AUR Automotive Retail, Service and Repair Training Package

Release: 5.0

CONTENTS

AUR10116 Certificate I in Automotive Vocational Preparation	43
AUR20116 Certificate II in Automotive Administration	46
AUR20218 Certificate II in Automotive Air Conditioning Technology	49
AUR20316 Certificate II in Bicycle Mechanical Technology	52
AUR20416 Certificate II in Automotive Electrical Technology	56
AUR20516 Certificate II in Automotive Servicing Technology	60
AUR20616 Certificate II in Marine Mechanical Technology	63
AUR20716 Certificate II in Automotive Vocational Preparation	67
AUR20816 Certificate II in Outdoor Power Equipment Technology	72
AUR20916 Certificate II in Automotive Body Repair Technology	75
AUR21016 Certificate II in Motor Sport Technology	81
AUR21116 Certificate II in Automotive Sales	85
AUR21216 Certificate II in Automotive Underbody Technology	89
AUR21316 Certificate II in Automotive Braking System Technology	92
AUR21416 Certificate II in Automotive Cooling System Technology	95
AUR21516 Certificate II in Automotive Cylinder Head Reconditioning	98
AUR21616 Certificate II in Automotive Driveline System Technology	101
AUR21716 Certificate II in Automotive Exhaust System Technology	104
AUR21816 Certificate II in Automotive Steering and Suspension System Technology	107
AUR21916 Certificate II in Automotive Tyre Servicing Technology	110
AUR30116 Certificate III in Automotive Administration	114
AUR30216 Certificate III in Bicycle Workshop Operations	117
AUR30316 Certificate III in Automotive Electrical Technology	122
AUR30416 Certificate III in Agricultural Mechanical Technology	128
AUR30516 Certificate III in Marine Mechanical Technology	133
AUR30616 Certificate III in Light Vehicle Mechanical Technology	138
AUR30716 Certificate III in Outdoor Power Equipment Technology	144
AUR30816 Certificate III in Motorcycle Mechanical Technology	149
AUR30916 Certificate III in Motor Sport Technology	153
AUR31016 Certificate III in Automotive Sales	161
AUR31116 Certificate III in Heavy Commercial Vehicle Mechanical Technology	165
AUR31216 Certificate III in Mobile Plant Technology	170
AUR31316 Certificate III in Automotive Engine Reconditioning	175
AUR31416 Certificate III in Automotive Diesel Fuel Technology	178
AUR31516 Certificate III in Automotive Diesel Engine Technology	181
AUR31616 Certificate III in Automotive Drivetrain Technology	185
AUR31716 Certificate III in Forklift Technology	189
AUR31816 Certificate III in Heavy Commercial Trailer Technology	195
AUR31916 Certificate III in Elevating Work Platform Technology	199
AUR32016 Certificate III in Automotive Alternative Fuel Technology	204
AUR32116 Certificate III in Automotive Body Repair Technology	208
AUR32216 Certificate III in Automotive Glazing Technology	213
AUR32316 Certificate III in Automotive and Marine Trimming Technology	217
AUR32416 Certificate III in Automotive Refinishing Technology	221
AUR32518 Certificate III in Automotive Underbody Technology	225
AUR32616 Certificate III in Automotive Tyre Management	229
AUR40116 Certificate IV in Automotive Management	233
AUR40216 Certificate IV in Automotive Mechanical Diagnosis	236
AUR40316 Certificate IV in Motor Sport Technology	240

AUR40416 Certificate IV in Automotive Performance Enhancement.....	244
AUR40514 Certificate IV in Vehicle Loss Assessing.....	248
AUR40616 Certificate IV in Automotive Electrical Technology	251
AUR40718 Certificate IV in Automotive Body Repair Technology.....	255
AUR40816 Certificate IV in Automotive Mechanical Overhauling.....	258
AUR50116 Diploma of Automotive Management.....	261
AUR50216 Diploma of Automotive Technology	264
AUR50316 Diploma of Motor Sport Technology.....	268
AUMABA002 Operate load shifting equipment	271
Assessment Requirements for AUMABA002 Operate load shifting equipment.....	274
AUMAFA001 Apply for jobs and undertake job interviews	276
Assessment Requirements for AUMAFA001 Apply for jobs and undertake job interviews.....	279
AUMAMM001 Influence and lead work groups in an automotive manufacturing workplace.....	281
Assessment Requirements for AUMAMM001 Influence and lead work groups in an automotive manufacturing workplace	284
AUMAQA001 Apply quality assurance techniques.....	286
Assessment Requirements for AUMAQA001 Apply quality assurance techniques	289
AUMGTG001 Install fixed and moveable glass components on vehicles	291
Assessment Requirements for AUMGTG001 Install fixed and moveable glass components on vehicles.....	294
AUMGTS004 Fabricate parts for vehicle sub-assemblies.....	296
Assessment Requirements for AUMGTS004 Fabricate parts for vehicle sub-assemblies.....	299
AUMGTY002 Install vehicle components	301
Assessment Requirements for AUMGTY002 Install vehicle components	304
AURAAA001 Work in an automotive administration role.....	306
Assessment Requirements for AURAAA001 Work in an automotive administration role.....	310
AURAAA002 Determine retail rates for automotive products and services	313
Assessment Requirements for AURAAA002 Determine retail rates for automotive products and services.....	316
AURACA001 Respond to customer needs and enquiries in an automotive workplace.....	318
Assessment Requirements for AURACA001 Respond to customer needs and enquiries in an automotive workplace	321
AURACA002 Manage complex customer requirements in an automotive workplace.....	323
Assessment Requirements for AURACA002 Manage complex customer requirements in an automotive workplace	327
AURACA003 Build customer relations in an automotive workplace	330
Assessment Requirements for AURACA003 Build customer relations in an automotive workplace.....	333
AURAEA001 Identify environmental and sustainability requirements in an automotive service or repair workplace	335
Assessment Requirements for AURAEA001 Identify environmental and sustainability requirements in an automotive service or repair workplace	338
AURAEA002 Follow environmental and sustainability best practice in an automotive workplace.....	340
Assessment Requirements for AURAEA002 Follow environmental and sustainability best practice in an automotive workplace	343
AURAEA003 Monitor environmental and sustainability best practice in an automotive workplace.....	346
Assessment Requirements for AURAEA003 Monitor environmental and sustainability best practice in an automotive workplace	350
AURAEA004 Manage environmental and sustainability best practice in an automotive workplace.....	353

Assessment Requirements for AURAEA004 Manage environmental and sustainability best practice in an automotive workplace357

AURAF A001 Use numbers in an automotive workplace360

Assessment Requirements for AURAF A001 Use numbers in an automotive workplace..363

AURAF A002 Read and respond to automotive workplace information365

Assessment Requirements for AURAF A002 Read and respond to automotive workplace information.....368

AURAF A003 Communicate effectively in an automotive workplace370

Assessment Requirements for AURAF A003 Communicate effectively in an automotive workplace.....373

AURAF A004 Resolve routine problems in an automotive workplace376

Assessment Requirements for AURAF A004 Resolve routine problems in an automotive workplace.....379

AURAF A005 Write routine texts in an automotive workplace381

Assessment Requirements for AURAF A005 Write routine texts in an automotive workplace.....384

AURAF A006 Conduct research and present technical reports.....386

Assessment Requirements for AURAF A006 Conduct research and present technical reports.....390

AURAF A007 Develop and document specifications and procedures.....393

Assessment Requirements for AURAF A007 Develop and document specifications and procedures396

AURAF A008 Interpret and apply automotive repair instructions399

Assessment Requirements for AURAF A008 Interpret and apply automotive repair instructions402

AURAF A009 Carry out research into the automotive industry404

Assessment Requirements for AURAF A009 Carry out research into the automotive industry408

AURAK A001 Use information technology systems410

Assessment Requirements for AURAK A001 Use information technology systems.....413

AURAK A002 Adapt work processes to new technologies in an automotive workplace ...415

Assessment Requirements for AURAK A002 Adapt work processes to new technologies in an automotive workplace418

AURAL A001 Comply with legal aspects of a service and repair contract in an automotive workplace.....420

Assessment Requirements for AURAL A001 Comply with legal aspects of a service and repair contract in an automotive workplace424

AURAMA001 Work effectively with others in an automotive workplace427

Assessment Requirements for AURAMA001 Work effectively with others in an automotive workplace.....430

AURAMA002 Communicate business information in an automotive workplace.....433

Assessment Requirements for AURAMA002 Communicate business information in an automotive workplace.....437

AURAMA003 Conduct information sessions in an automotive workplace.....440

Assessment Requirements for AURAMA003 Conduct information sessions in an automotive workplace.....443

AURAMA004 Maintain business image in an automotive workplace445

Assessment Requirements for AURAMA004 Maintain business image in an automotive workplace.....448

AURAMA005 Manage complex customer issues in an automotive workplace.....451

Assessment Requirements for AURAMA005 Manage complex customer issues in an automotive workplace.....455

AURAMA006 Contribute to planning and implementing business improvement in an automotive workplace.....458
Assessment Requirements for AURAMA006 Contribute to planning and implementing business improvement in an automotive workplace462
AURANN011 Estimate and quote automotive body repairs.....465
Assessment Requirements for AURANN011 Estimate and quote automotive body repairs468
AURAQA001 Contribute to quality work outcomes in an automotive workplace471
Assessment Requirements for AURAQA001 Contribute to quality work outcomes in an automotive workplace.....474
AURAQA002 Inspect technical quality of work in an automotive workplace476
Assessment Requirements for AURAQA002 Inspect technical quality of work in an automotive workplace.....479
AURAQA003 Maintain quality processes in an automotive workplace482
Assessment Requirements for AURAQA003 Maintain quality processes in an automotive workplace.....485
AURASA001 Apply automotive workplace safety fundamentals.....488
Assessment Requirements for AURASA001 Apply automotive workplace safety fundamentals491
AURASA002 Follow safe working practices in an automotive workplace494
Assessment Requirements for AURASA002 Follow safe working practices in an automotive workplace.....498
AURATA001 Identify basic automotive faults using troubleshooting processes501
Assessment Requirements for AURATA001 Identify basic automotive faults using troubleshooting processes.....504
AURATA002 Read, interpret and apply engineering drawings.....506
Assessment Requirements for AURATA002 Read, interpret and apply engineering drawings.....509
AURATA003 Produce drawings from design concepts511
Assessment Requirements for AURATA003 Produce drawings from design concepts514
AURATA004 Provide technical guidance.....516
Assessment Requirements for AURATA004 Provide technical guidance519
AURATA005 Estimate and quote automotive mechanical and electrical repairs521
Assessment Requirements for AURATA005 Estimate and quote automotive mechanical and electrical repairs524
AURBCA001 Work in a retail bicycle environment.....526
Assessment Requirements for AURBCA001 Work in a retail bicycle environment529
AURBCA002 Select and adjust bicycles to fit riders531
Assessment Requirements for AURBCA002 Select and adjust bicycles to fit riders.....535
AURBTA001 Remove and tag bicycle components537
Assessment Requirements for AURBTA001 Remove and tag bicycle components.....540
AURBTA002 Adjust bicycles and components542
Assessment Requirements for AURBTA002 Adjust bicycles and components.....545
AURBTA003 Assemble bicycles547
Assessment Requirements for AURBTA003 Assemble bicycles.....551
AURBTA004 Assemble new boxed bicycles for retail sale.....553
Assessment Requirements for AURBTA004 Assemble new boxed bicycles for retail sale557
AURBTA005 Restore bicycles559
Assessment Requirements for AURBTA005 Restore bicycles563
AURBTA006 Assemble components for custom bicycles.....565
Assessment Requirements for AURBTA006 Assemble components for custom bicycles .570
AURBTA007 Provide mechanical support during cycling events.....573
Assessment Requirements for AURBTA007 Provide mechanical support during cycling events.....577

AURBTB001 Service and repair bicycle mechanical braking systems580
Assessment Requirements for AURBTB001 Service and repair bicycle mechanical braking systems584
AURBTB002 Service bicycle hydraulic braking systems587
Assessment Requirements for AURBTB002 Service bicycle hydraulic braking systems .591
AURBTB003 Repair and overhaul bicycle hydraulic braking systems594
Assessment Requirements for AURBTB003 Repair and overhaul bicycle hydraulic braking systems.....598
AURBTD001 Service bicycle steering systems601
Assessment Requirements for AURBTD001 Service bicycle steering systems.....605
AURBTD002 Service bicycle suspension systems608
Assessment Requirements for AURBTD002 Service bicycle suspension systems.....612
AURBTD003 Repair and overhaul bicycle steering systems614
Assessment Requirements for AURBTD003 Repair and overhaul bicycle steering systems618
AURBTD004 Repair and overhaul bicycle suspension systems 621
Assessment Requirements for AURBTD004 Repair and overhaul bicycle suspension systems 625
AURBTJ001 Remove, repair and refit bicycle tyres628
Assessment Requirements for AURBTJ001 Remove, repair and refit bicycle tyres632
AURBTJ002 Service bicycle wheels and hubs.....634
Assessment Requirements for AURBTJ002 Service bicycle wheels and hubs638
AURBTJ003 Design and build bicycle wheels.....640
Assessment Requirements for AURBTJ003 Design and build bicycle wheels644
AURBTJ004 Repair and overhaul bicycle wheels and hubs.....647
Assessment Requirements for AURBTJ004 Repair and overhaul bicycle wheels and hubs651
AURBTK001 Maintain specialised bicycle repair tools and equipment.....653
Assessment Requirements for AURBTK001 Maintain specialised bicycle repair tools and equipment656
AURBTQ001 Service bicycle drivetrain systems658
Assessment Requirements for AURBTQ001 Service bicycle drivetrain systems.....662
AURBTQ002 Repair and overhaul bicycle drivetrain systems665
Assessment Requirements for AURBTQ002 Repair and overhaul bicycle drivetrain systems669
AURBTR001 Service electric power-assisted bicycles.....671
Assessment Requirements for AURBTR001 Service electric power-assisted bicycles675
AURBTR002 Install and adjust bicycle electronic gear shifters678
Assessment Requirements for AURBTR002 Install and adjust bicycle electronic gear shifters.....682
AURBTV001 Remove, refit and adjust bicycle accessories684
Assessment Requirements for AURBTV001 Remove, refit and adjust bicycle accessories688
AURBTY001 Repair bicycle frames.....691
Assessment Requirements for AURBTY001 Repair bicycle frames695
AURBTY002 Design and build bicycle frames.....697
Assessment Requirements for AURBTY002 Design and build bicycle frames702
AURBTY003 Repair carbon fibre bicycle frames705
Assessment Requirements for AURBTY003 Repair carbon fibre bicycle frames709
AURETA001 Analyse and evaluate electrical and electronic faults in electronic over hydraulic systems711
Assessment Requirements for AURETA001 Analyse and evaluate electrical and electronic faults in electronic over hydraulic systems715
AURETA002 Analyse and evaluate electrical and electronic faults in body management systems718

Assessment Requirements for AURETA002 Analyse and evaluate electrical and electronic faults in body management systems722

AURETA003 Analyse and evaluate electrical and electronic faults in monitoring and protection systems.....725

Assessment Requirements for AURETA003 Analyse and evaluate electrical and electronic faults in monitoring and protection systems729

AURETA004 Analyse and evaluate electrical and electronic faults in convenience and entertainment systems732

Assessment Requirements for AURETA004 Analyse and evaluate electrical and electronic faults in convenience and entertainment systems736

AURETA005 Analyse and evaluate electrical and electronic faults in theft-deterrent systems739

Assessment Requirements for AURETA005 Analyse and evaluate electrical and electronic faults in theft-deterrent systems743

AURETA006 Analyse and evaluate electrical and electronic faults in air conditioning and HVAC systems746

Assessment Requirements for AURETA006 Analyse and evaluate electrical and electronic faults in air conditioning and HVAC systems750

AURETB001 Diagnose and repair electric braking systems754

Assessment Requirements for AURETB001 Diagnose and repair electric braking systems758

AURETB002 Analyse and evaluate electrical and electronic faults in dynamic control management systems761

Assessment Requirements for AURETB002 Analyse and evaluate electrical and electronic faults in dynamic control management systems.....765

AURETD011 Diagnose and repair electronically controlled steering systems.....768

Assessment Requirements for AURETD011 Diagnose and repair electronically controlled steering systems.....772

AURETE001 Analyse and evaluate electrical and electronic faults in engine management systems775

Assessment Requirements for AURETE001 Analyse and evaluate electrical and electronic faults in engine management systems779

AURETH001 Depower and reinitialise battery electric vehicles782

Assessment Requirements for AURETH001 Depower and reinitialise battery electric vehicles786

AURETH002 Service and maintain battery electric vehicles789

Assessment Requirements for AURETH002 Service and maintain battery electric vehicles794

AURETH003 Diagnose and repair high voltage rechargeable energy storage systems in battery electric vehicle.....797

Assessment Requirements for AURETH003 Diagnose and repair high voltage rechargeable energy storage systems in battery electric vehicle802

AURETH004 Diagnose and repair traction motor speed control systems in battery electric vehicles806

Assessment Requirements for AURETH004 Diagnose and repair traction motor speed control systems in battery electric vehicles.....811

AURETH005 Diagnose and repair high voltage traction motors in battery electric vehicles815

Assessment Requirements for AURETH005 Diagnose and repair high voltage traction motors in battery electric vehicles820

AURETH006 Diagnose and repair auxiliary motors and associated components in battery electric vehicles.....823

Assessment Requirements for AURETH006 Diagnose and repair auxiliary motors and associated components in battery electric vehicles828

AURETH007 Diagnose and repair system instrumentation and safety interlocks in battery electric vehicles.....831

Assessment Requirements for AURETH007 Diagnose and repair system instrumentation and safety interlocks in battery electric vehicles.....836

AURETH008 Diagnose and repair HVAC and rechargeable energy storage cooling systems in battery electric vehicle839

Assessment Requirements for AURETH008 Diagnose and repair HVAC and rechargeable energy storage cooling systems in battery electric vehicle845

AURETH009 Diagnose and repair DC to DC converters in battery electric vehicles849

Assessment Requirements for AURETH009 Diagnose and repair DC to DC converters in battery electric vehicles854

AURETH010 Diagnose and repair high voltage rechargeable energy storage systems in hybrid electric vehicles857

Assessment Requirements for AURETH010 Diagnose and repair high voltage rechargeable energy storage systems in hybrid electric vehicles.....862

AURETH011 Depower and reinitialise hybrid electric vehicles.....866

Assessment Requirements for AURETH011 Depower and reinitialise hybrid electric vehicles870

AURETH012 Service and maintain electrical components in hybrid electric vehicles873

Assessment Requirements for AURETH012 Service and maintain electrical components in hybrid electric vehicles878

AURETH013 Analyse and evaluate electrical and electronic faults in HEV and BEV management systems881

Assessment Requirements for AURETH013 Analyse and evaluate electrical and electronic faults in HEV and BEV management systems885

AURETH014 Diagnose complex faults in hybrid and battery electric vehicle network management systems889

Assessment Requirements for AURETH014 Diagnose complex faults in hybrid and battery electric vehicle network management systems.....893

AURETK001 Identify, select and use low voltage electrical test equipment897

Assessment Requirements for AURETK001 Identify, select and use low voltage electrical test equipment901

AURETK002 Use and maintain electrical test equipment in an automotive workplace...904

Assessment Requirements for AURETK002 Use and maintain electrical test equipment in an automotive workplace908

AURETK003 Operate electrical test equipment911

Assessment Requirements for AURETK003 Operate electrical test equipment915

AURETR001 Remove and tag automotive electrical system components918

Assessment Requirements for AURETR001 Remove and tag automotive electrical system components.....921

AURETR002 Inspect heavy vehicle battery storage systems.....924

Assessment Requirements for AURETR002 Inspect heavy vehicle battery storage systems927

AURETR003 Identify automotive electrical systems and components.....929

Assessment Requirements for AURETR003 Identify automotive electrical systems and components.....932

AURETR004 Diagnose complex faults in convenience and entertainment systems935

Assessment Requirements for AURETR004 Diagnose complex faults in convenience and entertainment systems939

AURETR005 Install automotive security systems and components.....942

Assessment Requirements for AURETR005 Install automotive security systems and components.....946

AURETR006 Solder electrical wiring and circuits949

Assessment Requirements for AURETR006 Solder electrical wiring and circuits.....953

AURETR007 Apply knowledge of automotive electrical circuits and wiring systems956

Assessment Requirements for AURETR007 Apply knowledge of automotive electrical circuits and wiring systems959

AURETR008 Remove and replace electrical units and assemblies962

Assessment Requirements for AURETR008 Remove and replace electrical units and assemblies966

AURETR009 Install vehicle lighting and wiring systems.....969

Assessment Requirements for AURETR009 Install vehicle lighting and wiring systems .973

AURETR010 Repair wiring harnesses and looms976

Assessment Requirements for AURETR010 Repair wiring harnesses and looms.....980

AURETR011 Install basic ancillary electrical systems and components983

Assessment Requirements for AURETR011 Install basic ancillary electrical systems and components.....987

AURETR012 Test and repair basic electrical circuits.....990

Assessment Requirements for AURETR012 Test and repair basic electrical circuits994

AURETR013 Inspect, test and service charging systems998

Assessment Requirements for AURETR013 Inspect, test and service charging systems 1002

AURETR014 Inspect, test and service starting systems1005

Assessment Requirements for AURETR014 Inspect, test and service starting systems .1009

AURETR015 Inspect, test and service batteries1012

Assessment Requirements for AURETR015 Inspect, test and service batteries1016

AURETR016 Read and apply vehicle wiring schematics and drawings.....1019

Assessment Requirements for AURETR016 Read and apply vehicle wiring schematics and drawings.....1022

AURETR017 Overhaul charging system alternators1024

Assessment Requirements for AURETR017 Overhaul charging system alternators.....1028

AURETR018 Overhaul starting system motors1031

Assessment Requirements for AURETR018 Overhaul starting system motors1035

AURETR019 Inspect, service and repair AC electric motor drive systems1038

Assessment Requirements for AURETR019 Inspect, service and repair AC electric motor drive systems1042

AURETR020 Diagnose and repair network electronic control systems1045

Assessment Requirements for AURETR020 Diagnose and repair network electronic control systems1049

AURETR021 Inspect, service and repair electronic management, monitoring and tracking systems1052

Assessment Requirements for AURETR021 Inspect, service and repair electronic management, monitoring and tracking systems1056

AURETR022 Diagnose and repair vehicle dynamic control systems.....1059

Assessment Requirements for AURETR022 Diagnose and repair vehicle dynamic control systems1063

AURETR023 Diagnose and repair spark ignition engine management systems1066

Assessment Requirements for AURETR023 Diagnose and repair spark ignition engine management systems1070

AURETR024 Diagnose and repair compression ignition engine management systems..1074

Assessment Requirements for AURETR024 Diagnose and repair compression ignition engine management systems1078

AURETR025 Test, charge and replace batteries and jump-start vehicles1082

Assessment Requirements for AURETR025 Test, charge and replace batteries and jump-start vehicles.....1087

AURETR026 Remove, replace and program electrical and electronic units and assemblies1090

Assessment Requirements for AURETR026 Remove, replace and program electrical and electronic units and assemblies.....1094

AURETR027 Install ancillary electronic systems and components1097

Assessment Requirements for AURETR027 Install ancillary electronic systems and components.....	1101
AURETR028 Diagnose and repair instruments and warning systems	1104
Assessment Requirements for AURETR028 Diagnose and repair instruments and warning systems	1108
AURETR029 Diagnose and repair charging systems	1111
Assessment Requirements for AURETR029 Diagnose and repair charging systems.....	1115
AURETR030 Diagnose and repair starting systems.....	1118
Assessment Requirements for AURETR030 Diagnose and repair starting systems	1122
AURETR031 Diagnose and repair ignition systems	1125
Assessment Requirements for AURETR031 Diagnose and repair ignition systems.....	1129
AURETR032 Diagnose and repair automotive electrical systems.....	1133
Assessment Requirements for AURETR032 Diagnose and repair automotive electrical systems	1137
AURETR033 Develop and apply network electronic control system modifications.....	1141
Assessment Requirements for AURETR033 Develop and apply network electronic control system modifications.....	1145
AURETR034 Develop and apply electrical system modifications	1147
Assessment Requirements for AURETR034 Develop and apply electrical system modifications	1151
AURETR035 Apply knowledge of petrol and diesel engine operation	1153
Assessment Requirements for AURETR035 Apply knowledge of petrol and diesel engine operation.....	1156
AURETR037 Diagnose complex faults in light vehicle safety systems.....	1160
Assessment Requirements for AURETR037 Diagnose complex faults in light vehicle safety systems	1164
AURETR038 Diagnose complex faults in motorcycle electrical and electronic systems.....	1167
Assessment Requirements for AURETR038 Diagnose complex faults in motorcycle electrical and electronic systems.....	1171
AURETR039 Diagnose complex faults in light vehicle theft-deterrent systems	1174
Assessment Requirements for AURETR039 Diagnose complex faults in light vehicle theft-deterrent systems.....	1178
AURETR040 Diagnose complex faults in vehicle monitoring and protection systems ...	1181
Assessment Requirements for AURETR040 Diagnose complex faults in vehicle monitoring and protection systems	1185
AURETR042 Remove, refit and operate electrical components following body repair activities	1188
Assessment Requirements for AURETR042 Remove, refit and operate electrical components following body repair activities	1192
AURETR043 Diagnose and repair electronic body management systems	1195
Assessment Requirements for AURETR043 Diagnose and repair electronic body management systems	1199
AURETR044 Diagnose and repair integrated engine and transmission management systems	1202
Assessment Requirements for AURETR044 Diagnose and repair integrated engine and transmission management systems.....	1206
AURETR045 Inspect, service and repair DC electric motor drive systems	1209
Assessment Requirements for AURETR045 Inspect, service and repair DC electric motor drive systems	1213
AURETR046 Remove and refit vehicle batteries.....	1216
Assessment Requirements for AURETR046 Remove and refit vehicle batteries	1220
AURETR047 Recharge vehicle batteries	1222
Assessment Requirements for AURETR047 Recharge vehicle batteries.....	1226

AURETR048 Construct and test basic electronic circuits.....1228
Assessment Requirements for AURETR048 Construct and test basic electronic circuits1232
AURETR136 Diagnose and repair electronically controlled suspension systems.....1235
Assessment Requirements for AURETR136 Diagnose and repair electronically controlled suspension systems.....1239
AURETU001 Install air conditioning systems.....1243
Assessment Requirements for AURETU001 Install air conditioning systems1248
AURETU002 Recover vehicle refrigerants.....1252
Assessment Requirements for AURETU002 Recover vehicle refrigerants1256
AURETU003 Service air conditioning and HVAC systems1259
Assessment Requirements for AURETU003 Service air conditioning and HVAC systems1263
AURETU004 Diagnose and repair air conditioning and HVAC systems.....1266
Assessment Requirements for AURETU004 Diagnose and repair air conditioning and HVAC systems1271
AURETU005 Retrofit and modify air conditioning and HVAC systems.....1275
Assessment Requirements for AURETU005 Retrofit and modify air conditioning and HVAC systems1280
AURETU006 Diagnose complex faults in air conditioning and HVAC systems1284
Assessment Requirements for AURETU006 Diagnose complex faults in air conditioning and HVAC systems1288
AURETU007 Overhaul air conditioning and HVAC system compressors.....1291
Assessment Requirements for AURETU007 Overhaul air conditioning and HVAC system compressors1296
AURETX001 Analyse and evaluate electrical and electronic faults in driveline management systems1299
Assessment Requirements for AURETX001 Analyse and evaluate electrical and electronic faults in driveline management systems1303
AURHTA001 Carry out heavy vehicle pre-repair cleaning.....1306
Assessment Requirements for AURHTA001 Carry out heavy vehicle pre-repair cleaning1310
AURHTA003 Remove and replace heavy commercial vehicle ancillary components and accessories.....1312
Assessment Requirements for AURHTA003 Remove and replace heavy commercial vehicle ancillary components and accessories1315
AURHTB001 Diagnose and repair heavy vehicle air braking systems1317
Assessment Requirements for AURHTB001 Diagnose and repair heavy vehicle air braking systems.....1321
AURHTB002 Diagnose and repair heavy vehicle hydraulic and air over hydraulic braking systems1324
Assessment Requirements for AURHTB002 Diagnose and repair heavy vehicle hydraulic and air over hydraulic braking systems.....1328
AURHTB003 Overhaul hydraulic and air over hydraulic braking system components 1332
Assessment Requirements for AURHTB003 Overhaul hydraulic and air over hydraulic braking system components.....1336
AURHTB004 Overhaul air braking system components1339
Assessment Requirements for AURHTB004 Overhaul air braking system components1343
AURHTB005 Analyse and evaluate faults in heavy commercial vehicle braking systems1346
Assessment Requirements for AURHTB005 Analyse and evaluate faults in heavy commercial vehicle braking systems1350
AURHTB006 Diagnose complex faults in heavy commercial vehicle braking systems...1353
Assessment Requirements for AURHTB006 Diagnose complex faults in heavy commercial vehicle braking systems1357
AURHTB007 Diagnose and repair heavy commercial vehicle electronic braking systems1360

Assessment Requirements for AURHTB007 Diagnose and repair heavy commercial vehicle electronic braking systems1364

AURHTD001 Inspect heavy commercial vehicle suspension systems.....1367

Assessment Requirements for AURHTD001 Inspect heavy commercial vehicle suspension systems1370

AURHTD002 Diagnose and repair heavy commercial vehicle steering systems.....1372

Assessment Requirements for AURHTD002 Diagnose and repair heavy commercial vehicle steering systems1376

AURHTD003 Diagnose and repair heavy commercial vehicle suspension systems.....1379

Assessment Requirements for AURHTD003 Diagnose and repair heavy commercial vehicle suspension systems1383

AURHTD004 Carry out heavy vehicle wheel alignment operations1386

Assessment Requirements for AURHTD004 Carry out heavy vehicle wheel alignment operations1390

AURHTD005 Analyse and evaluate faults in heavy commercial vehicle steering and suspension systems.....1393

Assessment Requirements for AURHTD005 Analyse and evaluate faults in heavy commercial vehicle steering and suspension systems1397

AURHTD006 Diagnose complex faults in heavy commercial vehicle steering and suspension systems.....1400

Assessment Requirements for AURHTD006 Diagnose complex faults in heavy commercial vehicle steering and suspension systems1404

AURHTE001 Remove and install heavy vehicle engine assemblies1407

Assessment Requirements for AURHTE001 Remove and install heavy vehicle engine assemblies1411

AURHTE002 Diagnose and repair heavy vehicle compression ignition engines1414

Assessment Requirements for AURHTE002 Diagnose and repair heavy vehicle compression ignition engines1418

AURHTE003 Diagnose complex faults in heavy vehicle diesel engines1421

Assessment Requirements for AURHTE003 Diagnose complex faults in heavy vehicle diesel engines1425

AURHTE004 Analyse and evaluate faults in heavy commercial vehicle engine and fuel systems1428

Assessment Requirements for AURHTE004 Analyse and evaluate faults in heavy commercial vehicle engine and fuel systems.....1432

AURHTF001 Inspect heavy commercial vehicle fuel systems1435

Assessment Requirements for AURHTF001 Inspect heavy commercial vehicle fuel systems1438

AURHTF002 Diagnose and repair heavy vehicle diesel fuel injection systems.....1440

Assessment Requirements for AURHTF002 Diagnose and repair heavy vehicle diesel fuel injection systems1444

AURHTJ001 Inspect heavy commercial vehicle wheels and tyres1447

Assessment Requirements for AURHTJ001 Inspect heavy commercial vehicle wheels and tyres.....1450

AURHTJ002 Select heavy vehicle tyres, wheels and rims for specific applications1452

Assessment Requirements for AURHTJ002 Select heavy vehicle tyres, wheels and rims for specific applications1455

AURHTJ003 Remove, inspect and refit heavy vehicle wheel and tyre assemblies1457

Assessment Requirements for AURHTJ003 Remove, inspect and refit heavy vehicle wheel and tyre assemblies1461

AURHTJ004 Remove, inspect, repair and refit agricultural equipment tyres and tubes1464

Assessment Requirements for AURHTJ004 Remove, inspect, repair and refit agricultural equipment tyres and tubes1468

AURHTJ005 Identify and apply heavy vehicle pneumatic wheeled traction performance enhancement systems.....	1470
Assessment Requirements for AURHTJ005 Identify and apply heavy vehicle pneumatic wheeled traction performance enhancement systems	1474
AURHTJ006 Remove, inspect, repair and refit heavy vehicle tyres and tubes.....	1477
Assessment Requirements for AURHTJ006 Remove, inspect, repair and refit heavy vehicle tyres and tubes.....	1481
AURHTJ007 Remove, inspect, repair and refit industrial tyres and tubes.....	1484
Assessment Requirements for AURHTJ007 Remove, inspect, repair and refit industrial tyres and tubes	1487
AURHTL001 Inspect, diagnose and repair alternative fuel systems in heavy vehicle engines.....	1490
Assessment Requirements for AURHTL001 Inspect, diagnose and repair alternative fuel systems in heavy vehicle engines.....	1494
AURHTQ001 Inspect heavy commercial vehicle driveline components.....	1496
Assessment Requirements for AURHTQ001 Inspect heavy commercial vehicle driveline components.....	1499
AURHTQ002 Diagnose and repair heavy commercial vehicle final drive assemblies	1501
Assessment Requirements for AURHTQ002 Diagnose and repair heavy commercial vehicle final drive assemblies	1505
AURHTQ003 Diagnose and repair heavy vehicle drive shafts	1508
Assessment Requirements for AURHTQ003 Diagnose and repair heavy vehicle drive shafts	1512
AURHTR005 Diagnose and repair heavy commercial trailer electronically controlled roll stability systems	1515
Assessment Requirements for AURHTR005 Diagnose and repair heavy commercial trailer electronically controlled roll stability systems	1519
AURHTX001 Diagnose and repair heavy vehicle manual transmissions	1522
Assessment Requirements for AURHTX001 Diagnose and repair heavy vehicle manual transmissions	1526
AURHTX002 Inspect, test and replace heavy vehicle automatic transmissions	1529
Assessment Requirements for AURHTX002 Inspect, test and replace heavy vehicle automatic transmissions	1533
AURHTX003 Diagnose and repair heavy vehicle automatic transmissions.....	1536
Assessment Requirements for AURHTX003 Diagnose and repair heavy vehicle automatic transmissions	1540
AURHTX004 Diagnose and repair heavy vehicle clutch systems.....	1544
Assessment Requirements for AURHTX004 Diagnose and repair heavy vehicle clutch systems	1548
AURHTX005 Analyse and evaluate faults in heavy commercial vehicle transmission and driveline systems	1551
Assessment Requirements for AURHTX005 Analyse and evaluate faults in heavy commercial vehicle transmission and driveline systems	1555
AURHTX006 Diagnose complex faults in heavy commercial vehicle transmission and driveline systems	1558
Assessment Requirements for AURHTX006 Diagnose complex faults in heavy commercial vehicle transmission and driveline systems	1562
AURHTY001 Inspect and service mechanical connections of heavy vehicles and trailers over 4.5 tonnes.....	1565
Assessment Requirements for AURHTY001 Inspect and service mechanical connections of heavy vehicles and trailers over 4.5 tonnes.....	1569
AURHTY002 Diagnose and repair mechanical connections of heavy vehicles and trailers over 4.5 tonnes.....	1572

Assessment Requirements for AURHTY002 Diagnose and repair mechanical connections of heavy vehicles and trailers over 4.5 tonnes	1576
AURHTZ001 Diagnose and repair heavy vehicle emission control systems	1579
Assessment Requirements for AURHTZ001 Diagnose and repair heavy vehicle emission control systems	1583
AURJTA001 Carry out minor adjustments to motorcycles.....	1586
Assessment Requirements for AURJTA001 Carry out minor adjustments to motorcycles	1589
AURJTA002 Remove and replace motorcycle components and accessories.....	1591
Assessment Requirements for AURJTA002 Remove and replace motorcycle components and accessories	1595
AURJTA003 Analyse and evaluate faults in motorcycle engine and transmission systems	1598
Assessment Requirements for AURJTA003 Analyse and evaluate faults in motorcycle engine and transmission systems	1602
AURJTB001 Diagnose and repair motorcycle braking systems.....	1605
Assessment Requirements for AURJTB001 Diagnose and repair motorcycle braking systems	1609
AURJTB002 Analyse and evaluate faults in motorcycle braking systems	1612
Assessment Requirements for AURJTB002 Analyse and evaluate faults in motorcycle braking systems.....	1616
AURJTD001 Inspect motorcycle suspension systems.....	1619
Assessment Requirements for AURJTD001 Inspect motorcycle suspension systems	1622
AURJTD002 Inspect motorcycle steering systems.....	1624
Assessment Requirements for AURJTD002 Inspect motorcycle steering systems	1627
AURJTD003 Diagnose and repair motorcycle suspension systems.....	1629
Assessment Requirements for AURJTD003 Diagnose and repair motorcycle suspension systems	1633
AURJTD004 Diagnose and repair motorcycle steering systems.....	1636
Assessment Requirements for AURJTD004 Diagnose and repair motorcycle steering systems	1640
AURJTD005 Diagnose complex faults in motorcycle steering and suspension systems..	1643
Assessment Requirements for AURJTD005 Diagnose complex faults in motorcycle steering and suspension systems.....	1647
AURJTD006 Analyse and evaluate faults in motorcycle steering, suspension and frame systems	1650
Assessment Requirements for AURJTD006 Analyse and evaluate faults in motorcycle steering, suspension and frame systems.....	1654
AURJTE001 Diagnose and repair motorcycle engines.....	1657
Assessment Requirements for AURJTE001 Diagnose and repair motorcycle engines ...	1661
AURJTE002 Diagnose complex faults in motorcycle engine and transmission systems .	1664
Assessment Requirements for AURJTE002 Diagnose complex faults in motorcycle engine and transmission systems	1668
AURJTJ001 Remove, inspect and refit motorcycle wheel and tyre assemblies	1671
Assessment Requirements for AURJTJ001 Remove, inspect and refit motorcycle wheel and tyre assemblies	1675
AURJTJ002 Remove, inspect, repair and refit motorcycle tyres and tubes.....	1678
Assessment Requirements for AURJTJ002 Remove, inspect, repair and refit motorcycle tyres and tubes	1682
AURJTJ003 Remove and refit motorcycle wheel and tyre assemblies	1685
Assessment Requirements for AURJTJ003 Remove and refit motorcycle wheel and tyre assemblies	1688
AURJTQ001 Inspect and service motorcycle driveline systems.....	1690
Assessment Requirements for AURJTQ001 Inspect and service motorcycle driveline systems	1694

AURJTQ002 Diagnose and repair motorcycle driveline systems.....	1696
Assessment Requirements for AURJTQ002 Diagnose and repair motorcycle driveline systems	1700
AURJTR001 Analyse and evaluate faults in motorcycle electrical and electronic systems.....	1703
Assessment Requirements for AURJTR001 Analyse and evaluate faults in motorcycle electrical and electronic systems.....	1707
AURJTX001 Diagnose and repair motorcycle clutch systems.....	1710
Assessment Requirements for AURJTX001 Diagnose and repair motorcycle clutch systems	1714
AURJTX002 Diagnose and repair motorcycle manual transmissions	1717
Assessment Requirements for AURJTX002 Diagnose and repair motorcycle manual transmissions	1721
AURJTX003 Diagnose and repair motorcycle automatic transmissions.....	1724
Assessment Requirements for AURJTX003 Diagnose and repair motorcycle automatic transmissions	1728
AURJTY001 Repair and align motorcycle frames	1731
Assessment Requirements for AURJTY001 Repair and align motorcycle frames.....	1735
AURKKJ001 Manage use of tyre management software	1737
Assessment Requirements for AURKKJ001 Manage use of tyre management software.....	1740
AURKTA001 Synchronise plant and equipment.....	1742
Assessment Requirements for AURKTA001 Synchronise plant and equipment.....	1746
AURKTA002 Inspect, service and repair crop harvesting equipment	1749
Assessment Requirements for AURKTA002 Inspect, service and repair crop harvesting equipment	1753
AURKTA003 Inspect, service and repair crop planting and seeding equipment	1756
Assessment Requirements for AURKTA003 Inspect, service and repair crop planting and seeding equipment	1760
AURKTA004 Inspect, service and repair spraying and spreading equipment.....	1763
Assessment Requirements for AURKTA004 Inspect, service and repair spraying and spreading equipment	1767
AURKTA005 Inspect, service and repair track type drive and support systems	1770
Assessment Requirements for AURKTA005 Inspect, service and repair track type drive and support systems	1774
AURKTA006 Analyse and evaluate faults in track type mobile plant transmission, steering and braking systems.....	1777
Assessment Requirements for AURKTA006 Analyse and evaluate faults in track type mobile plant transmission, steering and braking systems.....	1781
AURKTA007 Analyse and evaluate faults in mobile plant hydraulic systems.....	1784
Assessment Requirements for AURKTA007 Analyse and evaluate faults in mobile plant hydraulic systems.....	1788
AURKTA009 Diagnose complex faults in mobile plant hydraulic systems	1791
Assessment Requirements for AURKTA009 Diagnose complex faults in mobile plant hydraulic systems.....	1795
AURKTA010 Inspect, service and repair hay cutting, raking and baling equipment	1798
Assessment Requirements for AURKTA010 Inspect, service and repair hay cutting, raking and baling equipment.....	1802

Assessment Requirements for AURPTR002 Test and service electric outdoor power equipment2587

AURPTR003 Service and repair outdoor power equipment engine management systems2590

Assessment Requirements for AURPTR003 Service and repair outdoor power equipment engine management systems2594

AURRGA001 Launch and recover vessels using a trailer.....2598

Assessment Requirements for AURRGA001 Launch and recover vessels using a trailer2602

AURRGA002 Use cranes, gantries and forklifts to launch and recover vessels.....2605

Assessment Requirements for AURRGA002 Use cranes, gantries and forklifts to launch and recover vessels.....2609

AURRGA003 Moor motor-driven vessels2612

Assessment Requirements for AURRGA003 Moor motor-driven vessels2616

AURRTA001 Inspect and service deck, hull and cabin equipment2619

Assessment Requirements for AURRTA001 Inspect and service deck, hull and cabin equipment2622

AURRTA003 Winterise vessels and engine systems2624

Assessment Requirements for AURRTA003 Winterise vessels and engine systems.....2628

AURRTA006 Water test vessels2630

Assessment Requirements for AURRTA006 Water test vessels2634

AURRTA007 Analyse and evaluate faults in light marine hydraulic systems2637

Assessment Requirements for AURRTA007 Analyse and evaluate faults in light marine hydraulic systems.....2641

AURRTA008 Analyse and evaluate faults in light marine hull performance and stability systems2644

Assessment Requirements for AURRTA008 Analyse and evaluate faults in light marine hull performance and stability systems.....2648

AURRTA009 Recommission vessels and engine systems2651

Assessment Requirements for AURRTA009 Recommission vessels and engine systems2655

AURRTC001 Diagnose and repair marine exhaust and cooling systems2658

Assessment Requirements for AURRTC001 Diagnose and repair marine exhaust and cooling systems2662

AURRTD001 Diagnose and repair marine steering systems2665

Assessment Requirements for AURRTD001 Diagnose and repair marine steering systems2669

AURRTE001 Carry out wet run tests on vessel outboard engines.....2672

Assessment Requirements for AURRTE001 Carry out wet run tests on vessel outboard engines.....2676

AURRTE002 Inspect and service marine outboard engines.....2678

Assessment Requirements for AURRTE002 Inspect and service marine outboard engines2682

AURRTE003 Inspect and service marine inboard engines2685

Assessment Requirements for AURRTE003 Inspect and service marine inboard engines2689

AURRTE006 Diagnose and repair marine outboard engines.....2692

Assessment Requirements for AURRTE006 Diagnose and repair marine outboard engines2696

AURRTE007 Diagnose and repair marine inboard engines2699

Assessment Requirements for AURRTE007 Diagnose and repair marine inboard engines2703

AURRTE008 Install marine engines, controls and instruments.....2706

Assessment Requirements for AURRTE008 Install marine engines, controls and instruments.....2710

AURRTE010 Test marine engines in water tanks2713

Assessment Requirements for AURRTE010 Test marine engines in water tanks.....2717

AURRTE011 Overhaul two and four-stroke cycle marine outboard engines.....2719

Assessment Requirements for AURRTE011 Overhaul two and four-stroke cycle marine outboard engines2723

AURRTE012 Analyse and evaluate faults in light marine engine and powerhead systems2726

Assessment Requirements for AURRTE012 Analyse and evaluate faults in light marine engine and powerhead systems.....2730

AURRTF001 Diagnose and repair petrol and diesel marine fuel systems.....2733

Assessment Requirements for AURRTF001 Diagnose and repair petrol and diesel marine fuel systems.....2737

AURRTQ001 Inspect and service marine inboard propeller drive systems2739

Assessment Requirements for AURRTQ001 Inspect and service marine inboard propeller drive systems2742

AURRTQ002 Inspect and service marine jet drive propulsion systems.....2744

Assessment Requirements for AURRTQ002 Inspect and service marine jet drive propulsion systems.....2747

AURRTQ004 Diagnose and repair marine inboard propeller drive systems2750

Assessment Requirements for AURRTQ004 Diagnose and repair marine inboard propeller drive systems.....2754

AURRTQ005 Install marine jet drive propulsion systems.....2757

Assessment Requirements for AURRTQ005 Install marine jet drive propulsion systems2760

AURRTQ006 Diagnose and repair marine jet drive propulsion systems.....2762

Assessment Requirements for AURRTQ006 Diagnose and repair marine jet drive propulsion systems.....2766

AURRTR001 Inspect, service and maintain marine battery storage systems.....2769

Assessment Requirements for AURRTR001 Inspect, service and maintain marine battery storage systems.....2773

AURRTR006 Diagnose and repair marine electrical systems2775

Assessment Requirements for AURRTR006 Diagnose and repair marine electrical systems2779

AURRTR007 Install marine electrical systems and components2782

Assessment Requirements for AURRTR007 Install marine electrical systems and components.....2786

AURRTX001 Inspect and service marine outboard and stern drive transmissions.....2789

Assessment Requirements for AURRTX001 Inspect and service marine outboard and stern drive transmissions.....2792

AURRTX002 Inspect and service marine inboard transmissions2795

Assessment Requirements for AURRTX002 Inspect and service marine inboard transmissions2798

AURRTX003 Diagnose and repair marine outboard and stern drive transmissions.....2801

Assessment Requirements for AURRTX003 Diagnose and repair marine outboard and stern drive transmissions.....2805

AURRTX004 Diagnose and repair marine inboard transmissions2808

Assessment Requirements for AURRTX004 Diagnose and repair marine inboard transmissions2812

AURRTX005 Analyse and evaluate faults in light marine transmission systems.....2815

Assessment Requirements for AURRTX005 Analyse and evaluate faults in light marine transmission systems2819

AURSAA001 Process customer complaints in an automotive workplace.....2822

Assessment Requirements for AURSAA001 Process customer complaints in an automotive workplace.....	2825
AURSAA002 Maintain customer aftermarket relations	2827
Assessment Requirements for AURSAA002 Maintain customer aftermarket relations.	2830
AURSBA001 Carry out warehousing procedures in an automotive workplace	2832
Assessment Requirements for AURSBA001 Carry out warehousing procedures in an automotive workplace.....	2836
AURSBA002 Identify and match uncommon automotive parts.....	2839
Assessment Requirements for AURSBA002 Identify and match uncommon automotive parts	2842
AURSCA001 Select and supply automotive parts and products	2844
Assessment Requirements for AURSCA001 Select and supply automotive parts and products	2847
AURSCA002 Present automotive products and services for sale.....	2849
Assessment Requirements for AURSCA002 Present automotive products and services for sale.....	2852
AURSCA003 Apply sales procedures in an automotive workplace	2854
Assessment Requirements for AURSCA003 Apply sales procedures in an automotive workplace.....	2857
AURSCA004 Carry out cash and non-cash payment operations	2860
Assessment Requirements for AURSCA004 Carry out cash and non-cash payment operations	2863
AURSCA005 Sell automotive products and services	2866
Assessment Requirements for AURSCA005 Sell automotive products and services.....	2869
AURSCA006 Promote automotive products and services.....	2871
Assessment Requirements for AURSCA006 Promote automotive products and services	2874
AURSCA007 Determine used motor vehicle stock requirements.....	2876
Assessment Requirements for AURSCA007 Determine used motor vehicle stock requirements	2879
AURSCA008 Wholesale used motor vehicle stock.....	2881
Assessment Requirements for AURSCA008 Wholesale used motor vehicle stock	2884
AURSCA009 Provide vehicle technology information	2886
Assessment Requirements for AURSCA009 Provide vehicle technology information....	2889
AURSCA010 Appraise and purchase used motor vehicles for sale.....	2891
Assessment Requirements for AURSCA010 Appraise and purchase used motor vehicles for sale.....	2894
AURSCA011 Conduct online transactions in an automotive workplace	2896
Assessment Requirements for AURSCA011 Conduct online transactions in an automotive workplace.....	2899
AURSCP001 Provide information to customers on automotive refinishing products.....	2901
Assessment Requirements for AURSCP001 Provide information to customers on automotive refinishing products.....	2904
AURSLA001 Comply with legal requirements when selling automotive products and services	2907
Assessment Requirements for AURSLA001 Comply with legal requirements when selling automotive products and services	2910
AURTGA001 Drive and manoeuvre trailers	2912
Assessment Requirements for AURTGA001 Drive and manoeuvre trailers	2915
AURTNA001 Estimate and quote automotive vehicle or machinery modifications.....	2918
Assessment Requirements for AURTNA001 Estimate and quote automotive vehicle or machinery modifications	2922
AURTTA001 Remove and tag steering, suspension and braking system components....	2924

Assessment Requirements for AURTTA001 Remove and tag steering, suspension and braking system components2928

AURTTA002 Assist with automotive workplace activities2930

Assessment Requirements for AURTTA002 Assist with automotive workplace activities2933

AURTTA003 Use and maintain basic mechanical measuring devices2935

Assessment Requirements for AURTTA003 Use and maintain basic mechanical measuring devices2938

AURTTA004 Carry out servicing operations.....2940

Assessment Requirements for AURTTA004 Carry out servicing operations2944

AURTTA005 Select and use bearings, seals, gaskets, sealants and adhesives.....2947

Assessment Requirements for AURTTA005 Select and use bearings, seals, gaskets, sealants and adhesives2951

AURTTA006 Inspect and service hydraulic systems.....2954

Assessment Requirements for AURTTA006 Inspect and service hydraulic systems2958

AURTTA007 Inspect, service and repair pneumatic systems.....2961

Assessment Requirements for AURTTA007 Inspect, service and repair pneumatic systems2965

AURTTA008 Produce patterns and templates.....2968

Assessment Requirements for AURTTA008 Produce patterns and templates2972

AURTTA009 Carry out mechanical pre-repair operations.....2974

Assessment Requirements for AURTTA009 Carry out mechanical pre-repair operations2978

AURTTA010 Service and repair trailers up to 4.5 tonnes2980

Assessment Requirements for AURTTA010 Service and repair trailers up to 4.5 tonnes2984

AURTTA011 Install hydraulic systems to specified applications.....2987

Assessment Requirements for AURTTA011 Install hydraulic systems to specified applications.....2991

AURTTA012 Fabricate and install fluid power hose assemblies.....2994

Assessment Requirements for AURTTA012 Fabricate and install fluid power hose assemblies2998

AURTTA013 Diagnose and repair hydraulic systems.....3001

Assessment Requirements for AURTTA013 Diagnose and repair hydraulic systems3005

AURTTA014 Assemble and install pneumatic system components.....3008

Assessment Requirements for AURTTA014 Assemble and install pneumatic system components.....3012

AURTTA015 Produce engineering drawings for vehicle components.....3014

Assessment Requirements for AURTTA015 Produce engineering drawings for vehicle components.....3017

AURTTA017 Carry out vehicle safety inspections3019

Assessment Requirements for AURTTA017 Carry out vehicle safety inspections3022

AURTTA018 Carry out diagnostic procedures.....3024

Assessment Requirements for AURTTA018 Carry out diagnostic procedures3028

AURTTA020 Apply heat induction processes3031

Assessment Requirements for AURTTA020 Apply heat induction processes3035

AURTTA021 Diagnose complex system faults3038

Assessment Requirements for AURTTA021 Diagnose complex system faults.....3042

AURTTA022 Develop and apply mechanical system modifications3045

Assessment Requirements for AURTTA022 Develop and apply mechanical system modifications3049

AURTTA023 Develop and apply hydraulic system modifications3051

Assessment Requirements for AURTTA023 Develop and apply hydraulic system modifications3055

AURTTA024 Develop and apply pneumatic system modifications.....3057

Assessment Requirements for AURTTA024 Develop and apply pneumatic system modifications3061

AURTTA025 Diagnose complex faults in vehicle integrated stability control systems ...3063
Assessment Requirements for AURTTA025 Diagnose complex faults in vehicle integrated stability control systems3067
AURTTA026 Diagnose complex faults in electronic over hydraulic systems.....3070
Assessment Requirements for AURTTA026 Diagnose complex faults in electronic over hydraulic systems.....3074
AURTTA027 Carry out basic vehicle servicing operations3077
Assessment Requirements for AURTTA027 Carry out basic vehicle servicing operations3081
AURTTB001 Inspect and service braking systems3084
Assessment Requirements for AURTTB001 Inspect and service braking systems3088
AURTTB004 Inspect and service air braking systems3091
Assessment Requirements for AURTTB004 Inspect and service air braking systems ...3095
AURTTB006 Inspect, service and repair auxiliary braking systems3098
Assessment Requirements for AURTTB006 Inspect, service and repair auxiliary braking systems3101
AURTTB007 Remove and replace brake assemblies.....3103
Assessment Requirements for AURTTB007 Remove and replace brake assemblies3107
AURTTB012 Attach friction materials and radius grind3109
Assessment Requirements for AURTTB012 Attach friction materials and radius grind3113
AURTTB013 Machine brake drums and brake disc rotors.....3116
Assessment Requirements for AURTTB013 Machine brake drums and brake disc rotors3120
AURTTB015 Assemble and fit braking system components3123
Assessment Requirements for AURTTB015 Assemble and fit braking system components3126
AURTTTC001 Inspect and service cooling systems3129
Assessment Requirements for AURTTTC001 Inspect and service cooling systems3133
AURTTTC002 Repair radiators3136
Assessment Requirements for AURTTTC002 Repair radiators3140
AURTTTC003 Diagnose and repair cooling systems3142
Assessment Requirements for AURTTTC003 Diagnose and repair cooling systems3146
AURTTTC004 Remove and replace radiators.....3149
Assessment Requirements for AURTTTC004 Remove and replace radiators3153
AURTTD001 Inspect steering systems.....3155
Assessment Requirements for AURTTD001 Inspect steering systems3158
AURTTD002 Inspect and service steering systems.....3160
Assessment Requirements for AURTTD002 Inspect and service steering systems3164
AURTTD003 Inspect suspension systems3166
Assessment Requirements for AURTTD003 Inspect suspension systems3169
AURTTD004 Inspect and service suspension systems.....3171
Assessment Requirements for AURTTD004 Inspect and service suspension systems3174
AURTTD005 Overhaul steering system components3176
Assessment Requirements for AURTTD005 Overhaul steering system components.....3180
AURTTD006 Remove and replace vehicle front suspension springs3182
Assessment Requirements for AURTTD006 Remove and replace vehicle front suspension springs.....3186
AURTTD007 Remove and replace steering assemblies.....3188
Assessment Requirements for AURTTD007 Remove and replace steering assemblies ..3192
AURTTTE001 Apply knowledge of engine science3194
Assessment Requirements for AURTTTE001 Apply knowledge of engine science.....3197
AURTTTE003 Remove and tag engine system components.....3200
Assessment Requirements for AURTTTE003 Remove and tag engine system components3203
AURTTTE004 Inspect and service engines3205
Assessment Requirements for AURTTTE004 Inspect and service engines3209
AURTTTE005 Overhaul engines3212

Assessment Requirements for AURTTE005 Overhaul engines.....3216

AURTTE006 Remove and replace conventional engine assemblies.....3219

Assessment Requirements for AURTTE006 Remove and replace conventional engine assemblies3223

AURTTE007 Dismantle and assemble single cylinder four-stroke petrol engines3225

Assessment Requirements for AURTTE007 Dismantle and assemble single cylinder four-stroke petrol engines3230

AURTTE008 Dismantle and assemble multi-cylinder four-stroke petrol engines.....3232

Assessment Requirements for AURTTE008 Dismantle and assemble multi-cylinder four-stroke petrol engines3237

AURTTE009 Remove and replace engine cylinder heads.....3240

Assessment Requirements for AURTTE009 Remove and replace engine cylinder heads3245

AURTTF001 Inspect and service petrol fuel systems3247

Assessment Requirements for AURTTF001 Inspect and service petrol fuel systems.....3251

AURTTF002 Inspect and service diesel fuel injection systems3254

Assessment Requirements for AURTTF002 Inspect and service diesel fuel injection systems3258

AURTTF003 Overhaul diesel fuel injection system components3261

Assessment Requirements for AURTTF003 Overhaul diesel fuel injection system components.....3266

AURTTF005 Diagnose and repair engine forced-induction systems3268

Assessment Requirements for AURTTF005 Diagnose and repair engine forced-induction systems3272

AURTTF006 Diagnose and repair petrol carburettor systems3275

Assessment Requirements for AURTTF006 Diagnose and repair petrol carburettor systems3279

AURTTF007 Overhaul carburettor fuel system components.....3282

Assessment Requirements for AURTTF007 Overhaul carburettor fuel system components3286

AURTTJ003 Remove and replace wheel and tyre assemblies3288

Assessment Requirements for AURTTJ003 Remove and replace wheel and tyre assemblies3292

AURTTJ011 Balance wheels and tyres3294

Assessment Requirements for AURTTJ011 Balance wheels and tyres.....3297

AURTTJ012 Remove, inspect and refit wheel hubs and associated brake components .3300

Assessment Requirements for AURTTJ012 Remove, inspect and refit wheel hubs and associated brake components.....3304

AURTTK001 Use and maintain measuring equipment in an automotive workplace3307

Assessment Requirements for AURTTK001 Use and maintain measuring equipment in an automotive workplace.....3310

AURTTK002 Use and maintain tools and equipment in an automotive workplace3312

Assessment Requirements for AURTTK002 Use and maintain tools and equipment in an automotive workplace.....3315

AURTTL001 Inspect and service CNG fuel systems3318

Assessment Requirements for AURTTL001 Inspect and service CNG fuel systems.....3322

AURTTL002 Diagnose and repair CNG fuel systems3325

Assessment Requirements for AURTTL002 Diagnose and repair CNG fuel systems.....3329

AURTTL003 Install CNG fuel systems.....3331

Assessment Requirements for AURTTL003 Install CNG fuel systems3335

AURTTL004 Inspect and service LNG fuel systems3337

Assessment Requirements for AURTTL004 Inspect and service LNG fuel systems.....3341

AURTTL005 Diagnose and repair LNG fuel systems3344

Assessment Requirements for AURTTL005 Diagnose and repair LNG fuel systems.....3348

AURTTL006 Install LNG fuel systems3350

Assessment Requirements for AURTTL006 Install LNG fuel systems.....3354

AURTTL007 Inspect and service LPG fuel systems.....3356
Assessment Requirements for AURTTL007 Inspect and service LPG fuel systems3360
AURTTL008 Diagnose and repair LPG fuel systems.....3363
Assessment Requirements for AURTTL008 Diagnose and repair LPG fuel systems3367
AURTTL009 Install LPG fuel systems3369
Assessment Requirements for AURTTL009 Install LPG fuel systems3373
AURTTL010 Install LPG, CNG and LNG electrical control equipment3375
Assessment Requirements for AURTTL010 Install LPG, CNG and LNG electrical control equipment3379
AURTTL011 Diagnose complex faults in CNG fuel systems3381
Assessment Requirements for AURTTL011 Diagnose complex faults in CNG fuel systems3385
AURTTL012 Diagnose complex faults in LNG fuel systems3388
Assessment Requirements for AURTTL012 Diagnose complex faults in LNG fuel systems3392
AURTTL013 Diagnose complex faults in LPG fuel systems.....3395
Assessment Requirements for AURTTL013 Diagnose complex faults in LPG fuel systems3399
AURTTL014 Analyse and evaluate faults in gas fuel systems3402
Assessment Requirements for AURTTL014 Analyse and evaluate faults in gas fuel systems3406
AURTTL015 Develop and apply gas fuel system modifications3409
Assessment Requirements for AURTTL015 Develop and apply gas fuel system modifications3413
AURTTM001 Operate and monitor computer numerical control machines3415
Assessment Requirements for AURTTM001 Operate and monitor computer numerical control machines3419
AURTTM002 Repair bearing tunnels and connecting rods in engines3422
Assessment Requirements for AURTTM002 Repair bearing tunnels and connecting rods in engines3428
AURTTM003 Apply metal to rebuild engine components.....3432
Assessment Requirements for AURTTM003 Apply metal to rebuild engine components3436
AURTTM004 Assemble engine blocks and sub-assemblies3439
Assessment Requirements for AURTTM004 Assemble engine blocks and sub-assemblies3444
AURTTM005 Balance rotating and reciprocating engine components3448
Assessment Requirements for AURTTM005 Balance rotating and reciprocating engine components.....3452
AURTTM006 Perform advanced machining and blueprinting of engine components...3455
Assessment Requirements for AURTTM006 Perform advanced machining and blueprinting of engine components3459
AURTTM007 Carry out crankshaft grinding.....3463
Assessment Requirements for AURTTM007 Carry out crankshaft grinding3468
AURTTM008 Dismantle and evaluate engine blocks and sub-assemblies3472
Assessment Requirements for AURTTM008 Dismantle and evaluate engine blocks and sub-assemblies3477
AURTTM009 Fit sleeves and bore and hone engine cylinders3481
Assessment Requirements for AURTTM009 Fit sleeves and bore and hone engine cylinders.....3486
AURTTM010 Heat treat, straighten and reclaim engine components.....3489
Assessment Requirements for AURTTM010 Heat treat, straighten and reclaim engine components.....3493
AURTTM011 Recondition engine cylinder heads.....3495
Assessment Requirements for AURTTM011 Recondition engine cylinder heads3500
AURTTM012 Carry out camshaft grinding.....3503
Assessment Requirements for AURTTM012 Carry out camshaft grinding3508
AURTTQ001 Inspect and service final drive assemblies3511
Assessment Requirements for AURTTQ001 Inspect and service final drive assemblies 3514

AURTTQ002 Remove and refit driveline components.....3516
Assessment Requirements for AURTTQ002 Remove and refit driveline components ...3520
AURTTQ003 Inspect and service drive shafts3522
Assessment Requirements for AURTTQ003 Inspect and service drive shafts.....3525
AURTTQ004 Overhaul final drive assemblies.....3527
Assessment Requirements for AURTTQ004 Overhaul final drive assemblies3531
AURTTTR001 Diagnose complex faults in engine management systems3534
Assessment Requirements for AURTTTR001 Diagnose complex faults in engine management systems3538
AURTTTS001 Fabricate exhaust systems and components3541
Assessment Requirements for AURTTTS001 Fabricate exhaust systems and components3545
AURTTW001 Carry out soft soldering techniques.....3548
Assessment Requirements for AURTTW001 Carry out soft soldering techniques3552
AURTTW002 Set, operate and monitor specialist reconditioning machines3554
Assessment Requirements for AURTTW002 Set, operate and monitor specialist reconditioning machines.....3558
AURTTW003 Carry out machining operations3560
Assessment Requirements for AURTTW003 Carry out machining operations3564
AURTTX001 Remove and tag driveline components.....3567
Assessment Requirements for AURTTX001 Remove and tag driveline components3570
AURTTX002 Inspect and service manual transmissions3572
Assessment Requirements for AURTTX002 Inspect and service manual transmissions3575
AURTTX003 Inspect and service automatic transmissions.....3577
Assessment Requirements for AURTTX003 Inspect and service automatic transmissions3580
AURTTX004 Inspect and service hydrostatic transmissions.....3583
Assessment Requirements for AURTTX004 Inspect and service hydrostatic transmissions3587
AURTTX006 Diagnose and repair hydrostatic transmissions.....3589
Assessment Requirements for AURTTX006 Diagnose and repair hydrostatic transmissions3593
AURTTX007 Overhaul clutch assemblies3596
Assessment Requirements for AURTTX007 Overhaul clutch assemblies.....3600
AURTTX008 Overhaul manual transmissions3603
Assessment Requirements for AURTTX008 Overhaul manual transmissions3607
AURTTX009 Overhaul automatic transmissions3610
Assessment Requirements for AURTTX009 Overhaul automatic transmissions.....3614
AURTTX010 Overhaul hydrostatic transmissions3617
Assessment Requirements for AURTTX010 Overhaul hydrostatic transmissions.....3621
AURTTX011 Overhaul torque converters3623
Assessment Requirements for AURTTX011 Overhaul torque converters.....3627
AURTTX012 Dismantle and assemble conventional manual transmissions3629
Assessment Requirements for AURTTX012 Dismantle and assemble conventional manual transmissions.....3633
AURTTX013 Remove and replace clutch assemblies.....3635
Assessment Requirements for AURTTX013 Remove and replace clutch assemblies3639
AURTTX015 Inspect and service clutch systems.....3641
Assessment Requirements for AURTTX015 Inspect and service clutch systems3644
AURTTY001 Repair vehicle chassis, frame and associated components3647
Assessment Requirements for AURTTY001 Repair vehicle chassis, frame and associated components.....3651
AURTTZ001 Inspect and service emission control systems.....3654
Assessment Requirements for AURTTZ001 Inspect and service emission control systems3657
AURTTZ002 Diagnose and repair exhaust systems3659
Assessment Requirements for AURTTZ002 Diagnose and repair exhaust systems.....3663

AURVLA001 Identify and report vehicle claim fraud indicators3665
Assessment Requirements for AURVLA001 Identify and report vehicle claim fraud indicators3669
AURVNA001 Provide vehicle loss assessments and identify repair requirements3672
Assessment Requirements for AURVNA001 Provide vehicle loss assessments and identify repair requirements.....3677
AURVNA002 Provide vehicle total loss assessments3680
Assessment Requirements for AURVNA002 Provide vehicle total loss assessments.....3685
AURVNA003 Review vehicle repair quotations.....3688
Assessment Requirements for AURVNA003 Review vehicle repair quotations3692
AURVNA004 Apply insurance industry knowledge to vehicle loss assessments3695
Assessment Requirements for AURVNA004 Apply insurance industry knowledge to vehicle loss assessments3700
AURVNA005 Inspect quality of vehicle repair work3702
Assessment Requirements for AURVNA005 Inspect quality of vehicle repair work3706
AURVNA006 Identify and value vehicle salvage3708
Assessment Requirements for AURVNA006 Identify and value vehicle salvage.....3712
AURVNA007 Apply automotive mechanical and electrical knowledge to vehicle loss assessments3714
Assessment Requirements for AURVNA007 Apply automotive mechanical and electrical knowledge to vehicle loss assessments.....3718
AURVNA008 Apply automotive body and paint knowledge to vehicle loss assessments3720
Assessment Requirements for AURVNA008 Apply automotive body and paint knowledge to vehicle loss assessments.....3725
AURVNN001 Evaluate vehicle bodywork for damage and identify repair requirements3728
Assessment Requirements for AURVNN001 Evaluate vehicle bodywork for damage and identify repair requirements.....3732
AURVNP001 Evaluate vehicle paintwork for damage and identify refinishing requirements3735
Assessment Requirements for AURVNP001 Evaluate vehicle paintwork for damage and identify refinishing requirements3739
AURVTA001 Prepare vehicles for customer use3742
Assessment Requirements for AURVTA001 Prepare vehicles for customer use.....3746
AURVTA002 Remove and replace vehicle supplementary restraint systems3748
Assessment Requirements for AURVTA002 Remove and replace vehicle supplementary restraint systems3752
AURVTA003 Inspect vehicle paint, trim and accessories and recommend repair procedures3755
Assessment Requirements for AURVTA003 Inspect vehicle paint, trim and accessories and recommend repair procedures3759
AURVTA004 Inspect damaged vehicle systems and recommend repairs3761
Assessment Requirements for AURVTA004 Inspect damaged vehicle systems and recommend repairs.....3765
AURVTA005 Clean vehicles3767
Assessment Requirements for AURVTA005 Clean vehicles.....3771
AURVTG001 Repair laminated glass windscreens.....3773
Assessment Requirements for AURVTG001 Repair laminated glass windscreens3777
AURVTG002 Remove and install rubber glazed windscreens3780
Assessment Requirements for AURVTG002 Remove and install rubber glazed windscreens3784
AURVTG003 Remove and install butyl sealed windscreens.....3786
Assessment Requirements for AURVTG003 Remove and install butyl sealed windscreens3790
AURVTG004 Remove and install direct glazed windscreens3792
Assessment Requirements for AURVTG004 Remove and install direct glazed windscreens3796

AURVTG005 Remove and install framed type windscreens3798
Assessment Requirements for AURVTG005 Remove and install framed type windscreens3802
AURVTG006 Apply vehicle window tinting.....3804
Assessment Requirements for AURVTG006 Apply vehicle window tinting3808
AURVTG007 Clean vehicle glass surfaces.....3811
Assessment Requirements for AURVTG007 Clean vehicle glass surfaces3815
AURVTG008 Cut and process vehicle and machinery flat laminated glass.....3817
Assessment Requirements for AURVTG008 Cut and process vehicle and machinery flat laminated glass3821
AURVTG009 Remove and install vehicle fixed body glass3823
Assessment Requirements for AURVTG009 Remove and install vehicle fixed body glass3827
AURVTG010 Remove and install vehicle movable body glass3829
Assessment Requirements for AURVTG010 Remove and install vehicle movable body glass3833
AURVTG011 Install side vehicle windows3835
Assessment Requirements for AURVTG011 Install side vehicle windows.....3839
AURVTG012 Remove and install heavy vehicle rubber and direct glazed windscreens 3842
Assessment Requirements for AURVTG012 Remove and install heavy vehicle rubber and direct glazed windscreens.....3847
AURVTG013 Remove and install large vehicle windscreens.....3850
Assessment Requirements for AURVTG013 Remove and install large vehicle windscreens3854
AURVTK001 Use and maintain vehicle body repair hand tools3857
Assessment Requirements for AURVTK001 Use and maintain vehicle body repair hand tools3860
AURVTN001 Remove and tag vehicle body components.....3862
Assessment Requirements for AURVTN001 Remove and tag vehicle body components3865
AURVTN002 Carry out non-structural vehicle panel repairs.....3867
Assessment Requirements for AURVTN002 Carry out non-structural vehicle panel repairs3871
AURVTN003 Remove and store vehicle body components3873
Assessment Requirements for AURVTN003 Remove and store vehicle body components3877
AURVTN004 Remove, replace and align bolt-on vehicle body panels and components.3879
Assessment Requirements for AURVTN004 Remove, replace and align bolt-on vehicle body panels and components3883
AURVTN005 Remove and replace adhesive attached components on vehicles3885
Assessment Requirements for AURVTN005 Remove and replace adhesive attached components on vehicles3889
AURVTN006 Remove and replace mechanical units during vehicle repair3891
Assessment Requirements for AURVTN006 Remove and replace mechanical units during vehicle repair3895
AURVTN007 Remove and clean salvageable vehicle components3898
Assessment Requirements for AURVTN007 Remove and clean salvageable vehicle components.....3902
AURVTN008 Clean vehicle body and door openings3904
Assessment Requirements for AURVTN008 Clean vehicle body and door openings.....3907
AURVTN009 Clean vehicle engines and engine components3909
Assessment Requirements for AURVTN009 Clean vehicle engines and engine components3913
AURVTN010 Clean vehicle underbody3915
Assessment Requirements for AURVTN010 Clean vehicle underbody3919
AURVTN011 Remove and install vehicle rear vision mirrors.....3921
Assessment Requirements for AURVTN011 Remove and install vehicle rear vision mirrors3925
AURVTN012 Install vehicle sunroofs3927

Assessment Requirements for AURVTN012 Install vehicle sunroofs.....3931
AURVTN013 Carry out paint-less dent repairs on vehicle body panels.....3933
Assessment Requirements for AURVTN013 Carry out paint-less dent repairs on vehicle body panels.....3937
AURVTN015 Repair vehicle body panels using metal finishing3939
Assessment Requirements for AURVTN015 Repair vehicle body panels using metal finishing3943
AURVTN016 Repair vehicle body panels using filler.....3945
Assessment Requirements for AURVTN016 Repair vehicle body panels using filler3949
AURVTN017 Repair vehicle thermoplastic body panels and components.....3951
Assessment Requirements for AURVTN017 Repair vehicle thermoplastic body panels and components.....3955
AURVTN018 Repair and replace vehicle structural damage.....3957
Assessment Requirements for AURVTN018 Repair and replace vehicle structural damage3961
AURVTN019 Repair vehicle structural damage by riveting3964
Assessment Requirements for AURVTN019 Repair vehicle structural damage by riveting3968
AURVTN020 Remove and replace major welded panels on vehicles3970
Assessment Requirements for AURVTN020 Remove and replace major welded panels on vehicles.....3974
AURVTN021 Repair vehicle body components using lead wiping.....3977
Assessment Requirements for AURVTN021 Repair vehicle body components using lead wiping.....3981
AURVTN022 Repair vehicle body misalignment.....3983
Assessment Requirements for AURVTN022 Repair vehicle body misalignment3987
AURVTN023 Repair adhesive bonded structural damage on vehicles.....3990
Assessment Requirements for AURVTN023 Repair adhesive bonded structural damage on vehicles.....3994
AURVTN025 Repair corroded vehicle body panels and components.....3997
Assessment Requirements for AURVTN025 Repair corroded vehicle body panels and components.....4001
AURVTN026 Repair vehicle aluminium body panels without the use of body filler4003
Assessment Requirements for AURVTN026 Repair vehicle aluminium body panels without the use of body filler4007
AURVTN027 Repair vehicle aluminium body panels using filler4009
Assessment Requirements for AURVTN027 Repair vehicle aluminium body panels using filler4013
AURVTN028 Identify and repair high strength steel vehicle components.....4015
Assessment Requirements for AURVTN028 Identify and repair high strength steel vehicle components.....4019
AURVTN029 Set up and operate universal vehicle measuring systems4021
Assessment Requirements for AURVTN029 Set up and operate universal vehicle measuring systems4025
AURVTN030 Service air compressors and air lines4028
Assessment Requirements for AURVTN030 Service air compressors and air lines.....4032
AURVTN031 Carry out vehicle sectional repairs.....4034
Assessment Requirements for AURVTN031 Carry out vehicle sectional repairs4038
AURVTN032 Inspect vehicle damage and determine repair procedures.....4041
Assessment Requirements for AURVTN032 Inspect vehicle damage and determine repair procedures4045
AURVTN033 Service and repair air compressors and components4047
Assessment Requirements for AURVTN033 Service and repair air compressors and components.....4051
AURVTN034 Evaluate vehicle body repair materials, equipment and work processes .4054

Assessment Requirements for AURVTN034 Evaluate vehicle body repair materials, equipment and work processes.....	4057
AURVTN035 Apply original equipment manufacturer repair procedures during vehicle repairs	4059
Assessment Requirements for AURVTN035 Apply original equipment manufacturer repair procedures during vehicle repairs	4063
AURVTN037 Test vehicle components for correct operation.....	4065
Assessment Requirements for AURVTN037 Test vehicle components for correct operation.....	4069
AURVTN038 Carry out basic repairs to vehicle body panels.....	4071
Assessment Requirements for AURVTN038 Carry out basic repairs to vehicle body panels.....	4075
AURVTN039 Set up body alignment equipment on vehicles.....	4077
Assessment Requirements for AURVTN039 Set up body alignment equipment on vehicles.....	4080
AURVTN040 Repair vehicle plastic components.....	4082
Assessment Requirements for AURVTN040 Repair vehicle plastic components	4086
AURVTN041 Remove and realign vehicle body panels	4088
Assessment Requirements for AURVTN041 Remove and realign vehicle body panels	4092
AURVTN042 Dismantle vehicle components	4094
Assessment Requirements for AURVTN042 Dismantle vehicle components.....	4097
AURVTP001 Remove paint from vehicle painted surfaces	4099
Assessment Requirements for AURVTP001 Remove paint from vehicle painted surfaces.....	4103
AURVTP002 Mask vehicle panels and components	4105
Assessment Requirements for AURVTP002 Mask vehicle panels and components.....	4109
AURVTP003 Prepare vehicle spray painting equipment for use	4111
Assessment Requirements for AURVTP003 Prepare vehicle spray painting equipment for use.....	4115
AURVTP004 Apply basic colour matching techniques using vehicle paint codes	4118
Assessment Requirements for AURVTP004 Apply basic colour matching techniques using vehicle paint codes	4122
AURVTP005 Apply rust prevention and sound deadening materials to vehicle body components.....	4125
Assessment Requirements for AURVTP005 Apply rust prevention and sound deadening materials to vehicle body components	4129
AURVTP006 Apply refinishing primers to vehicle surfaces.....	4132
Assessment Requirements for AURVTP006 Apply refinishing primers to vehicle surfaces.....	4136
AURVTP007 Touch up minor vehicle paintwork damage.....	4139
Assessment Requirements for AURVTP007 Touch up minor vehicle paintwork damage.....	4143
AURVTP008 Clean and polish vehicle paint surfaces	4146
Assessment Requirements for AURVTP008 Clean and polish vehicle paint surfaces	4150
AURVTP009 Apply vehicle body film wrapping	4152
Assessment Requirements for AURVTP009 Apply vehicle body film wrapping.....	4156
AURVTP010 Prepare and operate vehicle paint drying equipment	4158
Assessment Requirements for AURVTP010 Prepare and operate vehicle paint drying equipment	4161
AURVTP011 Apply solid acrylic two-pack materials to vehicle components	4163
Assessment Requirements for AURVTP011 Apply solid acrylic two-pack materials to vehicle components	4167
AURVTP012 Apply air dry and polyurethane refinishing materials	4170
Assessment Requirements for AURVTP012 Apply air dry and polyurethane refinishing materials	4174
AURVTP013 Prepare vehicle substrates for refinishing.....	4177
Assessment Requirements for AURVTP013 Prepare vehicle substrates for refinishing	4181
AURVTP014 Colour match multi-layer and clear over base two-pack paints on vehicles and components	4184

Assessment Requirements for AURVTP014 Colour match multi-layer and clear over base two-pack paints on vehicles and components.....4188

AURVTP015 Match direct gloss solid paint colour on vehicles or components.....4191

Assessment Requirements for AURVTP015 Match direct gloss solid paint colour on vehicles or components.....4195

AURVTP016 Rectify and touch up vehicle direct gloss paint faults using two-pack systems4198

Assessment Requirements for AURVTP016 Rectify and touch up vehicle direct gloss paint faults using two-pack systems.....4202

AURVTP017 Rectify and touch up vehicle paint faults using clear over base two-pack systems4205

Assessment Requirements for AURVTP017 Rectify and touch up vehicle paint faults using clear over base two-pack systems4209

AURVTP018 Rectify vehicle multi-layer and pearl paint faults using two-pack systems4212

Assessment Requirements for AURVTP018 Rectify vehicle multi-layer and pearl paint faults using two-pack systems.....4216

AURVTP019 Prepare and paint plastic and composite vehicle surfaces.....4219

Assessment Requirements for AURVTP019 Prepare and paint plastic and composite vehicle surfaces.....4223

AURVTP020 De-nib, buff and polish vehicle painted surfaces4226

Assessment Requirements for AURVTP020 De-nib, buff and polish vehicle painted surfaces4229

AURVTP021 Restore vehicle body exterior paint4231

Assessment Requirements for AURVTP021 Restore vehicle body exterior paint4235

AURVTP023 Apply clear over base two-pack refinishing materials to vehicle body components.....4238

Assessment Requirements for AURVTP023 Apply clear over base two-pack refinishing materials to vehicle body components4243

AURVTP024 Apply clear over base multi-layer and pearl refinishing materials to vehicle body components4246

Assessment Requirements for AURVTP024 Apply clear over base multi-layer and pearl refinishing materials to vehicle body components4250

AURVTP025 Apply water-based refinishing materials to vehicle bodies and substrates4253

Assessment Requirements for AURVTP025 Apply water-based refinishing materials to vehicle bodies and substrates4257

AURVTP026 Apply basic airbrush techniques to vehicle body panels.....4260

Assessment Requirements for AURVTP026 Apply basic airbrush techniques to vehicle body panels.....4264

AURVTP028 Carry out custom painting techniques to vehicle body panels4267

Assessment Requirements for AURVTP028 Carry out custom painting techniques to vehicle body panels4272

AURVTP029 Prepare surface and prime repaired body panels4275

Assessment Requirements for AURVTP029 Prepare surface and prime repaired body panels4279

AURVTP030 Apply paint to vehicle body panels4281

Assessment Requirements for AURVTP030 Apply paint to vehicle body panels4285

AURVTP031 Cut and polish painted vehicle body panels4287

Assessment Requirements for AURVTP031 Cut and polish painted vehicle body panels4291

AURVTP032 Prepare and mask vehicle body panel surfaces4293

Assessment Requirements for AURVTP032 Prepare and mask vehicle body panel surfaces4297

AURVTS001 Fabricate wooden components for vehicles4299

Assessment Requirements for AURVTS001 Fabricate wooden components for vehicles4303

AURVTS002 Repair wooden components in vehicles4305

Assessment Requirements for AURVTS002 Repair wooden components in vehicles4309

AURVTS003 Fabricate vehicle composite material components4311
Assessment Requirements for AURVTS003 Fabricate vehicle composite material components.....4315
AURVTS004 Repair vehicle composite material components4317
Assessment Requirements for AURVTS004 Repair vehicle composite material components.....4321
AURVTS005 Fabricate vehicle body panels and components4323
Assessment Requirements for AURVTS005 Fabricate vehicle body panels and components4327
AURVTS006 Fabricate automotive and marine trim components4329
Assessment Requirements for AURVTS006 Fabricate automotive and marine trim components.....4332
AURVTT001 Carry out sewing repairs to automotive and marine trim.....4334
Assessment Requirements for AURVTT001 Carry out sewing repairs to automotive and marine trim.....4338
AURVTT002 Carry out repairs and alterations to automotive and marine trim.....4340
Assessment Requirements for AURVTT002 Carry out repairs and alterations to automotive and marine trim4344
AURVTT003 Remove and replace automotive and marine interior trim components...4346
Assessment Requirements for AURVTT003 Remove and replace automotive and marine interior trim components4349
AURVTT004 Trim vehicle components.....4351
Assessment Requirements for AURVTT004 Trim vehicle components4355
AURVTT005 Select trim and fabric materials.....4357
Assessment Requirements for AURVTT005 Select trim and fabric materials4360
AURVTT006 Apply trimming adhesives4362
Assessment Requirements for AURVTT006 Apply trimming adhesives.....4365
AURVTT007 Clean plastic trim and fittings of vehicles4367
Assessment Requirements for AURVTT007 Clean plastic trim and fittings of vehicles.4371
AURVTT008 Clean vehicle interior trim.....4373
Assessment Requirements for AURVTT008 Clean vehicle interior trim4377
AURVTT009 Remove and replace vehicle and vessel seats and fittings.....4379
Assessment Requirements for AURVTT009 Remove and replace vehicle and vessel seats and fittings.....4382
AURVTT010 Remove and manufacture or repair vehicle head lining.....4384
Assessment Requirements for AURVTT010 Remove and manufacture or repair vehicle head lining4388
AURVTT012 Conduct sewing operations.....4391
Assessment Requirements for AURVTT012 Conduct sewing operations4394
AURVTT013 Fabricate and fit loose and fitted covers to vehicle seats and components4396
Assessment Requirements for AURVTT013 Fabricate and fit loose and fitted covers to vehicle seats and components.....4400
AURVTT014 Fabricate and fit marine covers4402
Assessment Requirements for AURVTT014 Fabricate and fit marine covers.....4406
AURVTT015 Fabricate and install canvas products for automotive and marine components.....4408
Assessment Requirements for AURVTT015 Fabricate and install canvas products for automotive and marine components4412
AURVTT017 Fabricate and install automotive and marine floor coverings.....4414
Assessment Requirements for AURVTT017 Fabricate and install automotive and marine floor coverings.....4418
AURVTT018 Fabricate and install automotive and marine soft top hoods4420
Assessment Requirements for AURVTT018 Fabricate and install automotive and marine soft top hoods.....4424

AURVTT019 Fabricate and install automotive and marine frames, canopies and side curtains4427
Assessment Requirements for AURVTT019 Fabricate and install automotive and marine frames, canopies and side curtains4431
AURVTT020 Select and use leather in automotive and marine trimming4434
Assessment Requirements for AURVTT020 Select and use leather in automotive and marine trimming4438
AURVTT021 Select and apply adhesives in automotive and marine service and repair work4440
Assessment Requirements for AURVTT021 Select and apply adhesives in automotive and marine service and repair work4444
AURVTV001 Remove, replace and test non-electrical vehicle components and accessories 4446
Assessment Requirements for AURVTV001 Remove, replace and test non-electrical vehicle components and accessories4450
AURVTW001 Carry out manual metal arc welding on components4452
Assessment Requirements for AURVTW001 Carry out manual metal arc welding on components4456
AURVTW002 Carry out oxyacetylene brazing of components4459
Assessment Requirements for AURVTW002 Carry out oxyacetylene brazing of components4463
AURVTW003 Carry out advanced gas metal arc welding on vehicle body sections4465
Assessment Requirements for AURVTW003 Carry out advanced gas metal arc welding on vehicle body sections4469
AURVTW004 Carry out tungsten inert gas welding4472
Assessment Requirements for AURVTW004 Carry out tungsten inert gas welding4476
AURVTW005 Carry out spot welding4479
Assessment Requirements for AURVTW005 Carry out spot welding4483
AURVTW006 Carry out thermoplastic welding on vehicle trim components4486
Assessment Requirements for AURVTW006 Carry out thermoplastic welding on vehicle trim components4490
AURVTW007 Carry out oxyacetylene thermal heating and cutting on vehicle body sections4492
Assessment Requirements for AURVTW007 Carry out oxyacetylene thermal heating and cutting on vehicle body sections4496
AURVTW009 Carry out basic gas metal arc welding4498
Assessment Requirements for AURVTW009 Carry out basic gas metal arc welding4501
AURVTW010 Set up and use welding equipment4504
Assessment Requirements for AURVTW010 Set up and use welding equipment4508
AURVTW018 Carry out oxyacetylene welding, thermal heating and cutting4510
Assessment Requirements for AURVTW018 Carry out oxyacetylene welding, thermal heating and cutting4513
BSBCUE405 Survey stakeholders to gather and record information4516

AUR10116 Certificate I in Automotive Vocational Preparation

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification is an introductory qualification to the automotive retail, service and repair industries and an entry to further training in several sectors. It is designed for application in a highly supervised context, such as VET in Schools (VETiS) or other equivalent introduction or induction to industry environments. The range of technical skills and knowledge is limited.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 8

5 core units, plus

3 elective units, of which:

- up to 3 units may be chosen from the Elective Units listed below
- up to 2 units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA001	Identify environmental and sustainability requirements in an automotive service or repair workplace
AURASA001	Apply automotive workplace safety fundamentals
AURETR003	Identify automotive electrical systems and components
AURLTA001	Identify automotive mechanical systems and components
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURFAA001	Use numbers in an automotive workplace
AURFAA002	Read and respond to automotive workplace information
AURBTA001	Remove and tag bicycle components
AURBTA002	Adjust bicycles and components
AURBTJ001	Remove, repair and refit bicycle tyres
AURETK001	Identify, select and use low voltage electrical test equipment
AURETR001	Remove and tag automotive electrical system components
AURETR006	Solder electrical wiring and circuits
AURHTA001	Carry out heavy vehicle pre-repair cleaning
AURHTA003	Remove and replace heavy commercial vehicle ancillary components and accessories
AURHTJ001	Inspect heavy commercial vehicle wheels and tyres
AURJTA001	Carry out minor adjustments to motorcycles
AURJTA002	Remove and replace motorcycle components and accessories
AURJTJ003	Remove and refit motorcycle wheel and tyre assemblies

Unit code	Unit title
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies
AURPTA001	Carry out pre-repair operations to outdoor power equipment
AURPTA002	Carry out minor adjustments to outdoor power equipment
AURPTA006	Inspect and service line trimming systems and components
AURRTQ001	Inspect and service marine inboard propeller drive systems
AURRTR001	Inspect, service and maintain marine battery storage systems
AURTTA001	Remove and tag steering, suspension and braking system components
AURTTA002	Assist with automotive workplace activities
AURTTA003	Use and maintain basic mechanical measuring devices
AURTTA009	Carry out mechanical pre-repair operations
AURTTE003	Remove and tag engine system components
AURVTN001	Remove and tag vehicle body components
AURVTN008	Clean vehicle body and door openings
AURVTP006	Apply refinishing primers to vehicle surfaces

Qualification Mapping Information

Equivalent to AUR10112 Certificate I in Automotive Vocational Preparation

AUR20116 Certificate II in Automotive Administration

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of administrative tasks in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 10

6 core units, plus

4 elective units, of which:

- up to **4** units may be chosen from the Elective Units listed below
- up to **2** units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAAA001	Work in an automotive administration role

Unit code	Unit title
AURFA003	Communicate effectively in an automotive workplace
AURFA005	Write routine texts in an automotive workplace
AURAKA001	Use information technology systems
AURAQA001	Contribute to quality work outcomes in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURFA001	Use numbers in an automotive workplace
AURFA002	Read and respond to automotive workplace information
AURFA004	Resolve routine problems in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURAMA002	Communicate business information in an automotive workplace
AURAMA004	Maintain business image in an automotive workplace
AURAQA003	Maintain quality processes in an automotive workplace
AURSAA001	Process customer complaints in an automotive workplace
AURSCA004	Carry out cash and non-cash payment operations
AURSCA011	Conduct online transactions in an automotive workplace
BSBFIA303	Process accounts payable and receivable
BSBINM202	Handle mail

Unit code	Unit title
BSBWOR204	Use business technology
SIRXCEG001	Engage the customer

Qualification Mapping Information

Equivalent to AUR20112 Certificate II in Automotive Administration

AUR20218 Certificate II in Automotive Air Conditioning Technology

Modification History

New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of tasks relating to servicing and repairing air conditioning components and systems of cars and heavy vehicles in an automotive service and repair business.

