<td>Release 1</td>
<td>New unit of competency.</td>
</tr>
</tbody>
</table>

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit’s elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the integrated engine and transmission management systems of two different vehicles or machinery, in which the work must involve removing, refitting or replacing a system component that affects the operation of both the engine and the transmission management system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing integrated engine and transmission management systems, including procedures for:
  - using specialised tools and equipment
  - using appropriate personal protective equipment (PPE)
  - identifying hazards and controlling risks associated with:
    - working on vehicle high voltage ignition systems
    - wearing jewellery while working around high current wiring systems
- integrated engine and transmission management system principles, including:
  - engine and transmission management system topography, inputs and outputs
  - typical vehicle or machinery systems equipped with engine and transmission management systems
- application, purpose and operation of integrated engine and transmission management systems and components, including:
  - control modules
control sensors and actuators
communication systems, including controlled area network data bus (CAN-bus)
diagnostic testing procedures for integrated engine and transmission management systems, including:
  accessing and interpreting scan tool system data, including:
    diagnostic trouble codes (DTCs)
    live data
    freeze frame data
    waveforms
  using diagnostic flow charts
testing electrical systems, including procedures for:
  accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
  resistance and voltage drop tests
  open and short circuit tests
  checking shorts to signal, power circuits and grounds
repair procedures for integrated engine and transmission management systems, including procedures for removing and replacing system components
post-repair testing procedures, including:
  DTC clearing procedures
  static and dynamic performance tests.

Assessment Conditions
Assessors must satisfy NVR/AQTF assessor requirements.
Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.
Assessment must include direct observation of tasks.
Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the integrated engine and transmission management systems that they have worked on, e.g. repair orders.
Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.
The following resources must be made available:
  automotive repair workplace or simulated workplace
  workplace instructions
  manufacturer specifications for engine and transmission management systems
  two different vehicles or machinery with integrated engine and transmission management system faults
  diagnostic equipment for integrated engine and transmission management systems, including:
• multimeter
• scan tool
• tools, equipment and materials appropriate for repairing vehicle engine and transmission management systems.
