and equipment are determined 1.4 OHS procedures are established, including risk assessment 1.5 Client, authorities and agencies are notified of the schedule of works 1.6 Procedures for dealing with environmental issues associated with construction work are determined
2 Organise resource requirements	2.1 Tasks and timelines are nominated with resources required for each 2.2 Labour requirements are organised 2.3 Parts and equipment are delivered to the site and checked 2.4 Equipment and machinery is selected and maintained 2.5 Jobs and tasks are allocated to the work team 2.6 Safety induction is carried out for the task and site
3 Interpret the <i>irrigation drainage system</i> design for the site	3.1 The purpose, scale and required output of the irrigation drainage system is established from the drainage plan 3.2 The landscape of the site is assessed 3.3 Construction requirements are determined and verified with the designer 3.4 Components are selected to meet design specifications and site requirements
4 Carry out preparatory work	4.1 The site is cleaned and marked out 4.2 Drainage structures are pegged out 4.3 Levels are taken and earth works planned
5 Supervise construction of the drainage system	5.1 Trenches are excavated to specification 5.2 Earth works are carried out 5.3 Drainage structures are constructed 5.4 Pipes are laid and joined 5.5 Fittings and valves are fitted and adjusted to the requirements of the installation plan, and all joints are secured according to enterprise guidelines. 5.6 Pumping system is installed and tested
6 Commission the irrigation drainage	6.1 The system is started up 6.2 Operating faults are identified and corrective actions taken

- system to meet design specifications
- 6.3 Testing/monitoring equipment is used to monitor system efficiency
  - 6.4 Adjustments are made as required
- 7 Rehabilitate the works area
- 7.1 Earthworks are resurfaced and sealed
  - 7.2 Vegetation areas are planted and maintained
  - 7.3 Waste and surplus materials are disposed of in an environmentally sound manner

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- interpret irrigation designs
- develop operational procedures
- implement employment procedures
- conduct OHS risk assessment
- supervise workers in:
  - earth moving and construction procedures
  - power and pumping plant installation
  - pump and gated pipe installation
  - construction of canals, channels, head ditches, beds, check structures, tailwater holding ponds
- estimate quantities and volumes of soil to be moved
- document requirements for structures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge includes:

---

#### Knowledge of:

- measuring and monitoring procedures for factors contributing to drainage system performance

- positive and negative environmental impacts of drainage systems
- water table and salinity measures
- water quality monitoring methods and techniques
- soil moisture measurement procedures
- water authority standards and procedures
- drainage appliances/fixtures/fittings and related
- level and align site
- types and operational parameters of drains
- components used in drainage systems
- isolation processes and procedures
- levelling and alignment processes
- regulatory requirements, codes of practice and relevant enterprise service standards relating to blockage removal, disconnection and reconnection activities
- enterprise policies and procedures
- environmental role of drainage systems
- environmental impacts of drainage systems.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish the requirements of the drainage system</li> <li>• implement operational procedures for the projec;</li> <li>• establish and organise resources</li> <li>• supervise on-site construction</li> <li>• commission the drainage system</li> <li>• rehabilitate the site.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Irrigation drainage systems*** may include:

both surface and sub-surface drainage installed to handle water which is excess to plant requirements in an irrigated area.

## Unit Sector(s)

Irrigation

# AHCIRG425A Monitor and control irrigation drainage systems

## Modification History

Not applicable.

## Unit Descriptor

This Unit covers the process of monitoring and controlling the performance and efficiency of an irrigation drainage system and defines the standard required to: identify and correcting system problems; measure, record and report soil moisture, salinity and water table depth; apply measuring and testing techniques; regulate drainage flows and clear blockages; record and report system performance.

## Application of the Unit

This Unit applies to irrigation managers in the amenity horticulture and food and fibre production industries.

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

This Unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Assess <i>irrigation drainage</i> and collection <i>systems</i>	1.1 Measurements are taken with appropriate equipment to determine drainage performance 1.2 Drainage/tail water quality is measured in accordance with OHS and enterprise policy and procedures 1.3 Water table depth is measured where required in accordance with OHS and enterprise policy and procedures 1.4 Soil salinity is measured where required in accordance with OHS and enterprise policy and procedures 1.5 Factors external to the system, which may cause interference, are identified and recorded in accordance with OHS and enterprise policy and procedures 1.6 Drainage system data is analysed and compared to the performance specified in the irrigation drainage plan
2 Regulate flows	2.1 Flow regulating systems are inspected and apply adjustments are applied necessary to achieve discharge requirements specified 2.2 Discharge flows are monitored and diversions applied to facilitate repair or emergency
3 Control and operate <i>drainage system structures</i> and processes	3.1 Processes are controlled to maintain performance specified in the irrigation drainage plan 3.2 Maintenance procedures for drainage system structures are developed and implemented 3.3 Operational conditions of the drainage system are identified, addressed and reported according to organisational requirements 3.4 Processes are integrated to improve drainage network performance
4 Troubleshoot drainage problems	4.1 A visual inspection is undertaken to determine damaged or broken components and results are recorded in accordance with Occupational Health and Safety (OHS) and enterprise policy and procedures 4.2 Areas being drained are inspected for signs of water pooling and problems are recorded in accordance with OHS and enterprise policy and procedures 4.3 Access to drainage lines is obtained to allow blockage to be cleared 4.4 Blockage is cleared or blocked section is replaced according to enterprise, environmental and OHS procedures 4.5 Drainage line is tested to confirm blockage is cleared from pipe system

- 4.6 Drainage line is repaired/resealed to permit normal use
- 4.7 The drainage site is rehabilitated
- 5 Record and report system performance status
  - 5.1 Water quality is recorded in accordance with enterprise procedures
  - 5.2 Water table depth, soil moisture and salinity are recorded in accordance with enterprise procedures
  - 5.3 Strategies that minimise the negative environmental impacts and maximise the positive impacts of the drainage system, are documented

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- identify hazards and implement safe work procedures
- apply soil moisture testing techniques
- calculate water volumes from rate and depth
- measure water table depth, soil moisture and salinity
- clear and refill drainage lines
- isolate drainage lines
- clear blockages from drainage systems
- identify adverse environmental impacts of drainage systems and appropriate remedial action
- use computers for recording and reporting drainage system data
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## Required knowledge includes:

### Knowledge of:

- measuring and monitoring procedures for factors contributing to drainage system performance
- positive and negative environmental impacts of drainage systems
- water table and salinity measures
- water quality monitoring methods and techniques
- soil moisture measurement procedures
- water authority standards and procedures
- enterprise policies and procedures
- environmental role of drainage systems.
- drainage appliances/fixtures/fittings and related
- level and align site
- types and operational parameters of drains
- components used in drainage systems
- isolation processes and procedures
- levelling and alignment processes
- regulatory requirements, codes of practice and relevant enterprise service standards relating to blockage removal, disconnection and reconnection activities
- environmental impacts of drainage systems
- OHS legislative requirements.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify and correcting system problems</li> <li>• measure, record and report soil moisture, salinity and water table depth</li> <li>• apply measuring and testing techniques</li> <li>• regulate drainage flows and clear blockages</li> <li>• record and report system performance.</li> </ul>

Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.
--	--

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Irrigation drainage systems</i></b> may include:</p>	<p>both surface and sub-surface drainage installed to handle water which is excess to plant requirements in an irrigated area.</p>
<p><b><i>Drainage system structures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• surface drains</li> <li>• culverts</li> <li>• mole drains</li> <li>• sand slit</li> <li>• sub-surface traps</li> <li>• pit and trap systems</li> <li>• dune and swale systems</li> <li>• reed beds</li> <li>• water-recycling pumps and baffles.</li> </ul>

## Unit Sector(s)

Irrigation

## AHCIRG426A Evaluate water supply for irrigation

### Modification History

Not applicable.

### Unit Descriptor

This Unit of Competency specifies the outcomes required to evaluate a water supply for an irrigation operation and defines the standard required to: determine the amount required and quality parameters for irrigation water; carry out water sampling and analyse the results; compare costing and delivery arrangements for alternative water sources; and complete purchasing arrangements.

### Application of the Unit

This Unit applies to irrigation operations managers who are responsible for sourcing irrigation water and analysing its suitability and cost.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Determine water needs for irrigation	1.1 The water needs of plants to be irrigated are determined 1.2 The permeability of the soil and deep drainage losses are calculated 1.3 Evapotranspiration rates are calculated through the growing season 1.4 Soil water deficits throughout the season are calculated based on expected rainfall 1.5 The amount of irrigation water required through the growing season is calculated
2 Assess a <i>water source</i> for water quality	2.1 Water source is tested for electrical conductivity and results analysed 2.2 Water source is tested for ionic composition and results analysed 2.3 Water source is tested for biological composition and results analysed
3 Determine cost and availability of alternative water sources	3.1 Water availability and access requirements are evaluated for water sources 3.2 Capital expenditure requirements are costed for water sources 3.3 Operating expenditure requirements are costed for water sources 3.4 Regulatory requirements for purchasing irrigation water are investigated and incorporated into business planning
4 Complete water sourcing and/or acquisition arrangements	4.1 Contractual arrangements are made for purchase or sourcing of water 4.2 Planning is carried out for short term purchasing or selling of water depending on seasonal conditions if necessary

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

#### Ability to:

- apply basic principles of hydraulics to the selection of irrigation systems, legal access and structures
- take water samples

- analyse results for electrical conductivity and ionic composition of irrigation water
- estimate the irrigation requirements of plants
- calculate water losses in an irrigation system
- compare costs for different water sources
- calculate capital and operating expenditure for a water supply system
- carry out purchasing of water rights.

### Required knowledge includes:

#### Knowledge of:

- plant water requirements in terms of water quality and frequency of supply
- types of irrigation systems
- selection of irrigation systems
- irrigation drainage, seepage, surface and subsurface drainage systems
- salinity and ionic composition impacts on soil structure and plant growth
- conveyance and disposal of drained effluent
- re-use systems, management of irrigation systems
- operations and maintenance requirements.
- water supply potential for the development of irrigation systems
- management planning and operation of water allocations
- water law
- cost benefit analysis
- capital and operating expenditure calculations to source water
- environmental and energy-use implications of resource utilisation and development
- efficiency of irrigation systems and long-term viability
- climatic factors in irrigation development, rainfall, evaporation, evapotranspiration and hydrology
- plant physiology and plant water use, transpiration crop water requirements in terms of water quality and quantity
- soils and water, soil moisture retention and movement, plant root zones and development, infiltration and leaching
- irrigation scheduling, soil moisture measurement.

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate	The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and

competency in this Unit	<p>satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• determine the amount required and quality parameters for irrigation water</li> <li>• carry out water sampling and analyse the results</li> <li>• compare costing and delivery arrangements for alternative water sources</li> <li>• complete purchasing arrangements.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Water sources</i></b> may include:	<ul style="list-style-type: none"> <li>• town water</li> <li>• permanent watercourses</li> <li>• storages</li> <li>• underground water</li> <li>• recycled water.</li> </ul>

## Unit Sector(s)

Irrigation

# **AHCIRG427A Plan and supervise on-site irrigation system installation and construction work**

## **Modification History**

Not applicable.

## **Unit Descriptor**

This Unit covers planning and supervising on-site irrigation system installations and construction work and defines the standard required to: identify operational requirements from contract documentation; develop a project plan with tasks, responsibilities, timelines and costs; organise the installation of supplies and equipment; implement and monitor on site operations; test the installation or construction against specifications; and monitor budgets and maintain documentation.

## **Application of the Unit**

This Unit applies to irrigation installation project managers who work in the irrigation servicing, amenity horticulture and food and fibre production industries.

## **Licensing/Regulatory Information**

Not applicable.

## **Pre-Requisites**

Not applicable.

## **Employability Skills Information**

This Unit contains employability skills.

## **Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Appraise contract documentation and determine operational requirements	1.1 Copy of building approval and conditions is obtained as required 1.2 Contract documentation is reviewed for any unusual aspects of construction, use of materials and penalties 1.3 Availability of sub-contractors is ascertained and selected to suit job requirements 1.4 Availability of materials is checked with suppliers 1.5 Site access limitations are assessed 1.6 Relevant authorities controlling construction work advised of commencement date for project as required 1.7 Procedures are developed for site deliveries, plant hire and hazard to the environment
2 Prepare project schedule for <i>irrigation system</i> installation and construction	2.1 Construction operations are prepared in sequence 2.2 Operations are entered into a manually prepared schedule or computer based software package 2.3 'Critical path' is identified and schedule revised with new activities/projects, as needed, and documented 2.4 Timeframe is adjusted to take account of anticipated delays
3 Determine all the required resources for project	3.1 Temporary services and site accommodation is determined as required 3.2 Plant requirements and dates are selected and accessed 3.3 On site labour requirements are determined 3.4 A dilapidation report is made of the condition of existing plant and structures
4 Implement and monitor Occupational Health and Safety (OHS) and risk management procedures	4.1 First aid facilities are established as necessary 4.2 Plant and equipment requiring certificated operators are identified to comply with risk management procedures 4.3 Likely hazards are identified and precautions taken 4.4 Role of Construction Safety Supervisor is identified 4.5 Documentation for safety reporting is instigated
5 Organise the installation of materials and equipment	5.1 Material orders are placed according to appropriate schedule 5.2 Equipment is hired according to planned schedule 5.3 Maintenance procedures are established for equipment
6 Supervise on-site operations	6.1 Operations are implemented according to appropriate schedule and contract 6.2 Sub-contractor operations are co-ordinated and monitored, including all aspects of materials used and standards of workmanship

- 6.3 Problems and delays are addressed as they arise and action recorded
  - 6.4 Industrial relations are monitored continuously and issues resolved to minimise impact on job progress
  - 6.5 Revisions are made to project schedule, when required, and variations documented to comply with quality management procedures
  - 6.6 Quality management procedures are applied continuously as per adopted standards for job
  - 6.7 Safety procedures are monitored continuously, reports analysed and procedures reviewed as required
  - 6.8 Reports on current project status are prepared for management
- 7 Monitor budget and comply with employment requirements
- 7.1 Summary records are prepared for progress claims
  - 7.2 Actual expenditure and earnings are checked against scheduled projected costs
  - 7.3 Employment records are maintained

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- place and check orders for materials
- negotiate start dates and manage resources to minimise delays and down-time
- notify client, authorities and agencies of the schedule of works
- comply with requirements of statutory authorities and agencies
- develop strategies
- schedule project tasks and timelines
- determine resources
- place and check orders for materials
- organise delivery of site accommodation
- organise delivery of plant
- organise delivery of components
- take delivery materials and arrange checks
- arrange connection of temporary services
- organise on-site labour
- analyse contract conditions
- develop a project schedule to:

- administer the contract on site
- supervise construction operations in the most efficient sequence
- monitor the delivery of materials and equipment to meet schedule
- monitor tasks and manage resources to minimise delays and down-time
- monitor project resources, including budget
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- manage contingencies
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- develop and implement relevant enterprise OHS and environmental procedures
- incorporate legislative and enterprise OHS and environmental procedures into planning
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### **Required knowledge includes:**

---

#### **Knowledge of:**

- installation and construction processes for on-site irrigation systems
- logical construction sequence for the system
- analysis of the required project resources
- labour hiring requirements and procedures
- communication procedures for on-site labour and authorities
- safety procedures and quality assurance programs
- state legislation and local government requirements for irrigation installation
- on-site contract provisions
- projected costs
- local government regulations
- labour hiring requirements and procedures
- relevant Australian Standards (e.g. AS3500)
- effect of main soil types on approach to excavation work and installation of irrigation components
- environmental impacts of irrigation activities and appropriate remedial/preventative action
- OHS and environmental procedures.

## Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• identify operational requirements from contract documentation</li> <li>• develop a project plan with tasks, responsibilities, timelines and costs</li> <li>• organise the installation of supplies and equipment</li> <li>• implement and monitor on site operations</li> <li>• test the installation or construction against specifications</li> <li>• monitor budgets and maintain documentation.</li> </ul>
Context of and specific resources for assessment	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Irrigation systems</i></b> may include:	low volume, sprinkler, moving sprinkler, surface or irrigation drainage systems.

## Unit Sector(s)

Irrigation

## AHCIRG428A Provide irrigation sales and service

### Modification History

Not applicable.

### Unit Descriptor

This Unit covers providing advice on irrigation products and services and defines the standard required to: retain technical currency in all aspects of irrigation relevant to the client group; engage with and give advice to customers; ensure that the advice and product/service type are applicable and suitable for the purpose and growing environment of the client; encourage add on sales; conduct retail transactions; represent the enterprise in a professional manner when dealing with customers.

### Application of the Unit

This Unit applies to rural products merchandisers whose job role includes providing advice and making sales in irrigation products and services.

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

This Unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify customer needs	1.1 Appropriate interpersonal skills are used to accurately identify customer needs 1.2 Customer enquiries are handled courteously and promptly in accordance with enterprise procedures and industry requirements 1.3 Available products are matched to customer needs and against ecological considerations 1.4 Knowledge and understanding of irrigation products is actively and regularly researched and updated from authoritative sources
2 Provide advice on products and services	2.1 Advice that addresses customer needs is provided to customers in a timely and professional manner 2.2 Products that may meet customer needs are appropriately exhibited or explained to customer 2.3 Alternative and additional products and services are suggested as necessary 2.4 Customers concerns and questions are addressed sensitively in line with enterprise requirements
3 Recommend irrigation components and pumps	3.1 Irrigation design is interpreted 3.2 Pump and component requirements are established and discussed with customer 3.3 Advice is provided on irrigation pumps that is based on suitability for the task, energy efficiency from pump curves and serviceability 3.4 Advice on components is provided based on technically correct and current information
4 Research irrigation innovations and products	4.1 Contacts in irrigation product development are maintained and review of new products is conducted 4.2 Exhibitions and field displays are studied to update technical expertise 4.3 Technical information and extension advice is read and incorporated into advice to customers and clients
5 Conduct retail transactions with irrigation clients	5.1 Quantities for irrigation installation projects are estimated 5.2 Quotes on products and services are provided 5.3 Price and payment options are negotiated 5.4 Advice on irrigation product warranties is provided 5.5 Advice on and arrange product service and repairs is provided 5.6 Delivery of irrigation merchandise is arranged

## Required Skills and Knowledge

This section describes the skills and knowledge required for this Unit.

### Required skills include:

---

#### Ability to:

- provide customer service
- conduct research of products
- interpret irrigation plans
- estimate requirements for materials and components from a plan
- interpret pump curves
- calculate pumping requirements
- select irrigation components for a system
- calculate pressure loss due to irrigation components
- pressure test pumps
- monitor performance of pumps and irrigation components
- use pressure testing equipment
- use recorded information to review energy and water efficiency for an irrigation system
- identify adverse environmental impacts of irrigation pumping activities and appropriate remedial action
- implement and follow relevant enterprise OHS and environmental policies and procedures
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge includes:****Knowledge of:**

- store irrigation products and pump range
- interpretation of manufacturers specifications
- price negotiation and payment options
- store product and service and repair policy
- pump and irrigation equipment characteristics, technical capabilities and limitations
- pump and irrigation equipment components, controls, features and functions
- determination of pump capacities in relation to proposed application
- irrigation components technical specifications and suitability
- demonstration and assembly of irrigation products and components
- basic diagnostic techniques
- Occupational Health and Safety (OHS) legislation and industry requirements
- Environmental legislation and industry requirements.

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this Unit	<p>The evidence required to demonstrate competency in this Unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• retain technical currency in all aspects of irrigation relevant to the client group</li> <li>• engage with and give advice to customers</li> <li>• ensure that the advice and product/service type are applicable and suitable for the purpose and growing environment of the client</li> <li>• encourage add on sales</li> <li>• conduct retail transactions</li> <li>• represent the retailer in a professional manner when dealing with customers.</li> </ul>
Context of and specific resources for assessment	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

	enterprise circumstances.
--	---------------------------

## Range Statement

<p>The range statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Irrigation products may include:	any products used in the irrigation sector covering low volume, sprinkler, moving sprinkler and surface irrigation systems.
Irrigation services may include:	any services associated with the installation, construction, maintenance or repair of irrigation infrastructure and equipment.