The completion of this qualification enables an individual to apply for an *AAC02 - Refrigerant handling licence - qualified persons* (Automotive air conditioning licence: 2 years). Users are advised that the scope of the licence will be contingent on unit of competency selection. This licence is governed by the Australian Refrigeration Council, which should be contacted for further information.

Entry Requirements

This qualification may be accessed by direct entry.

Packaging Rules

Total number of units = 13

6 core units, plus

7 elective units, of which:

- up to 7 units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace

Unit code	Unit title
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETU003	Service air conditioning and HVAC systems
AURETU004	Diagnose and repair air conditioning and HVAC systems
AURTTA018	Carry out diagnostic procedures

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF A001	Use numbers in an automotive workplace
AURAF A002	Read and respond to automotive workplace information
AURAF A003	Communicate effectively in an automotive workplace
AURETR006	Solder electrical wiring and circuits
AURETR011	Install basic ancillary electrical systems and components
AURETU001	Install air conditioning systems
AURETU002	Recover vehicle refrigerants
AURETU005	Retrofit and modify air conditioning and HVAC systems
AURETU007	Overhaul air conditioning and HVAC system compressors
AURTTA004	Carry out servicing operations
AURTTA009	Carry out mechanical pre-repair operations
AURTTC003	Diagnose and repair cooling systems
AURTTE004	Inspect and service engines
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURVTA001	Prepare vehicles for customer use

Qualification Mapping Information

No equivalent qualification.

AUR20316 Certificate II in Bicycle Mechanical Technology

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who to perform a range of routine assembly and servicing tasks in the bicycle industry. It is suitable for entry into the bicycle retail, service and repair sector.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 16

8 core units, plus

8 elective units, of which:

- up to **8** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
-----------	------------

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF A001	Use numbers in an automotive workplace
AURAF A002	Read and respond to automotive workplace information
AURASA002	Follow safe working practices in an automotive workplace
AURBTA004	Assemble new boxed bicycles for retail sale
AURBTJ001	Remove, repair and refit bicycle tyres
AURBTV001	Remove, refit and adjust bicycle accessories
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF A003	Communicate effectively in an automotive workplace
AURAF A004	Resolve routine problems in an automotive workplace
AURAF A005	Write routine texts in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURAMA002	Communicate business information in an automotive workplace
AURQA001	Contribute to quality work outcomes in an automotive workplace
AURATA001	Identify basic automotive faults using troubleshooting processes
AURBCA001	Work in a retail bicycle environment
AURBCA002	Select and adjust bicycles to fit riders
AURBTA003	Assemble bicycles

Unit code	Unit title
AURBTB001	Service and repair bicycle mechanical braking systems
AURBTB002	Service bicycle hydraulic braking systems
AURBTD001	Service bicycle steering systems
AURBTD002	Service bicycle suspension systems
AURBTJ002	Service bicycle wheels and hubs
AURBTK001	Maintain specialised bicycle repair tools and equipment
AURBTQ001	Service bicycle drivetrain systems
AURSA001	Process customer complaints in an automotive workplace
AURSCA002	Present automotive products and services for sale
AURSCA003	Apply sales procedures in an automotive workplace
AURSCA005	Sell automotive products and services
AURSCA006	Promote automotive products and services
AURTTA004	Carry out servicing operations
AURTTK001	Use and maintain measuring equipment in an automotive workplace
BSBCUS301	Deliver and monitor a service to customers
BSBFLM312	Contribute to team effectiveness
BSBPRO401	Develop product knowledge
BSBWOR202	Organise and complete daily work activities
BSBWOR301	Organise personal work priorities and development
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
SIRXCEG001	Engage the customer
SIRRINV001	Receive and handle retail stock
SIRRINV002	Control stock

Unit code	Unit title
TLIA3039	Receive and store stock

AUR20416 Certificate II in Automotive Electrical Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of tasks relating to installing, assembling and servicing electrical components and systems of motor vehicles in the automotive electrical installation, service and repair technology sector.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 16

10 core units, plus

6 elective units, of which:

- up to **6** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETK002	Use and maintain electrical test equipment in an automotive workplace
AURETR006	Solder electrical wiring and circuits
AURETR007	Apply knowledge of automotive electrical circuits and wiring systems
AURETR008	Remove and replace electrical units and assemblies
AURETR009	Install vehicle lighting and wiring systems
AURETR011	Install basic ancillary electrical systems and components
AURETR012	Test and repair basic electrical circuits
AURETR015	Inspect, test and service batteries

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF A001	Use numbers in an automotive workplace
AURAF A002	Read and respond to automotive workplace information
AURAF A003	Communicate effectively in an automotive workplace
AURAF A005	Write routine texts in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURAMA002	Communicate business information in an automotive workplace
AURATA001	Identify basic automotive faults using troubleshooting processes

Unit code	Unit title
AURATA002	Read, interpret and apply engineering drawings
AURATA003	Produce drawings from design concepts
AURETK001	Identify, select and use low voltage electrical test equipment
AURETR042	Remove, refit and operate electrical components following body repair activities
AURETR005	Install automotive security systems and components
AURETR010	Repair wiring harnesses and looms
AURETR013	Inspect, test and service charging systems
AURETR014	Inspect, test and service starting systems
AURETR016	Read and apply vehicle wiring schematics and drawings
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETU001	Install air conditioning systems
AURETU002	Recover vehicle refrigerants
AURETU003	Service air conditioning and HVAC systems
AURETU004	Diagnose and repair air conditioning and HVAC systems
AURETU005	Retrofit and modify air conditioning and HVAC systems
AURPTR002	Test and service electric outdoor power equipment
AURRTR001	Inspect, service and maintain marine battery storage systems
AURSCA001	Select and supply automotive parts and products
AURSCA003	Apply sales procedures in an automotive workplace
AURTTA004	Carry out servicing operations
AURTTA008	Produce patterns and templates
AURTTA009	Carry out mechanical pre-repair operations
AURTTA018	Carry out diagnostic procedures

Unit code	Unit title
AURTTE004	Inspect and service engines
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURVTT003	Remove and replace automotive and marine interior trim components
AURVTT004	Trim vehicle components
AURVTT005	Select trim and fabric materials
AURVTT006	Apply trimming adhesives
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

Qualification Mapping Information

Equivalent to AUR20412 Certificate II in Automotive Electrical Technology

AUR20516 Certificate II in Automotive Servicing Technology

Modification History

Release	Comment
Release 2	Updates to elective bank
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of servicing tasks in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 20

13 core units, plus

7 elective units, of which:

- up to **7** units may be chosen from the Elective Units listed below
- up to **4** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURATA001	Identify basic automotive faults using troubleshooting processes
AURETR015	Inspect, test and service batteries
AURTTA004	Carry out servicing operations
AURTTB001	Inspect and service braking systems
AURTTC001	Inspect and service cooling systems
AURTTD002	Inspect and service steering systems
AURTTD004	Inspect and service suspension systems
AURTTE004	Inspect and service engines
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTQ001	Inspect and service final drive assemblies
AURTTQ003	Inspect and service drive shafts

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF A001	Use numbers in an automotive workplace
AURAF A002	Read and respond to automotive workplace information
AURAF A003	Communicate effectively in an automotive workplace
AURETH001	Depower and reinitialise battery electric vehicles
AURETR012	Test and repair basic electrical circuits

Unit code	Unit title
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURLTJ011	Select light vehicle tyres and wheels for specific applications
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies
AURTTA006	Inspect and service hydraulic systems
AURTTA009	Carry out mechanical pre-repair operations
AURTTF001	Inspect and service petrol fuel systems
AURTTF002	Inspect and service diesel fuel injection systems
AURTTJ011	Balance wheels and tyres
AURTTL007	Inspect and service LPG fuel systems
AURTTX002	Inspect and service manual transmissions
AURTTX003	Inspect and service automatic transmissions
AURTTX004	Inspect and service hydrostatic transmissions
AURTTX015	Inspect and service clutch systems
AURTTZ001	Inspect and service emission control systems

Qualification Mapping Information

AUR20616 Certificate II in Marine Mechanical Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a limited range of tasks on a variety of vessels in the marine retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 18

12 core units, plus

6 elective units, of which:

- up to **6** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF001	Use numbers in an automotive workplace
AURAF002	Read and respond to automotive workplace information
AURAF005	Write routine texts in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURRTE002	Inspect and service marine outboard engines
AURRTE003	Inspect and service marine inboard engines
AURRTQ001	Inspect and service marine inboard propeller drive systems
AURRTQ002	Inspect and service marine jet drive propulsion systems
AURRTX001	Inspect and service marine outboard and stern drive transmissions
AURRTX002	Inspect and service marine inboard transmissions
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURAF003	Communicate effectively in an automotive workplace
AURAF004	Resolve routine problems in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURAMA002	Communicate business information in an automotive workplace
AURAQA001	Contribute to quality work outcomes in an automotive workplace
AURETK001	Identify, select and use low voltage electrical test equipment
AURETK002	Use and maintain electrical test equipment in an automotive workplace

Unit code	Unit title
AURETR006	Solder electrical wiring and circuits
AURETR009	Install vehicle lighting and wiring systems
AURETR011	Install basic ancillary electrical systems and components
AURETR012	Test and repair basic electrical circuits
AURETR015	Inspect, test and service batteries
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURRGA001	Launch and recover vessels using a trailer
AURRGA003	Moor motor-driven vessels
AURRTA001	Inspect and service deck, hull and cabin equipment
AURRTA003	Winterise vessels and engine systems
AURRTA006	Water test vessels
AURRTA009	Recommission vessels and engine systems
AURRTE001	Carry out wet run tests on vessel outboard engines
AURRTE010	Test marine engines in water tanks
AURRTR001	Inspect, service and maintain marine battery storage systems
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA010	Service and repair trailers up to 4.5 tonnes
AURTTB001	Inspect and service braking systems
AURTTE004	Inspect and service engines
AURTTF002	Inspect and service diesel fuel injection systems
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURVTW001	Carry out manual metal arc welding on components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

Unit code	Unit title
BSBFLM312	Contribute to team effectiveness
BSBWOR202	Organise and complete daily work activities
TLID1001	Shift materials safely using manual handling methods

AUR20716 Certificate II in Automotive Vocational Preparation

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a limited range of tasks relating to identifying and inspecting mechanical and electrical components and systems of light vehicles, heavy vehicles, outdoor power equipment, bicycles, marine craft and motorcycles. This qualification also covers the skills and knowledge required to perform minor maintenance and repair of an automotive vehicle body. The range of technical skills and knowledge is limited.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 12

7 core units, plus

5 elective units, of which:

- all units may be chosen from the Elective Units listed below
- up to 2 units may be chosen from a Certificate I or Certificate II qualification in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF003	Communicate effectively in an automotive workplace
AURAF004	Resolve routine problems in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR003	Identify automotive electrical systems and components
AURLTA001	Identify automotive mechanical systems and components
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AUMAF001	Apply for jobs and undertake job interviews
AURAF005	Write routine texts in an automotive workplace
AURAF009	Carry out research into the automotive industry
AURAMA001	Work effectively with others in an automotive workplace
AURAQA001	Contribute to quality work outcomes in an automotive workplace
AURBTA001	Remove and tag bicycle components
AURBTJ001	Remove, repair and refit bicycle tyres
AURBTK001	Maintain specialised bicycle repair tools and equipment
AURBTQ001	Service bicycle drivetrain systems
AURBTV001	Remove, refit and adjust bicycle accessories
AURETK001	Identify, select and use low voltage electrical test equipment
AURETK003	Operate electrical test equipment
AURETR001	Remove and tag automotive electrical system components

Unit code	Unit title
AURETR002	Inspect heavy vehicle battery storage systems
AURETR006	Solder electrical wiring and circuits
AURETR009	Install vehicle lighting and wiring systems
AURETR015	Inspect, test and service batteries
AURETR046	Remove and refit vehicle batteries
AURETR047	Recharge vehicle batteries
AURETR048	Construct and test basic electronic circuits
AURHTD001	Inspect heavy commercial vehicle suspension systems
AURHTF001	Inspect heavy commercial vehicle fuel systems
AURHTJ001	Inspect heavy commercial vehicle wheels and tyres
AURHTQ001	Inspect heavy commercial vehicle driveline components
AURJTA001	Carry out minor adjustments to motorcycles
AURJTA002	Remove and replace motorcycle components and accessories
AURJTD001	Inspect motorcycle suspension systems
AURJTD002	Inspect motorcycle steering systems
AURJTJ003	Remove and refit motorcycle wheel and tyre assemblies
AURPTA001	Carry out pre-repair operations to outdoor power equipment
AURPTA002	Carry out minor adjustments to outdoor power equipment
AURPTA003	Service and repair rotary cutting systems
AURPTA006	Inspect and service line trimming systems and components
AURPTE002	Inspect and service outdoor power equipment engines
AURRTE001	Carry out wet run tests on vessel outboard engines
AURRTE002	Inspect and service marine outboard engines
AURRTQ001	Inspect and service marine inboard propeller drive systems

Unit code	Unit title
AURRTQ002	Inspect and service marine jet drive propulsion systems
AURRTR001	Inspect, service and maintain marine battery storage systems
AURTTA001	Remove and tag steering, suspension and braking system components
AURTTA002	Assist with automotive workplace activities
AURTTA003	Use and maintain basic mechanical measuring devices
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA009	Carry out mechanical pre-repair operations
AURTTA027	Carry out basic vehicle servicing operations
AURTTB007	Remove and replace brake assemblies
AURTTC004	Remove and replace radiators
AURTTD006	Remove and replace vehicle front suspension springs
AURTTD007	Remove and replace steering assemblies
AURTTE003	Remove and tag engine system components
AURTTE006	Remove and replace conventional engine assemblies
AURTTE007	Dismantle and assemble single cylinder four-stroke petrol engines
AURTTE008	Dismantle and assemble multi-cylinder four-stroke petrol engines
AURTTE009	Remove and replace engine cylinder heads
AURTTJ003	Remove and replace wheel and tyre assemblies
AURTTQ002	Remove and refit driveline components
AURTTX001	Remove and tag driveline components
AURTTX012	Dismantle and assemble conventional manual transmissions
AURTTX013	Remove and replace clutch assemblies
AURVTA005	Clean vehicles

Unit code	Unit title
AURVTK001	Use and maintain vehicle body repair hand tools
AURVTN003	Remove and store vehicle body components
AURVTN038	Carry out basic repairs to vehicle body panels
AURVTN039	Set up body alignment equipment on vehicles
AURVTN040	Repair vehicle plastic components
AURVTN041	Remove and realign vehicle body panels
AURVTP006	Apply refinishing primers to vehicle surfaces
AURVTP008	Clean and polish vehicle paint surfaces
AURVTP029	Prepare surface and prime repaired body panels
AURVTP030	Apply paint to vehicle body panels
AURVTP031	Cut and polish painted vehicle body panels
AURVTP032	Prepare and mask vehicle body panel surfaces
AURVTT008	Clean vehicle interior trim
AURVTW010	Set up and use welding equipment

Qualification Mapping Information

Equivalent to AUR20712 Certificate II in Automotive Vocational Preparation

AUR20816 Certificate II in Outdoor Power Equipment Technology

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a limited range of tasks in the outdoor power equipment retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 16

8 core units, plus

8 elective units, of which:

- up to **8** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
-----------	------------

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURFAA001	Use numbers in an automotive workplace
AURFAA002	Read and respond to automotive workplace information
AURASA002	Follow safe working practices in an automotive workplace
AURETR006	Solder electrical wiring and circuits
AURETR015	Inspect, test and service batteries
AURPTE002	Inspect and service outdoor power equipment engines
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURPTA001	Carry out pre-repair operations to outdoor power equipment
AURPTA002	Carry out minor adjustments to outdoor power equipment
AURPTA003	Service and repair rotary cutting systems
AURPTA004	Service and repair drum cutting systems
AURPTA005	Service and repair chainsaw cutting systems
AURPTA006	Inspect and service line trimming systems and components
AURPTA007	Service and repair post boring systems
AURPTA008	Service and repair post hole digging systems
AURPTA009	Service and repair reciprocating cutting systems
AURPTA010	Inspect and service pumping systems
AURPTA011	Diagnose and repair pumping systems
AURPTE003	Diagnose and repair outdoor power equipment engines

Unit code	Unit title
AURPTR001	Test and service 240 volt portable generators
AURTTTF001	Inspect and service petrol fuel systems
AURTTX002	Inspect and service manual transmissions

Qualification Mapping Information

Equivalent to AUR20812 Certificate II in Outdoor Power Equipment Technology

AUR20916 Certificate II in Automotive Body Repair Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of tasks on vehicle bodies in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 13

5 core units, plus

8 elective units, of which:

- all units in one of the Specialist Elective Unit Groups A to I below must be chosen
- of the remaining units required to make up the elective unit total:
 - up to **5** units may be chosen from the Specialist Elective Unit Groups and the General Elective Units listed below
 - up to **3** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF002	Read and respond to automotive workplace information
AURAMA001	Work effectively with others in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Specialist Elective Unit Groups

Group A: Auto Body Repair

Unit code	Unit title
AURVTN002	Carry out non-structural vehicle panel repairs
AURVTN003	Remove and store vehicle body components
AURVTN016	Repair vehicle body panels using filler

Group B: Paint-Less Dent Repair

Unit code	Unit title
AURVTN013	Carry out paint-less dent repairs on vehicle body panels
AURVTP020	De-nib, buff and polish vehicle painted surfaces
AURVTT003	Remove and replace automotive and marine interior trim components

Group C: Automotive Painting

Unit code	Unit title
-----------	------------

Unit code	Unit title
AURVTP001	Remove paint from vehicle painted surfaces
AURVTP003	Prepare vehicle spray painting equipment for use
AURVTP006	Apply refinishing primers to vehicle surfaces

Group D: Automotive Trimming

Unit code	Unit title
AURVTT002	Carry out repairs and alterations to automotive and marine trim
AURVTT003	Remove and replace automotive and marine interior trim components
AURVTT004	Trim vehicle components

Group E: Automotive Glazing

Unit code	Unit title
AURVTG002	Remove and install rubber glazed windscreens
AURVTG004	Remove and install direct glazed windscreens
AURVTG009	Remove and install vehicle fixed body glass

Group F: Automotive Dismantling

Unit code	Unit title
AURVTN007	Remove and clean salvageable vehicle components
AURVTN037	Test vehicle components for correct operation
AURVTN042	Dismantle vehicle components

Group G: Automotive Detailing

Unit code	Unit title
AURVTA001	Prepare vehicles for customer use

Unit code	Unit title
AURVTN008	Clean vehicle body and door openings
AURVTT008	Clean vehicle interior trim

Group H: Vehicle Body Assembling

Unit code	Unit title
AURETR042	Remove, refit and operate electrical components following body repair activities
AURVTN004	Remove, replace and align bolt-on vehicle body panels and components
AURVTT009	Remove and replace vehicle and vessel seats and fittings

Group I: Vehicle Tinting

Unit code	Unit title
AURVTA001	Prepare vehicles for customer use
AURVTG006	Apply vehicle window tinting
AURVTT003	Remove and replace automotive and marine interior trim components

General Elective Units

Unit code	Unit title
AURAF001	Use numbers in an automotive workplace
AURETH001	Depower and reinitialise battery electric vehicles
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETU002	Recover vehicle refrigerants
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies
AURVTA001	Prepare vehicles for customer use
AURVTG001	Repair laminated glass windscreens

Unit code	Unit title
AURVTG003	Remove and install butyl sealed windscreens
AURVTG007	Clean vehicle glass surfaces
AURVTG010	Remove and install vehicle movable body glass
AURVTG011	Install side vehicle windows
AURVTK001	Use and maintain vehicle body repair hand tools
AURVTN004	Remove, replace and align bolt-on vehicle body panels and components
AURVTN005	Remove and replace adhesive attached components on vehicles
AURVTN009	Clean vehicle engines and engine components
AURVTN010	Clean vehicle underbody
AURVTN011	Remove and install vehicle rear vision mirrors
AURVTP002	Mask vehicle panels and components
AURVTP005	Apply rust prevention and sound deadening materials to vehicle body components
AURVTP008	Clean and polish vehicle paint surfaces
AURVTP010	Prepare and operate vehicle paint drying equipment
AURVTP013	Prepare vehicle substrates for refinishing
AURVTP019	Prepare and paint plastic and composite vehicle surfaces
AURVTP020	De-nib, buff and polish vehicle painted surfaces
AURVTP021	Restore vehicle body exterior paint
AURVTT001	Carry out sewing repairs to automotive and marine trim
AURVTT005	Select trim and fabric materials
AURVTT006	Apply trimming adhesives
AURVTT007	Clean plastic trim and fittings of vehicles
AURVTT021	Select and apply adhesives in automotive and marine service and

Unit code	Unit title
	repair work
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW007	Carry out oxyacetylene thermal heating and cutting on vehicle body sections

Qualification Mapping Information

Equivalent to AUR20912 Certificate II in Automotive Body Repair Technology

AUR21016 Certificate II in Motor Sport Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a limited range of tasks on competition vehicles in the motor sport industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 16

8 core units, plus

8 elective units, of which:

- up to **8** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes
AURMGA001	Set up and dismantle temporary work location and equipment at motor sport events
AURMMA001	Operate in a motor sport environment
AURMTA001	Prepare and service light competition vehicles
AURTTK002	Use and maintain tools and equipment in an automotive workplace
MSMENV272	Participate in environmentally sustainable work practices

Elective Units

Unit code	Unit title
AURATA001	Identify basic automotive faults using troubleshooting processes
AURATA002	Read, interpret and apply engineering drawings
AURATA003	Produce drawings from design concepts
AURETR006	Solder electrical wiring and circuits
AURETR009	Install vehicle lighting and wiring systems
AURETR010	Repair wiring harnesses and looms
AURETR011	Install basic ancillary electrical systems and components
AURETR012	Test and repair basic electrical circuits
AURETR015	Inspect, test and service batteries
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETR026	Remove, replace and program electrical and electronic units and assemblies

Unit code	Unit title
AURETR042	Remove, refit and operate electrical components following body repair activities
AURLTE001	Remove and install light vehicle engine assemblies
AURLTJ011	Select light vehicle tyres and wheels for specific applications
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies
AURMBA001	Transport light competition vehicles and support equipment
AURMDA001	Develop and update motor sport industry knowledge
AURMDA002	Assist with officiating duties at motor sport events
AURMLA001	Apply motor sport rules and regulations when officiating
AURMSA001	Follow motor sport safety and risk management procedures
AURMTA006	Perform torquing and fastening on motor sport competition vehicles
AURTTA004	Carry out servicing operations
AURTTB001	Inspect and service braking systems
AURTTB012	Attach friction materials and radius grind
AURTTB013	Machine brake drums and brake disc rotors
AURTTC001	Inspect and service cooling systems
AURTTC002	Repair radiators
AURTTD001	Inspect steering systems
AURTTD002	Inspect and service steering systems
AURTTD003	Inspect suspension systems
AURTTD004	Inspect and service suspension systems
AURTTE004	Inspect and service engines
AURTTF001	Inspect and service petrol fuel systems
AURTTJ011	Balance wheels and tyres

Unit code	Unit title
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTQ001	Inspect and service final drive assemblies
AURTTQ003	Inspect and service drive shafts
AURTTTS001	Fabricate exhaust systems and components
AURTTW001	Carry out soft soldering techniques
AURTTX002	Inspect and service manual transmissions
AURTTX003	Inspect and service automatic transmissions
AURTTZ001	Inspect and service emission control systems
AURTTZ002	Diagnose and repair exhaust systems
AURVTS006	Fabricate automotive and marine trim components
AURVTW001	Carry out manual metal arc welding on components
AURVTW002	Carry out oxyacetylene brazing of components
AURVTW004	Carry out tungsten inert gas welding
AURVTW005	Carry out spot welding
AURVTW006	Carry out thermoplastic welding on vehicle trim components
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting
AURVTW009	Carry out basic gas metal arc welding

AUR21116 Certificate II in Automotive Sales

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform sales-related tasks in the automotive service and repair sector.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 12

6 core units, plus

6 elective units, of which:

- **3** units must be chosen from one of the Specialist Elective Unit Groups A to C below
- of the remaining units required to make up the elective unit total:
 - up to **3** units may be chosen from the Specialist Elective Unit Groups and the General Elective Units listed below
 - up to **2** units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURSCA002	Present automotive products and services for sale
AURSCA006	Promote automotive products and services
AURSLA001	Comply with legal requirements when selling automotive products and services
SIRXRSK001A	Minimise theft

Specialist Elective Unit Groups

Group A: Service Station Sales and Service

Unit code	Unit title
AURSCA005	Sell automotive products and services
SIRRINV002	Control stock
SIRXMER201	Merchandise products
SIRXSLS002	Follow point-of-sale procedures
SIRXWHS003	Maintain workplace safety
TLIA2020	Replenish stock

Group B: Bicycle Sales

Unit code	Unit title
AURAMA001	Work effectively with others in an automotive workplace
AURBTA004	Assemble new boxed bicycles for retail sale

Unit code	Unit title
AURBTV001	Remove, refit and adjust bicycle accessories
AURSCA005	Sell automotive products and services
SIRRINV002	Control stock
SIRXMER201	Merchandise products
SIRXWHS003	Maintain workplace safety

Group C: Outdoor Power Equipment Sales

Unit code	Unit title
AURACA003	Build customer relations in an automotive workplace
AURSCA003	Apply sales procedures in an automotive workplace
SIRRINV001	Receive and handle retail stock
SIRXICT001A	Operate retail technology
TLIA2013	Receive goods

General Elective Units

Unit code	Unit title
AURACA003	Build customer relations in an automotive workplace
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF001	Use numbers in an automotive workplace
AURAF002	Read and respond to automotive workplace information
AURAF003	Communicate effectively in an automotive workplace
AURAF004	Resolve routine problems in an automotive workplace

Unit code	Unit title
AURAMA004	Maintain business image in an automotive workplace
AURAQA001	Contribute to quality work outcomes in an automotive workplace
AURSCA003	Apply sales procedures in an automotive workplace
AURSCA004	Carry out cash and non-cash payment operations
AURSCA011	Conduct online transactions in an automotive workplace
ICTWEB201	Use social media tools for collaboration and engagement
SIRRRTF001	Balance and secure point-of-sale terminal
SIRXSLS002	Follow point-of-sale procedures

AUR21216 Certificate II in Automotive Underbody Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a limited range of tasks on the underbody systems of a variety of vehicles in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 14

8 core units, plus

6 elective units, of which:

- up to **6** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURATA001	Identify basic automotive faults using troubleshooting processes
AURTTB001	Inspect and service braking systems
AURTTD002	Inspect and service steering systems
AURTTD004	Inspect and service suspension systems
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTZ002	Diagnose and repair exhaust systems

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF001	Use numbers in an automotive workplace
AURAF002	Read and respond to automotive workplace information
AURAF003	Communicate effectively in an automotive workplace
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies
AURTTA004	Carry out servicing operations
AURTTA009	Carry out mechanical pre-repair operations
AURTTB013	Machine brake drums and brake disc rotors
AURTTQ001	Inspect and service final drive assemblies
AURTTQ003	Inspect and service drive shafts

Unit code	Unit title
AURTTTS001	Fabricate exhaust systems and components
AURTTX002	Inspect and service manual transmissions
AURTTX003	Inspect and service automatic transmissions
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting
AURVTW009	Carry out basic gas metal arc welding

AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTM011	Recondition engine cylinder heads

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF001	Use numbers in an automotive workplace
AURAF002	Read and respond to automotive workplace information
AURAF003	Communicate effectively in an automotive workplace
AURTTA004	Carry out servicing operations
AURTTC001	Inspect and service cooling systems
AURTTE004	Inspect and service engines
AURTTW003	Carry out machining operations
AURVTW004	Carry out tungsten inert gas welding
AURVTW009	Carry out basic gas metal arc welding
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

Qualification Mapping Information

Equivalent to AUR21512 Certificate II in Automotive Cylinder Head Reconditioning

AUR21616 Certificate II in Automotive Driveline System Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a limited range of tasks on driveline and transmission systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 14

8 core units, plus

6 elective units, of which:

- up to **6** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURATA001	Identify basic automotive faults using troubleshooting processes
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTQ001	Inspect and service final drive assemblies
AURTTQ003	Inspect and service drive shafts
AURTTX002	Inspect and service manual transmissions
AURTTX003	Inspect and service automatic transmissions

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF A001	Use numbers in an automotive workplace
AURAF A002	Read and respond to automotive workplace information
AURAF A003	Communicate effectively in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURTTA004	Carry out servicing operations
AURTTA009	Carry out mechanical pre-repair operations
AURTTC001	Inspect and service cooling systems
AURTTQ002	Remove and refit driveline components
AURTTX015	Inspect and service clutch systems

Qualification Mapping Information

Equivalent to AUR21612 Certificate II in Automotive Driveline System Technology

Links

AUR21716 Certificate II in Automotive Exhaust System Technology

Modification History

Release	Comment
Release 2	Update to elective bank
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of tasks on exhaust systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 14

8 core units, plus

6 elective units, of which:

- up to **6** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURATA001	Identify basic automotive faults using troubleshooting processes
AURTTA004	Carry out servicing operations
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTS001	Fabricate exhaust systems and components
AURTTZ002	Diagnose and repair exhaust systems
AURVTW009	Carry out basic gas metal arc welding

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAFA001	Use numbers in an automotive workplace
AURAFA002	Read and respond to automotive workplace information
AURAFA003	Communicate effectively in an automotive workplace
AURTTA009	Carry out mechanical pre-repair operations
AURTTE004	Inspect and service engines
AURTTW003	Carry out machining operations
AURTTZ001	Inspect and service emission control systems
AURVTW001	Carry out manual metal arc welding on components
AURVTW002	Carry out oxyacetylene brazing of components
AURVTW004	Carry out tungsten inert gas welding

Unit code	Unit title
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

Qualification Mapping Information

Equivalent to AUR21712 Certificate II in Automotive Exhaust System Technology

AUR21816 Certificate II in Automotive Steering and Suspension System Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a limited range of tasks on steering and suspension systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 12

8 core units, plus

4 elective units, of which:

- up to **4** units may be chosen from the Elective Units listed below
- up to **2** units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURATA001	Identify basic automotive faults using troubleshooting processes
AURTTA004	Carry out servicing operations
AURTTD002	Inspect and service steering systems
AURTTD004	Inspect and service suspension systems
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF A001	Use numbers in an automotive workplace
AURAF A002	Read and respond to automotive workplace information
AURAF A003	Communicate effectively in an automotive workplace
AURHTD004	Carry out heavy vehicle wheel alignment operations
AURLTD006	Carry out light vehicle wheel alignment operations
AURLTD009	Diagnose complex faults in light vehicle steering and suspension systems
AURLTJ011	Select light vehicle tyres and wheels for specific applications
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies

Unit code	Unit title
AURTTD001	Inspect steering systems
AURTTD003	Inspect suspension systems
AURTTJ011	Balance wheels and tyres

Qualification Mapping Information

Equivalent to AUR21812 Certificate II in Automotive Steering and Suspension System Technology

AUR21916 Certificate II in Automotive Tyre Servicing Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of tasks on tyres in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 14

4 core units, plus

10 elective units, of which:

- all units in one of the Specialist Elective Unit Groups A to D below must be chosen
- of the remaining units required to make up the elective unit total:
 - units may be chosen from the Specialist Elective Unit Groups and General Elective Units listed below
 - up to **3** units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURATA001	Identify basic automotive faults using troubleshooting processes
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Specialist Elective Unit Groups

Group A: Light Vehicle Tyres

Unit code	Unit title
AURLTJ011	Select light vehicle tyres and wheels for specific applications
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies

Group B: Heavy Vehicle Tyres

Unit code	Unit title
AURHTJ002	Select heavy vehicle tyres, wheels and rims for specific applications
AURHTJ003	Remove, inspect and refit heavy vehicle wheel and tyre assemblies
AURHTJ006	Remove, inspect, repair and refit heavy vehicle tyres and tubes

Group C: Agricultural Tyres

Unit code	Unit title
AURHTJ002	Select heavy vehicle tyres, wheels and rims for specific applications
AURHTJ003	Remove, inspect and refit heavy vehicle wheel and tyre assemblies
AURHTJ004	Remove, inspect, repair and refit agricultural equipment tyres and tubes

Group D: Earthmoving and Off-the-Road Tyres

Unit code	Unit title
AURKTJ011	Remove, inspect and fit earthmoving and off-the-road tyres
AURKTJ012	Remove, inspect and fit earthmoving and off-the-road wheel and rim assemblies
AURKTJ015	Select earthmoving and off-the-road tyres, wheels and rim assemblies for specific applications
AURKTJ016	Use earthmoving and off-the-road tyre handlers

General Elective Units

Unit code	Unit title
AURAF001	Use numbers in an automotive workplace
AURAF002	Read and respond to automotive workplace information
AURAF003	Communicate effectively in an automotive workplace
AURETR015	Inspect, test and service batteries
AURHTJ007	Remove, inspect, repair and refit industrial tyres and tubes
AURJTJ001	Remove, inspect and refit motorcycle wheel and tyre assemblies
AURJTJ002	Remove, inspect, repair and refit motorcycle tyres and tubes
AURKTJ013	Perform minor repairs to earthmoving and off-the-road tyres

Unit code	Unit title
AURTTA004	Carry out servicing operations
AURTTB001	Inspect and service braking systems
AURTTTC001	Inspect and service cooling systems
AURTTD002	Inspect and service steering systems
AURTTD004	Inspect and service suspension systems
AURTTE004	Inspect and service engines
AURTTTF001	Inspect and service petrol fuel systems
AURTTJ011	Balance wheels and tyres
AURTTJ012	Remove, inspect and refit wheel hubs and associated brake components
RIICOM201D	Communicate in the workplace
RIIQUA201D	Maintain and monitor site quality standard
RIIRIS201D	Conduct local risk control
RIIWHS201D	Work safely and follow WHS policies and procedures
RIIWHS204D	Work safely at heights
TLID3011	Conduct specialised forklift operations
TLILIC2001	Licence to operate a forklift truck

Qualification Mapping Information

Equivalent to AUR21913 Certificate II in Automotive Tyre Servicing Technology

AUR30116 Certificate III in Automotive Administration

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of administrative tasks in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 18

10 core units, plus

8 elective units, of which:

- up to **8** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAAA001	Work in an automotive administration role

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURACA003	Build customer relations in an automotive workplace
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF A003	Communicate effectively in an automotive workplace
AURAKA001	Use information technology systems
AURAKA002	Adapt work processes to new technologies in an automotive workplace
AURAMA004	Maintain business image in an automotive workplace
AURAQA003	Maintain quality processes in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace

Elective Units

Unit code	Unit title
AURACA002	Manage complex customer requirements in an automotive workplace
AURAF A002	Read and respond to automotive workplace information
AURAF A004	Resolve routine problems in an automotive workplace
AURAF A005	Write routine texts in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURSAA001	Process customer complaints in an automotive workplace
AURSAA002	Maintain customer aftermarket relations
AURSCA005	Sell automotive products and services
AURSCA006	Promote automotive products and services
AURSCA011	Conduct online transactions in an automotive workplace

Unit code	Unit title
AURSLA001	Comply with legal requirements when selling automotive products and services
BSBFIA303	Process accounts payable and receivable
BSBINM202	Handle mail
TAEDEL301	Provide work skill instruction

Qualification Mapping Information

Equivalent to AUR30112 Certificate III in Automotive Administration

AUR30216 Certificate III in Bicycle Workshop Operations

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of mechanical tasks on a variety of bicycles in the bicycle retail, service and repair sector.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 28

16 core units, plus

12 elective units, of which:

- up to **12** units may be chosen from the Elective Units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURBCA001	Work in a retail bicycle environment
AURBTA004	Assemble new boxed bicycles for retail sale
AURBTB001	Service and repair bicycle mechanical braking systems
AURBTB002	Service bicycle hydraulic braking systems
AURBTB003	Repair and overhaul bicycle hydraulic braking systems
AURBTD001	Service bicycle steering systems
AURBTD002	Service bicycle suspension systems
AURBTD003	Repair and overhaul bicycle steering systems
AURBTJ002	Service bicycle wheels and hubs
AURBTJ003	Design and build bicycle wheels
AURBTJ004	Repair and overhaul bicycle wheels and hubs
AURBTQ001	Service bicycle drivetrain systems
AURBTQ002	Repair and overhaul bicycle drivetrain systems
AURBTV001	Remove, refit and adjust bicycle accessories

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF A001	Use numbers in an automotive workplace
AURAF A002	Read and respond to automotive workplace information

Unit code	Unit title
AURFAA003	Communicate effectively in an automotive workplace
AURFAA004	Resolve routine problems in an automotive workplace
AURFAA005	Write routine texts in an automotive workplace
AURAKA002	Adapt work processes to new technologies in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURAMA002	Communicate business information in an automotive workplace
AURAQA001	Contribute to quality work outcomes in an automotive workplace
AURAQA002	Inspect technical quality of work in an automotive workplace
AURAQA003	Maintain quality processes in an automotive workplace
AURBCA002	Select and adjust bicycles to fit riders
AURBTA003	Assemble bicycles
AURBTA005	Restore bicycles
AURBTA006	Assemble components for custom bicycles
AURBTA007	Provide mechanical support during cycling events
AURBTD004	Repair and overhaul bicycle suspension systems
AURBTJ001	Remove, repair and refit bicycle tyres
AURBTK001	Maintain specialised bicycle repair tools and equipment
AURBTR001	Service electric power-assisted bicycles
AURBTR002	Install and adjust bicycle electronic gear shifters
AURBTY001	Repair bicycle frames
AURBTY002	Design and build bicycle frames
AURBTY003	Repair carbon fibre bicycle frames
AURSAA001	Process customer complaints in an automotive workplace

Unit code	Unit title
AURSCA002	Present automotive products and services for sale
AURSCA003	Apply sales procedures in an automotive workplace
AURSCA005	Sell automotive products and services
AURSCA006	Promote automotive products and services
AURTTA018	Carry out diagnostic procedures
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTW001	Carry out soft soldering techniques
AURVTW001	Carry out manual metal arc welding on components
AURVTW002	Carry out oxyacetylene brazing of components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW004	Carry out tungsten inert gas welding
AURVTW009	Carry out basic gas metal arc welding
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting
BSBWOR202	Organise and complete daily work activities
BSBWOR301	Organise personal work priorities and development
MEM18002B	Use power tools/hand held operations
SIRRINV001	Receive and handle retail stock
SIRRINV002	Control stock
TAEDEL301	Provide work skill instruction
TLIA3039	Receive and store stock

AUR30316 Certificate III in Automotive Electrical Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who service, diagnose and repair electrical systems and components in vehicles in the automotive electrical service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 32

20 core units, plus

12 elective units, of which:

- up to **12** units may be chosen from the Elective Units listed below
- up to **6** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title	Prerequisite unit
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace	
AURASA002	Follow safe working practices in an automotive workplace	
AURETK002	Use and maintain electrical test equipment in an automotive workplace	
AURETR006	Solder electrical wiring and circuits	
AURETR007	Apply knowledge of automotive electrical circuits and wiring systems	
AURETR009	Install vehicle lighting and wiring systems	
AURETR010	Repair wiring harnesses and looms	
AURETR012	Test and repair basic electrical circuits	
AURETR023	Diagnose and repair spark ignition engine management systems	
AURETR024	Diagnose and repair compression ignition engine management systems	
AURETR025	Test, charge and replace batteries and jump-start vehicles	
AURETR027	Install ancillary electronic systems and components	
AURETR028	Diagnose and repair instruments and warning systems	
AURETR029	Diagnose and repair charging systems	
AURETR030	Diagnose and repair starting systems	
AURETR031	Diagnose and repair ignition systems	
AURETR032	Diagnose and repair automotive electrical systems	
AURETR035	Apply knowledge of petrol and diesel engine operation	
AURETR043	Diagnose and repair electronic body management systems	
AURTTA018	Carry out diagnostic procedures	

Elective Units

Unit code	Unit title	Prerequisite unit
AURFAA003	Communicate effectively in an automotive workplace	
AURAKA002	Adapt work processes to new technologies in an automotive workplace	
AURAMA001	Work effectively with others in an automotive workplace	
AURAMA002	Communicate business information in an automotive workplace	
AURAQA002	Inspect technical quality of work in an automotive workplace	
AURAQA003	Maintain quality processes in an automotive workplace	
AURATA004	Provide technical guidance	
AURATA005	Estimate and quote automotive mechanical and electrical repairs	
AURETB001	Diagnose and repair electric braking systems	
AURETD011	Diagnose and repair electronically controlled steering systems	
AURETH001	Depower and reinitialise battery electric vehicles	
AURETH002	Service and maintain battery electric vehicles	AURETH001
AURETH011	Depower and reinitialise hybrid electric vehicles	
AURETR005	Install automotive security systems and components	
AURETR008	Remove and replace electrical units and assemblies	
AURETR011	Install basic ancillary electrical systems and components	
AURETR013	Inspect, test and service charging systems	
AURETR014	Inspect, test and service starting systems	
AURETR015	Inspect, test and service batteries	
AURETR016	Read and apply vehicle wiring schematics and drawings	

Unit code	Unit title	Prerequisite unit
AURETR017	Overhaul charging system alternators	
AURETR018	Overhaul starting system motors	
AURETR019	Inspect, service and repair AC electric motor drive systems	
AURETR020	Diagnose and repair network electronic control systems	
AURETR021	Inspect, service and repair electronic management, monitoring and tracking systems	
AURETR022	Diagnose and repair vehicle dynamic control systems	
AURETR026	Remove, replace and program electrical and electronic units and assemblies	
AURETR136	Diagnose and repair electronically controlled suspension systems	
AURETR042	Remove, refit and operate electrical components following body repair activities	
AURETR044	Diagnose and repair integrated engine and transmission management systems	
AURETR045	Inspect, service and repair DC electric motor drive systems	
AURETU001	Install air conditioning systems	
AURETU002	Recover vehicle refrigerants	
AURETU003	Service air conditioning and HVAC systems	
AURETU004	Diagnose and repair air conditioning and HVAC systems	
AURETU005	Retrofit and modify air conditioning and HVAC systems	
AURETU007	Overhaul air conditioning and HVAC system compressors	
AURHTZ001	Diagnose and repair heavy vehicle emission control systems	
AURLTB003	Diagnose and repair light vehicle hydraulic braking systems	
AURLTD004	Diagnose and repair light vehicle steering systems	
AURLTD005	Diagnose and repair light vehicle suspension systems	

Unit code	Unit title	Prerequisite unit
AURLTE001	Remove and install light vehicle engine assemblies	
AURLTE002	Diagnose and repair light vehicle engines	
AURLTF001	Diagnose and repair light vehicle mechanical fuel injection systems	
AURPTR002	Test and service electric outdoor power equipment	
AURRTR006	Diagnose and repair marine electrical systems	
AURRTR007	Install marine electrical systems and components	
AURTTA004	Carry out servicing operations	
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives	
AURTTA017	Carry out vehicle safety inspections	
AURTTA021	Diagnose complex system faults	
AURTTB001	Inspect and service braking systems	
AURTTC003	Diagnose and repair cooling systems	
AURTTE004	Inspect and service engines	
AURTTF001	Inspect and service petrol fuel systems	
AURTTK002	Use and maintain tools and equipment in an automotive workplace	
AURTTL010	Install LPG, CNG and LNG electrical control equipment	
AURTTW001	Carry out soft soldering techniques	
AURTTZ002	Diagnose and repair exhaust systems	
AURVTA002	Remove and replace vehicle supplementary restraint systems	
AURVTA004	Inspect damaged vehicle systems and recommend repairs	
AURVTT003	Remove and replace automotive and marine interior trim components	
AURVTW001	Carry out manual metal arc welding on components	

Unit code	Unit title	Prerequisite unit
AURVTW002	Carry out oxyacetylene brazing of components	
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections	
AURVTW004	Carry out tungsten inert gas welding	
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting	
BSBINN301	Promote innovation in a team environment	
BSBWHS301	Maintain workplace safety	
TAEDEL301	Provide work skill instruction

AUR30416 Certificate III in Agricultural Mechanical Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on a variety of agricultural machinery in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 36

24 core units, plus

12 elective units, of which:

- up to **12** units may be chosen from the Elective Units listed below
- up to **6** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF A003	Communicate effectively in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETR029	Diagnose and repair charging systems
AURETR030	Diagnose and repair starting systems
AURHTE002	Diagnose and repair heavy vehicle compression ignition engines
AURHTF002	Diagnose and repair heavy vehicle diesel fuel injection systems
AURHTQ003	Diagnose and repair heavy vehicle drive shafts
AURKTA011	Diagnose and repair mobile plant hydraulic systems
AURKTB001	Diagnose and repair mobile plant braking systems
AURKTD002	Diagnose and repair mobile plant steering systems
AURKTQ001	Diagnose and repair mobile plant final drive assemblies
AURKTX001	Diagnose and repair powershift transmissions
AURTTA004	Carry out servicing operations
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA018	Carry out diagnostic procedures
AURTTB001	Inspect and service braking systems
AURTTC003	Diagnose and repair cooling systems
AURTTE004	Inspect and service engines
AURTTF002	Inspect and service diesel fuel injection systems

Unit code	Unit title
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURETR020	Diagnose and repair network electronic control systems
AURETR021	Inspect, service and repair electronic management, monitoring and tracking systems
AURETR024	Diagnose and repair compression ignition engine management systems
AURETR032	Diagnose and repair automotive electrical systems
AURETU003	Service air conditioning and HVAC systems
AURETU004	Diagnose and repair air conditioning and HVAC systems
AURETU005	Retrofit and modify air conditioning and HVAC systems
AURHTD003	Diagnose and repair heavy commercial vehicle suspension systems
AURHTE001	Remove and install heavy vehicle engine assemblies
AURHTJ003	Remove, inspect and refit heavy vehicle wheel and tyre assemblies
AURHTJ004	Remove, inspect, repair and refit agricultural equipment tyres and tubes
AURHTJ006	Remove, inspect, repair and refit heavy vehicle tyres and tubes
AURHTQ002	Diagnose and repair heavy commercial vehicle final drive assemblies
AURHTX001	Diagnose and repair heavy vehicle manual transmissions
AURHTX004	Diagnose and repair heavy vehicle clutch systems
AURHTZ001	Diagnose and repair heavy vehicle emission control systems
AURKTA001	Synchronise plant and equipment
AURKTA002	Inspect, service and repair crop harvesting equipment

Unit code	Unit title
AURKTA003	Inspect, service and repair crop planting and seeding equipment
AURKTA004	Inspect, service and repair spraying and spreading equipment
AURKTA005	Inspect, service and repair track type drive and support systems
AURKTA010	Inspect, service and repair hay cutting, raking and baling equipment
AURKTD001	Diagnose and repair mobile plant suspension systems
AURKTX004	Diagnose and repair continuously variable transmissions
AURTTA006	Inspect and service hydraulic systems
AURTTA007	Inspect, service and repair pneumatic systems
AURTTA011	Install hydraulic systems to specified applications
AURTTA012	Fabricate and install fluid power hose assemblies
AURTTA014	Assemble and install pneumatic system components
AURTTB004	Inspect and service air braking systems
AURTTD002	Inspect and service steering systems
AURTTD004	Inspect and service suspension systems
AURTTF005	Diagnose and repair engine forced-induction systems
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTQ001	Inspect and service final drive assemblies
AURTTQ003	Inspect and service drive shafts
AURTTX002	Inspect and service manual transmissions
AURTTX004	Inspect and service hydrostatic transmissions
AURTTX006	Diagnose and repair hydrostatic transmissions
AURTTZ002	Diagnose and repair exhaust systems
AURVTW001	Carry out manual metal arc welding on components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections

Unit code	Unit title
AURVTW004	Carry out tungsten inert gas welding
AURVTW009	Carry out basic gas metal arc welding
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

Qualification Mapping Information

Equivalent to AUR30412 Certificate III in Agricultural Mechanical Technology

AUR30516 Certificate III in Marine Mechanical Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New Release

Qualification Description

This qualification reflects the role of individuals who perform a range of tasks in the marine industry. It is suitable for entry into the marine mechanical service and repair sector.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 30

11 core units

19 elective units, of which:

- up to **19** elective units may be chosen from the elective units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETR029	Diagnose and repair charging systems
AURETR030	Diagnose and repair starting systems
AURRTE008	Install marine engines, controls and instruments
AURRTR006	Diagnose and repair marine electrical systems
AURRTR007	Install marine electrical systems and components
AURTTE001	Apply knowledge of engine science
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURAF A001	Use numbers in an automotive workplace
AURAF A002	Read and respond to automotive workplace information
AURAF A003	Communicate effectively in an automotive workplace
AURAF A004	Resolve routine problems in an automotive workplace
AURAF A005	Write routine texts in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURAMA002	Communicate business information in an automotive workplace
AURAQ A001	Contribute to quality work outcomes in an automotive workplace
AURETB001	Diagnose and repair electric braking systems

Unit code	Unit title
AURETK002	Use and maintain electrical test equipment in an automotive workplace
AURETR006	Solder electrical wiring and circuits
AURETR009	Install vehicle lighting and wiring systems
AURETR011	Install basic ancillary electrical systems and components
AURETR015	Inspect, test and service batteries
AURETR021	Inspect, service and repair electronic management, monitoring and tracking systems
AURETR023	Diagnose and repair spark ignition engine management systems
AURETR024	Diagnose and repair compression ignition engine management systems
AURETR026	Remove, replace and program electrical and electronic units and assemblies
AURETR028	Diagnose and repair instruments and warning systems
AURETR031	Diagnose and repair ignition systems
AURETR032	Diagnose and repair automotive electrical systems
AURHTF002	Diagnose and repair heavy vehicle diesel fuel injection systems
AURHTZ001	Diagnose and repair heavy vehicle emission control systems
AURLTB003	Diagnose and repair light vehicle hydraulic braking systems
AURRGA002	Use cranes, gantries and forklifts to launch and recover vessels
AURRTC001	Diagnose and repair marine exhaust and cooling systems
AURRTD001	Diagnose and repair marine steering systems
AURRTE002	Inspect and service marine outboard engines
AURRTE003	Inspect and service marine inboard engines
AURRTE006	Diagnose and repair marine outboard engines
AURRTE007	Diagnose and repair marine inboard engines

Unit code	Unit title
AURRTE011	Overhaul two and four-stroke cycle marine outboard engines
AURRTF001	Diagnose and repair petrol and diesel marine fuel systems
AURRTQ001	Inspect and service marine inboard propeller drive systems
AURRTQ002	Inspect and service marine jet drive propulsion systems
AURRTQ004	Diagnose and repair marine inboard propeller drive systems
AURRTQ005	Install marine jet drive propulsion systems
AURRTQ006	Diagnose and repair marine jet drive propulsion systems
AURRTX001	Inspect and service marine outboard and stern drive transmissions
AURRTX002	Inspect and service marine inboard transmissions
AURRTX003	Diagnose and repair marine outboard and stern drive transmissions
AURRTX004	Diagnose and repair marine inboard transmissions
AURTGA001	Drive and manoeuvre trailers
AURTTA010	Service and repair trailers up to 4.5 tonnes
AURTTA013	Diagnose and repair hydraulic systems
AURTTA018	Carry out diagnostic procedures
AURTTA021	Diagnose complex system faults
AURTTB001	Inspect and service braking systems
AURTTF002	Inspect and service diesel fuel injection systems
AURTTF005	Diagnose and repair engine forced-induction systems
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURVTW001	Carry out manual metal arc welding on components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting
BSBWOR202	Organise and complete daily work activities

Unit code	Unit title
BSBWOR301	Organise personal work priorities and development
MEM09002B	Interpret technical drawing
TLID1001	Shift materials safely using manual handling methods
TLILIC2001	Licence to operate a forklift truck

Qualification Mapping Information

AUR30616 Certificate III in Light Vehicle Mechanical Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on a variety of light vehicles in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 36

20 core units, plus

16 elective units, of which:

- up to **16** units may be chosen from the Elective Units listed below
- up to **6** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title	Prerequisite unit
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace	
AURASA002	Follow safe working practices in an automotive workplace	
AURETR012	Test and repair basic electrical circuits	
AURETR023	Diagnose and repair spark ignition engine management systems	
AURETR025	Test, charge and replace batteries and jump-start vehicles	
AURETR029	Diagnose and repair charging systems	
AURETR030	Diagnose and repair starting systems	
AURETR031	Diagnose and repair ignition systems	
AURLTB003	Diagnose and repair light vehicle hydraulic braking systems	
AURLTD004	Diagnose and repair light vehicle steering systems	
AURLTD005	Diagnose and repair light vehicle suspension systems	
AURLTE002	Diagnose and repair light vehicle engines	
AURLTZ001	Diagnose and repair light vehicle emission control systems	
AURTTA004	Carry out servicing operations	
AURTTA018	Carry out diagnostic procedures	
AURTTB001	Inspect and service braking systems	
AURTTTC003	Diagnose and repair cooling systems	
AURTTTE004	Inspect and service engines	
AURTTTF001	Inspect and service petrol fuel systems	
AURTTTK002	Use and maintain tools and equipment in an automotive workplace	

Elective Units

Unit code	Unit title	Prerequisite unit
AURACA001	Respond to customer needs and enquiries in an automotive workplace	
AURAF003	Communicate effectively in an automotive workplace	
AURETD011	Diagnose and repair electronically controlled steering systems	
AURETH001	Depower and reinitialise battery electric vehicles	
AURETH002	Service and maintain battery electric vehicles	AURETH001
AURETH011	Depower and reinitialise hybrid electric vehicles	
AURETR010	Repair wiring harnesses and looms	
AURETR011	Install basic ancillary electrical systems and components	
AURETR020	Diagnose and repair network electronic control systems	
AURETR022	Diagnose and repair vehicle dynamic control systems	
AURETR024	Diagnose and repair compression ignition engine management systems	
AURETR028	Diagnose and repair instruments and warning systems	
AURETR032	Diagnose and repair automotive electrical systems	
AURETR136	Diagnose and repair electronically controlled suspension systems	
AURETR043	Diagnose and repair electronic body management systems	
AURETR044	Diagnose and repair integrated engine and transmission management systems	
AURETU003	Service air conditioning and HVAC systems	
AURETU004	Diagnose and repair air conditioning and HVAC systems	
AURETU005	Retrofit and modify air conditioning and HVAC systems	
AURLTD001	Select and install performance enhanced suspension system products	
AURLTD002	Service and repair light vehicle lift assisted suspension systems	

Unit code	Unit title	Prerequisite unit
AURLTD006	Carry out light vehicle wheel alignment operations	
AURLTE001	Remove and install light vehicle engine assemblies	
AURLTF001	Diagnose and repair light vehicle mechanical fuel injection systems	
AURLTF002	Diagnose and repair light vehicle diesel fuel injection systems	
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes	
AURLTJ011	Select light vehicle tyres and wheels for specific applications	
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies	
AURLTQ001	Diagnose and repair light vehicle final drive assemblies	
AURLTQ012	Diagnose and repair light vehicle drive shafts	
AURLTX001	Diagnose and repair light vehicle manual transmissions	
AURLTX002	Diagnose and repair light vehicle automatic transmissions	
AURLTX013	Diagnose and repair light vehicle clutch systems	
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives	
AURTTA009	Carry out mechanical pre-repair operations	
AURTTA017	Carry out vehicle safety inspections	
AURTTB013	Machine brake drums and brake disc rotors	
AURTTB015	Assemble and fit braking system components	
AURTTTC001	Inspect and service cooling systems	
AURTTD002	Inspect and service steering systems	
AURTTD004	Inspect and service suspension systems	
AURTTTF002	Inspect and service diesel fuel injection systems	
AURTTTF005	Diagnose and repair engine forced-induction systems	

Unit code	Unit title	Prerequisite unit
AURTTF006	Diagnose and repair petrol carburettor systems	
AURTTJ011	Balance wheels and tyres	
AURTTK001	Use and maintain measuring equipment in an automotive workplace	
AURTTL007	Inspect and service LPG fuel systems	
AURTTL008	Diagnose and repair LPG fuel systems	
AURTTQ001	Inspect and service final drive assemblies	
AURTTQ003	Inspect and service drive shafts	
AURTTW001	Carry out soft soldering techniques	
AURTTX002	Inspect and service manual transmissions	
AURTTX003	Inspect and service automatic transmissions	
AURTTZ002	Diagnose and repair exhaust systems	
AURVTA004	Inspect damaged vehicle systems and recommend repairs	
AURVTW001	Carry out manual metal arc welding on components	
AURVTW002	Carry out oxyacetylene brazing of components	
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections	
AURVTW004	Carry out tungsten inert gas welding	
AURVTW009	Carry out basic gas metal arc welding	
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

AUR30716 Certificate III in Outdoor Power Equipment Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks in the outdoor power equipment retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 36

15 core units, plus

21 elective units, of which:

- up to **21** units may be chosen from the Elective Units listed below
- up to **6** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURPTA003	Service and repair rotary cutting systems
AURPTA005	Service and repair chainsaw cutting systems
AURPTA006	Inspect and service line trimming systems and components
AURPTA007	Service and repair post boring systems
AURPTA008	Service and repair post hole digging systems
AURPTA009	Service and repair reciprocating cutting systems
AURPTA010	Inspect and service pumping systems
AURPTA011	Diagnose and repair pumping systems
AURPTE002	Inspect and service outdoor power equipment engines
AURPTE003	Diagnose and repair outdoor power equipment engines
AURPTE004	Overhaul outdoor power equipment engines
AURTTA018	Carry out diagnostic procedures
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURACA002	Manage complex customer requirements in an automotive workplace
AURACA003	Build customer relations in an automotive workplace
AURAF A003	Communicate effectively in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace

Unit code	Unit title
AURAMA002	Communicate business information in an automotive workplace
AURATA001	Identify basic automotive faults using troubleshooting processes
AURETK002	Use and maintain electrical test equipment in an automotive workplace
AURETR006	Solder electrical wiring and circuits
AURETR009	Install vehicle lighting and wiring systems
AURETR012	Test and repair basic electrical circuits
AURETR015	Inspect, test and service batteries
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETR026	Remove, replace and program electrical and electronic units and assemblies
AURETR029	Diagnose and repair charging systems
AURETR030	Diagnose and repair starting systems
AURETR031	Diagnose and repair ignition systems
AURETR032	Diagnose and repair automotive electrical systems
AURHTX004	Diagnose and repair heavy vehicle clutch systems
AURKTA005	Inspect, service and repair track type drive and support systems
AURLTD004	Diagnose and repair light vehicle steering systems
AURLTE002	Diagnose and repair light vehicle engines
AURLTF002	Diagnose and repair light vehicle diesel fuel injection systems
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes
AURLTX001	Diagnose and repair light vehicle manual transmissions
AURLTZ001	Diagnose and repair light vehicle emission control systems
AURPTA004	Service and repair drum cutting systems
AURPTR001	Test and service 240 volt portable generators

Unit code	Unit title
AURPTR002	Test and service electric outdoor power equipment
AURPTR003	Service and repair outdoor power equipment engine management systems
AURTTA006	Inspect and service hydraulic systems
AURTTA013	Diagnose and repair hydraulic systems
AURTTA021	Diagnose complex system faults
AURTTB001	Inspect and service braking systems
AURTTC001	Inspect and service cooling systems
AURTTC003	Diagnose and repair cooling systems
AURTTD002	Inspect and service steering systems
AURTTD003	Inspect suspension systems
AURTTD004	Inspect and service suspension systems
AURTTE004	Inspect and service engines
AURTTF001	Inspect and service petrol fuel systems
AURTTF005	Diagnose and repair engine forced-induction systems
AURTTF006	Diagnose and repair petrol carburettor systems
AURTTJ012	Remove, inspect and refit wheel hubs and associated brake components
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTQ001	Inspect and service final drive assemblies
AURTTX002	Inspect and service manual transmissions
AURTTX004	Inspect and service hydrostatic transmissions
AURTTX006	Diagnose and repair hydrostatic transmissions
AURTTZ002	Diagnose and repair exhaust systems
AURVTW001	Carry out manual metal arc welding on components

Unit code	Unit title
AURVTW002	Carry out oxyacetylene brazing of components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW004	Carry out tungsten inert gas welding
AURVTW009	Carry out basic gas metal arc welding
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting
MEM18002B	Use power tools/hand held operations
TLID1001	Shift materials safely using manual handling methods
TLID2004	Load and unload goods/cargo
TLID2013	Move materials mechanically using automated equipment

Qualification Mapping Information

Equivalent to AUR30713 Certificate III in Outdoor Power Equipment Technology

AUR30816 Certificate III in Motorcycle Mechanical Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on a variety of motorcycles in the automotive service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 36

24 core units, plus

12 elective units, of which:

- up to **12** units may be chosen from the Elective Units listed below
- up to **6** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETR023	Diagnose and repair spark ignition engine management systems
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETR029	Diagnose and repair charging systems
AURETR030	Diagnose and repair starting systems
AURETR031	Diagnose and repair ignition systems
AURJTB001	Diagnose and repair motorcycle braking systems
AURJTD003	Diagnose and repair motorcycle suspension systems
AURJTD004	Diagnose and repair motorcycle steering systems
AURJTE001	Diagnose and repair motorcycle engines
AURJTQ002	Diagnose and repair motorcycle driveline systems
AURJTX001	Diagnose and repair motorcycle clutch systems
AURJTX002	Diagnose and repair motorcycle manual transmissions
AURTTA018	Carry out diagnostic procedures
AURTTB001	Inspect and service braking systems
AURTTC003	Diagnose and repair cooling systems
AURTTE004	Inspect and service engines
AURTTF001	Inspect and service petrol fuel systems
AURTTF006	Diagnose and repair petrol carburettor systems
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTQ001	Inspect and service final drive assemblies

Unit code	Unit title
AURTTQ003	Inspect and service drive shafts

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF003	Communicate effectively in an automotive workplace
AURETR022	Diagnose and repair vehicle dynamic control systems
AURJTJ001	Remove, inspect and refit motorcycle wheel and tyre assemblies
AURJTJ002	Remove, inspect, repair and refit motorcycle tyres and tubes
AURJTQ001	Inspect and service motorcycle driveline systems
AURJTX003	Diagnose and repair motorcycle automatic transmissions
AURLTD004	Diagnose and repair light vehicle steering systems
AURLTD005	Diagnose and repair light vehicle suspension systems
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes
AURLTQ001	Diagnose and repair light vehicle final drive assemblies
AURLTQ012	Diagnose and repair light vehicle drive shafts
AURLTZ001	Diagnose and repair light vehicle emission control systems
AURSCA006	Promote automotive products and services
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA009	Carry out mechanical pre-repair operations
AURTTC001	Inspect and service cooling systems
AURTTZ002	Diagnose and repair exhaust systems
AURVTW001	Carry out manual metal arc welding on components

Unit code	Unit title
AURVTW009	Carry out basic gas metal arc welding
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

AUR30916 Certificate III in Motor Sport Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on competition vehicles in the motor sport industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 36

21 core units, plus

15 elective units, of which:

- up to **15** units may be chosen from the Elective Units listed below
- up to **6** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title	Prerequisite unit
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace	
AURETR023	Diagnose and repair spark ignition engine management systems	
AURLTD006	Carry out light vehicle wheel alignment operations	
AURMBA002	Load and unload competition vehicles and support equipment	
AURMDA002	Assist with officiating duties at motor sport events	
AURMMA001	Operate in a motor sport environment	
AURMMA007	Follow motor sport event and team safety requirements	
AURMMA008	Coordinate operations of a motor sport team	
AURMTA002	Assemble and prepare competition vehicles for motor sport events	
AURMTA004	Prepare competition vehicles at motor sport events	
AURMTA005	Perform pit lane and service area operations at motor sport events	
AURMTA006	Perform torquing and fastening on motor sport competition vehicles	
AURMTA007	Conduct non-destructive testing	
AURMTA009	Collect and log motor sport data	
AURMTS001	Construct hose and pipe assemblies for competition vehicles	
AURTTA018	Carry out diagnostic procedures	
AURTTB001	Inspect and service braking systems	
AURTTD004	Inspect and service suspension systems	
AURTTE004	Inspect and service engines	
AURTTQ003	Inspect and service drive shafts	
AURTTX002	Inspect and service manual transmissions	

Elective Units

Unit code	Unit title	Prerequisite unit
AURASA002	Follow safe working practices in an automotive workplace	
AURATA002	Read, interpret and apply engineering drawings	
AURATA003	Produce drawings from design concepts	
AURETD011	Diagnose and repair electronically controlled steering systems	
AURETR006	Solder electrical wiring and circuits	
AURETR010	Repair wiring harnesses and looms	
AURETR012	Test and repair basic electrical circuits	
AURETR017	Overhaul charging system alternators	
AURETR018	Overhaul starting system motors	
AURETR020	Diagnose and repair network electronic control systems	
AURETR022	Diagnose and repair vehicle dynamic control systems	
AURETR024	Diagnose and repair compression ignition engine management systems	
AURETR025	Test, charge and replace batteries and jump-start vehicles	
AURETR026	Remove, replace and program electrical and electronic units and assemblies	
AURETR028	Diagnose and repair instruments and warning systems	
AURETR029	Diagnose and repair charging systems	
AURETR030	Diagnose and repair starting systems	
AURETR031	Diagnose and repair ignition systems	
AURETR032	Diagnose and repair automotive electrical systems	
AURETR043	Diagnose and repair electronic body management systems	

Unit code	Unit title	Prerequisite unit
AURETR044	Diagnose and repair integrated engine and transmission management systems	
AURETR136	Diagnose and repair electronically controlled suspension systems	
AURHTE002	Diagnose and repair heavy vehicle compression ignition engines	
AURHTX004	Diagnose and repair heavy vehicle clutch systems	
AURJTD003	Diagnose and repair motorcycle suspension systems	
AURJTD004	Diagnose and repair motorcycle steering systems	
AURJTY001	Repair and align motorcycle frames	
AURLTB001	Overhaul light vehicle braking system components	
AURLTB003	Diagnose and repair light vehicle hydraulic braking systems	
AURLTD004	Diagnose and repair light vehicle steering systems	
AURLTD005	Diagnose and repair light vehicle suspension systems	
AURLTE002	Diagnose and repair light vehicle engines	
AURLTF001	Diagnose and repair light vehicle mechanical fuel injection systems	
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes	
AURLTJ011	Select light vehicle tyres and wheels for specific applications	
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies	
AURLTQ001	Diagnose and repair light vehicle final drive assemblies	
AURLTQ012	Diagnose and repair light vehicle drive shafts	
AURLTX001	Diagnose and repair light vehicle manual transmissions	
AURLTX002	Diagnose and repair light vehicle automatic transmissions	
AURLTX013	Diagnose and repair light vehicle clutch systems	

Unit code	Unit title	Prerequisite unit
AURMBA001	Transport light competition vehicles and support equipment	
AURMDA001	Develop and update motor sport industry knowledge	
AURMDA004	Recover vehicles at motor sport events	
AURMDA005	Act as a marshal at motor sport events	
AURMDA006	Communicate using flags and signals at motor sport events	
AURMDA007	Act as a steward at motor sport events	
AURMGA001	Set up and dismantle temporary work location and equipment at motor sport events	
AURMGA002	Manage personal presentation and development in a motor sport environment	
AURMKA001	Manage motor sport data	
AURMLA001	Apply motor sport rules and regulations when officiating	
AURMLA002	Monitor motor sport official and volunteer application of rules and regulations	
AURMLA003	Inspect vehicles and equipment at motor sport events for compliance	
AURMMA002	Manage the preparation of motor sport competition vehicles	
AURMSA001	Follow motor sport safety and risk management procedures	
AURMSA002	Implement and monitor safety and risk management in a motor sport environment	
AURMTD001	Test suspension dampers using a dynamometer	
AURMTD002	Prepare competition vehicle suspension	
AURMTE001	Test engines using a dynamometer	
AURMTF001	Analyse and repair performance carburetted fuel systems	
AURMTF002	Analyse and repair performance fuel injection systems	
AURMTJ001	Select and prepare motor sport competition vehicle tyres and	

Unit code	Unit title	Prerequisite unit
	wheels	
AURMTQ001	Analyse and repair faults in performance driveline systems	
AURTTA021	Diagnose complex system faults	
AURTTB015	Assemble and fit braking system components	
AURTTC003	Diagnose and repair cooling systems	
AURTTD002	Inspect and service steering systems	
AURTTD005	Overhaul steering system components	
AURTTE005	Overhaul engines	
AURTTF001	Inspect and service petrol fuel systems	
AURTTF005	Diagnose and repair engine forced-induction systems	
AURTTF007	Overhaul carburettor fuel system components	
AURTTJ011	Balance wheels and tyres	
AURTTK001	Use and maintain measuring equipment in an automotive workplace	
AURTTM003	Apply metal to rebuild engine components	
AURTTM004	Assemble engine blocks and sub-assemblies	
AURTTM008	Dismantle and evaluate engine blocks and sub-assemblies	
AURTTM010	Heat treat, straighten and reclaim engine components	
AURTTM011	Recondition engine cylinder heads	
AURTTQ001	Inspect and service final drive assemblies	
AURTTQ004	Overhaul final drive assemblies	
AURTTTS001	Fabricate exhaust systems and components	
AURTTX003	Inspect and service automatic transmissions	
AURTTX007	Overhaul clutch assemblies	

Unit code	Unit title	Prerequisite unit
AURTTX008	Overhaul manual transmissions	
AURTTX009	Overhaul automatic transmissions	
AURVTA002	Remove and replace vehicle supplementary restraint systems	
AURVTW001	Carry out manual metal arc welding on components	
AURVTW002	Carry out oxyacetylene brazing of components	
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections	
AURVTW004	Carry out tungsten inert gas welding	
AURVTW005	Carry out spot welding	
AURVTW006	Carry out thermoplastic welding on vehicle trim components	
AURVTW009	Carry out basic gas metal arc welding	
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting	
MEM07005C	Perform general machining	MEM09002B MEM12023A MEM18001C
MEM09002B	Interpret technical drawing	
MEM12023A	Perform engineering measurements	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	

Qualification Mapping Information

Equivalent to AUR30912 Certificate III in Motorsport Technology

AUR31016 Certificate III in Automotive Sales

Modification History

Release	Comment
Release 2	Updates to imported units within elective bank
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform sales-related tasks in the automotive service and repair sector.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 20

10 core units, plus

10 elective units, of which:

- **6** units must be chosen from one of the Specialist Elective Unit Groups A or B below
- of the remaining units required to make up the elective unit total:
 - up to **4** units may be chosen from the Specialist Elective Unit Groups and the General Elective Units listed below
 - up to **4** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF004	Resolve routine problems in an automotive workplace
AURAMA004	Maintain business image in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURSAA001	Process customer complaints in an automotive workplace
AURSCA005	Sell automotive products and services
AURSCA006	Promote automotive products and services
AURSCA011	Conduct online transactions in an automotive workplace
AURSLA001	Comply with legal requirements when selling automotive products and services

Specialist Elective Unit Groups

Group A: Parts Interpreting

Unit code	Unit title
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURSBA001	Carry out warehousing procedures in an automotive workplace
AURSBA002	Identify and match uncommon automotive parts
AURSCA001	Select and supply automotive parts and products
BSBPRO401	Develop product knowledge

Unit code	Unit title
BSBWOR204	Use business technology
SIRRINV002	Control stock
TLIA2012	Pick and process orders

Group B: Vehicle, Farm Machinery and Motorcycles Sales

Unit code	Unit title
AURSCA002	Present automotive products and services for sale
AURSCA003	Apply sales procedures in an automotive workplace
AURSCA007	Determine used motor vehicle stock requirements
AURSCA008	Wholesale used motor vehicle stock
AURSCA009	Provide vehicle technology information
BSBSLS407	Identify and plan sales prospects
BSBSLS408	Present, secure and support sales solutions

