- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions
- identification and function of outboard and stern drive transmission components, including:
 - steering
 - trim and tilt
 - gear shift control, including:
 - mechanical
 - electrical
 - electrohydraulic
 - clutch system
 - cooling system

- types and applications of lubricants and lubricating fluids for outboard and stern drive transmissions
- inspection procedures for outboard and stern drive transmissions, including oil and fluid condition and leaks
- service and adjustment procedures for outboard and stern drive transmissions, including:
 - lubricant replacement
 - trim and tilt
 - steering system
 - screens and pick-ups
 - control system with forward, neutral and reverse
 - cooling system
- post-service testing procedures for outboard and stern drive transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine outboard and stern drive transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer outboard and stern drive transmission specifications
- two different marine transmissions specified in the performance evidence and requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing marine outboard and stern drive transmissions.

AURRTX002 Inspect and service marine inboard transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service marine inboard transmissions. It involves preparing for the task, inspecting the transmission, reporting the inspection findings, servicing and adjusting the transmission, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service inboard	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
transmission	1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect transmission	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service transmission	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and transmission is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to inboard transmissions.

Skills	Description
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate liquid volumes and service schedule intervals understand gear ratios in inboard transmissions.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for identifying hazards and controlling risks associated with working with rotating shafts and pulleys.
<i>Environmental requirements</i> must include:	<ul style="list-style-type: none"> procedures for trapping, storing and disposing of fluids released from transmissions.

Assessment Requirements for AURRTX002 Inspect and service marine inboard transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service two different marine transmissions, including:
 - one inline transmission
 - one 'V' drive transmission.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing marine inboard transmissions, including procedures for identifying hazards and controlling risks associated with working with rotating shafts and pulleys
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions
- identification and function of marine inboard transmissions, including:
 - 'V' drive transmissions
 - inline transmissions
 - step-up transmissions
 - hydraulic transmissions
 - mechanical transmissions
 - counter shaft transmissions
 - planetary gear transmissions
 - mechanical dog clutches
- basic operation of marine inboard transmissions, including:

- mechanical transmissions
- hydraulic transmissions
- types and applications of lubricants and lubricating fluids for inboard transmissions
- inspection procedures for marine inboard transmissions, including oil and fluid condition and leaks
- service and adjustment procedures for marine inboard transmissions, including:
 - replenishing lubricants
 - control system with forward, neutral and reverse
 - cooling system
- post-service testing procedures for marine inboard transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine inboard transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer inboard transmission specifications
- two different vessels with the inboard transmissions specified in the performance evidence and requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing marine inboard transmissions.

Assessment Requirements for AURRTX003 Diagnose and repair marine outboard and stern drive transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in:
 - two different marine outboard transmissions
 - one marine stern drive transmission.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing outboard and stern drive transmissions, including procedures for:
 - working with turning propellers
 - operating manual and mechanical lifting equipment
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions
- operating principles of outboard and stern drive transmissions and associated components, including:
 - gear types
 - gear ratios and torque reduction and multiplication
- application, purpose and operation of outboard and stern drive transmissions and components, including:
 - power flows
 - gearshift mechanisms, including:
 - cone clutches

- mechanical dog clutches
- methods of matching propeller to transmission gear ratio, engine output and boat performance
- diagnostic testing procedures for outboard and stern drive transmissions, including procedures for analysing:
 - gear selection problems
 - abnormal system noise
- dismantling procedures for outboard and stern drive transmissions, including procedures for:
 - measuring clearances and tolerances
 - inspecting components
- repair procedures for outboard and stern drive transmissions, including procedures for replacing:
 - gearshift mechanisms
 - bearings and seals, including oil replacement
 - gears
 - propellers
- assembly procedures for outboard and stern drive transmissions, including procedures for:
 - shimming bearings and gears
 - adjusting preload and rolling torque
 - checking gear tooth contact patterns
- post-repair testing procedures for outboard and stern drive transmissions, including procedures for water testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the outboard and stern drive transmissions in marine vessels that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

AURRTX005 Analyse and evaluate faults in light marine transmission systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate light marine transmission system faults in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the marine service and repair industry on inboard, outboard or jet drive transmission systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for light marine transmission system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Light marine transmission system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to light marine transmission systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised light marine transmission diagnostic equipment.

Range of Conditions

Assessment Requirements for AURRTX005 Analyse and evaluate faults in light marine transmission systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the transmission systems of three different light marine vessels
- the above analysis and evaluation must involve two of the following systems:
 - stern drive
 - inboard shaft
 - 'V' drive
 - outboard transmission
 - counter rotating outboard propellers
 - jet drive.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in light marine transmission systems, including procedures for working with inboard propeller drive systems and rotating shafts
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions
- principles and processes involved in planning and implementing analysis and evaluation of light marine transmission system faults
- design and planning of diagnostic procedures of light marine transmission systems
- types, functions, operation and limitations of light marine transmission systems, including:

- stern drives, inboard shaft and 'V' drives, outboard transmissions, jet drives, and drivelines
- shift controls
- counter rotating outboard propellers
- vessel systems and their impact on light marine transmission system operation, including on engine and shaft alignment for inboard and stern drive installations
- testing procedures for light marine transmission systems, including:
 - engine and shaft alignment for inboard and stern drive installations
 - propeller matching
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in light marine transmission systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to light marine transmission systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light marine transmission systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer transmission system specifications
- three different light marine vessels with faults in the transmission systems specified in the performance evidence
- diagnostic equipment for light marine transmission systems
- tools, equipment and materials appropriate for analysing and evaluating light marine transmission systems.

AURSAA001 Process customer complaints in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to deal with formal and informal complaints and negative feedback from customers. It involves following established process steps to resolve issues and complaints in order to satisfy both internal and external customer complaints.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Administration

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Clarify nature of	1.1 Details of complaint are established

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
complaint	1.2 Summary of complaint is documented accurately 1.3 Initial explanations about process and apologies appropriate to individual customer's situation are conveyed to customer
2. Identify options to resolve complaint	2.1 Possible options for resolving complaint are identified according to workplace procedures 2.2 Solutions outside individual level of responsibility are referred to supervisor
3. Act to resolve complaint	3.1 Chosen solution is outlined to customer according to workplace procedures 3.2 Chosen solution is implemented within required timeframe and conditions are negotiated with customer 3.3 Complaint is referred to supervisor if resolution is not possible or where additional levels of authorisation are required
4. Provide feedback on complaint resolution process	4.1 Effectiveness of complaint resolution solution is assessed against customer feedback 4.2 Changes required to improve complaint resolution procedures are identified and passed on to supervisor for consideration according to workplace procedures 4.3 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret information in warranties, terms and conditions, and receipts relevant to customer complaint.
Oral communication skills to:	<ul style="list-style-type: none"> participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer information and feedback effectively relate to people from diverse backgrounds using clear language and tone of voice appropriate to situation.

Skills	Description
Self-management skills to:	<ul style="list-style-type: none">• follow workplace procedures and seek assistance from supervisor as required.
Problem solving skills to:	<ul style="list-style-type: none">• apply basic conflict resolution skills for handling dissatisfied customers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Unit Mapping Information

Assessment Requirements for AURSAA001 Process customer complaints in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate that they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- process and resolve three different customer complaints in an automotive sales and service workplace or simulated environment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- workplace operations relating to:
 - workplace products and services
 - location of departments, sections and contact details
- workplace procedures relating to:
 - customer service
 - dealing with dissatisfied customers
 - complaints handling and recommending appropriate action
 - reporting and registering complaints
- key legal requirements relating to customer rights as a consumer and business obligations under the Australian Consumer Law (ACL)
- effective communication techniques and the individual's role in processing customer complaints, including:
 - giving customers full attention
 - greeting and farewelling protocols
 - speaking clearly and concisely
 - using appropriate language and non-verbal communication, including:
 - tone of voice

- body language
- personal presentation
- using clear written information
- dealing with people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities
- basic negotiation and problem-solving techniques, including:
 - active listening
 - questioning techniques
 - interpreting body language
 - presenting options.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to processing customer complaints in an automotive sales and service workplace, e.g. complaint summaries.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive sales and service workplace or simulated workplace
- workplace procedures relating to customer service and complaints handling
- commercially realistic range of customers with different complaints.

AURSAA002 Maintain customer aftermarket relations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to work in a customer service role with a focus on automotive aftermarket sales and service. It involves providing after-market advice and support, establishing and addressing customer needs while maintaining post-sale service relationships, and building long-term relationships with customers.

It applies to those working in the automotive administration or sales industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Administration

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Establish customer aftermarket needs,	1.1 Customer aftermarket needs are monitored using formal and informal communication channels and networks

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
trends and opportunities	1.2 Aftermarket products and services are assessed to determine if they meet customer needs 1.3 Customer aftermarket trends are documented and reported to appropriate persons for planning and continuous improvement opportunities
2. Update aftermarket customer database	2.1 Customer database and documents are regularly updated and vital data is kept for current and prospective customers 2.2 Customer sales and service history is gathered and entered into database 2.3 Customer data is uploaded, edited and maintained regularly to ensure databases are up-to-date
3. Process customer feedback	3.1 Customer feedback is assessed to determine customer needs 3.2 Customer needs are responded to according to workplace procedures 3.3 Customer is contacted where appropriate to clarify and confirm feedback 3.4 Response to customer is provided to satisfactorily meet their expectations
4. Provide aftermarket service	4.1 Workplace sales and service standards that align with customer expectations are identified and selected 4.2 Customer loyalty strategies appropriate to customer profile are selected and implemented according to workplace procedures 4.3 Aftermarket service is reviewed regularly to ensure customer and workplace needs are met 4.4 Information that assists with improving sales and service operations and activities is provided to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> use customer feedback to improve own customer relations.

Skills	Description
Oral communication skills to:	<ul style="list-style-type: none"> listen actively and use questioning techniques to gather, clarify and confirm customer information and feedback.
Digital literacy skills to:	<ul style="list-style-type: none"> use digital systems and tools to access, filter, extract and organise customer information.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for AURSAA002 Maintain customer aftermarket relations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- access and update customer data on an automotive workplace database or simulated customer database for three different customers
- provide professional aftermarket service relating to different aftermarket product or service requirements to the above customers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- formal and informal channels and networks used to communicate with customers and to capture customer information
- role of social media in customer service
- typical fields of information or data captured in customer databases
- current and emerging customer needs, expectations and trends in the workplace or automotive industry
- key features of automotive industry and workplace customer loyalty programs and promotional activities
- active listening and questioning techniques
- telephone techniques
- strategies for dealing with dissatisfied customers
- basic marketing and sales techniques
- workplace procedures relating to:
 - aftermarket sales and service and processes
 - maintaining customer databases

- key requirements relevant to aftermarket service of:
 - automotive industry codes of practice
 - workplace procedures relating to consumer rights and privacy
- vehicle and equipment product knowledge relevant to aftermarket product and sales.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to maintaining customer aftermarket relations, e.g. customer feedback forms.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive sales and service workplace or simulated workplace
- computer with customer database and information
- three different customers with different aftermarket requirements.

AURSBA001 Carry out warehousing procedures in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to receive, store and dispatch goods in an automotive warehouse. It involves receiving inward goods, handling and storing goods, and dispatching goods that meet customer requirements.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Support and Logistics

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Receive incoming goods	1.1 General receiving bay housekeeping is undertaken according to workplace procedures

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Received goods are checked and validated against <i>delivery information</i> according to workplace procedures 1.3 Received goods are unpacked and inspected according to workplace procedures and <i>safety and environmental requirements</i> 1.4 Discrepancies in quality of unpacked goods or breakages are documented according to workplace procedures 1.5 Stock levels are accurately documented on stock systems according to workplace procedures 1.6 Packing materials are disposed of according to workplace procedures
2. Store goods	2.1 Received goods are transported to appropriate storage area without causing damage to product or packaging according to workplace procedures and safety requirements 2.2 Goods and parts containers are labelled according to workplace procedures 2.3 Parts are transferred to labelled containers in storage area following established stock rotation procedures 2.4 Goods are stored according to workplace procedures and safety requirements and, where applicable, at correct temperatures to maintain product quality
3. Dispatch goods	3.1 <i>Dispatch information</i> is identified and confirmed 3.2 Goods for dispatch are selected and any identified non-conforming goods are labelled with supplier details and date and reason for return, or referred to supervisor 3.3 Goods for dispatch are packed securely, <i>labelled</i> and stored awaiting dispatch according to workplace procedures and safety requirements 3.4 Goods are dispatched to customer or end user according to workplace procedures 3.5 Warehousing documentation is completed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret a range of warehousing documentation, including: <ul style="list-style-type: none"> stock ordering and stock delivery documentation warehousing work procedures purchase and stock supply agreements.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately complete: <ul style="list-style-type: none"> warehouse stock control documents non-conforming stock return defect labels special delivery labels and shipping documents.
Numeracy skills to:	<ul style="list-style-type: none"> interpret and apply numerical information when completing stock records and delivery documentation.
Digital literacy skills to:	<ul style="list-style-type: none"> use digital systems and tools to access, search and retrieve information relating to stock and delivery requirements.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> technical skills to use stock recording equipment and mechanical and stock moving equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Delivery information</i> must include:	<ul style="list-style-type: none"> invoices purchase orders.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for manually and mechanically handling stock environmental requirements, including procedures for disposing of or recycling surplus packaging.
<i>Dispatch information</i> must include:	<ul style="list-style-type: none"> invoices picking slips packing slips.

Labelling must include:	<ul style="list-style-type: none">• dispatch details that correspond to picking and packing slip• workplace shipping documentation.

Assessment Requirements for AURSBA001 Carry out warehousing procedures in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- receive three different stock items into an automotive warehouse, in which the work must involve:
 - checking received goods against purchase orders and delivery documentation
 - following established workplace procedures for manual handling
- identify and raise appropriate documents for three different non-conforming or damaged stock items
- store three different stock items in the warehouse, in which the work must involve:
 - correctly labelling items before storage
 - storing items in the appropriate location
- dispatch three different stock items from the warehouse to the customer or end user, in which the work must involve:
 - identifying dispatch instructions
 - labelling items according to workplace procedures
 - completing shipping address details and any special instructions
- maintain workplace stock control documentation and warehouse computer records during above work.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for manually and mechanically handling stock

- environmental requirements, including procedures for disposing of or recycling surplus packaging
- key features of relevant codes of practice, including those dealing with:
 - managing risks of hazardous chemicals in the workplace
 - managing the work environment and facilities
 - hazardous manual tasks
- key features of documentation required for the receipt and dispatch of warehouse items, including:
 - invoices
 - picking and packing slips
 - order forms
- warehouse workplace procedures, including procedures for:
 - safe and secure stock storage
 - stock rotation
 - labelling stock items
 - product quality standards
 - packing and unpacking goods
 - isolating out of date, missing or damaged stock
 - identifying correct warehouse location of items or goods
 - using barcoding equipment
 - disposing of waste
 - completing delivery and dispatch documentation
 - maintaining stock record documentation
 - matching stock labelling to picking and packing slip
 - isolating non-compliant goods.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to carrying out warehousing procedures in an automotive sales and service workplace, e.g. invoices, and picking and packing slips.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following must be made available:

- automotive warehouse or simulated warehouse
- warehouse equipment, including:
 - stock
 - stock movement equipment
 - stock recording equipment
- warehouse documentation, including invoices, picking and packing slips, dispatch documentation and order forms.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements and performance criteria, range of conditions and foundation skills:

- identify and match one uncommon automotive part from the following categories for three different customers:
 - vintage part
 - obsolete part
 - non-original part.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- information gathering techniques, including:
 - active listening and questioning
 - effective face-to-face and telephone customer service
- common automotive terminology
- identification and function of automotive vehicle systems
- application and operation of automotive parts index systems, including:
 - catalogues
 - microfiche
 - computer databases
- key legal requirements relating to supplying uncommon automotive parts, including obligations under Australian Consumer Law (ACL).

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to identifying and matching uncommon automotive parts, e.g. customer invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive sales and service workplace or simulated workplace
- three different customers with different commercially realistic requirements for uncommon parts
- automotive parts index systems, including:
 - catalogues
 - microfiche
 - computer databases.

Assessment Requirements for AURSCA001 Select and supply automotive parts and products

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria and foundation skills:

- select and supply automotive parts or products from each of the following categories for three different customers:
 - service items, including filters, oils, coolants, spark plugs, fan belts, electrical accessories, sensors and actuators
 - non-specific items, including merchandise, apparel, cleaning products and tools
 - accessory items, including car mats, seat covers, lighting and vehicle covers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- information gathering techniques, including:
 - active listening and questioning
 - effective face-to-face and telephone customer service
- common automotive terminology
- identification and function of automotive vehicle systems
- types and applications of the automotive parts and products specified in the performance evidence
- application and operation of automotive parts index systems, including:
 - catalogues
 - microfiche
 - computer databases
- key legal requirements relating to supplying automotive parts and products, including obligations under the Australian Consumer Law (ACL).

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to selecting and supplying automotive parts and products, e.g. customer invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive sales and service workplace or simulated workplace
- three different customers with different commercially realistic requirements for automotive parts or products
- automotive parts index systems, including:
 - catalogues
 - microfiche
 - computer databases.

Assessment Requirements for AURSCA002 Present automotive products and services for sale

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- organise a display or presentation area in an automotive workplace for three different automotive products
- organise a display or presentation area in an automotive workplace for two different automotive services.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to presenting products and services in an automotive workplace, including procedures for:
 - manually handling stock
 - ensuring clear walkways
 - handling chemicals and dangerous goods
 - using personal protective equipment (PPE)
- principles of display design, including:
 - creating impact
 - use of colour and illumination
 - accessibility and ease of maintenance
 - interactivity
- types and applications of display and presentation areas, including:
 - areas, including:
 - interior and exterior

- permanent and temporary
- publicly accessible
- display systems, including cable, rod and sign systems
- showcases
- brochure and information display systems
- graphic display systems, including computer monitor, television and projector
- gaining feedback on effectiveness of display and presentation areas, including procedures for:
 - analysing sales
 - delivering and analysing simple customer questionnaires.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to presenting automotive products and services for sale, e.g. sales area floor plan.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive workplace or simulated workplace
- commercially realistic range of automotive services and products for sale
- commercially realistic presentation or display area
- materials needed for display of products and service information.

Assessment Requirements for AURSCA003 Apply sales procedures in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- engage with three potential automotive customers and respond to their enquiries regarding product and service features in line with workplace customer service standards
- sell automotive products or services to three different customers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- product and service knowledge applicable to automotive workplace, including:
 - specific product knowledge for area or section
 - company merchandise and service range
 - stock databases and service delivery calendar
 - equipment safety features
 - warranties and conditions
 - price and discounts available
- customer types and needs, including:
 - customer behaviour and cues
 - customer buying motivations, including functional and emotional motivation
 - demographics, lifestyle and income
 - individual and cultural differences
- key features of automotive industry codes of practice and statutory requirements that are reflected in workplace procedures relating to:
 - sale of products and services

- consumer rights and protection
- sales techniques relating to selling products and services in an automotive workplace, including:
 - techniques for opening and closing a sale
 - recognising buying signals
 - overcoming customer objections
 - strategies to focus customers on specific merchandise
- common workplace procedures relating to:
 - analysing individual and workplace sales performance
 - handling customer complaints.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to applying sales techniques when selling automotive products and services in an automotive sales and service workplace, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive sales and service workplace or simulated workplace
- workplace procedures relating to sales and customer service
- commercially realistic range of automotive retail products and services for sale
- product and service information
- three different customers with commercially realistic product and service needs.

Assessment Requirements for AURSCA004 Carry out cash and non-cash payment operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- determine transaction amount and conduct one of each of the following different payment operations:
 - cash
 - credit or debit card
 - cheque
- prepare three invoices for different products or services and submit them for payment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key legal requirements relating to carrying out cash and non-cash payment operations, including obligations under the Australian Consumer Law (ACL)
- factors to be considered when calculating final price, including:
 - goods and services tax (GST)
 - sales, discounts and promotions
 - deposits and partial payments
- procedures for carrying out cash and non-cash operations, including:
 - calculating sales balance
 - receiving and counting money
 - common sales security procedures for handling cash
 - calculating and returning change, including using:
 - manual methods

- point-of-sale (POS) equipment
- receiving and processing cheques
- using electronic funds transfer at point-of-sale (EFTPOS) equipment
- issuing receipts
- operation and maintenance of common sales equipment, including:
 - calculators
 - POS equipment, including procedures for changing receipt rolls
 - EFTPOS terminals
- procedures for preparing and distributing invoices, including:
 - types and applications of invoices
 - required contents of invoices
 - common types of software for producing invoices
 - common methods of distributing invoices to customers.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having carried out cash and non-cash payment operations in an automotive sales and service workplace, e.g. sales receipts and invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- sales and service workplace or simulated workplace
- workplace procedures for carrying out cash and non-cash payment operations and distributing invoices
- commercially realistic situations involving cash and non-cash payment transactions
- point-of-sale software
- computer hardware, software and business equipment required for processing cash and non-cash transactions and preparing invoices.

Assessment Requirements for AURSCA006 Promote automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- promote different automotive products or services to three different customers in line with workplace customer service standards.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- methods used to promote products and services, including:
 - strengths, weaknesses, opportunities and threats (SWOT) analysis
 - marketing and research techniques
 - face-to-face selling techniques
 - active listening and questioning techniques
 - upselling and value adding sales techniques
 - negotiation strategies when dealing with dissatisfied customers
 - loyalty programs and strategies for encouraging repeat business
- customer types, including:
 - customer buying signals and buyer behaviour
 - individual and cultural differences
- sources of information about automotive products and services and related promotional activities
- comparable products and services of major competitors
- workplace procedures relating to promotional processes and marketing activities, including marketing campaigns and advertising materials
- workplace procedures relating to promoting automotive products and services, including:

- consumer protection
- automotive industry codes of practice relating to sales
- advertising codes of practice.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having promoted products and services in an automotive workplace, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive sales and service workplace or simulated location
- workplace procedures relating to promotional sales activities
- sales material, including product and service information
- commercially realistic range of customers requiring different automotive products and services
- commercially realistic range of automotive retail products and services and associated promotional activities.

AURSCA007 Determine used motor vehicle stock requirements

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to research information from a range of sources to determine preferred and required used motor vehicle stock to purchase, and to identify sources for the stock.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Sales and Marketing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Gather information to inform decision on used motor vehicle stock	1.1 Procedures for collecting relevant data are identified and adopted 1.2 Data is obtained from workplace used motor vehicle sales and management staff

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
requirements	1.3 Data is collected from workplace used motor vehicle sales history records
2. Determine requirements for selecting used motor vehicle stock	2.1 Data is analysed and selection criteria for preferred used motor vehicle stock are established according to workplace requirements 2.2 Prices of motor vehicles that meet selection criteria are reviewed and a budget is set for purchasing used motor vehicle stock 2.3 List of motor vehicles to be purchased is compiled and documented according to workplace procedures
3. Identify sources and providers of required used motor vehicle stock	3.1 Workplace data on past used motor vehicle purchases is collected and analysed to determine potential sources and providers of used motor vehicle stock 3.2 Additional sources of preferred used motor vehicle stock are researched and analysed 3.3 Experienced workplace staff are consulted for sources of preferred used motor vehicle stock 3.4 List of sources and providers of motor vehicles to be purchased is compiled and documented according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from technical specifications and financial data to determine used motor vehicle requirements.
Oral communication skills to:	<ul style="list-style-type: none"> participate in verbal exchanges using active listening and questioning techniques to elicit knowledge and opinions about used motor vehicles from others and to confirm understanding.
Numeracy skills to:	<ul style="list-style-type: none"> perform mathematical operations, including addition, subtraction, multiplication and division, to calculate percentages.
Digital literacy skills to:	<ul style="list-style-type: none"> use digital systems and tools to access, filter, extract, organise

Skills	Description
	and present information.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> operate office technology efficiently to source and collate information relating to used motor vehicle requirements.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURSCA007 Determine used motor vehicle stock requirements

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- determine the used motor vehicle stock requirements of one motor vehicle dealership, including:
 - compiling a list of five motor vehicles to be purchased
 - compiling a list of sources and providers of the motor vehicles to be purchased.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- procedures for gathering data on used motor vehicle stock requirements, including examining:
 - socioeconomic profile of dealership area and potential customers
 - features and prices of:
 - current stock makes and models
 - new stock makes and models
 - dealership customer database
 - stock turnover rate and seasonal trends
- procedures for determining motor vehicle stock selection criteria, including:
 - using stock control software
 - analysing available statistics relevant to dealership
- procedures for sourcing vehicles to match selection criteria, including:
 - examining past motor vehicle purchases
 - locating motor vehicle wholesalers

- consulting colleagues.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having determined used motor vehicle stock requirements in an automotive sales and service workplace, e.g. list of recommended motor vehicles to be purchased.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive sales and service workplace or simulated workplace
- workplace procedures relating to the sale of used motor vehicles
- sales and management staff to interview
- sources of information relating to used motor vehicle sales, including history records
- computer hardware and software, calculators and office equipment.

AURSCA008 Wholesale used motor vehicle stock

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to research both own workplace records and retail buyer requirements in order to determine surpluses and used motor vehicle stock to sell on the wholesale market. It involves analysing data from a range of sources to inform decisions about market demand for used motor vehicle stock.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Sales and Marketing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Canvass dealerships regarding requirements	1.1 Retail buyers are consulted to obtain data about their requirements for used motor vehicles

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
for used motor vehicles	1.2 Data from retail buyers is collected, collated and documented 1.3 Collected data is analysed
2. Check workplace records to determine stock surpluses and wholesaling options	2.1 Workplace records and databases relating to used motor vehicle stock are accessed and information relating to surplus stock is retrieved 2.2 Data from workplace records and databases is collated, analysed and documented 2.3 Analysed workplace data is compared with established retail buyer requirements within commercially realistic timeframe 2.4 Potential surplus used motor vehicle stock to wholesale is identified based on market demand
3. Wholesale used motor vehicle stock	3.1 Potential buyers of surplus used vehicle stock are identified from existing networks and available databases 3.2 Satisfactory selling or purchase price is negotiated with potential buyers 3.3 Surplus stock is sold to buyers in compliance with legislative and statutory requirements 3.4 Workplace records are updated to reflect sale and current holding of used motor vehicle stock

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting on used motor vehicle stock.
Oral communication skills to:	<ul style="list-style-type: none"> convey and clarify information in verbal exchanges, using active listening and questioning to negotiate sale of surplus stock.
Numeracy skills to:	<ul style="list-style-type: none"> perform mathematical operations, including, addition, subtraction, multiplication and division, to determine pricing of used motor vehicle stock.

Skills	Description
Initiative skills to:	<ul style="list-style-type: none">• follow up on leads and sources of additional information relating to demand and potential sale of used motor vehicle stock.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Assessment Requirements for AURSCA008 Wholesale used motor vehicle stock

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- wholesale five used motor vehicles to one or more retail buyers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- procedures for gathering data of surplus used motor vehicle stock, including examining:
 - features and prices of current stock makes and models
 - dealership customer database
 - stock turnover rate and seasonal trends
- procedures for determining surplus motor vehicle stock selection criteria, including:
 - using stock control software
 - analysing available statistics relevant to used motor vehicle stock
- procedures for selling surplus vehicle stock, including:
 - locating motor vehicle retailers
 - determining acceptable selling prices of stock and negotiating with retailers
- key requirements of industry codes of practice and state and territory legislation covering the sale and purchase of used motor vehicles.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to wholesaling used motor vehicle stock in an automotive sales and service workplace, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive sales and service workplace or simulated workplace
- workplace procedures relating to the sale of used motor vehicles
- five surplus used motor vehicles to wholesale
- commercially realistic potential buyers of used motor vehicle stock
- sources of information relating to used motor vehicle sales
- computer hardware and software, calculators and office equipment.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- provide clear and accurate technology information and operating instructions relating to a vehicle to two different customers at point-of-sale, delivery or handover.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- vehicle technical product knowledge relevant to the operation of vehicle technology systems, including:
 - infotainment systems
 - navigation systems
 - blue tooth systems
 - keyless entry
 - interior adjustment systems
 - basic maintenance requirements
 - spare wheel replacement procedures
 - warning lights
 - vehicle safety cameras
 - park assist systems
 - climate control system
 - passenger safety systems
 - diesel particulate diffuser and filter system regeneration
- face-to-face and telephone communication techniques, including active listening and questioning

- key features of loyalty programs and strategies for encouraging repeat business
- workplace or dealership processes for maintaining customer databases.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having provided vehicle technology information to customers at vehicle point-of-sale or delivery, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive sales workplace or simulated location
- two different vehicles and integrated technologies
- owner manuals, handbooks and specifications containing vehicle information relating to relevant make and model
- two different customers requiring commercially realistic point-of-sale delivery or handover information regarding vehicle features and technology.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- inspect and appraise three different used motor vehicles
- negotiate a purchase price for the above three vehicles within workplace agreed budgets.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- basic operating principles of motor vehicle systems and components, including types and models of vehicles
- procedures for appraising used motor vehicles, including:
 - accessing vehicle price guides
 - inspecting vehicles
 - assessing value of vehicle accessories
 - interpreting automotive industry trends in used motor vehicle supply and demand
- procedures for purchasing used motor vehicles, including:
 - communication and negotiation processes, including:
 - presenting a persuasive argument
 - collaborative negotiation techniques
 - documentation requirements relating to the purchase of used motor vehicles, including sales contracts and safety certificates
- key requirements of industry codes of practice and state and territory legislation covering the sale and purchase of used motor vehicles.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having appraised and purchased used motor vehicles for an automotive sales and service workplace, e.g. purchase documentation.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive sales and service workplace or simulated workplace
- workplace procedures and documentation relating to the purchase of used motor vehicles
- three different used motor vehicles to appraise, and their owners.