## Unit Sector(s)

Irrigation

## AHCIRG501A Audit irrigation systems

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of collating and assessing system performance data, and compiling a system evaluation report including recommendations for improvements and defines the standard required to: compile data to compare the performance of the system with benchmarks; solve performance problems and recommend solutions; identify adverse impacts of irrigation system activities on the natural resource base of the irrigated area; identify environmental impacts of irrigation on the lower catchment; and use computer software for irrigation auditing.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to irrigation system auditors.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Collect and collate all available data	1.1.Data on system performance is collated. 1.2.Data on environmental and Occupational Health and Safety (OHS) issues is collated. 1.3.Data on equipment supply and usage is collated. 1.4.Data on crop production is collated. 1.5.Data on water use and quality is collated. 1.6.Data on climatic trends is collated. 1.7.Data on physical and chemical properties of soil is collated.
2. Assess actual data against benchmarks, specifications and predictions	2.1.System performance is compared to system specifications and performance predictions. 2.2.Supply and stock use is compared to previous and estimated usage and costs. 2.3.Crop production is compared to previous and predicted production. 2.4.Water usage and quality is compared to past and predicted usage and quality. 2.5.Climatic information is compared to predicted trends. 2.6.Soil properties are compared to previous and predicted properties. 2.7.Production costs related to irrigation system are compared to previous and predicted costs. 2.8.Net profits are compared to past and predicted profits.
3. Compile a report of	3.1.Report includes discussion of results of data

ELEMENT	PERFORMANCE CRITERIA
system evaluation	analysis. 3.2. Indicators of good performance are isolated and discussed. 3.3. Indicators of poor performance are isolated and discussed. 3.4. Causes of deviations from performance specifications and requirements are examined. 3.5. Conclusions about irrigation system performance in relation to crop production and business performance are clearly stated. 3.6. Conclusions are supported by the data.
4. Recommend alterations to irrigation system to achieve performance improvement	4.1. Recommendations are made to modify or eliminate causes of poor performance, or to enhance current performance.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analyse and organise data
- solve performance problems and recommend solutions
- identify adverse environmental impacts of irrigation system activities and recommend appropriate remedial action
- use computer software for irrigation auditing
- recommend relevant enterprise OHS and environmental procedures
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
abilities.
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• evaluation procedures</li> <li>• irrigation system performance indicators</li> <li>• statistical data analysis procedures or software</li> <li>• environmental impacts of irrigation systems using water from any ground or underground source</li> <li>• relevant enterprise OHS legislation, codes of practice and enterprise requirements.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Design an irrigation system maintenance program	<p>1.1.Resources needed to perform maintenance tasks are specified in the program outline.</p> <p>1.2.Repairs, replacements and servicing requirements for all equipment and machinery are specified in the program outline.</p> <p>1.3.Activities required to maintain the irrigation site, system hardware and water quality are specified according to enterprise needs.</p> <p>1.4.Manufacturer's operating manuals are obtained and used as guidance to specify maintenance activities, schedule and skills required.</p> <p>1.5.Timing and frequency of maintenance activities are scheduled to co-ordinate with other enterprise activities.</p> <p>1.6.System maintenance program activities relate to water supply authority constraints and requirements for water and maintenance.</p> <p>1.7.Labour and Occupational Health and Safety (OHS) requirements for each activity are determined and recorded in the system maintenance program.</p> <p>1.8.Weed control, water storage and treatment maintenance form an integral part of the system maintenance program.</p> <p>1.9.Strategies are specified in the program to ensure that negative impacts of irrigation, drainage and water treatment systems are minimised, and positive</p>

ELEMENT	PERFORMANCE CRITERIA
	impacts are maximised.
2. Design a monitoring and scheduling program	2.1.Procedures for monitoring and recording system hardware use and performance are included in the monitoring and scheduling program. 2.2.Procedures for scheduling, monitoring and recording water use form an integral part of the monitoring and scheduling program. 2.3.Procedures for monitoring and recording operating costs are included in the program. 2.4.Contingency plans in the event of water restrictions being imposed are developed for inclusion in the monitoring and scheduling program.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analyse and organise information
- identify and schedule activities
- design scheduling and recording procedures
- identify adverse environmental impacts of irrigation, drainage and water treatment activities and appropriate remedial action
- develop and include relevant enterprise OHS and environmental procedures
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- maintenance and monitoring design requirements

**REQUIRED SKILLS AND KNOWLEDGE**

- irrigation, drainage and water treatment maintenance activities
- water supply authority constraints
- water quality guidelines for fresh and marine water (e.g. ANZECC 1999)
- environmental impacts of irrigation
- drainage and water treatment using water from any ground or underground source
- OHS and environmental protection legislation, codes of practice and enterprise requirements for monitoring and maintenance programs.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify irrigation system monitoring and maintenance requirements
- determine the resources required for irrigation system maintenance
- design a maintenance program for an irrigation system
- develop procedures for scheduling and monitoring an irrigation system to achieve required performance
- develop contingency plans for the irrigation system for periods of restricted water supply.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Irrigation systems may include:	<ul style="list-style-type: none"> <li>• pressurised irrigation systems such as:             <ul style="list-style-type: none"> <li>• micro-irrigation systems</li> <li>• spray irrigation systems</li> <li>• gravity fed irrigation systems.</li> </ul> </li> </ul>

# AHCIRG503A Design irrigation, drainage and water treatment systems

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the designing of irrigation, draining and water treatment systems and defines the standard required to: identify design requirements for drainage and water treatment; determine specifications for suitable pumping and power systems; design distribution, drainage, storage and treatment systems; design water transfer, recharge, reuse and harvesting systems to conserve natural resources and; assess the environmental impacts of the irrigation system to ensure it will comply with environmental protection agency regulations.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit applies to those who design irrigation, drainage and/or water treatment systems with advice from technical advisers.
--------------------------------	--

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine design requirements	<p>1.1. Water is predicted to be available in sufficient quantity and quality for the particular crop or situation at the time it is needed by the enterprise.</p> <p>1.2. Water transfer, recharge, reuse and harvesting systems are designed to conserve natural resources.</p> <p>1.3. The process of collecting or storing water does not degrade the water quality for the enterprise or the environment.</p> <p>1.4. Construction specifications define the work required to make suitable water available to the enterprise in accordance with environmental and Occupational Health and Safety (OHS) requirements.</p> <p>1.5. Environmentally sensitive areas are identified and protected according to local, State and National legislation.</p> <p>1.6. Design calculations and decisions are documented to enterprise requirements.</p>
2. Define pumping and power systems	<p>2.1. Pumps are selected to deliver water efficiently when needed, from the water storage at the flow and pressure required to operate the distribution system to the design specifications.</p> <p>2.2. The pump motor combinations are efficient and the pumps are reliable, functional, serviceable and flexible for the intended application.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3. Energy requirements are determined, and layout of electricity lines are determined and checked with local authority.</p> <p>2.4. The relationship between capital and operational costs are optimised including a comparison of energy sources.</p> <p>2.5. Structures, valves and accessories are selected and integrated into a functional system that can be monitored and maintained according to enterprise guidelines.</p> <p>2.6. Performance indicators, design calculations and decisions are documented according to enterprise guidelines.</p> <p>2.7. Construction specifications define work required to make suitable pumping and power system available to enterprise.</p> <p>2.8. Power supply design specification is checked with power authorities.</p>
3. Design an irrigation distribution system	<p>3.1. Detailed topographic survey is conducted or an accurate map is obtained showing extent of irrigation, planting layout, physical constraints and contours with suitable interval.</p> <p>3.2. Detailed soil survey is conducted at suitable intervals and mapped to show variation in readily available water.</p> <p>3.3. Water budgets are determined having regard to the evapotranspiration state of the crop/plants, soil moisture characteristics and cultural practices.</p> <p>3.4. Distribution systems are evaluated and designed with respect to a range of key variables.</p> <p>3.5. Pipes, valves and fittings are sized according to design system specifications so that capital cost is balanced against operation costs over the anticipated system life.</p> <p>3.6. Flows, water levels and pressures are calculated and documented to be within the acceptable tolerances for optimum performance.</p> <p>3.7. Flows, water levels and pressures are achievable by the pumps operating at optimum efficiency and according to enterprise standards.</p> <p>3.8. Mechanisms for controlling and adjusting pressure are included, and isolation valves direct water to areas with different irrigation schedules.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.9. Channel systems and attendant structures are designed according to industry recommendations, and channel flow velocities are calculated according to enterprise standards.</p> <p>3.10. Soil types have been compared for erodeability and suitable fill has been selected for construction according to enterprise standards.</p> <p>3.11. Construction plans and specifications define work required to achieve the required standards of uniformity and efficiency of water application according to industry standards</p>
4. Design a drainage, storage and treatment system	<p>4.1. Regional geology and geography is investigated to predict sustainability of irrigation and storage.</p> <p>4.2. Site investigations to assess depth of clay, depth of ground water, soil and water salinity, and structural or chemical impediments are used to determine the most cost effective storage system.</p> <p>4.3. Predictions of leaching fractions and salt movements are documented, and soil amelioration and drainage management plans are developed.</p> <p>4.4. The need for leachate interception and dewatering system is determined, and if required, construction specification prepared for interception and collection, water treatment, disposal, and reuse or recycle.</p> <p>4.5. Drains and structures are capable of carrying the design water volumes and intensities according to enterprise standards.</p> <p>4.6. Damage from water logging is minimised according to enterprise standards.</p> <p>4.7. Hydrological calculations predict volumes and rates of surface run-off according to enterprise standards.</p>
5. Determine capital expense budget	<p>5.1. Design calculations and decisions are documented and relevant information is communicated clearly through plans, specifications and manuals.</p> <p>5.2. Design output is checked by a competent designer against enterprise objectives.</p> <p>5.3. Materials requirements are determined and documented from plans and specifications.</p> <p>5.4. Labour requirements are estimated, based upon documented work schedule with reasonable allowance for variances in work schedules.</p> <p>5.5. Costing attributed to each component is based upon quoted information from suppliers, or sound analysis</p>

ELEMENT	PERFORMANCE CRITERIA
	of individual elements.
6. Determine operating expense budget	6.1. Operating expense budget indicates all expenses applicable to the completed irrigation system.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect and analyse information
- identify adverse environmental impacts of irrigation, drainage and water treatment activities and appropriate remedial action
- identify design requirements
- develop specifications
- compare costings
- develop budgets
- document outcomes
- develop and implement relevant enterprise OHS and environmental procedures
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- design processes
- developments in irrigation technology
- drainage and storage development technology
- latest treatment technology
- automatic control and monitoring systems
- waste management and environmental issues
- budgeting

**REQUIRED SKILLS AND KNOWLEDGE**

- contractual development and obligations
- environmental protection agency regulations
- environmental impacts of irrigation, drainage and water treatment using water from any ground or underground source
- cost/benefit analysis
- OHS and environmental protection legislation, codes of practice and enterprise policies and procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- identify design requirements for drainage and water treatment
- determine specifications for suitable pumping and power systems
- design distribution, drainage, storage and treatment systems
- design water transfer, recharge, reuse and harvesting systems to conserve natural resources
- assess the environmental impacts of the irrigation system to ensure it will comply with environmental protection agency regulations.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Reuse systems may include:	<ul style="list-style-type: none"> <li>• dis-infestation and filtering equipment.</li> </ul>
Irrigation distribution systems covered by this standard are:	<ul style="list-style-type: none"> <li>• micro-irrigation systems</li> <li>• spray irrigation systems</li> <li>• surface irrigation systems</li> <li>• basin irrigation.</li> </ul>
Systems may range from:	<ul style="list-style-type: none"> <li>• manual operation and monitoring to fully automated with computer control and monitoring.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Compile property background information	1.1. Ownership details are described. 1.2. Irrigation history is described. 1.3. Locality and property details are described. 1.4. Agreements and easements with surrounding properties are identified. 1.5. Property maps are developed to illustrate locality and property boundaries.
2. Compile information on infrastructure and topography	2.1. Significant topographical and infrastructure features are described. 2.2. Opportunities and strengths of the property are identified. 2.3. Limitations and weaknesses of the property are identified. 2.4. Local planning issues that may affect the irrigation development are identified. 2.5. Map overlay to illustrate topography and

ELEMENT	PERFORMANCE CRITERIA
	infrastructure is developed.
3. Compile information on natural resources	3.1. Soil survey information is described. 3.2. Strategies to minimise and reduce soil erosion, and physical and chemical soil deterioration are identified. 3.3. Water sources availability and qualities are described. 3.4. Ground water depth and salinity issues are identified. 3.5. Climatic characteristics are described. 3.6. Map overlay to illustrate natural resource features is developed.
4. Compile information on enterprise cropping and planting	4.1. Suitability of soils and water quality for enterprise crops/plans is described. 4.2. Special irrigation requirements of crops/plants are identified. 4.3. Monthly and annual water budgets for each crop/plant program are developed. 4.4. Current yields are identified and compared with benchmark crop yields. 4.5. Targets are established with consideration for any factors which would limit optimum production. 4.6. Intended crop rotations are described. 4.7. Map overlay to illustrate crop and plant details is developed.
5. Compile information on existing irrigation and drainage system where used	5.1. Evaluation of current system performance is described. 5.2. Current system performance is compared to benchmark performance parameters. 5.3. Scheduling procedures are described. 5.4. Drainage management performance is described including environmental authority compliance issues. 5.5. Areas for improvement in system management and/or structure are identified. 5.6. Map overlay to illustrate irrigation system layout is developed.
6. Develop an irrigation and drainage management plan with specifications for new or up-graded irrigation and	6.1. Performance requirements for distribution, treatment and drainage systems are summarised. 6.2. New or replacement components are listed. 6.3. Development timetable is developed. 6.4. Proposed scheduling system is described.

ELEMENT	PERFORMANCE CRITERIA
drainage system	<p>6.5. Performance monitoring procedures and Occupational Health and Safety (OHS) requirements are described.</p> <p>6.6. Drainage management processes are described.</p> <p>6.7. Map overlay is developed to illustrate proposed irrigation and drainage development.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- compile and analyse complex information
- interpret statistical data and measurements
- identify adverse environmental impacts of irrigation system activities and recommend appropriate remedial action
- develop plans and reports
- use a range of irrigation and information management software
- develop and implement relevant enterprise OHS and environmental procedures
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- measuring and monitoring procedures
- soil/plant/water relationships
- readily available water
- water table and salinity
- methods and techniques of irrigation
- irrigation system options

**REQUIRED SKILLS AND KNOWLEDGE**

- computerised irrigation systems
- environmental impacts of irrigation systems using water from any ground or underground source
- enterprise policies and procedures
- relevant enterprise OHS procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- compile and analyse information on property background, infrastructure, topography and natural resources, and land use
- compile details of current irrigation and drainage system design and performance
- determine performance requirements for distribution, treatment and drainage systems
- incorporate specifications for a new or up-graded irrigation and drainage system into the
- irrigation and drainage management plan.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## AHCIRG505A Establish and maintain an irrigation-related environmental protection program

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers establishing and maintain an irrigation-related environmental protection program and defines the standard required to: establish and maintain environmental records; identify and assess existing and potential risks to the environment arising from irrigation practices and related activities; monitor risks to, and impacts on, the environment from irrigation; develop an induction and training program to support environmental protection policies and practices; develop an irrigation and drainage environmental plan.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes determining actions to reduce the impacts of irrigation and drainage systems on the environment, to minimise the risk of environmental pollution and reduce the impact of such events when they occur.
--------------------------------	---

### Licensing/Regulatory Information

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish and maintain an irrigation and drainage environmental protection program	<p>1.1. An irrigation and drainage environmental plan is developed in consultation with property owner or manager.</p> <p>1.2. Environmental responsibilities for the property are clearly defined and included in the duties of all personnel.</p> <p>1.3. Financial and human resources are made available to implement the environmental plan in a timely and consistent manner.</p> <p>1.4. Environmental records are established and maintained according to relevant codes of practice, legislation and regulations.</p>
2. Establish and maintain arrangements to ensure the involvement of all personnel in the environmental program	<p>2.1. Procedures and processes that allow and encourage all personnel at all levels to have input into environmental issues are developed.</p> <p>2.2. Issues raised through involvement and consultation with personnel are addressed promptly.</p>

ELEMENT	PERFORMANCE CRITERIA
<p>3. Establish and maintain risk management procedures to protect the environment from irrigation practices and related activities</p>	<p>3.1. Procedures for identifying and assessing existing and potential risks to the environment arising from irrigation practices and related activities are established and maintained according to relevant environmental standards.</p> <p>3.2. Work processes and procedures are designed to reduce or eliminate risks and hazards to the environment.</p> <p>3.3. Organisational and administrative systems are established and maintained to control risks to the environment arising from irrigation practices and related activities.</p> <p>3.4. Procedures to monitor risks to the environment and compliance with relevant legislation and regulations are established and maintained.</p>
<p>4. Establish and maintain procedures for responding to environmental pollution events</p>	<p>4.1. Potential environmental pollution events are identified.</p> <p>4.2. Procedures to control the level of risk associated with pollution events are developed in consultation with relevant environmental protection agencies and local government authorities.</p> <p>4.3. Appropriate information and training is provided to enterprise personnel to ensure prompt implementation of response procedures according to organisational and OHS requirements.</p>
<p>5. Establish and maintain an environmental protection induction and training program</p>	<p>5.1. An environmental protection induction and training program is developed and incorporated into the organisational personnel training program to ensure compliance with relevant legislation and regulations is maintained.</p> <p>5.2. Records of environmental protection training are established and maintained according to enterprise standards.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- develop policies and procedures
- apply and comply with environmental requirements
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- use technology to draft documents, develop environmental information, and audit data bases
- audit data bases
- develop and implement relevant enterprise OHS and environmental procedures
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- environmental impacts of irrigation, using water from any ground or underground source
- environmental planning for irrigation and drainage
- external factors that may effect the system
- relevant OHS and environmental protection legislation, codes of practice and enterprise procedures.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Open and close park/reserve	<p>1.1.Park/reserve is opened and closed as scheduled in accordance with enterprise procedures.</p> <p>1.2.Security systems are operated in accordance with manufacturer's guidelines and enterprise procedures.</p> <p>1.3.Public is informed of opening and closing times in accordance with enterprise procedures.</p> <p>1.4.Non-compliance with park/reserve access conditions is acted upon in accordance with enterprise procedures.</p>
2. Advise public on park/reserve access and activities	<p>2.1.Public is communicated with in a courteous, confident and effective manner appropriate to their background.</p> <p>2.2.Public is informed of responsibilities and safety requirements when using park facilities in accordance with enterprise procedures, legislative and public health and safety requirements.</p> <p>2.3.Public is informed of changes to access rights to park facilities when these have been affected by changes to environmental conditions in accordance with enterprise procedures and public health and safety requirements.</p>
3. Monitor visitor activities	<p>3.1.Non-compliance with park/reserve access conditions is acted upon in accordance with enterprise procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.2. Incidents are reported and responded to in accordance with enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- open and close park/reserve
- advise public on park/reserve access and activities
- provide information on safety requirements
- interpret legislation and public health requirements
- monitor visitor activities
- evaluate appropriate situations to enforce regulations
- assert authority and act on non-compliance activities
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- local environment, environmental hazards
- understand limits to personal and legal authority
- public relations, crowd behaviour, implications on cultural diversity
- enterprise procedures, OHS and legislative requirements
- enterprise security systems and communication equipment
- interpersonal skills and relating to different cultural groups
- instructions/guidelines and regulations and maps.

## AHCLPW303A Construct access tracks

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of constructing access tracks and clearing vegetation on rural land and defines the standard required to: determine control points; required grades, and water crossing points and structures from field observations; construct tracks utilising industry endorsed earthworks methods and patterns for specific machines; excavate; transport; dump and compact road material; finish track surface; clean worksite.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to workers in land management who are required to implement erosion control principles and apply specialised earthmoving techniques to fine tolerances. Work is often carried out in varied conditions and landscapes, which requires operators to develop skills that are unique to this sector.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for construction of access track	<ul style="list-style-type: none"> <li>1.1. Equipment and attachments are matched to programmed tasks and terrain scheduled on site.</li> <li>1.2. Work readiness of selected equipment is verified in line with contractor policy.</li> <li>1.3. Construction details and sequence are confirmed from supervisor.</li> <li>1.4. Survey pegs and site indicators are identified and located on work site.</li> <li>1.5. Compliance with relevant regulatory planning and environmental legislation are confirmed.</li> <li>1.6. Organisational occupational health&amp;safety procedures, practices policies, and precautions are observed and followed.</li> <li>1.7. Site environmental concerns are adhered to in accordance with relevant national, state, and local legislation and/or regulations.</li> <li>1.8. Determine control points, required grades, and water crossing points and structures from field observations and any available additional information.</li> <li>1.9. Any permits or licences required for the construction are identified, sought and obtained.</li> <li>1.10. People, materials and equipment required for the construction are coordinated and scheduled in accordance with organisation guidelines.</li> </ul>

ELEMENT	PERFORMANCE CRITERIA
2. Form access track	<p>2.1. Industry endorsed earthworks methods and patterns for specific machines are utilised during construction.</p> <p>2.2. Optimum machine loads are monitored and maintained to suit prevailing conditions.</p> <p>2.3. Safe machine operating techniques and procedures are deployed to match terrain, site conditions and other operators or workers.</p> <p>2.4. Excavation, transport, dumping and compaction of material is completed in line with job sequence and endorsed industry practices.</p> <p>2.5. Vegetation is cleared according to enterprise guidelines and industry best practice.</p> <p>2.6. Neighbouring landholders, local authorities and interest groups are liaised with during the construction activity in according to enterprise guidelines and industry best practice.</p> <p>2.7. Documentation required by organisation and/or occupational health&amp;safety guidelines, is completed clearly and accurately.</p> <p>2.8. Operational staff, clients and contractors are communicated with regularly throughout the construction activity to ensure smooth operation and progress.</p>
3. Apply final finish to track	<p>3.1. Endorsed industry methods are utilised to surfaces to achieve job requirements.</p> <p>3.2. Site features and vegetation are retained in line with works plan/schedule.</p> <p>3.3. Site is cleared and debris removed in line with contractor policy.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare for access track construction
- liaise with stakeholders

## REQUIRED SKILLS AND KNOWLEDGE

- determine control points, required grades, and water crossing points and structures from field observations
- operate appropriate machinery
- form access tracks
- apply final finish techniques to surfaces
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- erosion and sediment control standards and principles
- provisions of the relevant wild life, environmental, planning, ground water legislation
- safety
- erosion control and design principles
- soils and soil formation
- levels and levelling
- earthmoving principles
- principles for machine operation
- total catchment issues
- legal issues
- environmental issues
- country code
- managing peak water flows
- subsurface and surface drainage principles and systems.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Competence requires evidence that access tracks have been appropriately constructed according to enterprise guidelines, relevant legislation and industry best practice. The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• select and prepare equipment</li> <li>• determine control points, required grades, and water crossing points and structures from field observations</li> <li>• construct tracks utilising industry endorsed earthworks methods and</li> <li>• patterns for specific machines</li> <li>• excavate, transport, dump and compact road material</li> <li>• finish track surface and clean worksite.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Machinery and activities may include:	<ul style="list-style-type: none"> <li>• all machinery, equipment and processes used in the construction of access tracks and clearing of vegetation.</li> </ul>

## Unit Sector(s)

## AHCLPW304A Carry out inspection of designated area

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of carrying out inspection of designated area and defines the standard required to: define the scope and criteria on which to base inspection; define the hazards and risks to Occupational Health and Safety (OHS) and the environment associated with the inspection; conduct inspections; complying with statutory requirements and enterprise protocols for entry to private property; establish environmental impacts caused by the presence of the target; document the inspection and recommend follow up actions.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to carrying out an inspection of designated areas and is likely to be under limited supervision with checking related to overall progress. Responsibility for the work of others may be involved.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Define area and target of inspection	<p>1.1. Location and size of area to be inspected identified consistent with management strategy and/or supervisor's instructions.</p> <p>1.2. Frequency of inspection set according to management strategy.</p> <p>1.3. Targets of inspection determined from Management Strategy.</p> <p>1.4. Characteristics and favoured conditions for targets confirmed with management.</p>
2. Carry out Risk Assessment and minimisation	<p>2.1. Time and duration of inspection checked and relevant personnel notified.</p> <p>2.2. Risks to the environment associated with the inspection are identified in accordance with statutory and local authority requirements.</p> <p>2.3. Precautions to minimise environmental risks associated with the inspection are taken in line with statutory and local authority standards.</p> <p>2.4. Hazards associated with the inspection are identified in accordance with OHS standards.</p> <p>2.5. Precautions to minimise hazards are taken in accordance with OHS standards.</p>
3. Prepare for inspection	<p>3.1. Vehicles, equipment and materials required for the inspection are identified.</p> <p>3.2. Vehicles, equipment and materials are checked for</p>