General Elective Units

Unit code	Unit title
AURACA003	Build customer relations in an automotive workplace
AURFA001	Use numbers in an automotive workplace
AURFA002	Read and respond to automotive workplace information
AURFA003	Communicate effectively in an automotive workplace
AURAMA002	Communicate business information in an automotive workplace
AURAMA003	Conduct information sessions in an automotive workplace
AURAQA001	Contribute to quality work outcomes in an automotive workplace

Unit code	Unit title
AURSCA001	Select and supply automotive parts and products
AURSCA002	Present automotive products and services for sale
AURSCA004	Carry out cash and non-cash payment operations
AURSCA007	Determine used motor vehicle stock requirements
AURSCA008	Wholesale used motor vehicle stock
AURSCA010	Appraise and purchase used motor vehicles for sale
AURSCP001	Provide information to customers on automotive refinishing products
BSBFIA301	Maintain financial records
SIRRINV001	Receive and handle retail stock
SIRRMER003	Coordinate visual merchandising activities
SIRRRTF001	Balance and secure point-of-sale terminal
SIRXSLS002	Follow point-of-sale procedures
TAEDEL301	Provide work skill instruction
TLIA2012	Pick and process orders
TLIA2020	Replenish stock

AUR31116 Certificate III in Heavy Commercial Vehicle Mechanical Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on a variety of heavy commercial vehicles in the automotive service and repair sector.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 36

22 core units, plus

14 elective units, of which:

- **1** unit must be chosen from one of the Specialist Elective Unit Groups A or B below
- of the **13** remaining units required to make up the elective unit total:
 - up to **13** units may be chosen from the Specialist Elective Unit Group not already chosen and the General Elective Units listed below
 - up to **6** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETR022	Diagnose and repair vehicle dynamic control systems
AURETR024	Diagnose and repair compression ignition engine management systems
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETR029	Diagnose and repair charging systems
AURETR030	Diagnose and repair starting systems
AURHTB001	Diagnose and repair heavy vehicle air braking systems
AURHTD002	Diagnose and repair heavy commercial vehicle steering systems
AURHTD003	Diagnose and repair heavy commercial vehicle suspension systems
AURHTE002	Diagnose and repair heavy vehicle compression ignition engines
AURHTQ003	Diagnose and repair heavy vehicle drive shafts
AURHTZ001	Diagnose and repair heavy vehicle emission control systems
AURTTA004	Carry out servicing operations
AURTTA006	Inspect and service hydraulic systems
AURTTA018	Carry out diagnostic procedures
AURTTC003	Diagnose and repair cooling systems
AURTTF002	Inspect and service diesel fuel injection systems
AURTTF005	Diagnose and repair engine forced-induction systems
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Unit code	Unit title
AURTTQ001	Inspect and service final drive assemblies

Specialist Elective Unit Groups

Group A: Heavy Vehicle Manual Transmission

Unit code	Unit title
AURHTX001	Diagnose and repair heavy vehicle manual transmissions

Group B: Heavy Vehicle Automatic Transmission

Unit code	Unit title
AURHTX003	Diagnose and repair heavy vehicle automatic transmissions

General Elective Units

Unit code	Unit title
AURAF003	Communicate effectively in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURETR020	Diagnose and repair network electronic control systems
AURETR032	Diagnose and repair automotive electrical systems
AURETR043	Diagnose and repair electronic body management systems
AURETR044	Diagnose and repair integrated engine and transmission management systems
AURETU003	Service air conditioning and HVAC systems
AURETU004	Diagnose and repair air conditioning and HVAC systems

Unit code	Unit title
AURETU005	Retrofit and modify air conditioning and HVAC systems
AURHTB002	Diagnose and repair heavy vehicle hydraulic and air over hydraulic braking systems
AURHTB007	Diagnose and repair heavy commercial vehicle electronic braking systems
AURHTD004	Carry out heavy vehicle wheel alignment operations
AURHTE001	Remove and install heavy vehicle engine assemblies
AURHTJ003	Remove, inspect and refit heavy vehicle wheel and tyre assemblies
AURHTJ006	Remove, inspect, repair and refit heavy vehicle tyres and tubes
AURHTQ002	Diagnose and repair heavy commercial vehicle final drive assemblies
AURHTX002	Inspect, test and replace heavy vehicle automatic transmissions
AURHTX004	Diagnose and repair heavy vehicle clutch systems
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA013	Diagnose and repair hydraulic systems
AURTTA014	Assemble and install pneumatic system components
AURTTB001	Inspect and service braking systems
AURTTB004	Inspect and service air braking systems
AURTTB006	Inspect, service and repair auxiliary braking systems
AURTTD002	Inspect and service steering systems
AURTTD004	Inspect and service suspension systems
AURTTE004	Inspect and service engines
AURHTF002	Diagnose and repair heavy vehicle diesel fuel injection systems
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTX002	Inspect and service manual transmissions
AURTTX003	Inspect and service automatic transmissions

Unit code	Unit title
AURTTZ002	Diagnose and repair exhaust systems
AURVTW001	Carry out manual metal arc welding on components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW004	Carry out tungsten inert gas welding
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

Qualification Mapping Information

AUR31216 Certificate III in Mobile Plant Technology

Modification History

Release	Comment
Release 2	Update of elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on a variety of mobile plant machinery in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 36

22 core units, plus

14 elective units, of which:

- up to **14** units may be chosen from the Elective Units listed below
- up to **6** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETR024	Diagnose and repair compression ignition engine management systems
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETR029	Diagnose and repair charging systems
AURETR030	Diagnose and repair starting systems
AURHTE002	Diagnose and repair heavy vehicle compression ignition engines
AURHTF002	Diagnose and repair heavy vehicle diesel fuel injection systems
AURKTA005	Inspect, service and repair track type drive and support systems
AURKTA011	Diagnose and repair mobile plant hydraulic systems
AURKTB001	Diagnose and repair mobile plant braking systems
AURKTD002	Diagnose and repair mobile plant steering systems
AURKTQ001	Diagnose and repair mobile plant final drive assemblies
AURKTX001	Diagnose and repair powershift transmissions
AURTTA004	Carry out servicing operations
AURTTA006	Inspect and service hydraulic systems
AURTTA018	Carry out diagnostic procedures
AURTTC003	Diagnose and repair cooling systems
AURTTF005	Diagnose and repair engine forced-induction systems
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTX006	Diagnose and repair hydrostatic transmissions

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF003	Communicate effectively in an automotive workplace
AURATA002	Read, interpret and apply engineering drawings
AURETR032	Diagnose and repair automotive electrical systems
AURETU003	Service air conditioning and HVAC systems
AURETU004	Diagnose and repair air conditioning and HVAC systems
AURETU005	Retrofit and modify air conditioning and HVAC systems
AURHTB001	Diagnose and repair heavy vehicle air braking systems
AURHTE001	Remove and install heavy vehicle engine assemblies
AURHTJ003	Remove, inspect and refit heavy vehicle wheel and tyre assemblies
AURHTJ005	Identify and apply heavy vehicle pneumatic wheeled traction performance enhancement systems
AURHTQ003	Diagnose and repair heavy vehicle drive shafts
AURHTX002	Inspect, test and replace heavy vehicle automatic transmissions
AURHTX004	Diagnose and repair heavy vehicle clutch systems
AURHTZ001	Diagnose and repair heavy vehicle emission control systems
AURKTA001	Synchronise plant and equipment
AURKTD001	Diagnose and repair mobile plant suspension systems
AURKTJ012	Remove, inspect and fit earthmoving and off-the-road wheel and rim assemblies
AURKTJ016	Use earthmoving and off-the-road tyre handlers
AURKTR001	Diagnose and repair electronic over hydraulic control systems
AURKTX004	Diagnose and repair continuously variable transmissions

Unit code	Unit title
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA007	Inspect, service and repair pneumatic systems
AURTTA011	Install hydraulic systems to specified applications
AURTTA012	Fabricate and install fluid power hose assemblies
AURTTA014	Assemble and install pneumatic system components
AURTTA015	Produce engineering drawings for vehicle components
AURTTB001	Inspect and service braking systems
AURTTB004	Inspect and service air braking systems
AURTTB006	Inspect, service and repair auxiliary braking systems
AURTTC001	Inspect and service cooling systems
AURTTD002	Inspect and service steering systems
AURTTD004	Inspect and service suspension systems
AURTTE004	Inspect and service engines
AURTTE005	Overhaul engines
AURTTF002	Inspect and service diesel fuel injection systems
AURTTF003	Overhaul diesel fuel injection system components
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTQ001	Inspect and service final drive assemblies
AURTTQ003	Inspect and service drive shafts
AURTTX002	Inspect and service manual transmissions
AURTTX003	Inspect and service automatic transmissions
AURTTX004	Inspect and service hydrostatic transmissions
AURTTZ002	Diagnose and repair exhaust systems
AURVTW001	Carry out manual metal arc welding on components

Unit code	Unit title
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW004	Carry out tungsten inert gas welding
AURVTW009	Carry out basic gas metal arc welding
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

AUR31316 Certificate III in Automotive Engine Reconditioning

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who recondition engines in the automotive service and repair sector. It is suitable for entry into the automotive specialist service and repair sector.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 28

13 core units, plus

15 elective units, of which:

- up to **15** units may be chosen from the Elective Units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURMTA007	Conduct non-destructive testing
AURTTE001	Apply knowledge of engine science
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTM002	Repair bearing tunnels and connecting rods in engines
AURTTM004	Assemble engine blocks and sub-assemblies
AURTTM007	Carry out crankshaft grinding
AURTTM008	Dismantle and evaluate engine blocks and sub-assemblies
AURTTM009	Fit sleeves and bore and hone engine cylinders
AURTTM011	Recondition engine cylinder heads
AURTTW003	Carry out machining operations

Elective Units

Unit code	Unit title
AURHTE002	Diagnose and repair heavy vehicle compression ignition engines
AURLTE001	Remove and install light vehicle engine assemblies
AURLTE002	Diagnose and repair light vehicle engines
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA009	Carry out mechanical pre-repair operations
AURTTA018	Carry out diagnostic procedures

Unit code	Unit title
AURTTTF005	Diagnose and repair engine forced-induction systems
AURTTM001	Operate and monitor computer numerical control machines
AURTTM003	Apply metal to rebuild engine components
AURTTM005	Balance rotating and reciprocating engine components
AURTTM006	Perform advanced machining and blueprinting of engine components
AURTTM010	Heat treat, straighten and reclaim engine components
AURTTM012	Carry out camshaft grinding
AURTTW002	Set, operate and monitor specialist reconditioning machines
AURVTW001	Carry out manual metal arc welding on components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW004	Carry out tungsten inert gas welding
AURVTW009	Carry out basic gas metal arc welding
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

Qualification Mapping Information

Equivalent to AUR31312 Certificate III in Automotive Engine Reconditioning

AUR31416 Certificate III in Automotive Diesel Fuel Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on a variety of diesel fuel systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 21

13 core units, plus

8 elective units, of which:

- up to **8** units may be chosen from the Elective Units listed below
- up to **4** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETR024	Diagnose and repair compression ignition engine management systems
AURHTF002	Diagnose and repair heavy vehicle diesel fuel injection systems
AURHTZ001	Diagnose and repair heavy vehicle emission control systems
AURTTA018	Carry out diagnostic procedures
AURTTE004	Inspect and service engines
AURTTF002	Inspect and service diesel fuel injection systems
AURTTF003	Overhaul diesel fuel injection system components
AURTTF005	Diagnose and repair engine forced-induction systems
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURAF003	Communicate effectively in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURHTE001	Remove and install heavy vehicle engine assemblies
AURHTE002	Diagnose and repair heavy vehicle compression ignition engines
AURLTF002	Diagnose and repair light vehicle diesel fuel injection systems
AURTTA004	Carry out servicing operations

AUR31516 Certificate III in Automotive Diesel Engine Technology

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of tasks on a variety of diesel engines and associated systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 28

14 core units, plus

14 elective units, of which:

- up to **14** units may be chosen from the Elective Units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
-----------	------------

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace

AUR31616 Certificate III in Automotive Drivetrain Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of tasks on a variety of drivetrain systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 25

11 core units, plus

14 elective units, of which:

- all units in one of the Specialist Elective Unit Groups A to D below must be chosen
- of the remaining units required to make up the elective unit total:
 - units may be chosen from the Specialist Elective Unit Groups and the General Elective Units listed below
 - up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURTTA018	Carry out diagnostic procedures
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTQ001	Inspect and service final drive assemblies
AURTTQ002	Remove and refit driveline components
AURTTQ003	Inspect and service drive shafts
AURTTX002	Inspect and service manual transmissions
AURTTX003	Inspect and service automatic transmissions

Specialist Elective Unit Groups

Group A: Light Vehicle Automatic Drivelines

Unit code	Unit title
AURETR044	Diagnose and repair integrated engine and transmission management systems
AURLTX002	Diagnose and repair light vehicle automatic transmissions
AURTTX009	Overhaul automatic transmissions

Group B: Heavy Vehicle Automatic Drivelines

Unit code	Unit title
AURETR044	Diagnose and repair integrated engine and transmission management systems
AURHTX003	Diagnose and repair heavy vehicle automatic transmissions
AURTTX009	Overhaul automatic transmissions

Group C: Light Vehicle Manual Drivelines

Unit code	Unit title
AURLTQ001	Diagnose and repair light vehicle final drive assemblies
AURLTQ012	Diagnose and repair light vehicle drive shafts
AURLTX001	Diagnose and repair light vehicle manual transmissions
AURTTX008	Overhaul manual transmissions

Group D: Heavy Vehicle Manual Drivelines

Unit code	Unit title
AURHTQ002	Diagnose and repair heavy commercial vehicle final drive assemblies
AURHTQ003	Diagnose and repair heavy vehicle drive shafts
AURHTX001	Diagnose and repair heavy vehicle manual transmissions
AURTTX008	Overhaul manual transmissions

General Elective Units

Unit code	Unit title
AURHTX004	Diagnose and repair heavy vehicle clutch systems

Unit code	Unit title
AURKTQ001	Diagnose and repair mobile plant final drive assemblies
AURKTX001	Diagnose and repair powershift transmissions
AURKTX004	Diagnose and repair continuously variable transmissions
AURLTX013	Diagnose and repair light vehicle clutch systems
AURTTQ004	Overhaul final drive assemblies
AURTTX006	Diagnose and repair hydrostatic transmissions
AURTTX007	Overhaul clutch assemblies
AURTTX011	Overhaul torque converters

Qualification Mapping Information

Equivalent to AUR31612 Certificate III in Automotive Drivetrain Technology

AUR31716 Certificate III in Forklift Technology

Modification History

Release	Comment
Release 2	Update of elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on a variety of forklift systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 28

18 core units, plus

10 elective units, of which:

- up to **10** units may be chosen from the Elective Units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title	Prerequisite unit
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace	
AURASA002	Follow safe working practices in an automotive workplace	
AURETR012	Test and repair basic electrical circuits	
AURETR025	Test, charge and replace batteries and jump-start vehicles	
AURETR029	Diagnose and repair charging systems	
AURETR030	Diagnose and repair starting systems	
AURNTA001	Inspect, service and repair forklift mast assemblies	
AURNTB001	Diagnose and repair forklift hydraulic braking systems	
AURNTD001	Diagnose and repair forklift hydrostatic steering systems	
AURTTA004	Carry out servicing operations	
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives	
AURTTA006	Inspect and service hydraulic systems	
AURTTA013	Diagnose and repair hydraulic systems	
AURTTA018	Carry out diagnostic procedures	
AURTTB001	Inspect and service braking systems	
AURTTC003	Diagnose and repair cooling systems	
AURTTE004	Inspect and service engines	
AURTTK002	Use and maintain tools and equipment in an automotive workplace	

Elective Units

Unit code	Unit title	Prerequisite unit
------------------	-------------------	--------------------------

Unit code	Unit title	Prerequisite unit
AURACA001	Respond to customer needs and enquiries in an automotive workplace	
AURAF003	Communicate effectively in an automotive workplace	
AURETH001	Depower and reinitialise battery electric vehicles	
AURETH002	Service and maintain battery electric vehicles	AURETH001
AURETK002	Use and maintain electrical test equipment in an automotive workplace	
AURETR007	Apply knowledge of automotive electrical circuits and wiring systems	
AURETR010	Repair wiring harnesses and looms	
AURETR011	Install basic ancillary electrical systems and components	
AURETR019	Inspect, service and repair AC electric motor drive systems	
AURETR021	Inspect, service and repair electronic management, monitoring and tracking systems	
AURETR023	Diagnose and repair spark ignition engine management systems	
AURETR024	Diagnose and repair compression ignition engine management systems	
AURETR028	Diagnose and repair instruments and warning systems	
AURETR031	Diagnose and repair ignition systems	
AURETR032	Diagnose and repair automotive electrical systems	
AURETR044	Diagnose and repair integrated engine and transmission management systems	
AURETU003	Service air conditioning and HVAC systems	
AURETU004	Diagnose and repair air conditioning and HVAC systems	
AURETU005	Retrofit and modify air conditioning and HVAC systems	
AURHTB001	Diagnose and repair heavy vehicle air braking systems	

Unit code	Unit title	Prerequisite unit
AURHTE001	Remove and install heavy vehicle engine assemblies	
AURHTE002	Diagnose and repair heavy vehicle compression ignition engines	
AURHTF002	Diagnose and repair heavy vehicle diesel fuel injection systems	
AURHTJ006	Remove, inspect, repair and refit heavy vehicle tyres and tubes	
AURHTQ002	Diagnose and repair heavy commercial vehicle final drive assemblies	
AURHTZ001	Diagnose and repair heavy vehicle emission control systems	
AURKTR001	Diagnose and repair electronic over hydraulic control systems	
AURLTB003	Diagnose and repair light vehicle hydraulic braking systems	
AURLTD004	Diagnose and repair light vehicle steering systems	
AURLTD005	Diagnose and repair light vehicle suspension systems	
AURLTD006	Carry out light vehicle wheel alignment operations	
AURLTE001	Remove and install light vehicle engine assemblies	
AURLTE002	Diagnose and repair light vehicle engines	
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes	
AURLTJ011	Select light vehicle tyres and wheels for specific applications	
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies	
AURLTQ001	Diagnose and repair light vehicle final drive assemblies	
AURLTX002	Diagnose and repair light vehicle automatic transmissions	
AURLTX013	Diagnose and repair light vehicle clutch systems	
AURLTZ001	Diagnose and repair light vehicle emission control systems	
AURTTA009	Carry out mechanical pre-repair operations	
AURTTA011	Install hydraulic systems to specified applications	

Unit code	Unit title	Prerequisite unit
AURTTA012	Fabricate and install fluid power hose assemblies	
AURTTA017	Carry out vehicle safety inspections	
AURTTB006	Inspect, service and repair auxiliary braking systems	
AURTTB013	Machine brake drums and brake disc rotors	
yAURTTD002	Inspect and service steering systems	
AURTTD004	Inspect and service suspension systems	
AURTTF001	Inspect and service petrol fuel systems	
AURTTF002	Inspect and service diesel fuel injection systems	
AURTTF005	Diagnose and repair engine forced-induction systems	
AURTTF006	Diagnose and repair petrol carburettor systems	
AURTTJ011	Balance wheels and tyres	
AURTTK001	Use and maintain measuring equipment in an automotive workplace	
AURTTL001	Inspect and service CNG fuel systems	
AURTTL002	Diagnose and repair CNG fuel systems	
AURTTL007	Inspect and service LPG fuel systems	
AURTTL008	Diagnose and repair LPG fuel systems	
AURTTQ001	Inspect and service final drive assemblies	
AURTTQ003	Inspect and service drive shafts	
AURTTW001	Carry out soft soldering techniques	
AURTTX002	Inspect and service manual transmissions	
AURTTX003	Inspect and service automatic transmissions	
AURTTX004	Inspect and service hydrostatic transmissions	
AURTTX006	Diagnose and repair hydrostatic transmissions	

Unit code	Unit title	Prerequisite unit
AURTTZ002	Diagnose and repair exhaust systems	
AURVTW001	Carry out manual metal arc welding on components	
AURVTW002	Carry out oxyacetylene brazing of components	
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections	
AURVTW009	Carry out basic gas metal arc welding	
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting	

Qualification Mapping Information

Equivalent to AUR31712 Certificate III in Forklift Technology

AUR31816 Certificate III in Heavy Commercial Trailer Technology

Modification History

Release	Comment
Release 2	Update to elective unit within qualification
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on a variety of heavy commercial trailers and associated systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 28

12 core units, plus

16 elective units, of which:

- up to **16** units may be chosen from the Elective Units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR009	Install vehicle lighting and wiring systems
AURETR012	Test and repair basic electrical circuits
AURETR022	Diagnose and repair vehicle dynamic control systems
AURHTB001	Diagnose and repair heavy vehicle air braking systems
AURHTD003	Diagnose and repair heavy commercial vehicle suspension systems
AURHTJ003	Remove, inspect and refit heavy vehicle wheel and tyre assemblies
AURHTY002	Diagnose and repair mechanical connections of heavy vehicles and trailers over 4.5 tonnes
AURTTA006	Inspect and service hydraulic systems
AURTTA018	Carry out diagnostic procedures
AURTTK002	Use and maintain tools and equipment in an automotive workplace

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURFAA003	Communicate effectively in an automotive workplace
AURAQA002	Inspect technical quality of work in an automotive workplace
AURATA002	Read, interpret and apply engineering drawings
AURETR010	Repair wiring harnesses and looms

Unit code	Unit title
AURETR011	Install basic ancillary electrical systems and components
AURHTB002	Diagnose and repair heavy vehicle hydraulic and air over hydraulic braking systems
AURHTB007	Diagnose and repair heavy commercial vehicle electronic braking systems
AURHTD004	Carry out heavy vehicle wheel alignment operations
AURHTJ002	Select heavy vehicle tyres, wheels and rims for specific applications
AURHTJ006	Remove, inspect, repair and refit heavy vehicle tyres and tubes
AURHTR005	Diagnose and repair heavy commercial trailer electronically controlled roll stability systems
AURHTY001	Inspect and service mechanical connections of heavy vehicles and trailers over 4.5 tonnes
AURTTA004	Carry out servicing operations
AURTTA011	Install hydraulic systems to specified applications
AURTTA012	Fabricate and install fluid power hose assemblies
AURTTA013	Diagnose and repair hydraulic systems
AURTTA014	Assemble and install pneumatic system components
AURTTB001	Inspect and service braking systems
AURTTB004	Inspect and service air braking systems
AURTTB006	Inspect, service and repair auxiliary braking systems
AURTTB015	Assemble and fit braking system components
AURTTD004	Inspect and service suspension systems
AURTTJ011	Balance wheels and tyres
AURVTW001	Carry out manual metal arc welding on components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW009	Carry out basic gas metal arc welding

Unit code	Unit title
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting
AUMGTY002	Install vehicle components

AUR31916 Certificate III in Elevating Work Platform Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks on a variety of elevating work platforms and associated systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 32

20 core units, plus

12 elective units, of which:

- up to **12** units may be chosen from the Elective Units listed below
- up to **6** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURHTE002	Diagnose and repair heavy vehicle compression ignition engines
AURHTF002	Diagnose and repair heavy vehicle diesel fuel injection systems
AURHTQ002	Diagnose and repair heavy commercial vehicle final drive assemblies
AURHTQ003	Diagnose and repair heavy vehicle drive shafts
AURLTB003	Diagnose and repair light vehicle hydraulic braking systems
AURTTA004	Carry out servicing operations
AURTTA005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA006	Inspect and service hydraulic systems
AURTTA013	Diagnose and repair hydraulic systems
AURTTA018	Carry out diagnostic procedures
AURTTB001	Inspect and service braking systems
AURTTE004	Inspect and service engines
AURTTK001	Use and maintain measuring equipment in an automotive workplace
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURVTW001	Carry out manual metal arc welding on components
AURVTW009	Carry out basic gas metal arc welding

Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURAF003	Communicate effectively in an automotive workplace
AURETH001	Depower and reinitialise battery electric vehicles
AURETR005	Install automotive security systems and components
AURETR010	Repair wiring harnesses and looms
AURETR011	Install basic ancillary electrical systems and components
AURETR021	Inspect, service and repair electronic management, monitoring and tracking systems
AURETR024	Diagnose and repair compression ignition engine management systems
AURETR028	Diagnose and repair instruments and warning systems
AURETR029	Diagnose and repair charging systems
AURETR030	Diagnose and repair starting systems
AURETR031	Diagnose and repair ignition systems
AURETR032	Diagnose and repair automotive electrical systems
AURETR044	Diagnose and repair integrated engine and transmission management systems
AURHTE001	Remove and install heavy vehicle engine assemblies
AURLTD006	Carry out light vehicle wheel alignment operations
AURLTE001	Remove and install light vehicle engine assemblies
AURLTJ002	Remove, inspect, repair and refit light vehicle tyres and tubes
AURLTJ011	Select light vehicle tyres and wheels for specific applications
AURLTJ013	Remove, inspect and refit light vehicle wheel and tyre assemblies
AURLTX001	Diagnose and repair light vehicle manual transmissions
AURLTX002	Diagnose and repair light vehicle automatic transmissions

Unit code	Unit title
AURLTX013	Diagnose and repair light vehicle clutch systems
AURLTZ001	Diagnose and repair light vehicle emission control systems
AURTTA009	Carry out mechanical pre-repair operations
AURTTA017	Carry out vehicle safety inspections
AURTTB013	Machine brake drums and brake disc rotors
AURTTB015	Assemble and fit braking system components
AURTTB006	Inspect, service and repair auxiliary braking systems
AURTTC003	Diagnose and repair cooling systems
AURTTD002	Inspect and service steering systems
AURTTD004	Inspect and service suspension systems
AURTTF002	Inspect and service diesel fuel injection systems
AURTTF005	Diagnose and repair engine forced-induction systems
AURTTF006	Diagnose and repair petrol carburettor systems
AURTTJ011	Balance wheels and tyres
AURTTL007	Inspect and service LPG fuel systems
AURTTQ001	Inspect and service final drive assemblies
AURTTQ003	Inspect and service drive shafts
AURTTW001	Carry out soft soldering techniques
AURTTX002	Inspect and service manual transmissions
AURTTX003	Inspect and service automatic transmissions
AURTTX004	Inspect and service hydrostatic transmissions
AURTTX006	Diagnose and repair hydrostatic transmissions
AURTTZ002	Diagnose and repair exhaust systems
AURVTA004	Inspect damaged vehicle systems and recommend repairs

Unit code	Unit title
AURVTW002	Carry out oxyacetylene brazing of components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting
RIIHAN301D	Operate elevating work platform

Qualification Mapping Information

AUR32016 Certificate III in Automotive Alternative Fuel Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who install and repair alternative fuel systems and associated systems in the automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

Licensing, legislative, regulatory or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 23

11 core units, plus

12 elective units, of which:

- all units in one of the Specialist Elective Unit Groups A to C below must be chosen
- of the remaining units required to make up the elective unit total:
 - up to **10** units may be chosen from the Specialist Elective Unit Groups and the General Elective Units listed below
 - up to **4** units may be from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURETR012	Test and repair basic electrical circuits
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURTTA004	Carry out servicing operations
AURTTA018	Carry out diagnostic procedures
AURTTC001	Inspect and service cooling systems
AURTTE004	Inspect and service engines
AURTTF001	Inspect and service petrol fuel systems
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTZ001	Inspect and service emission control systems

Specialist Elective Unit Groups

Group A: CNG

Unit code	Unit title
AURTTL001	Inspect and service CNG fuel systems
AURTTL002	Diagnose and repair CNG fuel systems

Group B: LNG

Unit code	Unit title
-----------	------------

Unit code	Unit title
AURTTL004	Inspect and service LNG fuel systems
AURTTL005	Diagnose and repair LNG fuel systems

Group C: LPG

Unit code	Unit title
AURTTL007	Inspect and service LPG fuel systems
AURTTL008	Diagnose and repair LPG fuel systems

General Elective Units

Unit code	Unit title
AURACA001	Respond to customer needs and enquiries in an automotive workplace
AURFAA003	Communicate effectively in an automotive workplace
AURATA002	Read, interpret and apply engineering drawings
AURETR006	Solder electrical wiring and circuits
AURETR010	Repair wiring harnesses and looms
AURETR023	Diagnose and repair spark ignition engine management systems
AURETR024	Diagnose and repair compression ignition engine management systems
AURETR031	Diagnose and repair ignition systems
AURETR032	Diagnose and repair automotive electrical systems
AURHTL001	Inspect, diagnose and repair alternative fuel systems in heavy vehicle engines
AURHTF002	Diagnose and repair heavy vehicle diesel fuel injection systems

Unit code	Unit title
AURHTZ001	Diagnose and repair heavy vehicle emission control systems
AURLTE002	Diagnose and repair light vehicle engines
AURTTF006	Diagnose and repair petrol carburettor systems
AURTTL003	Install CNG fuel systems
AURTTL006	Install LNG fuel systems
AURTTL009	Install LPG fuel systems
AURTTL010	Install LPG, CNG and LNG electrical control equipment
AURTTW001	Carry out soft soldering techniques
AURVTW001	Carry out manual metal arc welding on components
AURVTW002	Carry out oxyacetylene brazing of components
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW004	Carry out tungsten inert gas welding
AURVTW009	Carry out basic gas metal arc welding
AURVTW018	Carry out oxyacetylene welding, thermal heating and cutting

Qualification Mapping Information

Equivalent to AUR32012 Certificate III in Automotive Alternative Fuel Technology

AUR32116 Certificate III in Automotive Body Repair Technology

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a broad range of tasks when repairing and maintaining the body of cars, heavy vehicles and other vehicles in the automotive service and repair sector.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 30

16 core units, plus

14 elective units, of which:

- **8** units from one of the Specialist Elective Unit Groups A to C below must be chosen
- of the remaining units required to make up the elective unit total:
 - up to **6** units may be chosen from the Specialist Elective Unit Groups and the General Elective Units listed below
 - up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF008	Interpret and apply automotive repair instructions
AURASA002	Follow safe working practices in an automotive workplace
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURTTY001	Repair vehicle chassis, frame and associated components
AURVTN003	Remove and store vehicle body components
AURVTN004	Remove, replace and align bolt-on vehicle body panels and components
AURVTN016	Repair vehicle body panels using filler
AURVTN020	Remove and replace major welded panels on vehicles
AURVTN022	Repair vehicle body misalignment
AURVTN023	Repair adhesive bonded structural damage on vehicles
AURVTN032	Inspect vehicle damage and determine repair procedures
AURVTN035	Apply original equipment manufacturer repair procedures during vehicle repairs
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW007	Carry out oxyacetylene thermal heating and cutting on vehicle body sections

Specialist Elective Unit Groups

Group A: Vehicle Body Repair

Unit code	Unit title
AURVTA002	Remove and replace vehicle supplementary restraint systems

Unit code	Unit title
AURVTN002	Carry out non-structural vehicle panel repairs
AURVTN005	Remove and replace adhesive attached components on vehicles
AURVTN015	Repair vehicle body panels using metal finishing
AURVTN017	Repair vehicle thermoplastic body panels and components
AURVTN018	Repair and replace vehicle structural damage
AURVTN019	Repair vehicle structural damage by riveting
AURVTN026	Repair vehicle aluminium body panels without the use of body filler
AURVTN027	Repair vehicle aluminium body panels using filler
AURVTN028	Identify and repair high strength steel vehicle components
AURVTN029	Set up and operate universal vehicle measuring systems
AURVTN031	Carry out vehicle sectional repairs
AURVTW005	Carry out spot welding

Group B: Vehicle Body Restoration

Unit code	Unit title
AURTTW001	Carry out soft soldering techniques
AURVTN015	Repair vehicle body panels using metal finishing
AURVTN021	Repair vehicle body components using lead wiping
AURVTN025	Repair corroded vehicle body panels and components
AURVTS001	Fabricate wooden components for vehicles
AURVTS002	Repair wooden components in vehicles
AURVTS003	Fabricate vehicle composite material components
AURVTS005	Fabricate vehicle body panels and components
AURVTS006	Fabricate automotive and marine trim components

Unit code	Unit title
AURVTW004	Carry out tungsten inert gas welding
MEM05004C	Perform routine oxy acetylene welding

Group C: Heavy Vehicle Body and Chassis Repair

Unit code	Unit title
AUMABA002	Operate load shifting equipment
AUMGTY002	Install vehicle components
AURTTA020	Apply heat induction processes
AURVTN019	Repair vehicle structural damage by riveting
AURVTN026	Repair vehicle aluminium body panels without the use of body filler
AURVTN029	Set up and operate universal vehicle measuring systems
AURVTP013	Prepare vehicle substrates for refinishing
AURVTW004	Carry out tungsten inert gas welding
MEM24001B	Perform basic penetrant testing
RIIWHS204D	Work safely at heights

General Elective Units

Unit code	Unit title
AURAF002	Read and respond to automotive workplace information
AURAF004	Resolve routine problems in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURETH001	Depower and reinitialise battery electric vehicles
AURETH011	Depower and reinitialise hybrid electric vehicles

Unit code	Unit title
AURETR042	Remove, refit and operate electrical components following body repair activities
AURVTA001	Prepare vehicles for customer use
AURVTN006	Remove and replace mechanical units during vehicle repair
AURVTN012	Install vehicle sunroofs
AURVTN013	Carry out paint-less dent repairs on vehicle body panels
AURVTN030	Service air compressors and air lines
AURVTN033	Service and repair air compressors and components
AURVTP005	Apply rust prevention and sound deadening materials to vehicle body components
AURVTS004	Repair vehicle composite material components
AURVTT009	Remove and replace vehicle and vessel seats and fittings
AURVTT021	Select and apply adhesives in automotive and marine service and repair work
AURVTV001	Remove, replace and test non-electrical vehicle components and accessories
MEM18001C	Use hand tools
TAEDEL301	Provide work skill instruction

Qualification Mapping Information

Equivalent to AUR32112 Certificate III in Automotive Body Repair Technology

AUR32216 Certificate III in Automotive Glazing Technology

Modification History

Release	Comment
Release 2	Update of one unit within elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who remove, install, repair and manage glazing technical operations of cars and other vehicles in the automotive industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 30

18 core units, plus

12 elective units, of which:

- up to **12** units may be chosen from the Elective Units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURACA003	Build customer relations in an automotive workplace
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF003	Communicate effectively in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURVTA001	Prepare vehicles for customer use
AURVTG001	Repair laminated glass windscreens
AURVTG002	Remove and install rubber glazed windscreens
AURVTG004	Remove and install direct glazed windscreens
AURVTG007	Clean vehicle glass surfaces
AURVTG009	Remove and install vehicle fixed body glass
AURVTG010	Remove and install vehicle movable body glass
AURVTG012	Remove and install heavy vehicle rubber and direct glazed windscreens
AURVTG013	Remove and install large vehicle windscreens
AURVTN011	Remove and install vehicle rear vision mirrors
MSFGG2005	Apply basic glass handling
MSFGG3001	Store and handle glass

Elective Units

Unit code	Unit title
AUMGTG001	Install fixed and movable glass components on vehicles

Unit code	Unit title
AURFAA002	Read and respond to automotive workplace information
AURFAA004	Resolve routine problems in an automotive workplace
AURANN011	Estimate and quote automotive body repairs
AURATA005	Estimate and quote automotive mechanical and electrical repairs
AURETH001	Depower and reinitialise battery electric vehicles
AURETH011	Depower and reinitialise hybrid electric vehicles
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURSAA001	Process customer complaints in an automotive workplace
AURSCA001	Select and supply automotive parts and products
AURSCA004	Carry out cash and non-cash payment operations
AURVTG003	Remove and install butyl sealed windscreens
AURVTG005	Remove and install framed type windscreens
AURVTG008	Cut and process vehicle and machinery flat laminated glass
AURVTG011	Install side vehicle windows
AURVTN035	Apply original equipment manufacturer repair procedures during vehicle repairs
AURVTP002	Mask vehicle panels and components
AURVTT007	Clean plastic trim and fittings of vehicles
AURVTT008	Clean vehicle interior trim
AURVTV001	Remove, replace and test non-electrical vehicle components and accessories
BSBFLM312	Contribute to team effectiveness
BSBWHS301	Maintain workplace safety
BSBWOR301	Organise personal work priorities and development
SIRRINV002	Control stock

Unit code	Unit title
TAEDEL301	Provide work skill instruction

Qualification Mapping Information

Equivalent to AUR32212 Certificate III in Automotive Glazing Technology

AUR32316 Certificate III in Automotive and Marine Trimming Technology

Modification History

Release	Comment
Release 2	Updates to imported units within elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who manufacture, repair and maintain trim components of a range of motor vehicles, marine craft, recreational and other vehicles in the automotive industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 30

12 core units, plus

18 elective units, of which:

- up to **18** units may be chosen from the Elective Units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURTTK002	Use and maintain tools and equipment in an automotive workplace
AURVTN035	Apply original equipment manufacturer repair procedures during vehicle repairs
AURVTS006	Fabricate automotive and marine trim components
AURVTT002	Carry out repairs and alterations to automotive and marine trim
AURVTT003	Remove and replace automotive and marine interior trim components
AURVTT004	Trim vehicle components
AURVTT005	Select trim and fabric materials
AURVTT012	Conduct sewing operations
AURVTT021	Select and apply adhesives in automotive and marine service and repair work

Elective Units

Unit code	Unit title
AURAAA002	Determine retail rates for automotive products and services
AURAF002	Read and respond to automotive workplace information
AURAF004	Resolve routine problems in an automotive workplace
AURATA005	Estimate and quote automotive mechanical and electrical repairs
AURETH001	Depower and reinitialise battery electric vehicles

Unit code	Unit title
AURETH011	Depower and reinitialise hybrid electric vehicles
AURETR006	Solder electrical wiring and circuits
AURETR008	Remove and replace electrical units and assemblies
AURETR010	Fabricate, test and repair wiring harnesses and looms
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURETR026	Remove, replace and program electrical and electronic units and assemblies
AURETR032	Diagnose and repair automotive electrical systems
AURVTA002	Remove and replace vehicle supplementary restraint systems
AURVTN011	Remove and install vehicle rear vision mirrors
AURVTP002	Mask vehicle panels and components
AURVTP005	Apply rust prevention and sound deadening materials to vehicle body components
AURVTP007	Touch up minor vehicle paintwork damage
AURVTP008	Clean and polish vehicle paint surfaces
AURVTP019	Prepare and paint plastic and composite vehicle surfaces
AURVTS004	Repair vehicle composite material components
AURVTT009	Remove and replace vehicle and vessel seats and fittings
AURVTT010	Remove and manufacture or repair vehicle head lining
AURVTT013	Fabricate and fit loose and fitted covers to vehicle seats and components
AURVTT014	Fabricate and fit marine covers
AURVTT015	Fabricate and install canvas products for automotive and marine components
AURVTT017	Fabricate and install automotive and marine floor coverings
AURVTT018	Fabricate and install automotive and marine soft top hoods

Unit code	Unit title
AURVTT019	Fabricate and install automotive and marine frames, canopies and side curtains
AURVTT020	Select and use leather in automotive and marine trimming
AURVTV001	Remove, replace and test non-electrical vehicle components and accessories
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections
AURVTW006	Carry out thermoplastic welding on vehicle trim components
AUMGTG001	Install fixed and moveable glass components on vehicles
AUMGTS004	Fabricate parts for vehicle sub-assemblies
MSFUP3001	Apply traditional foundations to upholstered furniture
MSTLG3001	Make a prototype
MSTTF2002	Cut, bend and shape metal
MSTTF2012	Stitch by hand
MSTTF2015	Install products on and off site
MSTTF3002	Gain customer acceptance of service proposal
TAEDEL301	Provide work skill instruction

AUR32416 Certificate III in Automotive Refinishing Technology

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who paint, refinish, repair and maintain painted surfaces on a range of automotive vehicles, recreational vehicles and other vehicles in the automotive industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 30

17 core units, plus

13 elective units, of which:

- up to **13** units may be chosen from the Elective Units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
-----------	------------

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAF008	Interpret and apply automotive repair instructions
AURASA002	Follow safe working practices in an automotive workplace
AURVTP001	Remove paint from vehicle painted surfaces
AURVTP002	Mask vehicle panels and components
AURVTP003	Prepare vehicle spray painting equipment for use
AURVTP004	Apply basic colour matching techniques using vehicle paint codes
AURVTP006	Apply refinishing primers to vehicle surfaces
AURVTP013	Prepare vehicle substrates for refinishing
AURVTP014	Colour match multi-layer and clear over base two-pack paints on vehicles and components
AURVTP015	Match direct gloss solid paint colour on vehicles or components
AURVTP017	Rectify and touch up vehicle paint faults using clear over base two-pack systems
AURVTP019	Prepare and paint plastic and composite vehicle surfaces
AURVTP020	De-nib, buff and polish vehicle painted surfaces
AURVTP023	Apply clear over base two-pack refinishing materials to vehicle body components
AURVTP024	Apply clear over base multi-layer and pearl refinishing materials to vehicle body components
AURVTP025	Apply water-based refinishing materials to vehicle bodies and substrates

Elective Units

Unit code	Unit title
------------------	-------------------

Unit code	Unit title
AURAF002	Read and respond to automotive workplace information
AURAF004	Resolve routine problems in an automotive workplace
AURAMA001	Work effectively with others in an automotive workplace
AURETH001	Depower and reinitialise battery electric vehicles
AURETH011	Depower and reinitialise hybrid electric vehicles
AURETR025	Test, charge and replace batteries and jump-start vehicles
AURVTA001	Prepare vehicles for customer use
AURVTA003	Inspect vehicle paint, trim and accessories and recommend repair procedures
AURVTN005	Remove and replace adhesive attached components on vehicles
AURVTN017	Repair vehicle thermoplastic body panels and components
AURVTN032	Inspect vehicle damage and determine repair procedures
AURVTN035	Apply original equipment manufacturer repair procedures during vehicle repairs
AURVTP007	Touch up minor vehicle paintwork damage
AURVTP009	Apply vehicle body film wrapping
AURVTP010	Prepare and operate vehicle paint drying equipment
AURVTP011	Apply solid acrylic two-pack materials to vehicle components
AURVTP012	Apply air dry and polyurethane refinishing materials
AURVTP016	Rectify and touch up vehicle direct gloss paint faults using two-pack systems
AURVTP018	Rectify vehicle multi-layer and pearl paint faults using two-pack systems
AURVTP026	Apply basic airbrush techniques to vehicle body panels
AURVTP028	Carry out custom painting techniques to vehicle body panels
TAEDEL301	Provide work skill instruction

AUR32518 Certificate III in Automotive Underbody Technology

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of services and repairs on tyres, wheels, steering, suspension and brakes. It applies to those working in the light vehicle automotive retail, service and repair industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 28

13 core units, plus

15 elective units, of which:

- up to **15** units may be chosen from the Elective Units listed below
- up to **5** units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

AUR32616 Certificate III in Automotive Tyre Management

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform a range of tasks relating to managing tyres in the automotive industry.

Entry Requirements

Those undertaking Certificate III in Automotive Tyre Management must have completed AUR21916 Certificate II in Automotive Tyre Servicing Technology, or be able to demonstrate equivalent competency.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 12

7 core units, plus

5 elective units, of which:

- up to 5 units may be chosen from the Elective Units listed below
- up to 2 units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA003	Monitor environmental and sustainability best practice in an automotive workplace
AURAMA003	Conduct information sessions in an automotive workplace
AURAQA003	Maintain quality processes in an automotive workplace
AURATA004	Provide technical guidance
AURKKJ001	Manage use of tyre management software
AURLTJ004	Provide advice on the effects of wheel and tyre combinations
FDFPPL3003A	Support and mentor individuals and groups

Elective Units

Unit code	Unit title
AURACA002	Manage complex customer requirements in an automotive workplace
AURAF A003	Communicate effectively in an automotive workplace
AURAF A004	Resolve routine problems in an automotive workplace
AURAKA002	Adapt work processes to new technologies in an automotive workplace
AURAMA002	Communicate business information in an automotive workplace
AURAMA004	Maintain business image in an automotive workplace
AURAQA001	Contribute to quality work outcomes in an automotive workplace
AURAQA002	Inspect technical quality of work in an automotive workplace
AURASA002	Follow safe working practices in an automotive workplace
AURHTJ002	Select heavy vehicle tyres, wheels and rims for specific applications

Unit code	Unit title
AURKTJ004	Conduct non-destructive testing of wheel and rim assemblies
AURKTJ013	Perform minor repairs to earthmoving and off-the-road tyres
AURKTJ015	Select earthmoving and off-the-road tyres, wheels and rim assemblies for specific applications
AURKTJ016	Use earthmoving and off-the-road tyre handlers
AURLTJ011	Select light vehicle tyres and wheels for specific applications
AURSA001	Process customer complaints in an automotive workplace
AURSCA002	Present automotive products and services for sale
AURSCA004	Carry out cash and non-cash payment operations
AUMAQA001	Apply quality assurance techniques
BSBPRO401	Develop product knowledge
BSBWOR204	Use business technology
CSCORG003	Prepare reports
HLTAID003	Provide first aid
MSMSUP390	Use structured problem solving tools
PMBPROD336	Inspect heavy off-the-road tyres
RIICOM201D	Communicate in the workplace
RIIQUA201D	Maintain and monitor site quality standards
RIIRIS201D	Conduct local risk control
RIIRIS301D	Apply risk management processes
RIIWHS201D	Work safely and follow WHS policies and procedures
RIIWHS204D	Work safely at heights
RIIWHS301D	Conduct safety and health investigations
SIRRINV001	Receive and handle retail stock

Unit code	Unit title
SIRRINV002	Control stock
SIRXRSK002	Maintain store security
TAEDEL301	Provide work skill instruction

AUR40116 Certificate IV in Automotive Management

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform management roles in an automotive retail, service and repair environment.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 10

6 core units, plus

4 elective units, of which:

- up to **4** units may be chosen from the Elective Units listed below
- up to **2** units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURACA003	Build customer relations in an automotive workplace

Unit code	Unit title
AURAEA004	Manage environmental and sustainability best practice in an automotive workplace
AURAMA004	Maintain business image in an automotive workplace
AURAMA005	Manage complex customer issues in an automotive workplace
BSBSMB407	Manage a small team
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements

Elective Units

Unit code	Unit title
AURAAA002	Determine retail rates for automotive products and services
AURAKA002	Adapt work processes to new technologies in an automotive workplace
AURALA001	Comply with legal aspects of a service and repair contract in an automotive workplace
AURAMA003	Conduct information sessions in an automotive workplace
AURAQA003	Maintain quality processes in an automotive workplace
AURATA005	Estimate and quote automotive mechanical and electrical repairs
BSBITS401	Maintain business technology
BSBLDR402	Lead effective workplace relationships
BSBSMB406	Manage small business finances
BSBWOR404	Develop work priorities
FNSASIC302	Develop, present and negotiate client solutions
TAEDEL404	Mentor in the workplace

AUR40216 Certificate IV in Automotive Mechanical Diagnosis

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform advanced diagnostic tasks in the automotive retail, service and repair industry.

Entry Requirements

Those undertaking the Certificate IV in Automotive Mechanical Diagnosis must have completed an automotive mechanical Certificate III qualification, or be able to demonstrate equivalent competency.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 10

1 core unit, plus

9 elective units, of which:

- up to **9** units may be chosen from the Elective Units listed below
- up to **2** units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title	Prerequisite unit
AURTTA021	Diagnose complex system faults	

Elective Units

Unit code	Unit title	Prerequisite unit
AURETH003	Diagnose and repair high voltage rechargeable energy storage systems in battery electric vehicles	AURETH001
AURETH004	Diagnose and repair traction motor speed control systems in battery electric vehicles	AURETH001
AURETH005	Diagnose and repair high voltage traction motors in battery electric vehicles	AURETH001
AURETH006	Diagnose and repair auxiliary motors and associated components in battery electric vehicles	AURETH001
AURETH007	Diagnose and repair system instrumentation and safety interlocks in battery electric vehicles	AURETH001
AURETH008	Diagnose and repair HVAC and rechargeable energy storage cooling systems in battery electric vehicle	AURETH001
AURETH009	Diagnose and repair DC to DC converters in battery electric vehicles	AURETH001 AURETR025
AURETH010	Diagnose and repair high voltage rechargeable energy storage systems in hybrid electric vehicles	AURETR025
AURETR037	Diagnose complex faults in light vehicle safety systems	
AURETU006	Diagnose complex faults in air conditioning and HVAC systems	
AURHTB006	Diagnose complex faults in heavy commercial vehicle braking systems	
AURHTD006	Diagnose complex faults in heavy commercial vehicle steering and suspension systems	
AURHTE003	Diagnose complex faults in heavy vehicle diesel engines	

Unit code	Unit title	Prerequisite unit
AURHTX006	Diagnose complex faults in heavy commercial vehicle transmission and driveline systems	
AURJTD005	Diagnose complex faults in motorcycle steering and suspension systems	
AURJTE002	Diagnose complex faults in motorcycle engine and transmission systems	
AURKTA009	Diagnose complex faults in mobile plant hydraulic systems	
AURKTB003	Diagnose complex faults in mobile plant braking systems	
AURKTD005	Diagnose complex faults in mobile plant steering and suspension systems	
AURKTX003	Diagnose complex faults in mobile plant transmission and driveline systems	
AURLTB004	Diagnose complex faults in light vehicle braking systems	
AURLTD009	Diagnose complex faults in light vehicle steering and suspension systems	
AURLTE004	Diagnose complex faults in light vehicle petrol engines	
AURLTE005	Diagnose complex faults in light vehicle diesel engines	
AURLTX004	Diagnose complex faults in light vehicle automatic transmission and driveline systems	
AURMTA007	Conduct non-destructive testing	
AURMTE001	Test engines using a dynamometer	
AURMTF001	Analyse and repair performance carburetted fuel systems	
AURMTF002	Analyse and repair performance fuel injection systems	
AURMTQ001	Analyse and repair faults in performance driveline systems	
AURTTA025	Diagnose complex faults in vehicle integrated stability control systems	
AURTTA026	Diagnose complex faults in electronic over hydraulic systems	

Unit code	Unit title	Prerequisite unit
AURTTTL011	Diagnose complex faults in CNG fuel systems	
AURTTTL012	Diagnose complex faults in LNG fuel systems	
AURTTTL013	Diagnose complex faults in LPG fuel systems	
AURTTR001	Diagnose complex faults in engine management systems

AUR40316 Certificate IV in Motor Sport Technology

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform as team leaders and supervisors in the motor sport industry.

Entry Requirements

Those undertaking the Certificate IV in Motor Sport Technology must have completed AUR30916 Certificate III in Motor Sport Technology, or be able to demonstrate equivalent competency.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 10

1 core unit, plus

9 elective units, of which:

- up to 9 units may be chosen from the Elective Units listed below
- up to 2 units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements

Elective Units

Unit code	Unit title
AURETR012	Test and repair basic electrical circuits
AURETR023	Diagnose and repair spark ignition engine management systems
AURLTB001	Overhaul light vehicle braking system components
AURLTD005	Diagnose and repair light vehicle suspension systems
AURLTQ001	Diagnose and repair light vehicle final drive assemblies
AURLTQ012	Diagnose and repair light vehicle drive shafts
AURLTX001	Diagnose and repair light vehicle manual transmissions
AURMCA001	Manage motor sport team media liaison
AURMCA002	Manage motor sport team promotional partnerships and marketing
AURMGA002	Manage personal presentation and development in a motor sport environment
AURMKA001	Manage motor sport data
AURMMA002	Manage the preparation of motor sport competition vehicles
AURMMA003	Manage motor sport operations
AURMMA004	Manage motor sport team development
AURMMA005	Manage team pit lane and service area operations at motor sport events
AURMMA006	Develop and implement race strategies for motor sport events

Unit code	Unit title
AURMTA003	Determine material suitability for competition vehicle components
AURMTA007	Conduct non-destructive testing
AURMTA008	Apply aerodynamic and vehicle dynamic principles and effects to competition vehicles
AURMTA009	Collect and log motor sport data
AURMTD001	Test suspension dampers using a dynamometer
AURMTD002	Prepare competition vehicle suspension
AURMTE001	Test engines using a dynamometer
AURMTF001	Analyse and repair performance carburetted fuel systems
AURMTF002	Analyse and repair performance fuel injection systems
AURMTJ001	Select and prepare motor sport competition vehicle tyres and wheels
AURMTQ001	Analyse and repair faults in performance driveline systems
AURTTA021	Diagnose complex system faults
AURTTD004	Inspect and service suspension systems
AURTTD005	Overhaul steering system components
AURTTE005	Overhaul engines
AURTTF001	Inspect and service petrol fuel systems
AURTTF006	Diagnose and repair petrol carburettor systems
AURTTF007	Overhaul carburettor fuel system components
AURTTQ004	Overhaul final drive assemblies
AURTTX007	Overhaul clutch assemblies
AURTTX008	Overhaul manual transmissions
AURTTX009	Overhaul automatic transmissions
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment

AUR40416 Certificate IV in Automotive Performance Enhancement

Modification History

Release	Comment
Release 2	Updates to elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform advanced analysis and modification tasks to enhance vehicle performance in the automotive retail, service and repair industry.

Entry Requirements

Those undertaking Certificate IV in Automotive Performance Enhancement must have completed AUR30616 Certificate III in Light Vehicle Mechanical Technology, or be able to demonstrate equivalent competency.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 10

3 core units, plus

7 elective units, of which:

- up to **7** units may be chosen from the Elective Units listed below
- up to **2** units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURMTE001	Test engines using a dynamometer
AURMTF002	Analyse and repair performance fuel injection systems
AURTTA021	Diagnose complex system faults

Elective Units

Unit code	Unit title
AURAEA003	Monitor environmental and sustainability best practice in an automotive workplace
AURAF006	Conduct research and present technical reports
AURAF007	Develop and document specifications and procedures
AURAMA006	Contribute to planning and implementing business improvement in an automotive workplace
AURETR023	Diagnose and repair spark ignition engine management systems
AURETR033	Develop and apply network electronic control system modifications
AURETR034	Develop and apply electrical system modifications
AURLTB001	Overhaul light vehicle braking system components
AURLTD005	Diagnose and repair light vehicle suspension systems
AURLTQ001	Diagnose and repair light vehicle final drive assemblies
AURLTQ012	Diagnose and repair light vehicle drive shafts
AURLTX001	Diagnose and repair light vehicle manual transmissions
AURMTA003	Determine material suitability for competition vehicle components
AURMTA007	Conduct non-destructive testing

Unit code	Unit title
AURMTA008	Apply aerodynamic and vehicle dynamic principles and effects to competition vehicles
AURMTD001	Test suspension dampers using a dynamometer
AURMTD002	Prepare competition vehicle suspension
AURMTF001	Analyse and repair performance carburetted fuel systems
AURMTJ001	Select and prepare motor sport competition vehicle tyres and wheels
AURMTQ001	Analyse and repair faults in performance driveline systems
AURTNA001	Estimate and quote automotive vehicle or machinery modifications
AURTTA022	Develop and apply mechanical system modifications
AURTTA023	Develop and apply hydraulic system modifications
AURTTD004	Inspect and service suspension systems
AURTTD005	Overhaul steering system components
AURTTE005	Overhaul engines
AURTTF001	Inspect and service petrol fuel systems
AURTTF006	Diagnose and repair petrol carburettor systems
AURTTF007	Overhaul carburettor fuel system components
AURTTL015	Develop and apply gas fuel system modifications
AURTTQ004	Overhaul final drive assemblies
AURTTX007	Overhaul clutch assemblies
AURTTX008	Overhaul manual transmissions
AURTTX009	Overhaul automatic transmissions
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment

Qualification Mapping Information

Equivalent to AUR40412 Certificate IV in Automotive Performance Enhancement

AUR40514 Certificate IV in Vehicle Loss Assessing

Modification History

Release	Comment
Release 3	Removal of two imported units in elective bank
Release 2	ISC Upgrade - Units in elective bank upgrade to reflect new standards for Training Packages.
Release 1	New Qualification

Qualification Description

This qualification reflects the role of individuals who perform a range of high level evaluation and assessment functions in the vehicle loss assessing industry.

Entry Requirements

Entry Requirements

Those undertaking Certificate IV in Vehicle Loss Assessing are required to have completed an automotive Certificate III qualification in one of the following disciplines.

- Automotive vehicle body or equivalent
- Automotive paint or equivalent
- Automotive mechanical or equivalent
- Automotive electrical or equivalent

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 17

11 core units

6 elective units, of which:

- up to **6** elective units may be chosen from the elective units listed below
- up to **3** elective units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURVLA001	Identify and report vehicle claim fraud indicators
AURVNA001	Provide vehicle loss assessments and identify repair requirements
AURVNA002	Provide vehicle total loss assessments
AURVNA003	Review vehicle repair quotations
AURVNA004	Apply insurance industry knowledge to vehicle loss assessments
AURVNA005	Inspect quality of vehicle repair work
AURVNA006	Identify and value vehicle salvage
AURVNA007	Apply automotive mechanical and electrical knowledge to vehicle loss assessments
AURVNA008	Apply automotive body and paint knowledge to vehicle loss assessments
AURVNN001	Evaluate vehicle bodywork for damage and identify repair requirements
AURVNP001	Evaluate vehicle paintwork for damage and identify refinish requirements

Elective Units

Unit code	Unit title
AURAEA002	Follow environmental and sustainability best practice in an automotive workplace
AURAEA004	Manage environmental and sustainability best practice in an automotive workplace
AURAKA001	Use information technology systems
AURAMA005	Manage complex customer issues in an automotive workplace

Unit code	Unit title
AURVTA004	Inspect damaged vehicle systems and recommend repairs
BSBCUE405	Survey stakeholders to gather and record information
BSBLDR402	Lead effective workplace relationships
BSBMGT403	Implement continuous improvement
BSBREL402	Build client relationships and business networks
BSBWHS301	Maintain workplace safety
BSBWOR404	Develop work priorities
FNSPIM410	Collect, assess and use information

Qualification Mapping Information

No equivalent qualification.

AUR40616 Certificate IV in Automotive Electrical Technology

Modification History

Release	Comment
Release 2	Update of one unit within elective bank
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who work as master diagnostic technicians the automotive service and repair industry; servicing, diagnosing and repairing vehicle electrical systems and components. A range of advanced electrical diagnostic skills and knowledge is necessary, and leadership and supervision of others would be expected.

Entry Requirements

Those undertaking Certificate IV in Automotive Electrical Technology must have completed AUR30316 Certificate III in Automotive Electrical Technology, or be able to demonstrate equivalent competency.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 10

1 core unit, plus

9 elective units, of which:

- up to **9** units may be chosen from the Elective Units listed below
- up to **3** units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title	Prerequisite unit
AURTTA021	Diagnose complex system faults	

Elective Units

Unit code	Unit title	Prerequisite unit
AURAEA003	Monitor environmental and sustainability best practice in an automotive workplace	
AURFAA006	Conduct research and present technical reports	
AURFAA007	Develop and document specifications and procedures	
AURAKA002	Adapt work processes to new technologies in an automotive workplace	
AURANN011	Estimate and quote automotive body repairs	
AURAQA002	Inspect technical quality of work in an automotive workplace	
AURAQA003	Maintain quality processes in an automotive workplace	
AURATA004	Provide technical guidance	
AURATA005	Estimate and quote automotive mechanical and electrical repairs	
AURETB001	Diagnose and repair electric braking systems	
AURETH001	Depower and reinitialise battery electric vehicles	
AURETH002	Service and maintain battery electric vehicles	AURETH001
AURETH003	Diagnose and repair high voltage rechargeable energy storage systems in battery electric vehicles	AURETH001
AURETH004	Diagnose and repair traction motor speed control systems in battery electric vehicles	AURETH001

Unit code	Unit title	Prerequisite unit
AURETH005	Diagnose and repair high voltage traction motors in battery electric vehicles	AURETH001
AURETH006	Diagnose and repair auxiliary motors and associated components in battery electric vehicles	AURETH001
AURETH007	Diagnose and repair system instrumentation and safety interlocks in battery electric vehicles	AURETH001
AURETH008	Diagnose and repair HVAC and rechargeable energy storage cooling systems in battery electric vehicle	AURETH001
AURETH009	Diagnose and repair DC to DC converters in battery electric vehicles	AURETH001 AURETR025
AURETH010	Diagnose and repair high voltage rechargeable energy storage systems in hybrid electric vehicles	AURETR025
AURETH011	Depower and reinitialise hybrid electric vehicles	
AURETH012	Service and maintain electrical components in hybrid electric vehicles	AURETH011
AURETH014	Diagnose complex faults in hybrid and battery electric vehicle network management systems	
AURETR004	Diagnose complex faults in convenience and entertainment systems	
AURETR025	Test, charge and replace batteries and jump-start vehicles	
AURETR033	Develop and apply network electronic control system modifications	
AURETR034	Develop and apply electrical system modifications	
AURETR037	Diagnose complex faults in light vehicle safety systems	
AURETR038	Diagnose complex faults in motorcycle electrical and electronic systems	
AURETR039	Diagnose complex faults in light vehicle theft-deterrent systems	
AURETR040	Diagnose complex faults in vehicle monitoring and protection systems	

Unit code	Unit title	Prerequisite unit
AURETU004	Diagnose and repair air conditioning and HVAC systems	
AURETU005	Retrofit and modify air conditioning and HVAC systems	
AURETU006	Diagnose complex faults in air conditioning and HVAC systems	
AURETU007	Overhaul air conditioning and HVAC system compressors	
AURDNA001	Estimate and quote automotive vehicle or machinery modifications	
AURTTA017	Carry out vehicle safety inspections	
AURTTA026	Diagnose complex faults in electronic over hydraulic systems	
AURTTE001	Apply knowledge of engine science	
AURTTL010	Install LPG, CNG and LNG electrical control equipment	
BSBLED401	Develop teams and individuals	
BSBINN301	Promote innovation in a team environment	
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements	
BSBWOR301	Organise personal work priorities and development	
TAEDEL301	Provide work skill instruction	
TAEDEL404	Mentor in the workplace

AUR40718 Certificate IV in Automotive Body Repair Technology

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform as a team leader or workplace manager in the automotive body repair and refinishing sector. A wide range of technical skills, knowledge, leadership and supervision of others is expected.

Entry Requirements

Those undertaking Certificate IV in Automotive Body Repair Technology must have completed an automotive Certificate III in one of the following disciplines, or be able to demonstrate equivalent competency.

- AUR32116 Certificate III in Automotive Body Repair Technology
- AUR32216 Certificate III in Automotive Glazing Technology
- AUR32316 Certificate III in Automotive and Marine Trimming Technology
- AUR32416 Certificate III in Automotive Refinishing Technology

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- **10** units of competency
 - **6** core units, plus
 - **4** elective units

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome, without duplicating the outcome of another unit chosen for this qualification.

The electives are to be chosen as follows:

- up to **4** units may be chosen from the Elective Units listed below

- up to 2 units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA003	Monitor environmental and sustainability best practice in an automotive workplace
AURAMA005	Manage complex customer issues in an automotive workplace
AURANN011	Estimate and quote automotive body repairs
AURVNA005	Inspect quality of vehicle repair work
AURVTN032	Inspect vehicle damage and determine repair procedures
AURVTN035	Apply original equipment manufacturer repair procedures during vehicle repairs

Elective Units

Unit code	Unit title
AURETH001	Depower and reinitialise battery electric vehicles
AURETH011	Depower and reinitialise hybrid electric vehicles
AURVNA003	Review vehicle repair quotations
AURVNA007	Apply automotive mechanical and electrical knowledge to vehicle loss assessments
AURVNA008	Apply automotive body and paint knowledge to vehicle loss assessments
AURVNN001	Evaluate vehicle bodywork for damage and identify repair requirements
AURVNP001	Evaluate vehicle paintwork for damage and identify refinish requirements

Unit code	Unit title
AURVTA002	Remove and replace vehicle supplementary restraint systems
AURVTA004	Inspect damaged vehicle systems and recommend repairs
AUMAMM001	Influence and lead work groups in an automotive manufacturing workplace
BSBLDR402	Lead effective workplace relationships
BSBREL402	Build client relationships and business networks
BSBRKG304	Maintain business records
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements
MSS403030	Improve cost factors in work practices
TAEDEL404	Mentor in the workplace
TLIL4005	Apply conflict/grievance resolution strategies

AUR40816 Certificate IV in Automotive Mechanical Overhauling

Modification History

Release	Comment
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform advanced troubleshooting and repair tasks in the automotive retail, service and repair industry.

Entry Requirements

Those undertaking Certificate IV in Automotive Mechanical Overhauling must have completed an automotive mechanical Certificate III qualification, or be able to demonstrate equivalent competency.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 10

1 core unit, plus

9 elective units, of which:

- up to **9** units may be chosen from the Elective Units listed below
- up to **2** units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
-----------	------------

Unit code	Unit title
AURTTA021	Diagnose complex system faults

Elective Units

Unit code	Unit title
AURETR017	Overhaul charging system alternators
AURETR018	Overhaul starting system motors
AURETU007	Overhaul air conditioning and HVAC system compressors
AURHTB003	Overhaul hydraulic and air over hydraulic braking system components
AURHTB004	Overhaul air braking system components
AURHTD004	Carry out heavy vehicle wheel alignment operations
AURLTB001	Overhaul light vehicle braking system components
AURLTD006	Carry out light vehicle wheel alignment operations
AURMTA007	Conduct non-destructive testing
AURMTE001	Test engines using a dynamometer
AURPTE004	Overhaul outdoor power equipment engines
AURRTE011	Overhaul two and four-stroke cycle marine outboard engines
AURTTD005	Overhaul steering system components
AURTTE005	Overhaul engines
AURTTF003	Overhaul diesel fuel injection system components
AURTTF007	Overhaul carburettor fuel system components
AURTTM001	Operate and monitor computer numerical control machines
AURTTM002	Repair bearing tunnels and connecting rods in engines
AURTTM003	Apply metal to rebuild engine components

Unit code	Unit title
AURTTM004	Assemble engine blocks and sub-assemblies
AURTTM005	Balance rotating and reciprocating engine components
AURTTM006	Perform advanced machining and blueprinting of engine components
AURTTM007	Carry out crankshaft grinding
AURTTM008	Dismantle and evaluate engine blocks and sub-assemblies
AURTTM009	Fit sleeves and bore and hone engine cylinders
AURTTM010	Heat treat, straighten and reclaim engine components
AURTTM011	Recondition engine cylinder heads
AURTTQ004	Overhaul final drive assemblies
AURTTW003	Carry out machining operations
AURTTX007	Overhaul clutch assemblies
AURTTX008	Overhaul manual transmissions
AURTTX009	Overhaul automatic transmissions
AURTTX010	Overhaul hydrostatic transmissions

Qualification Mapping Information

AUR50116 Diploma of Automotive Management

Modification History

Release	Comment
Release 2	Removal of deleted imported units within elective bank.
Release 1	New qualifications.

Qualification Description

This qualification reflects the role of individuals who undertake leadership and management roles in the automotive industry. It is suitable for entry into senior management roles in all sectors of the automotive industry.

Entry Requirements

This qualification may be accessed by direct entry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 12

6 core units, plus

6 elective units, of which:

- up to **6** units may be chosen from the Elective Units listed below
- up to **2** units may be chosen from a Certificate IV qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAEA004	Manage environmental and sustainability best practice in an automotive workplace
AURAMA005	Manage complex customer issues in an automotive workplace
AURAMA006	Contribute to planning and implementing business improvement in an automotive workplace
BSBFIM501	Manage budgets and financial plans
BSBMGT502	Manage people performance
BSBWHS501	Ensure a safe workplace

Elective Units

Unit code	Unit title
AURAAA002	Determine retail rates for automotive products and services
BSBCUS501	Manage quality customer service
BSBFIA401	Prepare financial reports
BSBFRA403	Manage relationship with franchisor
BSBHRM405	Support the recruitment, selection and induction of staff
BSBHRM505	Manage remuneration and employee benefits
BSBINN502	Build and sustain an innovative work environment
BSBLED401	Develop teams and individuals
BSBMGT517	Manage operational plan
BSBMKG523	Design and develop an integrated marketing communication plan
BSBPUR402	Negotiate contracts
BSBWOR501	Manage personal work priorities and professional development
BSBWOR502	Lead and manage team effectiveness

Unit code	Unit title
TLIA4005	Check and evaluate records and documentation
TLIA5058	Manage facility and inventory requirements

AUR50216 Diploma of Automotive Technology

Modification History

Release	Comment
Release 2	Update of imported unit in elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who diagnose, analyse, evaluate, design and modify vehicle systems in the automotive retail, service and repair industry.

Entry Requirements

Those undertaking the Diploma of Automotive Technology must have completed an automotive Certificate IV qualification in one of the following disciplines, or be able to demonstrate equivalent competency.

- AUR40216 Certificate IV in Automotive Mechanical Diagnosis
- AUR40816 Certificate IV in Automotive Mechanical Overhauling

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 12

1 core unit, plus

11 elective units, of which:

- up to **11** units may be chosen from the Elective Units listed below
- up to **2** units may be chosen from a Certificate IV qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURFA007	Develop and document specifications and procedures

Elective Units

AUR50316 Diploma of Motor Sport Technology

Modification History

Release	Comment
Release 2	Update to imported unit in elective bank.
Release 1	New qualification.

Qualification Description

This qualification reflects the role of individuals who perform as operational managers in the motor sport industry.

Entry Requirements

Those undertaking the Diploma of Motor Sport Technology must have completed AUR40316 Certificate IV in Motor Sport Technology, or be able to demonstrate equivalent competency.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Packaging Rules

Total number of units = 9

3 core units, plus

6 elective units, of which:

- up to **6** units may be chosen from the Elective Units listed below
- up to **2** units may be chosen from a Certificate IV qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

Core Units

Unit code	Unit title
AURAMA006	Contribute to planning and implementing business improvement in an automotive workplace
AURMMA003	Manage motor sport operations
AURMMA004	Manage motor sport team development

Elective Units

Unit code	Unit title
AURETB002	Analyse and evaluate electrical and electronic faults in dynamic control management systems
AURETE001	Analyse and evaluate electrical and electronic faults in engine management systems
AURETR034	Develop and apply electrical system modifications
AURETX001	Analyse and evaluate electrical and electronic faults in driveline management systems
AURLTB002	Analyse and evaluate faults in light vehicle braking systems
AURLTD007	Analyse and evaluate faults in light vehicle steering and suspension systems
AURLTE003	Analyse and evaluate faults in light vehicle engine and fuel systems
AURLTQ003	Analyse and evaluate faults in light vehicle transmission and driveline systems
AURMCA001	Manage motor sport team media liaison
AURMCA002	Manage motor sport team promotional partnerships and marketing
AURMMA005	Manage team pit lane and service area operations at motor sport events
AURMMA006	Develop and implement race strategies for motor sport events
AURMTA003	Determine material suitability for competition vehicle components

Unit code	Unit title
AURMTA008	Apply aerodynamic and vehicle dynamic principles and effects to competition vehicles
AURTTA022	Develop and apply mechanical system modifications
BSBWHS401	Implement and monitor WHS policies, procedures and programs to meet legislative requirements
MSMENV672	Develop workplace policy and procedures for environmental sustainability

AUMABA002 Operate load shifting equipment

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMABA3002 Operate load shifting equipment

Application

This unit describes the performance outcomes required to safely use load shifting equipment.

It applies to those in an automotive environment and involves the application of skills and knowledge to select and use suitable load shifting equipment and perform pre-operational inspections to ensure its safe operation.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Manufacturing - Common

Unit Sector

Support and Logistics

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Inspect load shifting equipment	<p>1.1 <i>Inspection of load shifting equipment</i> is completed according to <i>workplace procedures</i></p> <p>1.2 Load weights and volumes are identified, and confirmed by supervisor</p> <p>1.3 Equipment faults are identified, documented and reported to appropriate personnel</p>

Elements	Performance Criteria
2. Lift, shift and place load	<p>2.1 Load characteristics and handling requirements are identified and appropriate shifting device is selected</p> <p>2.2 Shifting route is planned and identified hazards are controlled</p> <p>2.3 Load is placed in specified locations without causing damage to property, machinery or equipment</p> <p>2.4 Lift, shift and placement of load are completed using approved work health and safety (WHS) methods and equipment, according to workplace procedures</p>
3. Complete load shifting operations	<p>3.1 Post-inspection of load shifting equipment is completed</p> <p>3.2 Identified faults are tagged and reported</p> <p>3.3 Load shifting equipment is stored and secured</p> <p>3.4 Load shifting documentation and maintenance records are completed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret load shifting equipment operating procedures and safety requirements review load shifting equipment pre- and post-inspection schedules.
Writing skills to:	<ul style="list-style-type: none"> legibly complete inspection schedules, maintenance reports and workplace documents.
Oral communication skills to:	<ul style="list-style-type: none"> convey identified equipment faults to appropriate personnel speak clearly and directly to inform others of loading and shifting requirements communicate equipment operating instructions and load weights and volumes to co-workers.
Numeracy skills to:	<ul style="list-style-type: none"> identify and where necessary estimate weights and volumes of objects to be shifted identify numbers in metric and imperial units and measurements.
Planning and organising skills to:	<ul style="list-style-type: none"> identify and prepare load shifting equipment and work area identify overhead and ground level workplace hazards conduct pre- and post-use inspection of equipment complete workplace documentation.

Skills	Description
Problem-solving skills to:	<ul style="list-style-type: none"> • identify load shifting equipment appropriate for the job • identify load shifting equipment faults and defects.
Teamwork skills to:	<ul style="list-style-type: none"> • advise co-workers of load shifting activities.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Inspection</i> must include:	<ul style="list-style-type: none"> • hydraulic and pneumatic leaks • lifting block • operation of control system • vehicle hazard warning light • wheels and tyres • wire rope, chains and lifting attachments.
<i>Load shifting equipment</i> must include:	<ul style="list-style-type: none"> • overhead travelling crane • pallet truck • trolley jack.
<i>Workplace procedures</i> must include:	<ul style="list-style-type: none"> • equipment operating instructions • identifying load weights and volumes • pre- and post-use inspection of equipment • recording and reporting • load storage location • WHS requirements.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AUMABA002 Operate load shifting equipment

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMABA3002 Operate load shifting equipment

Performance Evidence

Before competency can be determined, individuals must have competently operated load shifting equipment on a minimum of two occasions.

Individuals must demonstrate they can:

- conduct pre- and post-operational checks to load shifting equipment
- comply with workplace procedures and relevant load shifting regulations, standards and codes of practice
- document and report load shifting equipment faults
- demonstrate safe operating techniques for lifting, shifting and placing loads in line with work health and safety (WHS) and workplace requirements
- select and use load shifting equipment appropriate to weight and volume of load
- complete load shifting equipment records.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- WHS requirements when operating load shifting equipment, including overhead and ground level workplace hazards
- types, application and operation of load shifting equipment, including:
 - overhead travelling crane
 - pallet truck
 - trolley jack
- inspection procedures for load shifting equipment
- methods of determining load specifications, including weight, size and type
- methods of determining appropriate load shifting equipment for the circumstance
- load shifting equipment maintenance reports and schedules
- load shifting equipment storage procedures.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements and hold relevant load shifting equipment licences.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the operation of load-shifting equipment, e.g. load shifting equipment log books.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- load shifting devices and equipment
- workplace documentation relating to load shifting, including load shifting equipment inspection documentation
- load shifting equipment operating instructions and procedures
- relevant to an automotive manufacturing environment.

AUMAF001 Apply for jobs and undertake job interviews

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMAF01001 Manage personal career goals

Application

This unit describes the performance outcomes required to prepare and apply for a job in a range of contexts.

It involves the application of skills and knowledge at secondary school level or above.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Manufacturing – Common

Unit Sector

Foundation Skills

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Gather and evaluate information on employment opportunities	<p>1.1 Employment sources are identified and searched, and employment opportunities identified</p> <p>1.2 Opportunities are reviewed and additional information obtained</p> <p>1.3 Opportunities are clarified and graded according to own preferences, and a preferred opportunity is chosen</p>

Elements	Performance Criteria
2. Prepare and apply for a job	2.1 Selection criteria in job opportunity are reviewed 2.2 Own skills profile is analysed against selection criteria 2.3 Application for preferred job opportunity is prepared against criteria and checked for errors
3. Prepare a résumé	3.1 Résumé content is identified and prepared 3.2 Résumé is completed using an appropriate structure and format, and checked for errors
4. Prepare for and undertake a job interview	4.1 <i>Preparation for job interview</i> is undertaken 4.2 Potential interviews are rehearsed 4.3 Interview is undertaken
5. Review and evaluate interview performance	5.1 Feedback on performance in the interview is sought 5.2 Strengths and areas for improvement in the application and interview process are identified 5.3 Strategies for improving application and interview skills are identified

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> pose simple questions to help focus information search use simple web searches to locate information evaluate relevance of information on familiar subjects develop a simple plan to achieve personal goals.
Reading skills to:	<ul style="list-style-type: none"> interpret job application and understand job role description check for errors in typed job application and résumé.
Writing skills to:	<ul style="list-style-type: none"> complete a job application and a résumé.
Oral communication skills to:	<ul style="list-style-type: none"> rehearse and undertake an interview for a job.
Numeracy skills to:	<ul style="list-style-type: none"> interprets and uses times and dates follows directions to get to interview location.
Digital literacy skills to:	<ul style="list-style-type: none"> operate a computer to search employment databases and find information about an employer and job opportunity.
Planning and organising	<ul style="list-style-type: none"> plan and rehearse an interview

Skills	Description
skills to:	<ul style="list-style-type: none"> arrive at interview on time wearing appropriate clothing and with relevant documentation.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Preparation for job interview</i> must include:	<ul style="list-style-type: none"> anticipating interview questions and planning suitable answers clarifying the time and place of the interview making sure personal presentation is appropriate sourcing accurate information on the organisation and job position.
---	---

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AUMFA001 Apply for jobs and undertake job interviews

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMFA1001 Manage personal career goals

Performance Evidence

Before competency can be determined, individuals must have competently prepared for and undertaken a job interview on a minimum of three occasions.

Individuals must demonstrate they can:

- find an appropriate job offer using an employment database
- complete a job application
- complete a résumé
- undertake and evaluate a job interview.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- methods of sourcing jobs
- methods of prioritising job options
- procedures for completing job applications, including procedures for completing selection criteria
- procedures for completing résumés, including using résumé templates in computer word-processing programs
- interview techniques and strategies for improving interview performance.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to job applications and job interviews, e.g. an employer's letter advising of job application outcome.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- employment databases, including paper-based and internet
- computer with word-processing software that includes résumé templates.

AUMAMM001 Influence and lead work groups in an automotive manufacturing workplace

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMAMM3001 Influence and lead work groups in an automotive manufacturing environment

Application

This unit describes the performance outcomes required to influence and lead work groups and resolve problems in an automotive manufacturing environment.

It involves the application of skills and knowledge at a specialist level.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Competency Field

Manufacturing - Common

Unit Sector

Management, Leadership and Supervision - Manufacture

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section

Elements	Performance Criteria
1. Plan and determine work group task	<p>1.1 Work instructions and work health and safety (WHS) requirements are identified</p> <p>1.2 Current work processes are monitored for efficiency and effectiveness</p> <p>1.3 Process methods necessary to complete a group task are planned</p> <p>1.4 Responsibility for planning and completing components of the group task is assigned on an individual or shared basis</p>
2. Participate in work group task	<p>2.1 Communication methods appropriate to the group task are applied</p> <p>2.2 Responsibility for quality and project timelines and proposed productivity outcomes are agreed</p> <p>2.3 Assistance in completing the group task is sought from appropriate personnel as required</p> <p>2.4 Problems are discussed and resolved according to workplace procedures</p>
3. Monitor progress of work group task	<p>3.1 Contribution of individual group members to work task progress is monitored</p> <p>3.2 Feedback is provided to the work group on effectiveness of the group task</p> <p>3.3 Ways of improving performance are proposed and agreed on</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret team key production indicators and production goals interpret production requirements and meeting agendas interpret work instructions.
Writing skills to:	<ul style="list-style-type: none"> legibly enter information into manufacturing control documents complete production control sheets and graphs legibly complete safety, accident and incident reporting documents.
Oral communication skills to:	<ul style="list-style-type: none"> actively participate in team decision making and team meetings communicate and contribute to the structure of team tasks.

Skills	Description
Numeracy skills to:	<ul style="list-style-type: none"> • read, interpret and prepare control sheets and charts • interpret team key production indicators and production goals.
Planning and Organising skills to:	<ul style="list-style-type: none"> • adapting to changing work conditions • manage time when planning, preparing and organising work priorities.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Work instructions</i> must include:	<ul style="list-style-type: none"> • machine set-up procedures • operator instruction sheets (OIS) or workplace equivalent • preventative maintenance checklists • process control plans (PCPs) or workplace equivalent • standard operating procedures (SOPs) or workplace equivalent.
---	--

Unit Mapping Information

Assessment Requirements for AUMAMM001 Influence and lead work groups in an automotive manufacturing workplace

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMAMM3001 Influence and lead work groups in an automotive manufacturing environment

Performance Evidence

Before competency can be determined, individuals must have competently participated in influencing and leading work groups on a minimum of three occasions.