Assessment Requirements for AURSCA011 Conduct online transactions in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- sell different automotive products or services online to three different customers
- review effectiveness of online transactions, confirming that quality of products and services delivered met customer expectations.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key legal requirements relating to carrying out online transactions, including obligations under the Australian Consumer Law (ACL)
- factors to be considered when calculating final price, including:
 - goods and services tax (GST)
 - sales, discounts and promotions
 - deposits and partial payments
- types, application and operation of common electronic bill payment systems, including:
 - biller direct
 - bank aggregator
- procedures for carrying out online transactions, including:
 - following bill payment system processes, including:
 - logging in
 - receiving orders
 - generating accounts
 - generating billing

- dispatching goods, including tracking goods and confirming delivery
- creating, maintaining and reconciling sales records
- procedures for reviewing bill payment system, including:
 - assessing customer satisfaction
 - comparing costs of other providers.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having carried out online transactions in an automotive sales and service workplace, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive workplace procedures relating to sales
- automotive retail products and services for sale online
- online product or service information, including automotive online sales website
- three different online customers with commercially realistic purchasing requirements
- computer system with internet connection
- stock databases and service delivery calendars.

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Access and interpret information on refinishing products	1.1 Information on automotive refinishing products and their applications and limitations is accessed and interpreted according to workplace procedures 1.2 <i>Differences between similar products</i> are researched and evaluated
2. Identify customer requirements relating to refinishing products	2.1 Customer is greeted according to workplace customer service standards 2.2 Nature of customer enquiry is determined and clarified 2.3 Information relating to customer product requirement is gathered and confirmed with customer
3. Provide information to customer on refinishing products	3.1 Refinishing products are evaluated against customer requirements 3.2 <i>Information</i> is provided or demonstrated relating to applicable products to satisfy customer requirements and create a buying environment 3.3 Advice is sought from product specialist as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> access and interpret technical information relating to automotive refinishing products from a range of sources.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately summarise key information relating to automotive refinishing products for reference.
Oral communication skills to:	<ul style="list-style-type: none"> use questioning techniques suitable to customer and customer requirement clearly and effectively convey technical information using language, tone and pace appropriate to audience and purpose.
Numeracy skills to:	<ul style="list-style-type: none"> interpret and compare product numerical information in order to evaluate automotive refinishing products.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Differences between similar products</i> must include:	<ul style="list-style-type: none"> • brand options • product features • warranties • price.
<i>Information</i> must include:	<ul style="list-style-type: none"> • features of product • benefits and limitations of product • safety implications of product • techniques for applying product.

Unit Mapping Information

Equivalent to AURSCP2001 Provide information to customers on automotive refinishing products

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURSCP001 Provide information to customers on automotive refinishing products

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- access, collate and interpret information relating to five different automotive refinishing products
- provide accurate advice on automotive refinishing products to three different customers with different product information requirements.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- refinishing product knowledge, including:
 - automotive coatings
 - fillers
 - anti-rust material
 - abrasives and buffers
 - polishes and polishing material
 - cleaning materials
- automotive refinishing techniques, including:
 - repair of minor dents
 - treatment of rust
 - selection and application of fillers
 - surface preparation, including application of primers
 - coats and finishing putties
 - application of top coats and clear coats

- buffing
- colour matching
- mixing procedures for automotive finishes
- workplace-specific information, including:
 - product and merchandise range
 - service range
- workplace procedures specific to automotive refinishing and related products, including procedures for dealing with customers
- key requirements specific to automotive refinishing and related products, including automotive industry codes of practice relating to the sale of vehicle finishes and repair products.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having provided information to customers on automotive refinishing products in an automotive sales and service workplace, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following should be made available:

- automotive sales and service workplace or simulated workplace
- commercially realistic range of refinishing products
- documentation relating to range of refinishing products, such as inventory lists, price lists, delivery costs and details of available services
- workplace procedures relating to customer service
- three different customers with different information requirements relating to refinishing products.

AURSLA001 Comply with legal requirements when selling automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to locate, interpret and comply with legal requirements relating to the sale of automotive products and services to customers.

It applies to those working in the automotive sales and service industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Sales and Parts, Administration and Management

Unit Sector

Regulatory or Legal

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify legal requirements and procedures relating to	1.1 Legislation relating to selling automotive products or services is accessed and interpreted 1.2 Legal requirements specific to the sale of the automotive

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
sale of automotive products and services	workplace product or service range are identified 1.3 Workplace procedures relating to complying with legal requirements are sourced and interpreted
2. Sell product or service in compliance with legal requirements	2.1 Product or service is sold according to workplace procedures and identified legal requirements 2.2 Customer transaction is handled according to consumer legislation 2.3 Accurate advice and information are provided to customers about product and consumer rights 2.4 Advice is sought from supervisor where clarification or assistance is needed
3. Record required information on product or service sale documentation	3.1 Correct product or service sale documentation is selected and accessed according to workplace procedures 3.2 Clear and accurate information is provided on sales documentation to comply with legal requirements 3.3 Signed acknowledgement of information provided is obtained from customer, as required 3.4 Sales documentation is completed and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> keep up-to-date with changes relating to legal requirements in the sale of automotive products and services.
Reading skills to:	<ul style="list-style-type: none"> interpret key legal information in sales and related documentation.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately complete required sections of sales documentation to comply with legal requirements.
Oral communication skills to:	<ul style="list-style-type: none"> give clear and accurate information and instructions to customers relating to legal requirements, and respond to questions correctly participate in verbal exchanges relating to automotive products

Skills	Description
	using pace, tone and gestures suited to customers from diverse backgrounds.
Numeracy skills to:	<ul style="list-style-type: none"> interpret and explain numerical information relating to cost and time limitations to customers.
Digital literacy skills to:	<ul style="list-style-type: none"> access, search and retrieve information relating to legal requirements, customers and automotive products and services.
Planning and organising skills to:	<ul style="list-style-type: none"> sequence and plan handover of sales and product or service information to customers.
Technology skills to:	<ul style="list-style-type: none"> demonstrate the safe operation of automotive products use business technology to complete sales documentation and satisfy storage requirements.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Unit Mapping Information

Equivalent to AURSLA2001 Apply legal requirements relating to product sale

Assessment Requirements for AURSLA001 Comply with legal requirements when selling automotive products and services

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- sell different automotive products or services to three different customers, in which the sale must involve:
 - complying with legal requirements
 - providing accurate product or service and consumer information to customers
 - correctly completing required sales documentation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- requirements of relevant legislation, standards and codes of conduct relating to the sale of automotive products and services, including consumer rights and guarantees under the Australian Consumer Law (ACL), including:
 - consumer guarantees applying to products
 - consumer guarantees applying to services
 - exceptions to consumer guarantees
 - compensation for damages and loss
 - manufacturer's liability for faulty products
 - lawful wording of refund and return signs
 - customer complaint resolution
- roles of the Australian Competition and Consumer Commission (ACCC) in relation to consumer guarantees, including:
 - providing guidance on consumer guarantees
 - investigating complaints

- taking action on behalf of individuals
- types and application of product sale documentation, including procedures for completing and storing documentation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having complied with legal requirements when selling automotive products and services, e.g. sales invoices.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive sales and service workplace or simulated workplace
- workplace procedures relating to automotive product and service sales
- access to requirements of relevant legislation, standards and codes of conduct relating to the sale of automotive products and services, including consumer rights and guarantees under the ACL
- three different customers
- different automotive products or services for sale
- documentation required to complete a sale and fulfil legal requirements.

AURTGA001 Drive and manoeuvre trailers

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to drive and manoeuvre a trailer while it is attached to a driving vehicle. It involves inspecting the trailer before use, connecting the trailer to a vehicle, driving the trailer, and disconnecting the trailer from the vehicle.

It applies to those working in the automotive service and repair industry. The trailers may have non-pivoting axles or pivoting front axles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Carry out trailer safety inspection	1.1 <i>Pre-operational inspections and checks</i> of trailer are carried out according to manufacturer specifications and workplace procedures 1.2 Trailer load is inspected and secured according to manufacturer

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	specifications and workplace procedures 1.3 Safe condition of towing vehicle is determined according to manufacturer specifications and workplace procedures
2. Connect trailer to vehicle	2.1 Trailer and vehicle are aligned and trailer is coupled to vehicle according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Ancillary devices are connected between vehicle and trailer according to manufacturer specifications and workplace procedures 2.3 Trailer and vehicle connections are tested according to manufacturer specifications and workplace procedures 2.4 Faults are identified and action is taken to report them according to workplace procedures
3. Drive and manoeuvre trailer	3.1 Brake lock-out devices are set according to manufacturer procedures 3.2 Trailer is safely manoeuvred by vehicle in forward and reverse directions and parked according to road safety regulations, and without causing damage to trailer, towing vehicle, other vehicles or surrounding environment
4. Disconnect trailer from vehicle	4.1 Parking devices of trailer and vehicle are applied as appropriate according to manufacturer procedures 4.2 Ancillary devices are disconnected and trailer is decoupled from vehicle according to manufacturer specifications, workplace procedures and safety requirements 4.3 Trailer or vehicle is placed in appropriate parking area according to road safety regulations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret state and territory regulations for towing trailers and road signs.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings and trailer faults.
Oral communication skills to:	<ul style="list-style-type: none"> report inspection findings and trailer faults to workplace supervisor and customers.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical processes, including addition and subtraction, to calculate trailer load and perform simple measurements of trailer dimensions interpret numerical information on trailers, such as aggregate trailer mass and gross trailer mass.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Pre-operational inspections and checks</i> must include:	<ul style="list-style-type: none"> braking systems suspension and axles electrical systems wheels and tyres.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for manually manoeuvring trailers.

Assessment Requirements for AURTGA001 Drive and manoeuvre trailers

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- drive and manoeuvre two different trailers on a road with curves.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to driving and manoeuvring trailers, including procedures for manually manoeuvring trailers
- key features of relevant state and territory regulations relating to trailers, including those relating to:
 - couplings
 - safe towing weights
 - towing speeds
 - braking
- application, purpose and operation of trailers, including:
 - pivot and non-pivot trailers
 - definition of aggregate trailer mass and gross trailer mass
- trailer coupling systems, including:
 - tow ball
 - lunette ring
 - weight distributing hitch
- inspection procedures for trailers, including:
 - coupling system

- electrical system
- braking system
- wheel assembly and bearings
- suspension system
- loading procedures for trailers, including:
 - centre of mass location
 - tongue weight
 - methods for determining maximum towing capacity of vehicle
 - methods for determining load capacity of towbar
- driving and manoeuvring techniques, including:
 - effects of trailer on overall turning circle
 - effects of trailer on acceleration, steering and braking
 - methods of avoiding and controlling vehicle and trailer sway
 - methods of reversing a trailer.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the trailers that they have driven and manoeuvred, e.g. trailer log book.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- road with curves suitable for trailer forward and reverse driving, manoeuvring and parking
- trailer specifications and relevant state and territory regulations for towing trailers
- two different trailers and towing vehicles with suitable trailer couplings.

AURTNA001 Estimate and quote automotive vehicle or machinery modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare a quotation to modify the mechanical, electrical or body systems of a vehicle or machinery in order to estimate and calculate the costs, including materials, labour and overhead costs, of the modification. Mechanical and electrical systems and body enhancement kit modifications must comply with Australian Design Rules and Vehicle Safety Bulletins.

It applies to those working in the automotive service and repair industry. It includes quotations for light vehicles, heavy vehicles, agricultural machinery and mobile plant machinery, recreational vehicles or motorcycles. The unit does not apply to estimating and quoting on vehicle body structural repairs.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Loss Assessment or Repair Quoting

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to quote	1.1 Modification requirements are identified and clarified with customer 1.2 Workplace quotation information and recommended labour time guides are sourced and interpreted 1.3 Job cost estimation and calculation details are sourced and interpreted
2. Estimate cost to modify vehicle or machinery	2.1 Estimated time requirements for job are calculated and compared to recommended labour time guides and previous similar completed estimates 2.2 Feasibility of using replacement parts instead of refurbished parts is evaluated in line with original equipment manufacturer (OEM) specifications 2.3 Replacement or refurbished parts required for job are included in quotation 2.4 Parts and consumables are costed according to workplace pricing procedures 2.5 Parts and work needing to be subcontracted are identified and costed 2.6 Potential variations are identified and noted 2.7 Job labour cost estimate is documented and agreed with workplace supervisor 2.8 Quotation variations relating to unsighted damage are noted and prepared for customer acceptance 2.9 Final estimate is reviewed by workplace supervisor and quotation is finalised

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
3. Complete quotation processes	3.1 Detailed quotation is provided to customer for approval 3.2 Approval from customer to commence work and undertake any supplementary quotation work is obtained as required 3.3 Documentation is completed and quotation stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> • interpret job requirement information, OEM specifications and procedures, and labour time guides efficiently.
Writing skills to:	<ul style="list-style-type: none"> • legibly and accurately complete: • vehicle inspection or proposed modification report • modification quotation.
Oral communication skills to:	<ul style="list-style-type: none"> • participate in verbal exchanges using active listening and questioning techniques to gather, clarify and confirm customer information and feedback.
Numeracy skills to:	<ul style="list-style-type: none"> • use mathematical equations, including addition, subtraction, multiplication, division and percentages, to perform calculations and check accuracy of costs of options and solutions.

Skills	Description
Digital literacy skills to:	<ul style="list-style-type: none">• use digital systems and tools to access, search and retrieve information relating to products and services.
Technology skills to:	<ul style="list-style-type: none">• use workplace technology to assist in preparing a modification quotation.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURTNA001 Estimate and quote automotive vehicle or machinery modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria and foundation skills:

- estimate and quote modifications to three different vehicles or machinery, including:
 - one mechanical modification
 - one electrical modification
 - one body modification.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to estimating and quoting vehicle or machinery modifications, including:
 - quality requirements
 - reporting and recording procedures
 - procedures for selecting and using personal protective equipment (PPE) and hand tools
- location and content of:
 - original equipment manufacturer (OEM) specifications and workplace procedures
 - costing catalogues
 - labour time guides
- principles of estimating and job costing
- procedures and processes for identifying, apportioning, validating and documenting total costs for work, including components of estimates and job costings, including:
 - labour
 - parts

- costs relating to required external products or services
- requirements of Australian Design Rules (ADRs) and Vehicle Safety Bulletins (VSBs) relating to mechanical and electrical system and body enhancement modifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having provided a quotation relating to a vehicle or machinery modification, e.g. quotations.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- three different vehicles or machinery requiring estimates and quotes relating to mechanical and electrical system or body enhancement modifications
- OEM specifications and workplace procedures
- labour time guides
- office equipment, including calculators, computer, internet and software
- manufacturer and component refurbishing costing guides.

AURTTA001 Remove and tag steering, suspension and braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, remove and tag a range of steering, suspension and braking system components. It involves preparing for the work, removing and tagging components by title, job number and application, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation for entering the automotive retail, service and repair industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and tag steering, suspension or braking system component	1.1 Task instructions are interpreted and vehicle to be worked on is identified 1.2 Steering, suspension or braking system component information is sourced and interpreted 1.3 Potential hazards and risks associated with the task are identified and reported to workplace supervisor 1.4 Tools and equipment are selected and checked for serviceability
2. Remove component	2.1 Component for removal is identified 2.2 Component is removed according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> , and without causing damage to components or systems 2.3 Removed component is inspected and findings are recorded according to workplace procedures
3. Tag component	3.1 Tagging procedures are identified 3.2 Removed component is legibly <i>tagged</i> according to workplace procedures and without causing damage to vehicle or other components 3.3 Tagged component is stored according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instructions and workplace standards 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer specifications, workplace procedures, and safety requirements relating to steering, suspension and braking system components.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including tags, using correct industry terminology and conventions.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in task instructions and part numbers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> working with stored energy in springs, air springs and torsion bars working with brake dust and hydraulic fluids environmental requirements, including procedures for: <ul style="list-style-type: none"> trapping, storing and disposing of oils and fluids safely disposing of contaminated parts and components.
<i>Tagged</i> must include:	<ul style="list-style-type: none"> component title component condition job number.

Assessment Requirements for AURTTA001 Remove and tag steering, suspension and braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and tag the following components from one vehicle:
 - steering component
 - suspension component
 - brake component.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and tagging steering, suspension and braking system components, including procedures for:
 - working with stored energy in springs, air springs and torsion bars
 - working with brake dust and hydraulic fluids
- environmental requirements, including procedures for:
 - trapping, storing and disposing of oils and fluids
 - safely disposing of contaminated parts and components
- identification and basic function of components to be removed and tagged, including:
 - steering components
 - suspension components
 - brake components
- procedures for removing and tagging steering, suspension and braking system components, including:

- component removal
- component inspection
- component tagging, including key information required on tags
- component storage.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the steering, suspension and braking system components that they have removed and tagged, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer steering, suspension and brake specifications
- one vehicle with the components specified in the performance evidence requiring removal and tagging
- tools, equipment and materials appropriate for removing and tagging steering, suspension and braking system components.

AURTTA002 Assist with automotive workplace activities

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to assist with automotive workplace activities. It involves preparing for the work, assisting with workplace cleaning and component removal and refitting activities as required, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation for entering the automotive retail, service and repair industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for workplace activities	1.1 Task instructions are interpreted and activities are identified 1.2 Workplace activity information is sourced and interpreted 1.3 Potential hazards and risks associated with the task are identified and reported to workplace supervisor 1.4 Tools and equipment are selected and checked for serviceability
2. Undertake workplace activities	2.1 <i>Workplace activities</i> are carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> , and without causing damage to components, systems or vehicles 2.2 Assistance is sought from appropriate persons when difficulties arise
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instructions and workplace standards 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer specifications, workplace procedures and safety requirements relating to workplace activities.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.

Skills	Description
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate quantities and volume of materials.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Workplace activities</i> must include:	<ul style="list-style-type: none"> component removal and refitting component cleaning workplace housekeeping vehicle washing and cleaning.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE) safely handling chemicals environmental requirements, including procedures for trapping, storing and disposing of cleaning agents and contaminants.

Assessment Requirements for AURTTA002 Assist with automotive workplace activities

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out the following automotive workplace activities:
 - remove and refit one component of a vehicle or machinery
 - clean one component of a vehicle or machinery
 - clean an area of the workplace as directed by supervisor
 - wash the exterior and clean the interior of one vehicle or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out automotive workplace activities, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - safely handling chemicals
- environmental requirements, including procedures for trapping, storing and disposing of cleaning agents and contaminants
- procedures for vehicle and component cleaning , including:
 - identifying and using cleaning equipment, including:
 - high pressure washing
 - manual washing
 - vacuuming
 - types and application of cleaning agents
 - preventing damage to systems and components during cleaning activities

- procedures for removing and refitting components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the workplace activities that they have carried out in an automotive workplace, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- one vehicle or machinery to complete the activities specified in the performance evidence
- manufacturer cleaning and component specifications
- cleaning equipment, cleaning agents, tools, equipment and materials appropriate for carrying out automotive workplace activities.

AURTTA003 Use and maintain basic mechanical measuring devices

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to use and maintain basic mechanical measuring devices. It involves selecting, using and maintaining basic measuring devices, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTA003 Use and maintain basic mechanical measuring devices

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- use and maintain three of the following basic mechanical measuring devices:
 - inside and outside calipers
 - steel rulers
 - depth gauges
 - spirit levels
 - tape measures
 - squares
 - T-squares
 - straight edges.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to using and maintaining basic mechanical measuring devices, including safe operating procedures for basic mechanical measuring devices
- types, uses, limitations and operating procedures for the basic mechanical measuring devices specified in the performance evidence
- procedures for selecting measuring devices
- procedures for identifying and tagging faulty measuring devices
- basic maintenance, adjustment, calibration and storage procedures for mechanical measuring devices.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mechanical measuring devices they have used and maintained, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer mechanical measuring device specifications
- basic mechanical measuring devices specified in the performance evidence
- vehicles, components or materials that require the use of basic mechanical measuring devices
- tools, equipment and materials appropriate for using and maintaining basic mechanical measuring devices.

AURTTA004 Carry out servicing operations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out servicing operations. It involves preparing for the task, identifying lubricant requirements, servicing and adjusting vehicle and machinery, reporting the inspection findings, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The servicing operations include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTA004 Carry out servicing operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out servicing operations on two different vehicles or machinery, in which the work must involve:
 - replacing engine oil and filters
 - completing service reports.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing operations, including procedures for:
 - lifting and supporting vehicles and machinery
 - isolating and stabilising vehicles or machinery
 - safely handling hazardous oils, fluids and greases
- environmental requirements , including procedures for trapping, storing and disposing of lubricants and fluids released during servicing operations
- identification, function, service requirements and procedures for vehicle or machinery systems and components, including:
 - steering and suspension
 - driveline and final drive
 - braking
 - wheels and tyres
 - transmission
 - engine

- battery and electrical
- fuel
- cooling
- types and applications of filters, oils, fluids and greases, including:
 - additives
 - oil, fluid and grease classification
 - viscosity ratings
 - filter types
- oil sampling procedures
- post-service testing procedures, including resetting service interval indicators.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles or machinery that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer servicing specifications
- two different vehicles or machinery to carry out servicing operations
- tools, equipment and materials appropriate for carrying out servicing operations.

Assessment Requirements for AURTTA005 Select and use bearings, seals, gaskets, sealants and adhesives

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- prepare and install:
 - two of the following bearing types:
 - roller type bearing
 - ball type bearing
 - plain type bearing
 - two different gaskets
 - two different seals
- select and use two different sealants and adhesives.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working safely with sealants and adhesives, lubricants and greases
- environmental requirements, including procedures for trapping, storing and disposing of:
 - excess materials produced when applying sealants and adhesives
 - lubricants and greases released during work processes
- identification, application, function and operating principles, including:
 - bearings, including ball, roller and plain
 - seals, including lip, face, O ring, square section ring, and metal surface
 - gaskets, including treated paper, cork, composite materials, metal, synthetic, rubber, fibre, and nylon

- types, characteristics, uses and limitations of sealants and adhesives, including application techniques
- inspection, service, installation and adjustment procedures, including:
 - bearings, including:
 - roller types
 - ball types
 - plain types
 - seals and sealing surface condition
 - gaskets
- types and applications of bearing lubricants and greases.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bearings, seals, gaskets, sealants and adhesives they have selected and used, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications relating to bearings, seals, gaskets, sealants and adhesives
- vehicle or equipment requiring the application of bearings, seals, gaskets, sealants and adhesives
- bearings, seals, gaskets, sealants and adhesives as specified in the performance evidence
- tools, equipment and material appropriate for installing bearings, seals and gaskets.

AURTTA006 Inspect and service hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service hydraulic systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The hydraulic systems include those of agricultural machinery, heavy commercial vehicles, marine vessels, mobile plant machinery or outdoor power equipment. This unit is not intended for drive systems, power steering or hydraulic braking systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTA006 Inspect and service hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service two different hydraulic systems, in which the work must involve:
 - evaluating hydraulic fluid condition
 - replacing hydraulic filters
 - carrying out adjustments
 - carrying out visual inspections
 - carrying out operational testing.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing hydraulic systems, including procedures for:
 - using raising, lowering and supporting equipment
 - working with fluids under pressure
 - working with hot fluid hazards
 - isolating and stabilising vehicles or machines
- environmental requirements, including procedures for:
 - trapping, storing and disposing of hydraulic fluid released from hydraulic systems
 - disposing of filters
- identification, function and basic operation of major hydraulic system components, including:
 - reservoir

- accumulator
- pump and charge pump
- pump
- valves
- actuators
- motor
- oil cooler
- filters
- hoses, pipes, connectors and fittings
- AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- types and applications of hydraulic oils, including:
 - additives
 - viscosity ratings
 - viscosity index
 - fire resistant fluids
 - synthetic fluids
- types and applications of hydraulic filters, including:
 - filter types
 - position of filters
 - filter ratings
- inspection, evaluation and operational test procedures for hydraulic systems, including:
 - hydraulic oil sampling
 - oil contamination control
 - cycle times checks
 - pressure checks
- service and adjustment procedures for hydraulic systems, including:
 - oil and filter replacement scheduling
 - oil cleanliness procedures
- post-service testing procedures for hydraulic systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the hydraulic systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer hydraulic system specifications
- AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- two different hydraulic systems requiring servicing
- tools, equipment and materials appropriate for the inspection and servicing of hydraulic systems.

AURTTA007 Inspect, service and repair pneumatic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, service and repair faults in pneumatic systems and components. It involves preparing for the task, inspecting the system to determine the service and repair requirements, carrying out the service and repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The pneumatic systems include those of agricultural machinery, heavy commercial vehicles or mobile plant machinery. Work includes compressors, linear or rotary actuators, drive motors, conductors and control valves.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect, service and repair pneumatic system	1.1 Job requirements are determined from workplace instructions 1.2 Inspection procedures and information are sourced and interpreted 1.3 Options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Inspect pneumatic system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Faults are identified from inspection results and causes of faults are determined 2.3 Inspection findings are reported according to workplace procedures, and include recommendations for necessary service, repairs or adjustments
3. Carry out service and repair activities	3.1 Service and repair procedures and information are sourced and interpreted 3.2 Service and repair tools, equipment and materials are selected and checked 3.3 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.5 Post-repair testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking pneumatic system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify workplace instructions and determine job requirements.
Numeracy skills to:	<ul style="list-style-type: none"> measure pneumatic system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications understand measuring and test equipment divisions.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as vernier calipers, micrometers and pressure gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with stored pressure environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from pneumatic

Assessment Requirements for AURTTA007 Inspect, service and repair pneumatic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair two different pneumatic systems, including the following components in each system:
 - compressors and filters
 - linear and rotary actuators
 - pipes, hoses and connectors
 - control valves
- test above pneumatic systems, including:
 - adjusting and testing pneumatic components
 - setting up and testing compressor cut-out system
 - testing for system leaks.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing pneumatic systems, including procedures for working with stored pressure
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from pneumatic systems
- types and applications of pneumatic systems
- pneumatic system schematic diagrams and symbols
- identification, function and operation of pneumatic systems and components, including:
 - clamping systems

- hydropneumatic intensifiers
- rotary and screw compressors
- linear actuators
- rotary actuators
- drive motors
- lines, hoses and couplings
- control valves
- types of lubricants suitable for pneumatic systems, and their application and methods of lubrication
- inspection, servicing and repair procedures for pneumatic systems
- pneumatic system test and commissioning procedures
- post-repair testing procedures for pneumatic systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the pneumatic systems that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer pneumatic system specifications
- two different vehicles or machinery with pneumatic systems requiring service and repair
- tools, equipment and materials appropriate for inspecting, servicing and repairing pneumatic systems.

AURTTA008 Produce patterns and templates

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to produce patterns and templates for manufacturing parts or assisting the fitting of accessories. It involves preparing for the task, planning the process, plotting the dimensions and completing the pattern or template, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for production of pattern or template	1.1 Job requirements are determined from workplace instructions 1.2 Size requirements are checked in relation to production process and finishing capacity of workplace 1.3 Type and quantity of patterns and templates to be produced are identified and materials are obtained 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Plan process	2.1 Material required for pattern or template is identified for approximate size and characteristics 2.2 Required instruments and equipment are identified, located and assembled 2.3 Drawings and related specifications are identified and interpreted 2.4 Procedures for using pattern development instruments and tooling are confirmed, and equipment and tooling are prepared for use
3. Plot dimensions	3.1 Equipment and tooling are used according to workplace procedures 3.2 Each dimension is measured, exploded and plotted, while maintaining angles, arcs and curves 3.3 Visual inspection and measurements are used to compare pattern dimensions and shapes with drawings and specifications
4. Complete pattern or template	4.1 Pattern or template is completed according to <i>safety requirements</i> and ensuring that it indicates completion date and original drawing details 4.2 Required workplace approval of pattern or template is obtained 4.3 Plans are marked with <i>notations</i> according to workplace procedures 4.4 Plans are copied and filed according to workplace procedures
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and pattern or template is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- produce three different patterns and three different templates for manufacturing parts or for assisting with fitting accessories.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to producing patterns and templates, including procedures for using sharp cutting tools and equipment
- types, characteristics, uses and limitations of pattern and template materials
- procedures for selecting most suitable mediums and materials for pattern and template design
- pattern and template production techniques and procedures
- tools, equipment and machinery to measure, mark out and produce patterns and templates
- procedures for using and applying jigs and fixtures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the patterns and templates that they have produced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- materials for producing automotive patterns and templates
- tools and equipment to measure, mark out and produce patterns and templates.

Assessment Requirements for AURTTA009 Carry out mechanical pre-repair operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out mechanical pre-repair operations to three of the following vehicle components:
 - transmission
 - engine
 - steering and suspension system
 - final drive
 - wheels and hubs
 - chassis
 - hydraulic system
 - fuel system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out mechanical pre-repair operations, including procedures for:
 - operating cleaning equipment
 - using hazardous chemicals
 - selecting and using personal protective equipment (PPE), including safety glasses, gloves and protective clothing
- environmental requirements, including procedures for trapping, storing and disposing of cleaning agents and residue released during the cleaning process
- procedures for identifying and operating cleaning equipment, including:
 - steam cleaning

- high pressure washing
- manual washing
- sand or bead blasting
- types, application and safe handling of cleaning agents
- component cleaning procedures
- component dismantling procedures
- tagging and storage procedures for cleaned components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer cleaning agent specifications
- area and equipment, including PPE, for safely cleaning vehicle components
- vehicle components for pre-repair operations as specified in the performance evidence
- tools, equipment and materials appropriate for carrying out mechanical pre-repair operations.

