AURTTM001 Operate and monitor computer numerical control machines

Release: 1

AURTTM001 Operate and monitor computer numerical control machines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to operate and monitor computer numerical control (CNC) machines during machining operations of engine components as part of an engine reconditioning process. It involves preparing for the task, operating a CNC machine, selecting the appropriate program, performing machining to specifications and workplace requirements, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to operate and monitor a CNC machine	1.1 Job requirements are determined from workplace instructions 1.2 Information is sourced, procedures and methods are analysed, and appropriate options are selected for operating and monitoring

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	<p>CNC machine</p> <p>1.3 Pre-start checks are undertaken according to manufacturer procedures</p> <p>1.4 Hazards associated with the work are identified and risks are managed</p>
2. Operate a CNC machine	<p>2.1 Computer program is <i>selected and verified</i> according to workplace instructions</p> <p>2.2 CNC machine is operated to product specifications according to workplace procedures and <i>safety and environmental requirements</i>, and following machinery safe operating procedures</p> <p>2.3 Machine malfunctions are identified and reported according to workplace procedures</p> <p>2.4 Machined component is checked to ensure compliance with specifications</p>
3. Perform necessary adjustments during machining process	<p>3.1 Tool wear is monitored and, where appropriate, pre-set tools are replaced, tool offsets are identified in computer-controlled program and adjusted, or other corrective action is taken according to manufacturer specifications and workplace procedures</p> <p>3.2 Engine component deviation from specification is reported according to workplace procedures</p>
4. Complete work processes	<p>4.1 Final inspection is made to ensure finished work complies with workplace requirements and CNC machine is presented ready for use</p> <p>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>4.3 CNC machine and equipment are cleaned for use or storage according to workplace procedures</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret engine component specifications from workshop literature interpret CNC machinery safe operating procedures from operating manuals and signs.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation to record measurements.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions gain information when setting up machine operation.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts use basic mathematical operations, including addition and subtraction, to: <ul style="list-style-type: none"> convert metric dimensions to imperial, and imperial dimensions to metric calculate tolerances and clearances interpret metric and imperial increments on precision measuring equipment.
Digital literacy skills to:	<ul style="list-style-type: none"> navigate computer software, selecting and confirming options.
Problem solving skills to:	<ul style="list-style-type: none"> determine the most appropriate method of component adjustment or machining for the situation.
Technology skills to:	<ul style="list-style-type: none"> use metric and imperial precision measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Selecting and verifying</i> must include:	<ul style="list-style-type: none"> correct speed and feed rates of tools for cast iron and aluminium.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including operational risk assessment and treatments associated with: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE)

	<p>when working with CNC machines and using chemical cleaning and lubricating agents</p> <ul style="list-style-type: none">• safe operating procedures for operating CNC machinery• environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during machining process.