Individuals must demonstrate they can:

- give and receive instructions relating to group task
- work and communicate effectively with others in an automotive manufacturing environment
- influence and lead work groups within scope of own authority to:
 - achieve production goals
 - achieve work quality goals
 - identify problems and apply problem-resolution techniques
- follow work instructions, workplace diversity, equal opportunity and conflict-resolution procedures
- respond constructively to changing work requirements
- show initiative in adapting to changing work conditions or contexts
- manage time when planning, preparing and organising work priorities.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- established workplace communication techniques, channels and protocols
- work health and safety (WHS) requirements relating to influencing and leading automotive manufacturing work groups
- workplace diversity, equal opportunity and conflict-resolution procedures when influencing and leading work groups
- quality systems and performance measures
- recording, reporting and maintenance procedures relating to influencing and leading automotive work groups.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to activities related to leading work groups in an automotive manufacturing environment.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- work instructions
- workplace conflict-resolution, diversity and equal opportunity procedures that inform work involving influencing and leading automotive manufacturing work groups.

AUMAQA001 Apply quality assurance techniques

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMAQA4001 Apply quality assurance techniques
Release 2	Amendments made to the unit to include OHS requirements. Reference to SNR updated to NVR in Assessment Conditions to reflect new Standards for Registered Training Organisations.

Application

This unit describes the performance outcomes required to apply quality assurance techniques required in an automotive manufacturing environment.

It involves the application of skills and knowledge during the design, development and production of automotive plant, tools, equipment and systems at a production worker level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Manufacturing - Common

Unit Sector

Quality

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Interpret and apply workplace quality	1.1 <i>Instructions</i> and plans are interpreted to identify processes and materials to complete work tasks

Elements	Performance Criteria
standards	<p>1.2 Workplace quality standards are interpreted and applied to work tasks</p> <p>1.3 Process improvement tools are used either individually or in a team to identify design, development and production quality problems</p>
2. Monitor and report on quality	<p>2.1 Finished materials and products are checked for quality against workplace quality standards and according to <i>workplace procedures</i></p> <p>2.2 Non-conforming materials and products are identified and reported</p> <p>2.3 Quality problems are analysed to identify the root cause using analytical tools</p> <p>2.4 Strategies to improve quality are developed and recommended according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> identify and review quality improvement plans interpret instructions and plans, relevant legislation, regulations, standards, codes of practice, safe work practices and workplace procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly record and report quality improvement progress.
Oral communication skills to:	<ul style="list-style-type: none"> communicate between production and quality team members discuss quality improvement plans with team leader and clarify quality assurance requirements.
Numeracy skills to:	<ul style="list-style-type: none"> use analytical tools, instructions and plans calculate materials to complete work tasks.
Digital literacy skills to:	<ul style="list-style-type: none"> use computers and computer software, such as email, databases, spreadsheets and word processing.
Teamwork skills to:	<ul style="list-style-type: none"> work effectively with diverse team members.

Range of Conditions

and occupational health and safety (OHS) This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Instructions</i> must include:	<ul style="list-style-type: none"> • engineering specifications and drawings • operator instruction systems (OIS) or workplace equivalent • process control plans (PCPs) or workplace equivalent • standard operating procedures (SOPs) or workplace equivalent.
<i>Workplace procedures</i> must include:	<ul style="list-style-type: none"> • quality standards • use of tools and equipment • work health and safety (WHS) and occupational health and safety (OHS) requirements • workplace recording and reporting.

Performance Evidence

Before competency can be determined, individuals must have competently applied quality standards on a minimum of three occasions.

Individuals must demonstrate they can:

- comply with workplace production standards and quality assurance techniques
- apply workplace procedures relating to quality assurance techniques
- communicate effectively with team leaders and team members to ensure quality assurance
- document quality improvement activity and techniques
- complete quality improvement reports.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- quality processes
- workplace procedures relating to quality assurance techniques
- process improvement tools
- processes and procedures for implementing quality improvement activities, including:
 - processes and required resources from a quality improvement plan
 - identifying and allocating tasks from the quality improvement plan
 - recording and reporting procedures for monitoring progress of quality improvement plan activities
- types, layout and application of quality improvement activity reports.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the application of quality assurance techniques.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- tools, equipment and machinery required when producing motor vehicles
- workplace procedures relating to quality assurance techniques
- quality improvement plan
- process control plans (PCPs) or workplace equivalent.

AUMGTG001 Install fixed and moveable glass components on vehicles

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTG3001 Install fixed and moveable glass components

Application

This unit describes the performance outcomes required to cut, prepare and install fixed and moveable glass components on vehicles.

It applies to those in an automotive service and repair environment and involves the application of skills and knowledge at a production worker level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Manufacturing - Bus, Truck and Trailer

Unit Sector

Technical - Glazing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Fabricate templates for glass components	1.1 Job specifications are identified from work orders and work instructions 1.2 <i>Workplace procedures</i> are identified 1.3 Templates are fabricated from selected materials to meet job

Elements	Performance Criteria
	specifications
2. Mark and cut glass openings	<p>2.1 Templates are used to mark and cut glass opening using workplace methods and equipment</p> <p>2.2 Vehicle panels and trims are prepared for installing glass components</p>
3. Install glass components	<p>3.1 Adhesives or glass retaining system are identified and selected according to work order and job specification</p> <p>3.2 Glass components are installed according to vehicle manufacturer specifications</p> <p>3.3 Installed glass components are checked against specifications and leak tested, and corrective action is taken as required</p>
4. Complete work processes	<p>4.1 Work area is cleaned, and materials disposed of or recycled according to workplace procedures</p> <p>4.2 Tools and equipment are cleaned, checked, maintained and stored according to workplace procedures</p> <p>4.3 Workplace documentation is completed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret job specifications and work instructions identify work health and safety (WHS) requirements from workplace procedures interpret operating procedures of tools and equipment identify work orders.
Writing skills to:	<ul style="list-style-type: none"> complete job sheets relating to installation.
Numeracy skills to:	<ul style="list-style-type: none"> identify, mark out and measure glass components and templates according to specifications use measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Workplace procedures</i> must include:</p>	<ul style="list-style-type: none"> • recording and reporting guidelines for installing glass components in vehicles • use of equipment for installing glass components in vehicles • WHS requirements related to installing glass components in vehicles, including: <ul style="list-style-type: none"> • vehicle protection measures • personal protective equipment, including safety glasses, gloves and coveralls • workplace quality guidelines for installing glass components in vehicles.

Assessment Requirements for AUMGTG001 Install fixed and moveable glass components on vehicles

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTG3001 Install fixed and moveable glass components

Performance Evidence

Before competency can be determined, individuals must have competently installed glass components on vehicles on a minimum of two occasions.

Individuals must demonstrate they can:

- interpret job information
- mark out and fabricate templates for glass components
- select appropriate glass sealants, adhesives, tools and equipment
- prepare, install and adjust fixed and moveable glass components according to workplace procedures and work health and safety (WHS) requirements
- leak test installed glass components
- complete job sheets relating to installation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures and WHS requirements relating to installing fixed and moveable glass components on vehicles
- work documentation covering procedures, specifications, schedules and work plans
- template measuring and marking out procedures
- cutting procedures for vehicle panels and trim
- installation procedures for fixed, bonded and moveable glass components
- urethane, rubber and butyl installation methods
- bonded glass installation methods.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles on which they have worked, e.g. work sheets.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- tools and equipment required for installing glass components
- automotive vehicle or simulated frame for glass installation
- materials to produce templates for glass components
- fixed and movable glass components
- work orders and job specifications
- WHS requirements for installing glass components on vehicles, including:
 - vehicle protection equipment
 - personal protective equipment, including safety glasses, gloves and coveralls
- workplace procedures to install fixed and moveable glass components on vehicles
- workplace documentation relating to installing glass components on vehicles, including:
 - customer details
 - glass warranty information
 - work sheets.

AUMGTS004 Fabricate parts for vehicle sub-assemblies

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTS3004 Fabricate parts for sub-assemblies

Application

This unit describes the performance outcomes required to produce, finish and test parts and components for vehicle sub-assemblies.

It applies to those in an automotive manufacturing environment and involves the application of skills and knowledge at a production worker level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Manufacturing - Bus, Truck and Trailer

Unit Sector

Technical - Fabrication

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Plan and prepare	<p>1.1 Work orders, job specifications and drawings are identified and confirmed</p> <p>1.2 Tools, equipment and materials are identified, selected and prepared according to work order and job specification</p> <p>1.3 Materials are inspected for quality, and defects identified and reported</p>

Elements	Performance Criteria
	1.4 Welding equipment is selected, inspected, tested and adjusted according to job requirements
2. Weld components	2.1 Components are welded as identified in working drawings according to <i>workplace procedures</i> 2.2 Welds are completed to workplace <i>quality standards</i> and weld specifications 2.3 Welded parts are checked against job specifications 2.4 Weld faults are identified and rectified according to workplace procedures
3. Assemble and finish sub-assemblies	3.1 Sub-assemblies are completed and checked against job specification 3.2 Sub-assembly fasteners are tensioned to specifications 3.3 Seals, adhesives and sealants are applied to ensure joints are leak free
4. Complete work processes	4.1 Final inspections are made and faulty sub-assemblies are reworked in line with workplace procedures 4.2 Tools, equipment and work areas are cleaned, maintained, and inspected according to workplace procedures 4.3 Waste material is collected and recycled or disposed of according to workplace procedures 4.4 Faulty equipment is identified, tagged and reported according to workplace procedures 4.5 Work job sheets are completed and reported to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret workplace procedures, work health and safety (WHS) requirements, work orders, job specifications and drawings interpret equipment operating procedures and work instructions.
Numeracy skills to:	<ul style="list-style-type: none"> identify part numbers and quantities interpret job specification measurements set welding equipment use measuring equipment.
Writing skills to:	<ul style="list-style-type: none"> complete faulty equipment tags

	<ul style="list-style-type: none"> legibly complete production documents.
Oral communication skills to:	<ul style="list-style-type: none"> inform team members of suitable fabrication sequence and methods.
Planning and organising skills to:	<ul style="list-style-type: none"> select and prepare equipment, materials and work area fabricate parts for sub-assemblies within required timelines.
Problem-solving skills to:	<ul style="list-style-type: none"> access, interpret and apply work orders and work instructions.
Teamwork skills to:	<ul style="list-style-type: none"> work as part of a production team.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Workplace procedures</i> must include:	<ul style="list-style-type: none"> procedures for recording and reporting the fabrication of parts for vehicle sub-assemblies use of tools and equipment for fabricating parts for vehicle sub-assemblies WHS requirements for fabricating parts for vehicle sub-assemblies workplace quality standards relevant to fabricating parts for vehicle sub-assemblies.
<i>Quality standards</i> must include:	<ul style="list-style-type: none"> component fit and finish of fabricated parts for vehicle sub-assemblies weld quality of fabricated parts for vehicle sub-assemblies.

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTS3004 Fabricate parts for sub-assemblies

Performance Evidence

Before competency can be determined, individuals must have competently fabricated parts for sub-assemblies on a minimum of two occasions.

Individuals must demonstrate they can:

- locate, interpret and apply fabrication information and specifications
- use tools, equipment and welding equipment safely
- fabricate parts for sub-assemblies according to workplace procedures and work health and safety (WHS) requirements
- follow work instructions and production schedules when fabricating parts for vehicle sub-assemblies
- use inspection and checking processes and identify faulty parts of vehicle sub-assemblies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- WHS requirements relevant to fabricating vehicle sub-assemblies
- types of vehicle sub-assemblies and their components
- original equipment manufacturer operating procedures
- component fabrication alignment procedures
- welding types and techniques for fabricating vehicle sub-assemblies
- assembly procedures of vehicle sub-assemblies.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle sub-assemblies that they have fabricated, e.g. production work sheets.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- work instructions for fabricating vehicle sub-assemblies
- vehicle sub-assembly components
- vehicle sub-assembly specifications
- tools, equipment and welding equipment relevant to fabricating vehicle sub-assemblies.

AUMGTY002 Install vehicle components

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTY3002 Mount and install assembled component to chassis or frame

Application

This unit describes the performance outcomes required to mount and install assembled components to a chassis or frame (e.g. vehicle cabin, sleeper or vehicle bodies).

It applies to those in an automotive and related component manufacturing environment and involves the application of skills and knowledge at a specialist level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Manufacturing - Bus, Truck and Trailer

Unit Sector

Technical - Chassis and Frame

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Plan and prepare	<p>1.1 Hand <i>tools and equipment</i> are selected and inspected, and faults repaired or reported</p> <p>1.2 Appropriate lifting equipment is selected and checked for safe operation</p> <p>1.3 Fasteners are identified from job specifications</p> <p>1.4 Job <i>information</i> and working drawings are identified,</p>

Elements	Performance Criteria
	interpreted and confirmed
2. Position and tension components	<p>2.1 Workplace procedures are identified and followed</p> <p>2.2 Components are matched, positioned and secured according to work instruction and component specifications</p> <p>2.3 Fasteners are tensioned to specification</p> <p>2.4 Components are inspected for alignment and quality according to work order and workplace quality standards</p>
3. Hook up systems	<p>3.1 Component service lines are hooked up according to drawings and component specifications</p> <p>3.2 Completed hook-up is checked against job specifications, and then tested and inspected for quality and operation</p>
4. Complete work processes	<p>4.1 Work area and equipment are cleaned, inspected and maintained according to workplace procedures</p> <p>4.2 Faulty equipment is identified, tagged and reported</p> <p>4.3 Work sheets and production schedule are completed and given to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> identify workplace procedures and work health and safety (WHS) requirements interpret job instructions, working drawings, original equipment manufacturer (OEM) guides and, if applicable, requirements of Vehicle Standards Bulletin 6 (VSB6) National Code of Practice – Heavy Vehicle Modifications interpret component specifications identify installation sequences identify work sheets and inspection forms.
Writing skills to:	<ul style="list-style-type: none"> complete production schedules, equipment maintenance forms and faulty equipment tags prepare sequence work plans.
Numeracy skills to:	<ul style="list-style-type: none"> identify drawing and component specifications use measuring equipment identify fastener quantities and tension specifications.

Planning and organising skills to:	<ul style="list-style-type: none"> select and prepare components, equipment and work area.
------------------------------------	---

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> hand and power tools lifting equipment vehicle protection equipment.
<i>Information</i> must include:	<ul style="list-style-type: none"> component and service line specifications component assembly instructions customer requirements manufacturer specifications and guides VSB6 work orders and job specifications workplace procedures and instructions.
<i>Workplace procedures</i> must include:	<ul style="list-style-type: none"> equipment operations quality standards recording and reporting WHS requirements work instructions.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AUMGTY002 Install vehicle components

Modification History

Release	Comment
Release 1	Unit updated to reflect the new standards for Training Packages Replaces AUMGTY3002 Mount and install assembled component to chassis or frame

Performance Evidence

Before competency can be determined, individuals must have competently installed vehicle components on a minimum of two occasions.

Individuals must demonstrate they can:

- mount and install assembled components and service lines to a chassis or frame according to workplace procedures and work health and safety (WHS) requirements
- follow job specifications and work instructions when installing vehicle components
- identify materials lists, working drawings and production requirements
- select components for installation
- select and use tools and equipment for installing vehicle components
- complete workplace documentation relating to installing vehicle components
- apply manual-handling techniques relating to installing vehicle components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures and WHS requirements relating to installing vehicle components, including safe use of vehicle component installation equipment
- quality standards relating to installing vehicle components
- manufacturing procedures and vehicle component specifications
- material-handling techniques for installing vehicle components
- work sheets and production schedule documentation relating to installing vehicle components
- vehicle components
- procedures for operating lifting equipment required to install vehicle components.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles on which they have worked, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- working drawings and component specifications for installation
- original equipment manufacturer (OEM) installation guides
- service line fasteners and assembled components
- tools and equipment required to install vehicle components
- personal protective clothing and equipment relating to work requirements
- Vehicle Standards Bulletin 6 (VSB6) National Code of Practice – Heavy Vehicle Modifications
- workplace procedures for installing vehicle components
- lifting equipment required to install vehicle components.

AURAAA001 Work in an automotive administration role

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to understand the structure and culture of an automotive administration environment as well as the expectations of one's own role, and apply that understanding to own administrative activities. It involves meeting own role requirements, managing daily work activities in a safe and efficient manner, contributing to team activities in a productive automotive administration workplace, and identifying own professional development needs.

It applies to those working in an automotive administration role.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Administration

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Meet automotive administration employment requirements	1.1 Structure of automotive industry sector and relevant associations, occupations and job roles are identified 1.2 Company business requirements are interpreted and work conditions identified 1.3 Company organisational structure, and roles and responsibilities of team members and team leader, are identified 1.4 Own work role, personal responsibilities and accountabilities are clarified 1.5 Lines of authority and reporting requirements are identified and followed 1.6 Company expectations and requirements, including client focus and privacy and confidentiality requirements, are identified and followed
2. Manage daily work activities	2.1 Individual tasks are prioritised and completed according to work schedule, company standards, workplace procedures and team expectations, and within required timeframes 2.2 Assistance is sought from team leader when difficulties arise in achieving allocated tasks 2.3 Changes are made to workload or work priorities as required 2.4 Own work is monitored and adjusted according to feedback from supervisors
3. Maintain a safe environment	3.1 <i>Safety requirements</i> are identified and followed 3.2 Personal work space is kept in a clean, organised and safe condition according to workplace procedures 3.3 Potential hazards and hazardous practices are identified and reported to appropriate persons
4. Contribute to a productive team environment	4.1 Information and instructions relevant to team activities are identified and shared with team members to ensure work goals are met 4.2 Individual contributions to team activities are clarified and confirmed with team members 4.3 Assistance is provided to team members and constructive feedback is provided and encouraged 4.4 Improvements to work activities and variations in the quality of components and work practices are noted and reported to team leader according to workplace procedures 4.5 Causes of disharmony and other barriers to achievement are referred to team leader for resolution

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
5. Identify own development needs	<p>5.1 Personal skills are assessed to identify strengths and improvement opportunities, and are matched against job role and company requirements</p> <p>5.2 Personal goals are determined and potential automotive career path options explored and matched against personal goals</p> <p>5.3 Steps are taken, in consultation with team leader or manager, to identify own learning needs for future work requirements</p> <p>5.4 Opportunities to learn and develop required skills and knowledge for future automotive industry work are identified and acted on as required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret textual and numerical information in product or service documentation.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately enter information into workplace schedules, forms and databases.
Oral communication skills to:	<ul style="list-style-type: none"> participate in verbal exchanges using active listening and questioning techniques.
Numeracy skills to:	<ul style="list-style-type: none"> estimate and calculate timeframes to manage work schedules.
Digital literacy skills to:	<ul style="list-style-type: none"> use digital systems and tools to communicate with others access, organise and present information.
Technology skills to:	<ul style="list-style-type: none"> use office equipment to complete work schedules.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Safety requirements</i> must include:</p>	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • selecting and using personal protective equipment (PPE) • following ergonomic work practices • using correct manual handling procedures when moving workplace items.

Assessment Requirements for AURAAA001 Work in an automotive administration role

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- complete assigned administrative work activities in an automotive administration workplace or a simulated environment on three occasions doing different administrative activities within commercially realistic timeframes
- prepare one daily and one weekly individual work plan or schedule outlining own administrative duties and highlighting the interactions with other team members or activities
- prepare a personal learning and development plan.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to working in an automotive administration workplace, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - following ergonomic work practices
 - using correct manual handling procedures when moving workplace items
- structure of relevant automotive industry sector, and roles of the key industry associations, regulatory bodies, occupations and job roles
- typical administrative duties in the relevant automotive industry sector
- key features of relevant industrial awards, workplace agreements, and trainee or apprentice agreements
- company expectations and requirements, including:
 - working hours, work ethic and presentation standards
 - authority and reporting lines

- automotive terminology relating to work activity
- privacy and confidentiality
- client and customer service ethos
- own job role and accountabilities, including:
 - position description
 - reporting and supervisory arrangements
 - role within team or work group
- techniques for prioritising own work
- methods for documenting work schedules or action plans
- features of effective teams, including:
 - composition of work groups or teams
 - roles and responsibilities of members
 - group dynamics
 - impact of working effectively with others on individual and group performance
 - meeting and reporting procedures
- communication techniques for obtaining and clarifying information and instructions, including:
 - active listening
 - questioning techniques
 - conflict resolution techniques
- methods for obtaining and giving feedback, including:
 - formal and informal performance appraisal methods
 - verbal and non-verbal communication techniques
 - techniques for supporting team members
- personal learning and development, including:
 - techniques for assessing own strengths and opportunities for improvement
 - goal setting methods and techniques
 - sources of information on learning opportunities
- formats for documenting personal learning and development plans.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the assigned administrative work activities they have completed in an automotive workplace, e.g. an individual work plan, or a personal learning and development plan.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive administration workplace or simulated workplace
- team members
- workplace procedures relating to administrative processes
- individual work space and office equipment and technology to complete administrative duties
- sources of information relating to learning opportunities in the automotive industry.

AURAAA002 Determine retail rates for automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to calculate fixed and variable costs to determine retail labour rates and cost of products and services for sale in automotive service and repair workplaces.

It applies to those working in administrative and sales areas of an automotive workplace who are required to calculate costs of products and services to ensure business profitability.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Administration

Elements and Performance Criteria

Assessment Requirements for AURAAA002 Determine retail rates for automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- research and compare costs from external suppliers and competitors for:
 - two automotive workplace services
 - one consumable item
 - one automotive accessory product
- calculate retail rates for above products and services.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- basic accounting principles and practices relating to costings:
 - Goods and Services Tax (GST) calculations
 - mark-up, break even and profit calculations
 - simple and compound interest
 - inflation effects
 - straight line depreciation
- factors impacting on pricing products and services:
 - overheads, including accommodation costs, utilities, depreciation, insurances, licences and other business charges
 - labour costs, including on costs covering leave provision, superannuation, training and workers' compensation
 - actual employee chargeable hours
- sources of information on prices and costs:

- supplier or component price lists
- accounting records
- labour or payroll records
- purchasing records
- repair orders and job cards
- standard repair and warranty times
- key features of workplace software and technology relating to extracting and manipulating data and information.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to determining retail rates for automotive products and services, e.g. itemised calculation of retail rate.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- range of information and data relating to product and service costs, including supplier price lists, workplace sales and service data, financial data and payroll records
- calculator, computer hardware and software, and general office equipment.

Assessment Requirements for AURACA001 Respond to customer needs and enquiries in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- identify needs or enquiries of three different customers with different requirements, including one dissatisfied customer
- provide advice or information on automotive products and services to above customers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- techniques for assisting customers, including:
 - effective questioning
 - active listening
 - building rapport
 - explaining clear options
 - making recommendations
 - finalising contact
- customer service standards and practices relevant to automotive workplaces, including:
 - greeting and farewelling customers
 - recording customer requirements and enquiries
 - customer service delivery standards
 - contact and follow-up procedures
- indicators of customer dissatisfaction, including verbal and non-verbal cues
- techniques for resolving customer problems, including procedures for complaint escalation

- key legal requirements relating to customer rights as a consumer, and business obligations under Australian Consumer Law (ACL)
- procedures for making referrals relating to:
 - customer dissatisfaction
 - suppliers of other products and services
- key features and benefits of workplace-specific products and services
- techniques for undertaking basic calculations to provide information to customers relating to quantities, timeframes, and delivery of automotive products and services.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having responded to customer needs and enquiries, e.g. complaints register.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following must be made available:

- automotive workplace or simulated workplace
- three different customers with different requirements, including one dissatisfied customer.

Assessment Requirements for AURACA002 Manage complex customer requirements in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop an action plan for three different customers with different complex requirements relating to automotive products or services, which must include:
 - costing details
 - quotation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- negotiation, communication and problem-solving techniques, including:
 - active listening
 - questioning techniques
 - interpreting body language
 - negotiating or closing a deal
- types of complex customer requirements relating to:
 - cost requirements
 - warranty requirements
 - customised, bespoke, or unusual requirements
 - special timeframes
 - availability of parts or components
 - requirements of special or important customers
 - complex technical problems
 - matters involving more than one solution or area of service

- needs of customers dissatisfied with previously provided product or service
- complex financial or insurance arrangements
- key legal requirements relating to customer rights as a consumer, and business obligations under Australian Consumer Law (ACL), including:
 - anti-discrimination
 - equal opportunity
 - privacy and confidentiality
 - consumer protection and rights
 - freedom of information
- industry codes of practice and ethical principles, including duty of care and consumer access to appeal processes
- workplace policies and procedures relating to:
 - customer service
 - feedback and complaints handling
 - quality requirements
 - documentation and recording procedures
- detailed automotive product and service knowledge relevant to workplace, manufacturers or suppliers
- sources of additional information about automotive products and services, including:
 - manufacturers and suppliers
 - internet and social media
 - competitors.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having managed complex customer issues in an automotive workplace, e.g. complaints register.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace procedures relating to customer service
- three different customers with different complex requirements
- commercially realistic workplace with manufacturer and/or supplier product or service information
- computer hardware and software and general office equipment.

AURACA003 Build customer relations in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to maintain a customer database, monitor existing customer service processes and operations, and identify opportunities to value add to customer experiences in an automotive workplace.

It applies to those working in the automotive vehicle or component sales and service environment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Sales and Marketing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Maintain customer	1.1 Information relating to new customers is uploaded regularly to

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- update and maintain a customer database according to workplace procedures
- provide a report that shows evidence of monitoring and reviewing information relating to customer needs and value-adding opportunities
- provide evidence of conducting one of the following activities to address customer service standards and requirements:
 - staff or team meeting
 - staff or team training session
 - staff or team information session
 - staff or team member feedback or review.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- procedures for using workplace databases, including:
 - accessing database and entering data
 - retrieving data
 - analysing data, including basic statistical processes, including mean, median and mode
 - presenting data, including tables and graphs
- customer service principles and practices relevant to automotive workplaces, including:
 - recording customer requirements and enquiries
 - contact and follow-up procedures
 - feedback and complaints handling, including feedback surveys

- techniques for value adding to customer services, including creating positive consumer experiences through customer-centred approaches
- procedures for comparing actual customer service operations against expected operations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to customer relationship building activities in an automotive workplace, e.g. customer feedback surveys.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources should be made available:

- automotive workplace or simulated workplace
- office equipment, computer and database software
- customer database containing customer information and data
- workplace procedures relating to customer service and use of database.

AURAEA001 Identify environmental and sustainability requirements in an automotive service or repair workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify environmental and sustainability requirements in an automotive service or repair workplace. It involves identifying direct hazards to the environment from the service and repair of vehicles, as well as identifying sustainability practices that may reduce the environmental impact of work practices and outputs.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Environment

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify methods of controlling hazards to stormwater and wastewater drainage systems	1.1 Storage methods for parts and components containing environmentally hazardous materials are identified 1.2 Trapping, storing and disposal procedures for liquid wastes are identified 1.3 Actions are identified that prevent waste from entering either stormwater or wastewater drainage systems 1.4 Uses of a spill kit are identified
2. Identify methods of protecting air quality and controlling noise hazards	2.1 Methods of minimising airborne particles, gases and fumes are identified 2.2 Methods of containing airborne particles, gases and fumes are identified 2.3 Methods of minimising noise are identified 2.4 Methods of insulating noise from immediate environment are identified
3. Identify general workplace sustainability practices	3.1 Methods of minimising waste are identified 3.2 Methods of sorting and storing items for recycling or disposal are identified 3.3 Methods to reduce resource consumption are identified

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from workplace procedures and literature when identifying environmental and sustainability best practices.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for AURAEA001 Identify environmental and sustainability requirements in an automotive service or repair workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- identify the environmental and sustainability best practices of one automotive service and repair workplace.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- types of waste produced by automotive repair workplaces, including:
 - vehicle wastes, including:
 - coolants
 - oils
 - exhaust emissions
 - evaporative fuel emissions
 - waste components, including tyres
 - noise
 - workplace wastes, including:
 - cleaning materials
 - paper waste
- procedures for controlling hazards to stormwater and wastewater drainage systems, including:
 - trapping, storing and disposing of fluids released from vehicles
 - trapping spills, including the use of spill kits

- preventing hazards entering stormwater and wastewater drainage systems, including grease traps and triple interceptors
- procedures for protecting air quality and controlling noise hazards, including:
 - minimising the emission of airborne particles, gases, fumes and noise
 - containing and redirecting airborne particles, gases and fumes
 - insulating noise from automotive workshops
- procedures for minimising waste
- procedures for sorting and storing items for recycling or disposal
- procedures for reducing resource consumption, including water, electricity, fossil fuels and chemicals.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the automotive repair workplace in which they have identified environmental and sustainability best practices, e.g. company name, address and workshop supervisor.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace that complies with current state or territory environmental regulations.

Assessment Requirements for AURAEA003 Monitor environmental and sustainability best practice in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- carry out an environmental and sustainability audit of one automotive workplace that:
 - identifies the workplace's environmental and sustainability practices and equipment
 - assesses the workplace's ability to comply with commonwealth, state and territory environmental legislation and local government by-laws and regulations.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- environmental regulations and standards relevant to own automotive workplace, including commonwealth, state and territory legislation and local government by-laws and regulations
- procedures for reporting environmental damage and breaches
- procedures and processes that support environmental sustainability practices, including:
 - reducing waste
 - reusing materials
 - recycling waste
- types of waste produced by automotive workplaces and their impact on the environment, including:
 - vehicle wastes, including:
 - coolants
 - oils
 - exhaust emissions

- evaporative fuel emissions
- waste components, including tyres
- noise
- workplace wastes, including:
 - cleaning materials
 - paper waste
 - general rubbish
- procedures for minimising waste
- procedures for sorting and storing items for recycling or disposal
- procedures for reducing resource consumption, including water, electricity, fossil fuels and chemicals
- procedures for controlling hazards to stormwater and wastewater drainage systems, including:
 - capturing, storing and disposing of fluids released from vehicles
 - trapping spills, including the use of spill kits
 - preventing hazards entering stormwater and wastewater drainage systems, including bunding, grease traps and triple interceptors
- procedures for protecting air quality and controlling noise hazards, including:
 - minimising the emission of airborne particles, gases and fumes
 - containing and redirecting airborne particles, gases and fumes
 - insulating noise from automotive workshops
- procedures for monitoring workplace environmental and sustainability practices and equipment, including workplace environmental auditing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Implement environmental action plan</p>	<p>2.1 Workplace procedures, equipment and materials are established to meet workplace environmental and sustainability best practice requirements, or existing procedures, equipment and materials are evaluated and updated as required to determine ability to meet requirements</p> <p>2.2 Checklists are developed to ensure procedures are followed</p> <p>2.3 Safety data sheets (SDS) are sourced and stored, and staff notified of their location</p> <p>2.4 <i>Emergency response procedures</i> for major environmental accidents are developed and documented, and staff are notified of location and documentation developed for recording accidents and spills</p> <p>2.5 Staff are advised of workplace procedures, and use of equipment, materials and checklists</p> <p>2.6 Workplace procedures are put in place to address complaints regarding environmental issues</p>
<p>3. Review environmental action plan</p>	<p>3.1 Environmental laws, regulations and standards, and sustainability best practices relevant to work in the automotive industry are regularly sourced and interpreted</p> <p>3.2 <i>Environmental audit</i> of workplace is carried out regularly and results are compared with environmental laws, regulations and standards, and sustainability best practices</p> <p>3.3 Environmental action plan is updated as required to ensure compliance with environmental laws, regulations and standards, and sustainability best practices relevant to work in the automotive industry</p> <p>3.4 Workplace procedures, equipment and materials are put in place, or existing ones modified, to meet changed workplace environmental and sustainability best practice requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret information relating to environmental laws, regulations and standards, and sustainability best practices.
Writing skills to:	<ul style="list-style-type: none"> develop workplace documentation, such as workplace procedures and checklists legibly and accurately complete environmental incident reports.
Oral communication skills to:	<ul style="list-style-type: none"> communicate ideas and information to ensure all work is undertaken according to environmental best practice.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, estimate material requirements required for the work, and calculate wastage rates of various methods.
Planning and organising skills to:	<ul style="list-style-type: none"> plan and organise activities, including: <ul style="list-style-type: none"> preparing equipment material recycling and waste management systems use planning, checking and inspection techniques to avoid environmental contamination and wastage.
Self-management skills to:	<ul style="list-style-type: none"> work autonomously.
Teamwork skills to:	<ul style="list-style-type: none"> supervise others in ensuring compliance with workplace procedures.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Sustainability best practice</i>	<ul style="list-style-type: none"> recycling or reusing waste
--	--

must include:	<ul style="list-style-type: none"> • conserving energy • conserving natural resources, such as water.
<i>Environmental action plan</i> must include:	<ul style="list-style-type: none"> • workplace environmental and sustainability best practice requirements • actions to meet requirements • person or people responsible for carrying out actions • timeframe for carrying out actions • quantified reduction targets in volume, weight or costs.
<i>Emergency response procedures</i> must include:	<ul style="list-style-type: none"> • dealing with large spills • dealing with toxic chemical leaks.
<i>Environmental audit</i> must include:	<ul style="list-style-type: none"> • determining staff adherence to workplace procedures • determining types and occurrences of accidents • identifying workplace activities and equipment that are required to comply with environmental laws, regulations and standards • identifying workplace activities relevant to sustainability best practices • analysing suitability of safety data sheets • analysing suitability of workplace procedures and equipment to comply with environmental laws, regulations and standards, including analysing new technologies.

Assessment Requirements for AURAEA004 Manage environmental and sustainability best practice in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- develop, implement and review an environmental action plan for one automotive workplace.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- environmental regulations and standards relevant to own automotive workplace, including commonwealth, state and territory legislation and local government by-laws and regulations
- procedures and processes that support environmental sustainability practices, including:
 - reducing waste
 - reusing materials
 - recycling waste
- types of waste produced by automotive workplaces and their impact on the environment, including:
 - vehicle wastes, including:
 - coolants
 - oils
 - exhaust emissions
 - evaporative fuel emissions
 - waste components, including tyres
 - noise

- workplace wastes, including:
 - cleaning materials
 - paper waste
 - general rubbish
- procedures for minimising waste
- procedures for sorting and storing items for recycling or disposal
- procedures for reducing resource consumption, including water, electricity, fossil fuels and chemicals
- procedures for controlling hazards to stormwater and wastewater drainage systems, including:
 - capturing, storing and disposing of fluids released from vehicles
 - trapping spills, including the use of spill kits
 - preventing hazards entering stormwater and wastewater drainage systems, including bunding, grease traps and triple interceptors
- procedures for protecting air quality and controlling noise hazards, including:
 - minimising the emission of airborne particles, gases and fumes
 - containing and redirecting airborne particles, gases and fumes
 - insulating noise from automotive workshops
- procedures for developing an environmental action plan, including:
 - identifying environmental and sustainability best practice requirements for an automotive workplace
 - identifying workplace measures, including equipment and processes, to meet environmental and sustainability best practice requirements
 - identifying persons responsible for carrying out measures within and outside the workplace
 - identifying timeframe for carrying out measures
 - identifying quantified reduction targets in volume, weight and costs
 - identifying frequency of performing workplace environmental audits
- procedures for implementing an environmental action plan, including:
 - evaluating workplace environmental and sustainability measures
 - selecting suitable workplace environmental and sustainability measures
 - establishing workplace environmental and sustainability measures, including:
 - developing checklists
 - developing emergency response procedures
 - instructing staff
- procedures for addressing complaints from the public, regulatory authorities and staff
- procedures for reviewing an environmental action plan, including workplace environmental audit.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having managed environmental and sustainability compliance in their automotive workplace, e.g. environmental action plan.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- environmental regulations and standards relevant to automotive workplace, including commonwealth, state and territory legislation and local government by-laws and regulations
- workplace environmental auditing documentation.

AURFA001 Use numbers in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to make basic mathematical measurements and calculations relating to vehicle inspection, service and repairs. It includes undertaking calculations to inform parts and labour quotations and the completion of other automotive workplace documentation.

It applies to those required to apply entry-level proficiency in numerically orientated problem-solving skills.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Foundation Skills

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Estimate and make	1.1 Requirements for measurements are identified from task

Assessment Requirements for AURAF001 Use numbers in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- make accurate measurements relating to three vehicle inspection, service or repair tasks, presenting the measurement outcomes in whole numbers, fractions and percentages
- make accurate calculations based on above measurements demonstrating the use of the following mathematical operations:
 - addition
 - subtraction
 - multiplication
 - division.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures relating to collecting numerical information
- metric and non-metric systems of measurement as they relate to vehicle repairs
- units of measurement used in vehicle inspection, service and repairs
- mathematical operations involving calculations of whole numbers, fractions and percentages, including:
 - addition
 - subtraction
 - multiplication
 - division
- procedures for checking measurement and calculation outcomes
- protocols for using numbers when filling out:

- timesheets
- repair orders.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having used numbers in the automotive workplace, e.g. repair orders showing parts, time worked and work done.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- written automotive text and service information and documentation, such as workshop service manuals, vehicle repair information, stock records, job cards, repair quotations, time sheets, and supply quotations
- equipment appropriate for undertaking measurements and calculations, such as calculators or computers.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, and foundation skills:

- read and respond to three of the following types of automotive text:
 - repair order
 - repair manual
 - workplace signage, including safe operating procedures
 - safety data sheet (SDS)
 - purchase order
 - packing slip.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- types and purpose of common automotive texts, including:
 - repair orders
 - repair manuals
 - workplace signage, including safe operating procedures
 - SDS
 - purchase orders
 - packing slips
- high frequency vocabulary in automotive texts, including automotive glossaries
- reading strategies for locating and recognising information in automotive workplace texts.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having read automotive-specific texts in an automotive workplace, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- written automotive text specified in the performance evidence.

AURFA003 Communicate effectively in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to communicate in an automotive workplace. It involves communicating effectively by conveying and receiving information using verbal and non-verbal techniques and correct automotive technical terminology.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Foundation Skills

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to communicate	1.1 Purpose of communication is established and relevant information is identified

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Non-verbal information is examined and interpreted, as required 1.3 Suitable communication method is chosen to suit audience and purpose 1.4 Relevant information is prepared and prioritised in a logical manner
2. Participate in routine verbal communication	2.1 Information is conveyed clearly in verbal exchanges using language, tone and pace appropriate to audience and purpose 2.2 Automotive terminology, including vehicle and component descriptions, is used accurately and according to industry conventions 2.3 Verbal exchanges with others are conducted in a courteous and <i>professional manner</i> 2.4 Active listening and questioning techniques are used to clarify and confirm understanding 2.5 Own opinions are clearly expressed and those of others are listened to without interruption
3. Carry out routine written and non-verbal communication	3.1 Accurate and factual information is conveyed clearly in written and other non-verbal communication 3.2 Non-verbal techniques appropriate to the situation are used effectively in interactions with others 3.3 Intended meaning is clarified with recipients as required
4. Operate workplace communication system	4.1 Workplace communication device appropriate for the task is selected according to workplace procedures 4.2 Key functions of workplace <i>communication system</i> are used according to equipment specifications and workplace procedures
5. Contribute to workplace communication	5.1 Requests for information from colleagues are responded to in a timely manner 5.2 Contributions are made to work group activities and meetings 5.3 Clarification is sought from supervisor or colleagues relating to instructions or information as required 5.4 Feedback from supervisor or colleagues is sought and incorporated into own communication

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret instructions and requirements in written automotive workplace material.
Digital literacy skills to:	<ul style="list-style-type: none"> use digital systems and tools to: <ul style="list-style-type: none"> communicate with others access, extract, organise and present information.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Professional manner</i> must be:	<ul style="list-style-type: none"> consistent with workplace communication protocols appropriate to age, cultural diversity and special needs.
<i>Communication system</i> must include:	<ul style="list-style-type: none"> communication devices, including: <ul style="list-style-type: none"> telephones computers.

Assessment Requirements for AURAF003 Communicate effectively in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- complete three of the following communication tasks in an automotive workplace:
 - exchange verbal information regarding work task with colleague
 - exchange verbal information regarding work task with supervisor
 - request verbal clarification of work task from supervisor
 - request information from external customer using the telephone
 - request information from external customer using email.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- common automotive technical terms and their application to an automotive workplace
- active listening and questioning techniques
- verbal communication techniques, including:
 - one-on-one
 - group and team interactions
- collaborative and inclusive techniques for interacting with others, including techniques appropriate to differing ages, cultural backgrounds and special needs
- workplace forms and documents in electronic and hard copy, including:
 - workplace instructions or work orders
 - manufacturer service, repair and equipment manuals
- types of non-verbal communication techniques, including:
 - visual gestures and sign language

- body language
- signage
- electronic and mechanical signals
- workplace procedures and requirements relating to:
 - workplace document style, format and layout
 - use of communication systems, including email, telephone, intercom and social media
 - reporting
- types of communication devices in automotive workplaces
- operating features of communication devices, including:
 - computers and tablets with email and social media software
 - intercoms and two-way radios
 - telephone systems, including mobile phones.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having communicated effectively in the automotive workplace, e.g. emails, text messages, or written documentation of conversations.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- supervisor, colleagues and customers with whom to communicate in verbal and written exchanges
- workplace communication devices, including a telephone system and computer.

AURFA004 Resolve routine problems in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, clarify and resolve routine basic problems commonly encountered in an automotive workplace. It involves determining and implementing solutions to identified problems, and identifying and reporting on their effectiveness.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Foundation Skills

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and clarify	1.1 Early indicators of <i>problems</i> are identified or anticipated

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
nature of the routine problem	1.2 Existence of actual problem is verified 1.3 Information regarding problem is gathered from a variety of sources 1.4 Key components of problem are identified within available timeframe
2. Determine, implement and evaluate solution	2.1 Range of possible methods for resolving the problem are identified 2.2 Strengths and weaknesses of each option are analysed 2.3 Optimal solution is determined and applied within workplace timeframes 2.4 Effectiveness of solution is evaluated against options and modifications to solution are made, as required
3. Assist others to identify, clarify and resolve problems	3.1 Assistance is provided to help others identify routine problems 3.2 Problem is discussed with others and any previous solutions are used to help resolve problem

Foundation Skills

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
workplace text	determined 1.3 Key features of text and workplace conventions for written materials are identified 1.4 Information required to complete the text is sourced and collected
2. Finalise draft of written text	2.1 Text is drafted to convey intended meaning of factual information or message 2.2 Queries or concerns about information required in the text are clarified with relevant internal or external personnel 2.3 Text is reviewed and checked for accuracy and meaning, and revisions are made as required 2.4 Supporting documentation or information is collected, organised and attached as required 2.5 Signatory requirements are determined and obtained as required
3. Submit text	3.1 Routine text, supporting documentation, and any required payment, are lodged in a timely manner 3.2 Verification of receipt of text is sought and confirmed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret technical information and instructions to determine requirements for written text.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information and record it accurately in documentation.
Digital literacy skills to:	<ul style="list-style-type: none"> use digital systems and tools to access, filter, extract, organise and submit written text.
Self-management skills to:	<ul style="list-style-type: none"> sequence tasks and follow workplace procedures for preparing and lodging written text.
Technology skills to:	<ul style="list-style-type: none"> use office equipment to lodge forms and copy or send written texts.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Key features</i> must include:	<ul style="list-style-type: none">• layout and organisation of text• text that is appropriate for audience and purpose.
<i>Conveying intended meaning</i> must include:	<ul style="list-style-type: none">• spelling with reasonable accuracy• mostly using correct grammatical structure and punctuation• using appropriate automotive terminology.

Unit Mapping Information

Equivalent to AURFA2005 Write routine texts in an automotive workplace

Assessment Requirements for AURAF005 Write routine texts in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- write two short routine automotive texts for different audiences and purposes
- complete and lodge one industry form with an external organisation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- basic principles of effective written communication, including:
 - differences between requirements for written as opposed to spoken English
 - purposes of written communication used in automotive workplaces
 - features of routine formal and informal workplace texts, including layout
 - writing strategies to complete routine workplace texts, including planning, drafting and reviewing
 - grammar and vocabulary sufficient to complete routine workplace texts legibly
 - writing conventions for routine workplace texts
- workplace procedures or style guides for preparing written texts, including:
 - protocols relating to workplace documentation, including emails and memos
 - workplace sign-off and approval processes relating to written texts
- types, applications and layouts of industry forms, including:
 - forms from licensing and regulatory organisations
 - workplace-specific forms, including:
 - leave application forms
 - requisitions

- time cards
- electronic and manual lodgement processes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having written a range of routine texts in an automotive workplace, e.g. workplace-specific documents and forms that they have completed.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace-specific documents that can be completed
- writing equipment and materials
- office equipment and communication devices
- dictionaries or written language aids.

AURFA006 Conduct research and present technical reports

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to research technical subject matter, and prepare and present a technical report of findings. It involves identifying and analysing research requirements, planning and conducting the research, evaluating findings, and developing and presenting the technical report.

It applies to those working in the automotive service and repair industry at a specialist technician or manager level.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Foundation Skills

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Determine research	1.1 Problem requiring research is identified and clarified

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
requirements	1.2 Research purpose, objectives and limits, and timeframe are identified, clearly defined, and confirmed 1.3 Research outline is prepared and confirmed with key stakeholders
2. Plan research	2.1 Systematic methodology for information collection is developed 2.2 Appropriate sources of research information are identified, reviewed and assessed 2.3 Research design is developed according to research requirements 2.4 Resources that support research requirements are identified and sourced 2.5 Pilot study is conducted to identify variations or additions to proposed research plan
3. Conduct research	3.1 Research is carried out according to established purpose, process and objectives 3.2 Research data is collected, manipulated as required, and stored for future reference
4. Analyse research information	4.1 Research data is prepared for analysis 4.2 Data is analysed using appropriate methods according to workplace procedures 4.3 Conclusions, findings and recommendations are drawn from data analysis and documented according to workplace procedures
5. Prepare and present research report	5.1 Technical report, and as required associated presentation materials, are prepared according to report requirements and workplace standards 5.2 Report is presented according to workplace procedures 5.3 Information management and report storage requirements are followed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and analyse a range of technical information and documents relevant to work activities develop strategies to research and write technical reports.
Reading skills to:	<ul style="list-style-type: none"> interpret technical information, instructions and requirements interpret graphical illustrations, technical information and terminology in manuals and textbooks.
Writing skills to:	<ul style="list-style-type: none"> communicate ideas and information using relevant automotive terminology prepare and present textual and numerical information in technical reports.
Oral communication skills to:	<ul style="list-style-type: none"> clarify and confirm report requirements, including target audience.
Technology skills to:	<ul style="list-style-type: none"> use workplace technology to access technical documents, including computerised technology.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Research outline</i> must include:	<ul style="list-style-type: none"> information entry, including hard and soft copy data storage and version control print output.
<i>Research</i> must include one of the following:	<ul style="list-style-type: none"> desk-based research experiments tests.
<i>Research design</i> must include:	<ul style="list-style-type: none"> research methodology data gathering methods data analysis methods.
<i>Report requirements</i> must satisfy:	<ul style="list-style-type: none"> purpose objectives timeframe planned process reporting, including findings and proposed actions or recommendations.

Workplace standards must include:	<ul style="list-style-type: none">• agreed quality standards• suitability for intended audience and purpose• use of specialist or management summaries• compliance with protocols, conventions and legal requirements relating to acknowledgements and intellectual property.

Assessment Requirements for AURAF006 Conduct research and present technical reports

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- research and prepare two different technical reports, in which the work must involve:
 - accessing and interpreting relevant automotive technical information
 - developing a research outline
 - undertaking detailed research of the subject area
 - analysing data
 - developing conclusions, findings and recommendations
 - presenting reports to intended target audience.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- research methods, including:
 - qualitative, including:
 - participant observations
 - interviews
 - focus groups
 - quantitative, including:
 - questionnaires
 - laboratory experiments
- procedures for undertaking research, including:
 - planning the research, including:
 - identifying the problem

- defining purpose and limits of the research
- developing a research outline
- sourcing information
- designing the research, including:
 - methodology
 - data gathering
 - data analysis
 - conducting pilot studies
- conducting the research, including data gathering, including common testing procedures
- data analysis, including calculating mean, mode, median and percentages
- drawing conclusions from data analysis
- preparing and presenting a technical report, including:
 - writing for a specific audience
 - using pictures and diagrams
 - using style guides
 - storing data and documents.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to researching, preparing and presenting technical reports in the automotive workplace, e.g. technical reports and presentation notes.

Assessment must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- situations requiring research activities and technical report writing
- range of reference materials relevant to technical research activities
- commercially realistic number of co-workers to which the technical report may be presented.

AURFA007 Develop and document specifications and procedures

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify and analyse work task requirements and activities, and then develop and document technical specifications and procedures providing concise and unambiguous direction and guidance relating to them.

It applies to those working in the automotive service and repair industry. It involves conducting research and writing technical specifications and procedures at a specialist technician or manager level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Foundation Skills

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and plan requirements	<p>1.1 Technical activities and tasks requiring specifications and procedures to be developed are identified</p> <p>1.2 Requirements and formats for specifications and procedures are established and confirmed</p> <p>1.3 Requirements for information entry, storage, output and quality of document production are identified according to workplace procedures</p> <p>1.4 Document design is confirmed as appropriate for efficient entry of information and satisfies established document presentation requirements</p> <p>1.5 Authoritative sources and references are identified for use in preparation of specifications and procedures</p>
2. Prepare and develop specifications	<p>2.1 Technical information for inclusion in specifications is collected and validated according to workplace procedures</p> <p>2.2 Specifications are developed that reflect document design requirements and are written in a manner appropriate to workplace</p>
3. Prepare and develop procedures	<p>3.1 Technical activities and tasks requiring procedures to be developed are analysed, sequenced and logically grouped</p> <p>3.2 Technical procedures are developed that reflect document design requirements and are written in a manner appropriate to workplace</p>
4. Document specifications and procedures	<p>4.1 Developed material is documented according to workplace procedures and document design requirements</p> <p>4.2 Information management requirements, including document storage, are followed according to workplace procedures and document requirements</p> <p>4.3 Document is presented ready for use as required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret technical information, instructions and requirements in written material as required to carry out technical research activities interpret and understand a range of written document specifications and procedures found in the automotive workplace.
Writing skills to:	<ul style="list-style-type: none"> communicate ideas and information in a manner appropriate to workplace.
Numeracy skills to:	<ul style="list-style-type: none"> use standard mathematical terminology and structures to incorporate measurements, calibration and test requirements into technical specifications and procedural documentation.
Digital literacy skills to:	<ul style="list-style-type: none"> navigate computer software to collect, add and edit information in documents.
Planning and organising skills to:	<ul style="list-style-type: none"> plan and organise the research and writing of technical specifications and procedural requirements to avoid backtracking and workflow interruptions.
Technology skills to:	<ul style="list-style-type: none"> use computers and software.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURAF007 Develop and document specifications and procedures

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- develop and document the technical specifications and procedures of an automotive repair or manufacturing process that would take more than thirty minutes to complete, including:
 - safety requirements of the process
 - steps involved in undertaking the process, including:
 - use of any tools, equipment and materials
 - explanatory graphics
 - specifications explaining the requirements that a product or assembly must meet or exceed
 - bibliography of sources of information.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- types and application of technical documents, including:
 - technical background reports
 - technical guides
 - technical specifications, including:
 - open specifications
 - closed specifications
 - methods of describing limits, including tolerances, clearances and wear
 - technical and standard operating procedures, including:
 - safe operating procedures

- dismantle and assembly procedures
- literature reviews
- technical document writing techniques, including:
 - confirming document scope
 - understanding the audience
 - developing a plan
 - collecting information, including:
 - using primary and secondary sources
 - acknowledging sources
 - methods of organising information to meet document requirements, including:
 - linear or chronological
 - parts of an object graphics
 - simple to complex
 - specific to general
 - general to specific
 - writing first drafts, including:
 - using style guides
 - using graphics
 - revising and editing drafts
- workplace policies relating to publishing documents with company intellectual property content.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the specifications and procedures that they have developed, e.g. procedural documents relevant to their workplace.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- situations requiring research and documentation of technical specifications and procedures
- range of reference materials relevant to technical research activities and vehicle specifications and procedures.

AURFA008 Interpret and apply automotive repair instructions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to source, interpret and apply repair requirements from automotive workplace instructions and work orders. It involves following worksheets and work orders when conducting vehicle repairs.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Foundation Skills

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and obtain instructions	1.1 Work order and repair instructions are accessed and interpreted 1.2 <i>Recommended repair procedure</i> is identified and relevant information is located and applied

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.3 Work plan is prepared to maximise efficiency, minimise waste and comply with original equipment manufacturer (OEM) or authorised agency's recommended repair procedure
2. Initiate repairs	2.1 Tools, equipment and required materials are identified and checked for serviceability and application 2.2 Repairs are carried out in line with repair instructions, OEM or authorised agency's recommended repair procedure, and workplace procedures , and without causing damage to vehicles, systems or components 2.3 Additional required work identified during repair process is reported and discussed with supervisor prior to proceeding
3. Complete work processes	3.1 Completed work is checked for compliance against work order, OEM or authorised agency's specifications, and workplace quality standards 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored, and faulty electrical equipment is identified, tagged and isolated according to workplace procedures 3.4 Repair work sheets are completed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> access and interpret technical information and diagrammatic representations in written repair instructions and recommended repair procedures.
Writing skills to:	<ul style="list-style-type: none"> accurately and legibly complete workplace documentation, such as repair work plans and faulty equipment tags.
Oral communication skills to:	<ul style="list-style-type: none"> participate in verbal exchanges using active listening and questioning to clarify and confirm repair instructions.

Skills	Description
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical operations, including addition, subtraction, multiplication and division, to calculate OEM or authorised agency repair measurements and calibrations.
Planning and organising skills to:	<ul style="list-style-type: none"> plan and sequence order of repair work prepare work area and select equipment and materials prior to commencing repair work.
Technology skills to:	<ul style="list-style-type: none"> use workplace and specialist repair tools, equipment and measuring devices.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Recommended repair procedure</i> must include:	<ul style="list-style-type: none"> OEM or authorised agency's recommended repair specifications.
<i>Workplace procedures</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working safely with system being repaired.

Assessment Requirements for AURAF008 Interpret and apply automotive repair instructions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- interpret three different sets of work orders for different types of automotive repairs, for each work order:
 - preparing a work plan
 - following the prepared work plan and recommended automotive repair procedures when carrying out the repair work.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working safely with system being repaired
- automotive vehicle and repair terminology
- symbols, codes, legends and diagrammatic representations included in workplace manuals and recommended repair specifications
- repair work planning processes, including:
 - planning and sequencing tasks
 - preparing work area and selecting tools, materials and equipment
 - checking work against instructions and recommended repair specifications
- recommended repair specifications, including:
 - original equipment manufacturer (OEM) requirements
 - authorised agency requirements
 - repair sequence
 - use of specialist equipment

- automotive repair procedures relating to:
 - quality and continuous improvement processes
 - workplace instructions and work orders
 - equipment use, maintenance and storage
 - environmental management, including waste disposal, recycling and re-use guidelines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements:

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having applied automotive repair instructions in the workplace, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- OEM or authorised agency's recommended repair procedures
- repair instructions and work orders
- three different vehicles with repair requirements matched to work orders
- tools and equipment relating to automotive repairs
- workplace procedures relating to repair instructions.

AURFA009 Carry out research into the automotive industry

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to carry out research into the nature and structure of an automotive retail service and repair (RS&R) or automotive manufacturing workplace. It also requires the learner to prepare a research report.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Common

Unit Sector

Foundation Skills

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section

ELEMENT	PERFORMANCE CRITERIA
1. Prepare and plan research	1.1 Automotive industry sectors and types of businesses are identified for research 1.2 Information on the structure and operation of the automotive industry is located 1.3 <i>Safety and environmental requirements</i> for the automotive business are sourced
2. Investigate nature and structure of automotive business	2.1 Type of business, product line and customer profile are identified 2.2 Basic <i>supervision or management structure</i> of business is identified 2.3 <i>Employment conditions</i> of business are identified 2.4 <i>Employee clothing requirements</i> for business are identified 2.5 Workplace plan is drawn detailing identified <i>workplace safety features</i> 2.6 <i>Environment protection features</i> of business are identified 2.7 Findings and details are recorded for research report
3. Prepare research report	3.1 Research findings are reviewed and summarised under broad headings 3.2 Research findings are presented as a document

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate key information quickly and efficiently in appropriate sources.
Reading skills to:	<ul style="list-style-type: none"> interpret information from industry and workplace documents.
Writing skills to:	<ul style="list-style-type: none"> organise findings and prepare a research report.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to obtain information on business structure and operation from business workers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • relevant workplace procedures reflecting health and safety requirements • material safety management systems • hazardous substances and dangerous goods codes.
<i>Supervision or management structure</i> must include one or more of the following:	<ul style="list-style-type: none"> • employee supervision • line or operational management • team leaders • trainers.
<i>Employment conditions</i> must include one or more of the following:	<ul style="list-style-type: none"> • employee attendance times • induction training • shift work and weekend work requirements • type of qualifications.
<i>Employee clothing requirements</i> must include:	<ul style="list-style-type: none"> • any requirements in special work areas, such as foundry or paint shop • ear protection • personal protective clothing and footwear • safety glasses • any uniform requirements.
<i>Workplace safety features</i> must include:	<ul style="list-style-type: none"> • emergency procedures • fire extinguishers (type and location) • first aid facilities • hazardous warning signs • manual-handling procedures.
<i>Environment protection features</i> must include:	<ul style="list-style-type: none"> • emission control • material recycling • waste material disposal.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURAF009 Carry out research into the automotive industry

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- produce a research report on an automotive retail service or repair business or a component manufacturing business.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- automotive industry information, including:
 - sectors of the industry
 - types of businesses in each sector, including their products and services
 - distribution channels for industry products and services
 - relationships of the automotive industry with other industries
 - state and commonwealth government agencies responsible for directing safety and environmental requirements for the automotive industry
 - major automotive industry bodies and associations
 - career opportunities and career paths in the automotive industry
- roles, responsibilities and inter-relationships of individual personnel in an industry environment, including:
 - unions and employer bodies
 - professional associations
- industrial relations issues, including:
 - awards and enterprise bargaining agreements
 - non-award areas
 - cultural issues
- employment obligations in day-to-day work activities in the automotive industry
- new technologies in the automotive industry and their effect on the industry

- procedures for recording, reviewing and presenting research findings.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that validates the industry research.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- reference books and technical manuals
- industry journals
- computer and internet access
- job descriptions
- federal and state industrial awards
- specialist technical publications.

Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to use workplace information technology (IT) systems in a manner that complies with workplace procedures and guidelines. It involves operating hardware and software to access, retrieve, edit and update information, and solving a limited range of routine and predictable problems in relation to the IT system.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Information Technology

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to use workplace IT system	<p>1.1 <i>Safe work practices and procedures</i> to be applied when using workplace IT system are identified</p> <p>1.2 Workplace procedures, manuals or specific instructions relating to the use of IT system and manufacturer or component supplier software are accessed and interpreted</p>

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
2. Use IT system functions	2.1 Workplace IT system and <i>software applications</i> are accessed and operated according to manufacturer or component supplier instructions and workplace procedures 2.2 Keyboard skills are used accurately to carry out the entry, manipulation and retrieval of data and information according to workplace procedures 2.3 Data is transmitted according to electronic data interchange (EDI) procedures 2.4 Save and back-up procedures are carried out regularly according to workplace procedures
3. Edit or update data and information in IT system	3.1 Data and information on IT system to be edited or updated are identified using appropriate sources 3.2 Data and information are edited or updated and checked for accuracy and completeness before saving or backing up according to workplace procedures
4. Solve problems relating to IT system	4.1 Equipment, hardware or software faults are identified and rectified where possible and within scope of own role, or reported to relevant persons according to workplace procedures 4.2 Assistance with any routine IT problems that arise is positively and actively provided to others within scope of own role and where appropriate 4.3 Established workplace maintenance programs for hardware and software systems are followed according to manufacturer or component supplier specifications and workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> • select and interpret key information in IT user manuals, workplace procedures, and manufacturer or component supplier specifications • interpret IT system help files and respond to system help prompts.

Skills	Description
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately enter information into IT systems.
Planning and organising skills to:	<ul style="list-style-type: none"> sort and sequence relevant data and information to access, process and transmit schedule back-up procedures.
Teamwork skills to:	<ul style="list-style-type: none"> liaise collaboratively and assist others with workplace IT systems within scope of own role.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safe work practices and procedures</i> must include:	<ul style="list-style-type: none"> following workplace ergonomic guidelines when operating IT systems using physical aids as required and appropriate to support safe and effective use of IT system hardware.
<i>Software applications</i> must include:	<ul style="list-style-type: none"> databases menus EDI.

Unit Mapping Information

Assessment Requirements for AURAKA001 Use information technology systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit’s elements, performance criteria, range of conditions and foundation skills:

- operate a workplace information technology (IT) system on three different occasions in line with workplace procedures and guidelines, in which the work must involve:
 - accessing and retrieving data and information
 - entering and transmitting data and information
- carry out back-up of workplace IT system following above work activities
- problem solve routine IT problems or breakdowns during above work activities.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to using information technology systems, including:
 - ergonomic guidelines and practices that maintain own health and safety when operating IT systems
 - using physical aids to support safe and effective use of IT system hardware
- basic IT terminology, especially relating to IT help files and user manuals
- key requirements of workplace procedures and manufacturer or component supplier specifications relating to the use of the IT system
- key features of workplace IT system, including:
 - use and operation of equipment
 - purpose, key features and uses of software applications, including electronic data interchange (EDI) programs

- use of hardware and associated relevant input and output devices, including scanning and barcode equipment and, when working in a retail environment, point-of-sale terminals
- routine maintenance requirements for hardware and software systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the workplace IT systems they have used, e.g. IT maintenance schedules.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- an IT system consisting of PC, keyboard and software currently used in the workplace
- relevant user manuals or workplace procedures relating to use of IT systems
- data or information available:
 - on a current IT system
 - to enter and manipulate on the IT system.

AURAKA002 Adapt work processes to new technologies in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to investigate the nature of new technologies, and modify existing work processes and procedures to incorporate the new technologies.

It applies to those working in the automotive industry. It involves adapting work processes and new technologies in an automotive service or repair workplace or an automotive office administration environment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Information Technology

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Investigate the new technology	1.1 Information is obtained on new technology through a range of <i>sources</i> and in line with workplace expectations and procedures 1.2 New technologies of value to the workplace are identified and evaluated to determine their application and suitability 1.3 Impact of new technologies on existing work processes is identified and analysed 1.4 Information about additional materials and equipment required to adopt the technology is sourced and evaluated
2. Modify existing work processes and procedures	2.1 Action plan is prepared to implement new technology into work processes 2.2 Processes are modified to incorporate new technologies 2.3 Impact on workflow and productivity is analysed and minimised through planning process and communication with staff 2.4 Information on the use of new technologies is communicated to staff, as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding relating to new technologies.
Reading skills to:	<ul style="list-style-type: none"> research and critically analyse text and numerical information about new technologies from a range of sources.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately record information about new technologies and convey to others using clear and concise language.
Oral communication skills to:	<ul style="list-style-type: none"> clearly present information to others about new technologies and changes to work processes using concise language and tone appropriate for audience.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to interpret numerical information relating to new technologies and impact on work processes.

Skills	Description
Initiative and enterprise skills to:	<ul style="list-style-type: none"> proactively adopt new technologies and adapt and improve work processes.
Planning and organising skills to:	<ul style="list-style-type: none"> plan and prioritise implementation of new technologies in work processes.
Technology skills to:	<ul style="list-style-type: none"> use computers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Sources</i> must include:	<ul style="list-style-type: none"> desk-based research consultation with technical sources training and information sessions.

Assessment Requirements for AURAKA002 Adapt work processes to new technologies in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- conduct research and collate information on one new piece of technology to be adopted in the automotive workplace
- prepare an action plan outlining the modification of existing work processes and staff training required to incorporate above new piece of technology into the workplace.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- existing workplace activity, processes and procedures relevant to implementation of specific new technology
- sources of information on new technology, including:
 - internet
 - manufacturer or component supplier specifications
 - technical journals and manuals
 - workshops, information sessions, and trade shows
- procedures for cost-benefit analysis of opportunities and risks, considering:
 - cost savings
 - customer satisfaction
 - marketing opportunities
 - new business opportunities
 - payback period
 - profit margins
 - short and long-term benefits

- key features of action or implementation plan covering:
 - timelines
 - costs
 - business case or purpose
 - team or section requirements
- procedures for documenting action or implementation plans:
 - checklists
 - written documents
 - visual management board and items.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having adapted work processes to new technologies in an automotive workplace, e.g. action plans.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service and repair workplace or simulated workplace
- sources of information about new technologies
- tools and materials to research information
- computer hardware and software and general office equipment.

AURALA001 Comply with legal aspects of a service and repair contract in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to act within legal and ethical boundaries of a service and repair contract when dealing with customers, implement measures to avoid disputes, and resolve disputes that do occur.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Regulatory or Legal

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Interpret service and repair contract	1.1 Legal obligations of all parties involved in a valid service and repair contract are identified

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Legal liabilities of repairer performing work without a valid service and repair contract are identified 1.3 Regulatory bodies with authority to inspect the workplace if the customer takes legal action are identified 1.4 Workplace service and repair contract is analysed to determine relevant legal compliance requirements
2. Comply with service and repair contract requirements	2.1 Procedures are implemented to advise customers of the terms of contract into which they are entering 2.2 Procedures are implemented to ensure staff only use valid service and repair contracts 2.3 Procedures are implemented to minimise liability or customer claims in relation to bailment
3. Establish service and repair warranty requirements	3.1 Warranties document is developed detailing requirements 3.2 Procedures are implemented to ensure staff are aware of warranty requirements 3.3 Warranty requirements are documented and stored according to workplace procedures
4. Enforce service and repair contract requirements	4.1 Workplace policy on payment terms for services provided are implemented according to workplace procedures 4.2 Workplace legal rights and obligations when selling or disposing of uncollected vehicles or goods are identified and observed as required 4.3 Legal procedures to recover payment when a customer defaults are identified and implemented as required
5. Conduct dispute resolution processes	5.1 Procedures to minimise disputes with customers are implemented 5.2 Workplace records are maintained to support outcomes in any customer disputes 5.3 External sources of assistance in dispute resolution are identified 5.4 Outcomes of customer disputes and resolutions are analysed to develop procedures to avoid future disputes

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding relating to legal and ethical business dealings.
Reading skills to:	<ul style="list-style-type: none"> interpret: <ul style="list-style-type: none"> textual and numerical information in product or service documentation relating to contractual agreements original equipment manufacturer (OEM) or authorised agency's service and repair agreements vehicle specifications and job requirements.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately complete: <ul style="list-style-type: none"> dispute resolution forms and legal action plans outlining customer's statutory rights and settlement options vehicle warranty documents and reports.
Oral communication skills to:	<ul style="list-style-type: none"> communicate ideas and information to customers and supervisors relating to legal and ethical business dealings participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer information and feedback.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to count and measure.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Warranties document</i> must:</p>	<ul style="list-style-type: none"> meet legal requirements comply with workplace policies not compromise customer consumer guarantees be written in plain language.

Assessment Requirements for AURALA001 Comply with legal aspects of a service and repair contract in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- comply with the legal aspects of service and repair contracts with three different customers, in which the work must involve:
 - an abandoned vehicle
 - a vehicle kept as bailment
 - customer dissatisfaction due to failed installed parts.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- types and purpose of contracts, including:
 - key phases of contract, including:
 - offer
 - acceptance
 - consideration
 - oral and written contracts
- key components of Australian Consumer Law (ACL) relating to legal and ethical requirements of contracts and service agreements, including:
 - damages arising from breach of contracts
 - reasonable costs
 - proof of transaction
 - delays in delivery and non-supply

- charge back
- contracts with minors
- unfair contract terms
- loss or damage to consumer property
- misleading or deceptive conduct
- warranties
- dispute resolution
- key features of automotive service and repair contracts, including:
 - terms of the relationship, including:
 - acknowledgements and agreements from customer
 - definitions
 - rights, responsibilities and obligations of the service provider and principal, including:
 - level of performance and services being provided
 - authority in respect of the vehicle, including entering and test driving the vehicle
 - guarantees and warranties
 - lien to secure payment
 - abandonment of vehicle
 - liability
 - privacy
 - jurisdiction of the contract
 - business processes, including:
 - pricing
 - payment and invoicing
 - returns policies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having complied with the legal aspects of a service and repair contract in an automotive workplace, e.g. correspondence between customer and business.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace n
- commercially realistic range of automotive service and repair contracts
- three different customers with the service and repair contract issues specified in the performance evidence.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- work effectively with others in an automotive workplace, in which the work must involve:
 - participating in one shared work task involving two colleagues
 - providing support on a work task to a colleague
 - responding to feedback provided by a group member
 - facilitating the resolution of a work issue or problem.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- common types of automotive workplace job roles and accountabilities, including:
 - trainee assistant
 - technician
 - diagnostic technician
 - workshop supervisor
 - accounts person
 - sales person
 - business owner
 - customer
- key features of workplace policies and procedures, including:
 - codes of conduct, including those for workplace:
 - discrimination
 - violence, bullying and harassment

- disciplinary policies
- leave policies
- basic communication techniques and styles for different audiences, including appropriate language, tone and emphasis
- fundamentals of working effectively with others, including:
 - active listening
 - establishing common goals
 - assigning roles
 - creating objectives and timelines
 - resolving conflicts quickly and fairly
- methods for obtaining and giving feedback, including:
 - formal and informal performance appraisal methods
 - verbal and non-verbal communication techniques
 - techniques for supporting work group members
- basic ethical principles of respect for persons, including:
 - understanding and respecting cultural differences
 - identifying common ground
- basic conflict-resolution strategies
- workplace procedures and requirements relating to personal presentation, attire and grooming.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having worked effectively with others in an automotive workplace, e.g. supervisor performance reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- commercially realistic range of diverse workplace colleagues
- documentation, including workplace policies and procedures manuals relating to ethics, employee and employer rights and responsibilities, attire and grooming, job descriptions and organisational charts.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- receive and respond to one piece of verbal communication relating to the automotive workplace that includes asking questions and providing responses
- receive and respond to one piece of written communication relating to the automotive workplace
- participate in one workplace meeting relating to the automotive workplace that includes asking questions and providing responses
- prepare and make one presentation of information relating to the automotive workplace
- prepare for and participate in one discussion to resolve a workplace issue and document the outcomes.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- automotive industry technical terms and their application to an automotive workplace
- use of communication systems, including email, telephone, intercom and social media
- procedures for communicating verbally, including:
 - active listening and questioning techniques
 - creating clear, succinct and unambiguous language
 - clarifying meaning
 - choosing language to suit audience
- procedures for communicating in writing, including:
 - accessing and interpreting key concepts of written material
 - organising responses to address questions and according to communication medium

- creating draft documents, including structure and formatting
- editing documents
- procedures for participating in meetings, including:
 - accessing and reviewing previous meeting minutes and agendas
 - contributing to meeting outcomes
 - determining own role in meeting outcomes
- procedures for presenting information, including:
 - determining target audience
 - determining presentation format, including choosing equipment and materials
 - delivering a presentation
- procedures for negotiating between parties, including:
 - determining key factors of issues
 - planning discussions
 - conducting discussions, including:
 - establishing rapport
 - acknowledging disagreements and the views of others
 - dealing constructively with differences
 - staying focused
 - making a strong case without overselling or becoming personal or aggressive
 - compromising to achieve realistic and achievable outcomes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having communicated business information in an automotive workplace, e.g. emails, meeting minutes, or presentation slides.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- commercially realistic range of internal and external customers with whom to communicate
- written communication from internal or external customers
- meetings to attend, including meeting agendas and previous minutes
- equipment and materials appropriate for workplace presentations.

AURAMA003 Conduct information sessions in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare and present information sessions conducted in an automotive workplace, and then follow up on their outcomes. It involves preparing and presenting technical workplace information in structured sessions with workplace participants.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for information	1.1 Specific purpose and objectives of information session are

Assessment Requirements for AURAMA003 Conduct information sessions in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- plan and conduct two information sessions, each covering a different automotive technical or workplace topic
- during above sessions, demonstrate effective communication skills, including:
 - active listening
 - questioning techniques
 - collaborative activities.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- automotive industry technical terms and their application to an automotive workplace
- automotive industry technical information relevant to information session
- workplace procedures relating to conducting presentations, information sessions or meetings
- adult learning principles and training techniques
- types of information sessions, including:
 - demonstration
 - discussion and questioning
 - group work
 - simulations and role play
- presentation aids and materials, including:
 - computer simulations and presentations
 - diagrams, charts and posters

- models
- paper-based materials
- data projector and whiteboard
- techniques to evaluate presentation effectiveness, including:
 - critical friends
 - participant survey or written feedback
 - participant interviews.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the information sessions they have conducted in their workplace, e.g. copies of presentations delivered.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- participants to be involved in the information sessions specified in the performance evidence
- equipment, information, materials and tools appropriate for conducting information sessions
- computers, presentation media and business technology required to prepare information sessions.

Assessment Requirements for AURAMA004 Maintain business image in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- maintain the business image of an automotive workplace over one week, including:
 - ensuring a clean and tidy appearance of the workplace
 - ensuring correct staff attire and grooming
 - ensuring waste is correctly disposed of
 - engaging in one promotional activity to the limits of own role.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to maintaining business image in an automotive workplace, including procedures for:
 - manually handling goods
 - using cleaning chemicals and dangerous goods
 - selecting and using personal protective equipment (PPE)
- procedures for maintaining the physical appearance of an automotive workplace, including procedures for:
 - cleaning buildings, grounds and equipment
 - waste disposal and recycling processes, including designated locations for waste storage and collection
 - maintaining defined areas for specific tasks, including:
 - reception area
 - staff and public amenities

- service and repair work areas
- monitoring maintenance plans
- monitoring workplace signage, including:
 - checking currency
 - placement
 - condition
- procedures for monitoring workplace attire and grooming standards, including procedures for:
 - communicating requirements to staff
 - evaluating staff attire and grooming against workplace standards
- procedures for monitoring waste disposal processes, including:
 - workplace and local government requirements
 - recycling procedures for:
 - office waste
 - service and repair work area waste
 - waste collection schedules
- procedures for promoting workplace products and services, including:
 - basic principles of display and design, including layout and presentation
 - types of display areas, including:
 - signage and fixtures on floor
 - interior or exterior areas
 - permanent or temporary displays
 - publicly accessible areas
 - shelves and windows in areas
 - displaying products, including their rotation, maintenance, storage requirements, pricing and labelling
 - arranging advertising and promotional information.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having maintained the business image of an automotive workplace, e.g. maintenance plans.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace procedures relating to:
 - maintaining equipment and facilities
 - personal presentation, attire and grooming
 - waste disposal and recycling processes
- commercially realistic number of diverse staff working in an automotive workplace.

AURAMA005 Manage complex customer issues in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to resolve complex customer issues and complaints. Complex customer issues include those caused by cost variations, warranty issues, policy matters, additional repair time and disputed work standards. The unit involves examining the exact nature of a customer issue, communicating effectively, making informed judgements, negotiating an outcome or referring the issue to an appropriate person, and documenting outcomes for continuous improvement.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Examine the nature of the issue	1.1 Customer issue and associated feelings and opinions are identified 1.2 Facts relating to the issue are determined using <i>appropriate communication skills</i> 1.3 Workplace procedures and manufacturer or supplier policy relating to the issue are sourced and interpreted 1.4 Further information is researched as required to confirm or clarify issue 1.5 Rights and responsibilities of customer and workplace are determined and communicated to customer
2. Resolve or escalate the issue	2.1 Implications of the issue for customer and workplace are analysed and determined, and suitable resolution options are identified 2.2 Options for resolving the issue are explained and negotiated with customer according to workplace policies and procedures 2.3 Information required to assist customer in evaluating service and product options that best meet customer needs is provided 2.4 Complaints requiring attention from an external party are actioned by referring to appropriate person according to workplace procedures 2.5 Where a resolution cannot be negotiated and agreed, issue is escalated to appropriate person
3. Document issue and outcome	3.1 Record issue, outcome and customer feedback according to workplace procedures 3.2 Report agreed outcome to appropriate person according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> use feedback and experience obtained from negotiating with customers to inform future customer dealings and workplace procedures.
Reading skills to:	<ul style="list-style-type: none"> research and review information about supplier products and services relevant to customer issues.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately complete workplace reports outlining customer issues and associated outcomes.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using collaborative techniques, including active listening and questioning, to gather, clarify and confirm customer issues or complaints summarise and present key points of information to negotiate effectively to resolve the issue.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical operations, including addition, subtraction, multiplication division and percentages, to determine additional costs, refunds and time implications relating to the issue.
Digital literacy skills to:	<ul style="list-style-type: none"> use digital systems and tools to: <ul style="list-style-type: none"> communicate with others access, search and retrieve information relating to products and services.
Initiative skills to:	<ul style="list-style-type: none"> present options and alternatives to negotiate solutions to customer issues.
Planning and organising skills to:	<ul style="list-style-type: none"> select problem resolution methods and techniques appropriate to the circumstances use a planned approach to resolving and negotiating a customer's issue or complaint.
Technology skills to:	<ul style="list-style-type: none"> use office equipment to prepare written information and to communicate with customers via a range of channels.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate that they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- manage the complex issues of three different customers in an automotive service and repair environment, including issues involving two of the following:
 - cost variations
 - warranty issues
 - policy matters
 - additional repair time
 - disputed work standards
- one of the above must involve escalating the issue to appropriate person.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures relating to:
 - customer service
 - dealing with dissatisfied customers
 - complaints handling and recommending appropriate action
 - escalating issues to appropriate person
 - reporting and documenting complaints
- common complex customer issues, including disputes concerning:
 - cost
 - work standards
 - time taken or expected for repairs

- selection of parts
- warranties
- key legal requirements relating to customer rights as a consumer, and business obligations under Australian Consumer Law (ACL)
- negotiation, communication and problem-solving strategies, including:
 - active listening
 - questioning techniques
 - interpreting body language
 - negotiating or closing a deal
- automotive product and service knowledge relevant to workplace manufacturers or suppliers in order to recommend:
 - alternative products and services
 - variations in a limited product and service range.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Assessment Requirements for AURAMA006 Contribute to planning and implementing business improvement in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- review the performance of an automotive workplace against its business plan over twelve months
- analyse the effectiveness of the business marketing strategies against sales over twelve months
- develop a strategy to improve business performance based on the above review and analysis.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key features of a business plan, including:
 - purpose of business plan
 - types of business planning, including:
 - feasibility studies
 - strategic, operational, financial and marketing planning
 - setting short, medium and long-term goals and objectives
 - role of key performance indicators (KPIs) and targets
- key components of financial statements, including:
 - cash flow
 - trends
 - areas of risk
- principles and factors to consider in setting budgets, including:

- setting targets and stretch targets
- business profit margins
- expenditure, including fixed and variable costs
- calculating service and hourly rates
- contingency and unplanned events
- stock holding costs
- rework components and costs
- subcontracting costs
- business development principles, and strategies for improving business performance, including:
 - stages in business development
 - basic marketing concepts and principles
 - promotional activities
 - ways to reduce costs and address budget deficits
- report formats for preparing a business case, including financial analysis.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having contributed to business planning processes and improvement activities in an automotive workplace, e.g. business plans.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- financial information for an automotive workplace budget over a period of 12 months
- workplace business plan
- computer, office equipment and technology to prepare financial and written reports.

AURANN011 Estimate and quote automotive body repairs

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to prepare vehicle or equipment repair quotations for customer and insurance purposes, including associated materials and labour costs. It involves preparing for the task, estimating repair costs, producing written quotations, and completing workplace documentation.