AURTTA010 Service and repair trailers up to 4.5 tonnes

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service and repair trailers with an aggregate trailer mass (ATM) of up to 4.5 tonnes. It involves servicing the suspension, brakes, axles, couplings and electrical systems, and completing workplace processes and documentation, including any associated recommendations for further action.

It applies to those working in the automotive service and repair industry. The trailers include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTA010 Service and repair trailers up to 4.5 tonnes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- service, repair and adjust two different trailers with an aggregate trailer mass (ATM) up to 4.5 tonnes, in which the work must involve:
 - repacking wheel bearings
 - inspecting and adjusting brakes
 - inspecting and servicing suspension
 - coupling and securing chains
 - inspecting vehicle hitch, trailer coupling and securing chains
 - inspecting and servicing electrical system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing and repairing trailers up to 4.5 tonnes, including procedures for:
 - lifting and supporting trailers
 - handling and controlling brake dust and brake fluids
 - working with stored energy
- environmental requirements, including procedures for trapping, storing and disposing of hazardous materials and substances released from braking systems, including lubricants, brake fluid, brake dust and fibres
- identification, purpose and basic operation of trailer systems, including:
 - braking systems, including:
 - hydraulic

- electrical
- mechanical
- electrical wiring circuits
- trailer service and repair procedures, including:
 - wheel bearings
 - suspension system
 - braking system
 - lighting system
 - vehicle hitch and trailer coupling types and securing chains
 - 5th wheel trailer couplings
- post-service and repair testing procedures for trailers, including stationary and mobile performance tests.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the trailers that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer trailer specifications
- two different trailers with an ATM up to 4.5 tonnes requiring service and repair
- tools, equipment and materials appropriate for servicing and repairing trailers up to 4.5 tonnes.

Assessment Requirements for AURTTA011 Install hydraulic systems to specified applications

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install one hydraulic system in vehicle or machinery to specified applications, including:
 - assembling hydraulic system
 - adjusting and testing hydraulic system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing hydraulic systems, including procedures for:
 - using raising, lowering and supporting equipment
 - isolating and stabilising machines
 - working with stored hydraulic pressure
 - working with escaping high pressure oil
- environmental requirements, including procedures for trapping, storing and disposing of fluid released from hydraulic systems.
- requirements of AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- requirements of Mechanical Design Guideline (MDG) 41 for Fluid Power Safety at Mines
- hydraulic system installation diagrams and schematics
- principles of hydraulic systems and components, including actuators, conductors, pressure flow and direction control systems
- identification, application and operation of hydraulic systems, including:
 - linear actuators

- rotary actuators
- hoses, pipes fittings and couplings
- control valves
- arms and pads
- procedures for installing hydraulic systems in vehicles and machinery
- procedures for adjusting, tuning and testing the installation of hydraulic systems in vehicles or machinery.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the hydraulic systems that they have installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer hydraulic system specifications and installation procedures
- hydraulic system for installation
- one vehicle or machinery requiring installation of hydraulic system
- AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- Mechanical Design Guideline (MDG) 41 Guideline for Fluid Power Safety at Mines
- tools, equipment and materials appropriate for installing hydraulic systems.

AURTTA012 Fabricate and install fluid power hose assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to fabricate and install fluid power hose assemblies. It involves preparing for the task, fabricating, installing and testing fluid power hoses according to relevant industry standards, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The hose assemblies include those of agricultural machinery, heavy commercial vehicles, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTA012 Fabricate and install fluid power hose assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- fabricate, test and install fluid power hose assemblies, using both field attachable and crimp fittings, on two of the following:
 - single wire braid hose
 - double wire braid hose
 - spiral wire hose.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to fabricating and installing fluid power hose assemblies, including procedures for:
 - working with fluids under pressure
 - working with stored pressure hazards
 - isolating and stabilising vehicle or machinery
- environmental requirements, including procedures for trapping, storing and disposing of oil released from hydraulic hoses
- requirements of industry standards for hydraulic hoses and connectors, including:
 - MDG 41 Guideline for Fluid Power System Safety at Mines
 - ISO 6805 Rubber hoses and hose assemblies for underground mining
 - SAE J517 Hydraulic Hose
- application and purpose of hydraulic hoses, including:
 - hose sizes

- hose working pressures
- hydraulic hoses, including:
 - fabric braid
 - single wire braid hose
 - double wire braid hose
 - spiral wire hose, including multi-spiral wire hose
 - crimped and swaged hose fittings
 - field attachable hose fittings
 - couplers, connectors and fittings
- fabrication procedures for fluid power hose assemblies
- testing procedures for fluid power hose assemblies
- installation procedures for fluid power hose assemblies, including routing of hydraulic hoses and pipes
- post-repair testing procedures for fluid power hose assemblies, including visual and performance tests.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the fluid power hose assemblies that they have fabricated and installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer fluid power hose specifications
- MDG 41 Guideline for Fluid Power System Safety at Mines
- ISO 6805 Rubber hoses and hose assemblies for underground mining
- SAE J517 Hydraulic Hose
- test equipment for fluid power hose assemblies

-
- vehicles or machinery requiring the installation of the fluid power hose assemblies specified in the performance evidence
 - tools, equipment and materials appropriate for fabricating and installing fluid power hose assemblies, including a crimping machine.

AURTTA013 Diagnose and repair hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in hydraulic systems. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The hydraulic systems include those in heavy commercial vehicles, marine vessels or outdoor power equipment. This unit does not apply to agricultural or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Assessment Requirements for AURTTA013 Diagnose and repair hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different hydraulic systems, in which the work must involve removing and refitting or replacing three of the following:
 - hydraulic cylinder
 - hydraulic pump
 - hydraulic motor
 - hydraulic valves
 - hydraulic hose.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing hydraulic systems, including procedures for:
 - using raising, lowering and supporting equipment
 - working with fluids under pressure
 - working with stored pressure hazards
 - working with hot fluid hazards
 - isolating and stabilising machines or vehicles
- environmental requirements, including procedures for trapping, storing and disposing of fluid released from hydraulic systems
- operating principles of hydraulic systems and associated components, including:
 - transmission of energy by hydraulic fluid
 - mechanical advantage

- hydraulic circuits, including open and closed centred systems
- temperature, force, pressure, area and flow
- application, purpose and operation of hydraulic systems and components, including:
 - reservoirs
 - accumulators
 - pumps, including gear and piston
 - valves, including directional, pressure and flow
 - hand and remote cordless controls
 - linear and rotary actuators
 - hoses, pipes fittings and couplings
 - heat exchangers
 - hydraulic fluids
 - hydraulic symbols and system schematic
- requirements of AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- diagnostic testing procedures for hydraulic systems, including:
 - applying and using a flow meter to diagnose faults by carrying out an in-line, bypass or 'Tee' test to evaluate system components
 - visually inspecting hoses, pipes and connectors
 - oil sampling and contamination control
- repair procedures for hydraulic systems, including procedures for removing, repairing, replacing and adjusting hydraulic system components
- post-repair testing procedures for hydraulic systems, including procedures for testing:
 - operational functionality
 - fluid pressures and levels.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the hydraulic systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer hydraulic system specifications
- two hydraulic systems with faults in the components specified in the performance evidence
- diagnostic tools and equipment for hydraulic systems, including pressure gauges or flow meters
- AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- tools, equipment and materials appropriate for repairing and adjusting hydraulic systems.

Assessment Requirements for AURTTA015 Produce engineering drawings for vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- produce engineering drawings covering the manufacture or modification of three different vehicle components using hand and computer-aided drawing (CAD) equipment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- engineering drawing techniques and procedures, including:
 - hand drawing
 - computer-aided drawing
- engineering drawing terminology, symbols, codes, legends and diagrammatic representations
- quality standards for producing, maintaining and storing engineering drawings
- procedures for recording, reporting and maintaining engineering plans, workplace records and information.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engineering drawings of vehicle components that they have produced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- work instructions, including drawing specifications and dimensions
- material relevant to the production of engineering drawings
- drawing tools and CAD equipment appropriate for producing engineering drawings of vehicle components.

AURTTA017 Carry out vehicle safety inspections

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out a vehicle safety inspection, compare findings with manufacturer specifications, and report those findings. It involves preparing for the task, carrying out a vehicle safety inspection, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to carry out a vehicle safety	1.1 Job requirements are determined from workplace instructions 1.2 Vehicle safety inspection procedures and information are sourced

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
inspection	<p>and interpreted</p> <p>1.3 Vehicle safety inspection options are analysed and those most appropriate to the circumstances are selected</p> <p>1.4 Hazards associated with the work are identified and risks are managed</p> <p>1.5 Tools and equipment are selected and checked for serviceability</p>
2. Complete vehicle safety inspection	<p>2.1 Vehicle safety inspection is carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i>, and without causing damage to any components or system</p> <p>2.2 Vehicle components are compared to manufacturer specifications, and vehicle system tolerances outside vehicle manufacturer specifications are highlighted</p> <p>2.3 Vehicle safety inspection report is completed according to workplace procedures</p>
3. Complete work processes	<p>3.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>3.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>3.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workplace literature when seeking vehicle specifications and safety inspection procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation,

Skills	Description
	including vehicle safety inspection reports.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions.
Numeracy skills to:	<ul style="list-style-type: none"> measure vehicle components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as vernier calipers, micrometers and dial indicators.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for lifting and supporting vehicles.

Assessment Requirements for AURTTA017 Carry out vehicle safety inspections

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out the safety inspections of three different vehicles
- produce separate vehicle safety reports relating to the above inspections.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational, health and safety (OHS) requirements relating to carrying out vehicle safety inspections, including procedures for lifting and supporting vehicles
- methods for sourcing vehicle specifications
- vehicle and component safety inspection procedures
- types of vehicle safety inspection reports.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have inspected, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- vehicle manufacturer specifications
- three different vehicles requiring safety inspections
- tools and equipment for carrying out vehicle safety inspections.

Assessment Requirements for AURTTA018 Carry out diagnostic procedures

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- follow workplace diagnostic procedures to diagnose faults in three different vehicles or machinery
- the above diagnosis work must involve two of the following types of faults:
 - loss of vehicle power
 - excessive fuel consumption
 - excessive emissions
 - poor handling
 - poor hydraulic system performance
 - poor pneumatic system performance
 - incorrect mechanical system performance
 - incorrect electrical system performance
 - vibration
 - abnormal noise
- record the diagnostic procedures followed with the above vehicles or machinery and identify the cause or causes of faults.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out diagnostic procedures, including procedures for working safely with the system being tested

- environmental requirements, including procedures for complying with requirements specific to the system being tested
- methods of gathering information, including questioning customers and effective questioning techniques
- types and applications of diagnostic strategies, including:
 - strategy-based diagnostics
 - flow charts
 - diagnosis charts
- types, applications, limitations and operation of common diagnostic tools
- methods of differentiating between fault symptoms and fault causes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles or machinery in which they have diagnosed faults, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions detailing customer fault complaint
- manufacturer vehicle or machinery specifications
- three different vehicles or machinery with system faults specified in the performance evidence
- tools, equipment and materials required for diagnosing system faults.

AURTTA020 Apply heat induction processes

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply heat using induction processes when repairing vehicle chassis and components. It involves preparing for the task, selecting and using specialist tools and equipment, identifying damage, operating heat induction equipment according to manufacturer specifications, completing repairs to original equipment manufacturer (OEM) or authorised agency's specifications, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- apply heat induction processes to three different chassis and component repairs, in which the work must involve the use of:
 - metal colours
 - heat crayons
 - thermal temp gun.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying heat induction processes, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using specialist heat induction equipment
 - identifying workplace hazards
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- heat induction process and procedures, including:
 - use of heat induction in repairs
 - use of heat induction equipment, including:
 - metal colours
 - heat crayons
 - thermal temp gun

- original equipment manufacturer (OEM) or authorised agency specifications and recommended repair procedures
- material types suitable for applying heat induction processes
- problem-solving techniques relating to addressing repair defects
- final inspection procedures
- work area clean-up and maintenance requirements
- procedures for completing workplace documentation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having used heat induction equipment to repair vehicle chassis, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required to use heat induction equipment
- OEM or authorised agency repair procedures
- heat induction equipment and operating instructions
- three different damaged vehicle chassis and components requiring heat induction repairs
- tools and equipment appropriate for applying heat induction processes.

AURTTA021 Diagnose complex system faults

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose faults in complex vehicle, vessels or machinery systems to determine the repair action necessary to restore system performance. It involves confirming the existence of a complex system fault, choosing the required diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions, and making repair recommendations.

A complex system integrates two or more automotive systems, or incorporates three or more mechanical, hydraulic, pneumatic, electrical or electronic sub-systems. Examples include electronically controlled automatic transmissions, anti-lock braking systems, and engine management systems integrating ignition, fuel and transmission control systems.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Assessment Requirements for AURTTA021 Diagnose complex system faults

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose complex system faults on three different vehicles, machinery or vessels
- the above diagnosis must involve two of the following types of complex faults:
 - one fault that is in a complex system that integrates two or more automotive systems
 - one fault that incorporates three or more mechanical, hydraulic, pneumatic, electrical or electronic sub-systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex system faults in vehicles, vessels or machinery, including working safely with the systems being tested, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and equipment
- types, application and operation of complex systems, including:
 - systems that integrates two or more automotive systems
 - systems that incorporate three or more mechanical, hydraulic, pneumatic, electrical or electronic sub-systems
- diagnostic procedures for complex systems, including stages within the diagnostic procedure
- methods of gathering information on complex system faults, including customer questioning techniques
- types and applications of diagnostic flow charts

- types, applications, limitations and operation of diagnostic tools, including:
 - multimeters
 - scan tools, including:
 - diagnosis trouble codes (DTC) and the conditions that caused the code to be set
 - live data
 - snap shots
 - oscilloscopes
 - mechanical, hydraulic and pneumatic test equipment
- methods of differentiating between fault symptoms and fault cause.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle or machinery complex system faults that they have diagnosed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer system specifications
- three different vehicles, vessels or machinery that have the complex system faults specified in the performance evidence
- tools, equipment and materials appropriate for diagnosing complex system faults in vehicles, vessels or machinery.

AURTTA022 Develop and apply mechanical system modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to develop, apply and validate significant modifications to existing mechanical systems in order to vary or enhance performance. It involves identifying the modification requirement, developing the modification specifications, applying and testing the modification, and completing workplace processes and documentation.

Significant and non-routine modifications are those that require compliance with Australian Design Rules and Vehicle Safety Bulletins.

It applies to those working in the automotive service and repair industry. The mechanical systems include those of agricultural machinery, bicycles, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the modification requirement	1.1 Job requirements are determined from workplace instructions 1.2 Reasons for the modification are identified and confirmed with appropriate persons 1.3 Modification options are identified and presented to appropriate persons according to workplace procedures 1.4 Hazards associated with the work are identified and risks are managed 1.5 Legal and safety impacts of the modification are considered, as required, according to regulatory requirements
2. Develop and validate the modification specification	2.1 Manufacturer specifications for the existing mechanical system are sourced and interpreted 2.2 Criteria for selecting the modification method and evaluating the outcomes are identified and documented 2.3 Proposed modification method is identified, selected and evaluated from available options 2.4 Selected option, including material choices and processes, is developed in detail and progressively assessed against established criteria 2.5 Modification specification is documented according to workplace procedures
3. Apply and test the modification specification	3.1 Tools, test equipment and materials required to support the modification procedure are identified, selected and prepared for use 3.2 Selected modification method is carried out according to workplace procedures and safety requirements 3.3 Post-modification testing is carried out according to workplace procedures to confirm modification outcomes are as intended, and any problems detected as having been introduced during the modification process are rectified 3.4 Test results and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.5 Variations needed during the modification process or as a result of testing are incorporated into the modification specification 3.6 Information and detail relating to the modification are documented and provided to the appropriate parties according to regulatory and commercial obligations
4. Complete work	4.1 Final inspection is made to ensure work is to workplace

Assessment Requirements for AURTTA022 Develop and apply mechanical system modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop and apply one of the following significant and non-routine modifications on the mechanical system of two different vehicles, vessels, machinery or equipment:
 - adapt or modify mechanical system to a significantly changed capability
 - adapt mechanical system for different work conditions
 - modify or install a significant mechanical system for a special purpose.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to developing and applying mechanical system modifications, including procedures for using personal protective equipment (PPE) and hand tools
- principles and processes involved in planning and implementing modifications to mechanical systems
- principles and processes involved in planning and implementing modifications to mechanical systems
- types, functions, operation and limitations of mechanical systems being modified
- types, functions, operation and limitations of diagnostic testing equipment required for mechanical system modifications
- requirements of Australian Design Rules (ADRs) and Vehicle Safety Bulletins (VSBs) relating to mechanical system modifications
- procedures for documenting and reporting the modification specifications and outcomes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mechanical systems that they have modified, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mechanical system specifications
- ADRs and VSBs relating to mechanical system modifications
- two different vehicles, vessels, machinery or equipment requiring mechanical system modification
- testing equipment for mechanical system modification
- tools, equipment and materials appropriate for completing mechanical system modifications.

AURTTA023 Develop and apply hydraulic system modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to develop, apply and validate significant modifications to existing hydraulic systems in order to vary or enhance performance. It involves identifying the modification requirement, developing the modification specifications, applying and testing the modification, and completing workplace processes and documentation.

Significant and non-routine modifications are those that require compliance with Australian Design Rules and Vehicle Safety Bulletins.

It applies to those working in the automotive service and repair industry. The hydraulic systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the modification requirement	1.1 Job requirements are determined from workplace instructions 1.2 Reasons for the modification are identified and confirmed with appropriate persons 1.3 Modification options are identified and presented to appropriate persons according to workplace procedures 1.4 Hazards associated with the work are identified and risks are managed 1.5 Legal and safety impacts of the modification are considered, as required, according to regulatory requirements
2. Develop and validate the modification specification	2.1 Manufacturer specifications for the existing hydraulic system are sourced and interpreted 2.2 Criteria for selecting the modification method and evaluating the outcomes are identified and documented 2.3 Proposed modification method is identified, selected and evaluated from available options 2.4 Selected option, including material choices and processes, is developed in detail and progressively assessed against established criteria 2.5 Modification specification is documented according to workplace procedures
3. Apply and test the modification specification	3.1 Tools, test equipment and materials required to support the modification procedure are identified, selected and prepared for use 3.2 Selected modification method is carried out according to workplace procedures, and <i>safety and environmental requirements</i> 3.3 Post-modification testing is carried out according to workplace procedures to confirm modification outcomes are as intended, and any problems detected as having been introduced during the modification process are rectified 3.4 Test results and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.5 Variations needed during the modification process or as a result of testing are incorporated into the modification specification 3.6 Information and detail relating to the modification are documented and provided to the appropriate parties according to regulatory and commercial obligations

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. AURTTA025 Diagnose complex faults in vehicle integrated stability control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in the integrated stability control systems of vehicles or machinery, and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The stability control systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Assessment Requirements for AURTTA025 Diagnose complex faults in vehicle integrated stability control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the integrated stability control systems of three different vehicles or machinery
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in vehicle integrated stability control systems, including procedures for lifting and supporting vehicles
- types of complex faults relating to vehicle integrated stability control systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- types, function and operation of vehicle integrated stability control systems, including:
 - anti-lock braking systems (ABS)
 - traction control systems
 - electronic stability control (ESC) systems

- testing procedures for vehicle integrated stability control systems, including procedures for:
 - vehicle dynamic and static testing
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in vehicle integrated stability control systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle integrated stability control systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer vehicle integrated stability control system specifications
- three different vehicles or machinery with complex faults in their integrated stability control systems
- vehicle integrated stability control system diagnostic equipment, including scan tool

- tools, equipment and materials appropriate for diagnosing complex faults in vehicle integrated stability control systems.

Assessment Requirements for AURTTA026 Diagnose complex faults in electronic over hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in three different electronic over hydraulic systems
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in electronic over hydraulic systems, including procedures for working with high pressure fluid systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydraulic systems
- types of complex faults relating to electronic over hydraulic systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- types, functions, operation and limitations of electronic over hydraulic systems and components, including:
 - input sensors

- output actuators
- computer systems
- testing procedures for different electronic over hydraulic systems, including:
 - electronic control analysis
 - component wear analysis
 - system operation analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in different electronic over hydraulic systems, including:
 - scan tools
 - vacuum gauges
 - oil pressure gauges
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electronic over hydraulic systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer electronic over hydraulic system specifications
- three different electronic over hydraulic systems with complex faults
- electronic over hydraulic system diagnostic equipment, including:
 - scan tool
 - vacuum gauge
 - oil pressure gauge
- tools, equipment and materials appropriate for diagnosing complex faults in electronic over hydraulic systems.

AURTTA027 Carry out basic vehicle servicing operations

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to carry out basic vehicle servicing operations. It requires the learner to plan and prepare the servicing task; select the correct equipment and service the major vehicle systems according to manufacturer servicing procedures and specifications; record findings; maintain the work area; and check and store the servicing tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Plan to carry out basic vehicle servicing	1.1 <i>Safety and environmental requirements</i> are sourced and

ELEMENTS	PERFORMANCE CRITERIA
operations	<p>interpreted</p> <p>1.2. Task instruction is interpreted and <i>vehicle</i> to be serviced is identified</p> <p>1.3 Manufacturer specifications and workplace procedures for basic vehicle servicing operations are sourced and interpreted</p> <p>1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.5 Tools and equipment required for vehicle servicing are identified according to manufacturer specifications</p>
2. Carry out basic vehicle servicing operations	<p>2.1 Tools and equipment are selected and checked prior to use according to manufacturer specifications and safety requirements</p> <p>2.2 <i>Basic vehicle servicing operations</i> are carried out according to workplace procedures, manufacturer specifications and safety and environmental requirements</p> <p>2.3 Observations of worn vehicle components or issues requiring further exploration are recorded</p> <p>2.4 Basic vehicle servicing operation procedures are recorded</p>
3. Complete work processes	<p>3.1 Final inspection is made to ensure work meets task instruction and workplace standards, and serviced vehicle is presented ready for use or storage according to workplace procedures</p> <p>3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures</p> <p>3.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary</p> <p>3.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle servicing information and servicing equipment operating procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to perform basic vehicle servicing operations

Skills	Description
	<ul style="list-style-type: none"> select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret metric and imperial systems of measurement read and interpret mathematical information, including charts and drawings use specialist tools and measuring equipment, including gauges use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate volumes and ratios.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to perform basic vehicle servicing operations.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Safety and environmental requirements</i> must include:</p>	<ul style="list-style-type: none"> information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> use of personal protective equipment, including safety glasses, ear protection and safety footwear use of hand tools and lifting equipment application of procedures for handling, storing and disposing of
--	---

	used oil, lubricants and coolants.
Vehicle must include one or more of the following:	<ul style="list-style-type: none"> • passenger or light commercial motor vehicle • motorcycle • constructed vehicle.
Basic vehicle servicing operations must include:	<ul style="list-style-type: none"> • servicing the following: <ul style="list-style-type: none"> • engine and exhaust system • drive belt • cooling system • transmission and final drive • tyres, suspension and steering • fuel and intake system • electrical system • braking system • body fittings and pedal rubbers.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTA027 Carry out basic vehicle servicing operations

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly perform basic servicing operations on a minimum of two different operational vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements relating to basic vehicle servicing operations, including:
 - use of personal protective equipment, including safety glasses, ear protection and safety footwear
 - use of hand tools and lifting equipment
 - safety data sheets (SDS) and procedures for handling, storing and disposing of used oil, lubricants, coolants, transmission and brake fluids
 - reasons for servicing vehicles
- basic vehicle servicing procedures, including:
 - servicing the engine:
 - checking for leaks, worn or loose fittings, cracks or other damage
 - changing the engine oil
 - changing the oil filter
 - servicing the drive belt:
 - checking for cracks, fraying, oil soaking and glazing at the belt to pulley contact area
 - adjusting the belt
 - servicing the cooling system:

- checking for leaks, signs of corrosion, damaged or cracked hoses, worn or loose fittings
- topping up the coolant
- servicing transmission and final drive systems:
 - checking for leaks, worn or loose fittings, cracks or other damage
 - checking and topping up transmission and final drive lubricant level
 - topping up the clutch master cylinder fluid
- servicing the tyres and suspension and steering system:
 - checking for leaks, splits in rubber boots, worn or loose fittings, and tyre wear
 - adjusting air pressure
 - lubricating ball joints
 - topping up power steering reservoir fluid
- servicing the fuel system:
 - checking for leaks, worn or loose fittings, cracks or other damage
 - replacing air filters
- servicing the electrical system:
 - checking the lighting system
 - checking and topping up the battery
- servicing the brakes:
 - checking for leaks, wear, excessive heat damage, cracks or other damage
 - topping up the master cylinder fluid
- other tasks, including checking:
 - windscreen wipers
 - windscreen washers (fluid level)
 - heating, ventilation and air-conditioning (HVAC) operation
 - body panels
 - exhaust system
 - mirrors
 - condition of foot pedal rubbers
- hand and power tools and equipment used in vehicle servicing
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have serviced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two vehicles for servicing
- automotive hand and power tools and lifting and supporting equipment
- automotive fluids and oils, including:
 - engine oil
 - transmission oil
 - brake fluid.

AURTTB001 Inspect and service braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service braking systems according to manufacturer specifications. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The braking systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, motorcycles, mobile plant machinery, outdoor power equipment or trailers. The braking systems may be hydraulic, air over hydraulic, air, mechanical, or hand and parking braking systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service braking system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect braking system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service braking system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 <i>Post-service testing</i> is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
--------	-------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to braking systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection finding and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure brake components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications interpret measuring equipment scales.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as vernier calipers.

AURTTB006 Inspect, service and repair auxiliary braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, service and repair auxiliary braking systems. It involves preparing for the task, inspecting the system, servicing and carrying out any necessary repairs to the system, performing post-service or repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The auxiliary braking systems include those of agricultural machinery, heavy commercial vehicles or mobile plant machinery. The unit applies to vehicles or machinery fitted with speed reducing or control devices, such as engine brakes, exhaust brakes or hydraulic or electrical retarders.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair the auxiliary braking systems of two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing auxiliary braking systems, including procedures for working with hot exhaust components
- identification, function and operating principles of auxiliary braking systems and their components, including:
 - internal engine compression braking
 - external exhaust braking
 - hydraulic retarder
 - electrical retarder
 - control circuits
- inspection procedures for auxiliary braking systems
- service, repair and adjustment procedures for auxiliary braking systems
- post-repair testing procedures for auxiliary braking systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the auxiliary braking systems that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer auxiliary braking system specifications
- two different vehicles or machinery with auxiliary braking systems requiring service and repair
- tools and equipment appropriate for inspecting, servicing, repairing and adjusting auxiliary braking systems.

AURTTB007 Remove and replace brake assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the front and rear brake assemblies of a vehicle. It requires the learner to plan and prepare the task; identify types of brake assemblies; inspect components and identify their function; remove and replace the front and rear brake assemblies; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Brakes

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and replace brake	1.1 <i>Safety and environmental requirements</i> are sourced and interpreted

ELEMENTS	PERFORMANCE CRITERIA
assemblies	<p>1.2 Task instruction is interpreted and vehicle brake assemblies to be worked on are identified</p> <p>1.3 Manufacturer specifications and workplace procedures for brake assemblies removal and replacement are sourced and interpreted</p> <p>1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.5 Tools and equipment required for removing and replacing brake assemblies are identified according to manufacturer specifications</p>
2. Remove and inspect brake assemblies	<p>2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements</p> <p>2.2 Vehicle is prepared for brake assemblies removal according to workplace procedures and safety and environmental requirements</p> <p>2.3 Brake assemblies are removed according to workplace procedures and safety and environmental requirements, and without causing damage to components, tools or equipment</p> <p>2.4 Brake assemblies' components are arranged, identified and inspected according to manufacturer specifications</p> <p>2.5 Brake assemblies' inspection results are recorded</p>
3. Replace brake assemblies	<p>3.1 Brake assemblies are prepared for replacement</p> <p>3.2 Brake assemblies are replaced according to workplace procedures, manufacturer specifications, and safety and environmental requirements, and without causing damage to components, tools or equipment</p> <p>3.3 Brake assemblies are adjusted and bled</p>
4. Complete work processes	<p>4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use or storage according to workplace procedures</p> <p>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures</p> <p>4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle braking system information and brake assembly removal and replacement procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace front and rear brake assemblies select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information in brake system component identification codes use specialist tools and measuring equipment correctly, including verniers, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate clearances.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to remove and replace front and rear brake assemblies.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> • use of personal protective equipment, including safety glasses, ear protection and safety footwear • use of hand tools and lifting equipment • application of procedures for handling and disposing of used brake fluid, lubricants and asbestos-based products, including brake dust.
<i>Brake assemblies</i> must include:	<ul style="list-style-type: none"> • both front disc brake assemblies • both rear drum brake assemblies.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTB007 Remove and replace brake assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace the brake assemblies of at least two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - use of personal protective equipment, including safety glasses, ear protection and safety footwear
 - use of hand tools and lifting equipment
 - safety data sheets (SDS) and procedures for handling and disposing of waste brake fluid, lubricants and asbestos-based products, including brake dust
- types, application and basic operation of brake assembly, including:
 - disc brake systems
 - drum brake systems
 - hand brake systems
 - brake fluids
- brake assembly function and basic principles of operation
- brake assembly component names and their functions
- brake assembly dismantling procedures, including:
 - disc caliper, pad and disc removal
 - brake drum, shoes and wheel cylinder removal
- brake assembly inspection procedures, including:
 - brake hose serviceability
 - disc thickness

- disc runout
- brake shoe serviceability
- brake drum wear
- brake assembly replacement procedures, including:
 - disc pad replacement
 - caliper pin lubrication
 - disc replacement
 - brake cylinder and shoe replacement
 - bleeding and adjustment procedures
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced front and rear brake assemblies, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two vehicles fitted with front and rear brake assemblies, including disc and drum brake assemblies
- tools and special equipment, including lifting equipment.