ELEMENT	PERFORMANCE CRITERIA
	serviceability following manufacturer's guidelines.
4. Carry out inspection	<p>4.1. Vehicles are operated and driven within statutory requirements and industry practice.</p> <p>4.2. Inspection is carried out within the specified area and following the requirements of the integrated pest management strategy.</p> <p>4.3. Target occurrence is identified and recorded as required by the management strategy and enterprise practice.</p> <p>4.4. Statutory requirements and enterprise protocols regarding entering private property are fulfilled where appropriate.</p> <p>4.5. Dealings with landholders or their employees follow regulatory requirements and enterprise procedures.</p> <p>4.6. Precautions to minimise risks to the environment are implemented in accordance with statutory and local authority requirements.</p> <p>4.7. Precautions to minimise hazards are implemented in accordance with OHS standards.</p> <p>4.8. Incursions of non-targeted threats are noted and reported on.</p>
5. Establish the impact of the specified target	<p>5.1. Information on potential impacts is collected from stakeholders.</p> <p>5.2. Data on environmental hazards resulting from target presence are collected and analysed from stakeholders or available information.</p>
6. Prepare a report	<p>6.1. Collated data, inspection records and analysis of findings are documented with appropriate recommendations in accordance with enterprise guidelines.</p> <p>6.2. Targets reported as required by legislation, regulation or enterprise guidelines.</p> <p>6.3. Report submitted to supervisor or other authority.</p> <p>6.4. Samples submitted in compliance with legislative requirements, regulations or enterprise guidelines.</p> <p>6.5. Equipment and materials are cleaned and stored following industry standards or enterprise practice.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- define area and target of inspection
- carry out risk assessment and minimisation
- prepare for inspection
- carry out inspection
- identify targets and level of impact on site
- implement control measures
- monitor control methods
- clean and store equipment and materials following inspection
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- recognition and classification of local plant and animal species
- use of simple taxonomic or identification keys
- risk management
- characteristics of inspection targets
- inspection procedures and techniques
- monitoring techniques
- reporting protocols
- map reading
- relevant land use processes
- relevant legislative and regulatory requirements including environmental protection legislation.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• define the scope and criteria on which to base inspection</li> <li>• define the hazards and risks to OHS and the environment associated with the inspection</li> <li>• conduct inspections, complying with statutory requirements and enterprise protocols for entry to private property</li> <li>• establish environmental impacts caused by the presence of the target</li> <li>• document the inspection and recommend follow up actions.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Designated areas may include:	<ul style="list-style-type: none"> <li>• covers a range of designated areas such as farms, parks, reserves, and roadsides.</li> </ul>
Inspections may include:	<ul style="list-style-type: none"> <li>• plant and animal species and communities</li> <li>• threatened or endangered species</li> <li>• notifiable or noxious pests or animals</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• species not previously identified in the region</li> <li>• weeds or animals which may present a high risk and fire risks and threats.</li> </ul>

## AHCLPW305A Perform diving for scientific purposes

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of scientific diving required to support scientific research, monitoring and inspection roles associated with places or areas of significance and defines the standard required to: plan to carry out a dive; prepare to dive; carry out pre-dive checks; monitor dive conditions; respond to incidents and amend dive procedures if necessary; debrief dive team; store diving equipment.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit requires knowledge of the physics of diving, node compression tables, dive equipment and planning, emergency procedures, agency standing orders for notification, and radio operation procedures. This standard requires compliance with the current Australian Standard for Occupational Diving Operations: Scientific Diving.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan diving operations	<p>1.1.Objectives of dive are determined to enterprise guidelines, to diving standards and occupational health and safety guidelines.</p> <p>1.2.Number and type of dives to complete objectives are assessed to develop a dive program.</p> <p>1.3.Equipment and personnel required for dive operations are determined.</p> <p>1.4.Appropriate people are consulted about the dive objectives and proposed program.</p>
2. Prepare for diving operations	<p>2.1.Equipment and personnel required for dive operations are obtained.</p> <p>2.2.Appropriate notification and consents for dive plans are given and obtained.</p> <p>2.3.Equipment condition is checked to legislative, manufacturers', enterprise and code of practice requirements.</p> <p>2.4.Faulty equipment is sent for repair or discarded.</p> <p>2.5.Consumables requirements are assessed and sourced.</p> <p>2.6.Personnel are checked for competence and possession of a current medical clearance.</p> <p>2.7.Safety and emergency procedures for the dive program are developed to enterprise requirements and codes of practice.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Conduct dive	<p>3.1. Personnel and equipment are transported safely to dive site.</p> <p>3.2. Communications procedures are established for dives in remote areas.</p> <p>3.3. Pre-dive checks are performed to enterprise requirements and codes of practice.</p> <p>3.4. Final assessment on environmental factors is completed before entering the water.</p> <p>3.5. Dives are completed to procedures, safe working practices, defined objectives, enterprise requirements, codes of practice, legislation.</p> <p>3.6. Dives are conducted within the parameters of the special dive plan, including entry, descent, working on dive objective and exit.</p> <p>3.7. Dive procedures are amended within enterprise requirements, codes of practice and personal authority in light of dive conditions, and any changes to dive objectives.</p> <p>3.8. Dives are suspended or cancelled where safety or equipment operation considerations warrant.</p> <p>3.9. Dives are completed to objectives or suspended where personnel have completed allowed number of dives.</p> <p>3.10. Equipment is removed from site at completion of dives.</p> <p>3.11. Dives are logged to enterprise and legislative requirements and codes of practice.</p>
4. Debrief diving team	<p>4.1. Procedures applied during dive and outcomes of dive are reviewed by dive team promptly after dive.</p> <p>4.2. Procedures and dive plans are amended to enterprise requirements or codes of practice to reduce dive risks including safety and diver health, and improve dive efficiency and effectiveness.</p> <p>4.3. Dive debriefing is recorded to enterprise and legislative requirements and codes of practice.</p>
5. Check and store equipment	<p>5.1. Dive equipment is checked for condition and operation to manufacturer's instructions, enterprise requirements and codes of practice.</p> <p>5.2. Faulty equipment is sent for repair or discarded to enterprise requirements.</p> <p>5.3. Equipment is stored to manufacturers' and enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	5.4. Equipment use is recorded to enterprise, manufacturers' and legislative requirements. 5.5. All equipment is tested according to statutory requirements.
6. Review diving program	6.1. Dive plan is reviewed in light of debriefing, outcomes achieved, risk assessments and safety analysis, and future requirements. 6.2. Review conclusions are recorded and reported to enterprise requirements.
7. Respond to diving incidents	7.1. Dive operations are continually monitored to identify potential or actual maladies. 7.2. Dive operations are suspended or cancelled where potential or actual maladies have been identified. 7.3. A rescue approach is developed where required to enterprise requirements, or codes of practice. 7.4. Diver first aid is applied to injured or distressed personnel. 7.5. Emergency authorities are notified where assistance is required. 7.6. Procedures and dive plan are reviewed in light of risks identified and potential or actual malady. 7.7. All incidents are recorded on the enterprise/agency register.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- plan diving operations
- prepare for diving operations conduct dive
- debrief diving team
- check and store equipment
- review diving program
- respond to diving maladies

<b>REQUIRED SKILLS AND KNOWLEDGE</b>	
<ul style="list-style-type: none"> <li>• use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required</li> <li>• use numeracy skills to estimate, calculate and record routine workplace measures</li> <li>• use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>	
<b>Required knowledge</b>	
<ul style="list-style-type: none"> <li>• physics of diving</li> <li>• no-decompression tables</li> <li>• dive equipment</li> <li>• dive planning</li> <li>• AS2299 Scientific Diving</li> <li>• rescue procedures</li> <li>• oxygen administration procedures</li> <li>• agency standing orders for notification</li> <li>• emergency service procedures</li> <li>• radio operation procedures.</li> </ul>	

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• plan to carry out a dive</li> <li>• prepare to dive</li> <li>• carry out pre-dive checks</li> </ul>

## AHCLPW306A Undertake sampling and testing of water

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of sampling and testing water quality as part of a monitoring program and defines the standard required to: plan a water sampling program under direction; test and correlate equipment; sample and test water; record results on data sheets.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit relates to undertaking sampling and testing of water and is likely to be under limited supervision from others with checking only related to overall progress. Sampling and testing water quality requires knowledge of monitoring schedules, hydrological cycle, water quality determinations and standards, principles of water quality control, sampling and testing methods and groundwater salinity.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for sampling and testing field work	<p>1.1. Monitoring schedule is read/heard and confirmed with manager.</p> <p>1.2. Advanced water quality and environmental parameters are identified.</p> <p>1.3. Samples to be collected to determine water quality and environmental parameters are identified by supervisory staff.</p> <p>1.4. Equipment requirements for water sampling and testing are determined and arranged.</p> <p>1.5. Range of likely operating conditions, hazards and difficult/sensitive environments are assessed for impact on sampling and testing.</p>
2. Prepare equipment and resources	<p>2.1. Equipment required for sampling and testing is sourced according to monitoring procedures.</p> <p>2.2. Equipment is checked for availability and serviceability in accordance with enterprise procedures.</p> <p>2.3. Testing and correlation is carried out to verify correct and accurate performance of equipment.</p> <p>2.4. Repairs and maintenance of field-based equipment and instruments are carried out in accordance with enterprise procedures and manufacturer's instructions.</p> <p>2.5. Data or record sheets/books are collected for use.</p> <p>2.6. Equipment, data sheets and personnel are moved to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>sampling sites without injury or damage and readied for use.</p> <p>2.7. Equipment is installed and protected according to manufacturer's specifications, safety and enterprise requirements.</p> <p>2.8. Staff undertaking sampling and testing are briefed on and are aware of responsibilities in accordance with monitoring schedule.</p> <p>2.9. Testing equipment is confirmed and serviceable for monitoring procedures in field conditions to enterprise and manufacturers' requirements.</p>
3. Carry out sampling and testing of water	<p>3.1. Tests are undertaken in accordance with monitoring plan and enterprise procedures to avoid erroneous readings.</p> <p>3.2. Samples are taken and tested in accordance with monitoring standards and guidelines.</p> <p>3.3. Samples for external analysis are prepared, packaged and sent to laboratory in accordance with monitoring schedule and laboratory standards.</p> <p>3.4. Specific and general observations including information on relevant ambient and antecedent environmental conditions are made in accordance with monitoring schedule.</p> <p>3.5. Personnel undertaking sampling and testing tasks are supervised and feedback given on work performance.</p> <p>3.6. Equipment operation and work practices conform to OHS requirements.</p>
4. Complete water sampling and testing activities	<p>4.1. Equipment and clothing is cleaned, sanitised, repaired and stored in accordance with enterprise procedures.</p> <p>4.2. Damaged or malfunctioning equipment is repaired on site or sent to manufacturer or specialist.</p> <p>4.3. Test results and observations are accurately recorded on data sheets and forwarded in accordance with enterprise procedures.</p> <p>4.4. Changes in field conditions and equipment are conveyed to supervisor according to enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- plan for sampling and testing
- prepare equipment and resources
- carry out sampling and testing
- complete water sampling and testing activities
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- hydrological cycle
- water monitoring schedules and guidelines
- standards for water quality
- sampling and testing methods
- groundwater contamination evaluation
- sources of groundwater contamination
- groundwater salinity - mechanisms, occurrence and management
- irrigation induced salinity, mechanisms and management.

## Evidence Guide

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Establish client requirements	<p>1.1.The proposed changes in land use are discussed with and confirmed with the landholder.</p> <p>1.2.The catchment characteristics are reviewed and discussed considering the proposed land use.</p> <p>1.3.Current impacting legislation and policies are explained to the landholder.</p> <p>1.4.Possible strategies are discussed with the landholder and the best option confirmed.</p>
2. Determine scope of the request	<p>2.1.Profile of site determined from survey and aerial photographs.</p> <p>2.2.Initial inspection checks against legislative or procedures according to enterprise guidelines and industry best practice.</p> <p>2.3.Native vegetation types checked against maps and local guidelines.</p> <p>2.4.Threats to local species are checked against local resources.</p> <p>2.5.Soil and water impact reviewed against proposed land use and industry principles.</p> <p>2.6.Cultural heritage issues noted according to agency guidelines and best practice procedures.</p>
3. Present finding	<p>3.1.Applicant is provided with technical data following program guidelines.</p> <p>3.2.Concurrence is communicated relating to the formal application following program guidelines.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3.Applicant is informed of specific requirements relating to submitting a formal application. 3.4.Self-assessment process communicated and confirmed following program guidelines. 3.5.Potential risks associated with proceeding with process communicated based on program guidelines.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- establish client requirements
- determine scope of the request
- present findings
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant Federal and State legislation and regulations on relevant land use
- interpreting aerial photographs, maps and GIS
- communicating with stakeholders
- agency policies and procedures
- formats for presenting information to clients.

## AHCLPW402A Implement land and sea management practices

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers implementing land and sea management practices and defines the standard required to: access community members to determine appropriate indigenous land and sea management practices using accepted protocols; determine appropriate non-indigenous land and sea management practices; develop and discuss preferred options to implement land and sea management practices with indigenous groups and other stakeholders; undertake land and sea management practices in compliance with agreed approach and cultural customs and protocols.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes implementing Indigenous and non-Indigenous land and sea management practices required for a given area according to management plans and strategies, community guidelines and cultural protocols.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine appropriate indigenous land and sea management practices	<p>1.1. Correct cultural protocols are observed in discussing and evaluating Indigenous land and sea management practices.</p> <p>1.2. Management plans and priorities are reviewed.</p> <p>1.3. The most appropriate Indigenous practices for a specified area are assessed.</p> <p>1.4. Comparisons are made with non-Indigenous land and sea management practices.</p> <p>1.5. Technology, materials and resources for Indigenous land and sea management practices are defined and quantified for a specific area or practice.</p> <p>1.6. Appropriate persons to provide advice and information on Indigenous land and sea management practices are identified.</p> <p>1.7. Cultural protocols and customs in relation to disclosure of information on Indigenous land and sea management practices are determined.</p>
2. Determine appropriate non-Indigenous land and sea management practices	<p>2.1. Legislative, enterprise and best practice parameters governing non-Indigenous land and sea management practices are identified.</p> <p>2.2. Management plans and priorities are reviewed.</p> <p>2.3. The most appropriate non-Indigenous practices for a specified area are determined.</p> <p>2.4. Comparisons are made with Indigenous land and sea</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>management practices.</p> <p>2.5. Technology, materials and resources for non-Indigenous land and sea management practices are defined.</p> <p>2.6. Relevant information sources on non-Indigenous land and sea management practices are identified and accessed.</p>
3. Develop approach to implementation of land and sea management practices	<p>3.1. Options based on comparison of Indigenous and non-Indigenous land and sea management practices are developed.</p> <p>3.2. Appropriate persons, (government stakeholders and other relevant agencies) are consulted with about available options.</p> <p>3.3. Staging strategy for preferred option is prepared with realistic costs.</p> <p>3.4. Owners and stakeholders of specific area are consulted and involved in setting priorities for management work and practices.</p>
4. Undertake land and sea management practice	<p>4.1. Land and sea management practices are undertaken in compliance with agreed approach.</p> <p>4.2. Work is carried out according to enterprise guidelines, industry best practice and community expectations.</p> <p>4.3. Cultural customs and protocols are respected throughout performance of work.</p> <p>4.4. Practices are carried out by persons appropriately authorised to conduct them according to legislative and cultural requirements and protocols.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- determine appropriate Indigenous land and sea management practices
- determine appropriate non-Indigenous land and sea management practices
- develop approach to implementation of land and sea management practices

**REQUIRED SKILLS AND KNOWLEDGE**

- undertake land and sea management practices
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- cultural protocols which apply in communities
- Indigenous land and sea management practices
- Non-Indigenous land and sea management practices
- technology for use in environmental management
- implementation strategies for land and sea management
- Occupational Health and Safety (OHS), environmental and native title legislation and codes of practice.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- access community members to determine appropriate Indigenous land and sea management practices using accepted protocols

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• determine appropriate non-Indigenous land and sea management practices</li> <li>• develop and discuss preferred options to implement land and sea management practices with Indigenous groups and other stakeholders</li> <li>• undertake land and sea management practices in compliance with agreed approach and cultural customs and protocols.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

### Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Indigenous land and sea management practices may include:	<ul style="list-style-type: none"> <li>• fire management</li> <li>• feral animal control</li> <li>• ceremonial closures</li> <li>• sharing/passing on of knowledge and dreaming and story places</li> <li>• others as appropriate.</li> </ul>
Non-Indigenous land and sea management practices may include:	<ul style="list-style-type: none"> <li>• fire management</li> <li>• weed and feral animal control</li> <li>• waste management</li> <li>• pollution management</li> <li>• pest and disease management</li> <li>• others as appropriate.</li> </ul>

## AHCLPW403A Inspect and monitor cultural places

### Modification History

Not Applicable

### Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit covers inspecting and monitoring cultural places and defines the standard required to: establish the cultural value and background of the place; prepare or source checklists for inspection; inspect the place to establish a schedule of maintenance and monitor site management; submit report and recommendations based on requirements of contract including a review of existing management systems; monitor surroundings to establish restoration, reclamation, modification and protection that is required in the immediate area; monitor stakeholder views for impact on cultural significance, approach to maintenance, restoration and modification, and current and proposed uses of the place or area.</p>
-------------------------------	---

### Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit applies to those whose job role includes inspecting and monitoring the fabric and setting of heritage or culturally significant places to identify non-conformities with conservation and management plans. A high level of cultural awareness and the need to observe cultural protocols are important in parts of the process.</p> <p>Note: for Indigenous cultural places, the delivery and assessment against this unit must comply with community protocols and guidelines and be supported by elders and custodians of country.</p>

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for inspection	1.1. Significance of place is sourced from conservation and management plans. 1.2. According to operational request, specific facilities and equipment for inspection are determined. 1.3. Appropriate checklists relating to condition of fabric and surrounds are obtained to suit the application.
2. Carry out comprehensive inspection	2.1. Condition of fabric is inspected for deterioration and damage. 2.2. Non-conformity with conservation and management plans and Occupational Health and Safety (OHS) are recorded. 2.3. Observed deterioration and damage to the fabric is evaluated to determine short-term and long-term

ELEMENT	PERFORMANCE CRITERIA
	<p>impact on the significance of the place.</p> <p>2.4.Maintenance works for the cultural place is determined and scheduled.</p> <p>2.5.Records are checked for accuracy.</p> <p>2.6.Potential safety risks, hazards and situations are identified and detailed.</p>
3. Submit report and recommendations	<p>3.1.Situations requiring urgent action are addressed in accordance with conservation/management plan enterprise guidelines.</p> <p>3.2.Draft reports are provided to stakeholders in oral and/or written formats.</p> <p>3.3.Concise and accurate report are prepared and submitted to management.</p> <p>3.4.Existing management systems are reviewed particularly regarding frequency and scope of inspection.</p> <p>3.5.Recommendations for future action are consistent with conservation/management plan and industry standards and best practice.</p> <p>3.6.Collected data and information is submitted for inclusion on information management system.</p>
4. Monitor surroundings	<p>4.1.Condition of surrounds and setting of the place or area is monitored for deterioration, damage and for biological or geophysical changes.</p> <p>4.2.Deterioration and damage to surrounds and setting of place or area is evaluated to determine short-term and long-term impact on the significance of the place.</p> <p>4.3.Required restoration or modification of biological aspects of the setting, including indigenous and exotic species, are planned to maintain the cultural and natural significance.</p> <p>4.4.Required restoration or modification of geophysical aspects of the setting and surrounds, including replacement of soils and protection of landforms are planned to maintain the cultural and natural significance.</p> <p>4.5.Maintenance, restoration and modification of fabric, setting and surrounds is integrated to maintain the cultural (both indigenous and non-indigenous), and natural significance of the place or area.</p>
5. Monitor stakeholder	5.1.Stakeholders are periodically consulted to determine

ELEMENT	PERFORMANCE CRITERIA
views on significance	<p>their views on the significance and maintenance of the place and area.</p> <p>5.2. Visitors are periodically consulted to obtain their views on the place and area.</p> <p>5.3. Changes in views and/or stakeholders are identified.</p> <p>5.4. Changes in views are assessed for impact on cultural significance, approach to maintenance, restoration and modification, and current and proposed uses of the place or area.</p> <p>5.5. Assessment of changed views is reported to enterprise and Burra Charter processes or indigenous places guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare for inspection
- carry out comprehensive inspection
- assess the condition of a designated area
- monitor an area for deterioration, damage and for biological or geophysical changes.
- submit report and recommendations
- monitor surroundings
- consult with stakeholders to monitor views on significance
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• relevant cultural concepts</li> <li>• relevant aspects of Australian Heritage Commission legislation and requirements, State/Territory Heritage requirements and World Heritage requirements</li> <li>• International Union for Conservation of Nature (IUCN) guidelines for protected area management categories</li> <li>• Australian and New Zealand Environment Conservation Council (ANZECC) environmental standards and best practice guidelines</li> <li>• national and International Charters of the International Council on Monuments and Sites (ICOMOS), including the Burra Charter</li> <li>• environmental legislation and codes of practice</li> <li>• construction techniques and materials</li> <li>• processes of deterioration and damage</li> <li>• maintenance, restoration and modifications applied or potentially that could be applied to place or area</li> <li>• threats to place or area, including visitor impacts.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Evidence is required that cultural places have been appropriately inspected and monitored and that any maintenance activities conform to relevant legislation, charters and is according to enterprise guidelines and industry best practice. The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• establish the cultural value and background of the place</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• prepare or source checklists for inspection</li> <li>• inspect the place to establish a schedule of maintenance and monitor site management</li> <li>• submit report and recommendations based on requirements of contract including a review of existing management systems</li> <li>• monitor surroundings to establish restoration, reclamation, modification and protection that is required in the immediate area</li> <li>• monitor stakeholder views for impact on cultural significance, approach to maintenance, restoration and modification, and current and proposed uses of the place or area.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Cultural places of significance may include:	<ul style="list-style-type: none"> <li>• areas of non-indigenous activity, buildings and other structures</li> <li>• natural areas of Indigenous cultural significance</li> <li>• areas of Indigenous activity such as burial, occupation and contact sites, engravings, grinding grooves, rock pictures, fish traps, middens and mounds.</li> </ul>