It applies to those working in the automotive body repair industry. The quotes are for light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles or motorcycles. It does not apply to estimating and quoting on vehicle mechanical and electrical repairs.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Loss Assessment or Repair Quoting - Body

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
2. Estimate and cost repairs	<p>2.1 Required replacement parts and materials are estimated and costed according to workplace procedures</p> <p>2.2 Direct labour and subcontractor services are estimated and costed according to workplace procedures</p> <p>2.3 Overheads and mark-up percentages are estimated and costed according to workplace procedures</p> <p>2.4 Potential quotation variations relating to unsighted damage are noted on the quotation</p> <p>2.5 Quotation is prepared according to workplace procedures and relevant legislation</p> <p>2.6 Proposed repair timeframe is assessed and takes into consideration the workplace repair schedule</p> <p>2.7 Final costs, calculations and other details are verified with workplace supervisor</p>
3. Present quotation to customer	<p>3.1 Quotation is presented to customer or insurer for approval</p> <p>3.2 Approval is obtained from customer or insurer to commence repairs</p> <p>3.3 Documentation is completed and quotation filed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret vehicle specifications and job requirements interpret original equipment manufacturer (OEM) repair procedures and recognised body repair industry time guides.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately complete: <ul style="list-style-type: none"> vehicle damage inspection reports repair quotations.
Oral communication skills	<ul style="list-style-type: none"> participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer

Skills	Description
to:	information and feedback.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical operations, including addition, subtraction, multiplication, division and percentages, to perform calculations and check accuracy of costs of options and solutions.
Technology skills to:	<ul style="list-style-type: none"> use workplace technology when preparing a vehicle body repair quotation.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURANN011 Estimate and quote automotive body repairs

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria and foundation skills:

- inspect three different vehicles or equipment with body damage, and for each vehicle or equipment:
 - estimate the cost of replacement parts and labour
 - prepare a written repair quotation for insurance claim purposes and present to customer

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures and work health and safety (WHS) and occupational health and safety (OHS) requirements relating to estimating and quoting automotive body repairs, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using hand tools and equipment
- relevant legislation relating to trade practices and consumer rights, as well as industry codes of conduct
- location and content of specifications relating to the damaged vehicle or equipment being inspected
- body repair quality standards
- procedures for identifying and determining location and extent of vehicle damage, including understanding recalibration procedures and scanning tools
- procedures for estimating and job costing, including calculating:
 - labour costs, including calculating time to perform work, from:
 - inspecting vehicle damage
 - analysing original equipment manufacturer (OEM) or authorised agency repair procedures

- analysing workplace procedures
- parts costs, including those of:
 - new parts
 - second-hand parts
 - repaired parts
- costs relating to external products or services
- procedures for gaining evidence to support repair quotation, including:
 - part dismantling of damaged area for repair plan
 - estimating and documenting indirect or unforeseen damage
 - taking and storing photographs.
 -

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having prepared an automotive body repair quotation, e.g. workplace-specific quotations.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive body repair workplace or simulated workplace
- three different vehicles or equipment requiring body repairs
- customer or individual in the role of a customer
- manufacturer and component repair and replacement costing guides
- OEM repair procedures, repair time manuals and labour rates
- office equipment, including calculators, computer, internet and software
- workplace procedures relating to vehicle or machinery body repairs.
-

AURAQA001 Contribute to quality work outcomes in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to achieve quality work outcomes in own work role by complying with environmental and legal requirements and by planning, preparing and monitoring own work outcomes.

It applies to those working in service, repair, sales or office administration job roles in the automotive industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Assessment Requirements for AURAQA001 Contribute to quality work outcomes in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in the unit's elements, performance criteria and foundation skills:

- contribute to quality work outcomes in three different activities in an automotive workplace, in which the work must involve:
 - identifying quality performance indicators of the activity
 - demonstrating own ability to achieve quality performance indicators
 - demonstrating quality outcome improvements of each workplace activity.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key features of basic quality concepts, including:
 - taking responsibility for own work
 - getting it right the first time
 - reducing variability
 - achieving customer satisfaction
- key features of workplace quality systems and procedures, including:
 - work instructions
 - safe work procedures
 - product specifications
 - equipment maintenance schedules
 - loss and damage control systems covering personal injury, plant, equipment and materials
- work planning processes and performance indicators, including:

- prioritising tasks and time
- setting targets for own work
- identifying reasonable criteria for evaluating own work outcomes
- identifying measures to avoid wastage
- identifying reasonable criteria to judge internal and/or external customer satisfaction
- identifying processes to ensure a 'right first time' approach.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having contributed to the quality of work outcomes in an automotive workplace, e.g. work plans.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- workplace or simulated workplace
- workplace procedures relating to quality requirements.

AURAQA002 Inspect technical quality of work in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to gather information to inspect work done by colleagues to support workplace quality outcomes. It involves demonstrating discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.

It applies to those working in service, repair, sales or office administration job roles in the automotive industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURAQA002 Inspect technical quality of work in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out two technical quality inspections in an automotive service and repair workplace
- complete a workplace quality report relating to the above inspections.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- common automotive industry and quality terminology
- quality systems and procedures relating to automotive workplace, including:
 - quality system documentation, including work instructions
 - product specifications
 - equipment maintenance schedules
 - technical procedures and specifically prepared standards
 - vehicle safety requirements
 - work planning processes
 - safe operating procedures
 - work site environmental control measures
 - workplace reporting procedures
- types of quality inspections, including:
 - periodic inspection during job
 - observation at completion of job
 - random inspections
 - component inspections

- invoicing compliance
- checks of rectification of reported and diagnosed problems
- types of quality specifications or performance indicators, including:
 - time, quantity, quality and cost
 - targeting high risk areas
 - measures to avoid wastage
 - internal and/or external customer satisfaction
 - processes to ensure a ‘right first time’ approach
- procedures for carrying out technical quality inspections, including:
 - identifying relevant quality specifications or performance indicators
 - assigning rankings to quality specifications or performance indicators
 - measuring performance against quality specifications or performance indicators
 - documenting quality inspections, including non-compliance reports.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having inspected the technical quality of work in an automotive workplace, e.g. inspection reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service, repair, sales or office administration workplace or simulated workplace
- commercially realistic situations requiring inspections of technical quality
- work instructions and workplace procedures relating to technical quality inspections.

Assessment Requirements for AURAQA003 Maintain quality processes in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- conduct a quality check of three different workplace activities
- for the above activities:
 - analyse the extent to which work outcomes or processes meet expected quality outcomes
 - document one recommendation for improvement to a process or procedure.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key features of basic quality concepts, including:
 - taking responsibility for own work
 - getting it right the first time
 - reducing variability
 - achieving customer satisfaction
- key features of workplace quality systems and procedures, including:
 - work instructions
 - safe work procedures
 - product specifications
 - equipment maintenance schedules
 - loss and damage control systems covering personal injury, plant, equipment and materials
- work planning processes and performance indicators, including:

- measures to avoid wastage
- processes to ensure a ‘right first time’ approach
- judging internal and/or external customer satisfaction
- procedures for carrying out technical quality inspections, including:
 - identifying relevant quality specifications or performance indicators
 - assigning rankings to quality specifications or performance indicators
 - measuring performance against quality specifications or performance indicators
 - documenting quality inspections, including non-compliance reports
- common procedures for improving work outcomes and processes, including:
 - empowering workers
 - eliminating valueless processes
 - improving training
 - establishing goals
 - implementing gradual changes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having maintained quality processes when working in an automotive workplace, e.g. workplace quality and continuous improvement documents.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service, repair, sales or office administration workplace or simulated workplace
- opportunities to conduct workplace quality checks
- workplace quality procedures and related documentation
- commercially realistic number of co-workers and management
- materials, tools and equipment appropriate for completing quality checks.

AURASA001 Apply automotive workplace safety fundamentals

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply automotive workplace safety fundamentals. It involves preparing for the task, and identifying basic workplace emergency and safety practices and procedures.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Assessment Requirements for AURASA001 Apply automotive workplace safety fundamentals

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- source and interpret the procedure for safely moving one heavy item, and move the item
- source and interpret the procedure for safely handling one dangerous substance in an automotive workplace, and use the substance
- source and interpret the procedure for safely using a piece of electrical equipment in an automotive workplace, and use the equipment
- identify fire safety equipment and its correct application in an automotive workplace
- identify emergency evacuation procedures and responsibilities of self and co-workers in an automotive workplace.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- reasons for ensuring safe work practices in an automotive workplace
- common automotive workplace hazards, including:
 - electricity and water
 - toxic substances
 - flammable materials and fire hazards
 - spillages, waste and debris
- work health and safety (WHS) and occupational health and safety (OHS) procedures and requirements, equipment, and material relating to automotive workplace and personal safety, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - moving heavy items

- handling dangerous substances, including:
 - cleaning materials
 - paints
 - fuels and oils
 - chemicals
- using and storing electrical equipment, including:
 - pre-use checks
 - operating procedures
- location and content of workplace safety procedures
- location and application of fire safety and firefighting appliances and equipment in the workplace
- workplace emergency and evacuation procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having applied knowledge of automotive safety fundamentals in an automotive workplace, e.g. task instructions.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- an automotive workplace or simulated workplace
- tools, equipment and materials used for the automotive service and repair activities specified in the performance evidence
- workplace procedures relating to safe work practices.

AURASA002 Follow safe working practices in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify and follow safety and emergency procedures in an automotive workplace. It involves those safety procedures to be followed when using workplace hand tools and hand-held power tools, fixed equipment, and chemicals, and when running vehicles and machinery. It includes the individual's responsibility for safety and emergency response in the event of an accident or incident.

It applies to those working on agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, motorcycles, mobile plant machinery or outdoor power equipment in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Health and Safety

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and follow workplace safety procedures	1.1 <i>Workplace procedures</i> relating to personal safety are identified and followed 1.2 Unsafe situations and hazards are identified and reported according to workplace procedures 1.3 Machinery and equipment breakdowns are identified and reported according to workplace procedures 1.4 Fire hazards are identified and reported, and precautions taken according to workplace procedures 1.5 Workplace procedures and safety requirements for handling and storing dangerous goods and hazardous substances are identified and followed 1.6 Workplace manual handling procedures are identified and followed 1.7 Participation in any WHS consultative arrangements established by workplace is undertaken
2. Identify and follow workplace emergency procedures	2.1 Workplace emergency procedures regarding illness and accidents are identified and followed 2.2 Safety warning alarms and workplace evacuation procedures are identified and followed 2.3 Firefighting appliances and equipment are located and identified for emergency use and application 2.4 <i>Qualified persons</i> are identified for contacting in the event of an incident, accident or sickness of self, co-workers, staff, customers and others 2.5 Accident and incident documentation requirements are followed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate sources of information relating to workplace safety requirements.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking procedures required to carry out work safely.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately enter information into workplace safety documents and check sheets.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions inform personnel of workplace hazards.
Numeracy skills to:	<ul style="list-style-type: none"> match hazardous material weights and volumes to safety data sheets (SDS) and work instructions.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements to achieve required outcomes while working according to safety requirements.
Self-management skills to:	<ul style="list-style-type: none"> follow workplace safety requirements without constant supervision identify and look after own safety.
Problem solving skills to:	<ul style="list-style-type: none"> recognise when unsure of safety procedures and seek help recognise potential workplace hazards and take action.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Workplace procedures</i> must include procedures for:	<ul style="list-style-type: none"> selecting and using personal protective equipment (PPE) identifying hazards running motor vehicles in the workplace emergency, fire and accident.
<i>Qualified persons</i> must include:	<ul style="list-style-type: none"> those holding a current recognised qualification in any of the following: <ul style="list-style-type: none"> first aid cardiopulmonary resuscitation fire warden and workplace evacuation occupational or work health and safety representative.

Unit Mapping Information

Equivalent to AURASA2002 Apply safe working practices in an automotive workplace

Assessment Requirements for AURASA002 Follow safe working practices in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- move two heavy items in an automotive workplace
- use two different dangerous goods in an automotive workplace
- identify fire safety equipment and its correct application in an automotive workplace
- identify emergency evacuation procedures and responsibilities of self and co-workers in an automotive workplace
- raise a safety concern at either a work health and safety (WHS) or occupational health and safety (OHS) consultative meeting
- carry out a hazard inspection in an automotive workplace
- complete an incident report.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- basic aspects of relevant state or territory WHS or OHS legislation, including:
 - employer responsibilities for workplace practices
 - employee responsibilities to participate in WHS practices
 - employee responsibility to ensure own work practices protect the safety of self, other workers and other people in the workplace
- purpose and structure of WHS or OHS workplace committees, including roles of workplace personnel
- personal safety in an automotive workplace, including:
 - hearing protection
 - skin protection

- protective clothing
- protective footwear
- eye protection
- manual handling, including:
 - storing items
 - planning the lift
 - using correct lifting techniques and equipment
- workplace practices, including:
 - housekeeping
 - observing personal hygiene
 - identifying slip hazards and trip hazards
- meaning of WHS or OHS symbols and signs
- machine and equipment safety, including:
 - using compressed air
 - using machine guards
 - electrical tools, including:
 - checking before use
 - faulty equipment tagging and isolation procedures
 - dangers of using electrical tools around water
 - vehicle lifting equipment, including:
 - using jacks and stands
 - using hoists
 - safe working load (SWL) of jacks and hoists
- vehicle safety, including:
 - engine moving parts
 - engine and exhaust hot components
 - electrical hazards associated with:
 - high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
 - batteries
 - fuel, including petrol, diesel and natural and petroleum gas
 - high voltage in battery electrical and hybrid vehicles
- hazardous materials, including handling and storing:
 - oils
 - brake fluid
 - brake dust
 - chemicals
 - cleaning products
 - safety data sheets (SDS)
- emergency procedures, including:

- personnel responsibilities
- evacuation procedures and assembly points.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having followed safe work practices while working in an automotive workplace, e.g. documented hazard inspection or incident report.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace procedures and instructions relating to safe work practices
- workplace safety and emergency evacuation procedures
- hazardous chemicals and dangerous goods information
- safety materials and equipment relevant to an automotive workplace
- fire safety equipment
- documents for recording workplace safety, accidents and incidents.

AURATA001 Identify basic automotive faults using troubleshooting processes

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to conduct basic troubleshooting processes to identify common automotive faults or problems based on evidence provided by customers.

It applies to those identifying basic automotive faults in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, motorcycles, mobile plant machinery or outdoor power equipment in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Confirm nature of fault or problem	<p>1.1 Nature of customer enquiry or concern is determined using appropriate questioning techniques</p> <p>1.2 Hazards associated with fault identification process are recognised and precautions are taken according to <i>safety requirements</i></p> <p>1.3 Troubleshooting process options are researched and those most appropriate to the circumstances are selected</p> <p>1.4 Tools and equipment are selected and checked for serviceability according to manufacturer procedures</p>
2. Identify and report on fault	<p>2.1 Automotive system or component relating to fault or problem is identified</p> <p>2.2 Troubleshooting processes that identify likely cause of fault or problem are followed according to workplace procedures and without causing damage to components or systems</p> <p>2.3 Information and support to assist in the fault identification process are sought as required</p> <p>2.4 Report is forwarded to appropriate persons for action according to workplace procedures</p>
3. Complete work processes	<p>3.1 Final inspection is made to ensure work is to workplace expectations and vehicle or equipment is presented ready for use</p> <p>3.2 Tools and equipment are checked and stored, and faulty electrical equipment is identified, tagged and according to workplace procedures</p> <p>3.3 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify own skills and abilities required to perform the job and learning opportunities to gain necessary troubleshooting skills.
Reading skills to:	<ul style="list-style-type: none"> interpret safety and workplace requirements required to complete

	<p>the job task</p> <ul style="list-style-type: none"> interpret testing and troubleshooting procedures and flowcharts from manufacturer and workplace instructions and job requirements.
Oral communication skills to:	<ul style="list-style-type: none"> seek information from customers speak clearly to be understood using appropriate automotive technical terms give feedback to confirm clear understanding.
Planning and organising skills to:	<ul style="list-style-type: none"> plan the sequence of work tasks to ensure an efficient job outcome.
Self-management skills to:	<ul style="list-style-type: none"> select and use appropriate equipment, materials, processes and procedures follow workplace documentation, such as codes of practice or operating procedures.
Technology skills to:	<ul style="list-style-type: none"> use tools and equipment relating to troubleshooting processes.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for selecting and using personal protective equipment (PPE).

Assessment Requirements for AURATA001 Identify basic automotive faults using troubleshooting processes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- follow basic troubleshooting processes to identify a basic and familiar automotive fault in three of the following systems:
 - engine
 - engine management system
 - manual transmission
 - automatic transmission
 - driveline
 - final drive
 - braking system
 - hydraulic system
 - electrical system, excluding engine management
 - steering or suspension system
 - wheels and tyres
- report findings on the identified faults in the above systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to identifying basic automotive faults using troubleshooting processes, including procedures for selecting and using personal protective equipment (PPE)
- basic troubleshooting techniques and processes, including:
 - customer questioning skills to facilitate identification of vehicle system fault

- use of simple diagnostic charts
- procedures for reporting and documenting findings.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the basic faults they have identified in vehicles or machinery using troubleshooting processes, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- vehicles and components with basic faults
- equipment appropriate for troubleshooting basic automotive faults
- vehicle, machinery and equipment specifications.

AURATA002 Read, interpret and apply engineering drawings

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to read, interpret and determine work task and material requirements from engineering drawings. It involves referring to engineering drawings of systems and components when fabricating, modifying and repairing vehicles or equipment.

It applies to those working on agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, motorcycles, mobile plant machinery or outdoor power equipment in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

AURATA003 Produce drawings from design concepts

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to produce detailed drawings of objects from design concepts. It involves creating drawings or hand drawn sketches for items, such as mounting brackets for attaching accessories or components to vehicles or equipment. The unit does not involve producing computer-aided design (CAD) drawings.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Technical

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to produce drawing	1.1 Drawing purpose and design concept are defined and clarified according to workplace procedures

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 <i>Drawing specifications</i> are identified and confirmed with appropriate persons 1.3 Operational characteristics of object to be drawn are identified 1.4 Required drawing <i>resources</i> are selected
2. Draft initial drawing	2.1 <i>Initial drawing is drafted</i> from prototype model sketch and specifications 2.2 Production notes or special requirements are documented 2.3 Draft drawing is checked for accuracy against specifications and concept prototype drawing, and required approval is sought
3. Complete final drawing	3.1 Final drawing is compared to original design concepts and modified as required within scope of own authority 3.2 Drawing is checked and approved according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate drawing specifications and other relevant information efficiently keep up-to-date with drawing and sketching processes and new and emerging electronic drawing aids.
Reading skills to:	<ul style="list-style-type: none"> interpret drawing objectives and specifications and technical information.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately produce drawing requirements and material lists.
Oral communication skills to:	<ul style="list-style-type: none"> communicate with customers and others in the workplace.
Numeracy skills to:	<ul style="list-style-type: none"> calculate and list dimensions and specifications in drawings.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Drawing specifications</i> must include:	<ul style="list-style-type: none"> • dimensions, angles, shapes and component finish • fabrication processes • measurements and specifications • quality and technical information.
<i>Resources</i> must include:	<ul style="list-style-type: none"> • design concept brief and associated specifications • drawing equipment • object or sub-assembly to be fabricated and drawn.
<i>Drafting initial drawing</i> must include:	<ul style="list-style-type: none"> • appropriate object dimensions • connection of dimensional points to match drawing.

Assessment Requirements for AURATA003 Produce drawings from design concepts

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- produce three detailed technical drawings of objects, automotive products or components from design concepts specific to a vehicle or equipment application
- produce above drawings in both two- and three-dimensional form, and include dimensional points, fabrication notes and product finish requirements
- draw above drawings manually or using electronic drawing aids with appropriate software.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- common automotive terminology
- techniques for translating design concepts into sketches and detailed technical drawings
- technical drawing procedures and specifications
- procedures for making and listing drawing measurements and notes
- procedures for checking, documenting and storing drawings.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to drawings that they have produced from design concepts, e.g. drawings or sketches.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- object, product or sub-assembly to be fabricated and drawn
- design concept brief and associated design specifications
- drawing work plans and instructions
- technical drawing procedures and specifications
- manual drawing equipment or computer and appropriate software.

Assessment Requirements for AURATA004 Provide technical guidance

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- provide technical guidance to three different co-workers on different workplace tasks, in which the work must involve:
 - accessing and interpreting relevant technical information
 - assisting with service and repair work tasks
 - providing technical information and instructions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key learning styles, including:
 - visual
 - auditory
 - kinaesthetic
- effective communication techniques, including:
 - giving full attention
 - speaking clearly and concisely
 - using appropriate language and non-verbal communication, including:
 - tone of voice
 - body language
- technical knowledge relevant to subject area
- procedures for sourcing and interpreting technical information relating to automotive service and repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having provided technical guidance to co-workers in the automotive workplace, e.g. on-the-job training program.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- three different co-workers requiring technical instruction on different tasks
- supervisor, team leader or colleague with advanced technical knowledge.

AURATA005 Estimate and quote automotive mechanical and electrical repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare an estimate and quotation to repair the mechanical or electrical systems of vehicles or machinery. It involves preparing an initial estimate of costs, then preparing a detailed quotation for the required work, and presenting the quotation to customer.

It applies to those working in the automotive service and repair industry. It includes quotations for light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles or motorcycles. The unit does not apply to estimating and quoting vehicle body repair costs.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Common

Unit Sector

Technical

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Estimate repair or service costs	1.1 Clarify service and repair requirements 1.2 Time requirements for job are estimated from a comparison of previous similar repairs 1.3 Costs associated with replacement parts are estimated 1.4 Parts and work needing to be subcontracted are identified and costs estimated 1.5 Estimate is calculated, feasibility of job is discussed with customer, and agreement is reached to proceed with quote
2. Prepare quotation	2.1 Job labour cost is documented and agreed with workplace supervisor 2.2 Parts and consumables are costed according to workplace pricing procedures 2.3 Quotation variations relating to unsighted damage are noted and prepared for customer acceptance 2.4 Quotation is reviewed by workplace supervisor and finalised
3. Present quotation to customer	3.1 Detailed quotation is provided to customer for approval 3.2 Approval from customer to commence work and undertake any supplementary quotation work is obtained as required 3.3 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret vehicle specifications and job requirements interpret original equipment manufacturer (OEM) and recommended labour time guides.
Oral communication skills to:	<ul style="list-style-type: none"> participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer information and feedback.

Skills	Description
Numeracy skills to:	<ul style="list-style-type: none">• use mathematical operations, including addition, subtraction, multiplication and division, to perform calculations and check accuracy of costs of options and solutions.
Digital literacy skills to:	<ul style="list-style-type: none">• use digital systems and tools to access, search and retrieve information relating to products and services.
Technology skills to:	<ul style="list-style-type: none">• use workplace technology related to preparing a vehicle mechanical and electrical service repair quotation.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURATA005 Estimate and quote automotive mechanical and electrical repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria and foundation skills:

- inspect four different vehicles or equipment, two with mechanical and two with electrical faults, and:
 - estimate required repair or replacement of parts and labour
 - prepare a written repair quotation for the above vehicles or equipment for customer approval.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace procedures and work health and safety (WHS) and occupational health and safety (OHS) requirements relating to estimating and quoting on repairs, including procedures for:
 - selecting and using personal protection equipment (PPE)
 - manual handling vehicle components and systems
 - using hand tools and equipment
- components of estimates and job costings, including:
 - labour
 - parts
 - costs relating to external products or services required
- original equipment manufacturer (OEM) or authorised agency's service and repair procedures
- process to identify and determine location and extent of failure or faults in vehicle
- evidence to support repair quotation, including:

- part dismantle of damaged area for repair plan
- indirect or unforeseen damage
- photographs
- vehicle inspection, failure or fault assessment procedures
- service and repair industry standards.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to preparing a repair quotation relating to an automotive mechanical and electrical service and repair quotation, e.g. a written quote.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- four different vehicles requiring mechanical and electrical repairs or service
- automotive mechanical or electrical repair workplace or simulated workplace
- manufacturer and component repair and replacement costing guides
- OEM service and repair time manuals and labour rates
- office equipment, including calculators, computer, internet and software
- workplace procedures relating to vehicle mechanical and electrical repairs or service.

Assessment Requirements for AURBCA001 Work in a retail bicycle environment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit’s elements, performance criteria, range of conditions and foundation skills:

- sell bicycle product to three different retail bicycle store customers in line with workplace procedures and customer service standards, in which the work must involve:
 - completing workplace documentation
 - operating and maintaining workplace equipment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to working in a retail bicycle environment, including procedures for:
 - manually handling bicycles and components
 - identifying workplace hazards
 - using personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- retail bicycle workplace procedures and practices, including:
 - customer service techniques
 - reporting and communication channels
- retail bicycle workplace expectations, including:
 - ethical practice
 - maintaining privacy and confidentiality
- key features of specialist bicycle equipment
- key bicycle industry knowledge, including:

- bicycle types and their features
- bicycle parts, accessories and their uses
- bicycle categories and trends
- key bicycle terminology
- key bicycle websites and other sources of information
- key cycling events
- benefits of cycling for transport, health and fitness.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle retail store in which they have worked, e.g. employment contract, training record book or job card.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle retail workplace or simulated workplace
- workplace instructions
- electronic devices with internet connection
- different retail bicycle store customers with commercially realistic bicycle requirements
- tools and equipment appropriate to a retail bicycle environment.

Assessment Requirements for AURBCA002 Select and adjust bicycles to fit riders

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- select, fit and adjust three different bicycles to suit riders with differing requirements and builds.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to adjusting bicycles, including procedures for manually handling bicycles
- environmental requirements, including procedures for trapping, storing and disposing of waste grease and oils
- procedures for use, maintenance and storage of specialist bicycle tools and equipment, including personal protective equipment (PPE)
- bicycle types, categories and trends
- key bicycle terminology
- bio-mechanical principles of cycling
- techniques and procedures for selecting and adjusting bicycles, including:
 - bicycle components and assembly methods
 - bicycle measuring techniques
 - bicycle and component adjustment procedures
- features of rider comfort on a bicycle, including:
 - stability
 - efficiency
 - aerodynamics.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the riders they have measured and fitted to a bicycle, e.g. bicycle order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle retail workplace or simulated workplace
- workplace instructions
- PPE required when fitting bicycle to rider
- bicycle manufacturer specifications
- three riders with differing requirements and build requiring bicycle fittings
- three different bicycle models, including:
 - with and without gears
 - with lever-operated brakes
- tools and equipment appropriate for selecting and adjusting bicycles to fit riders.

AURBTA001 Remove and tag bicycle components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify and tag a range of bicycle components. It involves preparing for the work, removing and tagging bicycle components by title, job number and bicycle application, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation for entering the bicycle retail, service and repair industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Assessment Requirements for AURBTA001 Remove and tag bicycle components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit’s elements, performance criteria, range of conditions and foundation skills:

- remove and tag five of the following bicycle components from one bicycle:
 - wheel assembly
 - frame
 - drivetrain assembly
 - steering assembly
 - braking assembly
 - suspension assembly.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing bicycle components, including procedures for manually handling bicycles
- environmental requirements, including procedures for disposing of waste materials
- bicycle types and related key terminology
- bicycle components and their key features
- bicycle accessories and their functions
- types and use of specialist bicycle tools and equipment
- procedures for removing and tagging bicycle components, including:
 - component removal
 - component inspection
 - component tagging, including key information required on tags

- component storage.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle components that they have removed and tagged, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer bicycle specifications
- one bicycle
- tools, equipment and materials appropriate for removing and tagging bicycle components.

Assessment Requirements for AURBTA002 Adjust bicycles and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- adjust the following components on three different bicycles:
 - brakes
 - suspension
 - chain tension
 - seat
 - handlebars and steering
 - gears.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to adjusting bicycles, including procedures for manually handling bicycles
- environmental requirements, including procedures for trapping, storing and disposing of waste grease and oils
- key bicycle terminology
- techniques and procedures for adjusting bicycles, including:
 - bicycle measuring techniques
 - bicycle and adjustment procedures for components specified in the performance evidence
 - bicycle post-adjustment inspection and testing procedures
- types and use of specialist tools and equipment to adjust bicycles
- assembly procedures for bicycles and components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycles that they have adjusted, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace
- workplace instructions
- bicycle manufacturer specifications
- three different bicycles with components requiring adjustments
- tools and equipment appropriate for adjusting bicycles.

AURBTA003 Assemble bicycles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to assemble bicycles from a semi-assembled state. It involves preparing for the work, selecting and using specialist tools and equipment, selecting bicycle components, assembling bicycle frames, fitting, adjusting and testing bicycle components and accessories, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to assemble	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
bicycle	1.2 Bicycle manufacturer assembly specifications and the Australian Competition and Consumer Commission (ACCC) product safety standards relating to bicycles are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Assembly tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.5 Work area is prepared and work is planned to minimise waste and use time efficiently
2. Select components	2.1 Components are selected according to job specifications 2.2 Components are removed from packaging and inspected for quality 2.3 Components identified as damaged or faulty are listed and reported to appropriate personnel according to workplace procedures
3. Fit, test and adjust components	3.1 Components are fitted to bicycle frame according to assembly plan, manufacturer specifications, and <i>safety and environmental requirements</i> , and without causing damage to components or systems 3.2 Components are lubricated and torque and tensions are adjusted according to manufacturer assembly specifications 3.3 Assembled bicycle is inspected and tested for correct tension of components and operation, and adjusted as required according to workplace procedures 3.4 <i>Assembly</i> is checked to ensure it complies with ACCC product safety standards
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and bicycle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including assembly checklists.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information to match component codes, serial numbers and manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialist bicycle tools and equipment in line with workplace procedures.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for manually handling bicycles environmental requirements, including procedures for trapping, storing and disposing of waste grease and oils.
<i>Assembly</i> must include:	<ul style="list-style-type: none"> accessories, including: <ul style="list-style-type: none"> bell reflectors controls handlebars seat.

Assessment Requirements for AURBTA003 Assemble bicycles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- assemble three different semi-assembled bicycles, in which the work must involve:
 - one bicycle with gears
 - one bicycle with disc brakes
 - one road bicycle
- fit and adjust the following components during the above assemblies:
 - head stem and bearings
 - disc and rim brakes
 - seats
 - wheels
 - pedals
 - sprockets, gears and chains.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to assembling bicycles, including procedures for manually handling bicycles
- environmental requirements, including procedures for trapping, storing and disposing of waste grease and oils
- Australian Competition and Consumer Commission (ACCC) product safety standards relating to assembling bicycles
- key bicycle component and accessory terminology
- types of bicycles and their key features
- procedures for assembling and adjusting bicycles, including:

- types and use of bicycle assembly tools and equipment, including torque wrenches
- bicycle measuring techniques
- fitting and adjustment procedures for the components specified in the performance evidence
- greasing and lubrication procedures
- bicycle testing procedures, including post-assembly adjustment and safety checks.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycles that they have assembled, e.g. bicycle assembly orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace
- workplace instructions
- ACCC product safety standards relating to bicycles
- three different bicycles requiring assembly, including one bicycle with gears, one with disc brakes, and one road bicycle
- tools and equipment appropriate for assembling bicycles.

AURBTA005 Restore bicycles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to restore a used or vintage bicycle to original condition and full function. It involves preparing for the work, selecting and using specialist tools and equipment, selecting and matching bicycle components, identifying any required external services, dismantling, reassembling, adjusting and testing the bicycle, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURBTA006 Assemble components for custom bicycles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- assemble, adjust and test one custom bicycle to meet customer requirements.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to assembling custom bicycles, including procedures for manually handling bicycles
- environmental requirements, including procedures for trapping, storing and disposing of waste grease and oils
- types of bicycles and range of components and accessories
- key bicycle terminology
- biomechanical principles of cycling
- techniques for measuring and/or selecting custom bicycle components, including:
 - procedures for using bicycle sizing measuring equipment
 - design requirements of bicycle frames and wheels
 - purpose and relationships of bicycle frames, wheels, suspension, drivetrain and steering systems
 - principles of bicycle safety
 - physical attributes to consider when selecting a bicycle frame, including:
 - height
 - body shape and weight distribution
 - length of arms and legs

- fitness, injuries and style of cycling
- key features and materials used in bicycle frames, wheels and components
- bicycle component specifications
- bicycle accessories and fitting requirements
- techniques for assembling, adjusting and testing custom bicycles, including:
 - custom build procedures
 - testing and adjustment methods
 - types and use of bicycle assembly tools and equipment
 - greasing and lubrication procedures
 - fitting and adjustment procedures for the accessories and components specified in the range of conditions as essential to bicycle set-up
 - post-assembly safety checks
 - bicycle and component adjustment procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the components for custom bicycles that they have selected and assembled, e.g. build orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace
- workplace instructions
- personal protective equipment (PPE) required to assemble a custom bicycle
- bicycle and component manufacturer specifications
- customer requiring a custom bicycle
- a bicycle frame and components for assembly
- bicycle sizing measuring equipment
- tools and equipment appropriate for selecting components and assembling a custom bicycle.

AURBTA007 Provide mechanical support during cycling events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to work effectively as a bicycle mechanic in a support team for a professional or amateur cycling event. It involves preparing for the work, selecting and using specialist tools and equipment, planning mechanical support for an event, setting up a mobile work station, adjusting and repairing bicycles and components, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Establish cycling	1.1 Job role and responsibilities for the relevant event are identified

event requirements	1.2 Event regulations, team expectations and communication procedures relevant to own role are identified 1.3 <i>Safety and environmental requirements</i> and workplace procedures are sourced and interpreted
2. Prepare for event	2.1 Event <i>information</i> is confirmed 2.2 <i>Tools and equipment</i> , including personal protective equipment (PPE), are selected and checked for serviceability 2.3 Spare parts, wheels and bicycles are selected and prepared for the event 2.4 Components, tools, equipment and personal items are prepared for transportation to event according to team requirements and event conditions
3. Provide mechanical support at event	3.1 <i>Temporary work station</i> and equipment are set up according to event and safety and environmental requirements 3.2 Support vehicle is prepared as required according to team and event requirements 3.3 Hazards associated with the work are identified and risks are managed 3.4 <i>Bicycle repairs</i> , adjustments and maintenance are carried out within designated timeframes, according to plans developed in conjunction with other members of the support team, and in line with event regulations 3.5 <i>Team management is consulted</i> as required
4. Complete work processes	4.1 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.2 Work station is packed up and components, tools, equipment and personal items are prepared for transportation <i>according to workplace and safety requirements</i> 4.3 Event and workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including work orders, job cards and event insurance forms.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions and requirements, including with team and event personnel report event problems and feedback to management.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations to calculate required adjustments, including matching component codes, serial numbers and manufacturer specifications use bicycle measuring equipment, including metric and imperial units of measurement.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within required timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify bicycle defects and repair requirements.
Self-management skills to:	<ul style="list-style-type: none"> diagnose and complete required bicycle repairs, adjustments and maintenance when working under event conditions and within tight timeframes.
Teamwork skills to:	<ul style="list-style-type: none"> work collaboratively with others in a cycling support team.
Technology skills to:	<ul style="list-style-type: none"> use specialist bicycle tools and equipment in line with workplace procedures.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> manually handling bicycles, components, tools and equipment identifying hazards using PPE environmental requirements, including procedures for disposing of waste materials.
---	--

Information must include:	<ul style="list-style-type: none"> • event location • event management • bicycle brand and component specification and websites • event rules and regulations.
Tools and equipment must include:	<ul style="list-style-type: none"> • portable bicycle stands • hand tools and spare parts • lubricants and hydraulic fluid • pump and compressor.
Temporary work station must include:	<ul style="list-style-type: none"> • floor and matting • tables, benches and bicycle stands • lighting • bicycle storage • location for spare parts and components • specialist tools and equipment • cleaning agents.
Bicycle repairs must include:	<ul style="list-style-type: none"> • wheel, tyres and tubes • brakes, chains, gears, steering and suspension components.
Team management consultation must include:	<ul style="list-style-type: none"> • seeking assistance when difficulties outside scope of own role arise • advising of identified hazards • providing feedback to inform team performance.

Assessment Requirements for AURBTA007 Provide mechanical support during cycling events

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- set up a temporary mobile mechanical support work station during two different cycling events
- adjust and repair two bicycles during the above events, in which the work must involve:
 - identifying bicycle components to be repaired or replaced
 - applying correct repair, replacement, adjustment and testing procedures
 - working under pressure within required event timeframes.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to providing mechanical support during cycling events, including procedures for:
 - manually handling bicycles, components, tools and equipment
 - identifying hazards
 - using personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- bicycle mechanical principles
- key bicycle components and their specifications
- cycling event categories and bicycle types, including:
 - road, track and mountain
 - community and recreational
- key bicycle and cycling event terminology
- cycling governing bodies and their relevant regulations

- location and content of workplace procedures relating to adjusting and repairing bicycles during cycling events
- optimum set-up and layout of temporary work station at a cycling event
- types and use of tools and equipment used by mechanical support teams
- repair and maintenance techniques for bicycles and components in a race or event environment, including:
 - testing and adjustment methods
 - component repair, replacement, adjustment and tensioning techniques.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks and where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the cycling events where they have provided mechanical support, e.g. cycling event repair reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- temporary workstation at two different cycling events or simulated event locations, including:
 - floor and matting
 - tables, benches and bicycle stands
 - lighting
 - bicycle storage
- workplace instructions
- workplace and cycling event information
- PPE for mechanical support
- bicycle components
- bicycles that require repair and adjustment at cycling events
- tools and equipment appropriate for providing mechanical support during cycling events, including:
 - portable bicycle stands
 - hand tools and spare parts
 - lubricants and hydraulic fluid

- pump and compressor.

AURBTB001 Service and repair bicycle mechanical braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service and repair bicycle mechanical braking systems. It involves preparing for the work, selecting and using specialist tools and equipment, planning, inspecting, servicing and repairing, and testing the bicycle braking system, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service and repair bicycle mechanical braking system	1.1 Job requirements are determined from workplace instructions 1.2 Manufacturer specifications, workplace procedures and other relevant technical information are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.5 Work is planned to avoid damage to bicycle, minimise waste and use time efficiently
2. Inspect and diagnose braking system	2.1 <i>Mechanical braking system</i> is inspected for faults and worn or damaged components using visual inspection methods and by comparing measurements against manufacturer specifications 2.2 Condition of bicycle braking system is determined in line with system specifications and customer requirements 2.3 Service and repair options are identified 2.4 Service and repair items are documented and costed for customer approval according to workplace procedures
3. Carry out service and repair of braking system	3.1 Tools and equipment are used according to workplace procedures and manufacturer specifications 3.2 Service and repair of mechanical braking system are carried out according to work plan and <i>safety and environmental requirements</i> 3.3 Required replacement parts are checked and fitted according to manufacturer specifications 3.4 Braking system specifications are checked and tested for correct operation in a safe location 3.5 Adjustments are made to braking system as required according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and bicycle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret mechanical brake component technical information and manufacturer specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including service checklists and repair reports.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions and requirements.
Numeracy skills to:	<ul style="list-style-type: none"> use measuring equipment, including metric and imperial units of measurement match component codes, serial numbers and specifications.
Problem solving skills to:	<ul style="list-style-type: none"> identify faults, quality issues and potential problems associated with bicycle mechanical braking systems during service and repair activities.
Technology skills to:	<ul style="list-style-type: none"> use specialist bicycle tools and equipment in line with workplace procedures.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for AURBTB001 Service and repair bicycle mechanical braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- service, repair and adjust three of the following different types of bicycle mechanical braking systems:
 - cantilever
 - disc brakes
 - internal coaster
 - drum brakes
 - composite material brake pads
 - mechanical linkages and cables
 - integrated brake and gear levers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing and repairing bicycle mechanical braking systems, including procedures for:
 - manually handling bicycles and their systems
 - identifying workplace hazards
 - using personal protective equipment (PPE)
 - identifying safe location for testing brakes
- environmental requirements, including procedures for disposing of waste materials
- bicycle braking system terminology
- application, purpose and function of bicycle mechanical braking system principles

- mechanical braking system types specified in the performance evidence
- types and use of tools and equipment used to service and repair bicycle mechanical braking systems
- servicing and repair options, including:
 - on- and off-site servicing
 - servicing and adjusting mechanical braking system components
 - upgrading braking components
- techniques for servicing and repairing bicycle mechanical braking systems, including:
 - identification of bicycle mechanical brake components, materials and specifications
 - fault identification
 - brake repair and adjustment techniques
 - bicycle measuring techniques
 - mechanical brake testing procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle mechanical braking systems that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace, including location to test bicycle braking system
- workplace instructions detailing job requirements
- PPE required to service and repair bicycle mechanical braking systems
- manufacturer or brake component specifications and technical information for mechanical braking system
- components and parts to suit different mechanical braking systems
- three different bicycles with mechanical braking systems specified in the performance evidence and requiring repair and servicing

- tools and equipment appropriate for servicing and repairing bicycle mechanical braking systems.

Complete work processes	<p>3.1 Final inspection is made to ensure work meets workplace expectations and bicycle is presented ready for use</p> <p>3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored</p> <p>3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures</p> <p>3.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including service reports.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions and requirements.
Numeracy skills to:	<ul style="list-style-type: none"> complete measurements to determine steering system condition and operation.
Problem solving skills to:	<ul style="list-style-type: none"> identify technical and operational faults and defects, quality issues and potential problems associated with bicycle steering system during service activities.
Technology skills to:	<ul style="list-style-type: none"> use bicycle tools and equipment to service and test bicycle steering system, and make adjustments as required.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Steering system</i> must include:	<ul style="list-style-type: none"> forks headsets handlebars and stems.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> manually handling bicycles and their steering systems identifying workplace hazards using PPE environmental requirements, including procedures for disposing of waste materials.

Unit Mapping Information

Equivalent to AURBTD2001 Service bicycle steering systems

Assessment Requirements for AURBTD001 Service bicycle steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- service and test three different bicycle steering systems according to manufacturer specifications
- during work on the above three systems, service the following:
 - bicycle headsets
 - handlebars and stems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing bicycle steering systems, including procedures for:
 - manually handling bicycles and their steering systems
 - identifying workplace hazards
 - using personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- application, purpose and function of bicycle steering system principles
- bicycle steering system components, including:
 - forks
 - headsets
 - handlebars and stems
- techniques for servicing bicycle steering systems, including:
 - identification of bicycle steering components, materials and specifications

- fault identification
- bicycle measuring techniques
- steering system servicing and adjustment techniques
- steering system testing procedures
- bicycle steering system terminology
- types and use of tools and equipment used to service bicycle steering systems
- servicing options, including:
 - on- and off-site servicing
 - servicing and adjusting steering system components
 - upgrading steering components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle steering systems that they have serviced, e.g. service orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace, including location to test bicycle steering system
- workplace instructions detailing job requirements
- manufacturer and steering system component specifications
- three different bicycles requiring servicing and testing of their steering systems
- PPE required to service bicycle steering systems
- tools and equipment appropriate for servicing bicycle steering systems.

AURBTD002 Service bicycle suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service bicycle suspension systems. It involves preparing for the work, selecting and using specialist tools and equipment, inspecting, servicing and testing the bicycle suspension system and its components, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service bicycle suspension	1.1 Job requirements are determined from workplace instructions 1.2 Manufacturer specifications, workplace procedures and other

Assessment Requirements for AURBTD003 Repair and overhaul bicycle steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair and overhaul three different bicycle steering systems according to manufacturer specifications
- repair and overhaul the following components in the course of the above work:
 - forks
 - headsets
 - handlebars and stems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing and overhauling bicycle steering systems, including procedures for:
 - manually handling bicycles and their steering systems
 - identifying workplace hazards
 - using tools and equipment, including personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- key bicycle steering system terminology
- purpose of bicycle steering systems and their relationship to suspension, wheels, drivetrain, frame and braking systems
- operating principles of steering system components, including:
 - forks
 - headsets
 - handlebars and stems

- types and use of tools and equipment used to repair and overhaul bicycle steering systems
- techniques and processes for repairing and overhauling bicycle steering systems, including:
 - identification of bicycle steering components, materials and specifications
 - fault identification
 - measuring techniques
 - steering system adjustment techniques
 - steering system testing procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle steering systems that they have repaired and overhauled, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace, including location to test bicycle steering system
- workplace instructions detailing job requirements
- manufacturer specifications and technical information for bicycle steering systems
- PPE required to repair and overhaul bicycle steering systems
- component parts as required
- three different bicycles with steering systems requiring repair and overhaul
- tools and equipment appropriate for repairing and overhauling bicycle steering systems.

AURBTJ001 Remove, repair and refit bicycle tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove, repair and refit bicycle tyres. It involves preparing for the work, selecting and using specialist tools and equipment, removing the tyres and identifying tyre damage causes, repairing the tyres, inflating them to recommended pressure and fitting, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry. The bicycle tyres to be repaired and refitted include road, off-road, tubed or tubeless.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Assessment Requirements for AURBTJ001 Remove, repair and refit bicycle tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, repair, refit, inflate and test five different bicycle tyres, including for the following types of bicycles:
 - road bicycle
 - hybrid
 - BMX
 - commuter.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing, repairing and refitting bicycle tyres, including procedures for:
 - manually handling bicycles and tyres
 - identifying workplace hazards
 - using tools and equipment, including personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- key bicycle terminology
- types and use of tools and equipment used to remove, repair and refit bicycle tyres
- techniques for removing, repairing and refitting bicycle tyres, including:
 - bicycle types and categories
 - tyre and tube sizes
 - rim size and rim material type

- inflation pressures and test procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle tyres that they have removed, repaired and refitted, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace
- workplace instructions detailing job requirements
- manufacturer tyre and rim specifications and fitting instructions
- PPE required to remove, repair and refit bicycle tyres
- bicycle wheels, tyres and tubes for the types of bicycles specified in the performance evidence
- tools and equipment appropriate for removing, repairing, refitting and inflating bicycle tyres.

AURBTJ002 Service bicycle wheels and hubs

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service bicycle wheels and hubs. It involves preparing for the work, selecting and using specialist tools and equipment, inspecting, removing, adjusting and refitting the bicycle wheels and hubs, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service bicycle wheels and hubs	1.1 Job requirements, including <i>wheel and hub service</i> needs, are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Bicycle manufacturer specifications and service instructions for wheels and hubs are researched and interpreted 1.3 Condition of bicycle wheels and hubs is inspected for faults and worn or damaged components using visual inspection methods and by comparing measurements against manufacturer specifications 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.6 Work area is prepared and work is planned to avoid damage to bicycle, minimise waste and use time efficiently
2. Carry out service of wheels and hubs	2.1 Bicycle wheels are removed according to workplace procedures and manufacturer specifications 2.2 Wheels and hubs are serviced according to work plan, manufacturer specifications, and <i>safety and environmental requirements</i> 2.3 Serviced wheels and hubs are refitted to bicycle and tested and adjusted as required according to job requirements and workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and bicycle is presented ready for use 3.2 Problems outside own area of responsibility are reported to appropriate person 3.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.4 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.5 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including service reports.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions and requirements, including with the customer.
Numeracy skills to:	<ul style="list-style-type: none"> calculate required adjustments and settings.
Technology skills to:	<ul style="list-style-type: none"> use specialist bicycle tools and equipment in line with workplace procedures.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Wheel and hub service</i> must include:	<ul style="list-style-type: none"> wheel components: <ul style="list-style-type: none"> spoke, disc and tri-spoke wheels conventional, clincher, tubular, aero, deep dished and composite material wheel rims hub components: <ul style="list-style-type: none"> quick release, allen head and nut wheel fasteners vertical and horizontal frame lugs disc, drum and coaster, and internal foot brake hubs loose ball, cage and roller bearings lubricants.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> manually handling bicycles and their wheels identifying workplace hazards using tools and equipment, including PPE environmental requirements, including procedures for disposing of waste materials.

Assessment Requirements for AURBTJ002 Service bicycle wheels and hubs

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- service three different bicycle wheels and three different hubs.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing bicycle wheels and hubs, including procedures for:
 - manually handling bicycles and wheels
 - identifying workplace hazards
 - using tools and equipment, including personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- key bicycle terminology relating to wheels and hubs
- application, purpose and function of bicycle wheels and hubs
- bicycle wheel and hub components specified in the range of conditions
- types of lubricants and their application
- types and use of tools and equipment used to service bicycle wheels and hubs
- techniques for servicing bicycle wheels and hubs, including:
 - procedures for different types of bicycles
 - wheel and hub specifications
 - wheel and hub mechanical principles
 - wear or faults in bicycle wheel and hubs
 - torque measurement and adjustment of wheels
 - wheel and hub testing procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle wheels and hubs that they have serviced, e.g. service orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace
- workplace instructions detailing job requirements
- wheel and hub technical and component specifications
- PPE required to service bicycle wheels and hubs
- three bicycles with differing wheels and hubs requiring servicing and testing
- tools and equipment appropriate for servicing bicycle wheels and hubs.

Assessment Requirements for AURBTJ003 Design and build bicycle wheels

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- design and build three different bicycle wheels to specification, with each wheel including:
 - lacing a 32 hole three-cross spoke pattern
 - disc and non-disc brake specific patterns.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to designing and building bicycle wheels, including procedures for:
 - manually handling bicycle wheels
 - identifying workplace hazards
 - using tools and equipment, including personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- key bicycle terminology relating to wheel build for different bicycle types
- key features to be considered in wheel design:
 - hubs, spoke and rim selection
 - 32 hole three-cross spoke pattern
 - disc and non-disc brake specific patterns
 - symmetrical and asymmetrical patterns
 - wheel dynamics and loading
- wheel and hub mechanical principles

- bicycle wheel components specified in the range of conditions and their specifications
- types and use of tools and equipment used to design and build bicycle wheels
- techniques for designing and building bicycle wheels, including:
 - material used in bicycle wheels
 - lacing and spoke pattern
 - calculating spoke lengths
 - assembly, truing and tensioning of wheels
 - symmetrical and asymmetrical patterns of wheels
 - wheel dynamics and loading
 - torque measurement and adjustment of wheels
 - wheel and hub testing procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle wheels they have designed and built, e.g. build orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace
- workplace instructions detailing job requirements
- manufacturer and technical bicycle wheel specifications
- PPE required to design and build bicycle wheels
- wheel components specified in the range of conditions
- three different bicycle wheels as specified in the performance evidence requiring a complete build
- tools and equipment appropriate for designing and building bicycle wheels.

Assessment Requirements for AURBTK001 Maintain specialised bicycle repair tools and equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- maintain three different specialised bicycle repair tools
- complete log or report relating to maintenance of above tools.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to maintaining specialised bicycle repair tools and equipment, including procedures for:
 - manually handling the tools
 - identifying workplace hazards
 - using personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- types and uses of hand tools, including:
 - sockets and ratchets
 - spanners, including ring spanners, open-ended spanners
 - allen keys
 - screwdrivers
- methods of identifying faults in specialised bicycle repair tools and equipment
- reporting procedures relating to specialised bicycle repair tools and equipment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the specialised bicycle repair tools and equipment they have maintained, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- workplace instructions detailing job requirements
- PPE required to maintain specialised bicycle repair tools and equipment
- maintenance schedules of specialised bicycle repair tools and equipment
- operating instructions or manuals relating to specialised tools and equipment
- specialised tools and equipment appropriate for repairing bicycles.

AURBTQ001 Service bicycle drivetrain systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service bicycle drivetrain systems and their components. It involves preparing for the work, selecting and using specialist tools and equipment, inspecting and testing bicycle drivetrain systems and components according to manufacturer specifications, and completing workplace processes and documentation.

This applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical - Driveline and Final Drive

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service bicycle drivetrain	1.1 Job requirements are determined from workplace instructions 1.2 Manufacturer specifications, workplace procedures and other

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
system	relevant technical information are accessed and interpreted 1.3 Condition of bicycle <i>drivetrain system</i> is inspected for faults and worn or damaged components using visual inspection methods and by comparing measurements against manufacturer specifications 1.4 Service options and techniques are identified and confirmed with customer 1.5 Replacement parts for drivetrain are identified and sourced as required 1.6 Hazards associated with the work are identified and risks are managed 1.7 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.8 Work area is prepared and service sequence planned to avoid damage to bicycle, minimise waste and use time efficiently
2. Carry out service of drivetrain system	2.1 Bicycle drivetrain system is serviced according to work plan, manufacturer specifications, and <i>safety and environmental requirements</i> 2.2 Replacement parts are checked and fitted according to manufacturer specifications 2.3 Operation of serviced drivetrain system is tested and adjusted as required according to job requirements and workplace procedures 2.4 Results and quality issues are reported to authorised personnel as required
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and bicycle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedure

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including service reports.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions and requirements.
Numeracy skills to:	<ul style="list-style-type: none"> complete measurements to determine bicycle drivetrain system condition and operation identify and calculate bicycle drivetrain system settings and adjustments from specifications.
Self-management skills to:	<ul style="list-style-type: none"> select and use appropriate equipment, materials and processes to service bicycle drivetrain systems.
Problem solving skills to:	<ul style="list-style-type: none"> identify technical and operational faults and defects, quality issues and potential problems associated with bicycle drivetrain systems during service activities.
Technology skills to:	<ul style="list-style-type: none"> use specialist bicycle tools and equipment in line with workplace procedures.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Drivetrain system</i> must include:	<ul style="list-style-type: none"> cranks and pedals chains and chain wheels cassette, cartridge and internal hub gear systems manual mechanical, automatic, electro-mechanical and electric gear changers integrated brake and gear lever systems fixed and freewheel rear sprockets.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> manually handling bicycles and drivetrain systems identifying workplace hazards using tools and equipment, including PPE

	<ul style="list-style-type: none">• environmental requirements, including procedures for disposing of waste materials.

Assessment Requirements for AURBTQ001 Service bicycle drivetrain systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- service the following bicycle drivetrain systems on three different bicycles:
 - derailleur
 - internal hub gear system
 - integrated brake and gear lever system
 - fixed and freewheel rear sprockets.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing bicycle drivetrain systems, including procedures for:
 - manually handling bicycles and drivetrain systems
 - identifying workplace hazards
 - using tools and equipment, including personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- key bicycle terminology relating to drivetrain systems
- types of bicycle drivetrain systems and their system components, including:
 - cranks and pedals
 - chains and chain wheels
 - cassette, cartridge and internal hub gear systems
 - manual mechanical, automatic, electro-mechanical and electric gear changers
 - integrated brake and gear lever systems

- fixed and freewheel rear sprockets
- types and use of tools and equipment used to service bicycle drivetrain systems
- techniques and processes for servicing bicycle drivetrain systems, including:
 - identification of bicycle drivetrain components, materials and specifications
 - use of drivetrain lubricants
 - fault identification
 - drivetrain system measuring techniques
 - drivetrain adjustment techniques
 - drivetrain testing procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle drivetrain systems that they have serviced, e.g. service orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace, including location to test bicycle drivetrain system
- workplace instructions detailing job requirements
- PPE required to service bicycle drivetrain systems
- drivetrain component specifications
- drivetrain components specified in the performance evidence
- three different bicycles requiring drivetrain servicing and testing
- tools and equipment appropriate for servicing bicycle drivetrain systems.

AURBTQ002 Repair and overhaul bicycle drivetrain systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair bicycle drivetrain systems. It involves preparing for the work, selecting and using specialist tools and equipment, inspecting, repairing and testing the bicycle drivetrain system according to manufacturer specifications, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical - Driveline and Final Drive

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to repair bicycle drivetrain	1.1 Job requirements are determined from workplace instructions 1.2 Manufacturer specifications, workplace procedures and other

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
system	relevant technical information are accessed and interpreted 1.3 Condition of bicycle <i>drivetrain system</i> is <i>inspected</i> using visual and physical methods and compared with manufacturer specifications 1.4 Repair options and techniques are identified and confirmed with customer 1.5 Replacement parts for drivetrain are identified and sourced as required 1.6 Hazards associated with the work are identified and risks are managed 1.7 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.8 Work area is prepared and repair process, including post-repair testing, is planned to avoid damage to bicycle, minimise waste and use time efficiently
2. Carry out repairs to drivetrain system	2.1 Bicycle drivetrain system is repaired according to job requirements, manufacturer specifications, and <i>safety and environmental requirements</i> 2.2 Required replacement parts are checked and fitted according to manufacturer specifications 2.3 Operation of repaired drivetrain system is tested and adjusted as required according to manufacturer specifications and workplace procedures 2.4 Results and quality issues are reported to authorised personnel as required
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and bicycle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURBTQ002 Repair and overhaul bicycle drivetrain systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair and overhaul the following bicycle drivetrain systems on two different bicycles:
 - derailleur
 - internal hub gear system
 - integrated brake and gear lever system
 - fixed and freewheel rear sprockets.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing and overhauling bicycle drivetrain systems, including procedures for:
 - manually handling bicycles and their drivetrain systems
 - identifying workplace hazards
 - using tools and equipment, including personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- key bicycle terminology relating to drivetrain systems
- types of bicycle drivetrain systems and their system components specified in the range of conditions
- types and use of tools and equipment used to repair bicycle drivetrain systems
- techniques and processes for repairing and overhauling bicycle drivetrain systems, including:
 - identification of bicycle drivetrain components, materials and specifications
 - fault identification

- drivetrain system measuring techniques
- drivetrain adjustment techniques
- use of drivetrain lubricants
- drivetrain testing procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle drivetrain systems that they have repaired and overhauled, e.g. repair records.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace, including location to test bicycle drivetrain system
- workplace instructions detailing job requirements
- drivetrain component specifications
- PPE required to repair and overhaul bicycle drivetrain systems
- drivetrain components
- two different bicycles requiring drivetrain repair and overhaul
- tools and equipment appropriate for repairing and overhauling bicycle drivetrain systems.

AURBTR001 Service electric power-assisted bicycles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service electric power-assisted bicycle systems and components. It involves preparing for the work, selecting and using specialist tools and equipment, inspecting the bicycle condition, interpreting manufacturer specifications, performing routine maintenance and testing on electric bicycle components, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry. Electric power-assisted bicycles are throttle and pedal assist sensor (PAS) bicycles with 250 watts rated power at the wheel.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Bicycle

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service electric power-assisted bicycle	1.1 Job requirements are determined from workplace instructions 1.2 Manufacturer specifications and workplace procedures are accessed and interpreted 1.3 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Work area is prepared and service sequence planned to avoid damage to bicycle, minimise waste and use time efficiently
2. Carry out service of bicycle	2.1 Condition of bicycle is inspected for faults and worn, non-serviceable or damaged parts according to workplace procedures 2.2 <i>Bicycle components</i> needing repair, replacement or maintenance are identified 2.3 Service options and techniques are identified and confirmed 2.4 Routine <i>servicing and maintenance</i> of bicycle are carried out according to service plan and <i>safety and environmental requirements</i> 2.5 Testing and operation checks are carried out on serviced bicycle according to manufacturer specifications, and adjustments are made as required 2.6 Results and quality issues are reported to authorised personnel as required
3. Complete work processes	3.1 Bicycle is cleaned, final inspection is made to ensure work meets workplace expectations, and bicycle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Assessment Requirements for AURBTR001 Service electric power-assisted bicycles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- service three different electric power-assisted bicycles, in which the work involves:
 - battery testing and charging
 - checking operation of controller
 - checking wiring
 - checking connectors at motor plug
 - testing brake cut-outs, throttle and pedal assist sensor (PAS).

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing electric power-assisted bicycles, including procedures for:
 - manually handling bicycles
 - identifying workplace hazards
 - using tools and equipment, including personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- electric power-assisted bicycle terminology
- operating principles of electric power-assisted bicycles, including:
 - throttle response
 - power and performance
 - pedal assist function
 - throttle function

- function of electric power-assisted bicycle components specified in the range of conditions
- types and use of tools and equipment used to service electric power-assisted bicycles
- techniques and processes for servicing electric power-assisted bicycles, including:
 - identification of electric power-assisted bicycle components and specifications
 - fault identification
 - bicycle measuring techniques
 - adjustment techniques
 - testing procedures
- servicing options, including:
 - on- and off-site servicing
 - servicing and adjusting components
 - upgrading components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electric power-assisted bicycles that they have serviced, e.g. service orders.

Assessment Requirements for AURBTR002 Install and adjust bicycle electronic gear shifters

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install and adjust electronic gear shifting components on two different bicycles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing and adjusting bicycle electronic gear shifters, including procedures for:
 - manually handling bicycles and gear shifters
 - identifying workplace hazards
 - using tools and equipment, including personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- key bicycle terminology relating to electronic gear shifting components
- purpose and features of bicycle electronic gear shifting systems
- principles of electronic gear shifting operation
- types and use of tools and equipment used to install and adjust bicycle electronic gear shifters
- techniques and processes for installing and adjusting bicycle electronic gear shifting components, including:
 - identification of bicycle electronic gear shifter components, materials and specifications
 - fault and damage identification
 - measuring techniques

- electronic gear shifter adjustment techniques
- electronic gear shifter testing procedures
- methods of protecting bicycles from damage when installing and adjusting bicycle electronic gear shifting components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle electronic gear shifters they have installed and adjusted, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace, including location to test bicycle electronic gear shifters
- workplace instructions detailing job requirements
- manufacturer fitting instructions and specifications
- PPE required to install and adjust bicycle electronic gear shifting components
- bicycle electronic gear shifting components
- two different bicycles requiring the installation and adjustment of electronic gear shifting components
- tools and equipment appropriate for installing and adjusting bicycle electronic gear shifters.

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, refit and adjust three of the following bicycle accessories on different bicycles:
 - one bicycle computer
 - two of the following:
 - seat
 - bicycle carrier
 - pedals water bottle frame.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing, refitting and adjusting bicycle accessories, including procedures for:
 - manually handling bicycles
 - identifying workplace hazards
 - using materials, tools and equipment, including personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- key bicycle and accessory terminology
- purpose of bicycle accessories and their relationship to safe bicycle use
- types and functions of bicycle accessories, including:
 - bicycle computers
 - seats
 - bicycle carriers

- pedals
- water bottle frames
- types and use of tools and equipment used to remove, refit and adjust bicycle accessories
- techniques and processes for removing, refitting and adjusting bicycle accessories, including:
 - fitting instructions
 - fault identification
 - removal instructions
 - measuring techniques
 - adjustment techniques
 - testing procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle accessories that they have removed, refitted and adjusted, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace
- workplace instructions detailing job requirements
- technical specifications and fitting instructions for bicycle accessories
- PPE required to remove, refit and adjust bicycle accessories
- range of accessories specified in the performance evidence to be fitted on bicycles
- three different bicycles requiring accessories
- tools and equipment appropriate for removing, refitting and adjusting bicycle accessories.

AURBTY001 Repair bicycle frames

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, repair and test bicycle frames. It involves preparing for the work, selecting and using specialist tools and equipment, identifying frame damage, identifying repair options, carrying out repairs according to manufacturer specifications, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry. It does not apply to the repair of carbon fibre bicycle frames.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical - Chassis and Frame

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to repair bicycle	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
frame	1.2 Bicycle manufacturer specifications are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.5 Work area is prepared and work is planned to avoid damage to bicycle, minimise waste and use time efficiently
2. Inspect bicycle frame	2.1 <i>Bicycle frame</i> to be repaired is identified and checked against job requirements 2.2 Bicycle frame is inspected for faults, wear or damage using visual inspection methods and by comparing measurements against manufacturer specifications 2.3 Repair options for bicycle frame are identified and confirmed with customer 2.4 Required parts and materials are identified and their availability checked 2.5 Work area is prepared and repair sequence, including post-repair testing, is planned to avoid damage to bicycle, minimise waste and use time efficiently
3. Carry out repairs to bicycle frame	3.1 Bicycle frame is <i>repaired</i> according to workplace instructions, manufacturer specifications, and <i>safety and environmental requirements</i> 3.2 Required replacement parts are checked and fitted according to manufacturer specifications, and identified problems are reported to appropriate person 3.3 Repaired frame is checked and tested against manufacturer specifications according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and bicycle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including repair reports.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions and procedures.
Numeracy skills to:	<ul style="list-style-type: none"> identify component codes and serial numbers relating to frame manufacturer specifications.
Technology skills to:	<ul style="list-style-type: none"> use specialist bicycle tools and equipment in line with workplace procedures.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Italicised wording, if used in the performance criteria, is detailed below.

<i>Bicycle frame</i> must be from the following types of bicycles:	<ul style="list-style-type: none"> mountain bicycle road bicycle touring bicycle hybrid bicycle recumbent bicycle BMX bicycle.
<i>Repair</i> must include:	<ul style="list-style-type: none"> facing, reaming, and chasing threads and alignment left and right hand threads.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> manually handling bicycles identifying workplace hazards using tools and equipment, including PPE environmental requirements, including procedures for disposing of waste materials.

Assessment Requirements for AURBTY001 Repair bicycle frames

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair three different types of bicycle frames according to manufacturer specifications, chosen from the following:
 - mountain bicycle
 - road bicycle
 - touring bicycle
 - hybrid bicycle
 - recumbent bicycle
 - BMX bicycle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing bicycle frames, including procedures for:
 - manually handling bicycles
 - identifying workplace hazards
 - using personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- key bicycle terminology relating to frames
- different bicycle frames specified in the performance evidence and their components, including:
 - braking system
 - wheel sizes
 - drivetrain system

- steering system
- types and use of tools, equipment and materials used to repair bicycle frames
- techniques for repairing bicycle frames, including:
 - measuring techniques
 - frame preparation techniques
 - frame repair options
 - testing procedures and safety checks.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle frames that they have repaired, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace
- workplace instructions detailing job requirements
- manufacturer specifications for bicycle frames
- PPE required to repair bicycle frames
- three different bicycle frames requiring repair
- tools and equipment appropriate for repairing bicycle frames.

AURBTY002 Design and build bicycle frames

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to design and build a bicycle frame. It involves preparing for the work, selecting and using specialist tools and equipment, identifying different frame materials and components, determining rider measurements, assembling the bicycle frame to customer specifications, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical - Chassis and Frame

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify frame	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
requirements and prepare to design and build bicycle frame	1.2 <i>Customer requirements</i> are discussed and confirmed 1.3 Physical attributes of rider and his or her riding style are assessed using sizing cycle, observation and measurements 1.4 Bicycle frame design principles and design are researched and component specifications checked 1.5 Work plan and build instructions are prepared to use materials and time efficiently and minimise waste
2. Design bicycle frame	2.1 Frame is designed to meet customer measurements and requirements, using a bicycle computer-aided design (CAD) program or other means 2.2 Frame tubing requirements are specified in terms of diameter and wall thickness to meet durability and user requirements 2.3 Required parts and materials and their availability are determined 2.4 Frame costs are documented and customer approval is obtained 2.5 Order is placed with suppliers for frame materials, parts and components
3. Prepare for frame building	3.1 <i>Frame building methods</i> and sequence, and access to required tools and equipment, are planned 3.2 Parts are laid out and checked for damaged or missing components 3.3 Fabrication tooling and jig set-up are selected and checked for serviceability 3.4 Welding, brazing or bonding equipment and materials are set up
4. Build bicycle frame	4.1 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 4.2 Frame building activities are carried out according to design drawing, work plan, and <i>safety and environmental requirements</i> 4.3 Hazards associated with the work are identified and risks are managed 4.4 Design drawing angles, measurements and frame alignment are checked throughout the building process and adjustments are made as required

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
5. Paint and finish frame	<p>5.1 Frame is prepared for painting and finishing</p> <p>5.2 Paint or finish is prepared and applied according to job and customer requirements and workplace instructions</p> <p>5.3 Safety and environmental requirements, including the use of PPE and adequate ventilation during frame painting, are followed</p> <p>5.4 Visible paint defects are removed or repainted according to workplace procedures and quality requirements</p>
6. Complete work processes	<p>6.1 Final inspection is made to ensure work meets workplace expectations and bicycle is presented ready for use</p> <p>6.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored</p> <p>6.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures</p> <p>6.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> research information to maintain and update knowledge of bicycle frame designs.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including design specifications.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions and requirements, including with customers and suppliers.
Numeracy skills to:	<ul style="list-style-type: none"> identify and take customer measurements identify and interpret codes and serial numbers relating to component specifications use and interpret sizing cycle electronic measurement equipment use basic mathematical operations to calculate: <ul style="list-style-type: none"> specifications from drawing measurements

Skills	Description
	<ul style="list-style-type: none"> costs of repair.
Self-management skills to:	<ul style="list-style-type: none"> select and use appropriate equipment, frame materials, CAD drawings and processes to design and build bicycle frames.
Problem solving skills to:	<ul style="list-style-type: none"> apply research information to job requirements.
Technology skills to:	<ul style="list-style-type: none"> use bicycle CAD drawing and computer system use specialist tools and equipment in line with workplace procedures.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Customer requirements</i> must include:	<ul style="list-style-type: none"> intended use of bicycle preferred design required construction methods and finish two of the following frame materials: <ul style="list-style-type: none"> steel titanium composite aluminium.
<i>Frame building methods</i> must include:	<ul style="list-style-type: none"> bicycle CAD drawings tube cutting, mitreing and preparation welding brazing bonding using frame jig controlling distortion and misalignment painting and surface finishing.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> manually handling bicycle frames identifying workplace hazards using PPE environmental requirements, including procedures for disposing

	of waste materials.

Assessment Requirements for AURBTY002 Design and build bicycle frames

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- design and build two different bicycle frames to customer specifications, in which the frames must involve two of the following materials:
 - steel
 - titanium
 - composite
 - aluminium.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to building bicycle frames, including procedures for:
 - manually handling bicycle frames
 - identifying workplace hazards
 - using personal protective equipment (PPE)
- environmental requirements, including procedures for disposing of waste materials
- sources of information on bicycle frame design and components
- mechanical principles and requirements of bicycle frame systems and their relationship to braking, wheels, drivetrain and steering systems
- types of bicycle frames and their system components
- types and features of materials used in bicycle frames, including:
 - steel
 - titanium

- composite
- aluminium
- types and use of tools and equipment used to design and build bicycle frames
- procedures for sourcing bicycle parts and materials
- techniques for designing and building bicycle frames, including:
 - application of frame design principles
 - bicycle computer-aided design (CAD) drawing
 - using measurements of customer physical attributes, including:
 - height
 - body shape and weight distribution
 - length of arms and legs
 - using measurements to design a bicycle frame to meet customer requirements, including:
 - head tube length and angle
 - bottom bracket drop
 - seat tube length and angle
 - top tube length
 - saddle setback
 - chain stay length
 - fork rake or offset
 - fork trail and bicycle stability
 - frame construction procedures and techniques, including:
 - component specifications
 - painted, anodised, natural state or polished frame surface
 - welding and bonding techniques
- causes of frame failures and design alternatives to reduce failure.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bicycle frames they have designed and built, e.g. build orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- bicycle workplace or simulated workplace
- workplace instructions detailing job requirements and build instructions
- customer build requirements
- relevant technical information and bicycle frame component specifications
- PPE required to build a bicycle frame
- bicycle CAD or other design tools
- bicycle sizing measuring equipment
- bicycle parts and components to build two different bicycle frames specified in the performance evidence
- access to suppliers of bicycle parts
- tools and equipment appropriate for designing and building bicycle frames.

AURBTY003 Repair carbon fibre bicycle frames

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to determine the extent of damage to carbon fibre bicycle frames, and undertake the necessary repairs. It involves preparing for the work, selecting and using specialist tools and equipment, assessing frame damage, selecting repair materials, repairing and finishing the carbon fibre frame to manufacturer specifications, and completing workplace processes and documentation.

It applies to those working in the bicycle retail, service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Bicycle

Unit Sector

Technical - Chassis and Frame

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Inspect carbon fibre	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
bicycle frame	1.2 Bicycle history, including riding incidents and accidents, is determined through discussion with customer 1.3 Bicycle frame is inspected for faults or damage using visual inspection methods and by comparing measurements against manufacturer specifications 1.4 Non-destructive testing is arranged, as required 1.5 Hazards associated with the work are identified and risks are managed 1.6 Repair assessment , including replacement options for bicycle frame, is completed 1.7 Repair cost is calculated and documented for customer approval
2. Prepare for repair	2.1 Work area is prepared and repair sequence, including post-repair testing, is planned to avoid damage to bicycle, minimise waste and use time efficiently 2.2 Replacement parts and repair materials are prepared according to frame manufacturer specifications 2.3 Tools and equipment , including personal protective equipment (PPE), are selected and checked for serviceability
3. Repair carbon fibre frame	3.1 Frame surface is prepared for repair and contaminants are removed 3.2 Repairs to bicycle frame, including carbon fibre tubes and seat stay, are carried out according to repair plan, manufacturer specifications, and safety and environmental requirements 3.3 Repaired area of frame is sealed according to manufacturer specifications 3.4 Required replacement parts are checked and fitted according to manufacturer specifications 3.5 Tests are completed to ensure fibre frame repairs comply with manufacturer specifications, and problems outside scope of own role are referred to appropriate person 3.6 Carbon fibre bicycle frame is cleaned in preparation for delivery to customer
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and bicycle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description

AURETA001 Analyse and evaluate electrical and electronic faults in electronic over hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate electrical and electronic faults in the embedded network electronic over hydraulic systems of vehicles or machinery in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

The unit applies to those working in the automotive service and repair industry on network electronic over hydraulic systems in vehicles or machinery, which may be wheeled or track type machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for electronic over hydraulic system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Electronic over hydraulic system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to electronic over hydraulic systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised electronic over hydraulic system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:<ul style="list-style-type: none">• identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems• working with high pressure fluid hazards• tagging out and isolating machines, and wheel chocking• environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydraulic systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none">• diagnostic process, sequence, tests and testing equipment.

Unit Mapping Information

Equivalent to AURETA5001 Analyse and evaluate electrical and electronic faults in electric over-hydraulic systems

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURETA001 Analyse and evaluate electrical and electronic faults in electronic over hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate an electrical or electronic fault in the electronic over hydraulic systems of two different vehicles or machinery
- the above faults must involve two of the following systems:
 - traction motion control
 - excavator bucket control
 - steering control
 - crane ram control
 - garbage compactor control.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) or occupational health and safety (OHS) requirements relating to analysing and evaluating electrical and electronic faults in electronic over hydraulic systems, including procedures for:
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
 - working with high pressure fluid hazards
 - tagging out and isolating machines, and wheel chocking
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from electronic over hydraulic systems
- principles and processes involved in planning and implementing analysis and evaluation of electrical and electronic faults in electronic over hydraulic systems

- design and planning of diagnostic procedures of electronic over hydraulic system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults
- procedures for analysing and evaluating electronic over hydraulic system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of electronic over hydraulic systems, including:
 - gateway network control module
 - bus network topography
 - hydraulic control module functions
 - associated network electronic over hydraulic system components
 - sensor and actuator control and monitoring systems
 - control signal circuits
 - operator joystick control devices
 - solenoid and proportional valve control of hydraulic fluid
- testing procedures for electronic over hydraulic systems, including the use of:
 - digital multimeter
 - scan tool
 - oscilloscope
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate electrical and electronic faults in electronic over hydraulic systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to electronic over hydraulic systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electronic over hydraulic systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer electronic over hydraulic system specifications
- two different vehicles or machinery with faults in the electronic over hydraulic systems specified in the performance evidence
- diagnostic tools and equipment for vehicle or machinery electronic over hydraulic system fault diagnosis, including:
 - digital multimeter
 - scan tool
 - oscilloscope
- tools, equipment and materials appropriate for analysing and evaluating electronic over hydraulic systems.

AURETA002 Analyse and evaluate electrical and electronic faults in body management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate electrical and electronic faults in the embedded network body management systems of vehicles and machinery in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry on embedded network body management systems in vehicles or machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for body management system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Body management system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to body management systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised body management system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none">• diagnostic process, sequence, tests and testing equipment.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURETA005 Analyse and evaluate electrical and electronic faults in theft-deterrent systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate an electrical or electronic fault in the embedded network theft-deterrent systems of two different vehicles or machinery
- the above faults must involve two of the following systems:
 - locking and securing
 - passive entry
 - integrated alarm
 - engine immobiliser
 - remote access.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in theft-deterrent systems, including procedures for identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- principles and processes involved in planning and implementing analysis and evaluation of electrical and electronic faults in theft-deterrent systems
- design and planning of diagnostic procedures for faults in theft-deterrent systems, including procedures for diagnosing:
 - electrical faults
 - electronic faults
- types, functions, operation and limitations of theft-deterrent systems, including:

- gateway network control module
- bus network topography
- body control module (BCM) functions
- associated embedded network theft-deterrent system components
- sensor and actuator control and monitoring systems
- control signal circuits
- testing procedures for theft-deterrent systems, including the use of:
 - digital multimeter
 - scan tool
 - oscilloscope
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate electrical and electronic faults in theft-deterrent systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to theft-deterrent systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the theft-deterrent systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer theft-deterrent system specifications
- two different vehicles or machinery with faults in the theft-deterrent systems specified in the performance evidence
- diagnostic equipment for theft-deterrent system fault diagnosis, including:
 - digital multimeter
 - scan tool
 - oscilloscope
- tools, equipment and materials appropriate for analysing and evaluating theft-deterrent systems.

AURETA006 Analyse and evaluate electrical and electronic faults in air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate electrical and electronic faults in embedded network air conditioning and heating, ventilation and air conditioning (HVAC) systems of vehicles or machinery in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry on the air conditioning and HVAC systems of vehicles or machinery.

Licensing requirements apply to this unit. Users are advised to check with the relevant regulatory authority.

Competency Field

Electrical

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for embedded network air conditioning and HVAC system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Air conditioning and HVAC system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, <i>regulatory and licensing requirements</i> , and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Assessment Requirements for AURETA006 Analyse and evaluate electrical and electronic faults in air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate an electrical or electronic fault in the air conditioning and heating, ventilation and air conditioning (HVAC) systems of two different vehicles or machinery
- the above faults must involve two of the following:
 - compressor system
 - control module
 - system pressure and temperature sensor
 - erratic performance of air conditioning and HVAC system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in air conditioning and HVAC systems, including procedures for:
 - working with refrigerants at boiling point given risk of frostbite
 - working with system lubricants, including carcinogenic oils
 - handling flammable refrigerants
 - using personal protective equipment
 - identifying and using fire safety equipment
- environmental requirements, including procedures for preventing loss of refrigerant to the atmosphere

- principles and processes involved in planning and implementing analysis and evaluation of electrical and electronic faults in air conditioning and HVAC systems
- design and planning of diagnostic procedures for faults in air conditioning and HVAC systems, including procedures for diagnosing:
 - electrical faults
 - electronic faults
- types, functions, operation and limitations of air conditioning and HVAC systems, including:
 - gateway network control module
 - bus network topography
 - body control module (BCM) functions
 - associated network air conditioning and HVAC system components
 - sensor and actuator control and monitoring systems
 - control signal circuits
- testing procedures for air conditioning and HVAC systems, including the use of:
 - digital multimeter
 - scan tool
 - oscilloscope
 - manifold and gauge set
 - recovery unit
 - vacuum pump
 - electronic leak detector
 - nitrogen cylinder and regulator
 - digital vacuum gauge (vacrometer)
 - electronic scales
 - oil injector
 - infra-red thermometer (pyrometer)
 - electronic temperature probe
 - valve core removing or replacement tool
 - humidity detector (psychrometer)
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate electrical and electronic faults in air conditioning and HVAC systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- procedures for documenting and reporting the analysis and evaluation process

- regulatory and licensing requirements relating to air conditioning and HVAC systems, including those of:
 - Australian Refrigeration Council (ARCtick)
 - Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners
 - Australian Design Rules (ADRs).

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements and hold an Australian Refrigerant Council (ARC) Refrigerant Handling licence.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air conditioning and HVAC systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service and repair workplace or simulated workplace
- workplace instructions
- manufacturer air conditioning and HVAC system specifications
- regulatory and licensing requirements, including:
 - Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners
 - Australian Design Rules (ADRs)
- two different vehicles or machinery with air conditioning and HVAC system faults specified in the performance evidence
- diagnostic equipment for air conditioning and HVAC systems
- tools, equipment and materials appropriate for analysing and evaluating air conditioning and HVAC systems.

AURETB001 Diagnose and repair electric braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the electric braking systems of vehicle or machinery. These systems are single wire (non CAN-bus) circuits and include electric braking systems in light vehicles and machinery fitted with electric trailer braking controllers or trailers fitted with electric brakes. The unit involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. Electric braking systems include those in agricultural machinery, heavy commercial vehicles, light vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical – Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair electric braking system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose electric braking system	2.1 Diagnostic tests are carried out according to workplace procedures and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair electric braking system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, safety requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify and locate various sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and wiring diagrams in information relating to electrical system testing and repair equipment from manufacturer specifications and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> match electrical components and part identification numbers to workplace instructions, vehicle and component part lists, and manufacturer specifications interpret vehicle electrical measurements and readings measure voltage, current and resistance and use basic mathematical operations, including addition and subtraction, to calculate deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised equipment, including multimeters and scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> using specialised tools and equipment using appropriate personal protective equipment (PPE)

Assessment Requirements for AURETB001 Diagnose and repair electric braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the electrical non CAN-bus networked braking system of two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing electric braking systems, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with working on vehicle high voltage ignition systems, including standard precautions including not wearing jewellery while working around high current wiring systems
- electrical principles, including:
 - current, voltage, resistance and power
 - series circuits
 - parallel circuits
 - series and parallel circuits
 - Ohm's law
 - Faraday's law
 - Kirchhoff's law
 - electromagnetic interference and radiation
- application, purpose and operation of electric braking systems and components, including:

- control systems, including:
 - electric over hydraulic
 - electric over vacuum
- circuit protection devices
- switches, relays and globes, including light emitting diodes (LEDs)
- cable types and sizes and current carrying capacity
- sensors (two and three-wire)
- actuators, including pulse width modulated (PWM)
- techniques for reading and interpreting technical information, including circuit types, diagrams and symbols
- diagnostic testing procedures for electric braking systems, including:
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - testing resistance and voltage drop
 - testing open and short circuits
 - checking shorts to signal, power circuits and grounds
 - visual, aural and functional assessments of electric braking system components, including:
 - component damage and wear
 - component or connector corrosion
 - component water or moisture ingress
- repair procedures for electric braking system circuits, including procedures for removing and replacing:
 - brake controllers
 - electric drum brakes
 - electric disc brakes
 - electric braking system wiring and connectors
- post-repair testing procedures, including static and dynamic performance tests of electric braking systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment includes third-party evidence, individuals must provide evidence that links them to the electric braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer electric braking system specifications
- two different vehicles or machinery with electric braking system faults
- diagnostic equipment for electric braking systems, including:
 - multimeter
 - scan tool
- tools, equipment and materials appropriate for repairing vehicle and machinery electric braking systems.