AURTTB012 Attach friction materials and radius grind

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to attach brake and clutch friction materials using bonding, riveting or screwing methods and radius grind brake shoes. It involves preparing for the task, selecting and attaching friction material, radius grinding, and completing workplace processes and documentation.

This unit applies to those working within the automotive vehicle body repair industry. The friction materials include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to attach friction materials	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret friction material attaching procedures and information in order to identify friction material attaching options required for the job 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify tools and equipment required for the job and examine for serviceability

	<p>1.5 Measure components and evaluate against manufacturer specifications</p> <p>1.6 Identify and prepare components for bonding or riveting according to workplace procedures, workplace health and safety and environmental requirements</p>
2. Attach friction materials	<p>2.1 Identify and prepare friction materials to be attached according to workplace procedures, workplace health and safety, and environmental requirements</p> <p>2.2 Attach friction materials to components according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements</p>
3. Radius grind brake shoes	<p>3.1 Obtain and interpret radius grinding procedures from manufacturer specifications</p> <p>3.2 Radius grind brake shoes according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements</p> <p>3.3 Measure brake shoes against manufacturer specifications and according to workplace procedures and rectify any issues identified</p> <p>3.4 Test brake shoes according to workplace procedures, workplace health and safety and environmental requirements</p>
4. Complete work processes	<p>4.1 Carry out final inspection to ensure work is to workplace expectations and components are ready for use or stored according to workplace procedures</p> <p>4.2 Clear work area and dispose of or recycle materials according to workplace procedures</p> <p>4.3 Examine and store tools and equipment according to workplace procedures</p> <p>4.4 Complete documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of friction attaching material and radius grinding information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from workplace procedures and documentation on safe operating procedures for attaching friction materials and using radius grinding machinery

Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when making recommendations and recording parts and material used
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report findings make recommendations
Numeracy skills to:	<ul style="list-style-type: none"> measure components use basic mathematical operations, including addition and subtraction calculate tolerances and deviations from manufacturer specifications
Problem solving skills to:	<ul style="list-style-type: none"> identify risk factors and take action to minimise risk
Technology skills to:	<ul style="list-style-type: none"> use radius grinding machinery use measuring equipment including tape measures, rulers and vernier calipers

Assessment Requirements for AURTTB012 Attach friction materials and radius grind

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must attach friction materials to and radius grind the following two vehicle components:

- one set of brake shoes
- one clutch plate
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for attaching friction materials and radius grinding including:

- how to locate and interpret manufacturers specifications or equivalent information and workplace procedures for attaching friction materials and radius grinding
- the following workplace health and safety requirements relating to attaching friction materials and radius grinding:
 - procedures for working with brake machining equipment
 - selecting and using personal protective equipment (PPE)
 - procedures for handling and controlling brake dust
- the following technical information relating to attaching friction materials and radius grinding including:
 - material selection procedures
 - procedures for preparing components for friction material attachment:
 - friction material removal procedures
 - component cleaning procedures
 - friction material shaping and sizing procedures
 - procedures for attaching friction materials:

- bonding
- riveting
- procedures for radius grinding brake shoes
- environmental procedures for trapping, storing and disposing of brake dust produced during radius grinding
- workplace housekeeping and documentation procedures

Attaching friction materials and radius grinding technical information, including:

- coefficient of friction
-

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to attaching friction materials and radius grinding activity
 - workplace procedures relating to attaching friction materials and radius grinding activity
 - manufacturer specifications or equivalent documentation for attaching friction materials and for radius grinding
 - PPE for attaching friction materials and radius grinding
 - brake shoes and clutch plate requiring friction material attachment and radius grinding
 - bonding and riveting materials
 - radius grinding machinery
 - equipment, hand and power tooling suitable for attaching friction materials and radius grinding
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards

AURTTB013 Machine brake drums and brake disc rotors

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to measure, evaluate and machine vehicle brake drums and brake disc rotors to manufacturer specifications. It involves preparing for the task, machining disc brake rotors and brake drums, and completing workplace processes and documentation.

This unit applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to machine brake drums and brake disc rotors	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret brake drum and disc rotor machining procedures and information to identify machining options required for the job 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify and examine tools and equipment required for the job, including disc and drum brake lathe and examine for serviceability

	<p>1.5 Measure brake drums and brake disc rotors and evaluate against manufacturer specifications</p> <p>1.6 Prepare brake drums and brake disc rotors for machining according to workplace procedures, workplace health and safety and environmental requirements</p>
2. Carry out machining operations	<p>2.1 Position brake drums and brake disc rotors in brake lathe according to manufacturer specifications, workplace procedures, and workplace health and safety requirements</p> <p>2.2 Machine brake drums and brake disc rotors according to manufacturer specifications, workplace procedures and workplace health and safety requirements</p> <p>2.3 Measure brake drums and brake disc rotors against manufacturer specifications according to workplace procedures</p> <p>2.4 Visually evaluate brake drums and brake disc rotors to ensure safe operation according to workplace procedures</p>
3. Complete work processes	<p>3.1 Carry out final inspection to ensure work meets workplace expectations and brake drums and brake disc rotors are ready for use or stored according to workplace procedures</p> <p>3.2 Clear work area and dispose of or recycle materials according to workplace procedures</p> <p>3.3 Examine and store tools and equipment according to workplace procedures</p> <p>3.4 Complete workplace documentation according to workplace procedures</p>

Assessment Requirements for AURTTB013 Machine brake drums and brake disc rotors

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate evidence of machining the following:

- the four disc rotors of a four wheel disc brake system
- the two brake drums of a rear drum brake system or all four brake drums of a four wheel drum brake system
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for machining brake drums and brake disc rotors including:

- how to locate and interpret manufacturer specifications or equivalent documentation and workplace procedures relating to machining brake drums and brake disc rotors
- the following workplace health and safety requirements relating to machining brake drums and brake disc rotors:
 - procedures for working safely with brake machining equipment
- the following measurement and evaluation procedures for brake drums and brake disc rotors:
 - using vernier calipers, micrometers, brake drum micrometers and dial gauge indicators
 - visual inspection procedures for brake drums and brake disc rotors
- environmental procedures for trapping, storing and disposing of metal swarf produced during machining
- workplace housekeeping and documentation procedures

Machining brake drums and brake disc rotors technical information including:

- the purpose and operation of the following brake drum and brake disc rotor machining equipment:
 - off-vehicle machining
 - on-vehicle machining
 -

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to machining brake drums and brake disc rotors activity
 - workplace procedures relating to machining brake drums and brake disc rotors activity
 - manufacturer specifications or equivalent documentation for machining brake drums and brake disc rotors
 - brake drums and brake disc rotors requiring machining as specified in the performance evidence
 - brake drum and brake disc rotor machining equipment
 - measuring equipment for light vehicle braking systems including, vernier calipers, micrometers, brake drum micrometers and dial gauge indicators
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

Assessment Requirements for AURTTB015 Assemble and fit braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate assembling and fitting three different components from one of the following braking systems:

- hydraulic
- pneumatic over hydraulic
- vacuum over hydraulic
- electric
- electric over hydraulic
- pneumatic
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for assembling and fitting braking system components including:

- how to locate and interpret manufacturer specifications or equivalent documentation and workplace procedures for assembling and fitting braking system components
- the following workplace health and safety requirements relating to assembling and fitting brake system components:
 - procedures for lifting and supporting vehicles
 - procedures for handling and controlling brake dust and brake fluids
- the following technical braking systems information including:
 - procedures and techniques for assembling braking system components
 - procedures and techniques for fitting and testing braking system components
- environmental procedures for trapping, storing and disposing of brake dust and brake fluid released during assembly and fitting process
- workplace housekeeping and documentation procedures

Technical braking systems information including:

- the operation of the following braking systems and their components:
 - hydraulic
 - pneumatic over hydraulic
 - vacuum over hydraulic
 - electric
 - electric over hydraulic
 - pneumatic
 -

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - workplace instructions relating to the assembly and fit of braking system component
 - workplace procedures relating to assembly and fit of braking system components
 - manufacturer specifications or equivalent information relating to the assembly and fit of braking system components
 - components of the braking systems specified in the performance evidence
 - vehicles requiring the fitting and assembly of the braking systems specified in the performance evidence
 - equipment, hand and power tooling appropriate for assembling, fitting and testing braking systems and associated components
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

AURTTTC001 Inspect and service cooling systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service air and liquid cooling systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, reporting the inspection findings, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The cooling systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycle or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Cooling Systems

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service cooling system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect cooling system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service cooling system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or equipment is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to cooling systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> calculate and adjust coolant volumes and ratios using basic mathematical operations, including addition, subtraction, multiplication and division determine cooling system pressures for comparison to specifications.
Technology skills to:	<ul style="list-style-type: none"> use cooling system test equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with: <ul style="list-style-type: none"> hot pressurised cooling systems rotating fans, belts and pulleys coolant additives environmental requirements, including procedures for trapping, storing and disposing of fluids released from cooling systems.

Assessment Requirements for AURTTC001 Inspect and service cooling systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the cooling systems of two different vehicles or machinery
- undertake post-service testing of above systems, which must include:
 - pressure testing
 - testing and adjusting coolant additives.

Knowledge Evidence

- Individuals must be able to demonstrate knowledge of:
- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing cooling systems, including procedures for working with:
 - hot pressurised cooling systems
 - rotating fans, belts and pulleys
 - coolant additives
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from cooling systems
- identification, function and basic operation of liquid cooling system, including:
 - engine coolant additives
 - water pumps
 - filters
 - thermostats
 - mechanical, hydraulic and electric fans
 - radiators and radiator caps

- heater core and heater valve
- expansion tanks
- heat exchangers
- core plugs
- hoses
- drive belts
- temperature sensors and gauges
- keel cooling, heat exchanger, raw water cooling and sacrificial anodes
- identification, function and basic operation of air cooling system, including:
 - cooling system controls, fans, fins and cowlings
- types, quantities and applications of coolant additives, including coolant concentration
- inspection procedures for cooling systems, including:
 - coolant concentration test
 - transient voltage test
 - cooling system components
 - cooling system pressure testing
- service and adjustment procedures for cooling systems, including:
 - system cleaning
 - coolant replacement
 - cooling system bleeding
- post-service testing procedures for cooling systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the cooling systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- workplace instructions
- manufacturer cooling system specifications
- two different vehicles or machinery with cooling systems requiring servicing
- cooling system test equipment
- tools, equipment and materials appropriate for inspecting and servicing cooling systems.

AURTTTC002 Repair radiators

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair radiators. It involves preparing for the task, cleaning, inspecting, repairing and performing post-repair testing on radiators, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The radiators include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Cooling Systems

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to undertake radiator repairs	1.1 Job requirements are determined from workplace instructions 1.2 Information, procedures and methods are sourced and analysed

Assessment Requirements for AURTTC002 Repair radiators

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair three different radiators, in which the work must involve the following materials:
 - aluminium
 - copper
 - plastic.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing radiators, including procedures for:
 - using heating and welding equipment
 - working with corrosive cleaning agents
- environmental requirements, including procedures for trapping, storing and disposing of coolant released from radiators
- application, purpose and operation of radiators, including:
 - aluminium, copper and plastic radiators
 - cooling system, heater core and intercoolers
- dismantling procedures for aluminium, copper and plastic radiators
- cleaning, inspecting and testing procedures for aluminium, copper and plastic radiators, including:
 - visual inspection
 - pressure testing
 - tank testing
- repair procedures for aluminium, copper and plastic radiators, including soldering

- post-repair procedures for radiators, including pressure testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the radiators that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- three different radiators made of the materials specified in the performance evidence and requiring repair
- tools, equipment and materials appropriate for repairing radiators.

AURTTTC003 Diagnose and repair cooling systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the cooling systems of vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The cooling systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Assessment Requirements for AURTTC003 Diagnose and repair cooling systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different cooling systems, in which the work must involve:
 - removing and refitting or replacing all of the following components:
 - radiator
 - water pump
 - engine core plugs
 - removing and refitting or replacing two of the following components:
 - thermostat
 - radiator hoses and heater hoses
 - heater core
 - heater valve
 - heat exchanger
 - engine fan system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing cooling systems, including procedures for handling hot pressurised cooling systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from cooling systems
- operating principles of cooling systems and associated components, including:

- effects of heat, including changes of temperature, colour, state and volume of substances
- heat transfer, including conduction, convection and radiation
- air cooled systems
- liquid cooled systems
- application, purpose and operation of the following components of cooling systems and components, including:
 - engine coolant types and composition
 - water pumps
 - thermostats and bypass systems
 - mechanical, hydraulic, pneumatic and electric cooling fan systems
 - radiators and radiator caps
 - heat exchangers
 - expansion tanks
 - hoses
 - drive belts
 - temperature sensors and gauges
- diagnostic testing procedures for cooling systems, including testing procedures for:
 - effects of corrosion, cavitation and electrolysis
 - transient voltage
 - engine coolant
 - cooling system pressure
 - combustion leak
 - cooling fan system
 - thermostat
 - infra-red thermal devices
 - cooling system hose
 - water pump
- repair procedures for cooling systems, including procedures for bleeding coolant systems
- post-repair testing procedures for cooling systems, including:
 - fan system operation
 - thermostat operation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the cooling systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer cooling system specifications
- two different vehicles or machinery with cooling system faults
- diagnostic equipment for cooling systems
- tools, equipment and materials appropriate for repairing cooling systems.

AURTTTC004 Remove and replace radiators

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the radiator of a vehicle. It requires the learner to plan and prepare the task; remove the radiator and inspect it and its associated components; replace the radiator; top up the cooling system and check for leaks; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Cooling Systems

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and replace radiator	1.1 <i>Safety and environmental requirements</i> are sourced and interpreted

ELEMENTS	PERFORMANCE CRITERIA
	<p>1.2 Task instruction is interpreted and vehicle radiator to be worked on is identified</p> <p>1.3 Manufacturer specifications and workplace procedures for radiator removal and replacement are sourced and interpreted</p> <p>1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.5 Tools and equipment required for removing and replacing radiator are identified according to manufacturer specifications</p>
2. Remove radiator	<p>2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements</p> <p>2.2 Vehicle is prepared for radiator removal according to workplace procedures and safety and environmental requirements</p> <p>2.3 Vehicle radiator is removed according to workplace procedures and manufacturer specifications, and without causing damage to components, tools or equipment</p> <p>2.4 Radiator and associated components are inspected according to manufacturer specifications</p> <p>2.5 Results of inspection of radiator and its associated components are recorded</p>
3. Replace radiator	<p>3.1 Radiator is prepared for replacement</p> <p>3.2 Radiator is replaced according to workplace procedures, manufacturer specifications, and safety and environmental requirements, and without causing damage to components, tools or equipment</p> <p>3.3 Cooling system is tested according to manufacturer specifications</p> <p>3.4 Cooling system test results are recorded</p>
4. Complete work processes	<p>4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use or storage according to workplace procedures</p> <p>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures</p> <p>4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information on vehicle cooling system and radiator removal and refitting procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace radiators select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information in cooling system information use specialist tools and measuring equipment correctly, including pressure testers, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. kPa for kilopascals) use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate ratios of coolant.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to remove and replace radiators.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> • use of personal protective equipment, including safety glasses, ear protection and safety footwear • use of automotive hand tools • application of procedures for handling and disposing of used coolant.
<i>Vehicle radiator</i> must include:	<ul style="list-style-type: none"> • radiator for an engine with a liquid cooling system.
<i>Cooling system is tested</i> must include:	<ul style="list-style-type: none"> • pressure-testing the cooling system.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTTC004 Remove and replace radiators

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly and safely remove and replace the radiators of at least two different vehicles or engine assemblies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - use of personal protective equipment, including safety glasses, ear protection and safety footwear
 - use of automotive hand tools and lifting equipment
 - safety data sheets (SDS) and procedures for handling and disposing of used coolant
- types, application and basic operation of radiators, including:
 - vertical flow radiators
 - cross flow radiators
 - cooling system coolants and additives
 - radiator hoses and clamps
- radiator removal procedures, including procedures for catching and storing engine coolant
- radiator and associated component inspection procedures
- radiator replacement procedures, including:
 - calculating coolant system filling and additive concentration
 - coolant system bleeding
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced radiators, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two motor vehicles or engine assemblies with engines with a liquid cooling system
- automotive hand tools and special equipment, including cooling system pressure tester.

AURTTD001 Inspect steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and test steering system components and assess their condition. It involves preparing for the task, inspecting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The steering systems are both mechanical and power assisted steering systems and include those of heavy commercial vehicles or light vehicles.

This unit applies to those inspecting steering systems prior to conducting a wheel alignment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect steering system	1.1 Job requirements are determined from workplace instructions 1.2 Inspection information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect steering system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking inspection procedures and specifications relating to steering systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out documentation when reporting inspection findings and making recommendations.

Skills	Description
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings to appropriate personnel.
Numeracy skills to:	<ul style="list-style-type: none"> compare component wear against manufacturer specifications and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Problem solving skills to:	<ul style="list-style-type: none"> refer problems outside area of responsibility to appropriate person.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Inspection</i> must include:	<ul style="list-style-type: none"> visual, aural and functional assessments of mechanical, hydraulic and electrical steering system components, including for damage, corrosion, wear and leakage.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for lifting and supporting vehicles.

Assessment Requirements for AURTTD001 Inspect steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect the following components of two different vehicle steering systems:
 - hydraulic components
 - steering column and couplings
 - steering linkages.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting steering systems, including procedures for lifting and supporting vehicles
- identification and function of major steering components, including:
 - steering wheel, column and couplings
 - rack and pinion
 - steering box
 - power steering pump, pipes and hoses
 - steering linkages, including:
 - ball joints
 - tie rods and tie rod ends
 - idler arms
 - connecting rod, track rod or drag link
 - pitman arms

- steering arms
- king pins
- basic operation of steering systems, including:
 - manual steering systems
 - power assisted steering systems
 - electronically controlled systems
- inspection and reporting procedures for steering systems and components, including:
 - component wear analysis
 - fluid leaks.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the steering systems that they have inspected, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer steering system specifications
- two different vehicles with steering systems requiring inspection prior to wheel alignment
- tools, equipment and materials appropriate for inspecting steering systems.

AURTTD002 Inspect and service steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service steering systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The steering systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service steering system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect steering system	2.1 <i>Inspection</i> is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service steering system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to steering systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> compare component wear and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Problem solving skills to:	<ul style="list-style-type: none"> refer problems outside area of responsibility to appropriate person.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Inspection</i> must include:	<ul style="list-style-type: none"> inspecting for: <ul style="list-style-type: none"> wear oil and fluid leaks physical damage.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for isolating and stabilising vehicles or machines environmental requirements, including procedures for trapping, storing and disposing of oil and fluid released from steering systems.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the steering systems of two different vehicles or machinery, including one of the following:
 - manual steering
 - electric power assisted steering
 - hydraulic power assisted steering
 - full hydraulic steering.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing steering systems, including procedures for isolating and stabilising vehicles or machines
- environmental requirements, including procedures for trapping, storing and disposing of oil and fluid released from steering systems
- identification, function and basic operation of steering systems, including:
 - manual steering
 - electric power assisted
 - hydraulic power assisted steering
 - full hydraulic steering
- identification and function of major steering components
- types and applications of lubricants and hydraulic fluids
- inspection procedures for steering systems, including:

- component wear analysis
- oil and fluid leaks
- physical damage
- service and adjustment procedures for steering systems, including:
 - adjusting and replenishing oil and fluid levels as required
 - lubricating components
- post-service testing procedures of steering systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the steering systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer steering system specifications
- two different vehicles or machinery with the steering systems specified in the performance evidence and requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing steering systems.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect the front and rear suspension systems of two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting suspension systems, including procedures for:
 - lifting and supporting vehicles
 - working with stored energy in springs and accumulators
- identification and function of major front and rear suspension components, including:
 - control arms, bushes, links and rods
 - ball joints
 - struts and springs
 - leaf springs, hangers and shackles
 - torsion bars
 - air suspension
 - shock absorbers
 - height control systems
- basic operation of front and rear suspension systems
- inspection and reporting procedures for suspension systems and components, including:
 - component wear analysis
 - fluid leaks.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

AURTTD005 Overhaul steering system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return steering system components to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the steering system components, carrying out the overhaul procedures, reassembling and testing the components, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The steering systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery or outdoor power equipment. The unit does not apply to the steering systems of motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Assessment Requirements for AURTTD005 Overhaul steering system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the following steering system components:
 - two different power steering pumps
 - one of the following components:
 - power rack and pinion steering box
 - steering column
 - recirculating ball steering box.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling steering system components, including procedures for using:
 - specialised steering system component overhaul tools, equipment and machinery
 - chemicals and toxic substances
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from steering systems
- types, characteristics and operating principles of steering systems and associated components
- steering system component overhaul procedures, including:
 - methods for cleaning and preparing steering system components for overhaul
 - steering system component dismantling procedures
 - steering system component inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances

- steering system component repair and adjustment procedures, including:
 - power steering pumps
 - power rack and pinion steering boxes
 - steering columns
 - recirculating ball steering boxes
- steering system component assembly procedures, including procedures for measuring and calculating tolerances, and adjusting components
- post-overhaul testing procedures for steering system components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the steering system components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer steering system component specifications
- steering system components specified in the performance evidence and requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting steering system components.

AURTTD006 Remove and replace vehicle front suspension springs

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the front suspension springs of a vehicle. It requires the learner to plan and prepare the task; remove the springs and inspect them and associated components; replace the springs and check the vehicle ride height; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and	1.1 <i>Safety requirements</i> are sourced and interpreted

ELEMENTS	PERFORMANCE CRITERIA
replace vehicle front suspension springs	<p>1.2 Task instruction is interpreted and vehicle suspension to be worked on is identified</p> <p>1.3 Manufacturer specifications and workplace procedures for removing and replacing suspension springs are sourced and interpreted</p> <p>1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.5 Tools and equipment required for suspension spring removal and replacement are identified according to manufacturer specifications</p>
2. Remove and inspect front suspension springs	<p>2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements</p> <p>2.2 Vehicle is prepared for suspension springs removal according to workplace procedures and safety requirements</p> <p>2.3 Front suspension springs are removed according to workplace procedures and safety requirements, and without causing damage to components, tools or equipment</p> <p>2.4 Front suspension spring components are arranged, identified and inspected according to manufacturer specifications</p> <p>2.5 Results of inspecting front suspension spring components are recorded</p>
3. Replace front suspension springs	<p>3.1 Front suspension components are prepared for assembly</p> <p>3.2 Front suspension is assembled according to workplace procedures, manufacturer specifications and safety requirements, and without causing damage to components, tools and equipment</p> <p>3.3 Vehicle ride height is checked according to manufacturer specifications</p>
4. Complete work processes	<p>4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use or storage according to workplace procedures</p> <p>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures</p> <p>4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance criteria and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle suspension system information and suspension spring removal and replacement procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace vehicle front suspension springs select and interpret key information from workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information in suspension system information use specialist tools and measuring equipment correctly, including tape measures, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) use basic mathematical operations, including addition and subtraction to calculate length.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to remove and replace vehicle front suspension springs.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> • information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> • use of personal protective equipment, including safety glasses, ear protection and safety footwear • use of hand tools and lifting equipment.
<i>Tools, equipment and materials</i> must include:	<ul style="list-style-type: none"> • automotive hand tools • lifting and supporting equipment • related special tools, including spring compressors.
<i>Front suspension spring</i> must include:	<ul style="list-style-type: none"> • front suspension springs from one of the following: <ul style="list-style-type: none"> • passenger or light commercial vehicle • motor cycle • constructed vehicle.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTD006 Remove and replace vehicle front suspension springs

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace the front suspension springs of at least two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
 - dangers of working with stored energy in suspension springs
 - use of personal protective equipment, including safety glasses, ear protection and safety footwear
 - use of hand tools and lifting and supporting equipment
- types, application and basic operation of front suspension springs, including:
 - MacPherson strut
 - coil springs
- suspension spring removal procedures, including procedures for compressing springs
- suspension spring and associated component inspection procedures
- suspension spring replacement procedures, including ride height measurement procedures
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced front suspension springs, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two vehicles with complete front suspension assemblies
- tools and special equipment, including lifting and supporting equipment.

AURTTD007 Remove and replace steering assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the steering assemblies of a vehicle. It requires the learner to plan and prepare the task; remove the steering assembly and inspect it and its associated components; replace the steering assembly; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and replace a steering	1.1 <i>Safety and environmental requirements</i> are sourced and interpreted

AURTTE001 Apply knowledge of engine science

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply knowledge of the construction and operation of engines and their components during engine repair or reconditioning activities. It involves identifying engine components and describing their function.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify relevant information of engine	1.1 Components of engine are identified during repair or reconditioning activities

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
construction and operation	<p>1.2 Functions of engine components are identified during repair or reconditioning activities</p> <p>1.3 Relationships between engine components, including effects on other components' tolerances and clearances, are identified during repair or reconditioning activities</p> <p>1.4 Engine configurations are identified during repair or reconditioning activities</p>
2. Apply relevant information of engine construction and operation to work activities	<p>2.1 Knowledge of engine construction and operation is used during repair or engine reconditioning activities to carry out work according to manufacturer specifications and workplace procedures</p> <p>2.2 Knowledge of engine diagnosis is used during repair or reconditioning activities to identify causes of engine component wear or failure</p>
3. Evaluate knowledge of engine science	<p>3.1 Knowledge of engine science is regularly checked with colleagues and supervisor to ensure currency and accuracy</p> <p>3.2 Knowledge of engine science is updated as required to complement own work role</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate engine reconditioning procedures and engine specifications in workshop and manufacturer literature efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret technical information and terminology found in workshop manuals and automotive textbooks relating to engines.
Communication skills to:	<ul style="list-style-type: none"> discuss interpretation of engine science with colleagues and supervisor using listening skills and correct industry terminology.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numbers and units in information relating to engines in workshop manuals and automotive textbooks use basic mathematical operations, including addition,

Skills	Description
	subtraction and multiplication, to calculate engine dimensions <ul style="list-style-type: none">• use simple formulas, such as $A = \pi r^2$• interpret numbers and units used with measuring equipment, such as compression gauges and cylinder leakage testers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURTTE001 Apply knowledge of engine science

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria and foundation skills:

- apply knowledge of engine science to three different multi-cylinder engines when diagnosing and repairing engine faults or reconditioning engine components
- evaluate and expand knowledge of engine science, including demonstrating knowledge of one of the following:
 - new repair or reconditioning procedure
 - new engine technology
 - new reconditioning machine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- classifications of engines, including:
 - internal and external combustion
 - rotary and reciprocating engines
 - spark ignition and compression ignition engines
 - engine cylinder arrangements
- engine configurations, including:
 - inline engines, V type engines and slant cylinder engines
 - opposed cylinder engines
- camshaft and valve locations, including:
 - overhead cam (OHC)
 - overhead valve (OHV)

- engine operating principles, including:
 - combustion, including:
 - air to fuel ratios and flame propagation
 - direct and indirect fuel injection
 - detonation and pre-ignition
 - two-stroke and four-stroke cycles
- procedures for measuring engines and engine performance, including:
 - bore and stroke, including:
 - over square, square and under square engines
 - crank throw
 - swept volume and engine volume
 - compression ratio
 - engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency
 - torque and horsepower, including brake horsepower
- construction and operation of petrol engines, including:
 - basic metallurgy relating to engines
 - identification of metric and imperial threads
 - engine components, including cylinder blocks, cylinders, pistons, cylinder heads, combustion chambers, inlet and exhaust manifolds, connecting rods, crankshafts, piston rings, gudgeon pins, camshafts, cams and flywheels
- combustion chambers, including:
 - L head, bathtub, wedge, trapezoidal, hemispherical and heron-type shapes
 - multiple valve designs
- construction and operation of diesel engines, including:
 - direct and indirect injection
 - swirl chambers
 - pre-combustion chambers
- engine diagnosis, including:
 - wet and dry compression tests
 - cylinder leakage tests
 - cylinder power balance tests
 - vacuum tests
 - oil pressure tests
 - sources of fluid leaks
 - exhaust smoke diagnosis
- engine noise diagnosis, including procedures for identifying:
 - common engine noises
 - common abnormal combustion noises
- procedures for expanding knowledge, including location and content of:

- technical literature relating to engine science
- technical information relating to new and emerging engine technologies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine science they have applied to engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- three different multi-cylinder engines
- technical literature relating to engine science.