## AHCLPW404A Produce maps for land management purposes

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers producing maps for land management purposes and defines the standard required to: establish the land use, structures and natural resource features that are required to inform land use decisions; source data sets that provide the required information; validate the data for currency and compare to ground observations; incorporate data onto a map; provide a map key and any supporting information required; evaluate maps for suitability for purpose and value in making land management decisions.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to those whose job role includes preparing maps by hand or by using Geographical Information Systems (GIS) for land management purposes.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Obtain information for a specific land management purpose	<p>1.1.Information required to achieve result is defined and required data sets are correctly determined.</p> <p>1.2.Information from stakeholders on land management and production systems is collected and presented consistent with the local area management strategy.</p> <p>1.3.Information collected includes temporal and spatial data.</p> <p>1.4.Information is reviewed for relevance and accuracy.</p>
2. Assess data availability	<p>2.1.Availability of required data sets is ascertained through research of internal and external sources.</p> <p>2.2.Ownership of data is confirmed, and access and pricing determined.</p> <p>2.3.Data is obtained in line with industry standards, statutory requirements and enterprise policy.</p> <p>2.4.Where appropriate, procedures are developed to capture data.</p>
3. Assess data quality	<p>3.1.Data is assessed for integrity to determine suitability for task.</p> <p>3.2.Disparities between data sets are investigated and resolved to ensure integrity of data used.</p>
4. Format and present data	<p>4.1.Compatible format for data is identified.</p> <p>4.2.Relevant data elements are assembled.</p> <p>4.3.Data format(s) are selected to meet user's</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements.</p> <p>4.4.Information is presented to meet user requirements using suitable media in a tidy, informative and useable manner.</p> <p>4.5.Information is presented in line with appropriate enterprise and Australian standards.</p>
5. Incorporate data onto map(s)	<p>5.1.Information is transferred from various data sources onto map(s).</p> <p>5.2.Maps are produced showing spatial and temporal data consistent with development and implementation of the land management strategy.</p> <p>5.3.Maps are analysed for data to assist in development or implementation of land management plan.</p>
6. Review customer satisfaction	<p>6.1.Work is completed in line with enterprise quality requirements.</p> <p>6.2.Feedback is sought from users regarding satisfaction with information and presentation.</p> <p>6.3.Any areas of dissatisfaction are resolved in line with enterprise policy and procedures.</p> <p>6.4.Customer feedback is analysed and used as a quality improvement tool.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- assess data availability
- assess data quality
- incorporate data onto maps
- review customer satisfaction
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views

**REQUIRED SKILLS AND KNOWLEDGE**

- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- land management processes relevant to map being prepared
- relevant Commonwealth, State and Local legislative and regulatory requirements
- mapping principles and conventions including layout, legends, scale, media, printing and presentation styles
- use of software and hardware such as GIS, Computer-Aided Design (CAD), desktop publishing, desktop mapping, multimedia, graphic animation, plotters and printers.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- establish the land use, structures and natural resource features that are required to inform land use decisions
- source data sets that provide the required information
- validate the data for currency and compare to ground observations
- incorporate data onto a map
- provide a map key and any supporting information required
- evaluate maps for suitability for purpose and value in making land management decisions.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Select monitoring techniques	<p>1.1. Monitoring operations are selected to obtain required data described in monitoring plan and enterprise requirements.</p> <p>1.2. Range of likely operating conditions, hazards and difficult/sensitive environments are assessed for impact on monitoring.</p> <p>1.3. Alternative land, sea and air operations are considered to collect data in line with enterprise procedures.</p> <p>1.4. Operations are trialled to test monitoring scheme for reliability, timeline and safety.</p>
2. Prepare equipment and resources	<p>2.1. Appropriate certificates, licenses and authorisations are obtained according to enterprise and legislative requirements.</p> <p>2.2. Equipment required for monitoring is sourced according to enterprise procedures.</p> <p>2.3. Equipment and personnel are transported to monitoring sites without injury or damage according to enterprise procedures.</p> <p>2.4. Equipment is installed and protected from weather conditions according to manufacturer's specifications, safety and enterprise requirements.</p> <p>2.5. Equipment and monitoring procedures are tested in field conditions to enterprise and manufacturers' requirements.</p>
3. Monitor biodiversity	<p>3.1. Observations are made according to monitoring plan and to enterprise procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.2.Data is recorded to monitoring plan and database requirements. 3.3.Location and times of observations are recorded to enterprise requirements. 3.4.OHS requirements are followed to legislative requirements and enterprise policies and procedures.
4. Review data	4.1.Records of monitored data are examined for consistency and accuracy within requirements of the monitoring plan. 4.2.Records are assessed to determine whether the observations and measurements are addressing factors and issues consistent with the monitoring plan. 4.3.Monitoring techniques are adjusted to overcome any deficiency or reported to enterprise procedures for adjustment to monitoring plan.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- develop monitoring techniques
- prepare and install equipment and resources
- monitor biodiversity
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- ecosystems
- plant and animal classification
- monitoring systems for flora, fauna and microorganism populations
- accepted scientific processes
- parks/reserves, conservation, environmental protection and heritage and tenure systems
- set up and use of monitoring equipment
- threats, both natural and from human activity, to places of natural significance
- international, national and local standards and Codes of Practice
- data recording and analysis techniques
- Occupational Health and Safety (OHS) and environmental legislation under which enterprise operates.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- use monitoring techniques suitable for the environment and species
- install and use monitoring equipment
- develop systems to capture, maintain and analyse data
- make observations and record data on species diversity and abundance
- review data to ensure the monitoring process is correctly targeted and implemented.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Define the need for a management plan	1.1.Management plan objectives are identified for the designated area. 1.2.Brief is agreed in consultation with client. 1.3.Planning team including specialists and consultants is identified.
2. Undertake preliminary planning activities	2.1.Major stakeholders are identified. 2.2.Availability of specialists to assist in management planning work is ascertained and contracts are prepared where required. 2.3.Timelines for development of the management plan and reporting arrangements to client are established. 2.4.Resources required for the development of management strategies are identified.
3. Prepare a site description	3.1.Landscape values of the area are identified and mapped. 3.2.Physical features and characteristics of the area are identified and mapped. 3.3.Land uses, including current, cultural, and historical

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	<p>modifications, are researched and their effects on the designated area are determined and recorded.</p> <p>3.4. Physical condition of site is assessed and documented</p> <p>3.5. Biological characteristics of the site are documented.</p>
4. Analyse site information and description	<p>4.1. Information is evaluated in terms of core principles and objectives.</p> <p>4.2. Documents are produced including plans, technical reports and maps.</p> <p>4.3. Priorities and key conservation issues are determined.</p> <p>4.4. Longitudinal projections of continuing impacts are prepared.</p> <p>4.5. Land capability is assessed.</p> <p>4.6. Opportunities and constraints to meeting planning objectives and goals are identified and documented.</p> <p>4.7. Presentation to stakeholders/clients is undertaken and feedback incorporated into planning documentation.</p>
5. Identify management strategies	<p>5.1. Management strategies are identified that address defined objectives.</p> <p>5.2. Management strategies are designed to alleviate existing impacts or to target management actions.</p> <p>5.3. Management strategies are costed and compared to existing budgets and available resources.</p> <p>5.4. Staging of work is planned to prioritise outcomes and management resource allocation.</p> <p>5.5. Consultation with stakeholders/clients is undertaken and feedback incorporated into planning documentation.</p>
6. Prepare the management plan	<p>6.1. Site information and management strategies are documented into a draft management plan for consultation.</p> <p>6.2. Consultation with stakeholders and clients is undertaken according to enterprise guidelines.</p> <p>6.3. Changes are made to the draft plan, and a final plan is prepared and presented to client.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- define the need for a management plan
- undertake preliminary planning activities
- prepare a site description
- analyse site information and description
- identify management strategies
- prepare the management plan
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- management planning principles and issues
- basic civil design
- environmental assessment, survey and analysis techniques and practical application to a range of habitats and landscapes
- native fauna or flora identification, physiology, habitat requirements, and seasonal and nutritional influences on life cycle
- pest plant and animal and disease identification, physiology, control techniques, and equipment, pesticides and habitat requirements
- techniques and strategies for use in the management, rehabilitation and enterprise use of a range of native Australian habitats, species and landscapes
- Indigenous flora regeneration and revegetation techniques, equipment and methods of application in relation to a range of landscape characteristics
- management and rehabilitation techniques for the wildlife and habitat relevant to the designated area
- wildlife habitats associated with the designated area and local geographic region
- soil, plant and water testing processes and procedures, interpretation and application of results.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• discuss management plan objectives, deliverables and timeline with client</li> <li>• prepare a site plan detailing landscape values, physical features and characteristics, land uses (both past and present), physical condition and biological characteristics</li> <li>• identify land capability and conservation issues on and surrounding the site</li> <li>• analyse site information and description to assess feasibility of management objectives</li> <li>• develop and cost recommended actions and present to client for discussion as a draft management plan</li> <li>• consult with stakeholders and incorporate feedback into the final management plan.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Management plan strategies	<ul style="list-style-type: none"> <li>• urban forest management</li> <li>• indigenous flora regeneration and revegetation</li> </ul>

<b>RANGE STATEMENT</b>	
include:	<ul style="list-style-type: none"> <li>• strategies to provide habitat for wildlife and native predators</li> <li>• strategies to maintain biodiversity</li> <li>• strategies to moderate local weather conditions (e.g., wind speed, rainfall run-off, water table recharge, provide shade)</li> <li>• strategies to develop tree management plans</li> <li>• the selective removal of tree limbs for firewood and timber</li> <li>• the selective harvest of seed for revegetation or human consumption</li> <li>• as a genetic resource for plant propagation and medicinal components</li> <li>• as a contribution to sustainable land use</li> <li>• as an aesthetic contribution to enterprise (such as a home-stay farm for tourism).</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for assessment	<p>1.1.Existing data concerning suitability of application for changes in land use is reviewed and confirmed consistent with legislative requirements.</p> <p>1.2.Intention to process formal application is communicated following program guidelines.</p> <p>1.3.Title search completed in line with program standards.</p> <p>1.4.Specific issues relating to collection of evidence communicated aligning with technical guidelines.</p> <p>1.5.Timing of inspection and data collection established with client following program policy.</p>
2. Collect site evidence	<p>2.1.Accuracy of site details checked in line with program guidelines.</p> <p>2.2.Relevant data collected following legislative requirements.</p> <p>2.3.Potential threats to species diversity are checked in line with procedures according to enterprise guidelines and industry best practice.</p> <p>2.4.Soil and water impact assessed consistent with proposed land use and industry principles.</p> <p>2.5.Cultural heritage issues investigated and recorded according to enterprise guidelines and industry best practice.</p>
3. Compile final report	<p>3.1.Detail and accuracy of site data collected checked against assessment criteria.</p> <p>3.2.Report recommendations supported by evidence following assessment criteria and legislative</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements or procedures according to enterprise guidelines and industry best practice.</p> <p>3.3.Final report and supporting documentation presented in line with policy guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare for assessment
- collect site evidence
- compile final report
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- relevant Federal and State legislation and regulations on vegetation clearance
- interpreting aerial photographs, maps and GIS
- communicating with stakeholders
- agency policies and procedures
- formats for compiling reports
- assessment approaches for area of notification.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• review existing data on land use changes according to program guidelines</li> <li>• check title and arrange for physical inspection</li> <li>• collect evidence from the site on potential impacts on species diversity and soil and water quality</li> <li>• record any evidence of issues with cultural values of the site</li> <li>• report recommendations supported by evidence.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Legislation may include:	<ul style="list-style-type: none"> <li>• Federal, State and Territory laws</li> <li>• local government and statutory authority regulations relevant to the area</li> <li>• worksite or job role.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Determine priorities within the plan	<p>1.1.Priorities in conservation or resource management plan are identified to conserve places/area of high significance before those of lower significance, address threats to significance, manage risks, and generate revenue from the resources.</p> <p>1.2.Priorities in the plan are expressed in terms of new or continuing investigations into natural and/or cultural significance, new procedures, and new or continuing development or maintenance projects.</p> <p>1.3.New procedures are developed and address conservation priorities within the context of legislation, enterprise procedures and Codes of Practice.</p>
2. Develop projects to priorities	<p>2.1.Projects are defined from the plan requirements in terms of development and maintenance.</p> <p>2.2.Project definition is developed to identify outcomes and key project steps.</p> <p>2.3.Preliminary project design is completed to identify project steps and funding requirements.</p> <p>2.4.Arrangements for project implementation are made to according to Occupational Health and Safety</p>

ELEMENT	PERFORMANCE CRITERIA
	(OHS), legislative and enterprise requirements.
3. Obtain and manage funds	3.1.Funds requirements to develop operations and projects to the plan are estimated. 3.2.Applications are made for funds according to legislative and enterprise requirements. 3.3.Funds are managed to budget and in accordance with enterprise procedures.
4. Brief staff on plan, priorities and project	4.1.Staff are briefed on the plan objectives, priorities and actions planned. 4.2.Staff are trained in new procedures developed to address plan objectives. 4.3.Project implementation details are developed in consultation with staff, and/or by staff under supervision.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- determine priorities within the plan
- develop projects to priorities
- obtain and manage funds
- brief staff on plan, priorities and projects
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- park/reserve management approaches

## REQUIRED SKILLS AND KNOWLEDGE

- human resource and financial management
- works and project management
- regional tourism activities
- the range of scientific, cultural, historical and other concepts that are to be integrated into the plan
- policies applying across all levels of government and within the specific region, including those under catchment plans
- international treaties, agreements and charters
- Australian Natural Heritage Charter and the Burra Charter and the interpretation of the charters
- enterprise policies and procedures
- good planning practice and enterprise planning procedures and timelines
- OHS and environmental protection legislation, codes of practice and enterprise procedures.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- determine priorities based on high significance areas, the level of risk to sensitive areas, and the potential for revenue generation
- identify projects from the agreed priorities
- develop budgets for projects and apply for funding
- brief and train staff to carry out tasks and projects identified from the management plan.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Respond to advice of change in land use	<p>1.1. Recording of details relating to advice of change in land use is completed following organisational protocols.</p> <p>1.2. Pre site inspection investigations completed in accordance with organisational guidelines and Federal, State legislation and local regulations.</p> <p>1.3. Suspected breach reported and approval sought to proceed with investigation in accordance with organisational protocol.</p>
2. Carry out site investigation	<p>2.1. Site investigations proceed in accordance with organisation guidelines.</p> <p>2.2. Notification to other stakeholders of the consequences of their actions according to organisational guidelines is given.</p> <p>2.3. Interviews and record of proceedings are completed in accordance with legal and organisational protocols.</p> <p>2.4. Specific issues relating to collection of evidence aligning to technical guidelines are communicated.</p> <p>2.5. Record of specific site details relevant to the investigation is recorded following organisation guidelines.</p>
3. Collect site evidence	<p>3.1. Accuracy of site details in line with program guidelines is checked.</p> <p>3.2. Collected site evidence is obtained in accordance</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>with organisational guidelines and legal requirements.</p> <p>3.3. Completed investigations are sufficient to support judgement in accordance to organisational and legal requirements.</p>
4. Compile final report	<p>4.1. Detail and accuracy of supporting and validating data is checked in accordance with legal and organisational guidelines.</p> <p>4.2. Establishment of recommendations based on investigations conforms to legal protocol and organisational guidelines.</p> <p>4.3. Final report and supporting workplace documentation presented in line with policy guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- respond to advice of change in land use
- prepare for initial investigation
- carry out site investigation
- interview witnesses and land owners
- collect site evidence
- compile final report
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

## REQUIRED SKILLS AND KNOWLEDGE

- relevant Federal and State legislation and regulations on natural resource management issues
- interpreting aerial photographs, maps and Geographic Information Systems (GIS)
- communicating with stakeholders
- agency policies and procedures
- communicating with stakeholders, legal and agency policies and procedures
- formats for compiling reports and submitting evidence
- assessment approaches for area of notification.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- carry out preliminary (pre site) investigations into a reported or suspected breach of land use legislation
- seek approval to proceed with a full investigation
- carry out a site investigation
- document records of interviews, proceedings and site details
- check accuracy of all data and information collected
- complete final report with supporting documentation.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

<b>Prerequisite units</b>	

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Review existing information	<p>1.1.Information obtained during scoping or prior resource management plans is reviewed to determine starting point for planning process.</p> <p>1.2.Sources of additional information are identified for use during planning process.</p>
2. Identify dimensions of issues	<p>2.1.Natural resource management issues previously identified are examined to determine current and future impacts.</p> <p>2.2.Causes, scope and types of potential solutions are identified from documentation for use in planning process.</p>
3. Form panels and groups to support process	<p>3.1.Key stakeholder groups are approached to obtain views on consultative structures and processes.</p> <p>3.2.Panels and groups are formed to cater for input of stakeholder information and views, and to obtain assistance on plan development.</p> <p>3.3.Structure of panels and groups is developed to allow diversity and to promote involvement,</p>

ELEMENT	PERFORMANCE CRITERIA
	ownership and co-operation between stakeholder groups.
4. Coordinate the collection of data	<p>4.1.Data collection and surveys on regional factors and issues is coordinated to provide information for the planning process.</p> <p>4.2.Inherent or stable and dynamic data is identified to ensure plan is developed on sound information basis.</p> <p>4.3.Rules and relationships between various data sets are developed where required for loading into a database.</p> <p>4.4.Specialists are sourced to process data for reporting to planning process.</p> <p>4.5.Arrangements are made for data to be recorded in a database where appropriate for further processing and reporting.</p> <p>4.6.Data collection and recording is managed within budgetary constraints.</p>
5. Coordinate the development of goals and strategies	<p>5.1.The development of goals and strategies is coordinated through the use of technical advice, panels and groups.</p> <p>5.2.Sources of appropriate technical advice are identified.</p> <p>5.3.Technical advice is obtained on issues at regional and local levels for integration into goals and strategies.</p> <p>5.4.Technical advice is provided to groups and panels in appropriate terms to assist in the development of goals and strategies.</p> <p>5.5.Panels and groups are facilitated to provide suggestion for goals and strategies, and to comment progressively on their formulation at a regional level.</p> <p>5.6.Original scope and basis for planning process are reviewed at major developmental stages to determine their ongoing validity.</p>
6. Coordinate the preparation of a draft plan	<p>6.1.Preparation of draft plan is coordinated using technical and stakeholder input to cater for range of natural resource management issues within economic, industry and social contexts.</p> <p>6.2.Personnel are coordinated to structure the draft plan to comply with legislative, program and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>enterprise requirements.</p> <p>6.3. Draft plan includes goals, strategies and achievable and measurable outcomes that reflect prior consultation and technical advice.</p> <p>6.4. Draft plan is submitted to enterprise editing, review and approval processes required before public comment.</p>
7. Plan consultations	<p>7.1. Consultations are planned to ensure all stakeholders have the opportunity to comment.</p> <p>7.2. Formal consultations are recorded for use in revisions, and for reporting according to legislative, program and enterprise requirements.</p> <p>7.3. Consultations are organised to include Indigenous cultural heritage as applicable.</p>
8. Coordinate the revision of the plan to reflect consultations	<p>8.1. Revision of draft plan is coordinated to reflect consultation comments within the parameters allowed in legislative, program and enterprise requirements.</p> <p>8.2. Technical advice is obtained to develop an appropriate response to consultation comments.</p> <p>8.3. Revised plan is submitted to enterprise editing, review and approval processes required before final approval.</p> <p>8.4. Revised plan is submitted to regional planning group(s) before final approval.</p>
9. Submit plan for approval/endorsement	<p>9.1. Final plan is submitted for approval/endorsement and publication according to legislative, program, enterprise and contract requirements.</p> <p>9.2. Planning process and outcomes are evaluated to identify potential future improvements in process and outcomes.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

## REQUIRED SKILLS AND KNOWLEDGE

- facilitate to manage widely diverse groups, views and cultures
- coordinate multiple strands of planning development concurrently
- seek out technical advice and communication across a range of technical disciplines
- present effectively
- research in economic, planning, environmental and social areas
- address and relate to diverse groups of people
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- broad geographic indicators with particular emphasis on the region
- regional and rural planning concepts from town planning, rural industry planning, and natural resource planning perspectives
- impact of government processes and industry activities in social and economic terms
- consultative techniques
- cross cultural and cultural factors relevant to social structures
- local government operations
- natural resource management and issues
- sources of technical advice.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<b>EVIDENCE GUIDE</b>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• review existing planning documents and sources of information to inform the plan</li> <li>• identify land management issues and potential solutions</li> <li>• identify stakeholders to form discussion groups and seek individual input to planning</li> <li>• organise for the collection and analysis of data to inform planning and monitor progress</li> <li>• work with stakeholders and technical advisers to develop goals and performance criteria</li> <li>• develop a draft plan for widespread consultation and feedback</li> <li>• finalise the regional resource management plan.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare materials, tools and equipment for landscaping work	<p>1.1.The required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions.</p> <p>1.2.Checks are conducted on all materials, tools and equipment with insufficient or faulty items reported to the supervisor.</p> <p>1.3.Techniques used when loading and unloading materials demonstrate correct manual handling, and minimise damage to the load and the vehicle.</p> <p>1.4.Suitable Personal Protective Equipment (PPE) is selected and checked prior to use.</p> <p>1.5.Landscaping support is provided according to Occupational Health and Safety (OHS) requirements and according to workplace information.</p> <p>1.6.OHS hazards are identified and reported to the supervisor.</p>
2. Undertake landscape work as directed	<p>2.1.Instructions and directions provided by supervisor are followed and clarification sought when necessary.</p> <p>2.2.Landscape work is undertaken in a safe and environmentally appropriate manner according to enterprise guidelines and OHS requirements.</p> <p>2.3.Interactions with other staff and customers are carried out in a positive and professional manner.</p> <p>2.4.Enterprise policy and procedures in relation to workplace practices, handling and disposal of materials is observed.</p> <p>2.5.Problems or difficulties in completing work to</p>

ELEMENT	PERFORMANCE CRITERIA
	required standards or timelines are reported to supervisor.
3. Handle materials and equipment	<p>3.1. Waste material and debris produced during landscape work is stored in a designated area according to supervisor's instructions.</p> <p>3.2. Materials, equipment and machinery are handled and transported according to supervisor's instructions and enterprise guidelines.</p> <p>3.3. A clean and safe work site is maintained while undertaking landscaping activities.</p>
4. Clean up on completion of landscaping work	<p>4.1. Materials are returned to store or disposed of according to supervisor's instructions and OHS requirements.</p> <p>4.2. Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and supervisor's instructions.</p> <p>4.3. Site is made good according to supervisor's instructions and good environmental and OHS practices.</p> <p>4.4. Work outcomes are reported to the supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- follow safe work practices and safety directions
- prepare materials, tools and equipment for landscaping work
- undertake landscape work as directed
- handle materials and equipment
- clean up on completion of landscaping work
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare materials, tools and equipment for landscape construction work	<p>1.1.The required materials, tools and equipment are identified according to lists provided and/or supervisor's instructions.</p> <p>1.2.Checks are conducted on all materials, tools and equipment with insufficient or faulty items reported to the supervisor.</p> <p>1.3.Techniques used when loading and unloading materials demonstrate correct manual handling and minimise damage to the load and the vehicle.</p> <p>1.4.Suitable Personal Protective Equipment (PPE) is selected and checked prior to use.</p> <p>1.5.Construction activities are undertaken according to OHS requirements and according to workplace information.</p> <p>1.6.OHS hazards are identified and reported to the supervisor.</p>
2. Undertake landscape construction activities as directed	<p>2.1.Instructions and directions provided by the supervisor are followed and clarification sought when necessary.</p> <p>2.2.Landscape construction is undertaken in a safe and environmentally appropriate manner according to enterprise guidelines.</p> <p>2.3.Interactions with other staff and customers are carried out in a positive and professional manner.</p> <p>2.4.Enterprise policy and procedures in relation to workplace practices, handling and disposal of materials is observed.</p> <p>2.5.Problems or difficulties in completing work to</p>