Assessment Requirements for AURETB002 Analyse and evaluate electrical and electronic faults in dynamic control management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate an electrical or electronic fault in the dynamic control management systems of two different vehicles or machinery
- the above faults must involve two of the following:
 - anti-lock braking system (ABS)
 - ABS and integrated traction control system
 - traction and stability control system
 - electronic braking control module (EBCM).

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in dynamic control management systems, including procedures for identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- principles and processes involved in planning and implementing analysis and evaluation of electrical and electronic faults in dynamic control management systems
- design and planning of diagnostic procedures for faults in dynamic control management systems, including procedures for diagnosing:
 - electrical faults
 - electronic faults

- types, functions, operation and limitations of dynamic control management systems, including:
 - gateway network control module
 - bus network topography
 - body control module (BCM) functions
 - associated network dynamic control management system components
 - sensor and actuator control and monitoring systems
 - control signal circuits
 - ABS
 - stability control systems (SCS)
 - traction control systems (TCS)
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate electrical and electronic faults in dynamic control management systems
- testing procedures for dynamic control management systems, including the use of:
 - digital multimeter
 - scan tool
 - oscilloscope
 - four-wheel dynamometer
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate electrical and electronic faults in dynamic control management systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to dynamic control management systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the dynamic control management systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer dynamic control management system specifications
- two different vehicles or machinery with faults in the dynamic control management systems specified in the performance evidence
- diagnostic equipment for dynamic control management systems
- tools, equipment and materials appropriate for analysing and evaluating dynamic control management systems.

AURETD011 Diagnose and repair electronically controlled steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to diagnose and repair faults in electronically controlled steering systems. These systems include two-wire high and low speed (CAN-bus) and single wire low speed (LIN-bus) networked circuits in vehicle or machinery embedded network electronic control systems. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

This unit applies to those working within the automotive electrical service and repair industry. The electronically controlled steering systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Diagnose electronically controlled steering system	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret diagnostic information in order to identify diagnostic options required for the job 1.3 Identify hazards and environmental issues, assess potential risks, and implement control measures in line with workplace policies 1.4 Identify diagnostic tools and equipment required for the job and examine for serviceability

	<p>1.5 Perform diagnostic tests according to workplace procedures and workplace health and safety requirements</p> <p>1.6 Examine diagnostic test results to identify causes of faults, report findings and make recommendations for necessary repairs or adjustments according to workplace procedures</p>
2. Repair and test electronically controlled steering system	<p>2.1 Obtain and interpret repair information in order to identify repair options required for the job</p> <p>2.2 Identify repair tools, equipment and materials for the job and examine for serviceability</p> <p>2.3 Carry out repairs or component replacements and adjustments according to workplace procedures, manufacturer specifications, workplace health and safety and environmental requirements</p> <p>2.4 Carry out post-repair testing according to workplace procedures, workplace health and safety and environmental requirements to confirm fault rectification and repair any issues identified</p>
3. Complete work processes	<p>3.1 Carry out final inspection to ensure work meets workplace expectations and vehicle or machinery is ready for use</p> <p>3.2 Clear work area and dispose of waste or recycle materials according to workplace procedures</p> <p>3.3 Examine and store tools and equipment, ensuring faulty electrical equipment is identified, tagged and isolated according to workplace procedures</p> <p>3.4 Complete documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of electronically controlled steering systems information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from workplace procedures and documentation when seeking electronically controlled steering systems specifications and procedures
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings make repair recommendations

Numeracy skills to:	<ul style="list-style-type: none"> • use basic mathematical operations, including addition and subtraction • calculate deviations from manufacturer specifications • match electronically controlled steering system components and part identification numbers to workplace instructions, vehicle and component part lists, and manufacturer specifications • measure voltage, current and resistance • interpret vehicle or machinery electrical measurements and readings
Planning and organising skills to:	<ul style="list-style-type: none"> • plan own work requirements • prioritise actions to achieve required outcomes • ensure tasks are completed within workplace timeframes
Technology skills to:	<ul style="list-style-type: none"> • use specialised equipment, including multimeters • use diagnostic scan tools

Assessment Requirements for AURETD011 Diagnose and repair electronically controlled steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate a diagnosis and repair of electronically controlled steering systems that safely follows workplace procedures to meet required outcomes. This includes:

- diagnosis and repair of a fault within two of the following electronically controlled steering systems of two different vehicles or machinery:
 - steering wheel torque sensor circuit
 - steering wheel angle sensor circuit
 - wheel speed sensor circuit
 - ultrasonic position sensor self-parking system circuit
 - power steering motor control circuit
 - power steering hydraulic pump control circuit
 -

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures relating to the diagnosis, testing and repair of electronically controlled steering systems, including:

- how to locate and interpret manufacturers specifications or equivalent documentation and workplace procedures for the diagnosis and repair of electronically controlled steering systems
- the following workplace health and safety requirements for diagnosis and repair of electronically controlled steering systems:
 - procedures for using specialised tools and equipment
 - knowledge of the required personal protective equipment (PPE)
 - procedures for identifying hazards and controlling risks associated with working with high pressure and high temperature steering systems

- environmental requirements for diagnosis, testing and repair of electronically controlled steering systems
- the following diagnostic testing procedures for electronically controlled steering systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
- the following electrical systems testing procedures:
 - accessing electrical terminals
 - using test probes without damaging connectors, fuse holders or wiring
 - undertaking resistance tests
 - undertaking voltage drop tests
 - testing open circuits
 - testing short circuits
 - checking shorts to signal, power circuits and grounds
- the following repair procedures for electronically controlled steering systems:
 - removing and replacing electronically controlled steering system components
- the following post-repair testing procedures for electronically controlled steering systems:
 - DTC clearing procedures
 - static and dynamic performance tests of steering systems
- workplace housekeeping and documentation procedures

Electronically controlled power steering systems information, including:

- the operating principles of:
 - adaptive steering topography, inputs and outputs
 - typical vehicle or machinery systems equipped with adaptive steering systems
- the purpose and operation of:
 - adaptive steering control modules
 - control sensors and actuators
 - actuators, including pulse width modulated (PWM)
- the purpose and operation of the following steering control module functions:
 - control of hydraulic fluid settings
 - pressure control valve settings
 - power steering pump operation
 -

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to diagnose and repair activity
 - workplace procedures relating to diagnose and repair activity
 - manufacturer electronically controlled steering systems specifications and procedures or equivalent documentation to complete diagnose and repair activity
 - two different vehicles or machinery with faults in the electronically controlled steering system components specified in the performance evidence
 - diagnostic equipment for electronically controlled steering systems, including:
 - multimeter
 - scan tool
 - tools, equipment and materials required for repairing electronically controlled steering systems of vehicle and machinery
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

AURETE001 Analyse and evaluate electrical and electronic faults in engine management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate electrical and electronic faults in embedded network engine management systems of vehicles or machinery in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry on embedded network engine management systems of vehicles or machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for engine management system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Engine management system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> • apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> • research, organise and interpret technical information relating to engine management systems.
Writing skills to:	<ul style="list-style-type: none"> • legibly and accurately fill out workplace documentation when reporting failure analysis findings • document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> • use mathematical ideas and techniques to complete measurements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> • plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> • use specialised engine management system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:<ul style="list-style-type: none">• working on vehicle systems with ignition high voltages• identifying hazards and controlling risks associated with wearing jewellery while around high current wiring systems• working with high pressure fuel systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none">• diagnostic process, sequence, tests and testing equipment.

Assessment Requirements for AURETE001 Analyse and evaluate electrical and electronic faults in engine management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate an electrical or electronic fault in the engine management systems of two different vehicles or machinery
- the above faults must involve two of the following systems:
 - direct injection diesel engine management system
 - common rail diesel engine management system
 - distributor-less electronic ignition petrol engine management system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in engine management systems, including procedures for:
 - working on vehicle systems with ignition high voltages
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
 - working with high pressure fuel systems
- principles and processes involved in planning and implementing analysis and evaluation of electrical and electronic faults in engine management systems
- design and planning of diagnostic procedures for faults in engine management systems, including procedures for diagnosing:
 - electrical faults
 - electronic faults

- types, functions, operation and limitations of engine management systems, including:
 - spark ignition engine management systems
 - diesel fuel injection systems
 - gateway network control module
 - bus network topography
 - associated network engine management systems
 - sensor and actuator control and monitoring systems
 - control signal circuits
- testing procedures for engine management systems, including the use of:
 - digital multimeter
 - scan tool
 - oscilloscope
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate electrical and electronic faults in engine management systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to engine management systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine management systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine management system specifications
- two different vehicles or machinery with faults in the engine management systems specified in the performance evidence
- diagnostic equipment for engine management systems, including:
 - digital multimeter
 - scan tool
 - oscilloscope
- tools, equipment and materials appropriate for analysing and evaluating engine management systems.

AURETH001 Depower and reinitialise battery electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to depower and reinitialise battery electric vehicles (BEVs). It involves ensuring the vehicle high voltage (HV) rechargeable energy storage system (RESS) is isolated before commencing any service or repair work. It also involves calibrating vehicle systems that may need resetting once the energy storage system is reinitialised. Importance is placed in the unit on applying RESS and separated extra low voltage (SELV) electrical safety procedures.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to depower and reinitialise BEV	1.1 Job requirements are determined from workplace instructions 1.2 Workplace procedures and manufacturer specifications are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed according to <i>safety requirements</i> and AS 5732 Electric vehicle operations - Maintenance and repair 1.4 Tools and equipment are selected and checked for serviceability 1.5 Vehicle is identified with warning tag or sign to indicate potential hazards
2. Deactivate vehicle RESS	2.1 SELV supply is located and disconnected according to manufacturer specifications 2.2 RESS service plug or manual service disconnect is located and removed to depower vehicle HV RESS according to manufacturer specifications 2.3 Vehicle is stabilised and checked for zero residual voltage according to manufacturer procedures 2.4 RESS service plug or manual service disconnect is secured and retained to prevent refitting by third party
3. Reinitialise vehicle RESS	3.1 SELV and RESS service plug or manual service disconnect are reconnected in the correct order and vehicle is reactivated 3.2 Diagnostic test equipment is used to check and recalibrate subsystems affected by depower process as required 3.3 RESS and vehicle subsystems are checked for correct operation 3.4 Post-reactivation faults are reported according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and diagrams in depowering and reinitialising information in manufacturer specifications, and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> listen to workplace instructions and ask questions to clarify job requirements participate in verbal exchanges when depowering and reinitialising BEVs.
Numeracy skills to:	<ul style="list-style-type: none"> match electrical components and part identification numbers to workplace instructions, vehicle and component part lists, and manufacturer specifications interpret vehicle electrical measurements and readings on digital and analogue gauges interpret measurements of residual voltage and high voltages relating to BEVs.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify faults in reinitialising process that need to be reported.
Technology skills to:	<ul style="list-style-type: none"> use specialised tools.

Assessment Requirements for AURETH001 Depower and reinitialise battery electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- safely depower the rechargeable energy storage system (RESS) and separated extra low voltage (SELV) system of two different battery electric vehicles (BEVs), and stabilise the vehicles ensuring that no residual high voltage (HV) is measured
- safely reinitialise each BEV's RESS and SELV system and confirm correct vehicle operation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to depowering and reinitialising BEVs, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages on BEV electrical systems
 - wearing jewellery while working around high electrical currents
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions when:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
 - identifying and using firefighting equipment as appropriate
 - using the 'one hand' rule
 - following live system warning tags and signs
 - depowering vehicle
 - isolating HV RESS electrical supply

- stabilising vehicle electrical system.
- requirements of AS 5732 Electric vehicle operations - Maintenance and repair
- operating principles of RESS and SELV electrical systems relevant to a range of BEVs
- application, purpose and operation of a range of vehicle RESS depowering and reinitialising methods.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the BEVs that they have depowered and reinitialised e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE and safety equipment, including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
- manufacturer specifications and service procedures for the BEVs being depowered and reinitialised
- AS 5732 Electric vehicle operations - Maintenance and repair
- two different BEVs as specified in the performance evidence
- electrical test equipment, including:
 - digital multimeter with Cat III 1000 volt rating
 - insulation tester
 - residual voltage tester, if specified in original equipment manufacturer (OEM) test requirements
 - scan tool
- tools, equipment and materials appropriate for depowering and reinitialising BEVs.

AURETH002 Service and maintain battery electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service and maintain battery electric vehicles (BEVs). It involves working with automotive electrical components, maintaining rechargeable energy storage systems (RESS), and performing basic tests on electric drive motors. Importance is placed in the unit on applying high voltage (HV) RESS and separated extra low voltage (SELV) electrical safety procedures.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

AURETH001 Depower and reinitialise battery electric vehicles

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service and maintain BEV	1.1 Job requirements are determined from workplace instructions 1.2 Workplace procedures and manufacturer specifications are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed according to <i>safety requirements</i> and AS 5732 Electric vehicle operations - Maintenance and repair 1.4 <i>Tools and equipment</i> are selected and checked for serviceability
2. Test RESS and drive motor system operation	2.1 Diagnostic equipment is used to retrieve system parameters and information 2.2 RESS and vehicle drive motor system are tested for correct operation according to manufacturer specifications 2.3 Problems associated with performance of RESS or drive motor system are identified and reported according to workplace procedures
3. Deactivate vehicle RESS	3.1 Vehicle is depowered according to manufacturer specifications and workplace procedures 3.2 Vehicle is identified with warning tag or sign to indicate potential hazards 3.3 SELV supply is located and disconnected according to manufacturer specifications 3.4 RESS service plug or manual service disconnect is located and removed to depower vehicle HV RESS according to manufacturer specifications 3.5 Vehicle is stabilised and checked for zero residual voltage according to manufacturer procedures 3.6 RESS service plug or manual service disconnect is secured and retained to prevent refitting by third party
4. Check drive motor and associated components	4.1 Electrical drive motor is checked to confirm condition 4.2 Problems associated with performance of electric drive motor and associated components are identified 4.3 Corrective action required to achieve optimum motor performance is reported according to workplace procedures
5. Check associated electrical subsystems and components	5.1 Condition and operation of associated electrical subsystems and components are checked 5.2 Problems associated with performance of electrical subsystems and components are identified

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	5.3 Required <i>corrective action</i> is reported according to workplace procedures
6. Reinitialise vehicle RESS	<p>6.1 SELV and RESS service plug or manual service disconnect are reconnected in correct order, and vehicle is reactivated</p> <p>6.2 Diagnostic test equipment is used to check and recalibrate subsystems affected by depower process as required</p> <p>6.3 RESS and vehicle subsystems are checked for correct operation</p> <p>6.4 Post-service testing is carried out to ensure correct and safe operation of BEV, any reported problems are resolved, and no other problems are present</p>
7. Complete work processes	<p>7.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>7.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>7.3 Tools and equipment are checked and stored and any faulty equipment is identified, tagged and isolated according to workplace procedures</p> <p>7.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and diagrams in testing, servicing and maintenance information from manufacturer specifications, and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify workplace instructions participate in verbal exchanges to report faults, and service and maintenance findings, and make required repair

Skills	Description
	recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> match materials and component part numbers to workplace instructions, vehicle and component part lists, and manufacturer specifications interpret measurements of voltage, current and resistance relating to electrical circuits measure materials and components to determine compliance with manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> identifying hazards and controlling risks associated with: <ul style="list-style-type: none"> working with high voltages on BEV electrical systems wearing jewellery while working around high electrical currents determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions when: <ul style="list-style-type: none"> using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat identifying and using firefighting equipment as appropriate using the 'one hand' rule following live system warning tags and signs depowering vehicle isolating HV RESS electrical supply
---	---

	<ul style="list-style-type: none"> • stabilising vehicle electrical system.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> • those specified in the specific vehicle service maintenance procedures, including: <ul style="list-style-type: none"> • digital multimeter with Cat III 1000 volt rating • insulation tester • residual voltage tester, if specified in original equipment manufacturer (OEM) test requirements • scan tool.
<i>Corrective action</i> must include:	<ul style="list-style-type: none"> • tightening connections • balancing state of charge • replacing faulty or damaged cable connections • removing and replacing faulty or damaged components.

Assessment Requirements for AURETH002 Service and maintain battery electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- safely test, service and maintain two different battery electric vehicles (BEVs).

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing and maintaining BEVs, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages on BEV electrical systems
 - wearing jewellery while working around high electrical currents
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions when:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated high voltage (HV) insulating mat
 - identifying and using firefighting equipment as appropriate
 - using the 'one hand' rule
 - following live system warning tags and signs
 - depowering vehicle
 - isolating HV rechargeable energy storage system (RESS) electrical supply
 - stabilising vehicle electrical system
- requirements of AS 5732 Electric vehicle operations - Maintenance and repair
- key components of BEVs and their functions
- RESS battery construction, including:

- battery internal resistance
- battery types
- terminal corrosion
- terminal resistance
- key components of RESS theory, including:
 - cell failure theory
 - charging characteristics
 - open circuit cells
 - reverse polarisation
 - series cell configuration
 - strapping and layout
- battery charger characteristics and operation, including battery cooling system and refrigerant flow through RESS
- battery management system (BMS) theory
- power distribution unit (PDU) operation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the BEVs they have serviced and maintained, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE, including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
- manufacturer specifications and service procedures for the BEVs being worked on
- AS 5732 Electric vehicle operations - Maintenance and repair
- two different operational BEVs requiring service and maintenance
- electrical test equipment appropriate to BEVs being serviced, including:

- digital multimeter with Cat III 1000 volt rating
- insulation tester
- residual voltage tester, if specified in original equipment manufacturer (OEM) test requirements
- scan tool
- tools, equipment and materials appropriate for testing, servicing and maintaining BEVs.

AURETH003 Diagnose and repair high voltage rechargeable energy storage systems in battery electric vehicle

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the high voltage (HV) rechargeable energy storage systems (RESS) of battery electric vehicles (BEVs). It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and repair, performing post-repair testing, and completing workplace processes and documentation. Importance is placed in the unit on applying electrical safety procedures when working on HV RESS.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

AURETH001 Depower and reinitialise battery electric vehicles

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair HV RESS	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is accessed and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed according to <i>safety requirements</i> and AS 5732 Electric vehicle operations - Maintenance and repair 1.5 Diagnostic <i>tools and equipment</i> are selected and checked for serviceability
2. Diagnose RESS	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for required repairs or adjustments are reported according to workplace procedures
3. Repair RESS	3.1 Repair information is accessed and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 RESS service plug or manual service disconnect is located and isolated to depower vehicle HV RESS according to manufacturer specifications 3.5 RESS and components are replaced, repaired or adjusted as required according to manufacturer specifications, workplace procedures, safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.6 RESS service plug or manual service disconnect are reconnected and vehicle is reactivated 3.7 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and wiring diagrams in diagnostic and repair information in manufacturer specifications, and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> match electrical components and part identification numbers to workplace instructions, vehicle and component part lists, and manufacturer specifications interpret vehicle electrical measurements and readings on digital and analogue gauges measure voltage, current and resistance and use basic mathematical operations, including addition and subtraction, to calculate deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Assessment Requirements for AURETH003 Diagnose and repair high voltage rechargeable energy storage systems in battery electric vehicle

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit’s elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair high voltage (HV) rechargeable energy storage systems (RESS) in two different battery electric vehicles (BEVs) to correct performance deficiencies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing RESS in BEVs, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages on BEV electrical systems
 - wearing jewellery while working around high electrical currents
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions when:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
 - identifying and using firefighting equipment as appropriate
 - using the ‘one hand’ rule
 - following live system warning tags and signs
 - depowering vehicle
 - isolating HV RESS electrical supply
 - stabilising vehicle electrical system

- environmental requirements, including procedures for trapping, storing and disposing of waste released during repair procedures
- requirements of AS 5732 Electric vehicle operations - Maintenance and repair
- operating principles of HV RESS in BEVs, including:
 - battery pack construction, including:
 - battery types
 - battery internal resistance
 - battery pack system, including:
 - charging characteristics
 - open circuit cells
 - reverse polarisation
 - series cell configuration
 - strapping and layout
- application, purpose and operation of RESS, including:
 - HV battery charger and direct current (DC) to DC converter
 - battery management system (BMS)
 - power distribution unit (PDU)
- diagnostic testing procedures for HV RESS in BEVs, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - electrical system testing, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - testing controller input and output signals and waveforms
 - vehicle dynamic and static testing procedures
 - analysing abnormal noise
 - analysing component failure
 - RESS cooling system testing
- repair procedures for RESS, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
 - removing and replacing motor controller
- post-repair testing procedures for BEV, including:
 - DTC clearing procedures
 - checking for electrical connector mating

- performance testing RESS.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the RESS in BEVs that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE, including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
- manufacturer specifications for BEV and RESS
- AS 5732 Electric vehicle operations - Maintenance and repair
- two different BEVs with RESS and associated components accessible for diagnosis and repair or replacement activities
- electrical diagnostic equipment appropriate to the BEV being diagnosed and repaired, including:
 - digital multimeter with Cat III 1000 volt rating
 - insulation tester
 - residual voltage tester, if specified in original equipment manufacturer (OEM) specifications
 - scan tool
 - oscilloscope
- tools, equipment and materials appropriate for repairing BEV RESS and their components.

AURETH004 Diagnose and repair traction motor speed control systems in battery electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the traction motor speed control systems in battery electric vehicles (BEVs). These systems may be referred to as digital motor controllers (DMCs) or motor control units (MCUs). The unit involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation. Importance is placed in the unit on applying electrical safety procedures when working on high voltage (HV) rechargeable energy storage systems (RESS).

It applies to those working in the automotive service and repair industry. Motor speed control systems include circuits in BEVs.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Assessment Requirements for AURETH004 Diagnose and repair traction motor speed control systems in battery electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair traction motor speed control systems and associated components on two different battery electric vehicles (BEVs) to correct performance deficiencies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing traction motor speed control systems in BEVs, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages in BEV electrical systems
 - wearing jewellery while working around high electrical currents
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and high voltage (HV) insulating mat with Australian standards rating
 - identifying and using fire safety equipment as appropriate
 - using the 'one hand rule'
 - following live system warning tags and signs
 - depowering the vehicle
 - isolating the HV rechargeable energy storage system (RESS) electrical supply
 - stabilising the vehicle electrical system

- environmental requirements, including procedures for trapping, storing and disposing of waste released from traction motor speed control systems
- key requirements of AS 5732 Electric vehicle operations: Maintenance and repair
- operating principles of HV BEVs and associated components, including:
 - types of batteries
 - types of traction motors, including alternating current and direct current
 - types of motor controllers
 - battery charging
- application, purpose and operation of traction motor speed control systems and components, including:
 - controller inputs
 - resolvers
 - controller outputs
 - battery interface
- diagnostic testing procedures for battery electric vehicle systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - controller input and output signals and waveforms
 - vehicle dynamic and static testing procedures
 - abnormal noise analysis
 - component failure analysis
 - testing motor speed controller cooling system
- repair procedures for traction motor speed control systems, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
 - removing and replacing motor speed controller
- post-repair testing procedures for BEVs, including:
 - DTC clearing procedures
 - checking for electrical connector mating
 - static and dynamic performance tests of traction motors.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the BEV traction motor speed control systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE and safety equipment, including electrical safety gloves with 1000 volt rating and HV insulating mat with Australian standards rating
- manufacturer specifications for BEV traction motor speed control systems
- AS 5732 Electric vehicle operations: Maintenance and repair
- two different BEVs with traction motor speed control systems accessible for diagnosis and repair or replacement activities
- electrical diagnostic equipment appropriate to the BEV being diagnosed and repaired, including:
 - digital multimeter with Cat III 1000 volt rating
 - insulation tester
 - scan tool
 - oscilloscope
 - residual voltage tester, if specified in original equipment manufacturer (OEM) test requirements
- tools, equipment and materials appropriate for repairing high voltage traction motors in BEVs.

Assessment Requirements for AURETH005 Diagnose and repair high voltage traction motors in battery electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair high voltage (HV) traction motors and associated components on two different battery electric vehicles (BEVs) to correct performance deficiencies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing HV traction motors in BEVs, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages in BEV electrical systems
 - wearing jewellery while working around high electrical currents
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and high voltage (HV) insulating mat with Australian standards rating
 - identifying and using fire safety equipment as appropriate
 - using the 'one hand rule'
 - following live system warning tags and signs
 - depowering the vehicle
 - isolating the HV rechargeable energy storage system (RESS) electrical supply
 - stabilising the vehicle electrical system

- environmental requirements, including procedures for trapping, storing and disposing of waste released from high voltage traction motors
- key requirements of AS 5732 Electric vehicle operations: Maintenance and repair
- operating principles of HV BEVs and associated components, including:
 - motor generators
 - types of batteries
 - battery charging
- application, purpose and operation of HV traction motors and components, including:
 - direct current (DC) motor generators
 - alternating current (AC) motor generators
- diagnostic testing procedures for battery electric vehicle systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - determining damage to traction motor windings
 - checking insulation resistance of traction motor windings
 - checking routing and damage to HV cabling
 - conducting vehicle dynamic and static tests
 - analysing abnormal noise
 - analysing component failure
- repair procedures for traction motor speed control systems, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
 - removing and replacing the traction motor
- post-repair testing procedures for BEVs, including:
 - DTC clearing procedures
 - checking for electrical connector mating
 - static and dynamic performance tests of traction motors.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the BEV HV traction motors that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE and safety equipment, including electrical safety gloves with 1000 volt rating and high voltage (HV) insulating mat with Australian standards rating
- manufacturer specifications for BEV HV traction motor systems
- AS 5732 Electric vehicle operations: Maintenance and repair
- two different BEVs with HV traction motor systems accessible for diagnosis and repair or replacement activities
- electrical diagnostic equipment appropriate to the BEV being diagnosed and repaired, including:
 - digital multimeter with Cat III 1000 volt rating
 - insulation tester
 - scan tool
 - oscilloscope
 - residual voltage tester, if specified in original equipment manufacturer (OEM) test requirements
- tools, equipment and materials appropriate for repairing HV traction motors in BEVs.

AURETH006 Diagnose and repair auxiliary motors and associated components in battery electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the auxiliary motors of battery electric vehicles (BEVs), and in their associated components and control systems. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation. Importance is placed in the unit on applying electrical safety procedures when working on high voltage (HV) rechargeable energy storage systems (RESS).

It applies to those working in the automotive service and repair industry. BEV systems that may use auxiliary motors include power steering, braking and passenger comfort systems. Auxiliary motors and associated components include circuits in BEVs.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

AURETH001 Depower and reinitialise battery electric vehicles

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and high voltage (HV) insulating mat with Australian Standards rating
 - identifying and using fire safety equipment as appropriate
 - using the 'one hand rule'
 - following live system warning tags and signs
 - depowering the vehicle

- isolating the HV rechargeable energy storage system (RESS) electrical supply
- stabilising the vehicle electrical system
- environmental requirements, including procedures for trapping, storing and disposing of waste produced released during repair work
- key requirements of AS 5732 Electric vehicle operations: Maintenance and repair
- operating principles of BEV instrumentation and safety interlocks and associated components, including reasons for safety interlocks in BEVs
- application, purpose and operation of BEV instrumentation and safety interlocks, including:
 - battery charger, including charge cable sensor
 - controller signals
 - gear selector inhibitor switch
 - ignition or power key
 - inertia or impact sensor
 - isolation componentry, including HV contactor
 - motor over temperature control
 - under voltage protection
- diagnostic testing procedures for BEV instrumentation and safety interlocks, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - determining battery state of charge
 - operational tests of safety interlocks
 - testing instrumentation data communication systems using scan tool and oscilloscope
 - undertaking vehicle dynamic and static tests
- repair procedures for instrumentation and safety interlocks, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
 - removing and replacing instrumentation
- post-repair testing procedures for BEVs, including:
 - DTC clearing procedures
 - checking for electrical connector mating.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the BEV system instrumentation and safety interlocks that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE and safety equipment, including electrical safety gloves with 1000 volt rating and HV insulating mat with Australian standards rating
- manufacturer specifications for BEV system instrumentation and safety interlocks
- AS 5732 Electric vehicle operations: Maintenance and repair
- two different BEVs with system instrumentation and safety interlocks accessible for diagnosis and repair or replacement activities
- electrical diagnostic equipment appropriate to the BEV being diagnosed and repaired, including:
 - digital multimeter with Cat III 1000 volt rating
 - insulation tester
 - scan tool
 - oscilloscope
 - residual voltage tester, if specified in OEM requirements
- tools, equipment and materials appropriate for repairing system instrumentation and safety interlocks in BEVs.

AURETH008 Diagnose and repair HVAC and rechargeable energy storage cooling systems in battery electric vehicle

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the heating, ventilation and air conditioning (HVAC) system and cooling system of the rechargeable energy storage system (RESS) of battery electric vehicles (BEVs). The unit involves removing and replacing refrigerant, as well as performance testing the HVAC and RESS cooling system. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation. Importance is placed in the unit on applying electrical safety procedures when working on high voltage (HV) RESS.

It applies to those working in the automotive service and repair industry. HVAC and RESS cooling systems include circuits in BEVs.

Licensing requirements apply to this unit. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

AURETH001 Depower and reinitialise battery electric vehicles

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair HVAC and RESS cooling system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed according to <i>safety requirements</i> and AS 5732 Electric vehicle operations: Maintenance and repair 1.5 Diagnostic <i>tools and equipment</i> are selected and checked for serviceability
2. Diagnose HVAC and RESS cooling system	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair HVAC and RESS cooling system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 RESS service plug or manual service disconnect is located and isolated to depower vehicle HV RESS according to manufacturer specifications 3.5 HVAC and RESS cooling system components are replaced, repaired or adjusted as required according to manufacturer specifications, workplace procedures, safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.6 RESS service plug or manual service disconnect is reconnected and vehicle is reactivated 3.7 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 <i>Australian Refrigeration Council accredited service decal sticker (ARCTick)</i> and other required workplace documentation are completed and processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify and locate various sources of information efficiently.

Assessment Requirements for AURETH008 Diagnose and repair HVAC and rechargeable energy storage cooling systems in battery electric vehicle

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair heating, ventilation and air conditioning (HVAC) system and rechargeable energy storage system (RESS) cooling system components on two different battery electric vehicles (BEVs), in which the work must involve:
 - repairing or replacing one HVAC system component to correct performance deficiencies
 - repairing or replacing one RESS cooling system component to correct performance deficiencies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing HVAC and RESS cooling systems, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages in BEV electrical systems
 - wearing jewellery while working around high electrical currents
 - working with refrigerants at boiling point given risk of frostbite
 - working with system lubricants, including carcinogenic oils
 - handling flammable refrigerants
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions:

- using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and high voltage (HV) insulating mat with Australian standards rating
- identifying and using fire safety equipment as appropriate
- using the ‘one hand rule’
- following live system warning tags and signs
- depowering the vehicle
- isolating the HV RESS electrical supply
- stabilising the vehicle electrical system
- environmental requirements, including procedures for:
 - trapping, storing and disposing of waste released from HVAC and RESS cooling systems
 - preventing the escape of refrigerant to the atmosphere
- key requirements of AS 5732 Electric vehicle operations: Maintenance and repair
- operating principles of HVAC systems and RESS cooling systems and associated components, including:
 - types of HVAC systems, including engine operated and electric motor operated systems
 - types of RESS and RESS charging
 - reasons for cooling the RESS
- application, purpose and operation of HVAC systems and RESS cooling systems and components, including:
 - alternating current (AC) electric motor compressors
 - HVAC control units
 - HVAC control unit inputs and outputs
 - HVAC ejector cycle systems
 - RESS cooling systems, including air cooling, liquid cooling and HVAC cooled systems
- diagnostic testing procedures for HVAC and RESS cooling systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - determining damage to compressor motor windings
 - checking insulation resistance of compressor motor windings
 - checking routing and damage to HV cabling

- HVAC dynamic and static testing
- analysing abnormal noise
- analysing component failure
- repair procedures for HVAC systems and RESS cooling systems, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
- post-repair testing procedures for HVAC and RESS cooling systems, including:
 - DTC clearing procedures
 - checking for electrical connector mating
 - static and dynamic performance tests of HVAC systems and RESS cooling systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements and hold an Australian Refrigerant Council (ARC) Refrigerant Handling licence.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the BEV HVAC and RESS cooling systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- ARC accredited service decal sticker (ARCTick)
- PPE and safety equipment, including electrical safety gloves with 1000 volt rating and HV insulating mat with Australian standards rating
- manufacturer specifications for BEV HVAC and RESS cooling systems
- AS 5732 Electric vehicle operations: Maintenance and repair
- two different BEVs with HVAC and RESS cooling system components accessible for diagnosis and repair or replacement activities
- electrical diagnostic equipment appropriate to the BEV HVAC and RESS cooling being diagnosed and repaired as specified under tools and equipment in the range of conditions

- tools, equipment and materials appropriate for repairing HVAC and RESS cooling systems in BEVs.

AURETH009 Diagnose and repair DC to DC converters in battery electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in high voltage (HV) direct current (DC) to low voltage (LV) DC converters in battery electric vehicles (BEVs). It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation. Importance is placed in the unit on applying electrical safety procedures when working on HV rechargeable energy storage systems (RESS).

It applies to those working in the automotive service and repair industry. HV DC to LV DC converters include circuits in BEVs.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

AURETH001 Depower and reinitialise battery electric vehicles

AURETR025 Test, charge and replace batteries and jump start vehicles

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair DC to DC converter	1.2 Job requirements are determined from workplace instructions 1.3 Diagnostic information is sourced and interpreted 1.4 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.5 Hazards associated with the work are identified and risks are managed according to <i>safety requirements</i> and AS 5732 Electric vehicle operations: Maintenance and repair 1.6 Diagnostic <i>tools and equipment</i> are selected and checked for serviceability
2. Diagnose DC to DC converter	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair DC to DC converter	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 RESS service plug or manual service disconnect is located and isolated to depower vehicle HV RESS according to manufacturer specifications 3.5 DC to DC converters are replaced, repaired or adjusted as required according to manufacturer specifications, workplace procedures, safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.6 RESS service plug or manual service disconnect is reconnected and vehicle is reactivated 3.7 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair the DC to DC converter and its system components on two different battery electric vehicles (BEVs) to correct performance deficiencies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing DC to DC converters in BEVs, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages in BEV electrical systems
 - wearing jewellery while working around high electrical currents
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and high voltage (HV) insulating mat with Australian standards rating
 - identifying and using fire safety equipment as appropriate
 - using the 'one hand rule'
 - following live system warning tags and signs
 - depowering the vehicle
 - isolating the HV rechargeable energy storage system (RESS) electrical supply
 - stabilising the vehicle electrical system

- environmental requirements, including procedures for trapping, storing and disposing of waste produced during repair work
- key requirements of AS 5732 Electric vehicle operations: Maintenance and repair
- operating principles of DC to DC converters and associated components, including:
 - step-down converters
 - step-up converters
 - continuous current mode
 - discontinuous current mode
 - signal noise, including radio frequency (RF) noise, input noise and output noise
- application, purpose and operation of DC to DC converters and components, including:
 - linear converters
 - switched mode conversion
 - magnetic converters
 - capacitive converters
- diagnostic testing procedures for DC to DC converters, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - checking voltage input and output of DC to DC converters
 - checking routing and damage to cabling
- repair procedures for traction motor speed control systems, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
- post-repair testing procedures for BEVs, including:
 - DTC clearing procedures
 - checking for electrical connector mating.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the BEV DC to DC converters that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE and safety equipment, including electrical safety gloves with 1000 volt rating and HV insulating mat with Australian standards rating
- manufacturer specifications for BEV DC to DC converters
- AS 5732 Electric vehicle operations: Maintenance and repair
- two different BEVs with DC to DC converters accessible for diagnostic and repair or replacement activities
- electrical diagnostic equipment appropriate to the BEV being diagnosed and repaired, including:
 - digital multimeter with Cat III 1000 volt rating
 - insulation tester
 - scan tool
 - oscilloscope
 - residual voltage tester, if specified in original equipment manufacturer (OEM) test requirements
- tools, equipment and materials appropriate for repairing DC to DC converters in BEVs.

Assessment Requirements for AURETH010 Diagnose and repair high voltage rechargeable energy storage systems in hybrid electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit’s elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair high voltage (HV) rechargeable energy storage systems (RESS) in two different hybrid electric vehicles (HEVs) or plug-in hybrid electric vehicles (PHEVs) to correct performance deficiencies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing RESS in HEVs and PHEVs, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages on HEV and PHEV electrical systems
 - wearing jewellery while working around high electrical currents
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions when:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
 - identifying and using firefighting equipment as appropriate
 - using the ‘one hand’ rule
 - following live system warning tags and signs
 - depowering vehicle
 - isolating HV RESS electrical supply
 - stabilising vehicle electrical system

- environmental requirements, including procedures for trapping, storing and disposing of waste released during repair procedures
- requirements of AS 5732 Electric vehicle operations - Maintenance and repair
- operating principles of HV RESS in HEVs and PHEVs, including:
 - battery pack construction, including:
 - battery types
 - battery internal resistance
 - battery pack system, including:
 - charging characteristics
 - open circuit cells
 - reverse polarisation
 - series cell configuration
 - strapping and layout
- application, purpose and operation of RESS, including:
 - HV battery charger and direct current (DC) to DC converter
 - battery management system (BMS)
 - power distribution unit (PDU)
- diagnostic testing procedures for HV RESS in HEVs and PHEVs, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - electrical system testing, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - testing controller input and output signals and waveforms
 - vehicle dynamic and static testing procedures
 - analysing abnormal noise
 - analysing component failure
 - RESS cooling system testing
- repair procedures for RESS, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
 - removing and replacing motor controller
- post-repair testing procedures for BEV, including:
 - DTC clearing procedures
 - checking for electrical connector mating

- performance testing RESS.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the RESS in HEVs and PHEVs that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE, including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
- manufacturer specifications for HEV or PHEV RESS
- AS 5732 Electric vehicle operations - Maintenance and repair
- two different HEVs or PHEVs RESS and associated components accessible for diagnosis and repair or replacement activities
- electrical diagnostic equipment appropriate to the HEVs or PHEVs being diagnosed and repaired, including:
 - digital multimeter with Cat III 1000 volt rating
 - insulation tester
 - residual voltage tester, if specified in original equipment manufacturer (OEM) specifications
 - scan tool
 - oscilloscope
- tools, equipment and materials appropriate for repairing HEV or PHEV RESS and their components.

AURETH011 Depower and reinitialise hybrid electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to depower and reinitialise hybrid electric vehicles (HEVs) and plug-in hybrid electric vehicles (PHEVs). It involves ensuring that the vehicle high voltage (HV) rechargeable energy storage system (RESS) is isolated before commencing any service or repair work. It also involves calibrating vehicle systems that may need resetting once the energy storage system is reinitialised. Importance is placed in the unit on applying RESS and separated extra low voltage (SELV) electrical safety procedures.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to depower and reinitialise HEV and PHEV	1.1 Job requirements are determined from workplace instructions 1.2 Workplace procedures and manufacturer specifications are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed according to <i>safety requirements</i> and AS 5732 Electric vehicle operations - Maintenance and repair 1.4 <i>Tools and equipment</i> are selected and checked for serviceability 1.5 Vehicle is identified with warning tags or sign to indicate potential hazards
2. Deactivate vehicle RESS	2.1 SELV supply is located and disconnected according to manufacturer specifications 2.2 RESS service plug or manual service disconnect is located and removed to depower vehicle HV RESS according to manufacturer specifications 2.3 Vehicle is stabilised and checked for zero residual voltage according to manufacturer procedures 2.4 RESS service plug or manual service disconnect is secured and retained to prevent refitting by third party
3. Reinitialise vehicle RESS	3.1 SELV and RESS service plug or manual service disconnect are reconnected in the correct order and vehicle is reactivated 3.2 Diagnostic and testing equipment is used to check and recalibrate subsystems affected by depower process as required 3.3 RESS and vehicle subsystems are checked for correct operation 3.4 Post-reactivation faults are reported according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and diagrams in depowering and reinitialising information in manufacturer specifications, and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> listen to workplace instructions and ask questions to clarify job requirements participate in verbal exchanges when depowering and reinitialising HEVs and PHEVs.
Numeracy skills to:	<ul style="list-style-type: none"> match electrical components and part identification numbers to workplace instructions, vehicle and component part lists, and manufacturer specifications interpret vehicle electrical measurements and readings on digital and analogue gauges interpret measurements of residual voltage and high voltages relating to HEVs and PHEVs.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify faults in reinitialising process that need to be reported.
Technology skills to:	<ul style="list-style-type: none"> use specialised tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety
--	---

include:	<p>(OHS) requirements, including procedures for:</p> <ul style="list-style-type: none"> • identifying hazards and controlling risks associated with: <ul style="list-style-type: none"> • working with high voltages on HEV and PHEV electrical systems • wearing jewellery while working around high electrical currents • determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions when: <ul style="list-style-type: none"> • using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat • identifying and using firefighting equipment as appropriate • using the ‘one hand’ rule • following live system warning tags and signs • depowering vehicle • isolating HV RESS electrical supply • stabilising vehicle electrical system.
Tools and equipment must include:	<ul style="list-style-type: none"> • those specified in the specific vehicle service maintenance procedures, including: <ul style="list-style-type: none"> • digital multimeter with Cat III 1000 volt rating • insulation tester • residual voltage tester, if specified in original equipment manufacturer (OEM) test requirements • scan tool.

Assessment Requirements for AURETH011 Depower and reinitialise hybrid electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- safely depower the rechargeable energy storage system (RESS) and separated extra low voltage (SELV) of two different hybrid electric vehicles (HEVs) or plug-in hybrid electric vehicles (PHEVs), and stabilise the vehicles ensuring that no residual high voltage (HV) is measured
- safely reinitialise each HEV's or PHEV's RESS and SELV system and confirm correct vehicle operation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to depowering and reinitialising the RESS in HEVs or PHEVs, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages on HEV and PHEV electrical systems
 - wearing jewellery while working around high electrical currents
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions when:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
 - identifying and using firefighting equipment as appropriate
 - using the 'one hand' rule
 - following live system warning tags and signs

- depowering vehicle
- isolating HV RESS electrical supply
- stabilising vehicle electrical system
- requirements of AS 5732 Electric vehicle operations - Maintenance and repair
- operating principles of RESS and SELV electrical systems relevant to a range of HEVs and PHEVs
- application, purpose and operation of a range of vehicle RESS depowering and repowering methods.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the HEVs or PHEVs that they have depowered and reinitialised, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE, including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
- manufacturer specifications and service procedures for the HEVs or PHEVs being depowered and reinitialised
- AS 5732 Electric vehicle operations - Maintenance and repair
- two different operational HEVs or PHEVs as specified in the performance evidence
- electrical test equipment, including:
 - digital multimeter with Cat III 1000 volt rating
 - insulation tester
 - residual voltage tester, if specified in original equipment manufacturer (OEM) specifications
 - scan tool

- tools, equipment and materials appropriate for depowering and reinitialising RESS in HEVs and PHEVs.

AURETH012 Service and maintain electrical components in hybrid electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service and maintain electrical components in hybrid electric vehicles (HEVs) and plug-in hybrid electric vehicles (PHEVs). It involves working with the automotive electrical components and electrical systems that support the control and operation of the vehicle. Importance is placed in the unit on applying high voltage (HV) rechargeable energy storage system (RESS) electrical safety procedures.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

AURETH011 Depower and reinitialise hybrid electric vehicles

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service and maintain electrical components in HEVs and PHEVs	1.1 Job requirements are determined from workplace instructions 1.2 Workplace procedures and manufacturer specifications are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed according to <i>safety requirements</i> and AS 5732 Electric vehicle operations - Maintenance and repair 1.4 <i>Tools and equipment</i> are selected and checked for serviceability
2. Test electrical systems and components	2.1 Diagnostic equipment is used to retrieve system parameters and information 2.2 HEV or PHEV systems and components are tested for electrical efficiency according to manufacturer specifications 2.3 Electrical circuits are tested according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 2.4 Faults in HEV or PHEV electrical systems and components are identified
3. Service and maintain electrical systems and components	3.1 Problems associated with performance of electrical systems and components are identified, and appropriate <i>corrective action</i> is taken 3.2 Faults within electrical systems and components are identified and required corrective action is taken or reported according to workplace procedures 3.3 Components are repaired, replaced and adjusted according to manufacturer and component specifications and workplace procedures 3.4 Post-service testing is carried out to ensure correct and safe operation of HEV and PHEV, any reported problems are resolved, and no other problems are present
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or equipment is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and diagrams in testing, servicing and maintenance information in manufacturer specifications, and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when servicing and maintaining electrical components in HEVs or PHEVs.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify workplace instructions participate in verbal exchanges to report faults, and service and maintenance findings, and make required repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> match materials and component part numbers to workplace instructions, component part lists, and manufacturer specifications interpret measurements of voltage, current and resistance relating to electrical circuits measure components to determine compliance with manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify hazards and risks and take action to minimise them.
Technology skills to:	<ul style="list-style-type: none"> use specialised tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Safety requirements</i> must include:</p>	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • identifying hazards and controlling risks associated with: <ul style="list-style-type: none"> • working with high voltages on HEV and PHEV electrical systems • wearing jewellery while working around high electrical currents • determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions when: <ul style="list-style-type: none"> • using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat • identifying and using firefighting equipment as appropriate • using the ‘one hand’ rule • following live system warning tags and signs • depowering vehicle • isolating HV RESS electrical supply • stabilising vehicle electrical system.
<p><i>Tools and equipment</i> must include:</p>	<ul style="list-style-type: none"> • those specified in the specific vehicle service maintenance procedures, including: <ul style="list-style-type: none"> • digital multimeter with Cat III 1000 volt rating • insulation tester • residual voltage tester, if specified in original equipment manufacturer (OEM) test requirements • scan tool.
<p><i>Corrective action</i> must include:</p>	<ul style="list-style-type: none"> • tightening connections • balancing state of charge • replacing faulty or damaged cable connections • removing and replacing faulty or damaged components.

Assessment Requirements for AURETH012 Service and maintain electrical components in hybrid electric vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- safely test, service and maintain two different hybrid electric vehicles (HEVs) or plug-in hybrid electric vehicles (PHEVs).

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing and maintaining HEV and PHEV electrical components, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages on HEV and PHEV electrical systems
 - wearing jewellery while working around high electrical currents
 - determining appropriate procedures for minimising risk associated with hazards, including applying electrical safety precautions when:
 - using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated high voltage (HV) insulating mat
 - identifying and using firefighting equipment as appropriate
 - using the 'one hand' rule
 - following live system warning tags and signs
 - depowering vehicle
 - isolating HV rechargeable energy storage system (RESS) electrical supply
 - stabilising vehicle electrical system
- requirements of AS 5732 Electric vehicle operations - Maintenance and repair

- key electrical components of HEVs and PHEVs and their functions
- RESS battery construction, including:
 - battery internal resistance
 - battery types
 - terminal corrosion
 - terminal resistance
- key components of RESS theory, including:
 - cell failure theory
 - charging characteristics
 - open circuit cells
 - reverse polarisation
 - series cell configuration
 - strapping and layout
- different types of HEVs and PHEVs, including:
 - series, parallel and series parallel
 - strong, mid or weak hybrid systems
- operating principles of RESS and battery management system (BMS)
- key characteristics of HV battery charger and direct current (DC) to DC converter
- operating principles of power distribution unit (PDU).

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electrical systems and components they have serviced and maintained in HEVs or PHEVs, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- PPE, including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
- manufacturer specifications and service procedures for the HEVs or PHEVs being worked on
- AS 5732 Electric vehicle operations - Maintenance and repair
- two different operational HEVs or PHEVs requiring service and maintenance
- electrical test equipment appropriate to the HEVs and PHEVs being serviced, including:
 - digital multimeter with Cat III 1000 volt rating
 - insulation tester
 - residual voltage tester, if specified in original equipment manufacturer (OEM) test requirements
 - scan tool
- tools, equipment and materials appropriate for servicing and maintaining HEVs and PHEVs.

AURETH013 Analyse and evaluate electrical and electronic faults in HEV and BEV management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate electrical and electronic faults in the embedded network management systems of hybrid, plug-in hybrid and battery electric vehicles (HEV, PHEV and BEV) in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions. Importance is placed in the unit on applying electrical safety procedures when working on high voltage (HV) rechargeable energy storage systems (RESS).

It applies to those working in the automotive service and repair industry on HEV, PHEV or BEV embedded network management systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for HEV, PHEV or BEV management system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified, appropriate precautions are taken, and risks are managed according to workplace procedures, <i>safety requirements</i> , and requirements of Australian Design Rules (ADRs) and AS 5732 Electric vehicle operations: Maintenance and repair
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected, checked and prepared for use 2.5 HEV, PHEV or BEV management system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, requirements of ADRs and AS 5732

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	4.3 Report is prepared specifying analysis and evaluation process, and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to HEV, PHEV and BEV management systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised HEV, PHEV and BEV management system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Safety requirements</i> must include:</p>	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • identifying hazards and controlling risks associated with: <ul style="list-style-type: none"> • working with high voltages on vehicle electrical systems • working with hazardous materials and toxic substances • wearing jewellery while working around high electrical currents • minimising risk, including: <ul style="list-style-type: none"> • analysing task to define risk • applying electrical safety precautions, including ‘one hand’ rule, live system warning tags and signs, depowering the vehicle, isolating the HV RESS electrical supply, and stabilising the vehicle HV electrical systems • using personal protective equipment, including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat • identifying fire safety equipment.
<p><i>Analytical and evaluative methodology</i> must include:</p>	<ul style="list-style-type: none"> • diagnostic process, sequence, tests and testing equipment.

Assessment Requirements for AURETH013 Analyse and evaluate electrical and electronic faults in HEV and BEV management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate an electrical or electronic fault in the network management systems of one hybrid electric vehicle (HEV) and one battery electric vehicle (BEV)
- the above faults must involve two of the following:
 - battery management system (BMS)
 - rechargeable energy storage system (RESS)
 - power distribution unit (PDU)
 - high voltage traction motor drive assembly
 - direct current (DC) to DC converter assembly
 - RESS cooling system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating electrical and electronic faults in HEV and BEV management systems, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages on vehicle electrical systems
 - working with hazardous materials and toxic substances
 - wearing jewellery while working around high electrical currents
 - minimising risk, including:

- analysing task to define risk
- applying electrical safety precautions, including ‘one hand’ rule, live system warning tags and signs, depowering the vehicle, isolating the HV RESS electrical supply, and stabilising the vehicle HV electrical systems
- using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
- identifying and using fire safety equipment
- methods for locating and content of manufacturer specifications, workplace procedures, Australian standards and Australian Design Rules (ADRs) relating to embedded network management systems of HEV, plug-in hybrid electric vehicle (PHEV) and BEV
- principles and processes involved in planning and implementing analysis and evaluation of electrical and electronic faults in HEV, PHEV and BEV embedded network management systems
- design and planning of diagnostic procedures for electrical and electronic faults in HEV and BEV management systems, including procedures for diagnosing:
 - mechanical faults
 - electrical faults
 - electronics faults
- types, function and operation of hybrid and battery electric vehicle systems, including:
 - DC electric motor types, including:
 - separately excited motors
 - permanent magnet motors
 - alternating current (AC) electric motor types, including:
 - induction motors
 - brushless motors
 - HV traction motor drive assembly and motor controllers, including:
 - variable pulse width DC types
 - variable frequency and variable amplitude AC motor types
 - on-board RESS system and batteries, including:
 - lead acid
 - nickel metal hydride
 - lithium ion
 - ultra capacitors and super capacitors
 - key features of associated components and systems, including:
 - BMS
 - PDU
 - DC to DC converter assembly
 - RESS cooling system, including the vehicle HVAC system
 - parallel HEVs and PHEVs
 - series HEVs and PHEVs
 - power split HEVs and PHEVs

- testing procedures for HEV and BEV management systems, including:
 - vehicle dynamic and static testing procedures
 - abnormal noise analysis
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate electrical and electronic faults in HEV, PHEV and BEV management systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- procedures for documenting and reporting the analysis and evaluation process
- requirements of AS 5732 Electric vehicle operations: Maintenance and repair relating to HEV, PHEV and BEV management systems.
- requirements of Australian Design Rules (ADRs) relating to HEV, PHEV and BEV management systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the HEV, PHEV and BEV management systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

- PPE, including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
- AS 5732 Electric vehicle operations: Maintenance and repair
- manufacturer HEV, PHEV or BEV management system specifications
- one HEV with a network management system fault
- diagnostic equipment for HEV and BEV management systems, including:
 - digital multimeter
 - scan tool
 - oscilloscope
- tools, equipment and materials appropriate for analysing and evaluating electrical and electronic faults in HEV and BEV management systems.

AURETH014 Diagnose complex faults in hybrid and battery electric vehicle network management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in hybrid, plug-in hybrid and battery electric vehicle (HEV, PHEV and BEV) embedded network management systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations. Importance is placed in the unit on applying electrical safety procedures when working on high voltage (HV) rechargeable energy storage systems (RESS).

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The HEV, PHEV and BEV network management systems include those of light vehicles or heavy commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Hybrid Vehicle and Battery Electric Vehicle

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in HEV, PHEV or BEV network management system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures, <i>safety requirements</i> , and requirements of AS 5732 Electric vehicle operations: Maintenance and repair
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for network management system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are selected from the range of available options 2.4 Testing equipment is selected and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored, and any faulty

Assessment Requirements for AURETH014 Diagnose complex faults in hybrid and battery electric vehicle network management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the embedded network management systems of:
 - one battery electric vehicle (BEV)
 - one hybrid electric vehicle (HEV) or one plug-in hybrid electric vehicle (PHEV)
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in HEV and BEV network management systems, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages on vehicle electrical systems
 - working with hazardous materials and toxic substances
 - wearing jewellery while working around high electrical currents
 - minimising risk, including:
 - analysing task to define risk

- applying electrical safety precautions, including ‘one hand’ rule, live system warning tags and signs, depowering the vehicle, isolating the high voltage (HV) rechargeable energy storage system (RESS) electrical supply, and stabilising the vehicle electrical system
- using personal protective equipment (PPE), including electrical safety gloves with 1000 volt rating and Australian standards rated HV insulating mat
- identifying and using fire safety equipment
- lifting and moving the RESS using safe manual handling techniques
- using workplace first aid equipment
- types of complex faults relating to HEV and BEV network management systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- methods for locating and content of manufacturer specifications, workplace procedures and other technical information relating to network management systems of BEVs, HEVs and PHEVs
- requirements of AS 5732 Electric vehicle operations: Maintenance and repair
- operating principles of network management systems and data multiplexing in HEVs, PHEVs and BEVs
- types, function and operation of HEV, PHEV and BEV systems, including:
 - direct current (DC) electric motor types, including:
 - separately excited motors
 - permanent magnet motors
 - alternating current (AC) electric motor types, including:
 - induction motors
 - brushless motors
 - motor controllers, including:
 - variable pulse width DC types
 - variable frequency, variable amplitude AC types
 - inverters and converters, including:
 - AC to DC
 - DC to AC
 - batteries, including:
 - lead acid batteries
 - nickel metal hydride batteries
 - lithium ion batteries
 - ultra capacitors and super capacitors
- parallel hybrid electric vehicles
- series hybrid electric vehicles

- power split hybrid electric vehicles
- testing procedures for HEV, PHEV and BEV network management systems, including:
 - vehicle dynamic and static testing
 - abnormal noise analysis
 - component failure analysis
 - vehicle continuous and non-continuous monitored systems
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in HEV, PHEV and BEV network management systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the HEV, PHEV and BEV network management systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- AS 5732 Electric vehicle operations: Maintenance and repair
- manufacturer HEV, PHEV and BEV network management system specifications
- one BEV and one HEV or PHEV with complex network management system faults

- BEV, HEV and PHEV network management system diagnostic equipment, including:
 - digital multimeter
 - scan tool
 - oscilloscope
 - specialist BEV, PHEV and HEV tools and equipment as specified in original equipment manufacturer requirements
- tools, equipment and materials appropriate for diagnosing complex faults in HEV, PHEV and BEV network management systems.

AURETK001 Identify, select and use low voltage electrical test equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, select and safely use basic low voltage (LV) electrical test equipment to test basic LV electrical circuits in vehicles or machinery.

It applies to those working in the automotive service and repair industry. The electrical systems and components include those in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, motorcycles, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Tools and Equipment

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and select LV electrical test equipment	<p>1.1 Job requirements are determined according to workplace instructions</p> <p>1.2 <i>LV electrical test equipment</i> is identified and selected to meet job requirements</p> <p>1.3 Function and method of operation of equipment are confirmed before use</p> <p>1.4 LV electrical test equipment is checked for serviceability according to manufacturer specifications and workplace procedures</p> <p>1.5 Hazards associated with the work are identified and risks are managed</p> <p>1.6 <i>Safety requirements</i> and safe operating procedures for equipment are accessed and interpreted</p>
2. Use electrical test equipment	<p>2.1 Equipment is connected according to workplace procedures and without causing damage to vehicle or machinery</p> <p>2.2 Electrical test equipment is used according to safety requirements to prevent injury to self and others, and damage to vehicle or other workplace equipment</p> <p>2.3 Test results or readings are interpreted and confirmed according to job requirements and workplace procedures</p> <p>2.4 Damaged, faulty or inaccurate electrical test equipment is tagged and isolated for repair or replacement and reported according to workplace procedures</p>
3. Complete work processes	<p>3.1 Electrical test equipment is cleaned, checked and stored ready for use according to workplace procedures</p> <p>3.2 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and basic electrical diagrams in manufacturer literature and safe operating procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately record test measurements and enter correct information on tags of faulty LV electrical test equipment.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, confirm use and suitability of LV electrical test equipment, and report findings.
Numeracy skills to:	<ul style="list-style-type: none"> measure voltage, current and resistance and use basic mathematical operations, including addition and subtraction, to calculate deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> select and prepare appropriate LV electrical test equipment to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>LV electrical test equipment</i> must include:	<ul style="list-style-type: none"> test lights and probes circuit continuity testers digital multimeters.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE) identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems.

Assessment Requirements for AURETK001 Identify, select and use low voltage electrical test equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- use a test light or probe to check the voltage supply at three different points of a basic low voltage (LV) electrical circuit and earth return at two different points of the circuit
- use a digital multimeter to check voltage, current and resistance measurements within a basic electrical circuit
- use a circuit continuity tester and test three different electrical circuits between a power source, including:
 - one fuse
 - one lamp or heating element
 - one motor control device.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to identifying, selecting and using LV electrical test equipment, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- location and content of manufacturer specifications and workplace procedures, including:
 - LV test equipment selection procedures
 - basic checking procedures for automotive LV electrical test equipment
 - checking, identification and isolation procedures for faulty equipment

- types, characteristics, uses and limitations of automotive LV electrical test equipment, including:
 - multimeters
 - test lights, including resistive and light emitting diode (LED) test probes
 - circuit continuity testers
- procedures for testing electrical systems, including:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - checking resistance, current flow and voltage drop of system circuits
- procedures for identifying and tagging damaged electrical test equipment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the LV electrical test equipment they have identified, selected and used, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service repair workplace or simulated workplace
- manufacturer specifications and operator instructions for LV electrical test equipment
- materials and equipment relevant to using and checking automotive LV electrical test equipment
- LV electrical test equipment, including:
 - test lights and probes
 - circuit continuity testers
 - digital multimeters
- electrical components and circuits requiring the use of LV electrical test equipment, as specified in the performance evidence.

Assessment Requirements for AURETK002 Use and maintain electrical test equipment in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- use a test lamp to check for continuity, voltage supply and earth return in a basic electrical circuit
- use a multimeter to measure:
 - voltage, current and resistance in a basic electrical circuit
 - continuity between a control unit and sensor
 - voltage drop across an electrical resistive load
- use an inductive clamp to measure current flowing in a vehicle starting system
- gain the oscilloscope waveforms of two of the following engine sensors or actuator:
 - camshaft
 - crankshaft
 - knock
 - fuel injector
- service, maintain and store three different pieces of electrical test equipment
- identify and tag one faulty piece of electrical test equipment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to using and maintaining electrical test equipment in an automotive workplace, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with:

- working on high voltage ignition systems
- wearing jewellery while working around high current wiring systems
- types, characteristics, uses, limitations and calibrating requirements of automotive electrical test equipment, including:
 - test lights, including resistive and light emitting diode (LED)
 - continuity testers
 - test probes, including those for testing voltage positive and negative status
 - voltmeters, ammeters and ohmmeters
 - digital multimeters
 - circuit load testers, including alternating current (AC) and direct current (DC) clamp testers
 - oscilloscopes
 - databus test instruments
- testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - selecting test equipment
 - checking resistance, current flow and voltage drop of system circuits
- location and content of workplace procedures and manufacturer specifications, including:
 - basic maintenance procedures for automotive electrical test equipment

AURETK003 Operate electrical test equipment

Modification History

Release	Comment
Release 1	New unit of competency
Release 2	Minor typographical errors corrected

Application

This unit describes the performance outcomes required to operate electrical test equipment.

It requires the learner to plan and prepare the task, select the correct equipment, test electrical and electronic circuits, and check and store the electrical test equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Tools and Equipment

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section
1. Plan to operate electrical test equipment	1.1 <i>Safety requirements</i> are sourced and interpreted 1.2 Task instruction is interpreted and vehicle electrical circuit to be worked on is identified 1.3 Manufacturer specifications and workplace procedures for operating electrical test equipment are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Electrical test equipment is identified according to task instruction and manufacturer specifications
2. Test electrical circuits	2.1 <i>Electrical test equipment</i> is checked prior to use according to manufacturer specifications and safety requirements 2.2 Electrical test equipment is used to test vehicle electrical circuits according to manufacturer specifications and safety requirements 2.3 Electrical test equipment readings are checked and compared with manufacturer specifications 2.4 Electrical test equipment readings are recorded
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle or equipment is presented ready for use or storage according to workplace procedures 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 3.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle electrical system information and electrical test equipment operating procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from job instruction, manufacturer specifications, safety requirements and workplace procedures to safely and effectively operate electrical test equipment select and interpret key information from environmental requirements and workplace procedures to support environmental sustainability and to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition, subtraction, multiplication and division, when using Ohm's law and Watt's law to calculate electrical voltage, current flow, resistance and power read and interpret electrical test equipment correctly, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. Ω for ohms).
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> refer problems that cannot be readily resolved and seek assistance from workplace supervisor.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> information about key aspects of work health and safety (WHS) and occupational health and safety (OHS) requirements, including: <ul style="list-style-type: none"> use of personal protective equipment, including safety glasses, ear protection and safety footwear use of tools
---	---

	<ul style="list-style-type: none">• identification of electrical hazards• application of procedures for operating electrical test equipment.
<i>Electrical test equipment</i> must include:	<ul style="list-style-type: none">• 12 volt test lights and LED test lights• ammeters• voltmeters• ohmmeters• multimeters.

Release	Comment
Release 1	New unit of competency
Release 2	Minor typographical errors corrected

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly and safely operate electrical test equipment to test electrical circuits on a minimum of two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS) and, occupational health and safety (OHS) requirements when operating electrical test equipment, including:
- procedures for the correct use of personal protective equipment, including safety glasses, ear protection and safety footwear
- procedures for the correct use of tools
- identification of electrical hazards
- procedures for operating electrical test equipment
- meaning of electrical terms, including:
 - voltage
 - amperage
 - watts
 - resistance
- theory of electrical circuits, including:
 - Ohm's law
 - Watt's law
- circuit types, including series and parallel
- electrical component symbols

- types of electrical circuits in vehicles, including electrical components
- types of electrical circuit diagrams
- types, application and operation of electrical test equipment, including:
 - 12 volt test lights and LED test lights
 - ammeters
 - voltmeters
 - multimeters
 - ohmmeters
- procedures for testing electrical circuits on vehicles
- procedures for identifying and rectifying faults
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to operating electrical test equipment, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- electrical test equipment, including:
 - 12 volt test light
 - ammeter
 - voltmeter
 - ohmmeter
 - multimeter
 - LED test light
- two vehicles with operational electrical circuits.

AURETR001 Remove and tag automotive electrical system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, remove and tag a range of automotive electrical system components. It involves preparing for the work, removing and tagging components by title, job number and application, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and tag electrical system component	1.1 Task instructions are interpreted and electrical system to be worked on is identified 1.2 Electrical system component information is accessed and interpreted 1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.4 Tools and equipment are selected and checked for serviceability
2. Remove component	2.1 Component for removal is identified 2.2 Component is removed according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> , and without causing damage to components or systems 2.3 Removed component is inspected and findings are recorded according to workplace procedures
3. Tag component	3.1 Tagging procedures are identified 3.2 Removed component is legibly <i>tagged</i> according to workplace procedures and without causing damage to components or systems 3.3 Tagged component is stored according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instruction and workplace standards 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer and workshop literature relating to electrical system components.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including tags, using correct industry terminology and conventions.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in task instructions and part numbers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for identifying hazards and controlling risks associated with wearing jewellery while working around high current electrical circuits environmental requirements, including procedures for disposing of waste materials.
<i>Tagged</i> must include:	<ul style="list-style-type: none"> component title component condition job number.

Unit Mapping Information

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURETR001 Remove and tag automotive electrical system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and tag six of the following automotive electrical system components:
 - main fuse panel
 - battery
 - starter motor
 - alternator
 - ignition system
 - engine control module
 - body control module
 - flasher can relay
 - brake stop lamp switch
 - electric fuel pump.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and tagging automotive electrical system components, including procedures for identifying hazards and controlling risks associated with wearing jewellery while working around high current electrical circuits
- environmental requirements, including procedures for disposing of waste materials
- types and location of automotive electrical system components, including:
 - main fuse panels
 - batteries

- starter motors
- alternators
- ignition systems
- engine control modules
- body control modules
- flasher can relays
- brake stop lamp switches
- electric fuel pumps
- procedures for removing and tagging electrical system components, including:
 - component removal
 - component inspection
 - component tagging, including key information required on tags
 - component storage.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle electrical system components that they have removed and tagged, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer specifications for the electrical system components
- one vehicle or machinery with the electrical system components specified in the performance evidence requiring removal and tagging
- tools, equipment and materials appropriate for removing and tagging electrical system components.

AURETR002 Inspect heavy vehicle battery storage systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect battery storage systems in heavy vehicle and machinery according to manufacturer specifications. It involves preparing for the task, inspecting the system, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect battery storage system	1.1 Task instructions are interpreted and vehicle to be worked on is identified 1.2 Inspection information is accessed and interpreted 1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect system	2.1 <i>Inspection</i> is carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle or machinery is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer and workshop literature when seeking inspection procedures and specifications relating to battery storage systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.

Skills	Description
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information on batteries.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Inspection must include:	<ul style="list-style-type: none"> inspecting battery, terminals and leads inspecting battery securing system inspecting battery storage compartment.
Safety requirements must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection working safely with high current electrical systems manually handling batteries and toxic and corrosive substances.

Assessment Requirements for AURETR002 Inspect heavy vehicle battery storage systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect the heavy vehicle battery storage system of one heavy vehicle or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting heavy vehicle battery storage systems, including procedures for:
 - selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection
 - working safely with high current electrical systems
 - manually handling batteries and toxic and corrosive substances
- identification and function of heavy vehicle battery storage system components, including:
 - base, cover and box
 - battery hold down systems
 - ventilation and cooling systems
 - battery switching devices
- inspection procedures of heavy vehicle battery storage systems, including:
 - inspecting battery, terminals and leads
 - inspecting battery securing systems
 - inspecting battery storage compartments.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle or machinery battery storage systems that they have inspected, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer battery storage system specifications
- one heavy vehicle or machinery with battery storage system requiring inspection
- tools, equipment and materials appropriate for inspecting heavy vehicle battery storage systems.

Assessment Requirements for AURETR003 Identify automotive electrical systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- identify, locate and demonstrate knowledge of the operation of the following electrical systems while carrying out workplace activities:
 - vehicle electrical power supplies
 - ignition system
 - fuel delivery system
 - charging system
 - starting system
 - lighting system
 - fuses and circuit breakers
 - wiring looms and harnesses.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying automotive electrical system fundamentals, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and equipment
 - following workplace safety procedures
- basic theory and principles of automotive electrical systems, including:
 - alternating current (AC)
 - direct current (DC)

- Ohm's law
- identification, function and basic operation of vehicle electrical systems and components, including:
 - vehicle electrical power supplies
 - ignition system
 - fuel delivery system
 - charging system
 - starting system
 - lighting system
 - body electrical systems
 - fuses and circuit breakers
 - wiring looms and harnesses
- automotive terminology relating to electrical systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the automotive electrical system information that they have applied, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workshop or task instructions
- information regarding basic electrical principles and fundamentals
- information regarding vehicle electrical systems and components
- workplace safety equipment, including PPE
- a vehicle with the automotive electrical systems specified in the performance evidence
- automotive tools and equipment relating to workplace activities being carried out.

AURETR004 Diagnose complex faults in convenience and entertainment systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in vehicle embedded network convenience and entertainment systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The vehicle network convenience and entertainment systems include those in vehicles, vessels or machinery in the automotive industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in vehicle convenience and entertainment system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for convenience and entertainment system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are selected from the range of available options 2.4 Testing equipment is selected and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle, vessel or machinery is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking convenience and entertainment system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure convenience and entertainment system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised diagnostic equipment, including: <ul style="list-style-type: none"> digital multimeters scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for identifying hazards and controlling risks associated with:
---	---

	<ul style="list-style-type: none">• working around vehicle supplementary restraint systems (SRS), such as airbags• wearing jewellery while working around high electrical currents.

Assessment Requirements for AURETR004 Diagnose complex faults in convenience and entertainment systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the convenience and entertainment systems of two different vehicles, vessels or machinery
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in vehicle convenience and entertainment systems, including procedures for identifying hazards and controlling risks associated with:
 - working around vehicle supplementary restraint systems (SRS), including airbags
 - wearing jewellery while working around high electrical currents
- types of complex faults relating to vehicle convenience and entertainment systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems

- methods for locating and content of manufacturer specifications, workplace procedures, and other technical information relating to vehicle, vessel or machinery convenience and entertainment systems
- types, function and operation of convenience and entertainment systems in vehicles, vessels or machinery, including:
 - infotainment systems
 - telematics systems
 - intelligent transport systems
 - safety restraint systems
 - passenger comfort systems
- testing procedures for vehicle convenience and entertainment systems, including:
 - using digital multimeter, scan tool and oscilloscope
 - component wear analysis
 - system operation analysis
 - vehicle continuous and non-continuous monitored systems
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in vehicle convenience and entertainment systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- methods and processes for documenting and reporting diagnostic findings and recommendation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the convenience and entertainment systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer convenience and entertainment system specifications
- two different vehicles, vessels or machinery with complex faults in their convenience and entertainment systems
- convenience and entertainment system electrical and electronic system diagnostic equipment, including:
 - digital multimeter
 - scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in convenience and entertainment systems.

AURETR005 Install automotive security systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install and test automotive security systems and components in vehicles or machinery. It involves preparing for the task, installing and testing system and component operation, and completing workplace processes and documentation. The security systems and components will not require programming following installation as they do not communicate with the vehicle or machinery controller area network databus (CAN-bus or LIN-bus) topography.

It applies to those working in the automotive service and repair industry. The electrical security systems and components include those being installed in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install security system and components	1.1 Job requirements are determined according to workplace instructions 1.2 Manufacturer specifications and installation fitting instructions are accessed and interpreted 1.3 Installation options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment are selected and checked for serviceability
2. Install and test security system and components	2.1 Security system and components are checked for correct application and damage 2.2 Security system is installed according to manufacturer specifications, workplace procedures and safety requirements , and without causing damage to components or systems 2.3 Installed system and components are tested for correct operation according to workplace procedures and manufacturer specifications 2.4 Post-installation testing of other electrical systems is carried out according to workplace procedures to confirm correct operation, and any problems detected as having been introduced during the installation process are rectified
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking specifications and procedures interpret text, symbols and wiring diagrams in electrical security system and component fitting information in manufacturer specifications and workplace procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting work performed and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, report findings and make installation recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> match materials and component part numbers to work instructions and vehicle and machinery component part lists measure voltage, current and resistance and use basic mathematical operations, including addition and subtraction, to calculate deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use workplace technology and tools relating to the installation of electrical security systems and components, such as multimeters.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for AURETR005 Install automotive security systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- install two of the following security systems and components on non controller area network databus (CAN-bus) systems in different vehicles, vessels or machinery, including:
 - security alarm systems
 - single point immobilisation (engine start inhibit)
 - tilt, impact and vibration shock alarm activation sensors
 - audible and visual alert alarm equipment
 - theft alert vehicle and equipment tracking systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing automotive security systems and components, including procedures for:
 - using specialised tools and equipment
 - selecting and using personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with:
 - working on high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
- types and basic operation of automotive security systems, including:
 - complete vehicle or equipment security alarm systems
 - single point immobilisation (engine start inhibit)

- dual point immobilisation (engine start inhibit and fuel shut-off)
- tilt, impact and vibration shock alarm activation sensors
- audible and visual alert alarm equipment
- theft alert vehicle and equipment tracking systems
- procedures for installing automotive security systems and components, including:
 - techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
 - methods of determining wiring and connection type and size for system
 - methods of determining placement of components on vehicle or machinery
 - methods of connecting system and components to existing electrical system without causing damage or problems, including:
 - selecting and soldering wires
 - selecting and crimping terminals
 - removing and replacing connectors
 - removing and replacing existing electrical components
- post-installation testing procedures of automotive security system and components, including procedures for:
 - checking full operation of installed system
 - checking operation of existing electrical systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the automotive security systems and components that they have installed in vehicles, vessels or machinery, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

- wiring specifications relevant to vehicle, vessel or machinery systems and components being installed
- two different vehicles, vessels or machinery requiring the installation of security systems and components
- tools, equipment and materials appropriate for installing automotive security systems and components.

AURETR006 Solder electrical wiring and circuits

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to solder electrical components, electrical circuits and system wiring. It involves preparing for the task, preparing components, circuits and wiring for soldering, carrying out soldering, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The electrical wiring and circuits include those in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to solder electrical wiring and circuits	1.1 Job requirements are determined according to workplace instructions 1.2 Technical procedures and information are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment are selected and checked for serviceability
2. Prepare components, circuits and wiring for soldering	2.1 Materials and components to be joined are selected and prepared according to workplace procedures and <i>safety and environmental requirements</i> 2.2 Solder and flux type are identified and prepared 2.3 Soldering equipment is cleaned and prepared ready for use
3. Carry out soldering of components, circuits and wiring	3.1 Soldering is carried out according to workplace quality expectations, and without causing damage to vehicle, components, electrical circuits and system wiring 3.2 Soldered connection is inspected visually and checked to ensure effectiveness
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and wiring diagrams relating to soldering repair information in manufacturer specifications, and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, recording parts and material used.
Numeracy skills to:	<ul style="list-style-type: none"> interpret measurements of wire size and gauge relating to electrical wiring and circuits to select correct items measure components to determine compliance with manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised workplace technology, including soldering irons and heat guns.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> using safety data sheets (SDS) selecting and using personal protective equipment (PPE) safely handling materials during solder process safely operating soldering equipment identifying and using firefighting and first aid equipment environmental requirements, including procedures for trapping, storing and disposing of material released during soldering process.

Assessment Requirements for AURETR006 Solder electrical wiring and circuits

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- solder the wiring of six different electrical components, in which the work must involve:
 - different sized gauge wires
 - electrical terminals
 - resin core solder
 - heat shrink sleeving.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to soldering electrical wiring and circuits, including procedures for:
 - using safety data sheets (SDS)
 - selecting and using personal protective equipment (PPE)
 - safely handling materials during solder process
 - safely operating soldering equipment
 - identifying and using firefighting and first aid equipment
- environmental requirements, including procedures for trapping, storing and disposing of material released during soldering process
- location and content of workplace preparation and soldering procedures, SDS and manufacturer specifications
- procedures for preparing to solder electrical wiring and circuits, including:
 - preparing and cleaning components to be soldered, including selecting appropriate cleaning solutions

- methods of holding components to be soldered
- soldering fluxes and their application
- resin core solder types, diameter and application
- types and applications of soldering irons
- procedures for soldering electrical wiring and circuits, including:
 - applying heat and solder to the parts to be joined
 - allowing cooling without movement
- work completion procedures for soldering electrical wiring and circuits, including procedures for final visual inspection of soldered connections, including:
 - manufacturer and workplace specifications for acceptable soldering standard
 - post-soldering insulation, including heat shrink sleeving and application of electrical tape.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electrical wiring and circuits that they have soldered, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- six different electrical components requiring soldering of their wiring
- tools, equipment and material appropriate for soldering electrical components, circuits and system wiring, including:
 - automotive wiring
 - range of electrical terminals
 - resin core solder
 - heat shrink sleeving
 - soldering iron.

AURETR007 Apply knowledge of automotive electrical circuits and wiring systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply knowledge of electrical principles during the testing and repair of basic electrical circuits in vehicles, vessels and machinery.

It applies to those working in the automotive service and repair industry. The electrical circuits and wiring systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify relevant information of electrical circuit and wiring system construction and operation in work activities	1.1 Components of circuit are identified during testing and repair activities 1.2 Functions of circuit components are identified during testing and repair activities 1.3 Relationships between circuit components, including the effects of testing and repair activities on other electrical circuits, are identified during repair activities
2. Apply relevant information of electrical circuit and wiring system construction and operation in work activities	2.1 Knowledge of electrical circuit construction and operation is used during testing or repair activities to carry out work according to manufacturer specifications and workplace procedures 2.2 Basic electrical principles are used during fault finding procedures 2.3 Knowledge of basic testing procedures is used when using electrical test equipment
3. Evaluate knowledge of electrical circuit and wiring systems	3.1 Knowledge is regularly checked with colleagues and supervisor to ensure currency and accuracy 3.2 Knowledge is updated as required to complement own work role

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret a range of written technical information relating to automotive electrical circuits and wiring systems.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numbers and units relating to electrical circuits and wiring systems in automotive technical information interpret electrical measurements of voltage, current and resistance relating to electrical circuits

Skills	Description
	<ul style="list-style-type: none"> • interpret wiring gauge dimensional measurements • use basic mathematical operations and common electrical formulas to calculate voltage drop, resistance, current flow and electrical power.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Basic electrical principles</i> must include:	<ul style="list-style-type: none"> • relationship between electrical current flow, pressure, resistance and power using Ohm’s law.
<i>Basic testing procedures</i> must include:	<ul style="list-style-type: none"> • voltage drop • circuit resistance • circuit current flow.

Assessment Requirements for AURETR007 Apply knowledge of automotive electrical circuits and wiring systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- apply knowledge of automotive electrical circuits and wiring systems during the testing and repair of the electrical systems of three different vehicles, vessels or machinery
- evaluate and expand knowledge of automotive electrical circuits and wiring systems, including demonstrating knowledge of one of the following:
 - a new automotive electrical or electronic testing procedure
 - a new automotive electrical or electronic repair procedure
 - a new item of automotive electrical or electronic technology.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- types and location of sources of technical information relating to automotive electrical systems, including:
 - workplace service information
 - automotive engine mechanical texts
 - vehicle workshop manuals
 - service bulletins
 - technical articles
 - automotive textbooks
- features of vehicle electrical circuits, including:
 - voltage source
 - current load devices
 - resistive devices

- circuit protection devices
- switching circuit devices
- series circuits
- parallel circuits
- series parallel circuits
- relationships between:
 - volts, amps and ohms in vehicle electrical circuits
 - current flow and required wire gauge to carry the current
 - voltage drop across resistive load and current flowing in the circuit
- common fault types found in vehicle electrical circuits, including:
 - open circuit to power, signal and ground
 - short circuit to power, signal and ground
 - high resistance to power, signal and ground
- types and construction of vehicle electrical wiring systems, including:
 - common multi-strand conductor
 - various wire gauges and insulation types
 - controller area network databus (CAN-bus) twisted pair wiring
 - audio speaker shielded wiring
- principles of electricity, including:
 - alternating current (AC)
 - direct current (DC)
 - Ohm's law
 - Watts law
 - Kirchhoff's voltage law
 - Kirchhoff's current law
- identification, location and function of major components of common automotive electrical systems:
 - engine electrical systems, including:
 - battery
 - ignition
 - charging
 - starting
 - vehicle body electrical systems, including:
 - exterior lighting
 - internal lighting
 - vehicle access
 - washer and wiper
 - vehicle entertainment
 - wiring harness and loom assembly.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the knowledge of electrical circuits and wiring systems that they have applied, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- technical information relating to automotive electrical circuits and wiring systems
- automotive tools and electrical test equipment
- three different vehicles, vessels or machinery with functional electrical systems.

