

# AURTTD004 Inspect and service suspension systems

Release: 1

## **AURTTD004** Inspect and service suspension systems

# **Modification History**

Release	Comment		
Release 1	New unit of competency.		

### **Application**

This unit describes the performance outcomes required to inspect and service front and rear suspension systems. It involves preparing for the task, inspecting the front and rear suspension system for wear, oil or air leaks and physical damage, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The suspension systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery, motorcycles, outdoor power equipment or trailers.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

## **Competency Field**

Mechanical Miscellaneous

#### **Unit Sector**

Technical - Steering and Suspension

#### **Elements and Performance Criteria**

Elements	Performance Criteria	
essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.	

Approved Page 2 of 4

Elements	Performance Criteria			
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.			
Prepare to inspect and service suspension system	<ul> <li>1.1 Job requirements are determined from workplace instructions</li> <li>1.2 Servicing information is sourced and interpreted</li> <li>1.3 Hazards associated with the work are identified and risks are managed</li> <li>1.4 Tools, equipment and materials are selected and checked for serviceability</li> </ul>			
2. Inspect suspension system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications     2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments			
3. Service suspension system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems  3.2 Post-service testing is carried out according to workplace procedures			
4. Complete work processes	<ul> <li>4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</li> <li>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</li> <li>4.3 Tools and equipment are checked and stored according to workplace procedures</li> <li>4.4 Workplace documentation is processed according to workplace procedures</li> </ul>			

## **Foundation Skills**

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description		
Learning skills to:	locate appropriate sources of information efficiently.		
Reading skills to:	interpret information from manufacturer and workshop literature		

Approved Page 3 of 4

Skills	Description		
	when seeking service procedures and specifications relating to suspension systems.		
Writing skills to:	legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.		
Oral communication skills to:	<ul> <li>clarify instructions</li> <li>report inspection findings and make repair recommendations.</li> </ul>		
Numeracy skills to:	use basic mathematical operations, including addition and subtraction, to compare component wear to distances, tolerances and deviations in manufacturer specifications.		

## **Range of Conditions**

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety requirements must include:	(OH	thealth and safety (WHS) and occupational health and safety (S) requirements, including procedures for: working with stored energy solating and stabilising vehicles and machinery.	
Environmental requirements must include:		procedures for trapping, storing and disposing of lubricants and fluids released from suspension systems.	

## **Unit Mapping Information**

Equivalent to AURTTD2004 Inspect and service suspension systems