ELEMENT	PERFORMANCE CRITERIA
	required standards or timelines are reported to supervisor.
3. Handle materials and equipment	<p>3.1. Waste material and debris produced during landscape construction is stored in a designated area according to supervisor's instructions.</p> <p>3.2. Materials, equipment and machinery are handled and transported according to supervisor's instructions and enterprise guidelines.</p> <p>3.3. A clean and safe work site is maintained while undertaking landscaping activities.</p>
4. Clean up on completion of landscaping work	<p>4.1. Materials are returned to store or disposed of according to supervisors instructions.</p> <p>4.2. Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and supervisor's instructions.</p> <p>4.3. Site is made good according to supervisor's instructions and good environmental practices.</p> <p>4.4. Work outcomes are reported to the supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- prepare materials, tools and equipment for landscaping work
- undertake landscape construction as directed
- handle materials and equipment
- clean up on completion of landscaping work
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- safe work practices
- preparing for landscape work and cleaning up on project completion
- basic construction techniques
- landscaping tools and equipment
- maintenance practices for planted areas
- repair and maintenance of landscape features.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select and prepare tools and equipment
- implement work procedures including OHS
- undertake landscape construction activities
- transport and store machinery and equipment
- clean up the site and dispose of or recycle waste materials and debris.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Construction landscape features may include:	<ul style="list-style-type: none"> <li>• paths, paving</li> <li>• retaining walls</li> <li>• site structures and furniture</li> <li>• planted areas</li> <li>• irrigation systems.</li> </ul>
Maintenance of landscape features may include:	<ul style="list-style-type: none"> <li>• watering</li> <li>• weeding</li> <li>• staking</li> <li>• repairing</li> <li>• painting</li> <li>• cleaning.</li> </ul>

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	<p>1.1. Personal Protective Equipment (PPE) and clothing is selected, used and maintained.</p> <p>1.2. Work instructions relating to constructing the retaining wall are interpreted and confirmed with the supervisor.</p> <p>1.3. Tools and equipment are prepared and used according to the supervisor's instructions.</p> <p>1.4. Manual handling and other Occupational Health and Safety (OHS) hazards are identified, risks assessed and reported to the supervisor.</p> <p>1.5. Services are located according to site and construction</p> <p>1.6. The quantity and quality of materials are checked to ensure they conform to the requirements of the job plans.</p>
2. Mark out site for retaining wall	<p>2.1. The position of the retaining wall is marked out according to site and construction plans.</p> <p>2.2. The location and depth of excavations are determined from site and construction plans.</p> <p>2.3. Profiles are established to conform to the tolerances designated by the supervisor and/or site and construction plans.</p> <p>2.4. Survey benchmarks are established.</p>
3. Prepare footings according to industry	<p>3.1. Foundations for the retaining wall are excavated to depth and dimensions according industry standards.</p>

ELEMENT	PERFORMANCE CRITERIA
standards	<p>3.2. Soil and waste material are removed and stockpiled to ensure a safe working area.</p> <p>3.3. Reinforcing and/or steps in the excavated site are located and positioned according to industry standards.</p> <p>3.4. Pegs or levels are positioned to maintain even depth and horizontal plane to the top of footings.</p> <p>3.5. Footings are placed, consolidated and finished to determined levels, to ensure coverage of reinforcement as necessary and according to industry standards.</p>
4. Prepare and install retaining wall components	<p>4.1. Components for installation are prepared and laid out.</p> <p>4.2. Components to be cut are marked out to length and/or shape and cut accurately to the requirements of profiles already established.</p> <p>4.3. Drainage media is installed according to supervisor's instructions.</p> <p>4.4. Base layer of retaining wall is constructed to a point above the top of the drainage media and weep holes are formed where indicated.</p> <p>4.5. Fill material is back-filled and compacted behind base of retaining wall.</p> <p>4.6. Retaining wall components are constructed to dimensions, profiles and levels as outlined in the specified site and construction plans and/or according to supervisor's instructions.</p> <p>4.7. Capping to top of retaining wall is set to specified levels with a tolerance appropriate to the style of capping.</p>
5. Clean up site and store tools and equipment	<p>5.1. Soil and waste material from the site is disposed of or recycled to minimise damage to the environment.</p> <p>5.2. Unused construction materials are stored and stacked for future re-use according to supervisors instructions.</p> <p>5.3. All tools and equipment are cleaned and stored according to supervisors instructions.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- read and interpret site and construction plans
- calculate the amount of materials required and accurately mark out the area to be retained
- sort soil and waste material from the excavation site in an environmentally aware and sensitive manner, such as sorting it into organic, inorganic and recyclable piles
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- different construction materials for retaining walls
- construction approaches and methods
- OHS responsibilities of employees
- safe lifting practices for carrying large and heavy components
- the environmental impact of soil disturbance when excavating an area to be retained and the environmental effects of altering water flow when installing retaining walls, with or without drainage media
- methods of disposing of soil and waste materials in order to minimise damage to the environment
- Building Code of Australia relating to constructing retaining walls.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• plan and prepare for construction</li> <li>• mark out the site and assemble materials</li> <li>• construct footings and place reinforcing</li> <li>• carry out wall construction</li> <li>• clear up the site and dispose of waste.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan and prepare for installation	<p>1.1. Required workplace information is interpreted and confirmed with supervisor.</p> <p>1.2. Tools and equipment are prepared and used according to supervisors' instructions.</p> <p>1.3. The quantity and quality of materials are checked to ensure they conform to the requirements of the job.</p> <p>1.4. OHS hazards are identified, risks assessed and reported to the supervisor.</p> <p>1.5. Personal Protective Equipment (PPE) and clothing is selected, used and maintained.</p> <p>1.6. Plans for public risk protection are developed in liaison with the supervisor according to statutory obligations and enterprise guidelines.</p> <p>1.7. The potential for environmental damage are assessed and measures are planned to avoid or control/minimise those impacts.</p>
2. Set out the site for path construction	<p>2.1. The location of the proposed path is marked out according to the site plan and contract documents or supervisors instructions.</p> <p>2.2. The marked out area is checked with the supervisor</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>for compliance with the site plan, contract documents and OHS requirements.</p> <p>2.3.Public risk protection measures are put in place and used throughout the course of construction work.</p>
3. Undertake ground preparation	<p>3.1.The area is cleared of debris and excavated to base level and soil and waste materials are relocated or disposed of as directed.</p> <p>3.2.Measures to avoid environmental impacts are put in place prior to commencement of work.</p> <p>3.3.Base material is placed and compacted to the required finished level.</p> <p>3.4.Work carried out conforms to site plan, contract documents and instructions.</p> <p>3.5.Set out work is checked at regular intervals with supervisor.</p> <p>3.6.3Edge restraints, where required, are installed according to site plan and instructions.</p> <p>3.7.Install drainage structures as directed.</p> <p>3.8.Site problems and discrepancies are reported to the supervisor.</p>
4. Lay surface aggregate materials	<p>4.1.Surface aggregate materials are spread over the area to the designated depth.</p> <p>4.2.Material is screed to ensure consistent depth of materials.</p> <p>4.3.Aggregate materials are levelled to the designated level and falls.</p> <p>4.4.Aggregate materials are compacted using appropriate machinery.</p>
5. Make good the site	<p>5.1.Soil and waste material from the site is disposed of or recycled to ensure minimal impact on the environment.</p> <p>5.2.Areas disturbed by installation works are reinstated according to good environmental practices.</p> <p>5.3.All tools&amp;equipment are cleaned and stored according to supervisors' instructions.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- plan and prepare for installation and site safety
- set out the site for path construction
- undertake ground preparation
- lay surface aggregate materials
- make good the site
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- OHS responsibilities of employees
- OHS regulations regarding the erection of signs and barriers around the work area and responsibilities to the public
- the environmental impact of soil disturbance when preparing the site and the environmental effects of altering water flow when installing paths
- setting out site for path construction
- reading of plans and contract documents
- different base and aggregate materials and their performance
- tools and equipment used for installing paths
- methods of disposing of soil and waste materials in order to minimise damage to the environment
- machinery used in path construction
- ordering and estimating materials.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

<b>EVIDENCE GUIDE</b>	
performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• set out the path on a site</li> <li>• undertake ground preparation for an aggregate path</li> <li>• construct the aggregate path and supporting structures</li> <li>• minimise the impact of the aggregate path on the surrounding natural area</li> <li>• dispose of waste materials according to requirements.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan and prepare for paving work	<p>1.1. Required workplace information is interpreted and confirmed with supervisor.</p> <p>1.2. Tools and equipment are prepared and used according to supervisor's instructions.</p> <p>1.3. The quantity and quality of materials are checked to ensure they conform to the requirements of the job.</p> <p>1.4. Occupational Health and Safety (OHS) hazards are identified, risks assessed and reported to the supervisor.</p> <p>1.5. Personal Protective Equipment (PPE) and clothing is selected, used and maintained.</p>
2. Set out and prepare paving area	<p>2.1. The area to be paved is marked out according to the site plan.</p> <p>2.2. The marked out area is checked with the supervisor for compliance with the site plan and OHS requirements, and adjusted where necessary.</p> <p>2.3. The reduced levels of the proposed paving area are calculated and pegged from the survey benchmark using the rise and fall method in a closed level run.</p>
3. Undertake ground preparation	<p>3.1. The area is excavated to shape, depth and dimensions to sub base level according to minimal industry standards.</p> <p>3.2. The sub base is trimmed to the designated level and falls to ensure that the final level of paving can be achieved.</p> <p>3.3. Drainage systems are constructed as necessary according to the site plan.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. Base material is placed and compacted to the required finished level according to minimal industry standards.
4. Lay bedding material	<p>4.1. Bedding material is spread loosely over the area to ensure the designated bedding depth can be attained according to minimal industry standards.</p> <p>4.2. Screed rails are established to ensure the bedding course is maintained.</p> <p>4.3. Bedding material is levelled to the designated level and falls and in accordance with minimum industry standards.</p>
5. Lay pavers to a given pattern	<p>5.1. Grid string lines are set to required levels to ensure the designated pattern of the project is attained, and to maintain straight lines of components.</p> <p>5.2. Pavers are set out to the required dimensions and pattern according to the site plan.</p> <p>5.3. Whole pavers are laid and compacted to the established finish level.</p> <p>5.4. Pavers are marked, cut and fitted to accurately fill gaps in the pattern within tolerances nominated within the site plan.</p> <p>5.5. Permanent edge constraints are installed to prevent movement of pavers.</p>
6. Clean site and store tools and equipment	<p>6.1. Paving is swept thoroughly to produce a clean and flat surface free of debris.</p> <p>6.2. Sand is spread evenly of the paved area and compacted to the finished level.</p> <p>6.3. Soil and waste material from the site is disposed of or recycled to ensure minimal impact on the environment.</p> <p>6.4. All tools and equipment are cleaned and stored according to supervisors instructions.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<b>Required skills</b>
<ul style="list-style-type: none"> <li>• read, interpret and apply information from a site plan that is to scale</li> <li>• calculate the amount of materials required, prepare the paving site, and follow a designated pattern</li> <li>• install modular pavers</li> <li>• sort soil and waste material from the excavation site in an environmentally aware and sensitive manner, such as sorting it into organic, inorganic, and recyclable piles</li> <li>• use literacy skills to follow sequenced written instructions and record information accurately and legibly</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor</li> <li>• use numeracy skills to estimate, calculate and record routine workplace measures</li> <li>• use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.</li> </ul>
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• OHS responsibilities of employees</li> <li>• OHS regulations regarding the erection of signs and barriers around the area to be paved</li> <li>• the environmental impact of soil disturbance when preparing to pave, and the environmental effects of altering water flow when installing new drainage systems</li> <li>• methods of disposing of soil and waste materials in order to minimise damage to the environment.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install	<p>1.1. Enterprise work procedures related to the task are received and confirmed.</p> <p>1.2. Trees to be protected, and method of protection to be used, are identified accurately from enterprise work procedures.</p> <p>1.3. Occupational Health and Safety (OHS) hazards are identified, risks assessed and reported to the supervisor.</p> <p>1.4. Suitable Personal Protective Equipment (PPE) is selected, used and maintained.</p> <p>1.5. Tools and equipment appropriate to the task being undertaken are prepared and used according to enterprise OHS requirements.</p> <p>1.6. Protection devices or materials to assemble devices are collected and checked against requirements as indicated in enterprise work procedures.</p>
2. Install protection devices	<p>2.1. Protection devices are assembled according to enterprise work procedures.</p> <p>2.2. Devices are installed in line with protection plans and/or enterprise work procedures.</p> <p>2.3. Work is carried out in a manner that minimises risk of damage to trees and the surrounding environment.</p>
3. Complete installation activities	<p>3.1. Protection devices are checked for their effectiveness according to enterprise work procedures.</p> <p>3.2. Damaged and/or ineffective devices are reported to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>the supervisor.</p> <p>3.3. A clean and safe area is maintained throughout and on completion of work.</p> <p>3.4. Workplace outcomes are recorded or reported to the supervisor according to enterprise work procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- interpret site maps and tree protection plans
- operate equipment such as digging equipment, traffic control devices
- assemble or build protection devices
- read and interpret site maps and protection plans including a range of graphic symbols
- follow directions for the construction or assembly of protection devices
- follow supervisors instructions
- record or report workplace outcomes
- measure materials used in construction and assembly
- calculate quantities and area
- measure and estimate height, depth and distance.

#### Required knowledge

- potential damage to trees during construction work i.e. compaction, direct physical damage to trunk and crown, roots, soil contamination, changes in soil properties, environmental damage
- AS1742 Pt 3 1985 - Australian Standard Code of Practice, Work Site Traffic Management (if involved in traffic control)
- principles and techniques relating to the choice of tools and equipment for installing tree protection devices
- techniques for assembling or constructing a range of tree protection devices
- techniques and application of a range of tree protection devices suitable to the requirements of the species
- care and maintenance of trees during protection operations.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include evidence of the following:</p> <ul style="list-style-type: none"> <li>• select tools and equipment for protecting trees prior to construction activities</li> <li>• install protective measures around trees to prevent them from damage</li> <li>• clean up materials and maintain worksite.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Protection methods may include:	<ul style="list-style-type: none"> <li>• installation of fences, tree guards, tree plantings, barriers, retaining walls</li> <li>• soil coverings</li> <li>• erection of signs and bunting</li> <li>• traffic re-direction devices.</li> </ul>

## AHCLSC301A Set out site for construction works

### Modification History

Not Applicable

### Unit Descriptor

<p><b>Unit descriptor</b></p>	<p>This unit covers the process of setting out a site for construction works in accordance with site plans and specifications and defines the standard required to: interpret site plans and specifications; locate and mark out position of construction works; establish datum point and survey benchmarks on site; and take and verify site levels.</p>
-------------------------------	--

### Application of the Unit

<p><b>Application of the unit</b></p>	<p>This unit applies to the setting out of a site for construction work in accordance with site plans and specifications. These tasks may be done in advance of proposed works or in conjunction with construction works already being carried out.</p>
---------------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<p><b>Prerequisite units</b></p>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Interpret site plans and specifications	<p>1.1.The various components of the site plan and specifications are identified.</p> <p>1.2.Site plan and specifications are compared with other available plans to ensure accuracy of information.</p> <p>1.3.Equipment required for the setting out of construction works is determined from the site plan and specifications.</p> <p>1.4.Environmental impact of proposed construction works is considered in the interpretation of site plans.</p> <p>1.5.Occupational Health and Safety (OHS) hazards associated with the setting out of construction works are assessed for potential risks, and controls implemented accordingly.</p>
2. Locate and mark out position of construction works	<p>2.1.Existing site features are located from the site plan.</p> <p>2.2.Position of proposed construction works is located from the site plan.</p> <p>2.3.Scale measurements of lines, shapes, angles and dimensions are transferred from the site plan to site.</p> <p>2.4.The shape of proposed construction works is marked out on site according to the site plan and specifications.</p>
3. Establish datum point and survey benchmarks on site	<p>3.1.Datum point is established to ensure all existing and proposed construction works can be linked by survey equipment.</p> <p>3.2.Survey benchmarks are selected and established on positions/structures on site according to site plan and specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Take and verify site levels	4.1. Levelling equipment is set up and checked for accuracy of readings. 4.2. Instruments, which are out of specification, are adjusted accordingly. 4.3. Levels are taken, verified and recorded in accordance with established datum point and survey benchmarks. 4.4. Levelling equipment is cleaned, maintained and stored according to manufacturer instructions.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- implement mathematical and geometrical principles when locating and marking out a site for construction works
- use a range of surveyors instruments
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- interpretation of symbols and use of a legend on site plans and specifications, particularly in relation to benchmarks and the location of existing features
- understanding of compass directions and how to locate North from a site plan
- an awareness of other plans that may be referred to when setting out a site for construction works
- an awareness of common levelling and surveying terms
- environmental awareness associated with the preparation for construction works to ensure that the impact on the environment is minimal when works are implemented
- OHS hazards associated with setting out a site for construction works.

## Evidence Guide

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	1.1.Plans and specifications are interpreted and clarified with the supervisor. 1.2.The quantity and quality of materials are checked to ensure they conform to design drawings and specifications. 1.3.Tools and equipment are selected and checked for serviceability according to enterprise guidelines. 1.4.Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented. 1.5.Environmental implications of constructing concrete structures are identified and reported to the supervisor.
2. Set out and prepare the site	2.1.Services are determined and located from site plans. 2.2.The position of the structure or feature is marked out according to design drawings and specifications. 2.3.Profiles are established to conform to the tolerances nominated within the design drawings and specifications. 2.4.Subsoil is prepared by removing all debris, vegetable matter and topsoil to provide a solid foundation for concrete. 2.5.Drainage systems are installed according to design drawings and specifications. 2.6.Form work is installed to the site in a manner that will ensure it remains rigid during concrete pouring operations. 2.7.Sub-base material is placed and compacted to the required finished levels. 2.8.Preparation of the site is completed according to the type of structure or feature to be constructed.
3. Mix and pour	3.1.Proportions for concrete mix are determined

ELEMENT	PERFORMANCE CRITERIA
concrete	<p>according to the strength requirements of the project.</p> <p>3.2. Volume of dry materials necessary to produce final concrete mix is determined.</p> <p>3.3. All dry ingredients and required additives are mixed together to ensure a thorough blending of all materials is achieved.</p> <p>3.4. Sufficient water is introduced to produce a concrete mix to the required consistency.</p> <p>3.5. Concrete mix samples are taken for testing, if required, to check for conformity to specifications.</p> <p>3.6. Concrete is poured to designated levels in a manner to avoid segregation of materials.</p> <p>3.7. Concrete is consolidated using an approved vibration method to industry standard (AS3600) to ensure air pockets are eliminated.</p>
4. Finish concrete	<p>4.1. Concrete is screeded to a flat surface to maintain the desired finished level.</p> <p>4.2. Surface is trowelled according to design drawings and specifications.</p> <p>4.3. A Concrete is finished off according to design drawings and specifications.</p>
5. Check quality of work and clean up site	<p>5.1. Quality of finished works is inspected to ensure the standard of the finished structure or feature is in accordance with design drawings and specifications.</p> <p>5.2. Form work is removed and cleaned in a manner which will allow for re-use of the form work.</p> <p>5.3. All debris is removed and disposed of in a manner that minimises risk to the environment.</p> <p>5.4. All tools and equipment are cleaned and stored according to enterprise guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- measure and construct profiles using mathematical techniques

**REQUIRED SKILLS AND KNOWLEDGE**

- establish levels using levelling equipment
- undertake and interpret tests performed on a concrete mix
- place, consolidate and finish concrete
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- MPA testing theory and what effects MPA specifications in a concrete mix
- the comparative environmental implications associated with soil removal and the establishment of drainage systems
- industry standards in relation to reinforcing and consolidating concrete.
- sub-base and sub-grade materials and preparation.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- interpret site plans and specifications
- set out and prepare a site for receipt of concrete
- pour, set and finish concrete
- check quality of work and clean up site.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare work	<p>1.1.Plans and specifications are interpreted.</p> <p>1.2.The quantity and quality of materials are checked for conformation to design drawings and specifications.</p> <p>1.3.Tools and equipment are selected and checked for serviceability according to industry practice.</p> <p>1.4.Personal Protective Equipment (PPE) is selected, used and maintained according to procedures.</p> <p>1.5.Occupational Health and Safety (OHS) hazards are identified, risks assessed, and controls are implemented.</p>
2. Position the structure and prepare the profile and footings	<p>2.1.Services are identified and located from site plans.</p> <p>2.2.The position of the structure is marked out according to design drawings and specifications.</p> <p>2.3.Profiles are established to conform to the tolerances nominated within the design drawings and specifications.</p> <p>2.4.Footings are excavated and prepared according to the type of structure to be erected.</p>
3. Prepare and cut timber components	<p>3.1.Components are prepared for assembly to the requirements contained in the design drawings and specifications.</p> <p>3.2.The length of components and the positions of cuts and joints are marked out with a pencil according to designated specifications in design drawings.</p> <p>3.3.Cutting tools are selected, used and maintained</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to manufactures recommendations and OHS specifications.</p> <p>3.4.Components are cut, checked out and drilled accurately in preparation for joining and assembly.</p>
4. Assemble and erect structure	<p>4.1.Timber components are fixed, joined or assembled into position and fixed into place according to design drawings and specifications.</p> <p>4.2.Remaining components are installed and fixed into position according to design drawings and specifications.</p> <p>4.3.Structure is finished off to ensure all components are secure and complete.</p> <p>4.4.Coatings are applied according to specifications and manufacturer's recommendations.</p>
5. Check quality of work and clean up site	<p>5.1.Quality of finished works is checked for compliance with design drawings and specifications.</p> <p>5.2.Debris is cleaned from structure and site according to industry practice.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- measure and mark lengths of timber accurately
- fix, join or assemble timbers using a variety of recognised methods
- apply surface finishes
- use surveyors' instruments
- excavate footings
- use hand and power tools according to OHS requirements
- estimate quantities
- demonstrate safe working practices
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening,

**REQUIRED SKILLS AND KNOWLEDGE**

clarifying information and consulting with supervisors as required

- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- levelling principles and techniques
- timber properties and characteristics
- common timber joints
- timber fixing methods and product
- footings and their construction used for timber structures
- OHS requirements associated with erecting structures and features
- environmental implications associated with excavation and construction activity.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for paving project	1.1. Requirements of the paving project are clarified with client/supervisor and enterprise guidelines. 1.2. Equipment and material resource requirements are identified according to the scope of the construction work and the supervisor's instructions. 1.3. The environmental implications of the proposed work are identified. 1.4. Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented. 1.5. Personal protective equipment (PPE) is selected, used, maintained and stored. 1.6. Delivery of materials to site is organised according to workplace priorities.
2. Set out and prepare the site	2.1. Site and hazards are identified, risks assessed and suitable controls implemented. 2.2. Site bunting is erected, pedestrian access is controlled, and safety signage is placed where appropriate. 2.3. Services are determined and located from site plans. 2.4. Provision for irrigation lines to cross paved areas is made, where applicable. 2.5. The paving pattern is marked out according to plans and specifications. 2.6. Sub-base material is placed and compacted to the

