<td>New unit of competency.</td>
</tr>
</tbody>
</table>

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit’s elements, performance criteria, range of conditions and foundation skills:

- diagnose complex faults in the safety systems of two different light vehicles or light commercial vehicles
- the above diagnosis must involve two of the following types of complex faults:
  - an intermittent fault
  - a fault that affects more than one system
  - a fault introduced as a result of a system repair
  - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in light vehicle safety systems, including procedures for:
  - identifying hazards and controlling risks associated with:
    - working with high voltages on vehicle electrical systems
    - working around the vehicle’s supplementary restraint systems (SRS), including airbags
    - wearing jewellery while working around high electrical currents
    - disarming vehicle airbag and safety restraint systems
  - types of complex faults relating to light vehicle safety systems, including:
    - intermittent
    - multi-system
Assessment Requirements for AURET R037 Diagnose complex faults in light vehicle safety systems

- introduced as a result of system repair
- indirect, caused by the influence of external systems
- methods for locating and content of manufacturer specifications, workplace procedures and other technical information relating to light vehicle safety systems
- types, function and operation of light vehicle safety systems, including:
  - active and passive collision avoidance
  - adaptive front lighting systems
  - airbag systems
  - lane keeping assist
  - occupant detection systems
  - radar cruise control
  - roll-over protection
  - seatbelt pre-tensioners
- testing procedures for light vehicle safety systems, including:
  - using digital multimeter, scan tool and oscilloscope
  - vehicle dynamic and static testing
  - component failure analysis
  - vehicle continuous and non-continuous monitored systems
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in light vehicle safety systems
- procedures for accessing and interpreting scan tool system data, including:
  - diagnostic trouble codes (DTCs), including:
    - conditions that set the DTCs
    - conditions for running DTCs
    - live data
    - freeze frame data
    - waveforms
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle safety systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.
The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle safety system specifications
- two different light vehicles or light commercial vehicles with complex faults in their safety systems
- light vehicle safety system diagnostic equipment, including:
  - digital multimeter
  - scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in light vehicle safety systems.