AURTTE003 Remove and tag engine system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, remove and tag a range of engine components. It involves preparing for the work, removing and tagging engine components prior to engine dismantling by title, job number and engine application, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation for entering the automotive retail, service and repair industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTE003 Remove and tag engine system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and tag five of the following components from one engine:
 - intake manifold
 - exhaust manifold
 - starter motor
 - alternator
 - ignition components
 - fuel system components
 - turbocharger
 - power steering pump
 - hydraulic pump.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and tagging engine system components, including procedures for working with oils and fluids
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from engines
- identification and basic function of the engine system components specified in the performance evidence
- procedures for removing and tagging engine system components, including:
 - component removal

- component inspection
- component tagging, including key information required on tags
- component storage.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine components that they have removed and tagged, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer engine component specifications
- one engine with the components specified in the performance evidence requiring removal and tagging
- tools, equipment and materials appropriate for removing and tagging engine system components.

AURTTE004 Inspect and service engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service engines. It involves preparing for the task, inspecting the engine, reporting the inspection findings, servicing and adjusting the engine, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engines include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant or motorcycles. The unit does not apply to outdoor power equipment engines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and	1.1 Job requirements are determined from workplace instructions

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
service engine	1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect engine	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service engine	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements , and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature

Skills	Description
	when seeking engine service procedures and specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> calculate liquid volumes and service schedule intervals, using mathematical operations, including addition and subtraction.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Inspection</i> must include:	<ul style="list-style-type: none"> pre- and post-service inspections for oil and fluid leaks analysing abnormal engine noises inspecting ancillary components.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with: <ul style="list-style-type: none"> rotating and hot components engine oils high energy ignition and charging systems.
<i>Service</i> must include:	<ul style="list-style-type: none"> replacing oil and oil filter.
<i>Environmental requirements</i> must include:	<ul style="list-style-type: none"> procedures for trapping, storing and disposing of fluids released from engines.
<i>Post-service testing</i> must include:	<ul style="list-style-type: none"> starting up and running engine to operating temperature checking for leaks and abnormal noises.

Assessment Requirements for AURTTE004 Inspect and service engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the engines of two different vehicles or machinery, including replacing the engine oil and filters.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing engines, including procedures for working with:
 - rotating and hot components
 - engine oils
 - high energy ignition and charging systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- identification and function of major engine components, including:
 - cylinder block and head
 - piston and connecting rod
 - crankshaft
 - valve train
 - manifolds
 - ports and reed valve
- identification and function of engine systems, including:
 - lubrication
 - cooling system

- fuel system
- air system
- basic operation of spark ignition engines and compression ignition engines, including:
 - two-stroke spark ignition engines
 - four-stroke spark ignition engines
 - four-stroke compression ignition engines
- types and applications of engine configurations, including:
 - two-stroke spark ignition engines
 - four-stroke spark ignition engines
 - four-stroke compression ignition engines
- types and applications of engine oils and filters
- inspection procedures for engines, including:
 - oil and fluid leaks
 - ancillary components, including:
 - mountings
 - belts, pulleys and hoses
- service and adjustment procedures for engines, including:
 - adjusting or replacing engine components
 - replacing oil
 - replacing filter
- post-service testing procedures for engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- workplace instructions
- manufacturer engine specifications
- two different vehicles or machinery with engines requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing engines.

AURTTE005 Overhaul engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return an engine removed from its chassis to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the engine, carrying out the overhaul procedures, reassembling and testing the engine, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry on two and four-stroke spark ignition and four-stroke compression engines. The engines include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery or motorcycles.

This unit does not apply to outdoor power equipment engines and marine outboard engines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle engine	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted 1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate engine and components	2.1 Engine and relevant components are dismantled in a logical sequence according to manufacturer and workplace procedures, and <i>safety and environmental requirements</i> , and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble engine and components	4.1 Engine is assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of engine is completed within workplace timeframes and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	process are rectified
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations and engine is presented ready for use or storage</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate sources of information for engines efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret and assess information from manufacturer and workshop literature when seeking engine specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure engine components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.

Skills	Description
Planning and organising skills to:	<ul style="list-style-type: none"> • plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> • use precision measuring equipment, such as micrometers and dial bore gauges • use specialised engine overhaul equipment, such as: <ul style="list-style-type: none"> • hones • valve and valve seat cutting machinery.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for using: <ul style="list-style-type: none"> • specialised engine overhaul tools, equipment and machinery • chemicals and toxic substances • manual and mechanical lifting equipment • environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines.

Assessment Requirements for AURTTE005 Overhaul engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul two different multi-cylinder engines, including one engine with cylinder sleeves.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling engines and associated components, including procedures for:
 - using personal protective equipment (PPE) when handling engines and using chemical cleaning agents
 - using slings, chains and other lifting equipment and machinery
 - using specialised equipment, including heating torches, ovens and presses
 - handling freezing substances, including liquid nitrogen
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- types, characteristics and operating principles of engines and associated engine components
- engine overhaul procedures, including:
 - methods for cleaning and preparing engine for overhaul
 - engine dismantling procedures
 - engine and engine component inspection, measuring and evaluation procedures, including:
 - non-destructive testing procedures, including dye penetrant testing and magnetic particle testing
 - methods for measuring and calculating tolerances and clearances

- engine and engine component repair and adjustment procedures, including:
 - engine cylinder head and block machining
 - engine crankshaft and camshaft grinding
 - engine cylinder and engine sleeve fitting, boring and honing
 - engine bearing tunnel and connecting rod repair
 - engine component heat treating, straightening and reclamation
 - engine component balancing
- engine assembly procedures, including procedures for tolerance measuring and calculating and adjusting components, including:
 - piston to connecting rod big-end alignment
 - big-end bearing to crankshaft journal clearance
 - big-end bearing crush with bearing blue
 - piston ring end gap, back clearance and side clearance
 - main bearing to crankshaft journal clearance
 - main bearing crush with bearing blue
 - semi-flanged thrust bearings to crankshaft clearance
 - finished camshaft bearings to camshaft clearance
 - camshafts and cam followers
 - camshaft end float
 - crankshaft end float
 - gear backlash
 - oil pump sealing and pick-up oil piping
- component assembly procedures and processes, including:
 - welsh plugs and oil gallery plugs
 - piston and connecting rod assemblies
 - big-end bearings
 - piston rings to pistons
 - main bearings and thrust washers
 - semi-flanged thrust bearings
 - crankshafts, including protection measures for crankshaft journals, bearings, rings and bores
 - finished camshaft bearings
 - camshafts and cam followers
 - timing gears
 - chains and tensioners
 - oil pumps, oil squirters and oil pump pick-ups
 - balance shafts
 - fitting ancillary components, including covers and seals, housings, diesel fuel injection pumps, oil coolers, crankshaft pulleys, flywheels and bell housings
- post-overhaul testing procedures for engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- two different multi-cylinder engines requiring overhaul, including an engine with cylinder sleeves
- tools, equipment and materials appropriate for overhauling and adjusting engines.

AURTTE006 Remove and replace conventional engine assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the conventional engine assembly of a vehicle. It requires the learner to plan and prepare the task; remove the engine and inspect the associated components; replace the engine and check its operation; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Engines

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Plan and prepare for engine removal and	1.1 <i>Safety and environmental requirements</i> are sourced and interpreted

ELEMENTS	PERFORMANCE CRITERIA
replacement	<p>1.2 Task instruction is interpreted and vehicle to be worked on is identified</p> <p>1.3 Manufacturer specifications and workplace procedures for engine removal and replacement are sourced and interpreted</p> <p>1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.5 Tools and equipment required for engine removal and replacement are identified according to manufacturer specifications</p>
2. Remove engine assembly and inspect engine and associated components	<p>2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and workplace safety procedures</p> <p>2.2 Vehicle is prepared for engine removal according to workplace procedures and safety and environmental requirements</p> <p>2.3 Engine and associated components are identified and inspected according to manufacturer specifications</p> <p>2.4 Engine is removed according to workplace procedures, manufacturer specifications and safety requirements, and without causing damage to components, tools or equipment</p> <p>2.5 Engine and associated component inspection results are recorded</p>
3. Replace engine assembly	<p>3.1 Engine and associated components are prepared for assembly</p> <p>3.2 Engine is replaced according to workplace procedures, manufacturer specifications and safety requirements, and without causing damage to components, tools or equipment</p> <p>3.3 Engine fluid levels are checked and topped up with the appropriate lubricant and coolant according to manufacturer specifications and procedures</p> <p>3.4 Engine and vehicle is tested for correct operation</p>
4. Complete work processes	<p>4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and engine or vehicle is presented ready for use</p> <p>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures</p> <p>4.3 Tools and equipment are checked and stored in a condition ready for use according to workplace procedures, or tagged and reported where necessary</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance criteria and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of engine information and engine removal and replacement procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace engines select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information in engine information use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate ratios and volumes.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to complete engine removal and replacement.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to complete engine removal and replacement.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental</i>	<ul style="list-style-type: none"> information about key aspects of work health and safety
--	---

requirements must include:	(WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> • use of personal protective equipment, including safety glasses, ear protection and safety footwear • use of hand tools and lifting equipment • collection and disposal of used engine lubricants and coolant.
Tools and equipment must include:	<ul style="list-style-type: none"> • engine lifting equipment and related special tools.
Engine and associated components must include:	<ul style="list-style-type: none"> • cooling system components • electrical system components • exhaust system components • fuel system components.
Engine must include:	<ul style="list-style-type: none"> • an engine in a front engine, rear wheel drive vehicle.

Assessment Requirements for AURTTE006 Remove and replace conventional engine assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace at least one engine assembly from a conventional rear wheel drive vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - use of safety glasses, ear protection and safety footwear
 - use of engine lifting equipment
 - collection and disposal of used engine lubricants and coolant
- types, application and basic operation of engines, including:
 - multi-cylinder configurations
 - petrol and diesel classifications
 - engine lubrication requirements, including types and classifications of engine lubricants
- engine assembly removal procedures
- engine assembly and associated component inspection procedures, including procedures for inspecting:
 - cooling system components
 - electrical system components
 - exhaust system components
 - fuel system components
- engine assembly replacement procedures, including pre-startup checks and post-startup checks

- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced the engine assembly, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- an operable vehicle with rear wheel drive
- automotive tools, engine assembly lifting equipment and attachments
- engine oil
- engine coolant.

Unit Sector

Technical - Engines

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to dismantle and	1.1 <i>Safety and environmental requirements</i> are sourced and

ELEMENTS	PERFORMANCE CRITERIA
re-assemble a single cylinder four-stroke petrol engine	<p>interpreted</p> <p>1.2 Task instruction is interpreted and engine to be worked on is identified</p> <p>1.3 Manufacturer specifications and workplace procedures for engine dismantle and assembly are sourced and interpreted</p> <p>1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.5 Tools and equipment required for dismantling and assembling four-stroke petrol engine are identified according to manufacturer specifications</p>
2. Dismantle engine and clean its components	<p>2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements</p> <p>2.2 Engine is cleaned according to manufacturer specifications and workplace procedures</p> <p>2.3 Engine is dismantled without causing damage to components, tools or equipment</p> <p>2.4 Engine components are cleaned and arranged for identification according to workplace procedures</p>
3. Identify, inspect and measure engine components	<p>3.1 Measuring equipment and tools are selected and checked according to manufacturer specifications and workplace safety procedures</p> <p>3.2 Engine components are measured and results compared against manufacturer specifications</p> <p>3.3 Engine bearing information is sourced and interpreted, and engine bearing type and associated loads are identified</p> <p>3.4 Information on engine seals, sealants and gaskets is sourced and interpreted, and engine seals, sealants and gaskets are identified</p> <p>3.5 Engine component inspection results are recorded</p>
4. Inspect engine cooling system and components and identify type	<p>4.1 Information on the function, type, and components of cooling system is sourced and interpreted</p> <p>4.2 Cooling system components are identified and inspected according to manufacturer specifications</p> <p>4.3 Cooling system component inspection results are recorded</p>
5. Re-assemble engine and perform operational tests	<p>5.1 Engine components are prepared for assembly according to manufacturer specifications and safety and environmental requirements</p> <p>5.2 Engine is assembled according to manufacturer specifications, and without causing damage to components, tools and equipment</p> <p>5.3 Engine is tested for correct assembly and operation</p> <p>5.4 Engine assembly and testing procedures are recorded</p>

ELEMENTS	PERFORMANCE CRITERIA
6. Complete work processes	<p>6.1 Final inspection is made to ensure work meets task instruction and workplace standards, and engine is presented ready for use or storage according to workplace procedures</p> <p>6.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures</p> <p>6.3 Tools and equipment are checked and stored in a condition ready for use according to workplace procedures, or tagged and reported where necessary</p> <p>6.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle engine information and engine dismantle and reassembly procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely dismantle and assemble a single cylinder four-stroke engine select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information in engine information use specialist tools and measuring equipment correctly, including verniers and micrometers, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate clearances and ratios.

Skills	Description
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> use of safety glasses, ear protection and safety footwear use of engine dismantling and re-assembly equipment collection and disposal of used engine lubricants and coolant.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> micrometers and other measurement instruments torque wrench.
<i>Engine</i> must include one or more of the following:	<ul style="list-style-type: none"> operational single cylinder four-stroke petrol engine with air/direct cooling complete engine assembly with carburettor, manifold, ignition system and flywheel.

Assessment Requirements for AURTTE007 Dismantle and assemble single cylinder four-stroke petrol engines

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle and assemble at least two different single cylinder four-stroke petrol engines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - use of safety glasses, ear protection and safety footwear
 - use of engine dismantling and re-assembly equipment
 - collection and disposal of used engine lubricants and coolant
- types of engines and engine operating principles for:
 - four and two-stroke engines
 - single and multi-cylinder configuration
- construction and operating principles of single cylinder four-stroke engine and functions of their major components
- functions of the lubricating system
- components of the lubricating system and their function
- functions of the cooling system
- components of the cooling system and their functions
- types and application of:
 - seals
 - gaskets
 - bearings
- dismantling procedures for engines, including:
 - bolt loosening sequences

- procedures for noting component positions
- measurement and calculation methods for:
 - piston to bore and connecting rod bearing clearance
 - swept volume
 - clearance volume
 - compression ratio and engine capacity
- reassembly procedures for engines, including:
 - bolt tightening sequences and torque requirements
 - piston ring compression procedures
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engines that they have dismantled and assembled, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two different single cylinder four-stroke petrol engines
- tools and measuring instruments, including lifting equipment.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to dismantle and	1.1 <i>Safety and environmental requirements</i> are sourced and

ELEMENTS	PERFORMANCE CRITERIA
re-assemble a multi-cylinder four-stroke petrol engine	<p>interpreted</p> <p>1.2 Task instruction is interpreted and engine to be worked on is identified</p> <p>1.3 Manufacturer specifications and workplace procedures for engine dismantle and assembly are sourced and interpreted</p> <p>1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.5 Tools and equipment required for dismantling and assembling multi-cylinder four-stroke petrol engine are identified according to manufacturer specifications</p>
2. Dismantle engine and clean its components	<p>2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements</p> <p>2.2 Engine is cleaned according to manufacturer specifications and workplace procedures</p> <p>2.3 Engine is dismantled without causing damage to components, tools or equipment</p> <p>2.4 Engine components are cleaned and arranged for identification according to workplace procedures</p>
3. Identify, inspect and measure engine components	<p>3.1 Measuring equipment and tools are selected and checked according to manufacturer specifications and workplace safety procedures</p> <p>3.2 Engine and components are measured and results compared against manufacturer specifications</p> <p>3.3 Engine bearing information is sourced and interpreted, and engine bearing type and associated loads are identified</p> <p>3.4 Information on engine seals, sealants and gaskets is sourced and interpreted, and engine seals, sealants and gaskets are identified</p> <p>3.5 Engine component inspection results are recorded</p>
4. Inspect engine cooling system and components and identify type	<p>4.1 Information on the function, type and components of cooling system is sourced and interpreted</p> <p>4.2 Cooling system components are identified and inspected according to manufacturer specifications</p> <p>4.3 Cooling system component inspection results are recorded</p>
5. Re-assemble engine and perform operational tests	<p>5.1 Information on engine seals, sealants and gaskets is sourced and interpreted</p> <p>5.2 Engine components are prepared for assembly according to manufacturer specifications and safety and environmental requirements</p> <p>5.3 Engine is re-assembled according to manufacturer specifications, and without causing damage to components, tools and equipment</p>

ELEMENTS	PERFORMANCE CRITERIA
	5.4 Engine is tested for correct assembly and operation 5.5 Engine re-assembly and testing procedures are recorded
6. Complete work processes	6.1 Final inspection is made to ensure work meets task instruction and workplace standards, and engine is presented ready for use or storage according to workplace procedures 6.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 6.3 Tools and equipment are checked and stored in a condition ready for use according to workplace procedures, or tagged and reported where necessary 6.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle engine information and engine dismantle and reassembly procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely dismantle and assemble a multi-cylinder four-stroke engine select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information in engine information use specialist tools and measuring equipment correctly, including verniers, micrometers and torque wrenches, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters)

Skills	Description
	<ul style="list-style-type: none"> use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate clearances and ratios.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> use of safety glasses, ear protection and safety footwear use of engine dismantling and re-assembly equipment collection and disposal of used engine lubricants and coolant.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> micrometers and other measurement instruments torque wrench.
<i>Engine</i> must include one or more of the following:	<ul style="list-style-type: none"> operational multi-cylinder four-stroke petrol engine with: <ul style="list-style-type: none"> 2, 4, 6 or 8 cylinder configurations overhead valve with push rods or overhead camshaft complete multi-cylinder four-stroke engine assembly with carburettor, manifold, ignition system and flywheel.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTE008 Dismantle and assemble multi-cylinder four-stroke petrol engines

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle and assemble at least two different multi-cylinder four-stroke petrol engines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - use of safety glasses, ear protection and safety footwear
 - use of engine dismantling and re-assembly equipment
 - collection and disposal of used engine lubricants and coolant
- types of engines and engine operating principles for:
 - four and two-stroke engines
 - single and multi-cylinder configuration, including straight, vee and horizontally-opposed engine configurations
- construction and operating principles of multi-cylinder four-stroke engine and functions of their major components
- functions of the lubricating system
- components of the lubricating system and their function, including:
 - sump
 - oil pumps
 - oil filters
 - oil galleries
- functions of the cooling system
- components of the cooling system and their function, including:
 - engine cooling galleries

- radiators and hoses
- thermostats
- types and applications of:
 - seals
 - gaskets
 - bearings
- dismantling procedures for engines, including:
 - bolt loosening sequences
 - procedures for noting component positions and order
- measurement and calculation methods for:
 - piston to bore and connecting rod bearing clearance
 - swept volume
 - clearance volume
 - compression ratio and engine capacity
- reassembly procedures for engines, including:
 - bolt tightening sequences and torque requirements
 - piston ring compression procedures
 - procedures for fitting pistons in bores in pairs
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engines they have dismantled and re-assembled, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two different multi-cylinder four-stroke petrol engines
- tools and measuring instruments, including lifting equipment.

AURTTE009 Remove and replace engine cylinder heads

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace an engine cylinder head. It requires the learner to plan and prepare the task; remove and dismantle the cylinder head, inspect the components, and reassemble and replace the cylinder head; check the engine operation; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Engines

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and replace an engine	1.1 <i>Safety and environmental requirements</i> are sourced and interpreted

ELEMENTS	PERFORMANCE CRITERIA
cylinder head	1.2 Task instruction is interpreted and engine assembly to be worked on is identified 1.3 Manufacturer specifications and workplace procedures for engine cylinder head removal and replacement are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Tools and equipment required for removing and replacing an engine cylinder head are identified according to manufacturer specifications
2. Remove engine cylinder head	2.1 Tools, equipment and materials are selected and checked according to manufacturer procedures 2.2 Engine cylinder head is removed according to safety and environmental requirements, and without causing damage to components, tools or equipment 2.3 Removal procedures are recorded
3. Clean, dismantle and inspect engine cylinder head	3.1 Cleaning methods and materials are selected and checked according to manufacturer specifications and workplace procedures 3.2 Engine cylinder head is cleaned according to safety and environmental requirements 3.3 Engine cylinder head is dismantled without causing damage to components, tools or equipment 3.4 Engine cylinder head and components are cleaned and arranged for identification 3.5 Engine cylinder head and components are measured and results compared against manufacturer specifications 3.6 Engine cylinder head and components inspection results are recorded
4. Reassemble and replace engine cylinder head	4.1 Engine cylinder head and components are prepared for assembly according to manufacturer specifications and safety requirements 4.2 Engine cylinder head is assembled according to manufacturer specifications and workplace procedures, and without causing damage to components, tools or equipment 4.3 Engine cylinder head is replaced onto engine assembly according to manufacturer specifications and workplace procedures, and without causing damage to components, tools or equipment 4.4 Engine is tested for correct assembly and operation
5. Complete work processes	5.1 Final inspection is made to ensure work meets task instruction and workplace standards, and engine is presented ready for use or

ELEMENTS	PERFORMANCE CRITERIA
	<p>storage according to workplace procedures</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures</p> <p>5.3 Tools and equipment are checked and stored in a condition ready for use according to workplace procedures, or tagged and reported where necessary</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle engine information and engine cylinder head removal, dismantle, reassembly and replacement procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace engine cylinder head select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information in engine information use specialist tools and measuring equipment correctly, including feeler gauges, verniers, micrometers and torque wrenches, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate length, volume, clearances and ratios.
Planning and organising	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.

Skills	Description
skills to:	
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to remove and replace an engine cylinder head.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> use of safety glasses, ear protection and safety footwear use of engine cylinder head removal, dismantling, reassembly and replacement equipment collection and disposal of used engine lubricants and coolant.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> automotive hand tools and cylinder head lifting equipment and attachments.
<i>Engine cylinder head</i> must include:	<ul style="list-style-type: none"> the cylinder head of a multi-cylinder engine assembly, including all operational fitting attachments.
<i>Engine cylinder head is dismantled</i> must include:	<ul style="list-style-type: none"> removing the valve operating mechanisms and valves from the cylinder head.
<i>Engine cylinder head is replaced</i> must include	<ul style="list-style-type: none"> correctly torquing cylinder head bolts and associated component retaining bolts

Unit Mapping Information

Assessment Requirements for AURTTE009 Remove and replace engine cylinder heads

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace at least two different cylinder heads.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - use of safety glasses, ear protection and safety footwear
 - use of cylinder head removal and replacement equipment
 - collection and disposal of used engine lubricants and coolant
- types of engines and engine operating principles for:
 - four and two-stroke engines
 - single and multi-cylinder configuration
 - petrol and diesel classification
- construction, function and operating principles of major engine components
- component lubricating systems, including:
 - principles and function
 - splash and pressure systems, including system components
- engine cooling systems, including:
 - principles and function
 - air-cooled and water-cooled systems, including system components
- types and application of:
 - seals
 - gaskets

- bearings
- measurement and calculation methods for:
 - swept volume
 - clearance volume
 - compression ratio and engine capacity
- engine cylinder head removal procedures
- engine cylinder head dismantling procedures
- engine cylinder head inspection procedures, including testing for warping
- engine cylinder reassembly procedures
- engine cylinder head replacement procedures, including methods for torquing cylinder head to engine
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having removed and replaced engine cylinder heads, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two different vehicle or stand-mounted operable engines
- tools and measuring instruments
- cylinder head lifting equipment and attachments.

AURTTF001 Inspect and service petrol fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service petrol fuel systems. It involves preparing for the task, inspecting the fuel system for leaks, inspecting the air filter, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The petrol fuel systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, motorcycles, mobile plant or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Fuel Systems

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURTTF001 Inspect and service petrol fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the petrol fuel systems of two different vehicles or machinery, including replacing their fuel filters.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing petrol fuel systems, including procedures for working with:
 - stored fuel pressure
 - flammable liquids
- environmental requirements, including procedures for:
 - trapping, storing and disposing of flammable liquids released from fuel systems
 - disposing of filters
- identification, function and basic operation of petrol fuel system components, including:
 - types and applications of fuels, including petroleum and biofuels
 - fuel tank, cap and lines
 - fuel filters
 - fuel pumps, including:
 - mechanical
 - electrical
 - carburettors
 - electronic control unit and sensors

- fuel injection system components
- accelerator pedal or control lever
- air filter and air intake housing and ducting
- inspection procedures for petrol fuel systems, including:
 - inspecting components for damage and leaks
 - inspecting air filter and air intake housing and ducting for blockage or damage
- service and adjustment procedures for petrol fuel systems, including:
 - replacing fuel filter
 - cleaning or replacing air filter and checking air intake housing and ducting for damage
 - checking and adjusting base idle speed as required
 - fuel pressure testing as required
- post-service testing procedures for petrol fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the petrol fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer petrol fuel system specifications
- two different vehicles or machinery with petrol fuel systems requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing petrol fuel systems.

Assessment Requirements for AURTTF002 Inspect and service diesel fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service a diesel fuel injection system on two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing diesel fuel injection systems, including procedures for:
 - working with high pressure diesel fuel systems
 - working with high voltage diesel fuel injectors
 - working with stored fuel pressures
 - engine start-up and shut-down
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel systems
- application, purpose and operation of air filter and air intake housing and ducting
- identification and function of mechanically controlled diesel fuel injection system and components, including:
 - types and applications of fuels, including diesel and biofuels
 - fuel tank and lines
 - fuel filters and sedimenter filters
 - fuel supply pumps
 - injection pumps, including:
 - in-line
 - rotary

- injector pipes
- injectors
- overflow or leak-off pipes
- identification and function of electronic diesel fuel injection systems and common rail fuel systems and components, including:
 - fuel tank and lines
 - fuel filters and sedimenter filter
 - fuel supply pumps
 - injection pumps
 - pressure and injector pipes
 - fuel rail
 - injectors
 - overflow or leak-off pipes
 - electronic control unit and sensors
- inspection procedures for diesel fuel injection systems, including procedures relating to leaks, damaged piping and sedimentary sight glasses
- service and adjustment procedures for diesel fuel injection systems, including:
 - servicing sedimenter filter
 - replacing fuel filter
 - bleeding fuel system as required
 - servicing air filter and air intake housing and ducting
 - engine speed adjustments as required and operational testing
- post-service testing procedures for diesel fuel injection system.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the diesel fuel injection systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer diesel fuel injection system specifications
- two different vehicles or machinery with diesel fuel injection systems requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing diesel fuel injection systems.

AURTTF003 Overhaul diesel fuel injection system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return diesel fuel injection system components to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the diesel fuel injection system components, carrying out the overhaul procedures, reassembling and testing the diesel fuel injection system components, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The diesel fuel injection systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery, marine vessels or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Fuel Systems

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle diesel fuel injection system components	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted 1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate diesel fuel injection system components	2.1 Components are dismantled in a logical sequence according to manufacturer and workplace procedures, and <i>safety and environmental requirements</i> , and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked according to manufacturer procedures 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Assemble components	<p>4.1 Components are assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements</p> <p>4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made</p> <p>4.3 Assembly of components is completed within workplace timeframes and without causing damage to other components or systems</p> <p>4.4 Post-assembly testing is carried out according to workplace procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly process are rectified</p>
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations and components are presented ready for use or storage</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate sources of information for fuel system components efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret and assess information from manufacturer and workshop literature when seeking fuel system component specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations,

Skills	Description
	and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure fuel system components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as vernier calipers and micrometers use specialised fuel system component overhaul equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for using: <ul style="list-style-type: none"> specialised fuel system component overhaul tools, equipment and machinery chemicals and toxic cleaning substances environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel injection systems.

Assessment Requirements for AURTTF003 Overhaul diesel fuel injection system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the following diesel fuel injection system components:
 - two different diesel fuel high pressure pumps
 - two different sets of diesel fuel injectors.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling diesel fuel injection system components, including procedures for using:
 - specialised fuel system component overhaul tools, equipment and machinery
 - chemicals and toxic cleaning substances
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel injection systems
- types, characteristics and operating principles of diesel fuel injection systems and associated components
- diesel fuel injection system component overhaul procedures, including:
 - methods for cleaning and preparing components for overhaul
 - component dismantling procedures
 - component inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances
 - component repair and adjustment procedures, including:
 - diesel fuel low pressure pumps

- diesel fuel high pressure pumps
- diesel fuel injectors
- component assembly procedures, including procedures for measuring and calculating tolerances, and adjusting components
- post-overhaul testing procedures for diesel fuel injection system components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the diesel fuel injection systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer diesel fuel injection system component specifications
- diesel fuel injection system components specified in the performance evidence and requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting diesel fuel injection system components.

AURTTF005 Diagnose and repair engine forced-induction systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in engine forced-induction systems. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. Forced-induction systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Fuel Systems

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair a forced-induction system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose a forced-induction system	2.1 <i>Diagnostic tests</i> are carried out according to workplace procedures and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair a forced-induction system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and system or vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Assessment Requirements for AURTTF005 Diagnose and repair engine forced-induction systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a turbocharger fault in an engine forced-induction system
- diagnose and repair a fault in two of the following components of engine forced-induction systems:
 - variable turbocharger
 - compound turbocharger
 - waste-gate actuator
 - intercooler
 - supercharger.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing engine forced-induction systems, including procedures for working with high temperature exhaust and intake system components
- operating principles of engine forced-induction systems and associated components, including volumetric efficiency
- application, purpose and operation of engine forced-induction systems and components, including:
 - turbochargers, including:
 - twin scroll
 - twin turbocharger
 - turbo compounding

- variable geometry turbocharger
- waste-gate operation
- lubrication and cooling
- intercooler operation, including air to air and water to air
- supercharger operation
- diagnostic testing procedures for engine forced-induction systems, including:
 - intake manifold pressure and vacuum testing
 - intake and exhaust system leak testing
 - turbo boost air pressure
 - intercooler pressure and temperature checks, types include air to air and air to water
 - oil supply
 - oil return to sump
 - turbocharger waste-gate testing
 - visual inspection for oil leakage
 - turbine rotating assembly end float and axial movement
- repair procedures for engine forced-induction systems, including procedures for:
 - removing and replacing turbochargers
 - testing, removing, replacing and adjusting waste-gates
- post-repair testing procedures for engine forced-induction systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine forced-induction systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

- manufacturer engine forced-induction system specifications
- one vehicle or machinery with engine forced-induction systems and a fault in turbocharger
- diagnostic equipment for engine forced-induction systems, including dial indicator, vacuum and pressure gauges, and temperature gauges
- tools, equipment and materials appropriate for repairing engine forced-induction systems.