ELEMENT	PERFORMANCE CRITERIA
	<p>required finished levels.</p> <p>2.7.Surface drainage is incorporated according to design drawings and specifications.</p>
3. Coordinate paving project installation	<p>3.1.Paving project is constructed according to plan.</p> <p>3.2.Appropriate drainage is installed according to plan.</p> <p>3.3.Tools, equipment and machinery are used safely according to enterprise operating procedures and OHS requirements.</p>
4. Check quality of work and clean up site	<p>4.1.Quality of finished works is inspected to ensure the standard of the finished project is in accordance with design drawings and specifications.</p> <p>4.2.Paved surfaces are cleaned down in an environmentally safe and sensitive manner.</p> <p>4.3.Tools and equipment are cleaned and stored according to enterprise guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- calculate material and resource requirements
- conduct a site hazard identification and risk control assessment
- coordinate a team to achieve optimum performance
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- landscape paving materials
- landscape paving techniques
- set-out techniques

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• work schedule programming</li> <li>• possible causes of disruption to work activities and their effect on quality and time schedules</li> <li>• methods and practices for maintaining and repairing paved areas</li> <li>• the range, use and availability of required materials, equipment and machinery</li> <li>• hazard identification and risk control assessment</li> <li>• OHS legislative requirements and codes of practice.</li> </ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• determine project requirements from plans</li> <li>• organise work and use tools and equipment for paving project</li> <li>• conduct a site hazard identification and risk control assessment</li> <li>• set out and prepare paving site according to plan specifications</li> <li>• implement a paving project</li> <li>• clean up, store and maintain associated tools, machinery and equipment.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.</p>

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Implementation may include:	<ul style="list-style-type: none"> <li>• paving plans</li> <li>• materials</li> <li>• equipment and machinery.</li> </ul>

## AHCLSC307A Implement a retaining wall project

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of implementing a retaining wall project and defines the standard required to: set out and prepare site according to plan specifications; establish survey benchmarks; excavate and profile soil levels; install and assemble components of a retaining wall; use tools and equipment for retaining wall projects; verify completed works meet the design plan and specifications. This standard forms a part of the training and assessment necessary to obtain the industry license.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to landscapers involved in the process of implementation of a retaining wall project. The work is likely to be under limited supervision, with checking only related to overall progress.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for retaining wall project	<p>1.1. Requirements of the retaining wall project are clarified with client/supervisor.</p> <p>1.2. Equipment and material resource requirements are identified according to the scope of the construction work.</p> <p>1.3. The environmental implications of the proposed work are identified.</p> <p>1.4. Occupational Health and Safety (OHS) hazards are identified, risks assessed and reported to the supervisor.</p> <p>1.5. Personal Protective Equipment (PPE) is selected, used and maintained according to procedures</p> <p>1.6. Delivery of materials to site is organised according to workplace priorities.</p>
2. Mark out site for retaining wall	<p>2.1. Site bunting is erected and safety signage is placed where appropriate.</p> <p>2.2. Services are determined and located from site plans.</p> <p>2.3. The position of the retaining wall is marked out according to site and construction plans.</p> <p>2.4. The location and depth of excavations are determined from site and construction plans.</p> <p>2.5. Profiles are established to conform to the tolerances designated by the construction plans.</p> <p>2.6. Survey benchmarks are established.</p>
3. Construct retaining	3.1. Retaining wall components are assembled /installed

ELEMENT	PERFORMANCE CRITERIA
wall	<p>according to plan specifications.</p> <p>3.2. Appropriate drainage is installed according to plan.</p> <p>3.3. Tools, equipment and machinery are used safely in accordance with enterprise safe operating procedures and OHS requirements.</p>
4. Check quality of work and clean up site	<p>4.1. Quality of finished works is inspected to ensure the standard of the finished project is in accordance with design drawings and specifications.</p> <p>4.2. The work site is cleaned down in an environmentally safe and sensitive manner</p> <p>4.3. Tools and equipment are cleaned and stored according to enterprise guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- read and interpret documentation associated with retaining wall projects
- calculate material and resource requirements
- establish survey benchmarks
- install and assemble components of a retaining wall
- coordinate a team to achieve optimum performance
- document results clearly and concisely
- identify hazards and assess risk
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- landscape retaining wall materials
- landscape retaining wall construction techniques
- set out techniques
- work schedule programming

**REQUIRED SKILLS AND KNOWLEDGE**

- possible causes of disruption to work activities and their effect on quality and time schedules
- methods and practices for maintaining and repairing retaining walls
- the range, use and availability of materials, equipment and machinery that may be required for the project
- OHS issues, legislative requirements and codes of practice
- state based licensing
- local council regulations
- WorkCover regulations.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- set out and prepare site according to plan specifications
- establish survey benchmarks
- excavate and profile soil levels
- install and assemble components of a retaining wall
- use tools and equipment for retaining wall projects
- verify completed works meet the design plan and specifications.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan and prepare work	<p>1.1.Plans and specifications are interpreted and clarified with the supervisor.</p> <p>1.2.The quantity and quality of materials are checked to ensure they conform to design drawings and specifications.</p> <p>1.3.Tools and equipment are selected and checked for serviceability according to enterprise guidelines.</p> <p>1.4.Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented.</p> <p>1.5.Environmental implications of installing metal structures are identified and reported to the supervisor.</p>
2. Set out the site for the structure	<p>2.1.Services are determined and located from site plans.</p> <p>2.2.The position of the structure or feature is marked out according to design drawings and specifications.</p> <p>2.3.Profiles are established to conform to the tolerances nominated within the design drawings and specifications.</p> <p>2.4.Footings are excavated and prepared according to the type of structure or feature to be installed.</p>
3. Prepare and cut metal components	<p>3.1.Components are laid out ready for assembly to the requirements contained in the design drawings and specifications.</p> <p>3.2.The length of components and the positions of joins are marked out according to designated specifications in design drawings.</p> <p>3.3.Cutting tools are selected, used and maintained</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to manufacturer's recommendations and OHS specifications.</p> <p>3.4.Components are cut and joined in preparation for assembly.</p>
4. Assemble and erect structure	<p>4.1.Metal components are assembled into position and fixed into place according to design drawings and specifications.</p> <p>4.2.Remaining components are installed and fixed into position according to design drawings and specifications.</p> <p>4.3.Structure is finished off to ensure all components are secure and complete.</p> <p>4.4.Coatings are applied according to specifications, manufacturer's recommendations and OHS guidelines.</p>
5. Check quality of work and clean up site	<p>5.1.Quality of finished work is inspected to ensure the standard of the finished structure or feature is in accordance with design drawings and specifications.</p> <p>5.2.Debris is cleaned from structure and site according to enterprise guidelines.</p> <p>5.3.Waste material is disposed of in an environmentally aware and sensitive manner.</p> <p>5.4.Unused metal components are stored for future re-use according to enterprise guidelines.</p> <p>5.5.Tools and equipment are cleaned and stored according to enterprise guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- measure and mark lengths of metal components accurately
- join and cut metal components using different techniques and methods
- use some surveyor's instruments
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible

**REQUIRED SKILLS AND KNOWLEDGE**

- information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
  - use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- surveying principles and techniques
- the correct use of hand and power tools and other OHS requirements associated with installing structures and features
- comparative environmental implications associated with excavation and construction activity.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- plan and set out a site for the installation
- prepare and cut metal components
- assemble and erect structure
- check quality of work and clean up site.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Plan and prepare work	<p>1.1.Plans and specifications are interpreted and clarified with the supervisor.</p> <p>1.2.The quantity and quality of materials are checked to ensure they conform to design drawings and specifications.</p> <p>1.3.Tools and equipment are selected and checked for serviceability according to enterprise guidelines.</p> <p>1.4.Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented.</p> <p>1.5.Environmental implications of constructing concrete structures are identified and reported to the supervisor.</p>
2. Set out and prepare the site	<p>2.1.Services are determined and located from site plans.</p> <p>2.2.The exact location and depth of excavations is determined from design drawings and specifications, and marked out accordingly.</p> <p>2.3.Site is excavated to the shape, depth and dimensions as marked out.</p> <p>2.4.Drainage systems are constructed according to design drawings and specifications.</p> <p>2.5.Bedding material is placed and compacted to the required finished levels.</p> <p>2.6.Soil and waste material is sorted and stockpiled ready for removal, reuse or recycling.</p>
3. Install water feature and accessories	<p>3.1.A waterproof membrane, prefabricated shell or formed 'in situ' feature is installed according to design drawings, specifications and/or manufacturer's</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>instructions.</p> <p>3.2.All accessories to the feature are installed according to design drawings, specifications and/or manufacturer's instructions, and with due consideration to safety issues.</p> <p>3.3.The feature is filled with water, tested for leaks and repaired accordingly.</p> <p>3.4.Water is treated to remove or neutralise contaminants resulting from excavation and installation work.</p>
4. Check quality of work and clean up site	<p>4.1.Any mechanical features are checked and adjusted to ensure they operate according to manufacturer's specifications.</p> <p>4.2.Quality of finished works is inspected to ensure the standard of the finished feature is in accordance with design drawings and specifications.</p> <p>4.3.Debris is cleaned from feature and site according to enterprise guidelines.</p> <p>4.4.Soil and waste material is disposed of in an environmentally aware and sensitive manner.</p> <p>4.5.All tools and equipment are cleaned and stored according to enterprise guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- measure and calculate area, depth and volume
- use some surveyors instruments
- install various types of prefabricated water features and/or form them 'in situ'
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use interpersonal skills to work with and relate to people from a range of cultural,

**REQUIRED SKILLS AND KNOWLEDGE**

social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- regulations regarding water use and safety in public places
- pumping systems and accessories associated with water features
- pipe sizes, types and applications
- plant materials, fish and water animals suitable for various types of water features
- water treatment methods
- comparative environmental implications associated with soil excavation and the establishment of drainage systems and water catchment features
- legislative and regulatory requirements with water feature installation.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare site for water feature installation
- construct/assemble, install and commission water feature/s.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for tree transplantation	<p>1.1. Occupational Health and Safety (OHS) hazards associated with transplanting operations are identified, risks assessed and suitable controls implemented.</p> <p>1.2. Liaison with local authorities and information services is undertaken to determine location of services and utilities, and legislation, local by-laws and regulations governing the transplanting/transporting of trees.</p> <p>1.3. Tree is inspected to ensure the appropriate transplanting operations are implemented according to an identified program, and to ensure the safety of personnel, the public and property is maintained throughout and upon completion of work.</p> <p>1.4. Root ball and crown treatments are selected, prepared and used according to the requirements of the species to ensure the tree remains viable throughout the transplanting process.</p> <p>1.5. Site is prepared for transplanting activities including notification of local residents and authorities where necessary.</p> <p>1.6. Surrounding property/vegetation is relocated, secured and/or protected from potential damage during tree transplanting.</p> <p>1.7. Tools, equipment and machinery necessary to implement tree transplanting activities are selected, prepared and used according to enterprise guidelines and manufacturers' recommendations.</p>

ELEMENT	PERFORMANCE CRITERIA
2. Implement transplanting operations	<p>2.1. Soil around the root zone is excavated and root ball is undercut with minimum stress to the plant according to documented work procedures.</p> <p>2.2. Roots are pruned where required to meet AS4373 Pruning of amenity trees.</p> <p>2.3. Tree is stabilised as the root system is undercut and anti-transpirants applied as a root soak or foliar spray to ensure viability of the plant is maintained.</p> <p>2.4. Root ball is bound with appropriate material to ensure adequate soil is retained and kept moist prior to transportation and installation.</p> <p>2.5. Tree is lifted and secured for potential storage and/or transportation using safe lifting techniques and in accordance with documented guidelines.</p> <p>2.6. Tree or shrub is prepared and handled to minimise damage during handling and transportation.</p> <p>2.7. Appropriate drainage and soil improvements are implemented and the tree is re-installed and stabilised.</p> <p>2.8. Tools, equipment and machinery are cleaned and stored according to enterprise guidelines and manufacturers' recommendations.</p> <p>2.9. Completed transplanting program is recorded and communicated to management and/or the client according to enterprise guidelines.</p>
3. Maintain health and viability of transplanted tree	<p>3.1. Water is applied to the reinstalled tree over a sustained period to ensure minimal leaf loss and that new growth is apparent.</p> <p>3.2. Anti-transpirants are applied and any nutritional requirements of the species are provided.</p> <p>3.3. Tree protection devices are installed to ensure adequate support and protection is provided.</p> <p>3.4. Tree condition and site is monitored to ensure the plant remains healthy.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- calculate tree mass and size for safe removal
- bind and/or wrap root balls and crowns
- locate existing services
- monitor and minimise environmental impacts of transplanting operations
- dispose of plant debris in an environmentally safe and sensitive manner
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- tree anatomy and physiology
- tree transplanting techniques
- principles and methods of operating tree moving equipment
- causes of stress in trees resulting from transplanting, storage and transportation
- safety procedures and potential hazards of removing and transplanting trees
- requirements for securing and signage when transporting trees on road vehicles
- problems and methods relating to the aftercare of trees during their establishment period
- environmental impact of tree removal and transplantation
- relevant legislation that may impact on a tree transplant program
- local government tree protection and preservation regulations
- AS4373-2007 Pruning of amenity trees
- relevant Code of Practice.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the

<b>EVIDENCE GUIDE</b>	
performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• determine tree transplanting requirements from specifications</li> <li>• prepare tools and equipment, tree and new site for tree transplanting</li> <li>• calculate tree mass and size for safe removal</li> <li>• bind and/or wrap root balls and crowns</li> <li>• lift, reinstall and stabilise tree</li> <li>• organise work according to program requirements</li> <li>• record transplanting activities.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify scope of landscape project works	<p>1.1.Nature of landscape project works and extent of responsibilities are identified and checked against relevant landscape documentation.</p> <p>1.2.Personnel and other resources required to undertake landscape project works are identified according to the scope of the project and relevant landscape documentation.</p> <p>1.3.A work program is developed according to the needs of management and/or the client to ensure that project outcomes are reached within designated time lines.</p> <p>1.4.The environmental impact of the proposed landscape project works is considered.</p> <p>1.5.Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented.</p>
2. Coordinate the supply of materials/ equipment	<p>2.1.Material quantities and equipment requirements are calculated to ensure an on-going work program is maintained according to the scope of the project.</p> <p>2.2.Material quantities are ordered, checked for quantity and quality, and stockpiled where required.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3. Any specific delivery instructions are conveyed and confirmed with suppliers to ensure materials are delivered according to the work program.</p> <p>2.4. Any material rejected is sent back to supplier and re-ordered.</p>
3. Monitor project works	<p>3.1. Work program is monitored and adjusted to ensure the site is developed according to the needs of management and/or the client, and to ensure that project outcomes are reached within designated time lines</p> <p>3.2. Variations to the work program, issues likely to cause delays, and contingencies beyond the scope of the project are identified, recorded and reported to management and/or the client.</p> <p>3.3. The work site is monitored to ensure it remains in a clean, tidy and safe condition throughout and on completion of landscape project works.</p>
4. Complete site works	<p>4.1. Site is inspected prior to practical completion to ensure all works have been undertaken according to management and/or client needs and the relevant landscape documentation.</p> <p>4.2. Any works not complying are noted and rectified.</p> <p>4.3. A completed landscape project works report is produced, recorded and communicated to management and/or the client.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- calculate material and resource requirements
- control quality of supplied materials
- coordinate a team to achieve optimum performance
- demonstrate safe working practices
- use literacy skills to read, interpret and follow organisational policies and procedures, develop sequenced written instructions, record accurately and legibly

**REQUIRED SKILLS AND KNOWLEDGE**

- information collected and select and apply procedures to a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
  - use numeracy skills to estimate, calculate and record routine and more complex workplace measures and data
  - use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- environmental awareness associated with undertaking landscape project works to ensure the impact on the environment is minimal
- project contracts, documentation, plans and specifications
- possible causes of disruption to work programs and their effect on quality and time schedules
- site assessment and work site establishment
- supervision of labour and sub-contractors
- job reporting including format, frequency and documentation
- issuing of instructions, variations and RFI
- legislative requirements and legal responsibilities (including OHS)
- OHS responsibilities of employers and employees
- hazard identification, assessment and control.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- develop a project plan and apply for planning

<b>EVIDENCE GUIDE</b>	
	<p>approvals if required</p> <ul style="list-style-type: none"> <li>• calculate and obtain quotes for materials and receive on site</li> <li>• supervise the work team and ensure a safe work environment</li> <li>• minimise environmental risks and impacts</li> <li>• monitor the landscape works through to completion and rectify problems</li> <li>• complete a landscape works report and present to management and client.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

<b>RANGE STATEMENT</b>	
The range statement relates to the unit of competency as a whole.	
Landscape project works may include:	<ul style="list-style-type: none"> <li>• planting programs</li> <li>• turf installation and cultivation</li> <li>• the erection of landscape structures and features</li> <li>• installation of drainage and irrigation</li> <li>• garden maintenance or restoration</li> <li>• construction of walking tracks</li> <li>• boardwalks and safety rails</li> <li>• earthworks involving land shaping and stabilisation of slopes and embankments.</li> </ul>
Landscape project works may include:	<ul style="list-style-type: none"> <li>• amenity and/or natural areas.</li> </ul>

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Undertake the site survey	1.1.Survey items are determined from the existing plan or client brief. 1.2.Survey items and relevant landscape features are measured. 1.3.Measurements are taken and reduced with reference to the design. 1.4.Measurements are checked and recorded according to industry practice and documented procedures.
2. Read maps and plans	2.1.Current magnetic declinations and magnetic bearings are taken. 2.2.Differences between true and magnetic north and place north points on plans are determined. 2.3.Magnetic bearings to true north points are transferred on plans.
3. Record site details	3.1.Orientation and levels are recorded on a site plan. 3.2.Scale plan is produced for a garden design. 3.3.Plan of site is presented to the client.

## Required Skills and Knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>

## REQUIRED SKILLS AND KNOWLEDGE

- use survey equipment
- map levels and issues of levels in gardens
- use and care for relevant surveying equipment
- booking and logging results
- analyse surveying and levelling results
- determine surveying protocols
- capture survey data
- maintain data records
- exhibit professional work practices
- produce scale drawings for designs and costings
- use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

### Required knowledge

- current magnetic declinations and take magnetic bearings
- transference of magnetic bearings to true north points on plans
- terminology of surveying and levelling
- different techniques for dealing with different garden shapes
- differences between true and magnetic north and place north points on plans
- map and plan reading.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>EVIDENCE GUIDE</b>	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• determine the survey items from a client brief</li> <li>• record the levels of survey items and site features</li> <li>• orient the landscape site</li> <li>• map the levels on a scale plan.</li> </ul>

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Identify issues relating to the landscape project	<p>1.1.The goals and objectives of the project are identified and discussed with the client and/or management.</p> <p>1.2.Landscape documentation is analysed to determine the nature and scope of the project.</p> <p>1.3.Potential constraints to the success of the project are identified.</p> <p>1.4.The environmental impact of the proposed landscape project works is considered at this stage.</p> <p>1.5.Occupational Health and Safety (OHS) hazards are identified, risks assessed and controls implemented.</p>
2. Maintain effective client liaison	<p>2.1.Responsibilities of all parties involved in the project are clarified according to the contract.</p> <p>2.2.Procedures to vary the contract are clarified to the satisfaction of all parties involved in the project.</p> <p>2.3.Emergency procedures are identified to the satisfaction of all parties involved in the project according to contract terms and conditions.</p> <p>2.4.Communication obligations in respect of the work program are established according to contractual obligations and sound business practice.</p>

ELEMENT	PERFORMANCE CRITERIA
3. Develop work schedule	<p>3.1. Work schedules and timelines of operations are identified and documented in a form that is accessible and understandable to all relevant personnel.</p> <p>3.2. Resources required for the landscape project are identified according to the contract and landscape design.</p> <p>3.3. Quantity, quality and timing of supply of each input and service are identified and documented.</p> <p>3.4. Key performance outcomes and indicators are established to measure performance of all operations and personnel.</p>
4. Manage contractors	<p>4.1. Standard contracts are prepared for specific works in line with the landscape design and contract.</p> <p>4.2. Progress of works against contract is monitored according to enterprise standards.</p> <p>4.3. Variations are identified, negotiated, implemented and recorded.</p> <p>4.4. Non-conforming elements of the contract are identified, rectified and recorded.</p> <p>4.5. Progress payments and final payments are initiated according to the terms of contract.</p>
5. Submit works for hand over	<p>5.1. Site inspection is undertaken with relevant personnel at completion of works and prior to hand over according to enterprise guidelines.</p> <p>5.2. All items below specification are noted, recorded and rectified according to enterprise guidelines and contract terms and conditions.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- monitor and minimise adverse environmental impacts by contractors
- report on and document clearly all aspects related to landscape project works
- interpret or prepare estimates, quotes and tenders
- use literacy skills to fulfil job roles as required by the organisation. The level of

**REQUIRED SKILLS AND KNOWLEDGE**

skill may range from reading and understanding documentation to completion of written reports

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views
- use numeracy skills to estimate, calculate and record complex workplace measures
- use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- contract preparation and administration
- estimation, quotation and tender process
- project management principles
- regulations having possible bearing on landscape projects
- public liability and legal responsibilities
- personal and professional liability
- duty of care
- environmental awareness to identify, manage and minimise any environmental risks
- landscape machinery and equipment such as earthmoving and earth forming machinery.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- receive/prepare landscape project documentation
- develop and cost a bill of quantities

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• develop a schedule of works</li> <li>• order and arrange for purchase and delivery of goods and services</li> <li>• organise and manage works program and works team</li> <li>• identify sub-contracted work and program and manage sub-contractors</li> <li>• identify, negotiate and implement variations to the contract</li> <li>• identify and rectify non-conforming elements to the contract</li> <li>• prepare and manage on-going maintenance program until handover.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

# AHCLSC503A Manage a tree transplanting program

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers managing a tree transplanting program and defines the standard required to: assess the transplant trees; assess the lifting and transplant sites; determine the transplant and transportation requirements and removal method; implement the transplanting operation; document the tree transplanting program, budget and monitoring procedures; document the contingency planning and after-care plan.
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	This unit applies to the management a tree transplanting program and is likely to be undertaken without supervision, with only general guidance on progress sought by management and/or the client.
--------------------------------	---