AURETR008 Remove and replace electrical units and assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and replace electrical units and assemblies. Electrical units and assemblies include headlights, tail-lights, and vehicle and machinery control modules that do not require programming procedures on replacement. These electrical units and assemblies are not connected to vehicle controller area network databus (CAN-bus) topography.

It applies to those working in the automotive service and repair industry. The electrical units and assemblies include those fitted to agricultural machinery, heavy commercial vehicles, light vehicles, vessels, motorcycles, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and replace electrical unit and assemblies	1.1 Job requirements are determined from workplace instructions 1.2 Workplace procedures and manufacturer specifications are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment are selected and checked for serviceability
2. Remove electrical unit and assembly	2.1 Removal information is accessed and interpreted from manufacturer and component supplier specifications 2.2 Electrical unit and assembly are removed using approved methods, tools and equipment and according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.3 Unit and assembly are handled and stored according to manufacturer and component supplier requirements
3. Replace electrical unit and assembly	3.1 Replacement information is accessed and interpreted from manufacturer and component supplier specifications 3.2 Electrical unit and assembly are replaced using approved methods, tools and equipment and according to manufacturer specifications and workplace procedures
4. Test electrical unit and assembly	4.1 Replaced electrical unit and assembly are checked and tested to confirm correct operation and that no other problems are present, according to workplace procedures and without causing damage to components or systems 4.2 Test results are reported according to workplace procedures, including recommendations for repairs or adjustments as required
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Assessment Requirements for AURETR008 Remove and replace electrical units and assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace two of the following systems on the non controller area network databus (CAN-bus) circuits of two different vehicles or machinery:
 - headlight or tail-light assembly
 - windscreen washer and wiper motor assembly
 - door and window motor assembly
 - central door locking system
 - electric mirror assembly
 - electric brake controllers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and replacing electrical units and assemblies, including procedures for identifying hazards and controlling risks associated with:
 - working with vehicle ignition systems with injector high voltages
 - wearing jewellery while working around high current wiring systems
- procedures for removing, replacing, and testing electrical units and assemblies, including procedures for adjusting and calibrating systems and components
- key features of basic non CAN-bus networked electrical units and assemblies, including:
 - headlight assemblies
 - tail-light assemblies
 - side and rear vision mirrors

- windscreen washer and wiper motor assemblies
- door and window motor assemblies
- central door locking systems
- electric brake controllers
- types of wiring systems found in vehicles, including:
 - basic wiring
 - twisted pair
 - shielded wiring
 - CAN-bus wiring
- options for diagnosing faults, including:
 - continuity testing
 - insulation testing
 - isolating possible faults
 - replacing blown fuses or circuit breakers
 - replacing damaged connectors or terminals
 - visually inspecting and evaluating components
- location and content of technical information, wiring diagrams and graphic symbols relating to electrical units and assemblies
- procedures for testing electrical systems, including:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders and wiring
 - checking resistance, current flow and voltage drop of system circuits.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having removed and replace electrical units and assemblies in vehicles or machinery, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workshop or simulated workplace
- workplace instructions
- manufacturer specifications relating to removing and replacing electrical units and assemblies
- two different vehicles or machinery with faults in their electrical systems
- tools and electrical test equipment appropriate for diagnosing electrical units and assemblies.

AURETR009 Install vehicle lighting and wiring systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install vehicle, vessel or machinery low voltage (LV) direct current (DC) lighting and wiring systems that are not an integral part of vehicle or machinery controller area network databus (CAN-bus) topography. It involves preparing for the task, installing and testing the operation of lighting and wiring systems, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. LV lighting and wiring systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install, lighting and wiring system	1.1 Job requirements are determined according to workplace instructions 1.2 Manufacturer specifications and installation fitting instructions are accessed and interpreted 1.3 Installation options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment are selected and checked for serviceability
2. Install and test system	2.1 Lighting and wiring system and components are checked for correct application and damage 2.2 Lighting and wiring system is installed according to manufacturer specifications, workplace procedures and safety requirements , and without causing damage to components or other systems 2.3 Installed system and components are tested for correct operation according to workplace procedures and manufacturer specifications 2.4 Post-installation testing of other electrical systems is carried out according to workplace procedures to confirm correct operation, and that any problems detected as having been introduced during installation process are rectified
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURETR009 Install vehicle lighting and wiring systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- install two of the following low voltage (LV) lighting and wiring systems in non controller area network databus (CAN-bus) systems in two different vehicles, vessels or machinery:
 - trailer lights and wiring harness
 - driving lights and wiring harness
 - side clearance lamp
 - high-mount rear brake lamp
 - ascent strip light emitting diode (LED) lamp
 - filament lamp to LED lamp replacement.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing vehicle lighting and wiring systems, including procedures for:
 - using specialised tools and equipment
 - selecting and using personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- LV direct current (DC) lighting and wiring systems of the following:
 - trailer lights and wiring harnesses
 - driving lights and wiring harnesses
 - side clearance lamps

- high-mount rear brake lamps
- ascent strip LED lamps
- procedures for installing LV DC lighting and wiring systems, including:
 - filament lamp to LED lamp replacement
 - resistance and voltage drop
 - circuit performance checks
 - connecting system and components to existing electrical system without causing damage or problems, including:
 - selecting and soldering wires
 - selecting and crimping terminals
 - removing and replacing connectors
 - removing and replacing existing electrical components
- different cable types and sizes and their current carrying capacity
- types of wiring systems found in vehicles, vessels or machinery, including:
 - basic wiring
 - twisted pair
 - shielded wiring
- techniques for reading and interpreting technical information, fitting instructions, wiring diagrams and graphic symbols
- post-installation testing procedures, including:
 - confirming that electrical system is operating to manufacturer specifications following installation
 - confirming that no other problems are present as a result of installing LV DC lighting and wiring systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the lighting and wiring systems that they have installed, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- two different vehicles, vessels or machinery requiring the installation of LV DC lighting and wiring systems
- materials appropriate for installing LV DC lighting and wiring systems
- equipment, and hand and power tools appropriate for installing LV lighting and wiring systems.

1. Prepare to repair wiring harness and loom	1.1 Job requirements are determined according to workplace instructions 1.2 Technical procedures and information are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment are selected and checked for serviceability
2. Test wiring harness and loom assembly	2.1 Wiring harness and loom are inspected for damage 2.2 Harness and loom are tested using appropriate tools and fault finding techniques according to workplace procedures and safety and environmental requirements , and without causing damage to components or systems 2.3 Inspection and test results are compared with manufacturer specifications 2.4 Faults are identified from test results and causes of faults are determined
3. Remove wiring harness and loom	3.1 Wiring harness, loom assembly and associated components are labelled before removal 3.2 Harness and loom components are removed according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems
4. Repair and refit wiring harness and loom	4.1 Electrical circuit wiring diagrams are accessed and interpreted from manufacturer and component supplier specifications 4.2 Harness and loom are repaired or fabricated using appropriate techniques and according to workplace procedures 4.3 Repaired or fabricated harness and loom assembly is refitted and reconnected according to manufacturer and component supplier specifications 4.4 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair or fabrication process are rectified
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	<p>5.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and wiring diagrams relating to fabricating, testing and repairing wiring harnesses and looms in manufacturer specifications, and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions.
Numeracy skills to:	<ul style="list-style-type: none"> match component part numbers to workplace instructions and vehicle and component part lists interpret measurements of wire size and gauge relating to wiring harnesses and loom fabrication and repairs measure components to determine compliance with specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised workplace technology, tools and equipment relating to repairing wiring harnesses and looms, such as soldering irons and heat shrink insulation.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> • multimeter • continuity tester • crimping tools • soldering equipment • heat gun • terminals and connectors • wire and cabling.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • using safety data sheets (SDS) • selecting and using personal protective equipment (PPE) • identifying firefighting equipment • safely handling hazardous materials and toxic substances • following soldering equipment safe operating procedures • environmental requirements, including procedures for trapping, storing and disposing of hazardous materials and toxic substances released during repair processes.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURETR010 Repair wiring harnesses and looms

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- repair an existing basic wiring harness or loom assembly of the wiring systems of two different vehicles, vessels or machinery
- fabricate a new basic wiring harness or loom assembly for the wiring system of one vehicle, vessel or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing wiring harnesses and looms, including procedures for:
 - using safety data sheets (SDS)
 - selecting and using personal protective equipment (PPE)
 - identifying firefighting equipment
 - safely handling hazardous materials and toxic substances
 - following soldering equipment safe operating procedures
- environmental requirements, including procedures for trapping, storing and disposing of hazardous materials and toxic substances released during repair processes
- location and content of workplace procedures and manufacturer specifications relating to wiring harnesses and looms
- types of wiring systems found in vehicles, including:
 - basic single wiring, including:
 - tailer harness
 - driving lights harness

- accessory wiring harness
- complex multi-wiring with varying wire gauges
- controller area network databus (CAN-bus) wiring, including:
 - twisted pair
 - shielded wiring
- testing procedures, including:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - testing wiring harnesses and looms, including resistance and voltage drop and circuit performance checks
 - visual and functional assessments, including:
 - component damage and wear
 - component corrosion
 - water and moisture ingress
 - damaged insulation
 - frayed wires
 - burnt wiring
 - terminal and connector damage
- removal procedures for wiring harnesses and looms, including:
 - accessing wiring and removing panels and covers
 - removing and replacing components
 - disconnecting terminals from connectors
- repair procedures of wiring harnesses and looms, including:
 - determining cable and terminal types and sizes according to circuit current draw
 - wire soldering procedures
 - terminal crimping
 - replacing male and female terminals within a connector housing
 - protecting and routing harness and loom
- post-repair testing procedures of wiring harnesses and looms, including procedures for checking full operation of associated electrical systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle, vessel or machinery wiring harnesses and looms that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer machinery wiring specifications
- three different vehicles, vessels or machinery requiring repairs to their wiring harnesses and looms
- tools, equipment and materials appropriate for repairing wiring harnesses and looms, including:
 - multimeter
 - continuity tester
 - crimping tools
 - soldering equipment
 - heat gun
 - terminals and connectors
 - wire and cabling.

AURETR011 Install basic ancillary electrical systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install and test basic ancillary electrical systems and components in vehicles or machinery. It involves preparing for the task, installing and testing the operation of the systems and components, and completing workplace processes and documentation. These electrical systems and components will not require programming following installation as they do not communicate with the vehicle or machinery controller area network data bus (CAN-bus or LIN-bus) topography.

It applies to those working in the automotive service and repair industry. Basic ancillary electrical systems and components include those being installed in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install basic ancillary electrical system and components	1.1 Job requirements are determined according to workplace instructions 1.2 Manufacturer specifications and installation fitting instructions are sourced and interpreted 1.3 Installation options are considered and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Install and test basic ancillary electrical system and components	2.1 Electrical system and components are checked for correct application and damage 2.2 Electrical equipment is installed according to manufacturer specifications, workplace procedures and safety requirements , and without causing damage to components or systems 2.3 Installed system and components are tested for correct operation according to workplace procedures and manufacturer specifications 2.4 Post-installation testing of other electrical systems is carried out according to workplace procedures to confirm correct operation, and any problems detected as having been introduced during the installation process are rectified
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Assessment Requirements for AURETR011 Install basic ancillary electrical systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- install two of the following basic ancillary electrical systems and components to non CAN-bus embedded networked circuits in different vehicles or machinery, including:
 - driver interlocks, including alcohol interlock devices
 - remote keyless entry
 - security alarm system
 - audio system
 - mobile phone
 - speed alert system
 - navigation system
 - reverse parking aids, including sensors, audible alerts and cameras
 - driver gauges and instruments
 - electric trailer brake controller
 - trailer harness connector
 - driving lights or fog lights
 - dual battery system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing basic ancillary electrical systems and components, including procedures for:

- using specialised tools and equipment
- selecting and using appropriate personal protective equipment (PPE)
- identifying hazards and controlling risks associated with:
 - working on high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
- types and basic operation of the common ancillary electrical systems and components, including:
 - driver interlocks, including alcohol interlock devices
 - remote keyless entry systems
 - security alarm systems
 - audio systems
 - mobile phones
 - speed alert systems
 - navigation systems
 - reverse parking aids, including sensors, audible alerts and cameras
 - driver gauges and instruments
 - electric tailer brake controllers
 - trailer harness connectors
 - driving lights and fog lights
 - dual battery systems
- procedures for installing basic ancillary electrical systems and components, including:
 - techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
 - methods of determining wiring and connection type and size for system
 - methods of determining placement of components on vehicle or machinery
 - methods of connecting system and components to existing electrical system without causing damage or problems, including:
 - selecting and soldering wires
 - selecting and crimping terminals
 - removing and replacing connectors
 - removing and replacing existing electrical components
- post-installation testing procedures of basic ancillary electrical systems and components, including procedures for:
 - checking full operation of installed system
 - checking operation of existing electrical systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must be by direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the basic ancillary electrical systems and components that they have installed in vehicles or machinery, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service and repair workplace or simulated workplace
- workplace instructions
- vehicle and machinery wiring specifications relevant to systems and components being installed
- manufacturer ancillary electrical system specifications
- two different vehicles or machinery requiring installation of basic ancillary electrical systems and components
- tools, equipment and materials appropriate for installing basic ancillary electrical systems and components.

Assessment Requirements for AURETR012 Test and repair basic electrical circuits

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- test a basic electrical circuit, including:
 - one short circuit across an electrical resistive load
 - one open circuit before or after an electrical resistive load
 - one high resistance circuit before or after an electrical resistive load
 - current flow and voltage drop across an electrical resistive load
- test for continuity in a basic wiring harness and visually check terminals in the wiring harness for moisture ingress and corrosion
- carry out four different circuit repairs that include:
 - crimping various terminal sizes
 - soldering wire gauges to terminals
 - applying heat shrink insulation to crimped or soldered joints
 - replacing male and female terminals in a connector housing
 - performing terminal retention checks to replaced terminals.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to testing and repairing basic electrical circuits, including procedures for:
 - using specialised tools and equipment
 - selecting and using personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with wearing jewellery while working around electrical systems

- electrical principles, including:
 - current, voltage, resistance and power
 - series circuits
 - parallel circuits
 - series parallel circuits
 - Ohm's law
- key features of basic electrical circuit components, including:
 - cable types and sizes and current carrying capacity
 - circuit protection devices
 - switches
 - relays
 - automotive globes
- techniques for reading and interpreting technical information, including circuit types, diagrams and symbols
- procedures for using and operating electrical test equipment, including:
 - digital multimeters
 - test lights suitable for circuit testing, including resistive and light emitting diode (LED)
 - test probes suitable for testing circuit continuity
 - fused test lead
 - procedures for checking, identifying and isolating faulty equipment
- common types of faults, including:
 - open circuits
 - high resistance circuits
 - short circuits
 - damaged insulation
 - frayed wires
 - burnt wiring
 - water and moisture ingress
 - connector damage
 - terminal damage
- testing procedures for electrical systems, including:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - electrical measuring and testing procedures, including:
 - electrical resistance checks
 - open and short circuit tests
 - voltage drop tests
 - current flow tests
 - visual testing procedures, including:

- component moisture ingress
- connector damage
- repair procedures for electrical circuits, including:
 - wire soldering procedures
 - terminal crimping procedures
 - replacing male and female terminals in a connector housing
 - connector removal and replacement procedures
 - basic electrical components removal and replacement procedures
- post-repair testing procedures, including:
 - confirming that electrical system is operating to manufacturer specifications
 - confirming that no other problems are present as a result of the repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the basic electrical circuits they have tested and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer electrical system specifications
- vehicle or machinery with faults in the basic electrical circuits specified in the performance evidence
- electrical test equipment to test basic electrical circuits and components
- consumable materials relevant to repairing basic electrical circuits and components, including connectors, terminals, wire, electrical tape and heat shrink sleeving
- electrical repair tools, equipment and materials relating to basic electrical circuits and components.

Assessment Requirements for AURETR013 Inspect, test and service charging systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, test and service the charging systems of three different vehicles, vessels or machinery, in which the work must involve checking:
 - system output
 - system control circuit
 - system wiring.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, testing and servicing charging systems, including procedures for:
 - selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection
 - working safely with high current electrical systems
- environmental requirements, including procedures:
 - found in safety data sheets (SDS) relating to toxic and corrosive substances
 - for recycling and disposing of replaced charging system components
- identification and function of charging system components, including:
 - battery types, including:
 - lead acid and deep cycle batteries
 - maintenance-free batteries
 - generators

- alternators
- basic operating principles of charging systems, including:
 - using mechanical energy to produce electrical energy
 - charging battery and supplying power demands of vehicle
- inspection procedures for charging systems, including visual, aural and functional assessments of:
 - component damage and wear
 - component corrosion
- testing procedures for charging systems, including:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - measuring charging system output under load
- servicing procedures for charging systems, including:
 - changing and adjusting drive belts
 - cleaning and tightening terminals
 - checking gauges and warning devices for operation
- post-service testing procedures, including confirming that charging system is operating to manufacturer specifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the charging systems that they have inspected, tested and serviced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer charging system specifications
- PPE, including clothing, and eye and hand protection

- three different vehicles, vessels or machinery with charging systems requiring servicing
- tools and equipment appropriate for inspecting, testing and servicing charging systems, including multimeter.

AURETR014 Inspect, test and service starting systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, test and service vehicle, vessel and machinery starting systems. It involves preparing for the task, inspecting starting systems, servicing the systems, and completing workplace processes and documentation, including any associated recommendations for further action.

It applies to those working in the automotive service and repair industry. The starting systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, motorcycles, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect, test and service starting system	1.1 Job requirements are determined according to workplace instructions 1.2 Inspection, testing and servicing procedures are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are reported 1.4 <i>Tools and equipment</i> are selected and checked for serviceability
2. Inspect and test system	2.1 System and battery are inspected and tested according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Starting circuit is tested according to workplace procedures and without causing damage to components or systems 2.3 Inspection results are compared with manufacturer specifications 2.4 Inspection findings are reported according to workplace procedures, including recommendations for required repairs or adjustments
3. Service system	3.1 System is serviced according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.2 Post-service testing is carried out to confirm starting system is operating to manufacturer specifications and that no other problems are present
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recycle material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate starting system information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking starting system service procedures and specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately complete workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and report inspection findings to appropriate personnel.
Numeracy skills to:	<ul style="list-style-type: none"> match starting system types and identification numbers to workplace instructions and manufacturer specifications compare battery cold cranking amps (CCA) with vehicle starting system specifications.
Technology skills to:	<ul style="list-style-type: none"> use specialised tools and equipment, including load testers, inductive ammeters and multimeters.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> electronic testing equipment, including: <ul style="list-style-type: none"> multimeter load tester inductive ammeter.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection working safely with high current electrical systems.

<i>Environmental requirements</i> must include:	<ul style="list-style-type: none">• procedures:<ul style="list-style-type: none">• found in safety data sheets (SDS) relating to toxic and corrosive substances• for recycling and disposing of replaced starting system components.

Assessment Requirements for AURETR014 Inspect, test and service starting systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, test and service three different vehicle, vessel or machinery starting systems, in which the work must involve checking:
 - starter motor and solenoid
 - ignition switch to starter control circuit
 - battery to starter motor wiring.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, testing and servicing starting systems, including procedures for:
 - selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection
 - working safely with high current electrical systems
- environmental requirements, including procedures:
 - found in safety data sheets (SDS) relating to toxic and corrosive substances
 - for recycling and disposing of replaced starting system components
- identification and function of starting system components, including:
 - starter motor
 - starter solenoid
 - starter control circuits, including:
 - key ignition

- push button start
- proximity transponder
- automatic stop and start systems
- immobiliser
- interlocks
- basic operating principles of starting systems, including:
 - changing electrical energy to mechanical energy
 - mechanical advantage between ring gear and flywheel
 - basic circuit operation
- inspection procedures for starting systems, including visual, aural and functional assessments of:
 - component damage and wear
 - component corrosion
- testing procedures for starting systems, including:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - measuring starting system current draw
- servicing procedures for starting systems, including cleaning and tightening terminals
- post-service testing procedures, including confirming that starting system is operating to manufacturer specifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the starting systems that they have inspected, tested and serviced, e.g. repair orders.

Assessment Requirements for AURETR015 Inspect, test and service batteries

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, test and service the batteries of three different vehicles, vessels or machinery, in which the work must involve one maintenance-free battery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, testing and servicing batteries, including procedures for:
 - selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection
 - working with high current electrical systems
 - manually handling batteries and toxic and corrosive substances
 - conducting risk assessments of battery, vehicle and equipment movement before carrying out work
 - working safely when using battery testing equipment
- environmental requirements, including procedures:
 - found in safety data sheets (SDS) relating to toxic and corrosive substances
 - for recycling and disposing of replaced batteries
- basic operating principles of batteries, including using chemical energy to produce electrical energy
- types of automotive batteries, including:
 - lead acid batteries
 - deep cycle batteries

- maintenance-free batteries
- gel batteries
- absorbed glass mat batteries
- calcium batteries
- lithium ion and lithium ion phosphate batteries
- battery classifications, including:
 - reserve capacity
 - amp hour rating
 - cold cranking amps
- battery connection methods for 6 volt, 12 volt, 24 volt and 48 volt, including:
 - series
 - parallel
 - series parallel
- inspection and testing procedures for batteries, including:
 - terminals and leads
 - battery securing system
 - testing battery with load testing devices
 - testing battery with a hydrometer
 - battery memory retention
- servicing procedures for batteries, including:
 - cleaning battery and battery compartments
 - topping up battery fluid
- post-service testing procedures, including confirming that battery is serviceable and operating to manufacturer specifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the batteries that they have inspected, tested and serviced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer battery specifications
- PPE, including clothing, and eye and hand protection
- three different vehicles, vessels or machinery with batteries as specified in the performance evidence requiring servicing
- tools, equipment and materials appropriate for inspecting, testing and servicing batteries, including battery load testing devices, multimeters and cleaning materials.

AURETR016 Read and apply vehicle wiring schematics and drawings

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to read and apply technical information in the wiring schematics and drawings of vehicles, vessels and machinery when testing and fault finding electrical wiring systems. It involves preparing for the task, reading and interpreting the schematics and drawings, and completing work processes.

It applies to those working in the automotive service and repair industry. The wiring schematics and diagrams include those in electrical systems in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to read and apply vehicle wiring schematics and drawings	1.1 Workplace instructions are used to determine job requirements 1.2 Wiring schematics and drawings are sourced that relate to the vehicle, vessel or machinery electrical system being tested 1.3 Schematics and drawings are checked to ensure they are current and include latest amendments
2. Interpret information	2.1 <i>Electrical circuit information</i> in schematics and drawings is correctly identified 2.2 Information is interpreted and applied to assist when carrying out testing and repair procedures on electrical wiring systems
3. Complete work processes	3.1 Schematics and drawings are stored to ensure ease of access and protection from loss or damage 3.2 Damage to schematics and drawings is reported according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret symbols and graphical illustrations in electrical wiring schematics and drawings.
Oral communication skills to:	<ul style="list-style-type: none"> clarify information.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numbers and units relating to electrical circuits and wiring systems in automotive workshop hard copy and online documentation determine correct measurement relationships for voltage, current and resistance in electrical circuits from wiring schematics and drawings interpret correct wiring gauge and dimensions from wiring

Assessment Requirements for AURETR017 Overhaul charging system alternators

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul charging system alternators of two different vehicles, vessels or machinery, which include an alternator with a:
 - star connected stator
 - delta connected stator.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling charging system alternators, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- environmental requirements, including procedures:
 - found in safety data sheets (SDS) relating to toxic and corrosive substances
 - for disposing of replaced alternator components
- types, characteristics and operating principles of charging system alternators, including alternators with both star and delta connected stators
- charging system alternator overhaul procedures, including:
 - methods for cleaning and preparing charging system alternators for overhaul
 - charging system alternator dismantling procedures
 - charging system alternator repair and adjustment procedures, including:

- brushes to slip ring alignment
- bearings shimmed and seated in alternator housing
- rotors rebalanced
- rectifier installation to alternator housing
- component assembly procedures, including procedures for measuring and calculating tolerances, and adjusting components
- post-overhaul bench testing procedures, including:
 - use of load simulator load tester for complete system analysis
 - analysis of system operation while using gauges, current clamps, electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
- post-overhaul testing procedures of alternator in vehicle, vessel or machinery, including:
 - accessing and interpreting diagnostic trouble codes (DTCs)
 - DTC clearing procedures
 - checking for electrical connector mating
 - checking for correct charging voltage at battery.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the charging system alternators that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications relating to charging system alternators
- two different vehicles, vessels or machinery with star and delta connected stators and requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting a range of alternators.

Application

This unit describes the performance outcomes required to return starting system motors to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the transmission, carrying out the overhaul process, reassembling and testing the transmission, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. The starting system motors include those fitted to agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate sources of information relevant to starting system motor efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret and assess information from manufacturer and workshop literature when seeking starting system motor specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure starting system motor components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer

Skills	Description
	specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as vernier calipers and micrometers use specialised starting system motor overhaul equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> using specialised tools and equipment using appropriate personal protective equipment (PPE) identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems environmental requirements, including procedures: <ul style="list-style-type: none"> found in safety data sheets (SDS) relating to toxic and corrosive substances for disposing of replaced components.

Assessment Requirements for AURETR018 Overhaul starting system motors

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the starting system motors of three different vehicles, vessels or machinery, which must include:
 - one direct drive starter motor
 - one of the following solenoid pre-engaged types of starter motors:
 - direct drive
 - reduction drive
 - one stop-start starter motor.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling starting system motor, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- environmental requirements, including procedures:
 - found in safety data sheets (SDS) relating to toxic and corrosive substances
 - for disposing of replaced components
- types, characteristics and operating principles of vehicle, vessel or machinery starting system motors, including starter motors that are direct drive and solenoid pre-engaged types

- starting system overhaul procedures, including:
 - methods for cleaning and preparing starting system motors for overhaul
 - starting system motor dismantling procedures
 - starting system motor inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances
 - starting system motor repair and adjustment procedures, including:
 - brushes to commutator alignment
 - motor drive shaft to planetary gear assembly
 - solenoid shift lever to clutch drive assembly
 - procedures for tolerance measuring and calculating and adjusting components
- post-overhaul bench testing procedures, including:
 - use of load simulator load tester for complete system analysis
 - analysis of system operation while using gauges, current clamps, electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
- post-overhaul testing procedures of starting system motors in vehicles, vessels or machinery, including:
 - accessing and interpreting diagnostic trouble codes (DTCs)
 - DTC clearing procedures
 - checking for electrical connector mating
 - checking for voltage drop and starting system motor correct current draw.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the starting system motors that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- workplace instructions
- manufacturer starting system motor specifications
- three different vehicles, vessels or machinery with the starting system components specified in the performance evidence and requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting a range of starting system motors.

AURETR019 Inspect, service and repair AC electric motor drive systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, service and repair alternating current (AC) electric motor drive systems in vehicles, vessels or machinery. It involves preparing for the task, inspecting AC electric motor drive systems, repairing the systems, and completing workplace processes and documentation, including associated recommendations for further action.

It applies to those working in the automotive service and repair industry. The AC electric motor drive systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect, service and repair AC electric motor drive system	1.1 Job requirements are determined according to workplace instructions 1.2 Inspection and servicing procedures are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect and test system	2.1 System is inspected and tested according to workplace procedures and <i>safety requirements</i> 2.2 Circuits are tested according to workplace procedures and without causing damage to components or systems 2.3 Inspection results are compared with manufacturer specifications 2.4 Inspection findings are reported according to workplace procedures, including recommendations for required repairs or adjustments
3. Service and repair system	3.1 System is serviced and repaired according to manufacturer and component specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 System is performance tested and final adjustments are made 3.3 Post-repair testing is carried out to confirm system is operating to manufacturer specifications, any reported problems are resolved, and no other problems are present
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and diagrams from manufacturer specifications and workplace procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making repair recommendations, and recording parts and material used.

Assessment Requirements for AURETR019 Inspect, service and repair AC electric motor drive systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair three of the following alternating current (AC) electric motor drive systems in different vehicles, vessels or machinery:
 - AC single phase induction motor
 - AC three phase induction motor
 - AC brush commutator motor
 - AC synchronous motor.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing AC electric motor drive systems, including procedures for:
 - selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection
 - working safely with high current electrical systems
- operating principles of AC electric motor drive systems, including of:
 - AC single phase induction motor
 - AC three phase induction motor
 - AC brush commutator motor
 - AC synchronous motor
- application, purpose and operation of AC electric motor drive systems, including:
 - forklifts

- golf karts and buggies
- electric vehicle transportation
- recreational vehicles, including quad bikes and motorcycles
- inspection procedures for AC electric motor drive systems, including for analysing system operation
- procedures for testing AC electric motor drive systems, including:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - procedures for using and operating electrical test equipment, including:
 - digital multimeters
 - test lights and probes
 - oscilloscopes
- service and repair procedures for AC electric motor drive systems, including:
 - component removal and replacement procedures
 - component and associated system adjustment procedures
- post-repair testing procedures for AC electric motor drive systems, including:
 - confirming that system is operating to manufacturer specifications
 - confirming that no other problems are present as a result of the repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the AC electric motor drive systems that they have inspected, serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer AC electric drive motor specifications

- PPE, including clothing, and eye and hand protection
- three different vehicles, vessels or machinery with the AC electric motor drive systems specified in the performance evidence requiring repair
- tools, equipment and materials appropriate for inspecting, servicing and repairing AC electric motor drive systems, including multimeter.

AURETR020 Diagnose and repair network electronic control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair vehicle or machinery embedded network electronic control systems. These systems include two-wire high and low speed (CAN-bus) and single wire low speed (LIN-bus) networked circuits essential to control engine powertrain, vehicle dynamic control functions and body control functions. They include vehicle infotainment and climate control systems. The unit involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. Embedded networked systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair network electronic control system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose network electronic control system	2.1 Diagnostic tests are carried out according to workplace procedures and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair network electronic control system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURETR020 Diagnose and repair network electronic control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three different network electronic control circuits that set network communication diagnostic trouble codes (DTCs), including one single wire circuit and one two-wire circuit.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing network electronic control systems, including procedures for identifying hazards and controlling risks associated with:
 - working on vehicle high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
- operating principles of network electronic control systems and associated components, including:
 - assurance of message delivery, non-conflicting messages, minimum time of delivery, and electromagnetic field (EMF) noise resilience
 - network topographies
 - network protocols, including characteristics and data speeds
- application, purpose and operation of network electronic control systems and components, including:
 - controlled area network (CAN), including:
 - nodes: host processor, CAN controller, and transceiver
 - gateway modules

- terminating resistors
- data transmission
- vehicle data logic connector (DLC)
- local interconnect network (LIN), including:
 - master and slaves
 - data transmission
- diagnostic testing procedures for network electronic control systems, including:
 - accessing and interpreting scan tool system data, including:
 - DTCs, including 'U' type communication codes
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - determining damage to system wiring and connectors
- repair procedures for network electronic control systems, including:
 - connector removal and replacement procedures
 - removal and replacement procedures for vehicle network electronic control system components
- post-repair testing procedures for network electronic control systems, including:
 - DTC clearing procedures
 - checking for electrical connector mating.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the network electronic control systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for network electronic control systems
- two different network electronic control circuits
- diagnostic equipment for network electronic control circuits, including:
 - multimeter
 - scan tool
 - oscilloscope
- tools, equipment and materials appropriate for repairing network electronic control circuits.

Assessment Requirements for AURETR021 Inspect, service and repair electronic management, monitoring and tracking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair three of the following electronic management, monitoring and tracking systems:
 - receivers
 - displays
 - electronic controllers
 - steering actuators
 - telematics
 - connectors and harnesses.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing electronic management, monitoring and tracking systems, including procedures for:
 - using personal protective equipment (PPE), including clothing, and eye and hand protection
 - working safely with high current electrical systems
- environmental requirements, including procedures:
 - found in safety data sheets (SDS) relating to toxic and corrosive substances
 - for recycling and disposing of replaced electronic management, monitoring and tracking system components

- operating principles of electronic management, monitoring and tracking systems, including:
 - system overview
 - global positioning system (GPS)
 - electronic sensors and processors
 - electrical actuators
- application, purpose and operation of electronic management, monitoring and tracking systems, including:
 - receivers
 - displays
 - electronic controllers
 - steering actuators
 - telematics
 - connectors and harnesses
- techniques for reading and interpreting automotive technical information, graphic symbols and wiring diagrams
- inspection procedures, including:
 - analysing system operation
 - identifying software versions
 - interrogating electronic fault codes
- testing electrical systems, including procedures for accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
- service and repair procedures, including:
 - component removal and replacement procedures
 - downloading and installing relevant component software
 - component and associated system adjustment procedures to include variable operating conditions
- post-repair testing procedures, including:
 - confirming that vehicle or machinery electronic monitoring, management and tracking systems are serviceable and operating to manufacturer specifications
 - confirming that no other problems are present as a result of the repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electronic management, monitoring and tracking system that they have inspected, serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for electronic management, monitoring and tracking systems
- PPE, including clothing, and eye and hand protection
- vehicles or machinery with the electronic management, monitoring and tracking systems specified in the performance evidence requiring service or repair
- tools, equipment and materials appropriate for inspecting, servicing and repairing electronic management, monitoring and tracking systems, including scan tool.

AURETR022 Diagnose and repair vehicle dynamic control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in dynamic control systems of vehicles. These systems include the functions of a vehicle electronic braking control module (EBCM), such as anti-lock braking, brake assist, descent control, electronic brake force distribution, electronic park brake, hill start assist, stability control, traction control and active roll-over protection. The unit involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. Vehicle dynamic control systems include those in heavy commercial vehicles, light vehicles or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair vehicle dynamic control system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose vehicle dynamic control system	2.1 Diagnostic tests are carried out according to workplace procedures and <i>safety requirements</i> without causing damage to components or systems 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnostic tools and equipment are selected and checked for serviceability according to manufacturer specifications and workplace procedures
3. Repair vehicle dynamic control system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked according to manufacturer specifications and workplace procedures 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify and locate various sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and wiring diagrams in diagnostic and repair information from manufacturer specifications and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> match electrical components and part identification numbers to workplace instructions, vehicle and component part lists, and manufacturer specifications interpret vehicle electrical measurements and readings measure voltage, current and resistance and use basic mathematical operations, including addition and subtraction, to calculate deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised equipment, including multimeters and scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:<ul style="list-style-type: none">• using specialised tools and equipment• using appropriate personal protective equipment (PPE)• identifying hazards and controlling risks associated with:<ul style="list-style-type: none">• working on vehicle high voltage ignition systems• wearing jewellery while working around high current wiring systems.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURETR022 Diagnose and repair vehicle dynamic control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the dynamic control systems of:
 - one vehicle or machinery with an anti-lock braking system (ABS)
 - one vehicle or machinery with a traction control system (TCS).

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing vehicle dynamic control systems, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with:
 - working on vehicle high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
- operating principles of vehicle dynamic control systems and associated components, including:
 - active roll-over protection
 - anti-lock braking
 - brake assist
 - descent control
 - electronic brake force distribution

- electronic park brake
- hill start assist
- stability control
- traction control
- application, purpose and operation of vehicle dynamic control systems and components, including:
 - ABS, including system inputs, electronic control unit (ECU), ABS modulator, and system outputs
 - TCS, including system inputs, ECU, and system outputs, including associated throttle and braking system controls
 - electronic stability control (ESC), including system inputs, including yaw and steering angle sensors, and ECU and system outputs, including associated throttle and braking system controls
- diagnostic testing procedures for vehicle dynamic control systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including ‘U’ type communication codes
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - determining damage to system wiring and connectors
- repair procedures for vehicle dynamic control systems, including:
 - connector removal and replacement procedures
 - removal and replacement procedures for vehicle dynamic control system components
- post-repair testing procedures for vehicle dynamic control systems, including:
 - DTC clearing procedures
 - checking for electrical connector mating.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle dynamic control systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer vehicle dynamic control system specifications
- two different vehicles or machinery with dynamic control system faults
- diagnostic equipment for vehicle dynamic control systems, including:
 - multimeter
 - scan tool
- tools, equipment and materials appropriate for repairing vehicle dynamic control systems.

Assessment Requirements for AURETR023 Diagnose and repair spark ignition engine management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the spark ignition engine management systems of three different vehicles or machinery, including:
 - faults in two system input sensors
 - faults in one system output actuator.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing spark ignition engine management systems, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with:
 - working on vehicle high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
 - working with high pressure petrol fuel systems
- operating principles of spark ignition engine management systems and associated components, including:
 - combustion, including:
 - air-fuel ratios and chemistry of combustion
 - composition of petrol fuel, including octane rating
 - indirect and direct fuel injection

- application, purpose and operation of spark ignition engine management systems and components, including:
 - fuel system, including:
 - fuel filters
 - fuel pumps
 - fuel pressure regulators
 - fuel injectors
 - electronic control system, including the following system inputs:
 - throttle position sensors
 - coolant temperature sensors
 - oxygen sensors
 - load sensors and air flow meters
 - intake air temperature sensors
 - crankshaft position sensors
 - camshaft position sensors
 - battery voltage
 - accessory load sensors
 - knock sensors
 - key features of electronic control units (ECUs), including:
 - read-only memory (ROM)
 - programmable read-only memory (PROM)
 - electronically erasable programmable read-only memory (EEPROM)
 - random access memory (RAM)
 - multiplexing
 - adaptive learning
 - short-term fuel trim (STFT)
 - long-term fuel trim (LTFT)
 - sensor reference voltages and sensor grounds
 - system outputs, including:
 - injectors
 - idle speed control devices
 - fuel pump relays
 - engine cooling fans
 - air conditioning compressor controls
 - broadband intake manifolds
 - exhaust gas recirculation solenoid controls
 - carbon canister purge controls
 - throttle motor (drive by wire) controls
 - variable valve timing controls
 - assembly line diagnostic link (ALDL)

- ignition systems and components, including:
 - spark plugs
 - ignition leads
 - ignition coils, including electromagnetic induction
 - ignition timing, including varying ignition timing according to engine load, speed and knock sensor input
 - dwell period
- ECU control of ignition coil switching and methods of generating timing signals, including:
 - profile ignition pick-up (PIP) and crankshaft position sensor signals, including inductive pick-up, Hall effect and light emitting diode (LED)
 - waste spark ignition systems
 - coil-on-plug ignition systems
 - integrated ignition systems
- diagnostic testing procedures for spark ignition engine management systems, including:
 - diagnostic flow charts
 - fuel system testing, including:
 - low pressure fuel system testing
 - high pressure fuel system testing
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - injector testing
 - sensor testing
 - actuator testing
 - accessing and interpreting industry-relevant test equipment data, including:
 - fault codes
 - live data
 - freeze frame data
 - waveforms
- repair or replacement procedures for spark ignition engine management systems, including procedures for:
 - removing and replacing the following electrical or electronic components:
 - sensors
 - actuators, including fuel injectors and fuel pumps
 - adjusting and recalibrating components and associated systems
- post-repair testing procedures, including procedures for:
 - clearing fault codes
 - assessing engine performance
 - checking for electrical connector mating.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the spark ignition engine management systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

Assessment Requirements for AURETR024 Diagnose and repair compression ignition engine management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the compression ignition engine management systems of three different vehicles or machinery, including:
 - faults in two of the following:
 - engine position sensor
 - throttle position sensor
 - engine coolant temperature sensor
 - engine mass airflow (MAF) sensor
 - inlet air temperature (IAT) sensor
 - faults in one of the following:
 - fuel injector
 - engine fuel pressure sensor
 - boost pressure sensor
 - low pressure fuel delivery pump
 - high pressure fuel rail pump
 - electronic control unit (ECU).

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing compression ignition engine management systems, including procedures for identifying hazards and controlling risks associated with:

- working with high pressure diesel fuel systems
- wearing jewellery while working around high current wiring systems
- operating principles of diesel fuel injection systems and associated components, including:
 - phases of combustion
 - composition of diesel fuel, including cetane and sulphur content
- application, purpose and operation of compression ignition engine management systems and components, including common rail fuel systems:
 - low pressure stage
 - high pressure stage, including:
 - high pressure injection pump
 - common fuel rail
 - injectors
 - high pressure fuel line
 - compression ignition engine management systems, including:
 - sensors
 - actuators
 - wiring harness
 - electronic control module (ECM)
 - associated vehicle systems
- diagnostic testing procedures for compression ignition engine management systems, including:
 - diagnostic flow charts
 - fuel system testing, including:
 - low pressure fuel system testing
 - high pressure fuel system testing
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors or wiring
 - injector testing
 - sensor testing
 - actuator testing
 - accessing and interpreting industry-relevant test equipment data, including:
 - fault codes
 - live data
 - freeze frame data
 - waveforms
- repair or replacement procedures for compression ignition engine management systems, including procedures for:
 - removing and replacing sensors
 - removing and replacing actuators, including fuel injectors and fuel pumps

- adjusting and recalibrating components and their associated systems
- post-repair testing procedures, including procedures for:
 - clearing fault codes
 - assessing engine performance
 - checking for electrical connector mating.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the compression ignition engine management systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for compression ignition engine management systems
- three different vehicles or machinery with compression ignition engine management system faults
- diagnostic equipment for compression ignition engine management systems, including:
 - multimeter
 - scan tool
- tools, equipment and materials appropriate for repairing compression ignition engine management systems.

AURETR025 Test, charge and replace batteries and jump-start vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to test, charge, replace, retest and secure a range of automotive batteries, including vehicle or machinery jump-starting procedures. It involves preparing for the task, inspecting and testing the battery to determine serviceability, charging, jump-starting, removing and replacing, and undertaking the final retesting of batteries, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The batteries include those in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, motorcycles, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to test, charge and replace batteries and jump-start vehicle	1.1 Job requirements are determined according to workplace instructions 1.2 Technical information for testing batteries and equipment safe operating procedures are accessed and interpreted from vehicle or machinery and battery manufacturer specifications 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Test battery and determine serviceability	2.1 Battery is inspected and tested according to manufacturer specifications, workplace procedures, and safety and environmental requirements 2.2 Battery cables, terminals and case are visually inspected to determine faults or damage 2.3 Electrolyte levels are checked and topped up as required 2.4 Battery and terminals are cleaned using correct equipment and battery cleaning materials 2.5 Battery voltage and load are checked to determine if battery requires charging, jump-starting or replacement
3. Charge battery	3.1 Technical information for charging is interpreted from vehicle or machinery and battery manufacturer specifications 3.2 Tools and equipment for charging battery are identified, selected and prepared according to manufacturer specifications and workplace procedures 3.3 Electrolyte levels are checked and topped up as required 3.4 Battery charge rate is determined and battery charger is connected to battery according to manufacturer specifications, workplace procedures and safety requirements 3.5 Battery is charged according to manufacturer specifications, workplace procedures and safety requirements 3.6 Battery charger is turned off and disconnected, and electrolyte levels are rechecked, according to manufacturer specifications, workplace procedures and safety requirements as required
4. Carry out jump-start procedures	4.1 Jump-start is carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to vehicle or machinery 4.2 Battery voltage is identified and confirmed as being appropriate

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	to jump-start procedures and vehicle or machinery 4.3 Leads are connected and disconnected in correct sequence and polarity according to manufacturer specifications, workplace procedures and safety requirements
5. Remove and replace battery	5.1 Appropriate power source memory back-up device is connected to ensure no loss of power to accessories as required 5.2 Battery terminals are disconnected according to manufacturer specifications, workplace procedures and safety requirements 5.3 Battery is removed from vehicle according to manufacturer specifications, workplace procedures and safety requirements 5.4 <i>Replacement battery is chosen</i> appropriate to electrical and physical specifications and measurements of vehicle or machinery 5.5 Battery is replaced and secured according to manufacturer specifications, workplace procedures and safety requirements 5.6 Battery terminals are reconnected and tightened according to manufacturer specifications, workplace procedures and safety requirements 5.7 Post-replacement testing is carried out to confirm battery charging system is operating to manufacturer specifications, any reported problems are resolved, and no other problems are present
6. Complete work processes	6.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 6.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recycled material is collected 6.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 6.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret safety data sheets (SDS), and safe operating procedures in manufacturer specifications and workplace procedures interpret text, symbols and wiring diagrams in manufacturer specifications, and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> identify, interpret and match components and requirements to manufacturer specifications, including: <ul style="list-style-type: none"> battery types battery identification numbers and specifications cold cranking amp (CCA) and reserve capacity (RC) battery rating requirements use mathematical formulas and operations to calculate correct charge rate and charging period for the type and capacity of battery.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised tools and equipment relating to testing, charging and replacing batteries and jump-starting vehicles correctly and safely, including battery chargers, hydrometers and jumper leads.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Tools, equipment and materials</i> must include:	<ul style="list-style-type: none"> load testing devices hydrometers multimeters jumper leads battery chargers
--	--

	<ul style="list-style-type: none"> • battery cleaning materials.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • safely operating: <ul style="list-style-type: none"> • battery testing equipment • battery charging equipment • selecting and using personal protective equipment (PPE), including safety glasses • identifying hazards and controlling risks associated with: <ul style="list-style-type: none"> • battery, vehicle and machinery movement before carrying out work • wearing jewellery while working around high current wiring systems • environmental requirements, including procedures for: <ul style="list-style-type: none"> • following SDS to trap, store and dispose of toxic and corrosive substances • disposing of or recycling batteries.
<i>Determining battery charge rate</i> must include:	<ul style="list-style-type: none"> • calculating correct charge rate • calculating charging period for type and capacity of battery.
<i>Choosing replacement battery</i> must include:	<ul style="list-style-type: none"> • determining battery specifications to suit vehicle or machinery manufacturer specifications, including correct: <ul style="list-style-type: none"> • voltage • CCA and RC ratings.

Unit Mapping Information

Equivalent to AURETR3025 Test, charge and replace batteries

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURETR025 Test, charge and replace batteries and jump-start vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- test two different types of automotive batteries
- charge two batteries, in which the work must involve:
 - slow or trickle charging one battery
 - rapid charging the second battery
- remove and replace batteries from two different vehicles or machinery
- jump-start two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to testing, charging and replacing batteries and jump-start vehicles, including procedures for:
 - safely operating:
 - battery testing equipment
 - battery charging equipment
 - selecting and using personal protective equipment (PPE), including safety glasses
 - identifying hazards and controlling risks associated with:
 - battery, vehicle and machinery movement before carrying out work
 - wearing jewellery while working around high current wiring systems
- environmental requirements, including procedures for:
 - following safety data sheets (SDS) to trap, store and dispose of toxic and corrosive substances

- disposing of or recycling batteries
- location and content of manufacturer specifications, workplace procedures, and SDS
- types, application and operation of batteries, including:
 - lead acid batteries, including deep cycle batteries
 - gel batteries
 - absorbed glass mat batteries
 - calcium batteries
 - lithium ion and lithium ion phosphate batteries
- battery connection methods for 6 volt, 12 volt, 24 volt and 48 volt, including:
 - series
 - parallel
 - series parallel
- battery classification methods, including:
 - cold cranking amps (CCA)
 - reserve capacity (RC)
 - amp hour rating
- battery testing procedures, including:
 - testing safety requirements
 - visual inspection procedures
 - voltage drop testing
 - hydrometer testing
 - high rate discharge testing
- battery charging procedures, including:
 - charging safety requirements
 - slow, fast and trickle charging
 - battery memory retention
- battery replacement procedures, including:
 - replacement safety requirements
 - terminal disconnection
 - battery selection
 - battery installation and terminal connection
 - securing battery in vehicle
 - system recalibration procedures
- battery jump-start procedures, including:
 - vehicle and personnel safety requirements
 - battery terminal disconnection
 - jumper lead connection and disconnection.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the batteries that they have tested, charged, replaced and jump-started, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer battery specifications
- PPE for testing, charging, removing and replacing batteries and jump-starting vehicles and machinery, including safety glasses
- two different types of serviceable batteries
- two different vehicles or machinery requiring jump-starting
- tools, equipment and materials appropriate for battery testing, charging and replacement, including:
 - load testing device
 - hydrometer
 - multimeter
 - jumper leads
 - battery charger
 - battery cleaning materials.

AURETR026 Remove, replace and program electrical and electronic units and assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove, replace and program electrical and electronic units and assemblies integral to vehicle and machinery controller area network databus (CAN-bus). Electrical and electronic units and assemblies include powertrain control modules, engine and body control modules, and other electronic control modules that may require manufacturer programming procedures.

It applies to those working in the automotive service and repair industry. The electrical and electronic units and assemblies include those fitted to agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove, replace and program electrical and electronic units and assemblies	1.1 Job requirements are determined from workplace instructions 1.2 Workplace procedures and manufacturer specifications are accessed and interpreted 1.3 Removal information is accessed and interpreted from manufacturer and component supplier specifications 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment are selected and checked for serviceability
2. Remove unit and assembly	2.1 Unit and assembly are removed using approved methods, tools and equipment and according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Unit and assembly are handled and stored according to manufacturer and component supplier requirements
3. Replace unit and assembly	3.1 Replacement information is accessed and interpreted from manufacturer and component supplier specifications 3.2 Unit and assembly are replaced using approved methods, tools and equipment and according to manufacturer specifications and workplace procedures
4. Program unit and assembly	4.1 Reprogramming options are analysed and those most appropriate are selected 4.2 Component replacement and programming procedures are carried out according to manufacturer and component supplier specifications 4.3 Post-replacement testing is carried out to confirm that unit and assembly are operating to manufacturer specifications and that no other problems are present
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and diagrams in manufacturer specifications, safe operating procedures and workplace information.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions.
Numeracy skills to:	<ul style="list-style-type: none"> match component part numbers to workplace instructions and vehicle and component part lists interpret measurements of voltage, current and resistance relating to electrical and electronic units and assemblies measure components to determine compliance with specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> determine cause of faults and select most appropriate diagnostic and reprogramming method.
Technology skills to:	<ul style="list-style-type: none"> use specialised workplace technology, tools and equipment relating to removing, replacing and programming electrical and electronic units and assemblies, including scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for AURETR026 Remove, replace and program electrical and electronic units and assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- remove, replace, program and retest two of the following systems on controller area network databus (CAN-bus) circuits in different vehicles or machinery, including:
 - supplementary restraint system (SRS) module
 - body control module (BCM)
 - engine control module (ECM)
 - powertrain control module (PCM)
 - electric brake control (EBC), antilock braking system (ABS) or vehicle stability control (VSC) module
 - collision avoidance control (CAC) module
 - adaptive cruise control (ACC) module.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing, replacing and programming electrical and electronic units and assemblies, including procedures for identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- key features of electrical and electronic units and assemblies integral to vehicle CAN-bus networks, including:
 - supplementary restraint system modules
 - body control modules
 - engine control modules

- powertrain control modules
- electric brake control, antilock braking system, and vehicle stability control modules
- collision avoidance control modules
- adaptive cruise control modules
- various types of wiring systems found in vehicles, including:
 - basic wiring
 - twisted pair
 - shielded wiring
 - CAN-bus wiring
- procedures for removing and replacing electrical and electronic units and assemblies, including:
 - identifying unit position using wiring schematics and drawings
 - identifying unit model and configuration
 - identifying visual indications of unit damage, including:
 - physical damage and wear
 - water and moisture ingress
 - avoiding static electricity discharge when handling units
 - disconnecting and reconnecting electrical connectors
- procedures for programming electrical or electronic units, including:
 - service programming system (SPS)
 - original equipment manufacturer (OEM) programming code
 - flash code or program
 - vehicle configuration index (VCI) code or password
- post-replacement testing procedures, including checking unit system operation

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electrical and electronic units and assemblies they have removed, replaced and programmed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer electrical and electronic unit and assembly specifications
- two different vehicles or machinery requiring removal, replacement and programming of electrical and electronic units and assemblies
- tools, equipment and materials appropriate for removing, replacing and programming electrical and electronic units and assemblies, including scan tool.

AURETR027 Install ancillary electronic systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install and test ancillary electronic systems and components in vehicles or machinery. It involves preparing for the task, installing and testing the operation of the systems and components, and completing workplace processes and documentation. These electronic systems and components may require programming following installation to enable them to communicate with the vehicle or machinery controller area network data bus (CAN-bus or LIN-bus) topography.

It applies to those working in the automotive service and repair industry. Ancillary electronic systems and components include those being installed in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install ancillary electronic system and components	1.1 Job requirements are determined according to workplace instructions 1.2 Manufacturer specifications and installation fitting instructions are sourced and interpreted 1.3 Installation options are considered and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Install and test ancillary electronic system and components	2.1 Electronic system and components are checked for correct application and damage 2.2 Electronic equipment is installed according to manufacturer specifications, workplace procedures and safety requirements , and without causing damage to components or systems 2.3 Programming code is sought and interpreted, as required, to enable installed equipment to communicate with vehicle or machinery controller area network 2.4 Installed system and components are tested for correct operation according to workplace procedures and manufacturer specifications 2.5 Post-installation testing of other electrical and electronic systems is carried out according to workplace procedures to confirm correct operation, and any problems detected as having been introduced during the installation process are rectified
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURETR027 Install ancillary electronic systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- install two ancillary electronic systems and components that require communication with the vehicle or machinery controller area network data bus (CAN-bus) topography of different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing ancillary electronic systems and components, including procedures for:
 - using specialised tools and equipment
 - selecting and using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with:
 - working on high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
- types and basic operation of common ancillary electronic systems and components, including:
 - driver interlocks, including alcohol interlock devices
 - remote keyless entry systems
 - security alarm systems
 - audio systems
 - mobile phones
 - speed alert systems

- navigation systems
- reverse parking aids, including sensors, audible alerts and cameras
- driver gauges and instruments
- trailer harness connectors
- types of vehicle and machinery communication networks, including:
 - controller area network (CAN)
 - local interconnect network (LIN)
 - media oriented systems transport (MOST)
- types of communication network wiring, including:
 - single wire
 - two wire twisted pair
 - shielded wire
- procedures for installing basic ancillary electronic systems and components, including:
 - techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
 - methods of determining wiring and connection type and size for system
 - methods of determining placement of components on vehicle or machinery
 - methods of connecting system and components to existing electrical system without causing damage or problems, including:
 - selecting and soldering wires
 - selecting and crimping terminals
 - removing and replacing connectors
 - removing and replacing existing electrical components
 - procedures for sourcing and using programming code to allow communication between installed system and existing vehicle or machinery systems
- post-installation testing procedures of basic ancillary electronic systems and components, including procedures for checking:
 - full operation of installed system
 - operation of existing electrical and electronic systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must be by direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the ancillary electronic systems and components that they have installed in vehicles or machinery, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service and repair workplace or simulated workplace
- workplace instructions
- vehicle and machinery wiring specifications relevant to systems and components being installed
- manufacturer ancillary electronic system specifications
- two different vehicles or machinery requiring installation of ancillary electronic systems and components
- tools, equipment and materials appropriate for installing ancillary electronic systems and components.

AURETR028 Diagnose and repair instruments and warning systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the instruments and warning systems of vehicles, vessels or machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. The instruments and warning systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair instruments and warning system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose instruments and warning system	2.1 Diagnostic tests are performed according to workplace procedures and safety requirements without causing damage to components or systems 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair instruments and warning system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.2 Repair tools, equipment and materials are selected and checked according to manufacturer specifications and workplace procedures 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Compete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures

Elements	Performance Criteria

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURETR028 Diagnose and repair instruments and warning systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the instruments and warning systems of two different vehicles, vessels or machinery, including faults in two of the following:
 - driver instrument warning gauge assembly
 - engine monitoring warning assembly
 - vehicle warning visual alert assembly
 - vehicle warning audible alert assembly
- remove, refit or replace an instrument panel in one vehicle, vessel or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing instruments and warning systems, including procedures for working with high current wiring systems
- operating principles of instruments and warning systems and associated components, including types of instruments, gauges and warning systems
- application, purpose and operation of instruments and warning systems and components, including:
 - instrument panel construction
 - panel illumination
 - magnetic and thermal gauges
 - voltage regulators
 - mechanical gauges

- digital electronic gauges and systems
- warning lights and indicators
- diagnostic testing procedures for instruments and warning systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - checking resistance, current flow and voltage instruments and warning systems
- repair procedures for instruments and warning systems, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
- post-repair testing procedures for instruments and warning systems, including:
 - DTC clearing procedures
 - checking for electrical connector mating
 - undertaking static and dynamic performance tests of instruments and warning systems, including test-driving procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the instruments and warning systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer instrument and warning system specifications
- two different vehicles, vessels or machinery with instrument and warning system faults
- diagnostic equipment for instruments and warning systems, including multimeter
- tools, equipment and materials appropriate for repairing vehicle, vessel or machinery instruments and warning systems.

AURETR029 Diagnose and repair charging systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the charging systems of vehicles, vessels or machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. The charging systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURETR029 Diagnose and repair charging systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following charging system components in two different vehicles, vessels or machinery:
 - alternator stator or rotor circuit
 - alternator internal regulator control circuit
 - external regulator battery management system circuit
 - battery to alternator wiring and earthing system circuit
 - machinery charging system circuit.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing charging systems, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with:
 - working on high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
- operating principles of charging systems and associated components, including:
 - charging batteries with direct current
 - vehicle system power and electrical current requirements

- generating principles, including Faraday’s law and inducing an electromotive force (EMF)
- producing direct current (DC) EMF
- producing alternating current (AC) EMF
- changing AC to DC, including half-wave and full-wave rectification
- application, purpose and operation of charging systems and components, including:
 - generators, including:
 - internal component function and operation
 - regulation of output voltage and current
 - alternators, including:
 - internal component function and operation
 - star-connected and delta-connected stator windings
 - regulation of output voltage, including zener diodes and exciter diodes
 - battery management systems
- diagnostic testing procedures for charging systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - load testing charging systems
 - resistance, current flow and voltage drop checks of charging system circuits
- repair procedures for charging systems, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
- post-repair testing procedures for charging systems, including:
 - DTC clearing procedures
 - checking for electrical connector mating
 - static and dynamic performance tests of charging systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the charging systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for vehicle, vessel or machinery charging systems
- two different vehicles, vessels or machinery with charging system faults
- diagnostic equipment for vehicle, vessel or machinery charging systems, including:
 - multimeter
 - scan tool
- tools, equipment and materials appropriate for repairing vehicle, vessel or machinery charging systems.

Assessment Requirements for AURETR030 Diagnose and repair starting systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit’s elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following starting system circuits in two different vehicles, vessels or machinery:
 - vehicle starter motor and solenoid circuit
 - vehicle ignition switch to solenoid control circuit
 - vehicle battery to starter motor circuit
 - machinery starting system circuit.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with:
 - working on high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
- operating principles of starting systems and associated components, including:
 - producing movement due to the force between magnetic fields
 - producing magnetic fields due to current flow through conductors
 - basic direct current motor operation, including simple armature, magnetic field and commutator

- application, purpose and operation of starting systems and components, including:
 - starter motors, including:
 - internal component function and operation, including armature, commutator, field windings
 - starter motor windings, including series wound, shunt wound and compound wound
 - permanent magnet starter motors
 - direct drive and reduction-type starter motors
 - starting electrical systems, including:
 - solenoids
 - shift levers
 - overrunning clutch flywheel ring gears
 - ignition switching, including key start, push-button start, remote start and start-stop systems
 - safety switches, including inhibitor switches and clutch neutral switches
- diagnostic testing procedures for starting systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - resistance, current flow and voltage drop checks of starting system circuits
 - field winding tests
 - armature tests, including using a growler
 - commutator tests
 - brushes and holder tests
 - overrunning clutch and pinion tests
 - flywheel ring gear tests
 - starter motor bench tester operation
- repair procedures for starting systems, including:
 - tightening connections
 - replacing faulty or damaged cable connections
 - removing and replacing faulty or damaged components
- post-repair testing procedures for starting systems, including:
 - DTC clearing procedures
 - checking for electrical connector mating

- static and dynamic performance tests of starting systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the starting systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for vehicle, vessel or machinery starting systems
- two different vehicles, vessels or machinery with starting system faults
- diagnostic equipment for vehicle, vessel or machinery starting systems, including multimeter
- tools, equipment and materials appropriate for repairing vehicle, vessel or machinery starting systems.

Assessment Requirements for AURETR031 Diagnose and repair ignition systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the ignition systems of two different vehicles, vessels or machinery, including faults in two of the following:
 - magneto with contact points
 - magneto with solid state trigger
 - capacitive discharge ignition
 - distributor with contact points
 - distributor with hall effect sensor
 - distributor with induction magnetic trigger
 - distributor with optical sensor
 - waste spark
 - coil on plug.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing ignition systems, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with:
 - working on high voltage ignition systems
 - wearing jewellery while working around high current wiring systems

- operating principles of ignition systems and associated components, including:
 - generating principles, including Faraday's law and inducing an electromotive force (EMF)
- application, purpose and operation of ignition systems and components, including:
 - ignition coils, including:
 - internal component function and operation: primary windings, iron core and secondary windings
 - electromagnetic induction in the coil
 - spark plugs: identification, thread size, reach, heat range, resistance-type plugs, and type and number of earth electrodes
 - ignition leads
 - Kettering ignition system, including:
 - primary section: battery, ignition switch, ballast resistor, ignition coil primary windings, contact breaker point and capacitor
 - secondary section: ignition coil secondary windings, coil high tension lead, rotor button and distributor cap, spark plug high tension leads and spark plugs
 - firing order
 - ignition timing and methods of varying timing according to engine load and speed
 - electronic ignition systems, including:
 - pulse generator systems: stator and rotor units, ignition control units, current limiting and dwell control
 - Hall effect systems: Hall effect device, and permanent magnet and signal waveform
 - optical ignition systems: light emitting diodes (LEDs), rotating disc and optical electronic semiconductors
 - magneto ignition systems: shuttle and inductor magnetos, and energy transfer ignition systems
 - capacitive discharge ignition (CDI) systems:
 - transformer, charging circuit, triggering circuit, main capacitor and rectifier
 - alternating current CDI
 - direct current CDI
 - waste spark ignition systems
 - coil on plug ignition systems
- diagnostic testing procedures for ignition systems, including:
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - checking resistance, current flow and voltage drop of ignition system circuits
 - testing ignition coils
 - using oscilloscopes, including interpreting ignition system primary and secondary waveforms

- repair procedures for ignition systems, including:
 - removing and replacing faulty or damaged components
 - setting contact breaker gap and checking dwell
 - adjusting ignition system timing
 - removing, replacing and re-timing distributors
- post-repair testing procedures for ignition systems, including static and dynamic performance tests of ignition systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the ignition systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer ignition system specifications
- two different vehicles, vessels or machinery with ignition system faults
- diagnostic equipment for ignition systems, including:
 - multimeter
 - scan tool
 - oscilloscope
- tools, equipment and materials appropriate for repairing vehicle, vessel or machinery ignition systems.

AURETR032 Diagnose and repair automotive electrical systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the electrical systems of vehicles or machinery. These systems are single wire (non CAN-bus) networked circuits and include entry-exit locking systems, power windows, interior and exterior lighting, turning indicators, brake and hazard warning lights and electric drive motor circuits. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. Automotive electrical systems include those in agricultural machinery, heavy commercial vehicle, light vehicle, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair electrical system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose electrical system	2.1 Diagnostic tests are carried out according to workplace procedures and safety requirements without causing damage to components or systems 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair electrical system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify and locate various sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and wiring diagrams in information relating to electrical system testing and repair equipment from manufacturer specifications and workplace instructions and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> match electrical components and part identification numbers to workplace instructions, vehicle and component part lists, and manufacturer specifications interpret vehicle electrical measurements and readings measure voltage, current and resistance and use basic mathematical operations, including addition and subtraction, to calculate deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised equipment, including multimeters.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Assessment Requirements for AURETR032 Diagnose and repair automotive electrical systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three of the following electrical system single wire (non CAN-bus) circuits:
 - entry-exit locking systems with electric motor control circuit
 - power windows circuit
 - interior or exterior lighting circuit
 - turning indicator circuit
 - brake light circuit
 - hazard warning light circuit
 - electrical drive motor circuit
- carry out four of the following electrical connector repairs to a vehicle or machinery wiring harness:
 - crimp two different terminal types and sizes
 - remove two faulty connectors from the back of different terminals
 - solder two different wire gauges to electrical terminals
 - apply heat shrink insulation to two different crimped or soldered joints
 - check terminal retention on two different female terminals and connectors.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing automotive electrical systems, including procedures for:

- using specialised tools and equipment
- using appropriate personal protective equipment (PPE)
- identifying hazards and controlling risks associated with:
 - working on high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
- operating principles of automotive electrical systems and associated components, including:
 - current, voltage, resistance and power
 - series circuits
 - parallel circuits
 - series and parallel circuits
 - Ohm's law
 - Faraday's law
 - Kirchhoff's law
 - magnetism and direct current (DC) motor operation
 - electromagnetic interference and radiation
 - cable types and sizes and current carrying capacity
 - circuit protection devices
- application, purpose and operation of automotive electrical systems and components, including:
 - wiper motors
 - electric windows
 - electric door locks
 - fan motors
 - horns
 - lighting
 - radio aerials
- diagnostic testing procedures for automotive electrical systems, including:
 - visual, aural and functional assessments of electrical system components, including:
 - component damage and wear
 - component or connector corrosion
 - component water or moisture ingress
 - common faults in electrical circuits, including:
 - open circuits
 - high resistance circuits
 - short circuits
 - damaged insulation
 - frayed wires
 - burnt wiring
 - water and moisture ingress

- connector damage
- terminal damage
- using diagnostic flow charts
- testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - checking resistance, current flow and voltage drop of system circuits
- procedures for using:
 - digital multimeters
 - test lights and probes
 - oscilloscopes
- repair procedures for automotive electrical systems, including:
 - selecting and soldering wires
 - selecting and crimping terminals
 - removing and replacing connectors
 - removing and replacing electrical systems and their components
- post-repair testing procedures for automotive electrical systems, including:
 - checking for electrical connector mating
 - checking circuit current flow
 - static and dynamic performance tests of automotive electrical systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electrical systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

- manufacturer automotive electrical system specifications
- three different vehicles or machinery with electrical system faults
- diagnostic equipment for electrical systems, including multimeter
- tools, equipment and materials appropriate for repairing automotive electrical systems, including:
 - automotive wiring
 - heat shrink
 - soldering iron.

AURETR033 Develop and apply network electronic control system modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to develop, apply and validate significant modifications to existing network electronic control systems in order to vary or enhance performance. These systems include two-wire high and low speed (CAN-bus) and single wire low speed (LIN-bus) network circuits. The unit involves identifying the modification requirement, developing the modification specifications, applying and testing the modification, and completing workplace processes and documentation.

Significant and non-routine modifications are those that require compliance with Australian Design Rules and Vehicle Safety Bulletins.

It applies to those working in the automotive service and repair industry. The network electronic control systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the modification requirement	1.1 Job requirements are determined from workplace instructions 1.2 Reasons for the modification are identified and confirmed with appropriate persons 1.3 Modification options are identified and reported to appropriate persons according to workplace procedures 1.4 Hazards associated with the work are identified and risks are managed 1.5 Legal and safety impacts of the modification are considered, as required, according to regulatory requirements
2. Develop and validate the modification specification	2.1 Manufacturer specifications for the existing network electronic control systems are sourced and interpreted 2.2 Criteria for selecting the modification method and evaluating the outcomes are identified and documented 2.3 Proposed modification method is identified, selected and evaluated from available options 2.4 Selected option, including material choices and processes, is developed in detail and progressively assessed against established criteria 2.5 Modification specification is documented according to workplace procedures
3. Apply and test the modification specification	3.1 Tools, test equipment and materials required to support the modification procedure are identified, selected and prepared for use 3.2 Selected modification method is carried out according to workplace procedures and safety requirements 3.3 Post-modification testing is carried out according to workplace procedures to confirm modification outcomes are as intended, and any problems detected as having been introduced during the modification process are rectified 3.4 Test results and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.5 Variations needed during the modification process or as a result of testing are incorporated into the modification specification 3.6 Information and detail relating to the modification are documented and provided to the appropriate parties according to regulatory and commercial obligations

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> • locate and evaluate appropriate sources of information.
Reading skills to:	<ul style="list-style-type: none"> • interpret the operating and testing procedures for network electronic control system testing equipment from workplace and manufacturer literature • research, organise and interpret technical information from manufacturer and workshop literature when seeking network electronic control system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> • legibly and accurately fill out workplace documentation when reporting modification findings and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> • clarify instructions, gain information from supervisors, and report modification outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> • measure network electronic control system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications • interpret precision measuring equipment and test equipment units and scales.

Skills	Description
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised diagnostic equipment, including scan tools and oscilloscopes.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems using personal protective equipment (PPE) and hand tools.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop and apply one of the following significant and non-routine modifications on the network electronic control system of two different vehicles, vessels, machinery or equipment:
 - adapt or modify network electronic control system to a significantly changed capability
 - adapt network electronic control system for different work conditions
 - modify or install a significant network electronic control system for a special purpose.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to developing and applying network electronic control system modifications, including procedures for:
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
 - using personal protective equipment (PPE) and hand tools
- location and content of manufacturer specifications, workplace procedures and other relevant technical information relating to modifying network electronic control systems
- principles and processes involved in planning and implementing modifications to network electronic control systems
- types, functions, operation and limitations of the main automotive industry network electronic control systems being modified

- types, functions, operation and limitations of diagnostic testing equipment required for network electronic control system modifications, including scan tools and oscilloscopes
- requirements of Australian Design Rules (ADRs) and Vehicle Safety Bulletins (VSBs) relating to network electronic control system modifications
- procedures for documenting and reporting the modification specifications and outcomes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the network electronic control systems that they have modified, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service repair workplace or simulated workplace
- workplace instructions
- manufacturer network electronic control system specifications
- ADRs and VSBs relating to network electronic control system modifications
- two different vehicles, vessels, machinery or equipment requiring network electronic control system modification
- diagnostic equipment for network electronic control system modification, including scan tools and oscilloscopes
- tools, equipment and materials appropriate for completing network electronic control system modifications.

AURETR035 Apply knowledge of petrol and diesel engine operation

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply knowledge of petrol and diesel engine components and systems, as well as of the principles of engine operation, during the testing and repair of basic electrical circuits in vehicles, vessels and machinery.

It applies to those working in the automotive service and repair industry. The engines include those in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Assessment Requirements for AURETR035 Apply knowledge of petrol and diesel engine operation

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- apply knowledge of petrol and diesel engine operation during the testing and repair of three different vehicle, vessel or machinery electrical systems
- evaluate and expand knowledge of petrol and diesel engine operation, including demonstrating knowledge of one of the following:
 - a new automotive petrol and diesel engine testing procedure
 - a new automotive petrol and diesel engine repair procedure
 - a new automotive petrol and diesel engine technology.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- types and location of sources of technical information relevant to automotive electrical systems, including:
 - workplace service information
 - automotive engine mechanical texts
 - vehicle workshop manuals
 - service bulletins
 - technical articles
 - automotive textbooks
- classifications of engines, including:
 - internal combustion
 - reciprocating and rotary engines
 - spark ignition engines

- compression ignition engines
- engine cylinder arrangements
- engine configurations, including:
 - inline engines, V type engines and slant cylinder engines
 - opposed cylinder engines
- camshaft and valve locations, including:
 - overhead cam (OHC)
 - overhead valve (OHV)
- engine operating principles, including:
 - two-stroke cycles
 - four-stroke cycles
- engine measurement and performance ratings
- operating performance of engines, including:
 - petrol engines
 - diesel engines
- petrol and diesel engine operation, including:
 - engine construction
 - engine types and configuration
 - two-stroke and four-stroke
 - cycles of engine operation, including:
 - intake stroke
 - compression stroke
 - power stroke
 - exhaust stroke
 - firing orders
 - ignition types, including:
 - spark
 - compression
 - engine mounting location, including:
 - front longitudinal
 - front transverse
 - mid transverse
 - measurement and performance, including:
 - bore and stroke
 - displacement
 - compression ratio
 - engine efficiency
 - torque versus horsepower
- engine components, including:
 - top of engine, including:

- timing belt or chain
- camshaft timing pulley
- camshaft single and dual
- rocker arms and shafts
- intake valves and springs
- exhaust valves and springs
- cylinder head
- front of engine, including:
 - crankshaft
 - crankshaft timing pulley
 - crankshaft pulley and balancer
- rear of engine, including:
 - flywheel
 - starter ring gear
- bottom of engine, including:
 - engine block
 - crankshaft
 - crankshaft balance weights
 - crankshaft main bearing journals
 - pistons
 - connecting rods
- relationships between electrical systems and engine performance, including:
 - ignition system and engine power and torque, including:
 - ignition timing
 - combustion stroke pressure
 - diesel injection system and engine power and torque, including:
 - injection timing
 - combustion stroke pressure
 - starter motor system, including:
 - current draw of starting system of high compression engines
 - types of batteries and starter motors for petrol and diesel engines
 - wiring requirements of starter motor systems for petrol and diesel engines
 - charging system, including system requirements for low and high speed engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having applied knowledge of petrol and diesel engine systems and components to the vehicles and machinery that they have worked on, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- technical information relating to petrol and diesel engines
- automotive tools and electrical test equipment relating to the system being tested or repaired
- three different vehicles, vessels or machinery with functional electrical systems.

AURETR037 Diagnose complex faults in light vehicle safety systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in light vehicle or light commercial vehicle embedded network safety systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The vehicle network safety systems include those of light vehicles or light commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in vehicle safety system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for safety system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are selected from the range of available options 2.4 Testing equipment is selected and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking light vehicle safety system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure safety system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.

Assessment Requirements for AURETR037 Diagnose complex faults in light vehicle safety systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose complex faults in the safety systems of two different light vehicles or light commercial vehicles
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in light vehicle safety systems, including procedures for:
 - identifying hazards and controlling risks associated with:
 - working with high voltages on vehicle electrical systems
 - working around the vehicle's supplementary restraint systems (SRS), including airbags
 - wearing jewellery while working around high electrical currents
 - disarming vehicle airbag and safety restraint systems
- types of complex faults relating to light vehicle safety systems, including:
 - intermittent
 - multi-system

- introduced as a result of system repair
- indirect, caused by the influence of external systems
- methods for locating and content of manufacturer specifications, workplace procedures and other technical information relating to light vehicle safety systems
- types, function and operation of light vehicle safety systems, including:
 - active and passive collision avoidance
 - adaptive front lighting systems
 - airbag systems
 - lane keeping assist
 - occupant detection systems
 - radar cruise control
 - roll-over protection
 - seatbelt pre-tensioners
- testing procedures for light vehicle safety systems, including:
 - using digital multimeter, scan tool and oscilloscope
 - vehicle dynamic and static testing
 - component failure analysis
 - vehicle continuous and non-continuous monitored systems
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in light vehicle safety systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle safety systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle safety system specifications
- two different light vehicles or light commercial vehicles with complex faults in their safety systems
- light vehicle safety system diagnostic equipment, including:
 - digital multimeter
 - scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in light vehicle safety systems.

AURETR038 Diagnose complex faults in motorcycle electrical and electronic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in motorcycle electrical and electronic systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The electrical and electronic systems include those in motorcycles or all-terrain vehicles (ATVs).

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in motorcycle electrical or electronic system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for electrical or electronic system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are selected from the range of available options 2.4 Testing equipment is selected and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Motorcycle or ATV is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different motorcycles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking motorcycle electrical and electronic system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure electrical and electronic system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised diagnostic equipment, including: <ul style="list-style-type: none"> digital multimeters scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

AURETR042 Remove, refit and operate electrical components following body repair activities

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove, refit and test the operation of electrical components following body repair activities. Electrical components include headlights, tail-lights, mirrors, antennas, sensors, actuators, and vehicle, vessel or machinery control modules. These components are not an integral part of vehicle controller area network databus (CAN-bus) typography and do not require programming procedures following fitting activities.

It applies to those working in the automotive service and repair industry. The electrical components include those fitted in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove, refit and operate electrical components following body repair activities	1.1 Job requirements are determined from workplace instructions 1.2 Removal and refitting procedures and information are accessed and interpreted 1.3 Hazards are recognised and precautions are taken according to <i>safety requirements</i> 1.4 Tools and equipment are selected and checked for serviceability
2. Remove electrical components	2.1 Electrical components are removed using approved methods, tools and equipment and according to workplace procedures and safety requirements 2.2 Components are inspected for damage according to workplace procedures 2.3 Components are handled and stored according to manufacturer and component supplier requirements
3. Refit electrical components	3.1 Electrical components are replaced using approved methods, tools and equipment 3.2 Electrical components are refitted according to workplace procedures and safety requirements
4. Test operation of electrical components	4.1 Options for testing components are identified 4.2 Electrical components are tested according to workplace procedures and without causing damage to components or systems 4.3 Faults are identified from operational test results and potential causes of faults are analysed 4.4 Findings are reported according to workplace procedures, including recommendations for repair or component replacement
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked, stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and diagrams in manufacturer specifications, safe operating procedures and workplace information.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions.
Numeracy skills to:	<ul style="list-style-type: none"> match materials and component part numbers to workplace instructions, manufacturer specifications, and vehicle and component part lists interpret measurements of voltage, current and resistance relating to electrical components measure materials and components to determine compliance with specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE) identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems.

Assessment Requirements for AURETR042 Remove, refit and operate electrical components following body repair activities

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- remove, refit and operationally test four of the following systems on non controller area network databus (CAN-bus) circuits on different vehicles, vessels or machinery:
 - headlight or tail-light assembly
 - windscreen washer and wiper motor assembly
 - external electric mirror assembly
 - antenna, mobile phone or radio
 - actuators, central door locking or window closure.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing, refitting and operating electrical components following body repair activities, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- identification and function of electrical components, including:
 - headlight assemblies
 - tail-light assemblies
 - side and rear vision mirrors
 - windscreen washer and wiper motor assemblies
 - door and window motor assemblies

- procedures for removing and replacing electrical components, including:
 - identifying component position using wiring schematics and drawings
 - identifying component model and configuration
 - identifying visual indications of control unit damage, including:
 - physical damage and wear
 - water and moisture ingress
 - removing and replacing trim and covers
 - handling precautions of electrical components, including halogen globes
 - disconnecting and reconnecting electrical connectors
 - fitting electrical components to vehicle, vessel or machinery body
- post-fitting testing procedures *of electrical components*, including checking electrical system operation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electrical components that they have removed, refitted and tested following body repair activities, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive body repair workshop or simulated workplace
- workplace instructions
- vehicles, vessels or machinery with the electrical components specified in the performance evidence requiring removal and refitting following body repair
- tools and equipment appropriate for removing and refitting electrical components following body repair activities.

AURETR043 Diagnose and repair electronic body management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the electronic body management systems of vehicles, vessels or machinery. These systems include two-wire high and low speed (CAN-bus) and single wire low speed (LIN-bus) networked circuits in the vehicle or machinery's embedded network electronic control system and are essential to controlling vehicle, vessel or machinery body control functions, including passenger convenience, comfort, navigation and infotainment systems. The unit involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. Electronic body management embedded networked systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair electronic body management system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose electronic body management system	2.1 Diagnostic tests are carried out according to workplace procedures and safety requirements without causing damage to components or systems 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair electronic body management system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURETR043 Diagnose and repair electronic body management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following electronic body management systems of vehicles, vessels or machinery:
 - entry and exit systems, which must include:
 - power door lock circuit
 - key coding to vehicle
 - anti-theft immobilisation circuit
 - power window system
 - lighting system
 - navigation system
 - infotainment system
 - passenger comfort system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing electronic body management systems, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems

- electronic body management system principles, including types of electronic body management systems
- application, purpose and operation of electronic body management systems and components, including:
 - entry and exit systems, including:
 - power door lock circuits
 - key coding to vehicles
 - anti-theft immobilisation circuits
 - power window systems
 - lighting systems
 - navigation systems
 - infotainment systems
 - passenger comfort systems
- diagnostic testing procedures for electronic body management systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
- testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - resistance and voltage drop tests
 - open and short circuit tests
 - checking shorts to signal, power circuits and grounds
- repair procedures for electronic body management systems, including procedures for removing and replacing system components
- post-repair testing procedures for electronic body management systems, including:
 - DTC clearing procedures
 - static and dynamic performance tests of electronic body management systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electronic body management systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer body management system specifications
- vehicles, vessels or machinery with electronic body management system faults
- diagnostic equipment for body management systems, including:
 - multimeter
 - scan tool
- tools, equipment and materials appropriate for repairing vehicle, vessel or machinery electronic body management systems.

