# AURPTE004 Overhaul outdoor power equipment engines

Release: 1

#### AURPTE004 Overhaul outdoor power equipment engines

#### **Modification History**

| Release   | Comment                 |  |
|-----------|-------------------------|--|
| Release 1 | New unit of competency. |  |
|           |                         |  |
|           |                         |  |

# Application

This unit describes the performance outcomes required to return outdoor power equipment engines to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the engine, carrying out the overhaul procedures, reassembling and testing the engine, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment and the engines may be two and four stroke spark ignition and four stroke compression ignition engines. The unit does not apply to light or heavy vehicle engines. This unit does not apply to light or heavy vehicle engines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

# **Competency Field**

Outdoor Power Equipment

#### **Unit Sector**

Technical - Engines

#### **Elements and Performance Criteria**

| Elements   | Performance Criteria  |
|--|---|
| Elements describe the essential outcomes.                    | Performance criteria describe the performance needed to demonstrate<br>achievement of the element. Where bold and italicised text is used,<br>further information is detailed in the range of conditions section.           |
| 1. Prepare to dismantle<br>outdoor power<br>equipment engine | <ul><li>1.1 Job requirements are determined from workplace instructions</li><li>1.2 Dismantling information is sourced and interpreted</li><li>1.3 Dismantling options are analysed and those most appropriate to</li></ul> |

| Elements  | Performance Criteria   |  |  |
|---|--|--|--|
| Elements describe the essential outcomes.       | Performance criteria describe the performance needed to demonstrate<br>achievement of the element. Where bold and italicised text is used,<br>further information is detailed in the range of conditions section.  |  |  |
|   | the circumstances are selected   |  |  |
|   | 1.4 Hazards associated with the work are identified and risks are managed  |  |  |
|   | 1.5 Dismantling tools and equipment are selected and checked for serviceability  |  |  |
| 2. Dismantle and evaluate engine and components | 2.1 Engine and relevant components are dismantled in a logical sequence according to manufacturer and workplace procedures, and <i>safety and environmental requirements</i> , and without causing unnecessary damage to components or systems                             |  |  |
|   | 2.2 Components are cleaned ready for evaluation according to<br>workplace procedures and safety and environmental requirements   |  |  |
|   | 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined   |  |  |
|   | 2.4 Component repair method is determined  |  |  |
|   | 2.5 Unserviceable parts are identified and replacement parts sourced   |  |  |
|   | 2.6 Authorisation to proceed is obtained according to workplace procedures   |  |  |
| 3. Carry out overhaul                           | 3.1 Overhaul information is sourced and interpreted  |  |  |
|   | 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected   |  |  |
|   | 3.3 Overhaul tools and equipment are selected and checked for serviceability   |  |  |
|   | 3.4 Components are machined, repaired and replaced as required, and<br>adjustments are carried out according to manufacturer<br>specifications, workplace procedures, and safety and<br>environmental requirements, and without causing damage to<br>components or systems |  |  |
| 4. Assemble engine and components               | 4.1 Engine is assembled according to manufacturer specifications,<br>workplace procedures, and safety and environmental<br>requirements  |  |  |
|   | 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made  |  |  |
|   | 4.3 Assembly of engine is completed within workplace timeframes<br>and without causing damage to other components or systems   |  |  |
|   | 4.4 Post-assembly testing is carried out according to workplace<br>procedures and safety and environmental requirements, and any<br>problems detected as having been introduced during the assembly<br>process are rectified   |  |  |

| Elements                                  | Performance Criteria   |
|---|--|
| Elements describe the essential outcomes. | Performance criteria describe the performance needed to demonstrate<br>achievement of the element. Where bold and italicised text is used,<br>further information is detailed in the range of conditions section.  |
| 5. Complete work<br>processes             | <ul> <li>5.1 Final inspection is made to ensure work is to workplace expectations and engine is presented ready for use or storage, including protective guards, cowlings and safety features</li> <li>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</li> <li>5.3 Tools and equipment are checked and stored according to workplace procedures</li> <li>5.4 Workplace documentation is processed according to workplace procedures</li> </ul> |

### **Foundation Skills**

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

| Skills                             | Description  |  |  |
|------------------------------------|--|--|--|
| Learning skills to:                | <ul> <li>locate engine overhaul procedures and specifications</li> <li>use websites to download owner manuals, workshop literature and service bulletins.</li> </ul>   |  |  |
| Reading skills to:                 | • interpret and assess information from manufacturer and workshop literature when seeking engine specifications and procedures.  |  |  |
| Writing skills to:                 | • legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.  |  |  |
| Oral communication skills to:      | • clarify instructions, report evaluation findings and make overhaul recommendations.  |  |  |
| Numeracy skills to:                | • measure engine components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications. |  |  |
| Planning and organising skills to: | • plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.  |  |  |

| Skills                | Description  |  |
|-----------------------|--|--|
| Technology skills to: | <ul> <li>use precision measuring equipment, such as micrometers and dial bore gauges</li> <li>use specialised engine overhaul equipment, such as: <ul> <li>hones</li> <li>valve and valve seat cutting equipment.</li> </ul> </li> </ul> |  |

#### **Range of Conditions**

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

| Safety and environmental requirements must include: | • | <ul> <li>work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:</li> <li>operating specialised engine overhaul tools, equipment and machinery</li> </ul> |
|---|---|---|
|   | • | • using cleaning chemicals and toxic substances<br>environmental requirements, including procedures for trapping,<br>storing and disposing of lubricants and fluids released from<br>engines.                   |

# **Unit Mapping Information**

Equivalent to AURPTE4004 Overhaul engines and engine components (outdoor power equipment)