## Licensing/Regulatory Information

Not Applicable

## Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Assess the sites and trees	<p>1.1.Site assessments are undertaken to identify site conditions which may impact upon transplanting activities at the lifting site and the transplant site.</p> <p>1.2.Occupational Health and Safety (OHS) hazards are identified, risks assessed and suitable controls recommended.</p> <p>1.3.Liaison with local authorities and information services is undertaken to determine location of services and utilities, and legislation, local by-laws and regulations governing the transplanting/transporting of trees.</p> <p>1.4.Trees are assessed for viability for transplanting to ensure the best time and conditions are chosen according to tree species characteristics.</p>
2. Determine transplanting requirements	<p>2.1.The appropriate tools, equipment, machinery and specialist contractors are identified in accordance with the site assessment and tree species to be transplanted.</p> <p>2.2.Excavation methods and root ball preparation is determined according to the characteristics of the species.</p> <p>2.3.Crown reduction/protection tasks are determined according to the characteristics of the species and are planned to meet AS4373 Pruning of amenity trees.</p> <p>2.4.Root ball and tree mass is calculated to determine appropriate lifting and transport requirements.</p> <p>2.5.Personnel/contractor requirements are negotiated to ensure trees are prepared, lifted, transported and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>re-installed with minimum stress to the trees, and with regard to safety and environmental factors.</p> <p>2.6.A transport route is identified with regard to the size and shape of the tree and road transport vehicle requirements.</p> <p>2.7.An aftercare plan outlining monitoring frequency and methods to maintain the health and viability of the transplanted tree(s) is determined and documented in the program.</p>
3. Document a tree transplanting program	<p>3.1.Transplanting program is documented according to management and/or client needs.</p> <p>3.2.Resources and costing details are documented and presented to management and/or the client.</p> <p>3.3.Transplanting program is communicated to the relevant personnel for implementation.</p> <p>3.4.Transplant operations are performed as per standard Implement a tree transplanting program.</p> <p>3.5.Completed tree transplanting program is assessed to ensure that transplantation was undertaken according to the identified program and budget guidelines.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- assess tree viability
- calculate root ball and tree mass and size
- calculate project resources and costs and develop a budget
- assess crown and root reduction requirements
- accurately document a transplanting program and communicate these plans and instructions to clients and other personnel
- plan the transplanting program in an environmentally sensitive manner
- negotiate and manage contracts
- liaise with local authorities to determine location of services and relevant legislation
- assess and control risks

<p><b>REQUIRED SKILLS AND KNOWLEDGE</b></p> <ul style="list-style-type: none"> <li>• use literacy skills to fulfil job roles as required by the organisation. The level of skill may range from reading and understanding documentation to completion of written reports</li> <li>• use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification, negotiating solutions and responding to a range of views</li> <li>• use numeracy skills to estimate, calculate and record complex workplace measures</li> <li>• use interpersonal skills to work with others and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.</li> </ul>
<p><b>Required knowledge</b></p> <ul style="list-style-type: none"> <li>• tree anatomy, physiology and biochemistry</li> <li>• current practices and techniques in tree preparation, lifting, transportation and replanting</li> <li>• methods of managing tree moving operations</li> <li>• tree transplanting techniques appropriate to the specific requirements of the species</li> <li>• causes of stress in trees resulting from resulting from transplanting, storage and transportation</li> <li>• requirements for securing and signing trees for road transportation</li> <li>• planning considerations and environmental implications of transplanting activities</li> <li>• aftercare management</li> <li>• OHS risks associated with transplanting trees</li> <li>• the effect of adverse climatic conditions</li> <li>• relevant legislation that may impact on a tree transplant program</li> <li>• local government tree protection and preservation regulations</li> <li>• AS4373-2007 Pruning of amenity trees</li> <li>• relevant Code of Practice.</li> </ul>

equipment	<p>designated area according to supervisor's instructions.</p> <p>3.2. Materials, equipment and machinery are handled and transported according to supervisor's instructions and enterprise guidelines.</p> <p>3.3. A clean and safe work site is maintained while working.</p>
4. Clean up on completion of work	<p>4.1. Materials are returned to store or disposed of according to supervisor's instructions.</p> <p>4.2. Tools and equipment are cleaned, maintained and stored according to manufacturer's specifications and supervisor's instructions.</p> <p>4.3. Work outcomes are reported to the supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- follow safe work practices
- participate in teams and contribute to team objectives
- understand instructions
- read labels, site plan measurements and OHS symbols
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- safe work practices
- animal handling techniques including animal welfare requirements
- tools and equipment
- maintenance practices for planted areas
- repair and maintenance of features
- OHS and environmental protection legislation and enterprise procedures.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• use safe animal handling techniques</li> <li>• use livestock handling tools and equipment</li> <li>• assist in monitoring livestock health and welfare</li> <li>• assist others repair and maintain facilities.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Range Statement

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- follow safe work procedures
- prepare materials, tools and equipment for work
- undertake work as directed
- handle materials and equipment
- clean up on completion of work
- use literacy skills to read and follow a range of basic instructions
- use oral communication skills/language competence to communicate effectively with others
- use numeracy skills to complete basic calculations
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds.

#### Required knowledge

- safe work practices
- animal handling techniques including animal welfare
- tools and equipment
- repair and maintenance of buildings, fixtures or fittings
- OHS, animal welfare and environmental protection legislation and enterprise

**REQUIRED SKILLS AND KNOWLEDGE**

procedures.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- apply safe animal handling techniques
- use livestock handling tools and equipment
- repair and maintain features
- apply basic animal husbandry techniques.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Work tasks may include:

- regular checking of feed and water supplies for animals and/or birds
- mixing and milling standard stockfeed
- disposing of deceased animals
- loading and unloading animals for transport

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• carrying out routine maintenance on buildings, cages/pens</li> <li>• cleaning sheds, fixtures and fittings.</li> </ul>
Tools and equipment may include:	<ul style="list-style-type: none"> <li>• knives</li> <li>• spades</li> <li>• forks</li> <li>• rakes</li> <li>• hoes</li> <li>• spray equipment</li> <li>• augers</li> <li>• buckets</li> <li>• brooms</li> <li>• wheelbarrows</li> <li>• hoses and hose fittings.</li> </ul>
Hazards may include:	<ul style="list-style-type: none"> <li>• solar radiation</li> <li>• dust</li> <li>• noise</li> <li>• air- and soil-borne micro-organisms</li> <li>• chemicals and hazardous substances</li> <li>• sharp hand tools and equipment</li> <li>• manual handling</li> <li>• holes</li> <li>• slippery and uneven surfaces.</li> </ul>

## AHCLSK201A Assist with feeding in a production system

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of preparing and providing feed and water for livestock in a production unit and defines the standard required to: recognise a range of feed types and qualities; prepare and distribute feed; check watering systems; report on feeding to supervisors; keep basic feeding records.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to working under close supervision with regular checking within enterprise guidelines.
--------------------------------	--

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Get and distribute feed	<p>1.1. Daily feeding program for livestock is checked with supervisor.</p> <p>1.2. Occupational Health and Safety (OHS) hazards are identified, risk assessed and suitable controls implemented.</p> <p>1.3. Suitable personal protective equipment is selected, used and maintained.</p> <p>1.4. Assistance is provided for weighing and measuring feed.</p> <p>1.5. Feed is loaded into trolleys from silos or other storage bins and distributed, or where used, automatic/computerised feeders are checked for blockages and correct functioning.</p> <p>1.6. Supervisors are notified of any abnormalities or irregularities with feed stocks.</p> <p>1.7. Tools, machinery and equipment are maintained and stored after use.</p>
2. Check watering systems	<p>2.1. Where appropriate, watering systems are adjusted for height or position.</p> <p>2.2. Water flow is checked and adjustments are made accordingly.</p> <p>2.3. Watering containers or lines are emptied and cleaned where necessary.</p>
3. Keep workplace record	<p>3.1. Basic feeding records are kept and supervisor informed.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safety directions
- identify a range of feed types and qualities
- identify grain contaminants
- recognise and rectify minor operational faults
- read and interpret manufacturers specifications, work and maintenance plans, and Material Safety Data Sheets (MSDS)
- interpret and apply task instructions, communicate with work team and supervisor, and record and report faults, workplace hazards and accidents
- complete records and documentation of feed use and volumes for the shed
- use machinery and equipment associated with providing feed
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- silo operations, tractors and associated feeding machinery and equipment
- cleaning and storage of machinery, equipment and materials
- enterprise recording and reporting procedures
- grains, meals, pelleted and liquid feeds
- evidence of spoilage and handling spoilt feeds
- legislation and workplace procedures for OHS, animal welfare and environmental management.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<b>EVIDENCE GUIDE</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• recognise a range of feed types and qualities</li> <li>• prepare and distribute feed</li> <li>• check watering systems</li> <li>• report on feeding to supervisors</li> <li>• keep basic feeding records.</li> </ul>

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor and assess livestock health and welfare	<p>1.1.Regular checks are taken to assess livestock health and welfare according to the requirements of the organisation.</p> <p>1.2.Symptoms of ill health and common diseases, disorders or parasite infestations are recognised and reported.</p> <p>1.3.Livestock are handled calmly and according to enterprise procedures.</p>
2. Implement livestock health and welfare procedures	<p>2.1.Occupational Health and Safety (OHS) hazards in the workplace are recognised and safety issues reported according to enterprise requirements.</p> <p>2.2.Quarantine and biosecurity procedures are maintained as instructed to minimise the risks of disease introduction.</p> <p>2.3.Thorough personal hygiene practices are maintained in all activities associated with handling livestock, including reducing risks from diseases transmissible to humans.</p> <p>2.4.Sick or dead livestock are safely treated and humanely destroyed, if necessary.</p> <p>2.5.Environmental implications associated with livestock husbandry practices are identified, assessed and relevant measures implemented.</p>
3. Administer drenches,	3.1.Livestock treatment site and facilities are prepared to

ELEMENT	PERFORMANCE CRITERIA
vaccines and prescribed medicines to livestock	<p>industry standards in line with enterprise requirements.</p> <p>3.2.Livestock treatments are prepared and confirmed against work plan in line with manufacturer's specifications and work plan.</p> <p>3.3.Livestock are mustered safely, yarded, controlled, inspected and identified for treatment in line with enterprise requirements.</p> <p>3.4.Safe workplace practices with regard to livestock handling are observed and implemented in line with OHS and enterprise requirements.</p> <p>3.5.Treatment is administered in accordance with manufacturer's specifications, enterprise and animal welfare legislative requirements.</p>
4. Prepare, maintain and store animal health equipment	<p>4.1.Equipment and materials for treating livestock are checked for safe and sound operation and confirmed against work plan.</p> <p>4.2.Syringes, needles and other veterinary medicine containers are placed in allocated disposal containers, with tips removed from needles prior to disposal.</p> <p>4.3.Equipment, materials and facilities used for treatments are cleaned, maintained and stored in line with manufacturer's specifications, OHS and enterprise requirements.</p> <p>4.4.Livestock residues and waste are disposed of in an environmentally responsible manner in line with OHS and enterprise requirements.</p>
5. Monitor treated livestock and maintain records	<p>5.1.Livestock are monitored post-treatment for signs of treatment effectiveness.</p> <p>5.2.Livestock health and condition abnormalities are recognised and reported in accordance with enterprise requirements.</p> <p>5.3.Disease information is reported to the manager so that prevention strategies can be planned and implemented.</p> <p>5.4.Disease incidence, livestock losses, and treatments are recorded accurately according to organisation practice and relevant regulations.</p> <p>5.5.All records made, kept and maintained are clear, accurate, and follow the guidelines laid down by industry and the organisation.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work practices
- apply biosecurity procedures
- accurately count and record livestock numbers
- complete worksheets clearly and accurately
- detect possibility of disease through parameters such as behaviour and length of time required to eat food
- use veterinary medicines and chemicals according to label and legislative requirements
- dispose of unused prepared chemicals or medications, sharps and other contaminated items safely and in an environmentally correct manner
- observe, identify and react appropriately to environmental implications and OHS hazards
- recognise clinical symptoms (normal vs. abnormal)
- recognise fear and aggression
- recognise heat stress
- survey workplace for hygiene and OHS issues
- tag livestock of varying ages
- use computing technology to create, maintain and amend workplace records
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- environmental controls and codes of practice applicable to the enterprise
- livestock handling principles
- water quality and animal requirements
- feed requirements and quality
- enterprise biosecurity and euthanasia procedures
- safe handling of sick and dead livestock
- signs of fear and aggression

**REQUIRED SKILLS AND KNOWLEDGE**

- signs of heat stress
- symptoms of ill-health in livestock
- the organisation's livestock production and management plans - sound management practices and processes to minimise noise, odours and debris from the livestock operations
- the range of diseases affecting the class and age of livestock
- vaccination programs, vaccines and mode of action in use in the organisation
- withholding periods for use of antibiotics
- zoonotic diseases and mode of transmission.
- relevant legislation and regulations relating to waste and environment management, livestock health, stock medicines and welfare
- relevant OHS legislation, regulations and codes of practice.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- monitor and assess livestock health and welfare.
- select, use and maintain specialised animal health equipment
- prepare treatment site, facilities and equipment
- administer drenches, vaccines and medication to livestock.
- monitor the effectiveness of treatments and report issues
- keep and maintain records.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for birthing	1.1. Animal records are checked and anticipated birthing date confirmed where possible. 1.2. Condition and health status of pregnant animal is assessed and monitored prior to imminent birthing. 1.3. Birthing equipment, resources and materials are checked and prepared for use. 1.4. Females are given access to shelter to give birth in severe weather conditions. 1.5. Hazards in assisting with birthing are identified and safe work practices followed.
2. Assist at the birthing process	2.1. Environment and animals are monitored to ensure birth progresses normally. 2.2. Animals giving birth are handled calmly with minimal disruption to the process. 2.3. Animals experiencing birthing difficulties are identified and intervention is carried out within procedures. 2.4. Supervisor or veterinary advice is sought if birth complications cannot be resolved.
3. Provide post-birthing	3.1. Post-birthing health and bonding of female and

ELEMENT	PERFORMANCE CRITERIA
assistance	<p>newborn is monitored.</p> <p>3.2. Birthing environment, facilities and equipment are maintained in a safe, hygienic and operational state and faults are reported or fixed.</p> <p>3.3. Record of birth is kept if required.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply contingency measures for birthing in the event of birthing difficulties or adverse weather conditions
- assess and calculate animal numbers, feed measurement, rate and frequency of feeding, and animal gestation
- carry out animal husbandry procedures associated with birthing
- clean, maintain and store equipment and materials
- monitor animal condition and recognise abnormal behaviour
- recognise signs of imminent birthing of animals
- prepare birthing environment, materials and resources to industry standards
- provide due care and handle animals humanely
- provide feed and feed supplements to meet nutritional needs of pregnant animals as directed
- recognise abnormalities in newborn animals
- safely implement predator control strategies
- maintain a safe and secure post-birthing environment
- select birthing equipment and materials and check for operation
- demonstrate safe and environmentally responsible workplace practices
- identify hazards and use safe work practices in the birthing environment
- communicate abnormalities, equipment faults and workplace hazards, and report and maintain animal records
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures

**REQUIRED SKILLS AND KNOWLEDGE**

- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- animal behaviour and basic health and nutritional requirements as directed
- birthing environment requirements for animals
- birthing equipment and materials, their components and functions
- birthing intervention and non-intervention strategies
- effects of adverse weather conditions on birthing process and newborn animals
- effects of inadequate nutrition on animals and newborn
- enterprise policies with regard to treating animals, recording and reporting routines
- environmental impacts and minimisation measures associated with animal production
- hazards associated with handling animals
- livestock gestation and birthing and husbandry procedures
- personal protective clothing and equipment, and when and how it should be used
- problems associated with birthing and remedial treatment
- procedures for cleaning and maintaining treatment equipment and materials
- predator behaviour and control procedures
- relevant State/Territory legislation, regulations and codes of practice with regard to workplace Occupational Health and Safety (OHS) and animal welfare.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- implement predator control strategies
- recognise signs of imminent birthing of animals

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to work with livestock	<p>1.1. Work to be undertaken is interpreted from work program where necessary, and confirmed with management.</p> <p>1.2. Discussions are held with other workers who may be affected by the activities to ensure continued smooth operation of the process.</p> <p>1.3. Tools and equipment suitable for the work to be undertaken are selected, checked, and maintained if necessary.</p> <p>1.4. Suitable personal protective equipment is selected, used and maintained.</p>
2. Carry out livestock checks	<p>2.1. All livestock are routinely checked for signs of ill health.</p> <p>2.2. Livestock are examined for signs of illness, injuries and abnormalities, and signs of these are reported in the methods prescribed in the organisations work procedures.</p> <p>2.3. While handling livestock, the potential for Occupational Health and Safety (OHS) hazards is continually monitored, risks assessed, and suitable controls implemented.</p> <p>2.4. Livestock are handled safely and all required restraints are within the organisations and industry guidelines for animal health and welfare.</p>
3. Deal with livestock emergencies	<p>3.1. Common signs of livestock injury or life threatening conditions are detected and the situation quickly analysed before notification or action is taken.</p> <p>3.2. Life threatening livestock ailments requiring</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>emergency treatment are notified to the supervisor, manager or veterinarian and immediate assistance is called.</p> <p>3.3. Basic emergency and/or livestock first aid procedures are carried out until professional help arrives.</p> <p>3.4. Serious cuts and abrasions to livestock are promptly reported to the supervisor or to the veterinarian and assistance provided as required during professional treatment.</p>
4. Provide veterinary procedure support	<p>4.1. Cuts, abrasions and bruises are treated under instruction from the veterinarian, manager or foreman.</p> <p>4.2. Animals are examined for signs of distress or soreness after moving or mating procedures and all abnormalities are reported.</p> <p>4.3. Appropriate treatment is applied as instructed by the manager or supervisor.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe operating procedures
- handle livestock
- identify signs of ill health or injury or signs of injury or abnormality
- observe, identify and react appropriately to environmental implications and OHS hazards
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- the range of ailments that may occur or affect livestock
- the application of a range of basic treatments under veterinary supervision
- the behaviour of the relevant species
- environmental controls and codes of practice applicable to the enterprise
- the organisations livestock production and management plans
- sound management practices and processes to minimise noise, odours and debris
- relevant legislation and regulations relating to waste and environment management and animal health and welfare.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- check livestock regularly
- identify symptoms of ill health or injury
- deal efficiently and calmly with livestock emergencies
- complete basic livestock first aid procedures
- record and report serious issues or injuries.

#### Context of and specific resources for assessment

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for handling livestock	<p>1.1.Livestock handling areas, gates and access routes are identified, prepared and maintained according to enterprise requirements.</p> <p>1.2.Livestock are located and identified for handling according to supervisor's instructions.</p> <p>1.3.Behavioural characteristics of livestock are observed, anticipated and appropriate handling methods selected.</p> <p>1.4.Handling equipment is selected, checked for soundness and prepared for use according to manufacturer's specifications and supervisor's instructions.</p> <p>1.5.Hazards in the workplace are recognised and safety concerns reported.</p>
2. Handle livestock	<p>2.1.Suitable personal protective equipment is selected, used and maintained according to Occupational Health and Safety (OHS) requirements.</p> <p>2.2.Procedures to control, draft and sort livestock are conducted with due care according to OHS and animal welfare requirements.</p> <p>2.3.Restraint procedures are carried out safely and with minimum stress and discomfort to livestock according to OHS and animal welfare requirements.</p> <p>2.4.Livestock behaviour is continually monitored and anticipated during moving and drafting processes to ensure wellbeing of livestock and safety of handlers.</p> <p>2.5.Livestock count is conducted and recorded according to enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.6.Environmental implications associated with livestock production are recognised and reported to the supervisor.
3. Complete handling procedure	3.1.Livestock handling operations are completed as instructed, and gates and access routes prepared for livestock departure according to enterprise requirements. 3.2.Handling areas and equipment are cleaned and maintained and surplus materials stored according to OHS and enterprise requirements. 3.3.Handling area maintenance requirements and equipment faults or malfunctions are detailed and reported according to enterprise requirements. 3.4.Livestock residues and waste are disposed of according to OHS and enterprise environmental practices. 3.5.Relevant information is recorded and reported according to enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work practices
- provide due care in the handling of livestock
- recognise enterprise livestock identification systems
- safely drive vehicles, and ride horses and motorbikes without damage to person, property or environment
- recognise livestock abnormalities
- control environmental impacts associated with livestock production
- apply contingency measures for handling livestock in the event of adverse weather conditions
- observe and describe the behaviour of livestock
- read and comprehend oral and written information and instructions, write basic statements and maintain livestock handling records
- assess and calculate livestock numbers

**REQUIRED SKILLS AND KNOWLEDGE**

- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- livestock breeds and basic nutritional and welfare requirements
- livestock behavioural characteristics and movement in handling areas
- components and functions of handling equipment
- handling techniques and restraint methods
- enterprise livestock identification systems
- environmental codes of practice with regard to livestock production
- OHS and animal welfare legislative requirements
- regulatory controls with regard to handling livestock on public roads.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the functions required to prepare for and carry out the identification and marking of young animals and defines the standard required to: prepare appropriate identifying and marking sites and facilities to industry standards; operate and maintain equipment; determine identifying and marking methods; carry out identifying and marking operations; monitor animals behaviour post-marking for health and well-being.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit involves workers in the livestock industry who normally operate under limited supervision within enterprise guidelines.
--------------------------------	---

### Licensing/Regulatory Information

Not Applicable

### Pre-Requisites

<b>Prerequisite units</b>		

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to identify and mark animals	<p>1.1. Equipment and materials for identifying and marking animals are selected and checked for correct operation according to manufacturer's specifications and enterprise requirements.</p> <p>1.2. Suitable marking sites and facilities are identified and prepared according to enterprise requirements.</p> <p>1.3. Animal preventative health treatments are prepared according to manufacturer's specifications and supervisor's instructions.</p> <p>1.4. Hazards to health and safety are identified and safety concerns reported to supervisor.</p>
2. Identify and mark animals	<p>2.1. Suitable Personal Protective Equipment (PPE) and clothing is selected, used and maintained according to Occupational Health and Safety (OHS) requirements.</p> <p>2.2. Animals are safely mustered and young animals are identified, drafted and moved to marking site in readiness for identifying and marking.</p> <p>2.3. Animal identifying and marking operations are safely carried out according to enterprise and animal welfare legislative requirements.</p> <p>2.4. Environmental implications associated with identifying and marking animals are recognised, assessed and reported to the supervisor.</p>
3. Complete identifying and marking operation	<p>3.1. Animal count is conducted and accurately recorded according to enterprise requirements.</p> <p>3.2. Animals are prepared and moved along a planned route without damage to person, livestock, property</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>or environment.</p> <p>3.3. Identifying and marking equipment, materials and facilities are cleaned and maintained according to OHS and enterprise requirements.</p> <p>3.4. Equipment faults or malfunctions are detailed and reported according to enterprise requirements.</p> <p>3.5. Animal residues and waste are disposed of according to OHS and enterprise environmental practices.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- handle animals in a safe and humane manner
- monitor animal behaviour and recognise abnormalities
- mother-up animals and their young
- apply contingency measures in the event of adverse weather conditions
- maintain identifying and marking sites, facilities and equipment to industry standards
- calculate and record animal numbers and marking operations
- demonstrate safe and environmentally responsible workplace practices
- read and interpret manufacturers specifications, work plans and Material Safety Data Sheets (MSDSs)
- communicate effectively and maintain accurate reports and records
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- components and functions of identifying and marking equipment and materials
- identifying and marking methods and techniques
- animal identification systems
- animal preventative health requirements and procedures
- animal behaviour and basic health and nutritional requirements
- environmental codes of practice with regard to animal production