AURTTF006 Diagnose and repair petrol carburettor systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the petrol carburettor systems of vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The petrol carburettor systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment. The unit does not apply to the electronic control of petrol fuel systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Fuel Systems

Assessment Requirements for AURTTF006 Diagnose and repair petrol carburettor systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three of the following different petrol carburettor systems fitted to different vehicles or engines:
 - one type of variable venturi carburettor
 - one type of multi-barrel carburettor
 - one simple carburettor.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing petrol carburettor systems, including procedures for working with flammable petrol fuel
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel systems
- operating principles of petrol carburettor systems and associated components, including:
 - fuel atomisation
 - air-fuel ratios and combustion cycles
 - detonation and pre-ignition
 - venturi action
- application, purpose and operation of petrol carburettor systems and components, including:
 - carburettor systems, including:
 - float system

- idle system
- fast idle system
- main system
- choke system
- power system
- accelerating system
- single barrel carburettor operation, including:
 - mixture correction, including air-bleed, compensating jet, and metering rod mixture correction
- manual and automatic choke operation
- multi-barrel carburettors, including:
 - two-barrel and four-barrel carburettors
 - two-stage carburettors, including vacuum and mechanical control of second stage
- diagnostic testing procedures for petrol carburettor systems, including:
 - fuel pump pressure, volume and vacuum testing
 - air-leak testing
 - cold-start enrichment testing
 - exhaust gas analysis
- repair procedures for petrol carburettor systems, including procedures for:
 - installing fuel pumps
 - dismantling, cleaning, repairing and reassembling carburettors
 - removing, replacing and adjusting carburettors
- post-repair testing procedures for petrol carburettor systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the carburettors that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer vehicle petrol carburettor system specifications
- three different vehicles or engines with faults in the petrol carburettor systems specified in the performance evidence
- diagnostic equipment for petrol carburettor systems, including an exhaust gas analyser,
- tools, equipment and materials appropriate for repairing petrol carburettor systems.

Assessment Requirements for AURTTF007 Overhaul carburettor fuel system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the following carburettor fuel system components:
 - two different multi-barrel carburettors
 - one of the following:
 - single barrel carburettor
 - mechanical fuel pump.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling carburettor fuel system components, including procedures for using:
 - specialised fuel system component overhaul tools, equipment and machinery
 - chemicals and toxic cleaning substances
- environmental requirements, including procedures for trapping, storing and disposing of fluids from fuel systems
- types, characteristics and operating principles of carburettor fuel systems and associated components
- carburettor fuel system component overhaul procedures, including:
 - methods for cleaning and preparing components for overhaul
 - component dismantling procedures
 - component inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances

- component repair and adjustment procedures, including:
 - mechanical fuel pumps
 - single barrel carburettors, including fixed and variable venturi
 - multi-barrel carburettors, including fixed and variable venturi
- component assembly procedures, including procedures for measuring and calculating tolerances, and adjusting components
- post-overhaul testing procedures for carburettor fuel system components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the carburettor fuel system components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer carburettor fuel system component specifications
- carburettor fuel system components specified in the performance evidence and requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting carburettor fuel system components.

AURTTJ003 Remove and replace wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace wheel and tyre assemblies. It requires the learner to plan and prepare the task; identify wheel and tyre assemblies; remove wheel and tyre assemblies; inspect components and identify their function; replace the wheel and tyre assembly; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and	1.1 <i>Safety requirements</i> are sourced and interpreted

ELEMENTS	PERFORMANCE CRITERIA
replace wheel and tyre assemblies	<p>1.2 Task instruction is interpreted and vehicle wheel and tyre assemblies to be worked on are identified</p> <p>1.3 Manufacturer specifications and workplace procedures for removing and replacing wheel and tyre assembly are sourced and interpreted</p> <p>1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.5 Tools and equipment required for wheel and tyre assembly removal and replacement are identified according to manufacturer specifications</p>
2. Remove and inspect vehicle wheel and tyre assemblies	<p>2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements</p> <p>2.2 Vehicle is prepared for wheel removal according to workplace procedures and safety requirements</p> <p>2.3 Wheel and tyre assemblies are removed according to workplace procedures and manufacturer specifications, and without causing damage to components, tools or equipment</p> <p>2.4 Wheel and tyre assemblies are identified and inspected according to manufacturer specifications</p> <p>2.5 Wheel and tyre assembly inspection results are recorded</p>
3. Replace wheel and tyre assemblies	<p>3.1 Wheel and tyre assemblies are prepared for replacement</p> <p>3.2 Wheel and tyre assemblies are replaced according to workplace procedures, manufacturer specifications and safety requirements without causing damage to components, tools or equipment</p> <p>3.3 Wheel and tyre assembly on vehicle is checked for correct operation</p>
4. Complete work processes	<p>4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle wheels and tyres are presented ready for use or storage according to workplace procedures</p> <p>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures</p> <p>4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of wheel and tyre assembly information and assembly removal and replacement procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace wheel and tyre assemblies select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret metric and imperial systems of measurement read and interpret numerical information in wheel and tyre identification codes use specialist tools correctly, including pressure gauges, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. kPa for kilopascals) use basic mathematical operations, including addition and subtraction, to calculate length.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to remove and replace wheel and tyre assemblies.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> • information about key aspects of work health and safety (WHS) and occupational health and safety (OHS) requirements, including: <ul style="list-style-type: none"> • use of personal protective equipment, including safety glasses, ear protection and safety footwear • use of hand tools and lifting and supporting equipment • application of procedures for handling wheel and tyre assemblies.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> • automotive hand tools • vehicle lifting and supporting equipment, including wheel chocks.
<i>Vehicles</i> must include one or more of the following:	<ul style="list-style-type: none"> • passenger motor vehicle • motor cycle • constructed vehicle.
<i>Wheel and tyre assemblies</i> must include:	<ul style="list-style-type: none"> • one vehicle fitted with steel wheels • one vehicle fitted with alloy wheels.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTJ003 Remove and replace wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace the wheel and tyre assemblies of at least two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
 - use of personal protective equipment, including safety glasses, ear protection and safety footwear
 - use of hand tools and lifting equipment
 - procedures for handling wheel and tyre assemblies
- types and application of wheel assemblies, including:
 - stamped or pressed steel wheels
 - alloy wheels
 - wheel studs and nuts
 - tyres, including cross-ply and radial tyres
- inspection procedures for tyre and wheel assemblies, including wheel inspection and tyre wear
- removal and replacement procedures and precautions
- tyre air pressure setting and test procedures
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced wheel and tyre assemblies, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- a vehicle fitted with steel wheels
- a vehicle fitted with alloy wheels
- automotive hand tools and lifting equipment.

AURTTJ011 Balance wheels and tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to balance automotive wheels and tyres. It involves identifying and confirming work requirements; preparing for the work; inspecting, balancing and refitting wheel and tyre assemblies; and completing workplace processes and documentation.

It applies to those working within the automotive light vehicle service and repair or light vehicle wheel alignment industry. The wheels and tyres include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery, motorcycles or trailers.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical – Wheels and Tyres

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to balance wheels and tyres	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret wheel balancing information from manufacturer specifications 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify tools, equipment and materials required for the job and examine for serviceability
2. Conduct wheel and tyre	2.1 Carry out wheel and tyre pre-balance inspection according to manufacturer specifications, workplace procedures and workplace

pre-balance inspection	health and safety requirements 2.2 Report inspection findings according to workplace procedures, including recommendations for necessary repair or replacement
3. Carry out balancing procedures	3.1 Inspect wheel balancing machine according to manufacturer specifications, workplace procedures and safety requirements 3.2 Balance wheel according to manufacturer specifications, workplace procedures and safety requirements without causing damage to wheel or tyre
4. Complete work processes	4.1 Carry out final inspection to ensure work meets workplace expectations and vehicle and wheels are ready for use 4.2 Clear work area and dispose of or recycle materials according to workplace procedures 4.3 Examine and store tools and equipment according to workplace procedures 4.4 Complete workplace documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of balancing wheels and tyres information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from manufacturer specifications and workshop literature relating to wheel balance procedures and specifications
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used
Numeracy skills to:	<ul style="list-style-type: none"> measure wheel balancing weights use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications calculate balance weights in metric and imperial units of measurement set and calibrate wheel balancing machine
Technology skills to:	<ul style="list-style-type: none"> operate wheel balance machines

Assessment Requirements for AURTTJ011 Balance wheels and tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate balancing of wheels and tyres that safely follows workplace procedures to meet required outcomes. This includes:

- balancing four different wheels and tyres, in which work must involve:
 - selecting appropriate methods and techniques to balance wheels and tyres
 - conducting wheel and tyre pre-balance inspection for damage and excessive run-out

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for balancing wheels and tyres, including:

- how to locate and interpret manufacturers specifications or equivalent information and workplace procedures for balancing wheels and tyres
- the following workplace health and safety requirements and procedures relating to balancing wheels and tyres:
 - lifting and supporting vehicles and wheels
 - working with balancing machines, including rotating components and flying objects
- environmental requirements relating to balancing wheels and tyres
- procedures for pre-balance inspection of wheels and tyres
- workplace housekeeping and documentation procedures

Wheel balancing machinery, including:

- off vehicle balancers
- on vehicle balancers

Wheel balancing equipment and concepts, including:

- tyre and wheel run-out

- static and dynamic balance
- the following out of balance effects on wheels:
 - wheel hop or tramp
 - wheel shimmy
 - vibration
 - tread wear
- types and applications of wheel weights
-

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to balancing wheels and tyres activity
 - workplace procedures relating to balancing wheels and tyres activity
 - manufacturer wheel balancing specifications or equivalent documentation
 - four different wheels and tyres for balancing
 - wheel balancing machinery
 - two different vehicles or machinery requiring wheel/tyre balancing
 - tools, equipment and materials appropriate for balancing wheels and tyres
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards

AURTTJ012 Remove, inspect and refit wheel hubs and associated brake components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to remove, inspect and refit wheel hubs and associated brake components during the rectification of faults in steering and suspension systems. It involves identifying and confirming work requirements, preparing for the task, removing and refitting the wheel hubs and associated brake components, and completing workplace processes and documentation.

This unit applies to those working within the automotive service and repair industry. The hubs and associated brake components include those of light vehicles, four wheel drive vehicles or light commercial vehicles. This unit does not involve servicing or repairing braking systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical – Wheels and Tyres

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to remove and refit wheel hubs and associated brake components	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret wheel hub and braking component removal, refitting and adjustment information 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies

	1.4 Identify tools, equipment and materials required for the job and examine for serviceability
2. Remove and inspect wheel hubs and associated brake components	<p>2.1 Identify components to be removed and remove according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements, and without causing damage to components or systems</p> <p>2.2 Inspect components according to manufacturer specifications and workplace procedures</p> <p>2.3 Report inspection findings and make recommendations for necessary repairs or replacements and adjustments according to workplace procedures</p>
3. Refit and adjust wheel hubs and associated brake components	<p>3.1 Obtain and interpret refitting information in order to identify refitting options required for the job</p> <p>3.2 Fit and adjust wheel hubs and associated brake components according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements</p> <p>3.3 Tighten wheel hub adjustment and wheel nuts according to manufacturer specifications and workplace procedures</p>
4. Complete work processes	<p>4.1 Carry out final inspection to ensure correct assembly and operation, and ensure work meets workplace expectations and vehicle is ready for use</p> <p>4.2 Clean work area and dispose of or recycle materials according to workplace procedures</p> <p>4.3 Examine tools and equipment and store according to workplace procedures</p> <p>4.4 Complete workplace documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of wheel hub and braking components information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from manufacturer specifications, workplace procedures and documentation when seeking removal, refitting and adjustment procedures and specifications
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making repair recommendations,

	and recording parts and material used
Oral communication skills to	<ul style="list-style-type: none"> clarify instructions make repair recommendations
Numeracy skills to:	<ul style="list-style-type: none"> interpret precision measuring tool scales understand numerical divisions in metric and imperial units of measurement for tensioning fasteners
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment operate fastener tensioning tools

Assessment Requirements for AURTTJ012 Remove, inspect and refit wheel hubs and associated brake components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate removing, inspecting, refitting and adjusting the following wheel hubs safely according to workplace procedures to meet required outcomes:

- one disc brake hub and associated brake components
- one drum brake hub and associated brake components

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures relating to the removal, inspection and refitting of wheel hubs and brake components, including:

- how to locate and interpret manufacturer specifications or equivalent documentation, manufacturer procedures and workplace procedures for removing, inspecting and refitting wheel hubs and associated brake components
- the following workplace health and safety requirements relating to removing, inspecting and refitting wheel hubs and associated brake components, including procedures for:
 - lifting and supporting vehicles and wheel hubs
 - handling and controlling brake dust and brake fluids
- the following environmental requirements and procedures:
 - trapping, storing and disposing of brake dust and brake fluid
- procedures for removing, inspecting, refitting and adjusting wheel hubs and associated brake components, including:
 - brake bleeding
 - brake and park brake adjustment
 - wheel bearing lubrication and adjustment
- post-fitting procedures and checks of wheel hubs and associated brake components
- workplace housekeeping and documentation procedures

Wheel hubs and associated brake components technical information, including:

- the purpose of:
 - discs, pads and brake calipers
 - drums, brake linings, wheel cylinders and hydraulic components
 - park braking devices
 - wheel bearing types
- the basic operation of the following braking systems:
 - hydraulic braking systems
 - mechanical braking systems
- the types and uses of brake hydraulic fluids and wheel bearing greases
-

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to remove, inspect and refit activity
 - workplace procedures relating to remove, inspect and refit activity
 - manufacturer specifications or equivalent documentation for wheel hubs and associated brake component
 - vehicle for removing and refitting the wheel hubs and associated brake components specified in the performance evidence
 - tools, equipment and materials appropriate for removing, inspecting and refitting wheel hubs and associated brake components
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards

-

AURTTK001 Use and maintain measuring equipment in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to select, use, maintain and store automotive measuring equipment. It involves selecting and maintaining measuring equipment, and using measuring equipment to determine length, width, angles, ovality, depth, out of square, clearances, run-out, pressure and temperature of automotive components and materials.

It applies to those working in all sectors of the automotive industry. This unit does not apply to electrical measuring equipment that measures voltage, resistance or current flow.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Tools and Equipment

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1 Select and use measuring equipment	1.1 Job requirements are determined from workplace instructions 1.2 Measuring equipment is selected to meet job requirements 1.3 Measuring equipment is checked for serviceability and calibration according to manufacturer and workplace procedures 1.4 Hazards associated with the work are identified and risks are managed 1.5 Measuring equipment is used according to manufacturer and <i>safety requirements</i>
2 Service, maintain and store measuring equipment	2.1 Measuring equipment is serviced, calibrated and maintained according to workplace and manufacturer schedules and procedures to ensure safe and accurate operation, within scope of own responsibility 2.2 Damaged, worn or inaccurate measuring equipment is tagged and removed from the workplace and reported according to workplace procedures 2.3 Remaining measuring equipment is cleaned, checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret measuring equipment information from manufacturer instruction manuals.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately tag faulty measuring equipment complete measuring equipment service and maintenance schedules.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate distance, area and volume understand metric units of measurements and decimal

Skills	Description
	increments.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including safe operating procedures for specific measuring equipment.

Equivalent to AURTTK2001 Use and maintain measuring equipment in an automotive workplace

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURTTK001 Use and maintain measuring equipment in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- use and maintain each of the following pieces of measuring equipment:
 - inside and outside micrometers
 - vernier calipers
 - dial indicators
 - steel rulers
 - squares
 - straight edges
 - feeler gauges
 - pressure gauges
 - temperature gauges.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to using and maintaining measuring equipment, including safe operating procedures for specific measuring equipment
- types, uses, limitations and operation of measuring equipment specified in the performance evidence, including:
 - using metric and imperial units of measurement
 - using analogue and digital measuring equipment
- procedures for selecting measuring equipment suitable to job requirements
- identification and tagging procedures for faulty measuring equipment

- basic maintenance, adjustment, calibration and storage procedures for measuring equipment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the measuring equipment that they have used and maintained, e.g. repair orders with calculated tolerances.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- measuring equipment specified in the performance evidence requiring maintenance
- vehicles, components or materials that require the use of automotive measuring equipment
- material relevant to maintaining automotive measuring equipment, including:
 - measuring equipment operating instructions or manuals
 - relevant measuring equipment and adjusting or calibration equipment
 - tagging material.

Unit Mapping Information

Equivalent to AURTTK2002 Use and maintain workplace tools and equipment

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURTTK002 Use and maintain tools and equipment in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- use and maintain the following workplace tools and equipment:
 - five different hand tools
 - two different power tools
 - two different air tools
 - one piece of vehicle lifting equipment
 - one piece of vehicle supporting equipment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to using and maintaining workplace tools and equipment, including procedures for:
 - using specific tools and equipment
 - selecting and using personal protective equipment (PPE)
- types, uses, limitations and operating procedures for hand and power tools, including:
 - sockets and ratchets
 - spanners, including ring spanners, open-ended spanners, combination spanners and flare nut spanners
 - wrenches, including torque wrenches and adjustable wrenches
 - oil filter removal tools
 - allen keys

- screwdrivers, including impact screwdrivers
- pliers, including combination, adjustable, long nose, snap ring, side cutting and vice grip pliers
- hammers
- chisels and punches
- hacksaws
- files
- bench grinders
- presses
- impact guns
- air ratchets and blowguns
- types, characteristics, uses and limitations of workplace equipment, including:
 - vehicle lifting and supporting equipment, including:
 - jacks, including air jacks
 - jack stands
 - vehicle hoists
 - fasteners, including:
 - bolts
 - washers
 - nuts
 - studs
 - screws
 - specialised tools, including:
 - screw extractors
 - stud installation and removal tools
 - gear and bearing pullers
 - sealing and adhesive equipment
- procedures for selecting tools and equipment
- identification and tagging procedures for faulty tools and equipment
- basic maintenance and storage procedures for tools and equipment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the tools and equipment that they have used and maintained, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- workplace hand and power tools and equipment as specified in the performance evidence
- PPE required to use workplace tools and equipment
- vehicles, components or materials that require the use of tools and equipment
- material relevant to maintaining workplace tools and equipment, including:
 - tool and equipment operating instructions or manuals
 - relevant tool and equipment adjusting or calibration equipment
 - tagging material.

AURTTL001 Inspect and service CNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service compressed natural gas (CNG) fuel systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The CNG fuel systems include those of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Alternative Fuels

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service CNG fuel system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with work are identified and risks are managed according to <i>safety and environmental requirements</i> 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect CNG fuel system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, safety requirements, and AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service CNG fuel system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, AS/NZS 2739, and safety and environmental requirements, and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or system is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to CNG fuel systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate service schedule intervals.
Problem solving skills to:	<ul style="list-style-type: none"> refer problems outside area of responsibility to appropriate person.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> working with a lighter-than-air flammable gas avoiding cold burns storing CNG environmental requirements, including procedures for preventing loss of gas to atmosphere.

Assessment Requirements for AURTTL001 Inspect and service CNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following compressed natural gas (CNG) fuel systems:
 - two different light vehicle CNG fuel systems
- or
- two different heavy commercial vehicle CNG fuel systems
- or
- two different forklift CNG fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing CNG fuel systems, including procedures for:
 - working with a lighter-than-air flammable gas
 - avoiding cold burns
 - storing CNG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- licensing requirements for working on CNG systems
- identification and function of CNG fuel system components
- basic operation of CNG fuel systems
- requirements of AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- inspection procedures for CNG fuel systems, including:

- leakage check
- CNG container identity
- container life
- container recertification date
- container corrosion and damage
- container attachment
- automatic fuel shut-off device
- manual valves
- compartment and sub-compartment refuelling connection
- refuelling interlock device
- flexible piping and hoses
- ground clearances
- vehicle identification, including identification markers
- service and adjustment procedures for CNG fuel systems, including checking compliance of fuel system emissions
- post-service testing procedures for CNG fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle CNG fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- ASNZS 2739 Natural gas (NG) fuel systems for vehicle engines
- manufacturer servicing schedules and vehicle CNG fuel system specifications
- vehicles and machinery specified in the performance evidence with operating CNG fuel systems requiring servicing

- tools, equipment and materials appropriate for inspecting and servicing CNG fuel systems.

AURTTL002 Diagnose and repair CNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the compressed natural gas (CNG) fuel systems of vehicles or machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The unit applies to CNG fuel systems in agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Alternative Fuels

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair CNG fuel system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose CNG fuel system	2.1 Diagnostic tests are performed according to workplace procedures and <i>safety and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair CNG fuel system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, safety and environmental requirements, and AS/NZ 2739 Natural gas (NG) fuel systems for vehicle engines, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures and AS/NZ 2739 to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace expectations 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two vehicles with different compressed natural gas (CNG) fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing CNG fuel systems, including procedures for:
 - working with extremely cold and flammable gas
 - storing CNG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- key requirements of AS/NZ 2739 Natural gas (NG) fuel systems for vehicle engines
- application, purpose and operating principles of CNG fuel systems and associated components, including:
 - mixers
 - regulators
 - fuel lock-off valves
 - filters
 - tanks
 - control valves and switches
- diagnostic testing procedures for CNG fuel systems, including:
 - mixers

- regulators
- fuel lock-off valves
- electronic control valves and switches
- repair procedures for CNG fuel systems, including procedures for removing, replacing and adjusting the systems
- post-repair testing procedures for CNG fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Assessment Requirements for AURTTL004 Inspect and service LNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following liquefied natural gas (LNG) fuel systems:
 - two different light vehicle LNG fuel systems

or

- two different heavy commercial vehicle LNG fuel systems

or

- two different forklift LNG fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing LNG fuel systems, including procedures for:
 - working with a lighter-than-air flammable gas
 - avoiding cold burns
 - storing LNG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- licensing requirements for working on LNG systems
- identification and function of LNG fuel system components
- basic operation of LNG fuel systems
- requirements of AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- inspection procedures for LNG fuel systems, including:

- leakage check
- LNG container identity
- container life
- container recertification date
- container corrosion and damage
- container attachment
- automatic fuel shut-off device
- manual valves
- compartment and sub-compartment refuelling connection
- refuelling interlock device
- flexible piping and hoses
- ground clearances
- vehicle identification, including identification markers
- service and adjustment procedures for LNG fuel systems, including checking compliance of fuel system emissions
- post-service testing procedures for LNG fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle LNG fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- manufacturer servicing schedules and vehicle LNG fuel system specifications
- vehicles and machinery specified in the performance evidence with operating LNG fuel systems requiring servicing

- tools, equipment and materials appropriate for inspecting and servicing LNG fuel systems.

AURTTL005 Diagnose and repair LNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the liquefied natural gas (LNG) fuel systems of vehicles or machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The unit applies to LNG fuel systems in agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Alternative Fuels

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair LNG fuel system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose LNG fuel system	2.1 Diagnostic tests are performed according to workplace procedures and <i>safety and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair LNG fuel system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, safety and environmental requirements, and AS/NZ 2739 Natural gas (NG) fuel systems for vehicle engines, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures and AS/NZ 2739 to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace expectations 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret Australian standards relating to repairing LNG fuel systems interpret information from manufacturer and workshop literature when seeking LNG fuel system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure LNG fuel system components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, including exhaust gas analyser.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> working with extremely cold and flammable gas storing LNG environmental requirements, including procedures for preventing

Assessment Requirements for AURTTL005 Diagnose and repair LNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two vehicles with different liquefied natural gas (LNG) fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing LNG fuel systems, including procedures for:
 - working with extremely cold and flammable gas
 - storing LNG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- key requirements of AS/NZ 2739 Natural gas (NG) fuel systems for vehicle engines
- operating principles of LNG fuel systems and associated components
- application, purpose and operation of LNG fuel systems and components, including:
 - mixers
 - regulators
 - fuel lock-off valves
 - filters
 - tanks
 - control valves and switches
- diagnostic testing procedures for LNG fuel systems, including:
 - mixers

- regulators
- fuel lock-off valves
- electronic control valves and switches
- repair procedures for LNG fuel systems, including procedures for removing, replacing and adjusting the systems
- post-repair testing procedures for LNG fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the LNG fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer LNG fuel system specifications
- AS/NZ 2739 Natural gas (NG) fuel systems for vehicle engines
- two vehicles with different LNG fuel systems with faults
- diagnostic equipment for LNG fuel systems, including exhaust gas analyser
- tools, equipment and materials appropriate for repairing LNG fuel systems.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install one complete liquefied natural gas (LNG) fuel system in a vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing LNG fuel systems, including procedures for working with extremely cold and flammable gas
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- requirements of AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines, including:
 - containers and fuel system components
 - fuel service lines and materials
 - fuel control equipment
 - inspection, testing and commissioning requirements
- Australian standard inspection, testing and commissioning requirements
- LNG system adjustment procedures, including exhaust gas analysis
- Australian standard certification, compliance plate, and marking and label requirements.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the LNG fuel systems that they have installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- manufacturer vehicle LNG system specifications
- one vehicle requiring installation of an LNG fuel system
- LNG installation kit, including:
 - fill valve and fill hose
 - fuel container and mounting
 - service line
 - vaporiser
 - regulator
 - safety lock-off devices
 - mixers or injectors
 - associated electrical and electronic system, including selector and safety switches
 - compliance plates
- testing equipment for LNG fuel systems, including exhaust gas analyser
- tools, equipment and materials for installing LNG fuel systems.

AURTTL007 Inspect and service LPG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service liquefied petroleum gas (LPG) fuel systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The LPG fuel systems include those of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Assessment Requirements for AURTTL007 Inspect and service LPG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following liquefied petroleum gas (LPG) fuel systems:
 - two different light vehicle LPG fuel systems

or

- two different heavy commercial vehicle LPG fuel systems

or

- two different forklift LPG fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing LPG fuel systems, including procedures for:
 - working with heavier-than-air flammable gas
 - avoiding cold burns
 - storing LPG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- licensing requirements for working on LPG systems
- identification and function of LPG fuel system components
- basic operation of LPG fuel systems
- requirements of AS/NZS 1425 LP Gas fuel systems for vehicle engines

- inspection procedures for LPG fuel systems according to relevant Australian standards, including:
 - leakage check
 - fuel container life
 - container corrosion and attachment checks
 - accuracy of the automatic fuel limiter
 - operation of fuel containment system, including testing automatic fuel shut-off device
 - fuel control systems, including automatic fuel shut-off device and fuel selector
 - manual valves
 - compartment or sub-compartment
 - filler connection
 - hydrostatic relief valve
 - safety valve system
 - liquids
 - ground clearances
 - vehicle identification, including identification markers
- service and adjustment procedures for LPG fuel systems, including:
 - draining oil from converters
 - checking compliance of fuel system emissions
- post-service testing procedures for LPG fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle LPG fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install liquefied petroleum gas (LPG) fuel systems. It involves preparing for the task, selecting, installing, testing and adjusting the system for correct operation, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The LPG fuel systems include those of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install LPG fuel system	1.1 Job requirements are determined from workplace instructions 1.2 LPG fuel system installation information is sourced and interpreted 1.3 Installation options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Carry out installation activities	2.1 LPG fuel system is checked for correct application and components are checked for damage 2.2 <i>LPG fuel system components</i> are installed according to workplace procedures, manufacturer specifications, <i>safety and environmental requirements</i> and AS/NZS 1425 LP Gas fuel systems for vehicle engines, and without causing damage to components or systems 2.3 Installed <i>LPG fuel system is tested</i> for correct operation and required adjustments are made according to manufacturer specifications, workplace procedures, safety requirements, and AS/NZS 1425
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and system is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret Australian standards relating to installing LPG fuel systems interpret manufacturer and workshop literature when seeking LPG system installation procedures and specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to measure components and vehicle when calculating installation positions and material lengths interpret gauges of testing equipment.
Digital literacy skills to:	<ul style="list-style-type: none"> navigate computer programs in testing equipment and scan tools while testing and adjusting fuel system.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> determine most appropriate method of installing fuel system while meeting relevant Australian standards.
Technology skills to:	<ul style="list-style-type: none"> use specialist tooling, measuring equipment and computerised equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>LPG fuel system components</i> must include:	<ul style="list-style-type: none"> fill valve and fill hose fuel container and mounting service line vaporiser regulator safety lock-off devices mixers or injectors associated electrical and electronic system, including selector and
--	--

	<ul style="list-style-type: none"> safety switches compliance plates.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with extremely cold and flammable gas environmental requirements, including procedures for preventing loss of gas to atmosphere.
<i>Testing LPG fuel system</i> must include:	<ul style="list-style-type: none"> system leak testing exhaust gas analysis to ensure compliance with relevant emission control standards.