AURETR044 Diagnose and repair integrated engine and transmission management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the engine and transmission management systems of vehicles or machinery. These systems communicate on the vehicle two-wire (CAN-bus) networked controlled circuit, and are an integral part of an engine and transmission management system. The unit involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. Engine and transmission management systems include those in agricultural machinery, heavy commercial vehicles, light vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURETR044 Diagnose and repair integrated engine and transmission management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the integrated engine and transmission management systems of two different vehicles or machinery, in which the work must involve removing, refitting or replacing a system component that affects the operation of both the engine and the transmission management system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing integrated engine and transmission management systems, including procedures for:
 - using specialised tools and equipment
 - using appropriate personal protective equipment (PPE)
 - identifying hazards and controlling risks associated with:
 - working on vehicle high voltage ignition systems
 - wearing jewellery while working around high current wiring systems
- integrated engine and transmission management system principles, including:
 - engine and transmission management system topography, inputs and outputs
 - typical vehicle or machinery systems equipped with engine and transmission management systems
- application, purpose and operation of integrated engine and transmission management systems and components, including:
 - control modules

- control sensors and actuators
- communication systems, including controlled area network data bus (CAN-bus)
- diagnostic testing procedures for integrated engine and transmission management systems, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - resistance and voltage drop tests
 - open and short circuit tests
 - checking shorts to signal, power circuits and grounds
- repair procedures for integrated engine and transmission management systems, including procedures for removing and replacing system components
- post-repair testing procedures, including:
 - DTC clearing procedures
 - static and dynamic performance tests.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

AURETR045 Inspect, service and repair DC electric motor drive systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, service and repair direct current (DC) electric motor drive systems in vehicles, vessels or machinery. It involves preparing for the task, inspecting DC electric motor drive systems, repairing the systems, and completing workplace processes and documentation, including associated recommendations for further action.

It applies to those working in the automotive service and repair industry. The DC electric motor drive systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect, service and repair DC electric motor drive system	1.1 Job requirements are determined according to workplace instructions 1.2 Inspection and servicing procedures are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect and test system	2.1 System is inspected and tested according to workplace procedures and <i>safety requirements</i> 2.2 Circuits are tested according to workplace procedures and without causing damage to components or systems 2.3 Inspection results are compared with manufacturer specifications 2.4 Inspection findings are reported according to workplace procedures, including recommendations for required repairs or adjustments
3. Service and repair system	3.1 System is serviced and repaired according to manufacturer and component specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 System is performance tested and final adjustments are made 3.3 Post-repair testing is carried out to confirm system is operating to manufacturer specifications, any reported problems are resolved, and no other problems are present
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle, vessel or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURETR045 Inspect, service and repair DC electric motor drive systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair three of the following direct current (DC) electric motor drive systems in vehicles, vessels or machinery:
 - brush commutator motor
 - stepper motor assembly
 - brushless hall effect motor
 - magnetic flux array motor.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing DC electric motor drive systems, including procedures for:
 - selecting and using personal protective equipment (PPE), including clothing, and eye and hand protection
 - working safely with high current electrical systems
- operating principles of DC electric motor drive systems, including:
 - brush commutator motors, including of:
 - permanent magnet motor
 - series motor
 - shunt motor
 - compound motor
 - brushless motors, including:

- stepper motors, including rotary position actuators
- hall effect motor
- magnetic flux array motors
- application, purpose and operation of DC electric motor drive systems, including:
 - power operated windows, door and roofs
 - power operated seats, mirrors and radio antennas
 - winches and lifting platforms
 - rotary position actuators
 - brushless traction motors
 - magnetic flux array, including wheel hub motors
- inspection procedures for DC electric motor drive systems, including analysing system operation
- procedures for testing DC electric motor drive systems, including:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - procedures for using and operating electrical test equipment, including:
 - digital multimeters
 - test lights and probes
 - oscilloscopes
- service and repair procedures for DC electric motor drive systems, including:
 - component removal and replacement procedures
 - component and associated system adjustment procedures
- post-repair testing procedures of DC electric motor drive systems, including:
 - confirming that system is operating to manufacturer specifications
 - confirming that no other problems are present as a result of the repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the DC electric motor drive systems that they have inspected, serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer DC electric drive motor specifications
- PPE, including clothing, and eye and hand protection
- three different vehicles, vessels or machinery with the DC electric motor drive systems specified in the performance evidence requiring repair
- tools, equipment and materials appropriate for inspecting, servicing and repairing DC electric motor drive systems, including multimeter.

AURETR046 Remove and refit vehicle batteries

Modification History

Release	Comment
Release 1	New unit of competency
Release 2	Minor typographical errors corrected

Application

This unit describes the performance outcomes required to remove and refit lead-acid batteries from a vehicle. It requires the learner to plan and prepare the task; investigate battery types and connections; perform the task; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Element Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and refit battery	1.1 <i>Safety and environmental requirements</i> are sourced and interpreted 1.2 Task instruction is interpreted and vehicle battery to be worked on is identified 1.3 Manufacturer specifications and workplace procedures for battery removal and refitting are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Tools and equipment required for battery removal and refitting are identified according to manufacturer specifications
2. Remove battery	2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements 2.2 Vehicle is prepared for battery removal according to workplace procedures and safety and environmental requirements 2.3 <i>Battery</i> is removed according to workplace procedures and manufacturer specifications, and without causing damage to components, tools or equipment 2.4 Battery is identified and inspected according to manufacturer specifications 2.5 Battery inspection results are recorded
3. Refit battery	3.1 Battery is refitted according to workplace procedures, manufacturer specifications and safety requirements, and without causing damage to components, tools or equipment 3.2 Vehicle is checked for correct electrical operation
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use or storage according to workplace procedures 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle battery information and battery removal and refitting procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and refit batteries select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information imbedded in battery identification codes.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to remove and refit batteries.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> • use of personal protective equipment, including safety glasses, ear protection and safety footwear • use of hand tools and lifting equipment • application of procedures for handling, storing and disposing of automotive batteries.
<i>Battery</i> must include:	<ul style="list-style-type: none"> • lead-acid battery.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURETR046 Remove and refit vehicle batteries

Modification History

Release	Comment
Release 1	New unit of competency
Release 2	Minor typographical errors corrected

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and refit the automotive batteries of a minimum of two different operational vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements when removing and refitting batteries, including:
 - safety data sheets (SDS) and procedures for handling, storing and disposing of used automotive batteries
 - use of personal protective equipment, including safety glasses, ear protection and safety footwear
 - use of hand tools and lifting equipment
- battery types and their application, including:
 - lead-acid batteries, including:
 - deep cycle batteries
 - maintenance-free batteries, including gel batteries and absorbed glass mat batteries
 - lithium-ion batteries
 - battery identification procedures
 - battery polarity and connection methods
 - battery removal and refitting methods, precautions and procedures
 - battery cleaning methods
 - post-fitting inspection procedures

- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and refitted batteries, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two operational vehicles with lead-acid batteries
- hand tools for removing and refitting lead-acid batteries.

AURETR047 Recharge vehicle batteries

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to recharge a vehicle's battery. It requires the learner to plan and prepare the task; investigate battery types and connections; inspect, test and charge batteries; and maintain a work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly recharge at least two automotive batteries with different cold-cranking amp (CCA) ratings.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - use of personal protective equipment, including safety glasses, ear protection and safety footwear
 - dangers of working with battery testing and charging equipment
 - safety data sheets (SDS) and procedures for handling, storing and disposing of automotive batteries and battery fluid
- battery inspection and testing methods, including:
 - visual checks
 - hydrometers
 - high-rate discharge testers
 - resting battery voltage
- battery charging procedures, including:
 - methods for determining appropriate charging rate, including reserve capacity (RC) and CCA methods
 - types, application and operating procedures for automotive battery chargers
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have recharged batteries, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two lead-acid automotive batteries with different CCA ratings
- battery testing equipment, including hydrometer and high-rate discharge tester
- battery charger
- automotive hand tools.

AURETR048 Construct and test basic electronic circuits

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to construct and test basic electronic circuits using a small number of standard electronic components. It requires the learner to plan and prepare the task, select the correct equipment, construct and test electronic circuits, and check and store the electrical test equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to construct basic electronic circuit	1.1 <i>Safety and environmental requirements</i> are sourced and interpreted

ELEMENT	PERFORMANCE CRITERIA
	1.2 Task instruction is interpreted and <i>electronic circuit</i> to be worked on is identified 1.3 Manufacturer specifications and workplace procedures for electronic circuitry are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor
2. Draw circuit diagrams and identify equipment and materials to construct electronic circuit	2.1 Electronic circuit diagrams that accurately reflect the circuit specifications are drawn according to manufacturer specifications 2.2 Electronic components are depicted correctly in circuit diagram using standard symbols 2.3 Component and material requirements are identified from electronic circuit diagram and recorded
3. Construct electronic circuit	3.1 Tools, equipment and electronic components are sourced and selected according to manufacturer specifications and safety requirements 3.2 Component manufacturer installation and connection information is read, interpreted and applied 3.3 Circuit is constructed using <i>electronic components</i> according to manufacturer specifications and safety requirements
4. Test electronic circuit	4.1 Circuit fault testing equipment is identified and sourced according to workplace procedures, manufacturer specifications and safety requirements 4.2 Electronic circuit is tested according to workplace procedures, manufacturer specifications and safety requirements 4.3 Faults detected are corrected and circuit is re-tested to confirm their operation 4.4 Circuit testing procedures and outcomes are recorded
5. Complete work processes	5.1 Final inspection is made to ensure work meets task instruction and workplace standards, and that electronic circuit is constructed ready for use or storage 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 5.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of electronic circuit information and electrical test equipment operating procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures relating to constructing basic electronic circuits select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information imbedded in electronic components' identification codes use basic mathematical operations, including addition, subtraction, multiplication and division, when using Ohm's law and Watt's law to calculate electrical voltage, current flow, resistance and power read and interpret electrical test equipment correctly, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. Ω for ohms).
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to construct basic electronic circuits.

Range of Conditions

Assessment Requirements for AURETR048 Construct and test basic electronic circuits

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly and safely construct and test two different basic electronic circuits.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements relating to the construction of basic electronic circuits, including:
 - use of personal protective equipment, including safety glasses
 - use of soldering irons
 - use of hand tools and electrical test equipment
 - identification of electrical risks and hazards
 - disposal of used electronic components
- meaning of electrical terms, including:
 - voltage
 - amperage
 - watts
 - current
 - resistance
- theory of electrical circuits, including:
 - Ohm's law
 - Watt's law
- types and application of electronic components, including:
 - heat sinks

- electronic wiring
- terminals
- solder
- switches
- lamps
- potentiometers
- relays
- diodes
- resistors
- capacitors
- transistors
- integrated circuits
- types, application and operation of basic electronic circuits, including:
 - flashing circuits
 - timing circuits
 - speed control circuits
 - methods for drawing electronic circuit diagrams
 - procedures for constructing basic electronic circuits
 - procedures for testing electronic circuits, and identifying and rectifying faults
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having constructed basic electronic circuits, e.g. circuit diagrams.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace, including a safe work area for constructing electronic circuit boards
- personal protective equipment appropriate to the workplace, including safety glasses
- electronic components and materials, including:
 - heat sinks
 - electronic wiring
 - terminals
 - solders
 - switches

- lamps
- relays
- diodes
- resistors
- capacitors
- transistors.

AURETR136 Diagnose and repair electronically controlled suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to diagnose and repair faults in electronically controlled suspension systems. These systems include two-wire high and low speed (CAN-bus) and single wire low speed (LIN-bus) networked circuits in the embedded network electronic control system of a vehicle or machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

This unit applies to those working within the automotive service and repair industry. The electronically controlled suspension systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Diagnose electronically controlled suspension system	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret diagnostic information in order to identify diagnostic options required for the job 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify diagnostic tools and equipment required for the job and examine for serviceability

	<p>1.5 Perform diagnostic tests according to workplace procedures and workplace health and safety requirements</p> <p>1.6 Examine diagnostic test results to identify causes of faults, report findings and make recommendations for necessary repairs or adjustments according to workplace procedures</p>
2. Repair and test electronically controlled suspension system	<p>2.1 Obtain and interpret repair information in order to identify repair options required for the job</p> <p>2.2 Identify repair tools, equipment and materials for the job and examine for serviceability</p> <p>2.3 Carry out repairs or component replacements and adjustments according to workplace procedures, manufacturer specifications, workplace health and safety and environmental requirements</p> <p>2.4 Carry out post-repair testing according to workplace procedures, workplace health and safety and environmental requirements to confirm fault rectification and repair any issues identified</p>
3. Complete work processes	<p>3.1 Carry out final inspection to ensure work meets workplace expectations and vehicle or machinery is ready for use</p> <p>3.2 Clear work area and dispose of waste or recycle materials according to workplace procedures</p> <p>3.3 Examine and store tools and equipment, ensuring faulty electrical equipment is identified, tagged and isolated according to workplace procedures</p> <p>3.3 Complete documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of electronically controlled suspension system information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from workplace procedures and documentation when seeking electronically controlled steering system specifications and procedures
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings make repair recommendations

Numeracy skills to:	<ul style="list-style-type: none"> • use basic mathematical operations, including addition and subtraction • calculate deviations from manufacturer specifications • match electronically controlled suspension system components and part identification numbers to workplace instructions, vehicle or machinery component part lists, and manufacturer specifications • measure voltage, current and resistance • interpret vehicle or machinery electrical measurements and readings
Planning and organising skills to:	<ul style="list-style-type: none"> • plan own work requirements • prioritise actions to achieve required outcomes • ensure tasks are completed within workplace timeframes
Technology skills to:	<ul style="list-style-type: none"> • use specialised equipment, including multimeters • use diagnostic scan tools

Assessment Requirements for AURETR136 Diagnose and repair electronically controlled suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate a diagnosis and repair of electronically controlled suspension systems that safely follows workplace procedures to meet required outcomes. This includes:

- diagnosis and repair of a fault within the following electronically controlled suspension system components of two different vehicles or machinery:
 - ride height sensor circuits
 - wheel speed sensor circuits
 - steering rate sensor circuits
 - ride height control relay circuits
 - air compressor motor control circuits
 - air spring fill-vent solenoid control valve circuits
- diagnosis and repair of one electronically controlled steering system in which the work must include removing, refitting or replacing and re-testing one of the following components:
 - solenoid actuated shock absorber
 - load sensing shock absorber
 -

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures relating to the diagnosis, testing and repair of electronically controlled suspension systems including:

- how to locate and interpret manufacturers specifications or equivalent documentation and workplace procedures for the diagnosis and repair of electronically controlled suspension systems
- the following workplace health and safety requirements for diagnosis and repair of electronically controlled suspension systems:

- procedures for using specialised tools and equipment
- knowledge of the appropriate personal protective equipment (PPE)
- identifying hazards and controlling risks associated with working with stored energy in springs and torsion bars
- procedures for removing tension from suspension components
- identifying hazards and controlling risks associated with manual handling heavy suspension system components
- environmental procedures for diagnosis, testing and repair of electronically controlled suspension systems
- the following diagnostic testing procedures for electronically controlled suspension systems:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
 - using diagnostic flow charts
- the following electrical systems testing procedures:
 - accessing electrical terminals
 - using test probes without damaging connectors, fuse holders or wiring
 - undertaking resistance tests
 - undertaking voltage drop tests
 - testing open circuits
 - testing short circuits
 - checking shorts to signal, power circuits and grounds
- the following repair procedures for electronically controlled suspension systems:
 - removing and replacing system components
- the following post-repair testing procedures for electronically controlled suspension systems:
 - DTC clearing procedures
 - static and dynamic performance tests of suspension system
- workplace housekeeping and documentation procedures

Electronically controlled suspension system information, including:

- the operating principles of:
 - vehicle ride and handling
 - typical vehicle or machinery equipped with electronically controlled suspension systems
- the purpose and operation of the following electronically controlled suspension systems and components:

- adaptive suspension control module
- control sensors and actuators
- the purpose and operation of the following suspension control module functions within electronically controlled suspension systems:
 - control of air spring settings
 - shock damper settings
 - air compressor operation
 -

Assessment Conditions

Mandatory conditions for the assessment of this unit are stipulated below.

The assessment must:

- include access to:
 - automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to diagnosis and repair activity
 - workplace procedures relating to diagnosis and repair activity
 - manufacturer electronically controlled suspension systems specifications and procedures of equivalent documentation to complete diagnose and repair activity
 - two different vehicles or machinery with faults in the electronically controlled suspension system components specified in the performance evidence
 - diagnostic equipment for electronically controlled steering systems, including:
 - multimeter
 - scan tool
 - tools, equipment and materials suitable for repairing electronically controlled suspension systems of vehicle and machinery
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards

-

AURETU001 Install air conditioning systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install automotive air conditioning systems in vehicles and machinery for driver and passenger convenience and comfort. It involves preparing for the task, installing and testing the operation of automotive air conditioning systems, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. Air conditioning systems include those being installed in agricultural machinery, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing requirements apply to this unit. Users are advised to check with the relevant regulatory authority. An Australian Refrigeration Council (ARCtick) Restricted Refrigerant Handling licence is required for those carrying out this work.

Competency Field

Electrical

Unit Sector

Technical - Air Conditioning and HVAC

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install air conditioning system	1.1 Job requirements are determined according to workplace instructions 1.2 <i>Installation information</i> is sourced and interpreted 1.3 <i>Installation options</i> are considered and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Install air conditioning system components	2.1 Air conditioning system components are installed according to workplace procedures and <i>safety and environmental requirements</i> , and without causing damage to components and vehicle or machinery systems 2.2 Installation is visually checked prior to pressure testing and system charging
3. Charge air conditioning system with refrigerant and lubricating oil	3.1 System is pressure tested for leaks prior to being evacuated using approved methods and equipment 3.2 System is charged with appropriate refrigerant gas and lubricating oil according to manufacturer specifications, workplace procedures, and relevant industry code of practice
4. Test air conditioning system	4.1 Post-installation testing is carried out to ensure performance and operation comply with manufacturer specifications 4.2 Test results are reported according to workplace procedures
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation, including <i>ARTick service decal sticker</i> , is completed and processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking specifications and procedures interpret requirements of the Australian automotive code of practice relating to installing automotive air conditioning systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including ARCTick stickers, when reporting work performed and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report findings and make installation recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> match refrigerant types and identification numbers to workplace instructions, vehicle and component part lists, manufacturer specifications and regulatory requirements interpret weight measurements, including tare and gross weights, and readings on digital and analogue pressure gauges interpret measurements of temperature and pressure related to air conditioning system performance and compare with manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use workplace technology and specialist tools relating to installing and testing air conditioning systems.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Installation information</i>	<ul style="list-style-type: none"> manufacturer specifications
--	---

must include:	<ul style="list-style-type: none"> • installation fitting instructions • Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners.
<i>Installation options</i> must include:	<ul style="list-style-type: none"> • refrigerant types: <ul style="list-style-type: none"> • R134a • R1234yf • R290 and R600a blends • fluid levels: <ul style="list-style-type: none"> • refrigerant • lubricating oils • filter serviceability: <ul style="list-style-type: none"> • receiver dryer • cabin filter • O rings and seals • adjustments and operational testing • visual inspections and documentation.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • working with refrigerants at boiling point given risk of frostbite • working with system lubricants, including carcinogenic oils • handling flammable refrigerants and refrigerant recovery equipment • selecting and using personal protective equipment (PPE) • identifying and using fire safety equipment • environmental requirements, including procedures for preventing loss of refrigerant to atmosphere.
<i>ARCTick service decal sticker information</i> must include:	<ul style="list-style-type: none"> • name of the service organisation • ARCTick business authority number • quantity of refrigerant added • refrigerant and oil type • service date • technician's name and licence number.

Assessment Requirements for AURETU001 Install air conditioning systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install an air conditioning system in two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing air conditioning systems, including procedures for:
 - working with refrigerants at boiling point given risk of frostbite
 - working with system lubricants, including carcinogenic oils
 - handling flammable refrigerants and refrigerant recovery equipment
 - selecting and using personal protective equipment (PPE)
 - identifying and using fire safety equipment
- environmental requirements, including procedures for preventing loss of refrigerant to the atmosphere.
- methods for locating manufacturer specifications and workplace procedures, including safe operating procedures and current Australian automotive code of practice
- requirements of Automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners
- principal types of vehicle air conditioning systems, including:
 - piston, scroll and rotary vane compressors
 - electric compressors
 - variable displacement compressors
 - clutchless compressors

- application, purpose and operation of air conditioning systems, including:
 - climate control
 - multi-zone systems
- refrigerant types, operating pressures and suitable lubricating oils
- techniques for reading and interpreting technical information, including:
 - refrigerant saturation temperatures in relation to ambient temperatures and changing levels of humidity
 - graphic symbols and diagrams
- procedures for using and operating tools and equipment, including:
 - hand tools
 - manifold and gauge sets
 - refrigerant hoses and couplers
 - recovery units and vacuum pumps
 - electronic leak detector
 - nitrogen cylinder and regulator
 - digital vacuum gauge (vacrometer)
 - oil injector
 - infra-red thermometer (pyrometer)
 - electronic temperature probe
 - electronic scales
 - valve core removal or replacement tool
 - humidity detector (psychrometer)
 - multimeter
- procedures for installing air conditioning systems and components, including:
 - techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
 - methods of determining wiring and connection type and size for system
 - methods of determining placement of components on vehicle or machinery
 - methods of connecting system and components to existing electrical system without causing damage or problems, including:
 - selecting and soldering wires
 - selecting and crimping terminals
 - removing and replacing connectors
- post-installation testing procedures, including:
 - validating effectiveness of installation, including checking for:
 - electrical connector mating
 - ambient temperature
 - centre vent temperature
 - condenser and suction line temperature
 - manifold gauge pressure readings

- refrigerant leaks
- procedures for completing workplace documentation, including ARCTick sticker.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements and hold an Australian Refrigerant Council (ARC) Refrigerant Handling licence.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air conditioning systems that they have installed in vehicles or machinery, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- vehicle and machinery wiring specifications relevant to system and components being installed
- manufacturer air conditioning system specifications
- Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners.
- two different vehicles or machinery requiring installation of air conditioning systems
- material necessary to install air conditioning system components
- tools, equipment and materials appropriate for installing air conditioning system components, including:
 - manifold and gauge set
 - recovery unit
 - vacuum pump
 - electronic leak detector
 - nitrogen cylinder and regulator
 - digital vacuum gauge (vacrometer)
 - multimeter
 - electronic scales

- oil injector
- infra-red thermometer (pyrometer)
- electronic temperature probe
- valve core removal or replacement tool
- humidity detector (psychrometer)
- air conditioning gas appropriate to system being installed.

AURETU002 Recover vehicle refrigerants

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to recover vehicle air conditioner refrigerants in designated recovery cylinders for disposal according to safety and environmental procedures while observing critical precautions, given that refrigerant may be flammable.

It applies to those working as vehicle dismantlers, automotive parts recycling contractors, and vehicle body repairers in automotive service and repair workplaces who are required to recover automotive air conditioning refrigerants. Automotive air conditioners, including heating, ventilation and air conditioning (HVAC) systems, include those in agricultural machinery, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing requirements apply to this unit. Users are advised to check with the relevant regulatory authority. An Australian Refrigeration Council accredited (ARCTick) Restricted Refrigerant Recoverer licence is required for those carrying out this work.

Competency Field

Electrical

Unit Sector

Technical - Air Conditioning and HVAC

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for refrigerant recovery	1.1 Job requirements are determined from workplace instructions 1.2 Refrigerant recovery workplace procedures and relevant <i>code of practice</i> are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Vehicle air conditioning system, components and refrigerant service ports are identified for refrigerant recovery 1.5 <i>Recovery equipment</i> , personal protective equipment (PPE) and firefighting equipment, are checked for serviceability according to manufacturer specifications and workplace procedures
2. Operate recovery equipment	2.1 Vehicle refrigerant is identified with a refrigerant identifier or analyser 2.2 Designated recovery cylinder is weighed to determine available capacity, and tare weight of cylinder is recorded 2.3 Recovery equipment is connected to vehicle according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.4 Refrigerant is recovered and transferred into designated recovery cylinder using recovery equipment according to manufacturer specifications, workplace procedures, and safety and environmental requirements 2.5 Problems are responded to appropriately and escalated according to workplace procedures
3. Complete work processes	3.1 Quantity and details of recovered refrigerant are recorded according to workplace procedures and regulatory requirements 3.2 Recovery equipment, hoses and recovery cylinder are shut down and disconnected, and cylinders capped, according to workplace procedures 3.3 Refrigerant is stored in designated recovery cylinder according to workplace procedures 3.4 Recovery equipment and tools are checked and stored, and faulty equipment is identified, tagged and isolated according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and diagrams in workplace and safe operating procedures and manufacturer specifications interpret critical precautions of the Australian automotive code of practice relating to automotive refrigerant recovery.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately enter information in regulatory reports and fill out other required workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify job requirements.
Numeracy skills to:	<ul style="list-style-type: none"> match refrigerant types and identification numbers to workplace procedures and code of practice requirements interpret weight measurements, including tare and gross weights interpret readings on digital and analogue pressure gauges complete numerical data in documentation and charts.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use workplace technology and tools, such as refrigerant analyser, vacuum recovery equipment, and scales.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Code of practice</i> must include:	<ul style="list-style-type: none"> Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners.
<i>Recovery equipment</i> must include:	<ul style="list-style-type: none"> refrigerant hose and coupler refrigerant recovery unit refrigerant scales

	<ul style="list-style-type: none"> • refrigerant identifier or analyser • designated and appropriately labelled recovery cylinders.

Assessment Requirements for AURETU002 Recover vehicle refrigerants

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- recover vehicle refrigerants from three different vehicles or machinery, in which the work must involve one of the following refrigerant types:
 - synthetic greenhouse and ozone depleting (SGOD) refrigerant
 - hydrocarbon (HC) refrigerant
 - a mixture of SGOD and HC refrigerant.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to safety requirements for recovering vehicle refrigerants, including procedures for:
 - working with refrigerants at boiling point given risk of frostbite
 - working with system lubricants, including carcinogenic oils
 - handling flammable refrigerants
 - selecting and using personal protective equipment (PPE)
 - identifying firefighting equipment
- environmental requirements associated with refrigerant recovery and refrigerant waste disposal, including procedures for:
 - preventing loss of refrigerant to the atmosphere
 - storing and transporting refrigerants
- Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners

- key features of various types of refrigerants and oils found in automotive vehicle and equipment HVAC systems, including:
 - synthetic SGOD refrigerants, including:
 - chlorofluorocarbons (CFC)
 - hydrofluorocarbons (HCFC)
 - HC refrigerants
 - mineral and synthetic refrigerant oils
- types, application and operation of refrigerant recovery equipment, including:
 - manifold and gauge set
 - recovery unit
 - types of recovery cylinders
- procedures for recovering automotive refrigerant, including:
 - testing refrigerant to determine its type
 - connecting manifold and gauge set and recovery unit, including types and location of service ports
 - identifying recovery cylinder appropriate to the refrigerant
 - operating recovery unit, including weighing recovery cylinder before and after recovery
 - disconnecting and storing recovery unit and cylinder
- work completion procedures for recovering vehicle refrigerant, including:
 - work area clean-up and maintenance requirements
 - workplace regulatory documentation to be completed
- completing workplace documentation, including Australian Refrigeration Council accredited (ARCTick) service decal sticker.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements and hold an Australian Refrigerant Council (ARC) Refrigerant Handling licence.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to vehicle refrigerant that they have recovered from HVAC systems, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace, parts recycling yard or simulated workplace
- workplace instructions
- PPE and firefighting equipment required when recovering vehicle refrigerants
- Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners
- three different vehicles or machinery with refrigerant to be recovered
- refrigerant recovery equipment designed for safe operation, including:
 - hose and vehicle couplings
 - refrigerant scales
 - refrigerant identifier or analyser
 - vehicle refrigerant designated and labelled recovery cylinders
 - appropriate hand tools for refrigerant recovery.

AURETU003 Service air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service air conditioning systems, including heating, ventilation and air conditioning (HVAC) systems, fitted to a range of vehicles and machinery. It involves preparing for the task, carrying out performance testing and correct servicing procedures, performing post-service testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. Automotive air conditioners, including HVAC systems, include those in agricultural machinery, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing requirements apply to this unit. Users are advised to check with relevant regulatory authority. An Australian Refrigeration Council accredited (ARCtick) Refrigerant Handling licence is required for those carrying out this work.

Competency Field

Electrical

Unit Sector

Technical - Air Conditioning and HVAC

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service system	1.1 Job requirements are determined from workplace instructions 1.2 Service information, manufacturer specifications, and relevant <i>code of practice</i> are accessed and interpreted 1.3 Servicing options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Servicing tools and equipment are selected and checked for serviceability
2. Test operation of system and components	2.1 System is visually checked to establish extent of possible failure or damage 2.2 System performance tests are carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> , and without causing damage to components or system 2.3 Findings, including recommendations for required repairs or adjustments, are reported according to workplace procedures
3. Service system and components	3.1 System and components are serviced according to manufacturer specifications, workplace procedures and relevant code of practice 3.2 Code of practice regulations regarding topping up refrigerant are interpreted and applied during service procedures 3.3 <i>Post-service performance tests</i> are carried out to confirm that reported service issue has been resolved and that no other problems are present
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 <i>Australian Refrigeration Council accredited (ARCTick) service decal sticker</i> and other required workplace documentation are completed and processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret text, symbols and diagrams relating to service information in manufacturer specifications, and workplace instructions and procedures interpret key requirements of Australian automotive code of practice relating to servicing air conditioning and HVAC systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including ARctick stickers, when reporting test findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> listen to workplace instructions and ask questions to clarify job requirements participate in verbal exchanges to report faults, diagnostic and test findings and service repair recommendations to relevant personnel.
Numeracy skills to:	<ul style="list-style-type: none"> match refrigerant types and identification numbers to workplace instructions, part lists, manufacturer specifications, and code of practice requirements interpret weight measurements, including tare and gross weights interpret readings on digital and analogue pressure gauges measure temperatures and pressures, and use basic mathematical operations, including addition and subtraction, to calculate deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use workplace technology and tools, such as refrigerant vacuum recovery equipment and manifold gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Code of practice</i> must include:	<ul style="list-style-type: none"> • Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • working with refrigerants at boiling point given risk of frostbite • working with system lubricants, including carcinogenic oils • identifying flammable refrigerants • selecting and using personal protective equipment (PPE) • identifying firefighting equipment • environmental requirements, including procedures for: <ul style="list-style-type: none"> • preventing loss of refrigerant to the atmosphere • handling materials and refrigerant recovery equipment.
<i>Post-service performance tests</i> must include:	<ul style="list-style-type: none"> • temperature checks • checking for refrigerant leaks.
<i>Australian Refrigeration Council accredited (ARCTick) service decal sticker information</i> must include:	<ul style="list-style-type: none"> • name of service organisation • ARCTick business authority number • quantity of refrigerant added • refrigerant and oil type • service date • technician name and licence number.

Assessment Requirements for AURETU003 Service air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- service the air conditioning and HVAC systems of two different vehicles or machinery, in which the work must involve:
 - one air conditioning system
 - one heating, ventilation and air conditioning (HVAC) system
- complete Australian Refrigeration Council accredited (ARCTick) service decal stickers for the above jobs.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing air conditioning and HVAC systems, including procedures for:
 - working with refrigerants at boiling point given risk of frostbite
 - working with system lubricants, including carcinogenic oils
 - identifying flammable refrigerants
 - selecting and using personal protective equipment (PPE)
 - identifying firefighting equipment
- environmental requirements, including procedures for:
 - preventing loss of refrigerant to the atmosphere
 - handling materials and refrigerant recovery equipment.
- key requirements of Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners

- identification and function of major air conditioning and HVAC system components, including:
 - compressor
 - condenser
 - receiver-dryer
 - expansion valve
 - evaporator
 - blower fan
- principles of operation of air conditioning and HVAC systems, including transferring heat from cabin to exterior using refrigerant gas
- types of air conditioning and HVAC systems, including:
 - single zone and multi-zone
 - climate control
- inspection procedures for air conditioning and HVAC systems, including:
 - conducting visual, aural and functional assessments for:
 - component damage and wear
 - component corrosion
 - vacuum and leaks
 - system performance testing, including:
 - using manifold gauges and thermometers to check system pressures and vent temperatures
 - checking blower fan output
 - checking engine fan output
 - checking filters
 - using manifold gauges and thermometers to check pressure and temperatures
- service and adjustment procedures of air conditioning and HVAC systems, including:
 - checking and adjusting compressor drive belts
 - changing filters
 - clearing evaporator water outlet
 - cleaning condenser
- post-service testing procedures of air conditioning and HVAC systems, including system performance testing and using thermometers to check vent temperatures
- procedures for completing workplace documentation, including ARCTick service decal sticker.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements and hold an Australian Refrigerant Council (ARC) Refrigerant Handling licence.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air conditioning and HVAC systems that they have serviced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive service repair workplace or simulated workplace
- workplace instructions
- air conditioning and HVAC system manufacturer specifications
- Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners
- two different vehicles or machinery with air conditioning and HVAC systems requiring servicing
- tools, equipment and materials appropriate for servicing air conditioning and HVAC systems, including:
 - thermometer
 - manifold and gauge set.

AURETU004 Diagnose and repair air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the air conditioning systems, including heating, ventilation and air conditioning (HVAC) systems, fitted to a range of vehicles and machinery for passenger convenience and comfort. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. Automotive air conditioners, including HVAC systems, include those in agricultural machinery, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing requirements apply to this unit. Users are advised to check with relevant regulatory authority.

Competency Field

Electrical

Unit Sector

Technical - Air Conditioning and HVAC

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair air conditioning and HVAC system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose air conditioning and HVAC system	2.1 Diagnostic tests are carried out according to workplace procedures and safety and environmental requirements using appropriate tools and techniques without causing damage to components or system 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair air conditioning and HVAC system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked according to manufacturer specifications and workplace procedures 3.4 Repairs and component replacements and adjustments are carried out according to requirements , and without causing damage to components or systems 3.5 System is recharged with the appropriate refrigerant gas according to manufacturer specifications and workplace procedures 3.6 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and the vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	<p>4.3 Tools and equipment are checked and stored and faulty electrical equipment is identified, tagged and isolated according to workplace procedures</p> <p>4.4 <i>Australian Refrigeration Council accredited service decal sticker (ARCTick)</i> and other required workplace documentation are completed and processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify and locate various sources of information efficiently.

Assessment Requirements for AURETU004 Diagnose and repair air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the air conditioning and heating, ventilation and cooling (HVAC) systems of two different vehicles or machinery, in which the work must involve removing, refitting or replacing two of the following:
 - condenser
 - evaporator
 - expansion valve
 - compressor
 - heater box.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing air conditioning and HVAC systems, including procedures for:
 - working with refrigerants at boiling point given risk of frostbite
 - working with system lubricants, including carcinogenic oils
 - handling flammable refrigerants
 - using personal protective equipment (PPE)
 - identifying and using fire safety equipment
- environmental requirements, including procedures for preventing loss of refrigerant to the atmosphere

- key requirements relevant to diagnosing and repairing air conditioning and HVAC systems detailed in the Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners
- air conditioning and HVAC system principles, including:
 - heat transfer principles, including convection, conduction and radiation
 - functions of the following air conditioning components:
 - compressor
 - condenser
 - receiver-drier
 - evaporator
 - blower fan
 - refrigerant
 - functions of the following heating components:
 - radiator
 - thermostat
 - radiator and heater hoses
 - heater tap
 - heater box
 - single zone and multi-zone vehicle layouts
- application, purpose and operation of air conditioning and HVAC systems and components, including:
 - high pressure and low pressure sides of air conditioning systems
 - compressors, including:
 - axial type, including variable capacity compressors
 - scroll type
 - vane type
 - electromagnetic clutches
 - condensers
 - receiver-dryer, including filters and desiccants
 - expansion valves, including capillary tube
 - evaporator
 - thermostat
 - refrigerants, including R12, R134, R1234yf and hydrocarbon refrigerants
 - compressor oils
 - air conditioner and heating controls, including levers and ducting
 - air conditioner and heating electrical circuits and sensors, including:
 - high and low pressure switches
 - pressure relief valves
 - temperature sensors

- climate control systems
- diagnostic testing procedures for air conditioning and HVAC systems, including:
 - using diagnostic flow charts
 - using manifold gauges on systems with different refrigerants, including analysis of high and low pressure readings in conjunction with temperature probes
 - testing electrical systems, including procedures for:
 - accessing electrical terminals and using test probes without damaging connectors, fuse holders or wiring
 - resistance and voltage drop tests
 - open and short circuit tests
 - checking shorts to signal, power circuits and grounds
- repair procedures for air conditioning and HVAC systems, including procedures for:
 - using manifold gauges to discharge, evacuate and charge system refrigerants
 - removing and replacing system components
- post-repair testing procedures for air conditioning and HVAC systems, including procedures for checking for:
 - refrigerant leaks
 - heater core and system water coolant leaks
- static and dynamic performance tests of air conditioning and HVAC systems, including checking:
 - ambient temperature
 - vent temperature
 - condenser and suction line temperature.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements and hold an Australian Refrigerant Council (ARC) Refrigerant Handling licence.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air conditioning and HVAC systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for air conditioning and HVAC systems
- Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners
- ARCTick service decal stickers
- procedures for servicing and adjusting vehicle air conditioning and HVAC systems
- two different vehicles or machinery with air conditioning and HVAC system faults
- diagnosis and repair equipment for air conditioning and HVAC systems, including:
 - manifold and gauge set
 - recovery unit
 - vacuum pump
 - electronic leak detector
 - nitrogen cylinder and regulator
 - multimeter
 - electronic scales
 - oil injector
 - infra-red thermometer
 - temperature probe
 - scan tool.

AURETU005 Retrofit and modify air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to retrofit and modify air conditioning systems, including heating, ventilation and air conditioning (HVAC) systems, fitted to a range of vehicles and machinery. It involves preparing for the task, selecting the correct de-gas procedure, carrying out the retrofit and modification procedures, performing post-modification testing, and completing workplace processes and documentation.

Air conditioning systems may contain a mixture of both natural and flammable synthetic refrigerants that are difficult to accurately identify and safely recover. To minimise the possibility of ignition, the procedures and equipment used when recovering refrigerants must be those required for flammable refrigerants.

It applies to those working in the automotive service and repair industry. Automotive air conditioners, including HVAC systems, include those in agricultural machinery, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing requirements apply to this unit. Users are advised to check with relevant regulatory authority. An Australian Refrigeration Council accredited (ARCTick) Refrigerant Handling licence is required for those carrying out this work.

Competency Field

Electrical

Unit Sector

Technical - Air Conditioning and HVAC

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to retrofit system	1.1 Job requirements are determined from workplace instructions 1.2 Retrofit information, manufacturer specifications, and relevant <i>code of practice</i> are accessed and interpreted 1.3 Type of refrigerant is determined according to workplace procedures and <i>safety and environmental requirements</i> 1.4 Retrofit options are analysed and those most appropriate to the circumstances are selected 1.5 Hazards associated with the work are identified and risks are managed 1.6 Retrofit tools and equipment are selected and checked for serviceability
2. De-gas system	2.1 System de-gas procedures are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or system 2.2 Refrigerant is recovered into appropriate refrigerant recovery cylinder for the refrigerant type 2.3 Oil recovered is measured to determine replacement volume 2.4 System is evacuated according to manufacturer specifications, workplace procedures, and safety and environmental requirements
3. Retrofit system	3.1 Technical information relating to vehicle or machinery being retrofitted is accessed and interpreted 3.2 Air conditioning retrofit modification procedures are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 System is pressure tested for leaks before being re-gassed according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.4 System is re-gassed with appropriate refrigerant gas and lubricating oil according to manufacturer specifications and workplace procedures 3.5 Post-modification testing is carried out according to workplace procedures and test results are checked to confirm system performance is operating to manufacturer specifications, reported pre-modification issue has been resolved, and no other faults are

Assessment Requirements for AURETU005 Retrofit and modify air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- retrofit and modify the air conditioning and HVAC systems of two different vehicles or machinery, in which the work must include changing the type of refrigerant.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to retrofitting and modifying air conditioning and HVAC systems, including procedures for:
 - working with refrigerants at boiling point given risk of frostbite
 - working with system lubricants, including carcinogenic oils
 - identifying and handling flammable refrigerants, including hydrocarbon (HC) refrigerants
 - selecting and using personal protective equipment (PPE)
 - identifying firefighting equipment
- environmental requirements, including procedures for:
 - preventing loss of refrigerant to the atmosphere
 - handling materials and refrigerant recovery equipment
- key requirements of Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners
- application, purpose and operation of air conditioning and HVAC systems and components, including:

- high pressure and low pressure sides of air conditioning systems
- compressors, including:
 - piston, scroll and rotary vane compressors
 - electric compressors
 - variable displacement compressors
 - clutchless compressors electromagnetic clutches
- condensers
- receiver-dryers, including filters and desiccants
- expansion valves, including capillary tubes
- evaporators
- thermostats
- refrigerants, including R12, R134a, R1234yf, R290 and R600a blends
- compressor oils
- air conditioner and heating controls, including levers and ducting
- air conditioner and heating electrical circuits and sensors, including:
 - high and low pressure switches
 - pressure relief valves
 - temperature sensors
- climate control systems
- procedures for retrofitting and modifying air conditioning and HVAC systems, including:
 - determining original system fitted to vehicle, including refrigerant and oil type and types of components
 - determining appropriate retrofit and modification options, including:
 - determining required system performance output
 - component replacement, including O rings and seals
 - refrigerant and oil selection
 - procedures for removing and replacing system components
- procedures for changing system refrigerant, including:
 - changing refrigerant gas from R12 to R134a:
 - receiver dryer filter replacement
 - change system fittings for manifold gauge attachment
 - change oil type
 - changing refrigerant gas from R134a to R1234yf:
 - change refrigerant recharging ports
 - change system fittings for manifold gauge attachment
 - changing refrigerant gas from R134a to blends of R290 and R600a:
 - change refrigerant re-charging ports
 - change system fittings for manifold gauge attachment
- procedures for recovering automotive refrigerant, including:
 - testing refrigerant to determine its type

- connecting manifold and gauge set and recovery unit, including types and location of service ports
- identifying recovery cylinder appropriate to the refrigerant
- operating recovery unit, including weighing recovery cylinder before after recovery
- disconnecting and storing recovery unit and cylinder
- procedures for re-gassing air conditioning and HVAC systems, including:
 - testing system for leaks using vacuum and pressure testing
 - using manifold gauges to charge system
- post-retrofit testing procedures for air conditioning and HVAC systems, including procedures for checking for:
 - refrigerant leaks
 - heater core and system water coolant leaks
- static and dynamic performance tests of air conditioning and HVAC systems, including checking:
 - ambient temperature
 - vent temperature
 - condenser and suction line temperature
- procedures for completing workplace documentation, including ARCTick service decal sticker.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements and hold an Australian Refrigerant Council (ARC) Refrigerant Handling licence.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air conditioning and HVAC systems that they have retrofitted and modified, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

- vehicle or machinery air conditioning and HVAC system manufacturer specifications
- Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners
- two different vehicles or machinery with air conditioning and HVAC systems requiring retrofitting and modification
- retrofit, modification and testing equipment for air conditioning and HVAC systems, including:
 - manifold and gauge set
 - recovery unit
 - vacuum pump
 - leak detector
 - refrigerant analyser.

AURETU006 Diagnose complex faults in air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in air conditioning and heating, ventilation and air conditioning (HVAC) systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in an automotive service and repair industry. The air conditioning and HVAC systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels or mobile plant machinery.

Licensing requirements apply to this unit. Users are advised to check with the relevant regulatory authority.

Competency Field

Electrical

Unit Sector

Technical - Air Conditioning and HVAC

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in air conditioning and HVAC system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for air conditioning and HVAC system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are selected from the range of available options 2.4 Testing equipment is selected and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle, vessel or machinery is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles, vessels or machinery.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking air conditioning and HVAC system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure air conditioning and HVAC system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Assessment Requirements for AURETU006 Diagnose complex faults in air conditioning and HVAC systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the air conditioning and heating, ventilation and air conditioning (HVAC) systems of two different vehicles, vessels or machinery
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in air conditioning and HVAC systems, including procedures for:
 - identifying hazards and controlling risks associated with wearing jewellery while working around high electrical currents
 - working with refrigerants at boiling point given risk of frostbite
 - working with system lubricants, including carcinogenic oils
 - handling flammable refrigerants
 - preventing loss of refrigerant to environment
 - using personal protective equipment (PPE)
 - identifying and using fire safety equipment

- environmental requirements, including procedures for preventing loss of refrigerant to the atmosphere
- types of complex faults relating to air conditioning and HVAC systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- requirements of Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners, including procedures for preventing loss of refrigerant to atmosphere
- methods for locating and content of manufacturer specifications, workplace procedures and other technical information relating to air conditioning and HVAC systems
- types, function and operation of air conditioning and HVAC systems, including:
 - climate control systems
 - single and dual zone systems
 - electric controlled compressor systems
- testing procedures for air conditioning and HVAC systems, including:
 - vehicle HVAC performance testing
 - component failure analysis
 - vehicle continuous and non-continuous monitored systems
- procedures for using testing and diagnostic tools and equipment, including:
 - scan tools
 - oscilloscopes
 - manifold and gauge sets
 - vacuum pumps
 - leak detectors
 - nitrogen cylinder and regulators
 - digital vacuum gauges (vacrometer)
 - digital multimeters
 - infra-red thermometers (pyrometer)
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in vehicle air conditioning and HVAC systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements and hold an Australian Refrigerant Council (ARC) Refrigerant Handling licence.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air conditioning and HVAC systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer air conditioning and HVAC system specifications
- two different vehicles, vessels or machinery with complex faults in their air conditioning and HVAC systems
- testing and diagnostic tools and equipment appropriate for diagnosing and repairing complex faults in air conditioning and HVAC systems, including:
 - manifold and gauge sets
 - leak detectors
 - digital multimeters
 - thermometers
- tools, equipment and materials appropriate for diagnosing complex faults in air conditioning and HVAC systems.

AURETU007 Overhaul air conditioning and HVAC system compressors

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to overhaul and return air conditioning and heating, ventilation and air conditioning (HVAC) system compressors to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the compressor, carrying out the overhaul process, reassembling and testing the compressor, and completing workplace processes and documentation.

It applies to those working in an automotive service and repair industry. The air conditioning and HVAC system compressors include those fitted to agricultural machinery, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing requirements apply to this unit. Users are advised to check with relevant regulatory authority.

Competency Field

Electrical

Unit Sector

Technical - Air Conditioning and HVAC

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle air conditioning compressor	1.1 Job requirements are determined from workplace instructions 1.2 Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners is sourced and interpreted 1.3 Dismantling information is sourced and interpreted 1.4 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.5 Hazards associated with the work are identified and risks are managed 1.6 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate compressor and components	2.1 Compressor is dismantled in a logical sequence according to manufacturer and workplace procedures, and <i>safety and environmental requirements</i> , and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, safety and environmental requirements, and Australian automotive code of practice
4. Assemble compressor and components	4.1 Compressor is assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of compressor is completed within workplace

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	timeframes and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly process are rectified
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and compressor is presented ready for use or storage 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate sources of information relevant to compressor efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret and assess information from manufacturer and workshop literature when seeking air conditioning and HVAC system compressor specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure air conditioning and HVAC system components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer

Skills	Description
	specifications <ul style="list-style-type: none"> • match refrigerant types and identification numbers to workplace instructions, vehicle and component part lists, and code of practice requirements • interpret weight measurements, including tare and gross weights, and readings on digital and analogue pressure gauges • interpret measurements of temperature and pressure relating to air conditioner and HVAC system performance.
Planning and organising skills to:	<ul style="list-style-type: none"> • plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> • use precision measuring equipment, such as vernier calipers and micrometers • use specialised air conditioning and HVAC system compressor overhaul equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Safety and environmental requirements</i> must include:</p>	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • working with refrigerants at boiling point given risk of frostbite • working with system lubricants, including carcinogenic oils • handling flammable refrigerants • using personal protective equipment (PPE) • identifying fire safety equipment • environmental requirements, including procedures for preventing loss of refrigerant to the atmosphere.

Assessment Requirements for AURETU007 Overhaul air conditioning and HVAC system compressors

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the air conditioning compressors of two different vehicles or machinery, including:
 - piston, scroll and rotary vane compressors
 - electric compressors
 - variable displacement compressors
 - clutchless compressors
- recover and evacuate refrigerants according to required code of practice and regulations, and recharge the system with the appropriate manufacturer refrigerant and oil type.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling air conditioning and heating, ventilation and air conditioning (HVAC) system components, including procedures for:
 - working with refrigerants at boiling point given risk of frostbite
 - working with system lubricants, including carcinogenic oils
 - handling flammable refrigerants
 - using personal protective equipment (PPE)
 - identifying and using fire safety equipment
- environmental requirements, including procedures for preventing loss of refrigerant to the atmosphere
- techniques for reading and interpreting technical information, including:

- refrigerant saturation temperatures in relation to ambient temperatures and changing levels of humidity
- graphic symbols and diagrams
- principal types of vehicle air conditioning and HVAC systems, including:
 - piston, scroll and rotary vane compressors
 - electric compressors
 - variable displacement compressors
 - clutchless compressors
- principal refrigerant types and their respective operating pressures and lubricating oils, including:
 - R12
 - R134a
 - R1234yf
- air conditioning and HVAC system component overhaul procedures, including:
 - methods for cleaning and preparing air conditioning and HVAC system compressor for overhaul
 - air conditioning and HVAC system compressor dismantling procedures
 - air conditioning and HVAC system compressor inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances
 - air conditioning and HVAC compressor repair and adjustment procedures, including:
 - piston, scroll and rotary vane compressors
 - electric compressors
 - variable displacement compressors
 - clutchless compressors
 - procedures for tolerance measuring and calculating and adjusting components
- post-overhaul bench testing procedures, including:
 - use of manifold gauges and surface probe thermocouples for complete system analysis
 - analysis of system operation while using gauges, temperature probes, electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
- post-overhaul testing of air conditioning and HVAC systems in vehicle or machinery, including:
 - diagnostic procedures for air conditioning and HVAC systems, including:
 - accessing and interpreting diagnostic trouble codes (DTCs)
 - diagnostic flow charts
 - visual, aural and functional assessments
 - ambient temperature
 - centre vent temperature
 - condenser and suction line temperature
 - manifold gauge pressure readings
 - refrigerant leaks.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements and hold an Australian Refrigerant Council (ARC) Refrigerant Handling licence.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air conditioning and HVAC systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- Australian automotive code of practice: Control of refrigerant gases during manufacture, installation, servicing or de-commissioning of motor vehicle air conditioners.
- manufacturer specifications for air conditioning and HVAC system components
- two different vehicles or machinery requiring overhaul, with operational air conditioning and HVAC systems and with components specified in the performance evidence
- tools, equipment and materials appropriate for overhauling and adjusting a range of air conditioning and HVAC compressors.

AURETX001 Analyse and evaluate electrical and electronic faults in driveline management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate electrical and electronic faults in the embedded network driveline management systems of vehicles or machinery in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry on embedded network driveline management systems of vehicles or machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Electrical

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for driveline management system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Driveline management system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored, and any faulty electrical equipment is identified, tagged and isolated according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to driveline management systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised driveline management system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:<ul style="list-style-type: none">• identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems• working with high pressure fluid.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none">• diagnostic process, sequence, tests and testing equipment.

Equivalent to AURETX5001 Analyse and evaluate electrical and electronic faults in transmission and driveline systems

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURETX001 Analyse and evaluate electrical and electronic faults in driveline management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate an electrical or electronic fault in the driveline management systems of two different vehicles or machinery
- the above faults must involve the following systems:
 - transmission
 - driveline.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in driveline management systems, including procedures for:
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
 - working with high pressure fluid
- principles and processes involved in planning and implementing analysis and evaluation of electrical and electronic faults in driveline management systems
- design and planning of diagnostic procedures for faults in driveline management systems, including procedures for diagnosing:
 - electrical faults
 - electronic faults
- types, functions, operation and limitations of driveline management systems, including:
 - driveline management systems, including:

- clutches
- torque converters
- manual transmissions
- automatic transmissions
- drive and power take-off shafts
- differentials
- drivelines
- gateway network control module:
 - bus network topography
 - associated network electronic vehicle or machinery systems
 - sensor and actuator control and monitoring systems
 - control signal circuits
- testing procedures for driveline management systems, including the use of:
 - digital multimeter
 - scan tool
 - oscilloscope
 - four-wheel dynamometer
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate electrical and electronic faults in driveline management systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to driveline management systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the driveline management systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer driveline management system specifications
- two different vehicles or machinery with driveline management system faults
- diagnostic equipment for driveline management systems
- tools, equipment and materials appropriate for analysing and evaluating driveline management systems.

AURHTA001 Carry out heavy vehicle pre-repair cleaning

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to clean a heavy vehicle body and its major components before beginning repairs. It involves preparing for the task, cleaning the vehicle body and components by mechanical or chemical means, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to undertake pre-repair cleaning	1.1 Task instructions are interpreted and vehicle, area of vehicle body or components to be worked on are identified 1.2 Cleaning procedures and information are sourced and interpreted 1.3 Cleaning options are analysed and those most appropriate to the circumstances are selected 1.4 Potential hazards and risks associated with the task are identified and reported to workplace supervisor 1.5 Cleaning tools, equipment and materials are selected and checked for serviceability
2. Clean vehicle body and components	2.1 Area of vehicle body to be worked on is cleaned according to manufacturer specifications, workplace procedures, and safety and environmental requirements , and without causing damage to components or systems 2.2 Vehicle components are cleaned according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 2.3 Used cleaning agents and waste materials are disposed of according to workplace procedures, and safety and environmental requirements
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instructions and workplace standards 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer specifications, workplace procedures, and safety and environmental requirements relating to cleaning a heavy vehicle body and major components.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to interpret volumes and calculate chemical mixing requirements for preparation of cleaning agents.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE) using cleaning tools and equipment safely handling cleaning agents controlling hazards, including hazardous materials and toxic substances environmental requirements, including procedures for trapping, storing and disposing of cleaning agents and contaminants.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- clean three of the following heavy vehicle systems or components:
 - vehicle body
 - engine
 - transmission
 - final drive
 - steering and suspension system
 - wheels and hubs
 - chassis
 - electrical component
 - fuel system component
- use chemical cleaning when cleaning one of the above systems or components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) relating to heavy vehicle pre-repair cleaning, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using cleaning tools and equipment
 - safely handling cleaning agents
 - controlling hazards, including hazardous materials and toxic substances

- environmental requirements, including procedures for trapping, storing and disposing of cleaning agents and contaminants
- cleaning procedures, techniques and materials appropriate for mechanical and chemical components, and relevant to the task instructions
- protective treatment and storage procedures for cleaned heavy vehicle components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct or third-party observation of tasks.

Where assessment of competency includes third-party observation, individuals must provide evidence that links them to the heavy vehicles or components that they have cleaned before repair, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- manufacturer cleaning material specifications
- heavy vehicle systems and components specified in the performance evidence requiring pre-repair cleaning
- cleaning equipment, cleaning agents, materials and tools appropriate for pre-repair cleaning.

Assessment Requirements for AURHTA003 Remove and replace heavy commercial vehicle ancillary components and accessories

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace three of the following heavy commercial vehicle ancillary components and accessories:
 - rear vision mirrors
 - mudguards and mudflaps
 - ancillary lighting system
 - dust deflectors
 - reflectors
 - trim
 - audio systems
 - adhesive signage and stickers
 - exhaust system ancillary components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and replacing heavy vehicle ancillary components and accessories, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and equipment
- procedures and specifications for removing, replacing and adjusting heavy vehicle ancillary components and accessories required for the task

- types, application and operation of specialist tools and equipment for removing and replacing heavy commercial vehicle ancillary components and accessories
- post-adjustment testing procedures for heavy commercial vehicle ancillary components and accessories.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle ancillary components and accessories that they have removed and replaced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer component and accessory specifications
- heavy vehicles requiring the removal, replacement and adjustment of the ancillary components and accessories specified in the performance evidence
- tools, equipment and materials appropriate for removing and replacing heavy commercial vehicle components and accessories.

AURHTB001 Diagnose and repair heavy vehicle air braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the air braking systems of heavy vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The air braking systems include those in agricultural machinery, heavy commercial vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair air braking system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose air braking system	2.1 <i>Diagnostic tests</i> are carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair air braking system	3.1 <i>Repair information</i> is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.5 <i>Post-repair testing</i> is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking braking system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure braking system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use braking system diagnostic equipment and measuring equipment, such as vernier calipers, micrometers and brake drum micrometers.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Diagnostic tests</i> must include:	<ul style="list-style-type: none"> friction material wear drum brake component serviceability disc brake component serviceability air pressure testing.
--	---

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • working safely with stored energy in springs and high air pressure systems • managing and controlling brake dust and brake fluids • removing and refitting wheel assemblies • environmental requirements, including procedures for trapping, storing and disposing of hazardous materials and substances released from braking systems, including brake dust and fibres.
<i>Repair information</i> must include procedures relating to:	<ul style="list-style-type: none"> • removing, replacing and adjusting system components • dismantling, repairing, reassembling and adjusting systems.
<i>Post-repair testing</i> must include:	<ul style="list-style-type: none"> • stall testing of service, park, emergency and secondary brakes • dynamic brake performance testing using approved methods or equipment.

Unit Mapping Information

Equivalent to AURHTB3001 Repair air braking systems

Assessment Requirements for AURHTB001 Diagnose and repair heavy vehicle air braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three heavy vehicle air braking systems as follows:
 - one disc braking system, in which the work must involve removing and refitting or replacing the brake actuators, disc pads and disc rotors
 - one drum braking system, in which the work must involve removing and refitting or replacing the brake actuators, brake shoes and drums
 - one air braking system, in which the work must involve removing and refitting or replacing the following:
 - air compressor, delivery and storage components
 - slack adjusters
 - pneumatic and electronic control circuits and valves.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing air braking systems, including procedures for:
 - working safely with stored energy in springs and high air pressure systems
 - managing and controlling brake dust and brake fluids
 - removing and refitting wheel assemblies
- environmental requirements, including procedures for trapping, storing and disposing of hazardous materials and substances released from braking systems, including brake dust and fibres
- Australian Design Rules ADR35 and ADR38 relating to repairing heavy vehicle brakes

- operating principles of air braking systems and associated components, including:
 - levers
 - friction
 - pneumatics
 - electronics
- application, purpose and operation of heavy vehicle air braking systems and components, including:
 - disc braking systems
 - drum braking systems
 - air compressors, air storage, air dryers and valves
 - brake actuators
 - foot valves
 - air control valves
 - manual and automatic slack adjusters
 - trailer brake valves
 - pneumatic and electronic control circuits and valves
- diagnostic testing procedures for air braking systems, including:
 - air control system testing
 - air brake component inspection and evaluation
 - brake system stationary and mobile performance tests
- repair procedures for air braking system components, including:
 - wheel end components, including:
 - disc braking systems
 - drum braking systems
 - air compressors, air storage, air dryers and valves
 - brake actuators
 - foot valves
 - manual and automatic slack adjusters
 - trailer brake valves
 - pneumatic and electronic control circuits and valves
- post-repair testing procedures for air braking systems, including stationary and mobile performance tests.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle air braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer braking system specifications
- two different heavy vehicles with faults in the air braking systems specified in the performance evidence
- diagnostic equipment for heavy vehicle air braking systems
- Australian Design Rules ADR35 and ADR38
- tools, equipment and materials appropriate for repairing and adjusting heavy vehicle air braking systems.

AURHTB002 Diagnose and repair heavy vehicle hydraulic and air over hydraulic braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the hydraulic and air over hydraulic braking systems of heavy vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The braking systems include those in agricultural machinery, heavy commercial vehicles or mobile plant machinery. The unit does not apply to hydraulic pressure brakes in agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair heavy vehicle hydraulic and air over hydraulic braking system	1.1 Job requirements are determined according to workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose braking system	2.1 <i>Diagnostic tests</i> are carried out according to manufacturer specifications, workplace procedures and <i>safety and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair braking system	3.1 <i>Repair information</i> is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked according to manufacturer procedures 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.5 <i>Post-repair testing</i> is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace

Assessment Requirements for AURHTB002 Diagnose and repair heavy vehicle hydraulic and air over hydraulic braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in a heavy vehicle hydraulic braking system, including:
 - master cylinder and wheel cylinders
 - disc and drum brake wheel end components
 - parking brake
- diagnose and repair a fault in a heavy vehicle air over hydraulic braking system, including:
 - disc and drum brake wheel end components
 - air compressor, delivery and storage components
 - foot valves
 - parking brake.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy vehicle hydraulic and air over hydraulic braking systems, including procedures for:
 - working safely with stored energy in springs and high air pressure systems
 - managing and controlling brake dust and brake fluids
 - removing and refitting wheel assemblies
- environmental procedures for trapping, storing and disposing of hazardous materials and substances released from braking systems, including brake fluids and brake dust and fibres

- operating principles of heavy vehicle hydraulic braking systems and associated components, including:
 - levers
 - friction
 - pneumatics
 - hydraulics
- Australian Design Rules ADR35 and ADR38 relating to repairing heavy vehicle brakes
- application, purpose and operation of heavy vehicle hydraulic and air over hydraulic braking systems and components, including:
 - hydraulic braking systems, including:
 - disc and caliper assemblies
 - drum and lining assemblies
 - master cylinder and boosters
 - brake lines and hydraulic valves
 - load compensating valves
 - proportioning valves
 - air over hydraulic braking systems, including:
 - air storage
 - brake valves
 - air compressor
 - brake lines and valves
 - receiver drier
 - parking brake systems
- diagnostic testing procedures for heavy vehicle hydraulic and air over hydraulic braking systems, including:
 - air control system tests
 - hydraulic system component inspection and evaluation
 - air braking system component inspection and evaluation
 - brake fluid tests
 - parking brake operational tests
 - drum and disc brake operational tests
 - drum brake and shoes, disc and pad measurement and evaluation
 - stationary and mobile performance tests
- repair procedures for heavy vehicle hydraulic and air over hydraulic braking systems, including:
 - removal, replacement and adjustment procedures for hydraulic system components, including:
 - disc and caliper assemblies
 - drum and lining assemblies
 - master cylinder and boosters
 - brake lines and valves

- switches
- removal, replacement and adjustment procedures for hydraulic and air over hydraulic braking system components, including:
 - brake valves
 - air compressors
 - air storage
 - brake lines and valves
 - receiver driers
- post-repair testing procedures for heavy vehicle hydraulic and air over hydraulic braking systems, including stationary and mobile performance tests.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle hydraulic and air over hydraulic braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer braking system specifications
- two heavy vehicles with the faults and braking systems specified in the performance evidence
- diagnostic equipment for heavy vehicle hydraulic and air over hydraulic braking systems
- Australian Design Rules ADR35 and ADR38
- tools, equipment and materials appropriate for repairing and adjusting heavy vehicle hydraulic and air over hydraulic braking systems.

AURHTB003 Overhaul hydraulic and air over hydraulic braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return hydraulic and air over hydraulic braking system components to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the braking system components, carrying out the overhaul procedures, reassembling and testing the braking system components, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The braking systems include those of agricultural machinery, heavy commercial vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle braking system components	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted 1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate braking system and components	2.1 Braking system is dismantled in a logical sequence according to manufacturer and workplace procedures, and <i>safety and environmental requirements</i> , and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble components	4.1 Braking system components are assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of braking system components is completed within workplace timeframes and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace

Assessment Requirements for AURHTB003 Overhaul hydraulic and air over hydraulic braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the following hydraulic and air over hydraulic braking system components:
 - two different wheel end disc and drum brake components
 - two different hydraulic system components
 - two different air system components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling hydraulic and air over hydraulic braking system components, including procedures for:
 - operating specialised braking system component overhaul tools, equipment and machinery
 - using chemicals and toxic substances
 - operating manual and mechanical lifting equipment
 - working with stored energy
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from braking systems
- types, characteristics and operating principles of hydraulic and air over hydraulic braking systems and associated components, including:
 - disc and drum wheel end systems
 - hydraulic systems
 - air systems

- braking system overhaul procedures, including:
 - methods for cleaning and preparing braking system components for overhaul
 - braking system component dismantling procedures
 - braking system component inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances
 - braking system component repair and adjustment procedures, including:
 - brake actuators
 - air compressors
 - air storage and valves
 - disc and drum wheel end components
 - slack adjusters
 - master cylinder
 - brake booster
 - component assembly procedures, including procedures for measuring and calculating tolerances, and adjusting components
- post-overhaul testing procedures for braking system components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the hydraulic and air over hydraulic braking system components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer hydraulic and air over hydraulic braking system component specifications
- heavy vehicle braking system components specified in the performance evidence and requiring overhaul

- tools, equipment and materials appropriate for overhauling and adjusting hydraulic and air over hydraulic braking system components.

Assessment Requirements for AURHTB004 Overhaul air braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the following air braking system components:
 - two different wheel end disc and drum brake components
 - two different air system components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling air braking system components, including procedures for:
 - operating specialised air braking system component overhaul tools, equipment and machinery
 - using chemicals and toxic substances
 - operating manual and mechanical lifting equipment
 - working with stored energy
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from air braking systems
- types, characteristics and operating principles of air braking systems and associated components
- air braking system overhaul procedures, including:
 - methods for cleaning and preparing braking system components for overhaul
 - braking system component dismantling procedures

- braking system component inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances
- braking system component repair and adjustment procedures, including:
 - brake actuators
 - air compressors
 - air storage and valves
 - disc and drum wheel end components
 - slack adjusters
- procedures for tolerance measuring and calculating and adjusting components
- post-overhaul testing procedures for braking system components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air braking systems and components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer air braking system and component specifications
- air braking system components specified in the performance evidence and requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting air braking system components.

AURHTB005 Analyse and evaluate faults in heavy commercial vehicle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in heavy commercial vehicle braking systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The braking systems include those of heavy commercial vehicles and heavy trailers. This unit does not apply to agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for heavy commercial vehicle braking system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Braking system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to heavy commercial vehicle braking systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised heavy commercial vehicle braking system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Safety and environmental requirements</i> must include:</p>	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • handling and controlling brake dust and brake fluids • working with stored energy in springs, air springs, torsion bars and air storage • environmental requirements, including procedures for trapping, storing and disposing of brake dust and brake fluid released from braking systems.
<p><i>Analytical and evaluative methodology</i> must include:</p>	<ul style="list-style-type: none"> • diagnostic process, sequence, tests and testing equipment.

Assessment Requirements for AURHTB005 Analyse and evaluate faults in heavy commercial vehicle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the braking systems of three different heavy commercial vehicles
- the above faults must be in two of the following braking systems:
 - pneumatic system
 - air over hydraulic system
 - hydraulic system
 - electronic system
 - auxiliary braking system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in heavy commercial vehicle braking systems, including procedures for:
 - handling and controlling brake dust and brake fluids
 - working with stored energy in springs, air springs, torsion bars and air storage
- environmental requirements, including procedures for trapping, storing and disposing of brake dust and brake fluid released from braking systems
- principles and processes involved in planning and implementing analysis and evaluation of braking system faults
- design and planning of diagnostic procedures of heavy commercial vehicle braking systems, including procedures for diagnosing:

- hydraulic faults
- mechanical faults
- pneumatic faults
- electrical faults
- types, functions, operation and limitations of the following systems and components:
 - foundation brakes
 - friction materials
 - anti-lock braking system (ABS)
 - electronic braking system (EBS)
 - pneumatic braking system
 - pneumatic and electronic control circuits and valves
 - hydraulic braking system
 - air over hydraulic braking system
 - heavy trailer braking system
 - auxiliary braking systems (compression and transmission retarders)
- testing procedures for heavy commercial vehicle braking systems, including:
 - brake timing and balancing
 - air supply performance
 - vehicle stopping distance
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in braking systems
- procedures for documenting and reporting the analysis and evaluation process required to analyse and evaluate faults in braking systems
- requirements of Australian Design Rules (ADRs) relating to heavy commercial vehicle braking systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer heavy commercial vehicle braking system specifications
- three different heavy commercial vehicles with faults in the braking systems specified in the performance evidence
- diagnostic equipment for heavy commercial vehicle braking systems
- tools, equipment and materials appropriate for analysing and evaluating heavy commercial vehicle braking systems.

AURHTB006 Diagnose complex faults in heavy commercial vehicle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in heavy commercial vehicle braking systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The braking systems include those of trucks or buses.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in heavy commercial vehicle braking system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to perform diagnosis	2.1 Manufacturer specifications and other technical information for vehicle braking system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking heavy commercial vehicle braking system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure braking system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and vernier calipers use specialised testing equipment, such as pressure gauges and scan tools.

Range of Conditions

Assessment Requirements for AURHTB006 Diagnose complex faults in heavy commercial vehicle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the following heavy commercial vehicle braking systems:
 - air braking system
 - air over hydraulic braking system
 - anti-lock braking system
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in heavy commercial vehicle braking systems, including procedures for:
 - working with stored energy, including pneumatic pressure and spring energy
 - handling and controlling brake dust and brake fluids
- environmental requirements, including procedures for trapping, storing and disposing of hazardous materials and substances released from braking systems, including hydraulic fluid, brake fluid and brake fibres
- types of complex faults relating to heavy commercial vehicle braking systems, including:
 - intermittent

- multi-system
- introduced as a result of system repair
- indirect, caused by the influence of external systems
- types, function and operation of heavy commercial vehicle braking systems, including:
 - air braking systems
 - hydraulic braking systems
 - air over hydraulic braking systems
 - anti-lock braking systems
- testing procedures for heavy commercial vehicle braking systems, including:
 - vehicle dynamic and static testing procedures
 - abnormal noise analysis
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in heavy commercial vehicle braking systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer heavy commercial vehicle braking system specifications
- three different heavy commercial vehicles with complex faults in the braking systems specified in the performance evidence
- heavy commercial vehicle braking system diagnostic equipment, including:
 - pressure gauge
 - scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in heavy commercial vehicle braking systems.

AURHTB007 Diagnose and repair heavy commercial vehicle electronic braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the electronically controlled braking systems of heavy commercial vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The braking systems include those in heavy commercial vehicles. This unit does not apply to agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose heavy commercial vehicle electronic braking system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose electronic braking system	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair electronic braking system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out and diagnostic fault codes are confirmed as having have been rectified according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Assessment Requirements for AURHTB007 Diagnose and repair heavy commercial vehicle electronic braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the electronic components of two different heavy commercial vehicle electronic braking systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy commercial vehicle electronic braking systems, including procedures for working safely with high air pressure systems
- operating principles of heavy commercial vehicle electronic braking systems and associated components, including:
 - electronic systems
 - pneumatic systems
- Australian Design Rules ADR35 and ADR38 relating to repairing heavy vehicle brakes
- application, purpose and operation of heavy commercial vehicle electronic braking systems and components, including:
 - electronic control unit (ECU)
 - dual circuit pneumatic foot pedal control valve with electronic position sensing
 - front circuit electric over air modulation and relay valve
 - rear circuit electric over air modulation and relay valve
 - wheel speed sensors and pole wheel
 - tractor protection air valve
 - pressure sensor in airbag system or load sensor

- diagnostic testing procedures for heavy commercial vehicle electronic braking systems that comply with manufacturer specifications, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
- repair procedures for heavy commercial vehicle electronic braking systems that comply with manufacturer specifications, including removal, replacement and adjustment procedures for electronic braking system components
- post-repair testing procedures for heavy commercial vehicle electronic braking systems that comply with manufacturer specifications, including static and dynamic performance tests of electronic braking systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle electronic braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer braking system specifications
- two different heavy commercial vehicles with faults in their electronic braking systems
- diagnostic equipment for heavy commercial vehicle electronic braking systems
- Australian Design Rules ADR35 and ADR38
- tools, equipment and materials appropriate for repairing and adjusting heavy commercial vehicle electronic braking systems.

AURHTD001 Inspect heavy commercial vehicle suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect heavy commercial vehicle suspension systems according to manufacturer specifications. It involves preparing for the task, inspecting the system, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect suspension system	1.1 Task instruction is interpreted and vehicle to be worked on is identified 1.2 Inspection information is sourced and interpreted 1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect suspension system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURHTD001 Inspect heavy commercial vehicle suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect the front and rear suspension systems of one heavy commercial vehicle, including:
 - springs
 - spring dampers
 - arms, mountings and bushings
 - vehicle curb height.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting heavy commercial vehicle suspension systems, including procedures for:
 - working with stored energy in springs, air springs and torsion bars
 - lifting and supporting vehicles
- identification and function of major suspension system components, including:
 - airbag, coil spring, leaf spring and torsion bar
 - spring dampers
 - pneumatic, mechanical and rubber suspension
 - lateral and longitudinal arms
 - self-levelling device, ride control, height control
- basic operation of suspension systems, including:
 - leaf spring

- equaliser beam
- rubber block
- torsion bar
- air spring
- inspection procedures for suspension systems, including front and rear suspension.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle suspension systems that they have inspected, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer suspension system specifications
- one heavy commercial vehicle with front and rear suspension systems
- tools, equipment and materials appropriate for inspecting heavy commercial vehicle suspension systems.

Prepare to diagnose and repair a heavy commercial vehicle steering system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose steering system	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair steering system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked according to manufacturer procedures 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking steering system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> understand steering system information in degrees, and metric and imperial units of measurement measure steering system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as tape measures, rulers, vernier calipers, micrometers and hydraulic gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with high pressure steering systems environmental requirements, including procedures for trapping,
---	--

	storing and disposing of power steering hydraulic fluid released from steering systems.

Assessment Requirements for AURHTD002 Diagnose and repair heavy commercial vehicle steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in one of the following heavy commercial vehicle steering systems:
 - electronically assisted steering
 - hydraulic power assisted steering
- diagnose and repair a fault in three of the following heavy commercial vehicle steering components:
 - power steering pump
 - hydraulic and electronic valves
 - tie rods and linkages
 - king pin
 - front wheel bearings.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy commercial vehicle steering systems, including procedures for working with high pressure steering systems
- environmental requirements, including procedures for trapping, storing and disposing of power steering hydraulic fluid released from steering systems
- operating principles of heavy commercial vehicle steering systems and associated components, including:
 - manual steering systems

- power assisted steering systems
- application, purpose and operation of heavy commercial vehicle steering systems and components, including:
 - manual steering systems, including:
 - steering box
 - steering column
 - tie rods and linkages
 - king pins
 - wheel bearings
 - hydraulic power assisted steering systems, including:
 - integral piston steering box
 - power steering pump
 - hydraulic and electronic valves
 - twin axle steering systems
 - electronically assisted steering systems
- identification, function and basic operating principles of steering angles, including:
 - Ackermann principle of steering
 - toe-in and toe-out
 - toe-out on turns
 - caster
 - camber
 - steering axis inclination
- diagnostic testing procedures for heavy commercial vehicle steering systems, including:
 - operational testing
 - hydraulic steering system testing
 - electronic and load sensing steering testing
 - analysing component wear analysis
- repair procedures for heavy commercial vehicle steering system components, including:
 - power steering pump
 - steering box
 - steering column
 - king pin
 - electronically assisted steering
 - tie rods and linkages
 - wheel bearings
- post-repair testing procedures for heavy commercial vehicle steering systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle steering systems or components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer steering system specifications
- heavy commercial vehicle with faults in the power assisted steering systems and components specified in the performance evidence
- diagnostic equipment for heavy commercial vehicle steering systems
- tools, equipment and materials appropriate for repairing and adjusting heavy vehicle steering systems.

AURHTD003 Diagnose and repair heavy commercial vehicle suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the suspension systems of heavy commercial vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The suspension systems include those in heavy commercial vehicles. This unit does not apply to agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair heavy vehicle suspension system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose suspension system	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair suspension system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked according to manufacturer procedures 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURHTD003 Diagnose and repair heavy commercial vehicle suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in:
 - the following two heavy commercial vehicle suspension systems:
 - leaf spring suspension
 - air spring suspension
 - one of the following heavy commercial vehicle suspension systems:
 - equaliser beam suspension
 - torsion bar suspension
 - electronically controlled suspension.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy vehicle suspension systems, including procedures for:
 - working with stored energy in springs, air springs, accumulators and torsion bars
 - lifting, supporting and manual handling heavy vehicle suspension systems
- operating principles of heavy vehicle suspensions and associated components, including:
 - rigid and independent suspensions
 - sprung and unsprung mass
 - ride and curb height
 - spring dampers

- spring types
- application, purpose and operation of heavy vehicle suspension systems and components, including:
 - air spring suspension
 - leaf spring suspension, including:
 - front suspension
 - rear suspension, including single and tandem axle
 - equaliser beam suspension
 - torsion bar suspension
 - electronically controlled suspension
- diagnostic testing procedures for heavy vehicle suspension systems, including:
 - component wear analysis
 - checking axle alignment
 - checking fluid leaks
 - checking air leaks
 - checking ride and curb height
 - control system tests
- repair procedures for heavy vehicle suspension systems, including procedures for:
 - removing, repairing and replacing suspension components, and springs and spring dampers
 - aligning axles
- post-repair testing procedures for heavy vehicle suspension systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer suspension system specifications
- heavy commercial vehicles with faults in the different suspension systems listed in the performance evidence
- diagnostic equipment for heavy commercial vehicle suspension systems
- tools, equipment and materials appropriate for repairing and adjusting heavy commercial vehicle suspension systems.

AURHTD004 Carry out heavy vehicle wheel alignment operations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out heavy vehicle wheel alignment operations. It involves identifying and confirming work requirements, preparing for the work, carrying out pre-alignment inspection and wheel alignment, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The wheel alignment operations include those of agricultural machinery, heavy commercial vehicles or mobile plant machinery. The unit does not apply to light vehicles, light commercial vehicles or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Carry out wheel alignment pre-checks	1.1 Job requirements are determined from workplace instructions 1.2 Alignment pre-check information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Alignment pre-checks of vehicle wheels, steering and suspension condition are carried out according to manufacturer specifications, workplace procedures and safety requirements 1.5 Faults are identified and reported according to workplace procedures as necessary
2. Carry out vehicle wheel alignment activities	2.1 Vehicle wheel alignment specifications are sourced and interpreted 2.2 Wheel alignment measuring equipment is connected to vehicle according to manufacturer specifications and workplace procedures 2.3 Wheel alignment is carried out without causing damage to components or systems, and readings are recorded 2.4 Corrective adjustments are carried out according to workplace procedures and safety requirements, and within manufacturer specifications 2.5 Wheel alignment is re-checked to confirm accuracy of adjustments 2.6 Post-adjustment wheel alignment readings are recorded and reported according to workplace procedures
3. Complete work process	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret safe operating procedures for wheel alignment equipment from workplace signs and procedures and manufacturer specifications interpret information from manufacturer specifications and workshop literature when seeking vehicle wheel alignment specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting findings, making recommendations, and recording vehicle pre-alignment checks and pre- and post-wheel alignment readings.
Numeracy skills to:	<ul style="list-style-type: none"> measure steering and suspension system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications understand measurements in metric and imperial units of measurement and angles in degrees.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring wheel alignment equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS), occupational health and safety (OHS) requirements, including procedures for raising and supporting heavy vehicles or machinery.

Assessment Requirements for AURHTD004 Carry out heavy vehicle wheel alignment operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- align the wheels on at least three different heavy vehicles, in which the work must involve measuring, recording and adjusting the following angles to manufacturer specifications:
 - camber
 - caster
 - king pin inclination (KPI)
 - toe (toe-in and toe-out)
 - toe-out on turns.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to heavy vehicle wheel alignment operations, including procedures for raising and supporting heavy vehicles or machinery
- application, purpose and operating principles of steering geometry and wheel alignment angles, including:
 - Ackermann principle of steering
 - camber
 - caster
 - KPI
 - toe-in and toe-out
 - toe-out on turns
 - steering axis inclination

- two wheel and twin four wheel steer
- vehicle pre-alignment inspection procedures, including:
 - analysing tyre wear
 - inflating tyre
 - adjusting wheel bearing
 - inspecting steering and suspension
 - determining wheel run-out
 - determining vehicle height
 - checking chassis and axle alignment
- wheel alignment equipment types, application and operation
- procedures for measuring and adjusting steering angles, including:
 - camber
 - caster
 - toe-in and toe-out
 - toe-out on turns
- post-wheel alignment testing procedures for heavy vehicles.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle wheel alignments that they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer wheel alignment specifications
- three different heavy vehicles requiring wheel alignment
- wheel alignment equipment for heavy vehicles

- tools, equipment and materials appropriate for carrying out wheel alignment operations on heavy vehicles.

AURHTD005 Analyse and evaluate faults in heavy commercial vehicle steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in heavy commercial vehicle steering and suspension systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The steering and suspension systems include those of heavy commercial vehicles or heavy trailers. This unit does not apply to agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