**REQUIRED SKILLS AND KNOWLEDGE**

- relevant provisions of OHS and animal welfare legislation.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare appropriate identifying and marking sites and facilities to industry standards
- operate and maintain equipment
- determine identifying and marking methods
- carry out identifying and marking operations
- monitor animal's behaviour post-marking for health and well-being.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Livestock may include:

- cattle
- horses

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• sheep</li> <li>• pigs</li> <li>• alpacas</li> <li>• goats.</li> </ul>
Identifying and marking may include:	<ul style="list-style-type: none"> <li>• tagging</li> <li>• tailing</li> <li>• notching</li> <li>• tattooing</li> <li>• micro-chipping</li> <li>• branding</li> <li>• dehorning</li> <li>• trimming eye teeth</li> <li>• identifying abnormalities or faults and identifying and marking animals for culling.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check facilities and equipment for sound working conditions	<p>1.1.Required facilities and equipment are identified.</p> <p>1.2.The work site, facilities and equipment are checked for hazards and safety concerns are reported.</p> <p>1.3.Repairs and maintenance of facilities and equipment required for the loading or unloading of livestock are carried out where necessary.</p> <p>1.4.Personal protective clothing and equipment is used and stored.</p>
2. Load animals	<p>2.1.Animals are mustered, yarded/caught, prepared for transport, loaded and counted using safe working methods.</p> <p>2.2.Numbers of livestock are recorded according to enterprise procedures.</p> <p>2.3.Identification details of individual animals are recorded as required.</p> <p>2.4.Vendor declarations and any other required documentation are completed.</p> <p>2.5.Animal identification tags are fitted as required.</p> <p>2.6.Livestock are loaded in compliance with animal welfare and Occupational Health and Safety (OHS) requirements.</p>
3. Unload animals	<p>3.1.Animals are unloaded in safe manner to ensure no injury to personnel or animals.</p> <p>3.2.Numbers of livestock are recorded according to enterprise procedures.</p> <p>3.3.Agreement on condition of animals is reached with the receiving and/or dispatching party.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Perform appropriate animal health procedure	4.1. Stock is sorted if required. 4.2. Animal health treatments are performed off truck as instructed. 4.3. Animals are fed and watered to enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- provide due care and handle animals safely and humanely
- prepare equipment and working dogs (when used) for handling animals
- monitor animal behaviour and recognise irregularities
- read and interpret muster plans and maps
- calculate animal numbers and assess and calculate feed and water requirements
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- animal handling and movement methods and techniques
- animal basic health and nutritional requirements
- animal herding/flocking behaviour
- animal welfare codes of practice
- working dogs' uses and techniques (where appropriate)
- relevant OHS and animal welfare legislative and enterprise requirements.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Check health status of animals	<p>1.1. Condition and health status of animals is checked and confirmed against enterprise health strategies and records.</p> <p>1.2. Signs of poor health and condition or abnormal behaviour are recognised and reported to the supervisor for remedial action.</p> <p>1.3. Preventative health treatments are arranged and administered according to manufacturer specifications and the supervisor's instructions.</p> <p>1.4. Existing and potential hazards in the workplace are identified and risk is assessed and controlled according to Occupational Health and Safety (OHS) requirements.</p> <p>1.5. Environmental implications associated with production are identified, assessed and reported to the supervisor.</p>
2. Identify pregnant animals	<p>2.1. Animals are identified and separated on basis of pregnancy status according to enterprise guidelines.</p> <p>2.2. Dry animals are identified and procedures implemented according to enterprise requirements.</p> <p>2.3. Additional assistance required for assessing pregnancy status is reported to the supervisor for remedial action.</p>
3. Feed pregnant animal	<p>3.1. Nutritional needs of pregnant animals are identified and confirmed against the feeding plan according to enterprise requirements.</p> <p>3.2. Animals with special feeding needs are identified and given preferential feeding, and are recorded</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to enterprise requirements.</p> <p>3.3. Supplementary feeding is implemented as required and recorded according to enterprise requirements.</p> <p>3.4. A safe and secure environment for pregnant animals is maintained according to enterprise requirements.</p> <p>3.5. Handling is conducted with minimum stress and discomfort to the animals without excessive yarding or shedding according to animal welfare and enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safety directions
- administer preventative health treatments
- calculate animal numbers, measure feed, assess rate and frequency of feeding, and calculate animal gestation
- carry out basic repairs to paddocks, shelter, and housing
- communicate orally and in writing, animal behaviour and identified abnormalities
- control environmental impacts associated with animal production
- dispose of sharps, other contaminated items and unused prepared chemicals or medication safely and in an environmentally correct manner
- handle pregnant animals with due care
- observe and accurately report animal behaviour
- observe local climatic conditions
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

## REQUIRED SKILLS AND KNOWLEDGE

- effects of adverse weather conditions and inadequate nutrition on pregnant animals and their newborn
- effect of local climatic conditions on the timing of shearing, separating and transporting pregnant animals
- environment codes of practice with regard to animal production
- handling techniques for dry and pregnant animals
- health and nutritional requirements for pregnant animals
- housing requirements for intensively produced animals
- livestock identification methods
- OHS and animal welfare legislative requirements
- pregnant animals behaviour and abnormalities
- pregnancy checking and confirmation procedures (including scanning)
- preventative health treatments, procedures and methods.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- observe livestock health and wellbeing from joining
- maintain appropriate nutritional and environmental requirements
- recognise and report abnormalities for remedial action
- provide a safe and secure environment for the promotion of the welfare and wellbeing of pregnant animals through to birthing.

#### Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Monitor water supplies	<p>1.1. Routine inspections of water supplies are carried out in accordance with enterprise policy and procedures.</p> <p>1.2. High and low water levels are recognised and reported.</p> <p>1.3. Where water quality problems or pathogens are found, treatment is carried out in accordance with enterprise procedures.</p> <p>1.4. Information on water supplies is recorded and reported in accordance with enterprise policy and procedures.</p>
2. Inspect and clear intake and outlet points	<p>2.1. Intakes and outlets are inspected.</p> <p>2.2. Potential blockages are reported and actual blockages are cleared in accordance with safe working procedures.</p> <p>2.3. Water filters are checked and replaced as required.</p> <p>2.4. Intake lines are repositioned as necessary to ensure unobstructed suction.</p> <p>2.5. Strainers are cleared of debris and sludge.</p>
3. Operate water delivery equipment	<p>3.1. Water delivery equipment is prepared and checked in accordance with enterprise procedures.</p> <p>3.2. Water delivery equipment operated in accordance with manufacturer's procedures and Occupational Health and Safety (OHS) requirements.</p> <p>3.3. Outflow is checked to ensure water delivery equipment is operating correctly.</p> <p>3.4. Water delivery equipment is shut down as required in accordance with enterprise procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.5. Activities and water delivery equipment function are reported in accordance with enterprise procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safety procedures
- record and report water supply information, activities and system performance
- read and follow manufacturers procedures
- problem solve to identify potential as well as actual blockages
- check outflow rates
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- water delivery systems and components and their operation
- enterprise procedures for carrying out inspections, recording and reporting water information and system performance
- OHS requirements for working outdoors, with water supplies
- environmental impacts and procedures for water supplies.

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for muster	<p>1.1. Mustering requirements are identified and confirmed.</p> <p>1.2. Transport requirements are arranged and checked and confirmed for operation.</p> <p>1.3. Additional information relevant to livestock movements is identified and accessed.</p> <p>1.4. Potential and existing hazards to health and safety are identified and safety concerns reported to the supervisor.</p>
2. Carry out muster	<p>2.1. Suitable personal protective equipment is selected, used and maintained according to Occupational Health and Safety (OHS) requirements.</p> <p>2.2. Livestock identified in the muster plan are located and aggregated in preparation for movement.</p> <p>2.3. Muster processes are conducted according to enterprise requirements.</p>
3. Move livestock	<p>3.1. Livestock movement is conducted with minimal stress to livestock and without damage to person, property or environment.</p> <p>3.2. Livestock welfare is monitored and maintained during movement with adequate provision of rest, water and feeding points.</p> <p>3.3. Livestock are confined and pastured at destination, counted and recorded according to enterprise requirements.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work procedures
- handle livestock safely and humanely
- prepare equipment and working dogs (when used) for handling livestock
- monitor livestock behaviour and recognise abnormalities
- monitor and minimise impacts to the environment
- communicate effectively with the muster team
- read and interpret muster plans and maps
- calculate livestock numbers and assess and calculate feed and water requirements
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- mustering and movement methods and techniques
- livestock basic health and nutritional requirements
- livestock herding/flocking behaviour
- environmental codes of practice with regard to livestock production
- working dogs uses and techniques (where appropriate)
- legislative requirements for stock movement along public roads
- relevant OHS and animal welfare legislative requirements
- environmental impacts and procedures for mustering and moving livestock.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for feeding	<p>1.1. Condition and health status of livestock is checked and recorded in line with enterprise requirements.</p> <p>1.2. Feed and feed supplements are confirmed and prepared in line with feeding plan.</p> <p>1.3. Water supply, quality and quantity is checked and maintained to meet livestock requirements and enterprise requirements.</p> <p>1.4. Occupational Health and Safety (OHS) hazards in the workplace are identified and reported to the supervisor.</p>
2. Feed livestock	<p>2.1. Suitable personal protective clothing and equipment is selected, used and maintained in accordance with OHS requirements.</p> <p>2.2. Feed and feed supplements are provided in accordance with feeding plan and enterprise requirements.</p> <p>2.3. Feeding process is monitored to ensure livestock are feeding effectively in accordance with feeding plan.</p> <p>2.4. Procedures to minimise feed wastage and spillage, and dispose and recycle feed waste are followed in line with enterprise requirements.</p> <p>2.5. Variations to individual eating and drinking patterns are noted and reported.</p>
3. Complete the feeding process	<p>3.1. Feeding process is evaluated and recorded in accordance with workplace procedures.</p> <p>3.2. Feeding abnormalities are recorded and reported to the supervisor in line with enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3.A clean and safe area is maintained during and on completion of feeding in accordance with OHS and enterprise requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe work procedures
- provide feed and feed supplements in accordance with feeding plan
- monitor livestock health and condition, and recognise abnormalities
- employ safe and environmentally responsible systems and procedures with regard to the handling of livestock and feed
- recognise and report environmental implications associated with livestock production
- read and interpret feeding plan, work plan and supervisors instructions
- communicate and report livestock feeding abnormalities and workplace hazards, and maintain livestock records
- assess and calculate herd/flock numbers, measure feed and rate and frequency of feeding
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- nutritional requirements for livestock (including water)
- types of feed and feed supplements (including pastures and grazing)
- types of noxious and toxic plants relevant to feeding areas
- livestock health and behaviour
- livestock scoring and weighing methods
- environmental impact of livestock on ground cover
- safe livestock handling techniques and procedures
- hazards associated with handling livestock and control measures
- personal protective clothing and equipment and when and how it should be used
- enterprise policies with regard to feeding livestock, recording and reporting routines

**REQUIRED SKILLS AND KNOWLEDGE**

- State/Territory legislation, regulations and codes of practice with regard to OHS and animal welfare.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include evidence of the following:

- monitor and record livestock condition
- apply methods and procedures to provide feed and feed supplements
- safely handle livestock
- report feeding abnormalities and maintain records.

**Context of and specific resources for assessment**

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Animals may include:

- cattle
- sheep
- horses

<b>RANGE STATEMENT</b>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare horses for work	<p>1.1. Occupational Health and Safety (OHS) hazards are continually identified when working with horses, risks are assessed and suitable controls implemented.</p> <p>1.2. Equipment suitable for the work to be undertaken is selected, checked, and maintained if necessary.</p> <p>1.3. Suitable personal protective equipment is selected, used and maintained.</p> <p>1.4. Feeds are mixed and offered in the quality and quantities instructed by the manager.</p> <p>1.5. Horses are groomed before and after work to ensure their coat condition and health are maintained.</p> <p>1.6. Hoof care and cleaning is completed before working the horses, according to the organisations procedures.</p> <p>1.7. Vices of horses are identified and corrective action is taken to maintain control of the horses.</p> <p>1.8. Horse education is carried out in association with stock working routines.</p>
2. Ride horses	<p>2.1. Stock horses suitable for the task and rider ability are identified and selected.</p> <p>2.2. Unhealthy or unsound horses are identified and reported to foreman or manager.</p> <p>2.3. Selected horses are approached, caught and restrained as instructed.</p> <p>2.4. Gear to manage and control the horse for the required work is selected and fitted.</p> <p>2.5. OHS procedures are followed for working with and riding horses.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>2.6. Horses are handled and restrained safely and within the organisation's and industry guidelines for animal health and welfare.</p> <p>2.7. Livestock are checked, mustered and moved by horseback.</p> <p>2.8. Educated horses are controlled and worked as an integral part of stock husbandry routines.</p> <p>2.9. Horses are handled safely and within the organisations and industry guidelines for animal health and welfare.</p>
3. Care for saddlery and equipment	<p>3.1. Basic working gear to suit the individual horse is selected and fitted.</p> <p>3.2. Working gear is cleaned and checked as a part of regular daily routines.</p> <p>3.3. Working gear is maintained or repaired as required to ensure safe horse working conditions.</p> <p>3.4. Working gear and saddlery is stored after use in line with organisation policy.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- horse handling skills
- ride horses
- complete basic hoof care procedures
- groom horses
- care for saddlery and equipment
- measuring quantities required for feed
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures

**REQUIRED SKILLS AND KNOWLEDGE**

- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- horses and horse husbandry
- horse riding and handling safety when riding
- horse health, behaviour and psychology
- anatomy and physiology of the horse
- care and maintenance of hooves and the lower limbs
- environmental controls and codes of practice applicable to the organisation
- the organisation's livestock production and management plans
- sound management practices and processes to minimise noise, odours and debris from the livestock operations
- relevant legislation and regulations relating to waste and environment management, animal health and welfare
- relevant OHS legislation, regulations and codes of practice.

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare horses for work
- select and maintain equipment for riding
- monitor and anticipate horse behaviour when riding
- recognise and report hazards or movement problems for remedial action
- care for saddlery and equipment.

**Context of and specific resources for**

Competency requires the application of work practices

**EVIDENCE GUIDE****assessment**

under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole.

Horses may include:

- those suitable for beginning riders and novice handlers, but can be of any type and breed used for riding work.

## AHCLSK213A Clean out production sheds

### Modification History

Not Applicable

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of cleaning out sheds used for the intensive production of livestock and defines the standard required to: raise or remove equipment from the shed to allow cleaning; remove litter, manure and dust from the shed; service filters and flush drinker lines and tanks; provide a disease free and hygienic environment for stock introduced to a shed; manage runoff according to enterprise procedures; dispose of wastes and cleaning materials in line with enterprise procedures; complete all records required including chemical usage and manifest.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to working under limited supervision from others, with checking only related to overall progress. It is usually done within routines, methods and procedures where some discretion and judgement is required in the selection of equipment and materials, organisation of work, services and actions, and the achievement of outcomes within time constraints.
--------------------------------	--

### Licensing/Regulatory Information

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare to clean shed	<p>1.1. Requirements for the work to be undertaken are interpreted and confirmed with supervisor.</p> <p>1.2. Occupational Health and Safety (OHS) hazards are identified; risks assessed and suitable controls are implemented.</p> <p>1.3. Suitable personal protective equipment is selected, used and maintained.</p> <p>1.4. The environmental implications of cleaning the shed are identified, likely outcomes assessed and, if necessary, responsible action is taken.</p> <p>1.5. Equipment is raised, dismantled or removed from the shed for cleaning according to supervisor's instructions.</p> <p>1.6. Feed and watering equipment is raised or removed from shed and cleaned to remove contamination.</p> <p>1.7. Electrical switchboards and other equipment are covered or sealed to prevent entry of water if appropriate.</p>
2. Clean shed and surrounds	<p>2.1. OHS hazards relating to the cleaning process are identified; risks assessed and suitable controls are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>implemented.</p> <p>2.2. Machinery is available, serviced and prepared for operation according to established operating practice.</p> <p>2.3. Where used, litter is removed and disposed of according to establishment hygiene practice.</p> <p>2.4. According to production circumstances, manure is removed and disposed of according to environmental codes, enterprise quality assurance requirements, and OHS guidelines.</p> <p>2.5. According to production circumstances and environment, dust and cobwebs are removed from all surfaces.</p> <p>2.6. Filters are serviced and drinker lines and tanks are flushed.</p> <p>2.7. Where appropriate, silos are emptied and cleaned as required by hygiene and production programs.</p> <p>2.8. Cleaning agents are prepared and used according to manufacturer's instructions and in line with established safe working procedures.</p> <p>2.9. Shed is aired to ensure evacuation of cleaning agent's toxicants prior to re-entry of staff and re-installation of equipment.</p> <p>2.10. Chemical agents are safely handled and applied in compliance with OHS standards, and in line with property quality assurance program.</p> <p>2.11. Electrical equipment is dry-cleaned.</p> <p>2.12. Run-off from cleaning activity is managed according to the organisations effluent and waste management procedures.</p> <p>2.13. Checks are made to ensure that all cleaning and hygiene processes are completed to standard.</p>
3. Complete hygiene and administration task	<p>3.1. Equipment is cleaned in accordance with manufacturer's specifications, and organisational procedures and regulations.</p> <p>3.2. Attachments and other ancillary equipment are cleaned and stored to minimise damage and to maximise hygiene according to manufacturers' specifications, and organisational procedures and regulations.</p> <p>3.3. All containers, leftover fluids, waste and debris from the cleaning operations are disposed of safely and appropriately.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.4. All required records and documentation are completed accurately and promptly in accordance with organisational requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work practices including Personal Protective Equipment (PPE)
- operate high pressure washing equipment
- handle cleaning agents and disinfectants according to directions
- read and interpret cost sheets, production information, target statistics, quantities of feed and other inputs, job performance audits, and Material Safety Data Sheets (MSDSs)
- prepare and present production and other information in a manner that is readily accessible for both management and operators
- observe, identify and react appropriately to environmental implications and OHS hazards
- make shed environment secure to prevent accidental entry of personnel until environment safe
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- types of sheds and equipment in them
- relevant OHS legislation, regulations, and codes of practice
- chemical spillage management and safety equipment and clothing
- environmental procedures.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</p> <ul style="list-style-type: none"> <li>• raise or remove equipment from the shed to allow cleaning</li> <li>• remove litter, manure and dust from the shed</li> <li>• service filters and flush drinker lines and tanks</li> <li>• provide a disease free and hygienic environment for stock introduced to a shed</li> <li>• manage runoff according to enterprise procedures</li> <li>• dispose of wastes and cleaning materials in line with enterprise procedures</li> <li>• complete all records required including chemical usage and manifest.</li> </ul>
<b>Context of and specific resources for assessment</b>	Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

## Elements and Performance Criteria Pre-Content

Not Applicable

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Maintain environment systems	<p>1.1. Biosecurity procedures, including access to sheds and boot washing, are implemented and monitored.</p> <p>1.2. Shed heating, cooling and ventilation systems are monitored in accordance with the standards of the establishment.</p> <p>1.3. Litter and manure conditions are regularly monitored and changes reported.</p> <p>1.4. Lighting programs specified for the production unit are maintained and variations notified.</p> <p>1.5. Light globes are regularly cleaned and malfunctions notified.</p> <p>1.6. Feed program is monitored, and feeding times and feed rate monitored when restricted feeding is practised. Malfunctions are recognised and notified.</p> <p>1.7. Maintenance work is carried out according to enterprise Occupational Health and Safety (OHS) hazards identification, risk assessment and risk control measures.</p> <p>1.8. Waterers in sheds are monitored and malfunctions are recognised and reported to supervisor in accordance with enterprise procedures.</p>
2. Observe and assess livestock health	<p>2.1. Livestock are checked regularly.</p> <p>2.2. Incidence of ill health is recognised and appropriate action taken to notify and record according to establishment practice.</p> <p>2.3. Disease prevention strategies appropriate to the unit are carried out as instructed, and in line with</p>

ELEMENT	PERFORMANCE CRITERIA
	establishment practice and the Biosecurity Code.
3. Handle livestock	<p>3.1.Livestock is handled in accordance with animal welfare code of practice, counted and identified accurately.</p> <p>3.2.Injured, malformed and non-productive livestock is recognised and disposed of humanely according to establishment practice and the welfare code of practice.</p> <p>3.3.Livestock is treated under direction of the unit supervisor and according to enterprise procedures.</p> <p>3.4.Effects of treatment are assessed and reported according to enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and follow safe work practices
- follow biosecurity procedures
- calibrate feed weigh cells
- recognise variations from normal in mortality, and behaviour
- perform routine hygiene maintenance activities as required by the employer or unit manager, and more frequently on demand
- adjust and monitor environmental lighting, temperature/humidity, and air quality
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- temperature/humidity and light requirements of different classes of livestock
- light control programs and equipment
- temperature/humidity control equipment

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"> <li>• ventilation control equipment</li> <li>• feed programs for different classes and types of livestock</li> <li>• hygiene practices and awareness</li> <li>• enterprise and industry codes of practice</li> <li>• OHS, environmental and animal welfare legislation and enterprise procedures.</li> </ul>

# AHCLSK215A Carry out alpaca handling and husbandry operations

## Modification History

Not Applicable

## Unit Descriptor

<b>Unit descriptor</b>	This unit covers the process of moving and controlling alpacas using basic handling methods and procedures and defines the standard required to: prepare handling areas, gates and access routes for alpaca movement; monitor and anticipate alpaca behaviour in handling operations; identify, sort, move and control alpacas for handling and husbandry operations; use correct equipment and calming and humane methods to minimise undue stress and risk to alpacas or handlers; recognise and report signs of unusual behaviour, unhealthy animals or abnormal conditions.
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	This unit applies to working under routine supervision within enterprise guidelines.