Assessment Requirements for AURTTL009 Install LPG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install one complete liquefied petroleum gas (LPG) fuel system in a vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing LPG fuel systems, including procedures for working with extremely cold and flammable gas
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- requirements of AS/NZS 1425 LP Gas fuel systems for vehicle engines, including:
 - containers and container sub-assemblies
 - fuel service lines
 - fuel control equipment
- Australian standard inspection, testing and commissioning requirements
- LPG system adjustment procedures, including exhaust gas analysis
- Australian standard certification, compliance plate, and marking and label requirements.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the LPG fuel systems that they have installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- AS/NZS 1425 LP Gas fuel systems for vehicle engines
- manufacturer vehicle LPG system specifications
- one vehicle requiring installation of an LPG fuel system
- LPG installation kit, including the following components:
 - fill valve and fill hose
 - fuel container and mounting
 - service line
 - vaporiser
 - regulator
 - safety lock-off devices
 - mixers or injectors
 - associated electrical and electronic system, including selector and safety switches
 - compliance plates
- testing equipment for LPG fuel systems, including exhaust gas analyser
- tools, equipment and materials for installing LPG fuel systems.

AURTTL010 Install LPG, CNG and LNG electrical control equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install liquefied petroleum gas (LPG), compressed natural gas (CNG) and liquefied natural gas (LNG) electrical control equipment. It involves identifying and confirming work requirements, preparing for the work, installing LPG, CNG or LNG electrical control equipment, testing the installed equipment, and completing work finalisation processes, including clean-up and documentation.

It applies to those working in the automotive service and repair industry. The gas fuel system electrical control equipment includes that of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install one piece of liquefied petroleum gas (LPG), compressed natural gas (CNG) or liquefied natural gas (LNG) electrical control equipment in a vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing LPG, CNG and LNG electrical control equipment, including procedures for:
 - working with extremely cold and flammable gas
 - avoiding ignition of flammable gas when working on electrical systems
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- requirements of Australian standards relating to installing LPG, CNG and LNG electrical control equipment:
 - AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
 - AS/NZS 1425 LP Gas fuel systems for vehicle engines
- properties of LP, CN and LN gases
- operating principles of LPG, CNG and LNG electrical control equipment
- post-installation testing procedures for LPG, CNG and LNG electrical control equipment, including fuel trim and exhaust gas analysis.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the LPG, CNG and LNG electrical control equipment they have installed in vehicles, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

AURTTL011 Diagnose complex faults in CNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in compressed natural gas (CNG) fuel systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The CNG fuel systems include those in vehicles from all sectors of the industry.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical Miscellaneous

Unit Sector

Assessment Requirements for AURTTL011 Diagnose complex faults in CNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in three different compressed natural gas (CNG) systems
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in CNG fuel systems, including procedures for working with lighter-than-air flammable gas
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- types of complex faults relating to CNG fuel systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- types, functions and operation of CNG fuel systems, including:
 - fuel lock-offs
 - injectors

- mixers
- metering units
- requirements of AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- testing procedures for CNG fuel systems, including:
 - component failure analysis
 - safety component operation
 - electrical control systems
 - exhaust emissions
 - on-road fuel efficiency
 - data interpretation
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in CNG fuel systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the CNG fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- manufacturer CNG fuel system specifications
- three different CNG fuel systems with complex faults
- CNG fuel system diagnostic equipment, including scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in CNG fuel systems.

AURTTL013 Diagnose complex faults in LPG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in liquefied petroleum gas (LPG) fuel systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The LPG fuel systems include those in vehicles from all sectors of the industry.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnosis requirements are determined from workplace instructions 1.2 Existence of fault in LPG fuel system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for LPG fuel system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are selected from the range of available options 2.4 Testing equipment is selected and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.2 Diagnostic findings are confirmed, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs that comply with AS/NZS 1425 LP Gas fuel systems for vehicle engines 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle or machinery is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different LPG fuel systems.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking LPG fuel system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure LPG fuel system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications use gauges and interpret units, such as kilopascals and pounds per square inch (PSI).
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers use specialised diagnostic equipment, such as: <ul style="list-style-type: none"> scan tools compression gauges vacuum gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental</i>	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety
--	---

requirements must include:	(OHS) requirements, including procedures for working with heavier-than-air flammable gas <ul style="list-style-type: none">• environmental requirements, including procedures for preventing loss of gas to atmosphere.

Assessment Requirements for AURTTL013 Diagnose complex faults in LPG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in three different liquefied petroleum gas (LPG) fuel systems
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in LPG fuel systems, including procedures for working with heavier-than-air flammable gas
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- types of complex faults relating to LPG fuel systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- types, function and operation of LPG fuel systems, including:
 - converter-mixer systems
 - injection systems

- requirements of AS/NZS 1425 LP Gas fuel systems for vehicle engines
- testing procedures for LPG fuel systems, including:
 - component failure analysis
 - safety component operation
 - electrical control systems
 - exhaust emissions
 - on-road fuel efficiency
 - data interpretation
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in LPG fuel systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the LPG fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

- AS/NZS 1425 LP Gas fuel systems for vehicle engines
- manufacturer LPG fuel system specifications
- three different LPG fuel systems with complex faults
- LPG fuel system diagnostic equipment, including:
 - scan tool
 - vacuum gauge
 - compression gauge
- tools, equipment and materials appropriate for diagnosing complex faults in LPG fuel systems.

AURTTL014 Analyse and evaluate faults in gas fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in gas fuel systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The gas fuel systems include those of agricultural machinery, heavy commercial vehicles, forklifts, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements apply to this unit. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Alternative Fuels

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for gas fuel system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Gas fuel system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process, and detailing and justifying rectification method or variation to

Assessment Requirements for AURTTL014 Analyse and evaluate faults in gas fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in:
 - a gas fuel system
 - the electrical control of a different gas fuel system
 - the electronic control of a third gas fuel system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in gas fuel systems, including procedures for working with extremely cold and flammable gas
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- principles and processes involved in planning and implementing analysis and evaluation of gas fuel system faults
- design and planning of diagnostic procedures of gas fuel system faults, including procedures for diagnosing:
 - fuel faults
 - mechanical faults
 - electrical faults
- procedures for analysing and evaluating gas fuel system faults, including:
 - system failure analysis
 - component failure analysis

- types, functions, operation and limitations of gas fuel systems, including:
 - compressed natural gas (CNG)
 - liquefied natural gas (LNG)
 - liquefied petroleum gas (LPG)
- impact of other associated vehicle systems on gas fuel system operation, including:
 - ignition system and components
 - engine and components
 - cooling system and components
 - intake system and components
 - exhaust system and components
- testing procedures for gas fuel systems, including:
 - gas system performance under load
 - safety cut-out operation
 - convertor operation
 - mixer or injector operation
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in gas fuel systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) and Australian standards relating to gas fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

AURTTL015 Develop and apply gas fuel system modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to develop, apply and validate significant modifications to existing gas fuel systems in order to vary or enhance performance. It involves identifying the modification requirement, developing the modification specifications, applying and testing the modification, and completing workplace processes and documentation.

Significant and non-routine modifications are those that require compliance with Australian Design Rules and Vehicle Safety Bulletins.

It applies to those working in the automotive service and repair industry. The gas fuel systems include those of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop and apply the following significant and non-routine modifications on the gas fuel systems of two different vehicles or machinery:
 - adapt or modify gas fuel system to a significantly changed capability
 - adapt gas fuel system for different work conditions
 - modify or install a significant gas fuel system for a special purpose.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to developing and applying gas fuel system modifications, including procedures for working with extremely cold and flammable gas
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- principles and processes involved in planning and implementing modifications to gas fuel systems
- types, functions, operation and limitations of gas fuel systems being modified, including:
 - liquefied petroleum gas (LPG)
 - compressed natural gas (CNG)
 - liquefied natural gas (LNG)
- types, functions, operation and limitations of diagnostic testing equipment required for gas fuel system modifications
- associated vehicle systems and their impact on gas fuel system operation

- requirements of Australian Design Rules (ADRs) and Vehicle Safety Bulletins (VSBs) relating to gas fuel system modifications
- procedures for documenting and reporting the modification specifications and outcomes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

AURTTM001 Operate and monitor computer numerical control machines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to operate and monitor computer numerical control (CNC) machines during machining operations of engine components as part of an engine reconditioning process. It involves preparing for the task, operating a CNC machine, selecting the appropriate program, performing machining to specifications and workplace requirements, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to operate and monitor a CNC machine	1.1 Job requirements are determined from workplace instructions 1.2 Information is sourced, procedures and methods are analysed, and appropriate options are selected for operating and monitoring CNC machine 1.3 Pre-start checks are undertaken according to manufacturer procedures 1.4 Hazards associated with the work are identified and risks are managed
2. Operate a CNC machine	2.1 Computer program is <i>selected and verified</i> according to workplace instructions 2.2 CNC machine is operated to product specifications according to workplace procedures and <i>safety and environmental requirements</i> , and following machinery safe operating procedures 2.3 Machine malfunctions are identified and reported according to workplace procedures 2.4 Machined component is checked to ensure compliance with specifications
3. Perform necessary adjustments during machining process	3.1 Tool wear is monitored and, where appropriate, pre-set tools are replaced, tool offsets are identified in computer-controlled program and adjusted, or other corrective action is taken according to manufacturer specifications and workplace procedures 3.2 Engine component deviation from specification is reported according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure finished work complies with workplace requirements and CNC machine is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 CNC machine and equipment are cleaned for use or storage according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret engine component specifications from workshop literature interpret CNC machinery safe operating procedures from operating manuals and signs.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation to record measurements.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions gain information when setting up machine operation.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts use basic mathematical operations, including addition and subtraction, to: <ul style="list-style-type: none"> convert metric dimensions to imperial, and imperial dimensions to metric calculate tolerances and clearances interpret metric and imperial increments on precision measuring equipment.
Digital literacy skills to:	<ul style="list-style-type: none"> navigate computer software, selecting and confirming options.
Problem solving skills to:	<ul style="list-style-type: none"> determine the most appropriate method of component adjustment or machining for the situation.
Technology skills to:	<ul style="list-style-type: none"> use metric and imperial precision measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Selecting and verifying</i> must include:	<ul style="list-style-type: none"> • correct speed and feed rates of tools for cast iron and aluminium.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including operational risk assessment and treatments associated with: <ul style="list-style-type: none"> • selecting and using personal protective equipment (PPE) when working with CNC machines and using chemical cleaning and lubricating agents • safe operating procedures for operating CNC machinery • environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during machining process.

Assessment Requirements for AURTTM001 Operate and monitor computer numerical control machines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- conduct computer numerical control (CNC) machining of a shape in aluminium alloy, in which the work must involve:
 - drilling and tapping four holes
 - machining a pocket in the shape
 - surface machining one face on the shape
- conduct CNC machining of a shape in cast iron, in which the work must involve:
 - drilling and tapping four holes
 - machining a pocket in the shape
 - surface machining one face on the shape.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to operating and monitoring CNC machines, including operational risk assessment and treatments associated with:
 - selecting and using personal protective equipment (PPE) when working with CNC machines and using chemical cleaning and lubricating agents
 - safe operating procedures for operating CNC machinery
- environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during machining process
- procedures for accessing computer-controlled programs installed in the machine controller, including:

- posting appropriate program to the machine
- selecting tool specified by the program and for the material to be machined
- selecting appropriate speeds and feeds
- computer-controlled machine operating procedures, including:
 - zeroing the machine axes
 - engaging warm-up procedures, and checking lubricant levels, coolant levels, and machine slide ways
 - mounting tools in tool holders
 - setting tool speed and feed rates
 - setting tool height manually
 - setting machine offset parameters to correct tool number and height
 - setting work piece datum
 - recording data in machine offsets
 - selecting dry run mode on CNC controller and single block to test program
- procedures for basic editing of computer program to reflect specific job requirements
- typical machine malfunctions, including:
 - programming
 - non-optimal speeds and feeds
 - inflexible controller
- tool wear and effect of wear on product or part specifications
- procedures to be followed once tool wear has been detected
- pre-set tool replacement procedures
- adjustment procedures for tool offsets
- effects of adjustments on machining specifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the CNC machines that they have operated and monitored, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine component specifications
- CNC machines appropriate for machining automotive engine components
- precision measuring equipment relevant to the component and work process
- cast iron and aluminium alloy shapes suitable for the CNC work specified in the performance evidence.

AURTTM002 Repair bearing tunnels and connecting rods in engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair bearing tunnels and connecting rods in engines. It involves preparing for the task, line boring and honing engine bearing tunnels, repairing connecting rods to specifications and workplace requirements in an engine reconditioning process, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Determine line boring requirements	1.1 Job requirements are determined from workplace instructions 1.2 Engine block is cleaned and main bearing bolt holes are crack tested according to workplace procedures and safety requirements 1.3 Information is sourced and repair options are analysed and those most appropriate to the circumstances are selected 1.4 Required tools and measuring equipment are checked and prepared for operation according to manufacturer specifications and workplace procedures 1.5 Hazards associated with the work are identified and risks are managed
2. Prepare engine and line boring machine	2.1 Engine is measured and <i>calibration requirements</i> for line boring are determined 2.2 <i>Engine block or cylinder head is prepared</i> for line boring according to workplace procedures and <i>safety and environmental requirements</i> 2.3 <i>Line boring machine is prepared</i> to accept cylinder engine block or cylinder head according to manufacturer specifications and workplace procedures 2.4 Engine block or cylinder head is <i>positioned and clamped</i> according to manufacturer specifications and workplace procedures
3. Line bore engine bearing tunnels	3.1 <i>Tool is set and locked</i> and a test cut is taken according to workplace procedures and safety requirements, and following machinery safe operating procedures 3.2 Engine tunnels are <i>line bored at correct speeds and feed rates</i> according to workplace procedures and safety requirements, and following machinery safe operating procedures 3.3 Line boring tool sharpness is checked and maintained throughout boring operation according to manufacturer specifications and workplace procedures 3.4 Engine block thrust faces and seal diameter are machined to original size 3.5 Tunnels are measured to ensure compliance with manufacturer specifications 3.6 Line boring operations are completed according to required <i>specifications and honing allowances</i> , workplace procedures and safety requirements, and following machinery safe operating procedures
4. Prepare to hone	4.1 Line-bored engine block or cylinder head is cleaned of residue and

	<p>block or cylinder head is prepared for further process or storage according to workplace procedures</p> <p>8.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret engine component specifications from manufacturer and workshop literature interpret machinery safe operating procedures from operating manuals and signs.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation to record measurements.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in manufacturer specifications, workshop literature, and machinery dials and gauges use basic mathematical operations, including addition and subtraction, to: <ul style="list-style-type: none"> convert metric dimensions to imperial, and imperial dimensions to metric calculate tolerances and clearances interpret numerical measurements on metric and precision measuring equipment.
Planning and organising skills to:	<ul style="list-style-type: none"> select best tooling option for the work and sequence procedure to reduce time and material wastage.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Calibration requirements</i> must include:	<ul style="list-style-type: none"> determining depths of cuts and required honing allowances determining tunnel to journal clearance.
<i>Preparing engine block or cylinder head</i> must include:	<ul style="list-style-type: none"> removing main bearing caps from engine block machining bearing cap and engine block parting faces fitting bearing caps to required tensions.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS), and occupational health and safety (OHS) requirements, including: <ul style="list-style-type: none"> procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear using hand tools and lifting equipment operational risk assessment and treatments associated with: <ul style="list-style-type: none"> electrical safety of line boring and honing machinery line boring and honing machinery movement and operation environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during machining process.
<i>Preparing line boring machine</i> must include:	<ul style="list-style-type: none"> sharpening and shaping cutting tools identifying worn and damaged cutting tools mounting and positioning cutting tools correctly using clamps, jigs and rails.
<i>Positioning and clamping</i> must include:	<ul style="list-style-type: none"> setting work piece into line boring machine and aligning work piece to centre line of boring bar using appropriate and sufficient clamping of work piece.
<i>Setting and locking tool</i> must include:	<ul style="list-style-type: none"> setting tool to required diameter locking tool according to manufacturer specifications.
<i>Line boring at correct speeds and feed rates</i> must include:	<ul style="list-style-type: none"> using coolant and lubricant correctly setting machining parameters to achieve job requirements and maximise tool life setting speed and feed rates for tunnel material and diameter.
<i>Specifications and honing</i>	<ul style="list-style-type: none"> consideration of speed and feed and nose radius of boring tool.

<i>allowances</i> must include:	
<i>Cleaning and checking for serviceability</i> must include:	<ul style="list-style-type: none">• crack testing connecting rod• measuring little end and big end size• checking big end fitment in connecting rod.

Assessment Requirements for AURTTM002 Repair bearing tunnels and connecting rods in engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- set up the following multi-cylinder engine configurations on a line boring machine:
 - a V configured engine
 - an in-line configured engine
- line bore the main bearing tunnels of a cylinder block, including each of the following:
 - relocating a main bearing cap
 - fitting a semi-finished main bearing cap
 - sleeving a main bearing tunnel
- repair camshaft bearing tunnels of an overhead camshaft cylinder head
- repair full set of connecting rods
- repair one connecting rod with a stepped parting face.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS), and occupational health and safety (OHS) requirements relating to repairing bearing tunnels and connecting rods in engines, including:
 - procedures for:
 - selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear
 - using hand tools and lifting equipment
 - operational risk assessment and treatments associated with:
 - electrical safety of line boring and honing machinery

- line boring and honing machinery movement and operation
- environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during machining process
- types, characteristics and limitations of line boring and honing machines, including:
 - types and grades of boring tools
 - types and grades of honing stones
- tool sharpening and dressing methods, including:
 - maintaining sharpness of tools throughout boring operations
 - dressing procedures for stones
- line boring methods and procedures, including:
 - preparing line borer to accept engine block or cylinder head
 - setting engine block or cylinder head into line boring machine and aligning to centre line of boring bar
 - setting line boring tool to correct diameter and locking boring tool
 - welding and relocating main bearing caps
 - machining top and bottom of bearing caps
 - machining parting faces of cylinder head camshaft bearing
 - line boring cylinder head camshaft tunnels
 - line boring damaged tunnels to oversize to accept sleeving operation
 - machining parting faces of cylinder block
 - line boring cylinder block tunnels to accept oversized back bearings
 - line boring tunnels to leave a honing allowance
 - line boring rear main bearing areas and thrust bearing diameters to original size
 - machining and squaring thrust faces in engine blocks
 - line boring semi-finished camshaft bearings
- line honing methods and procedures, including:
 - procedures for setting diameter of honing stone
 - rotational and oscillating speeds of honing bar
- connecting rod repair methods and procedures, including:
 - removing rod eye bush and measuring rod eye bore
 - checking alignment of connecting rod and straightening connecting rod
 - boring rod eye for oversized bush
 - removing cap bolts and nuts and machining parting faces on connecting rod and big end cap, including cracked rods
 - resizing big end for standard and oversize back bearings
 - fitting new little end bushes and pin boring little ends
 - types and application of cleaning and lubricating agents
- requirements of Australian standards relevant to engine reconditioning, including:
 - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines

- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-repair operations, including rust protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bearing tunnels and connecting rods in engines that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- multi-cylinder engine blocks and cylinder heads specified in the performance evidence
- engine line boring and honing machines
- precision measuring equipment, including:
 - dial bore gauges
 - dial indicators
 - inside and outside metric and imperial micrometers.

AURTTM003 Apply metal to rebuild engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply metal spray and hard chrome and weld materials, and perform the necessary machining to rebuild engine components. It involves preparing for the task, determining repair requirements, rebuilding engine components, bearing tunnels and connecting rods in engines, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Assessment Requirements for AURTTM003 Apply metal to rebuild engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair a cast iron cylinder head
- repair a crack in an aluminium alloy cylinder head
- build up camshaft lobes or journals by welding, metal spraying and hard chroming, and machine to specifications
- build up crankshaft journals or thrust surfaces or bearing faces by welding, metal spraying and hard chroming, and machine to specifications.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying metal to rebuild engine components, including procedures for :
 - selecting and using personal protective equipment (PPE)
 - safely operating welding, metal spraying and hard chroming machinery
- environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during the machining process
- procedures for identifying existing heat treatment processes, including nitriding, Tufftriding and induction hardening
- specific welding procedures, including:
 - manual metal arc welding (MMAW)
 - gas metal arc welding (GMAW)
 - gas tungsten arc welding (GTAW)
 - flux core

- metal spraying
- submerged arc
- procedures for hard chrome application
- repair operations for components, including:
 - crankshaft journals
 - camshaft journals and lobes
 - seal areas
 - crankshaft nose and keyway
 - pulley retaining thread damage
- crankshaft radius treatment, including:
 - shot peening
 - radius rolling
 - deep fillet radius rolling
- requirements of Australian standards relevant to engine reconditioning, including:
 - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
 - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-repair operations, including rust protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

- manufacturer engine specifications
- multi-cylinder crankshafts, camshafts, and engine cylinder heads specified in the performance evidence
- hand, air and power tools, welding equipment and materials for rebuilding engine components
- precision measuring equipment, including:
 - dial indicators
 - inside and outside metric and imperial micrometers.

AURTTM004 Assemble engine blocks and sub-assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to assemble a short engine block and sub-assemblies, and check clearances and tolerances in an engine reconditioning process. It involves preparing for the task, selecting the correct assembly procedure, carrying out the assembly and performing post-assembly testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine blocks and sub-assemblies include those in vehicles from all sectors of the industry. This unit does not cover fitting semi-finished sleeves, or boring and honing cylinders.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to assemble engine block and sub-assembly	1.1 Job requirements are determined from workplace instructions 1.2 Information is sourced, procedures and methods are analysed, and appropriate tools are selected for assembling engine block and sub-assemblies 1.3 Tools and measuring equipment are prepared and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Pre-assembly cleaning of engine components is carried out according to safety and environmental requirements , and components are laid out in logical order 1.6 Replacement component parts are checked for size and suitability according to manufacturer specifications and job requirements
2. Check engine block and sub-assembly clearances and tolerances	2.1 <i>Clearances and tolerances are measured</i> to the tolerance required by manufacturer specifications 2.2 <i>Clearances and tolerances are adjusted</i> according to workplace procedures and to the tolerance required by manufacturer specifications
3. Assemble engine block and engine sub-assembly	3.1 Engine sub-assemblies are <i>assembled</i> in correct order and without damage, against manufacturer specifications and tolerances and according to workplace procedures and relevant Australian standards and safety requirements 3.2 Engine blocks are assembled in correct order against manufacturer specifications and tolerances and according to workplace procedures, relevant <i>Australian standards</i> , and safety requirements, and without causing damage to components or systems 3.3 Assembled components are measured according to manufacturer specifications and workplace procedures 3.4 Assembled component clearances and tolerances are adjusted according to workplace procedures and to the tolerance required by manufacturer specifications
4. Complete assembly process	4.1 Final inspection is made to ensure finished work complies with workplace requirements 4.2 Bright surfaces are treated with rust prevention solution and engine block and sub-assemblies are prepared for further process or storage according to workplace procedures

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	<p>4.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> identify and interpret engine component specifications from workshop literature interpret machinery safe operating procedures from operating manuals and signs.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when making recommendations and recording parts and material used.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts use basic mathematical operations, including addition and subtraction, to: <ul style="list-style-type: none"> convert metric dimensions to imperial, and imperial dimensions to metric calculate tolerances and clearances.

Assessment Requirements for AURTTM004 Assemble engine blocks and sub-assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- assemble two different engine blocks, one of which must be a V configuration engine block, and the sub-assemblies of those engine blocks, in which the work must involve:
 - a multi-cylinder diesel engine
 - a multi-cylinder petrol engine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to assembling engine blocks and sub-assemblies, including procedures for:
 - selecting and using personal protective equipment (PPE) for handling engine blocks and sub-assemblies and using chemical cleaning agents
 - correctly operating specialised equipment, including heating torches, ovens and presses
 - handling freezing substances, including liquid nitrogen
 - manual handling techniques, including:
 - using machinery for lifting engine blocks and engine components
 - using slings, chains and other lifting equipment according to safe work practices
- environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids released during the assembly process
- procedures for clearance testing and adjusting or machining components, including:
 - piston to connecting rod big end alignment
 - big end and main bearing crush with bearing blue

- piston ring end gap, back clearance and side clearance
- bearing to crankshaft clearances with plastigage and measuring and calculating clearances
- semi-flanged thrust bearings
- finished camshaft bearings and measuring clearances
- camshafts and cam followers
- camshaft end float
- crankshaft end float
- gear backlash
- oil pump sealing and pick-up oil piping
- component assembly procedures and processes, including:
 - pre-assembly wash procedures for components
 - welsh plugs and oil gallery plugs
 - piston and connecting rod assemblies
 - big end bearings
 - piston rings to pistons, including procedures for using ring compressors
 - main bearings and thrust washers
 - semi-flanged thrust bearings
 - crankshafts, including protection measures for crankshaft journals, bearings, rings and bores
 - finished camshaft bearings
 - camshafts and cam followers
 - timing gears
 - chains and tensioners
 - oil pumps, oil squirters and oil pump pick-ups
 - balance shafts
 - fitting ancillary components, including:
 - covers and seals
 - housings
 - diesel fuel injection pumps
 - oil coolers
 - crankshaft pulleys
 - flywheels
 - bell housings
- requirements of Australian standards relevant to engine reconditioning, including:
 - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
 - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine block and sub-assemblies that they have assembled, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- two different multi-cylinder engine blocks, including:
 - in-line engine blocks
 - V configuration engine blocks
- full gasket and seal set for the engine block
- fixed and portable hand, air and power tools, lifting equipment, torque wrench and material suitable for assembling engine block
- precision measuring equipment, including:
 - dial bore gauges
 - dial indicators
 - inside and outside metric and imperial micrometers.

AURTTM005 Balance rotating and reciprocating engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to balance rotating and reciprocating engine components. It involves preparing for the task, determining and performing the balancing requirements for the engine component in an engine reconditioning process, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to balance rotating and reciprocating engine component	1.1 Job requirements are determined from workplace instructions 1.2 Methods of balancing component are sourced and interpreted from manufacturer literature and workplace procedures 1.3 Tools and measuring equipment are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Engine component is <i>prepared</i> for balancing operations and balancing machine is prepared to accept component according to <i>safety requirements</i>
2. Balance rotating and reciprocating engine component	2.1 Component is mounted and engaged with machine according to workplace procedures and safety requirements, and following machinery safe operating procedures 2.2 Rotating and reciprocating engine components are balanced in line with workplace requirements and according to workplace procedures, safety requirements, and machinery safe operating procedures, and without causing damage to components or system
3. Complete balancing processes	3.1 Final inspection is made to ensure work is to workplace requirements 3.2 Component is cleaned and presented ready for use or stored according to workplace procedures 3.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> identify and interpret engine component specifications from workshop literature interpret safe operating procedures for engine component balancing machinery from operating manuals.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when recording measurements.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in manufacturer specifications, workshop manuals, and machinery dials and gauges use basic mathematical operations, including addition, subtraction, division and multiplication to: <ul style="list-style-type: none"> convert metric dimensions to imperial, and imperial dimensions to metric weigh engine components to determine weight to be removed or added.
Digital literacy skills to:	<ul style="list-style-type: none"> navigate and operate computerised balancing machinery.
Problem solving skills to:	<ul style="list-style-type: none"> determine the most appropriate balancing method for the situation.
Technology skills to:	<ul style="list-style-type: none"> use metric and imperial precision measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Preparing</i> must include:	<ul style="list-style-type: none"> procedures for chemically cleaning components without damage checking all components to ensure no further machining is required.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including operational risk assessment and treatments associated with: <ul style="list-style-type: none"> electrical safety of balancing equipment and machinery equipment and machinery movement and operation.

Assessment Requirements for AURTTM005 Balance rotating and reciprocating engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- balance one four or six cylinder in-line engine crankshaft assembly, including:
 - front pulley
 - crankshaft and flywheel and pressure plate (manual transmission) or drive plate (automatic transmission)
- balance one V8 engine crankshaft assembly, including:
 - front pulley
 - crankshaft and flywheel and pressure plate (manual transmission) or drive plate (automatic transmission)
- balance one piston and connecting rod assembly
- during the above work, perform each of the following methods of adding or removing weight from engine components:
 - drilling
 - welding
 - machining.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to balancing rotating and reciprocating engine components, including operational risk assessment and treatments associated with:
 - electrical safety of balancing equipment and machinery
 - equipment and machinery movement and operation

- operating principles of component balancing, including:
 - dynamic balance
 - internally and externally balanced engines
 - reciprocating mass
 - rotating mass
 - sources of torsional vibration
 - gas pressure
 - purpose of counterweights, torsional vibration dampeners, and balance shafts in balancing
 - difference between in-line engine balance, flat plane and V type engine balance, including the effect of the number and angle of cylinders
- balancing procedures and techniques, including:
 - in-line engines, flat plane crankshafts and V type engines
 - protecting crank pins from damage from bob-weight clamping
 - protecting main bearing journals from damage from balancing machine cradle rollers or V block
 - weight matching the pistons and rod ends
 - methods of calculating bob-weight values for V type and in-line engines, including:
 - rotating mass with oil allowance
 - reciprocating mass
 - effect of number of cylinders and V angle on the total calculation
 - mounting bob-weights on crankshafts of V type engines
 - balancing internally balanced engines
 - balancing externally balanced engines
- procedures for adding and removing metal to the crankshaft, including:
 - drilling and finishing to remove weight
 - welding to add weight
 - machining or drilling and adding heavy metal.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the rotating and reciprocating engine components that they have balanced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- material relevant to balancing rotating and reciprocating engine components
- multi-cylinder crankshafts, flywheels and piston and connecting rod assemblies specified in the performance evidence and requiring balancing
- precision measuring equipment, including:
 - dial indicators
 - inside and outside metric and imperial micrometers
 - scales in 0.1 gram graduations
- finishing machine
- hand, air and power tools appropriate to balancing rotating and reciprocating engine components.

AURTTM006 Perform advanced machining and blueprinting of engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to compare engine components to original manufacturer and component supplier specifications and match them in relation to weight, size and capacity. It involves preparing for the task, measuring and machining components to original manufacturer and component supplier specifications, and completing workplace processes and procedures.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to blueprint engine	1.1 Job requirements are determined from workplace instructions 1.2 Information is sourced, procedures and methods are analysed, and appropriate tools are selected for machining and blueprinting engines 1.3 Tools and measuring equipment are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Cylinder block and cylinder head are <i>prepared</i> for blueprinting according to <i>safety and environmental requirements</i>
2. Measure components	2.1 Measurements, clearances and tolerances are sourced and interpreted from manufacturer and component supplier literature 2.2 Components are measured and clearances and tolerances are calculated according to workplace procedures
3. Machine components	3.1 Components are adjusted or machined to meet manufacturer and component supplier specifications according to workplace procedures and safety and environmental requirements, and following machinery safe operating procedures 3.2 Dummy assembly of engine is performed as required and clearances and tolerances are calculated according to workplace procedures 3.3 Further machining is carried out as required to achieve required clearances and tolerances 3.4 Engine is assembled according to job requirements and clearances, and tolerances are calculated again 3.5 Bright surfaces are treated with rust prevention solution and component is prepared for further process or storage according to workplace procedures 3.6 <i>Blueprinting schedule documentation</i> is completed according to workplace procedures
4. Complete blueprinting and machining process	4.1 Final inspection is made to ensure finished work complies with workplace requirements 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace

Assessment Requirements for AURTTM006 Perform advanced machining and blueprinting of engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- machine and blueprint two of the following different engine components:
 - engine with multiple overhead camshafts
 - V configuration engine with at least six cylinders
 - multi-cylinder diesel engine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to performing advanced machining and blueprinting of engine components, including:
 - procedures for selecting and using personal protective equipment (PPE) for:
 - handling engine blocks and sub-assemblies
 - using chemical cleaning agents
 - operational risk assessment and treatments associated with:
 - electrical safety of machinery
 - machinery movement and operation
- environmental requirements, including procedures for trapping, storing and disposing of cleaning and lubricating fluids released during process
- procedures for preparing cylinder blocks and cylinder heads for blueprinting, including:
 - chemically cleaning engine components, including methods for avoiding damage or loss of components
 - chasing threads to remove debris with correct grade tap

- hardness testing components
- pressure testing cylinder heads
- checking cylinder heads for bend on both sides
- checking cylinder heads for minimum thickness
- checking valve guides, valve stems, collets and valve springs for wear
- testing engine block, including sonic testing and crack testing
- dummy assembling engines, including reasons for dummy assembling engines
- procedures for blueprinting cylinder blocks, including:
 - line boring main tunnels to produce datum
 - fitting bearings and checking crush
 - measuring main bearing tunnel with bearings fitted
 - grinding crankshaft to suit bearings and to achieve desired clearance and phasing consistency
 - sleeving lifter bores to centre line of camshaft and checking lifter to bore clearance and alignment to camshaft
 - fitting camshaft bearings and checking running clearances
 - squaring up deck to crankshaft tunnel to ensure crankshaft is parallel to block
 - fitting torque plate to bore and hone
 - honing cylinders to desired surface finish, matching individual pistons to respective bores
 - setting ring end gap
 - achieving consistent piston height for desired compression ratio and checking rotational clearance
- procedures for blueprinting connecting rods, including:
 - shot peening connecting rods
 - preparing rod for re-sizing, including removing and locating dowels as required
 - selecting bolts
 - tensioning and re-sizing tunnel, maintaining centre-to-centre height
 - checking little end running clearance
 - removing bushes and checking parent bore of rod and bush fitment
 - pin fitting rod, maintaining centre-to-centre height and running clearance
 - checking alignment of rod
 - fitting up bearings, checking crush and running clearance
 - resizing connecting rods and fitting new bolts to ensure centre-to-centre length and alignment is correct
- procedures to blueprint cylinder heads, including:
 - methods for achieving optimum airflow, including limitations of cylinder head modifications
 - machining for larger valves, including identifying machining shifts in castings
 - operating flow bench
 - porting for improved air flow and to balance combustion chambers

- calculating capacity of individual combustion chambers and machining combustion chambers to achieve consistency
- calculating compression ratio
- selecting camshaft
- setting valve heights
- calculating installed height of valve springs and seat pressure
- calculating valve spring open height and pressure
- calculating valve spring solid height and coil bind clearance
- calculating spring retainer to stem seal clearance
- dialling camshaft
- machining pistons to achieve desired compression ratio
- setting rocker geometry, including length and sweep
- requirements of Australian standards relevant to engine reconditioning, including:
 - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
 - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-grinding operations, including rust protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine components that they have machined and blueprinted, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications

- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- two different multi-cylinder engines as specified in the performance evidence requiring machining and blueprinting
- precision measuring equipment, including:
 - dial bore gauges
 - dial indicators
 - inside and outside metric and imperial micrometers
 - inside and outside spring calipers
 - fixed and portable hand, air and power tools
 - lifting equipment
- material suitable for machining and blueprinting the engine components.

AURTTM007 Carry out crankshaft grinding

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out grinding operations on engine crankshafts to specific under sizes. It involves preparing for the task, determining crankshaft damage and required repair action, preparing and using grinding machines to grind crankshafts to specifications, tolerances and workplace requirements, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The crankshafts include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTM007 Carry out crankshaft grinding

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- grind one crankshaft of an in-line petrol engine with at least four cylinders.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to grinding crankshafts, including procedures for:
 - selecting and using personal protective equipment (PPE) for using grinding machines and chemical cleaning and lubricating agents
 - identifying hazards associated with rotating grinding machines
 - manual handling techniques relating to grinding crankshafts
- types, characteristics and limitations of crankshaft grinding machines, including:
 - hand-held machines for oil hole dressing
 - types and grades of grinding wheels, including grit grades
- dismantling procedures for crankshafts, including:
 - numbering and removing counterweights
 - drive gears
 - oil seal sleeves and dowels
- cleaning and inspection procedures, including:
 - chemically cleaning crankshafts, including methods of avoiding damage to nitride and Tufftride crankshafts
 - identifying crankshaft material

- identifying heat treatment process, including nitriding, Tufftriding and induction hardening
- identifying radius treatment, including deep fillet rolling, radius rolling and shot peening
- checking alignment of crankshaft in V blocks
- measuring journals against specifications and identifying damaged journals
- testing procedures for crankshaft, including:
 - crack testing coil shot and end shot
 - testing hardness of journals
- procedures for preparing crankshaft grinding wheel, including:
 - wheel preparation, including selecting wheel to suit radius and journal width of crankshaft
 - dressing procedures for wheel, including:
 - types of diamonds for front and radius dressing
 - procedures for dressing wheel to suit crankshaft radius
 - procedures for dressing front of wheel
- procedures for big end grinding, including:
 - setting crankshaft rotation speed according to crankshaft material and big end diameter
 - setting crankshaft grinder wheel head position
 - setting chuck offsets for big end bearings and adjusting counterweights to suit
 - fitting crankshaft in correct direction of rotation and ensuring that critical surfaces are not damaged by the chuck
 - measuring journal diameters during grinding with constant measuring gauge
- procedures for adjusting crankshaft grinder to suit main bearing journal grinding, including:
 - removing crankshaft from grinder
 - fitting crankshaft in correct direction of rotation
 - setting datum in relation to rear flange and nose for main bearing grinding
- procedures for main bearing journal grinding, including:
 - setting crankshaft rotation speed according to crankshaft material and journal size
 - setting crankshaft grinder wheel head position
 - measuring journal diameters during grinding with constant measuring gauge
- procedures for finishing journal grinding, including:
 - chamfering and dressing oil holes
 - finishing journals according to grade of belt, required finish, and rotational direction
 - setting up and facing flange ends and seal areas
 - final grinding inspections of crankshaft, including:
 - journal surface finish
 - taper, ovality, barrelling, and hourglass
 - grinding chatter
 - burning of radius and journals

- methods of correcting faults
- procedures for removing crankshaft from grinder and checking crankshaft for straightness in V blocks using dial indicator
- requirements of Australian standards relating to engine reconditioning, including:
 - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
 - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-grinding operations, including rust protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the crankshaft grinding that they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer crankshaft specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- crankshaft from an in-line petrol engine with at least four cylinders requiring grinding
- engine crankshaft grinding machine
- precision measuring equipment, including:
 - dial indicators
 - inside and outside metric and imperial micrometers.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle engine block and sub-assembly	1.1 Job requirements are determined from workplace instructions 1.2 Engine block and sub assembly dismantling information is sourced and interpreted 1.3 Tools and measuring equipment are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Engine is set up for dismantling using appropriate lifting equipment and avoiding fluid spillage according to <i>safety and environmental requirements</i> 1.6 Engine block and sub-assembly are cleaned according to safety and environmental procedures and relevant Australian standards, and positions of auxiliary equipment are <i>recorded, including</i> photographic evidence
2. Dismantle engine block and sub-assembly	2.1 Covers and ancillary components are removed, cleaned and stored according to workshop procedures 2.2 Engine block and sub-assembly are dismantled according to safety requirements and laid out in a logical order using approved methods, tools and equipment 2.3 Component parts are cleaned using appropriate cleaning agents for the type of material and kept in a logical order in preparation for evaluation
3. Determine repair procedures	3.1 Engine block and sub-assembly are <i>inspected, measured and tested</i> against manufacturer specifications and tolerances and according to workplace procedures and safety requirements 3.2 Engine block and sub-assembly are evaluated and repair requirements are determined and reported according to workplace procedures
4. Complete dismantle and evaluation processes	4.1 Final inspection is made to ensure finished work complies with workplace requirements 4.2 Bright surfaces are treated with rust prevention solution and engine block and sub-assembly are prepared for further process or storage according to workplace procedures 4.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> identify and interpret engine component specifications from workshop literature interpret safe operating procedures for engine component rebuild machinery from operating manuals and signs.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when making recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts use basic mathematical operations, including addition and subtraction, to: <ul style="list-style-type: none"> convert metric dimensions to imperial, and imperial dimensions to metric calculate tolerances and clearances.
Planning and organising skills to:	<ul style="list-style-type: none"> select best tooling option for the work and sequence components to reduce time and material wastage.
Technology skills to:	<ul style="list-style-type: none"> use metric and imperial precision measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including operational risk assessment and treatments associated with: <ul style="list-style-type: none"> electrical equipment used in dismantling and evaluating engine blocks and sub-assemblies manual and mechanical lifting and shifting equipment
---	---

	<ul style="list-style-type: none"> • toxic cleaning substances • environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids released during the process.
<p><i>Inspecting, measuring and testing</i> must include:</p>	<ul style="list-style-type: none"> • applying surface finishes and wear patterns to: <ul style="list-style-type: none"> • cylinder bores, crankshafts, pistons, gears, cam followers, and camshafts • bearings and bushes • block facings • parting faces of connecting rod • main bearing caps • crack testing: <ul style="list-style-type: none"> • connecting rods • crankshaft • camshaft • cylinder block surface • camshaft and main bearing tunnels • main bearing caps • hardness testing: <ul style="list-style-type: none"> • alloy cylinder blocks, pistons, crankshaft journals and camshaft followers • checking taper, ovality and wear of: <ul style="list-style-type: none"> • crankshaft and camshaft journals • main bearing and connecting rod tunnels • cylinder bores in conventional engine blocks and parent bores of engine blocks with dry sleeves • checking: <ul style="list-style-type: none"> • camshaft lobe lift • straightness of shafts • main bearing tunnels for alignment • connecting rod alignment and little end bore size • cylinder block flatness and deck height • piston ring land clearance, piston skirt wear, and gudgeon pin to piston clearance • cylinder liner register in both upper and lower parts of cylinder block • oil pump for serviceability • idler gear hub to bearing clearance.

Assessment Requirements for AURTTM008 Dismantle and evaluate engine blocks and sub-assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle and evaluate the following three different engine blocks and their sub-assemblies:
 - in-line engine block
 - V configuration engine block
 - diesel engine block with sleeves.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to dismantling and evaluating engine blocks and sub-assemblies, including operational risk assessment and treatments associated with:
 - electrical equipment used in dismantling and evaluating engine blocks and sub-assemblies
 - manual and mechanical lifting and shifting equipment
 - toxic cleaning substances
- environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids released during the process
- manual handling techniques, including those relating to:
 - using machinery for lifting engine blocks and engine components
 - using slings, chains and other lifting equipment according to safe work practices
- dismantling methods and procedures, including:
 - reasons for selecting chosen tools, techniques and equipment

- hazards and fluid control measures associated with removal of engines and engine components, including housekeeping
- procedures for recording positions of components, including photographic evidence
- pre-evaluation checks to determine suitability of component to be re-used
- reasons for checking end float before disassembly
- cleaning solutions and cleaning procedures for components
- use of pullers, presses and specialised tools, and application of heat to dismantle components, including gears, pulleys and dowels
- procedures for recording facing directions of pistons, connecting rods, main and big end caps, and positions of removable counterweights and counterweight shaft assemblies
- precautions to be used when removing connecting rod cap
- removing crankshaft and identifying main bearing caps that have lost register
- removing dry and wet sleeves
- dismantling pistons from connecting rods
- removing camshaft bearings and balance/idler shaft bearings
- removing welsh plugs and oil gallery plugs
- removing diesel injection pumps
- dismantling components that have seized, bent or broken, including seized stud and bolt removal
- inspection, measurement and testing procedures, including:
 - characteristics of surface finishes and wear patterns as applied to:
 - cylinder bores, crankshafts, pistons, gears, cam followers, and camshafts
 - bearings and bushes
 - block facings
 - parting faces of connecting rod
 - main bearing caps
 - crack testing components
 - testing hardness of alloy cylinder blocks, pistons, crankshaft journals and camshaft followers
 - straightness of shafts
 - taper, ovality and wear of:
 - crankshaft and camshaft journals
 - main bearing and connecting rod tunnels
 - cylinder bores in conventional engine blocks and parent bores of engine blocks with dry sleeves
 - camshaft lobe lift
 - straightness of shafts
 - main bearing tunnels for alignment
 - connecting rod alignment and little end bore size
 - cylinder block flatness and deck height

- piston ring land clearance, piston skirt wear and gudgeon pin to piston clearance
- cylinder liner register in both the upper and lower parts of the cylinder block
- oil pump for serviceability
- idler gear hub to bearing clearance
- requirements of Australian standards relevant to engine reconditioning, including:
 - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
 - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine blocks and sub-assemblies that they have dismantled and evaluated, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- three different multi-cylinder engine blocks specified in the performance evidence
- precision measuring equipment, including:
 - dial bore gauges
 - dial indicators
 - inside and outside metric and imperial micrometers

- fixed and portable hand, air and power tools and lifting equipment suitable for dismantling and evaluating engine blocks and sub-assemblies.

AURTTM009 Fit sleeves and bore and hone engine cylinders

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to fit sleeves to restore engine cylinder blocks and to bore and hone the sleeves to specific tolerances. It involves preparing for the task, assessing damage and determining required repair action, boring, sleeving and honing engine cylinders, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engines include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to bore engine	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
cylinder	1.2 Engine block, boring and sleeving information is sourced and interpreted 1.3 Tools and measuring equipment for boring are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Engine cylinder is measured and calibration requirements for boring are determined 1.6 Engine cylinder block is prepared for boring, and reboring machine is prepared to accept engine cylinder block according to manufacturer specifications and workplace procedures 1.7 Engine cylinder block is correctly positioned and clamped, and limit stop is set according to manufacturer specifications and workplace procedures
2. Bore engine cylinder	2.1 Cutting tools are mounted and positioned, and worn and damaged cutting tools are identified and replaced or sharpened 2.2 Boring operations are carried out at correct speeds and feed rates according to workplace procedures and safety and environmental requirements , and following machinery safe operating procedures 2.3 Engine cylinder is measured to ensure compliance with specifications 2.4 Boring operations are completed to required specifications and honing allowances according to workplace procedures and safety requirements, and following machinery safe operating procedures
3. Prepare to sleeve engine cylinder	3.1 Tools and equipment for sleeving are selected, checked and prepared for operation according to manufacturer specifications and workplace procedures 3.2 Measuring and calibration requirements for sleeving are determined and required sleeve is selected 3.3 Engine cylinder block or barrel is prepared for sleeving according to manufacturer specifications and workplace procedures
4. Sleeve engine cylinder	4.1 Sleeving operations are carried out according to workplace procedures and safety requirements, and following machinery safe operating procedures 4.2 Sleeves are measured to ensure compliance with specifications, including sleeve protrusion 4.3 Sleeves are bored as required to required specifications and honing allowances according to workplace procedures and safety

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	requirements, and following machinery safe operating procedures
5. Prepare to hone engine cylinder	5.1 Bored engine block is cleaned of residue and swarf according to manufacturer specifications and workplace procedures 5.2 Tools and equipment for honing are selected, checked and prepared for operation according to manufacturer specifications and workplace procedures 5.3 Clearances are measured and honing requirements are determined 5.4 Honing machine is prepared to accept engine cylinder block according to manufacturer specifications and workplace procedures 5.5 Engine cylinder block is positioned and securely clamped, and required hone stroke is set according to manufacturer specifications and workplace procedures 5.6 Hone stones are selected and speed is set to achieve required finish and cross hatch
6. Hone engine cylinder	6.1 Engine cylinder is honed at correct speed and rate to required finish according to workplace procedures and safety requirements and following machinery safe operating procedures 6.2 Engine cylinder is measured to ensure compliance with specifications 6.3 Honing operations are completed to required piston to bore clearance according to workplace procedures and safety requirements and following machinery safe operating procedures 6.4 Engine cylinder block is thoroughly cleaned of residual honing oil according to workplace procedures
7. Complete sleeving, boring and honing processes	7.1 Final inspection is made to ensure finished work complies with workplace requirements 7.2 Bright surfaces are treated with rust prevention solution and engine cylinder block is prepared for further process or storage according to workplace procedures 7.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 7.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURTTM009 Fit sleeves and bore and hone engine cylinders

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- work on three different engine blocks as follows:
 - bore one engine block to accept parallel liners with correct interference fit
 - bore one engine block to accept flanged liners with correct interference fit
 - bore and hone the cylinders of a different multi-cylinder engine block to achieve correct piston to bore clearance.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to fitting sleeves and boring and honing engine cylinders, including:
 - procedures for selecting and using personal protective equipment (PPE) for:
 - handling engine cylinder blocks
 - using boring and honing machines
 - using chemical cleaning and lubricating agents
 - safe operating procedures for boring and honing machinery, including:
 - electrical safety of boring and honing machinery
 - boring and honing machinery movement and operation
- environmental requirements, including procedures for trapping, storing and disposing of cleaning and lubricating fluids released during the machining process
- types and application of sleeves, including:
 - dry sleeves, including:
 - interference fit parallel sleeve

- interference fit flanged sleeves
- chrome type finished-to-size dry flanged sleeves
- wet sleeves, including:
 - flanged
 - stepped
- sleeve fitting procedures, including:
 - interference sleeves, including fitting parallel sleeves to step in parent bore
 - wet sleeves
 - checking sleeve height
- types, characteristics and limitations of honing and boring machines, including:
 - types and grades of boring tools
 - types and grades of honing stones
 - hand-held and machine-operated hones
- tool sharpening methods, including:
 - maintaining sharpness of tool throughout boring operations
 - compensation methods for tool wear throughout boring operations
- boring methods and procedures, including:
 - determining required size of bore, including honing allowance
 - preparing engine cylinder block for boring, and setting engine cylinder block into boring machine, including jigs, rails and clamps
 - setting boring tool to correct diameter, locking boring tool, and setting limit stop
 - reasons for taking a test cut
 - speed and feed rates of boring tool for differing materials, including alloysil or nicolsil, and for bore diameters
 - methods for setting speed and feed rate of boring tools
- honing methods and procedures, including:
 - cleaning engine cylinder block before and after honing
 - preparing portable and stationary honing machines, setting engine cylinder block into honing machine, and setting hone stroke
 - setting honing speeds and feed rates to achieve required finish
 - methods of measuring bores for taper, ovality and barrelling
- types and application of cleaning, lubricating and protective agents, including:
 - material suitability
 - application of lubricating agents for different speeds and feed rates of boring machines and honing machines
 - hazards associated with chemical cleaning and lubricating agents
- requirements of Australian standards relevant to engine reconditioning, including:
 - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
 - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines

- post-repair procedures, including rust protection.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine cylinders that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- three different multi-cylinder engine blocks as specified in the performance evidence
- engine boring and honing machines
- precision measuring equipment, including:
 - dial bore gauges
 - dial indicator gauges
 - inside and outside metric and imperial micrometers.

AURTTM010 Heat treat, straighten and reclaim engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply heat treatment and straightening techniques to repair damaged or under sized engine components, and perform the necessary machining to reclaim engine components in an engine reconditioning process. It involves preparing for the task, heat treating, straightening and reclaiming engine components, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTM010 Heat treat, straighten and reclaim engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- heat treat, straighten and machine three different engine components, including one engine cylinder head.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to heat treating, straightening and reclaiming engine components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using heating torches, ovens, presses and straightening tools
- environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during the machining process
- types, characteristics, uses and limitations of reclamation techniques, including:
 - heat treatment techniques, including:
 - effects of heat on different metals and heating procedures
 - hardening and tempering techniques, including thermal stress relieving to stabilise crankshafts and applying Tufftride and nitride
 - straightening techniques, including:
 - cylinder head straightening
 - crankshaft, camshaft and connecting rod straightening
 - machining surfaces to achieve tolerances and required finish
- requirements of Australian standards relevant to engine reconditioning, including:

- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-repair procedures, including component surface oxidation protection.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine components that they have heat treated, straightened and reclaimed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

AURTTM011 Recondition engine cylinder heads

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to recondition engine cylinder heads as part of an engine reconditioning process. It involves preparing for the task, determining engine cylinder head damage and required repair action, preparing reconditioning machines, performing machining to specifications and workplace requirements, reassembling and testing the cylinder head, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine cylinder heads include overhead valve or overhead camshaft design cylinder heads in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to undertake engine cylinder head reconditioning	1.1 Job requirements are determined from workplace instructions 1.2 Cylinder head dismantling procedures are sourced and interpreted 1.3 Tools and measuring equipment are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Cylinder head is cleaned according to <i>safety and environmental requirements</i> and relevant <i>Australian standards</i> , and positions of auxiliary equipment are recorded, including photographic evidence
2. Dismantle engine cylinder head	2.1 Covers and ancillary components are removed, cleaned and stored according to workshop procedures 2.2 Cylinder head is dismantled according to safety requirements and laid out in a logical order using approved methods, tools and equipment 2.3 Component parts are cleaned using appropriate cleaning agents for the type of material and kept in a logical order in preparation for evaluation
3. Determine repair procedures	3.1 Cylinder head is hardness tested as required according to manufacturer specifications, workplace procedures and safety requirements 3.2 Cylinder head is pressure and/or crack tested according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Cylinder head and component parts are <i>inspected, measured and tested</i> against manufacturer specifications and tolerances and according to workplace procedures and safety and environmental requirements
4. Recondition engine cylinder head and component parts	4.1 Components are adjusted and/or machined against manufacturer specifications and tolerances and according to workplace procedures, relevant Australian standards, and safety and environmental requirements 4.2 Adjustments and/or machining of components are achieved without causing damage to components or system 4.3 Cylinder head is thoroughly cleaned and oil and waterways are cleared using appropriate tools
5. Assemble engine	5.1 Cylinder head is assembled in correct order and without damage,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
cylinder head	<p>against manufacturer specifications and tolerances and according to workplace procedures, relevant Australian standards and safety requirements</p> <p>5.2 Assembled components are measured according to manufacturer specifications and workplace procedures</p> <p>5.3 Assembled component clearances and tolerances are adjusted to the tolerance required by manufacturer specifications according to workplace procedures</p> <p>5.4 Assembled engine cylinder head is tested and adjusted against manufacturer specifications and tolerances and according to workplace procedures, relevant Australian standards and safety requirements</p> <p>5.5 Bright surfaces are treated with rust prevention solution and cylinder head is prepared for further process or storage according to workplace procedures</p>
6. Complete work processes	<p>6.1 Final inspection is made to ensure finished work complies with workplace requirements and engine cylinder heads are presented ready for use or storage</p> <p>6.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>6.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>6.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> identify and interpret engine cylinder head specifications from workshop literature interpret engine cylinder head rebuild machinery safe operating

Skills	Description
	procedures from operating manuals and signs.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation to record measurements.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts use basic mathematical operations, including addition and subtraction, to: <ul style="list-style-type: none"> convert metric dimensions to imperial, and imperial dimensions to metric calculate tolerances and clearances.
Planning and organising skills to:	<ul style="list-style-type: none"> select best tooling option for the work and sequence procedure to reduce time and material wastage.
Technology skills to:	<ul style="list-style-type: none"> use precision metric and imperial measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including: <ul style="list-style-type: none"> operational risk assessment and treatments associated with: <ul style="list-style-type: none"> electrical safety of power tools manual and mechanical lifting and shifting equipment toxic cleaning substances selecting and using personal protective equipment (PPE) for handling engine cylinder heads and using specialised equipment environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids and machining waste released during reconditioning process.
<i>Australian standards</i> must include:	<ul style="list-style-type: none"> AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines.

<i>Inspecting, measuring and testing</i> must include:	<ul style="list-style-type: none">• checking for straightness of both sides of cylinder head and all manifold faces• checking camshaft tunnels for wear and pick-up• checking water jackets for corrosion• checking valve suitability for refacing, including stem condition• checking valve guide condition and material• resurfacing valves• sizing and fitting K lines• machining and fitting valve seats• establishing valve stem protrusion.

Assessment Requirements for AURTTM011 Recondition engine cylinder heads

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- recondition two of the following engine cylinder heads:
 - overhead valve (OHV) petrol cylinder head
 - overhead camshaft (OHC) petrol cylinder head
 - diesel cylinder head
- resurface a cylinder head.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to reconditioning engine cylinder heads, including:
 - operational risk assessment and treatments associated with:
 - electrical safety of power tools
 - manual and mechanical lifting and shifting equipment
 - toxic cleaning substances
 - selecting and using personal protective equipment (PPE) for handling engine cylinder heads and using specialised equipment
- environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids and machining waste released during reconditioning process
- procedures for removing cylinder head from engine block
- dismantling methods and procedures relating to cylinder heads
- cleaning methods and procedures relating to cylinder heads
- procedures for measuring, testing and evaluating cylinder heads, including:

- hardness of aluminium alloy cylinder heads and re-hardening aluminium alloy cylinder heads
- visual inspections
- cylinder head testing, including:
 - dye penetrant for alloy cylinder heads
 - wet and dry magnetic particle for cast iron cylinder heads
 - vacuum for valve leakage
 - pressure for porosity
 - inspecting valve guides and valve seats
- procedures for measuring, testing and evaluating associated parts, including inspecting camshafts, valves, valve springs, valve spring seats, valve spring retainers, collets and lash caps, rocker arms, rocker shafts and pushrods
- procedures for repairing cylinder heads and associated components, including:
 - heat treating aluminium alloy cylinder heads
 - straightening cylinder heads
 - repairing cracks in cylinder heads
 - welding aluminium alloy and cast iron cylinder heads
 - types of surface finishes for different cylinder head gaskets
 - surfacing cylinder heads, including manifold faces
 - repairing valve guides, valve seats, rocker arms and rocker shafts
 - replacing valve guides
 - cutting valve seats to required angles
 - re-facing valves in valve re-facer
 - setting valve stem protrusion
 - setting valve masking heights in diesel cylinder heads
 - fitting injector tubes and setting injector protrusion
 - cleaning cylinder heads of residue and swarf, including removing residue from bead cleaning
- procedures for assembling cylinder heads, including:
 - refitting welsh plugs and oil gallery plugs, valves, springs, spring seats, retainers, collets lash caps, camshafts, rocker gear, cam followers and associated components
 - reasons for setting valve timing before fitting cylinder head to block
 - evaluating and setting rocker arm geometry
 - preparing cylinder block to accept cylinder head
 - fitting head gaskets and cylinder heads to engine blocks
 - tightening procedures for cylinder head bolts
- requirements of Australian standards relevant to engine reconditioning, including:
 - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
 - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines

- post-repair test procedures, including machined surface protection.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine cylinder heads that they have reconditioned, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available.

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- precision measuring equipment relevant to the engine component and work process
- three different multi-cylinder engine cylinder heads as specified in the performance evidence
- fixed and portable hand, air and power tools, lifting equipment and material suitable for reconditioning cylinder heads.

AURTTM012 Carry out camshaft grinding

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to grind engine camshafts to specific under sizes. It involves preparing for the task, determining camshaft damage and required repair action, preparing and using grinding machines to grind camshafts to specifications and workplace requirements, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The camshafts include those of engines in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to grind	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
camshaft	1.2 Camshaft is <i>cleaned and inspected</i> , lobe lift is measured, and condition is reported 1.3 Camshaft grinding information is sourced, procedures and methods are analysed, and appropriate grinding machine and master are selected for camshaft 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and measuring equipment are selected and checked for serviceability 1.6 Camshaft grinding wheel is <i>dressed</i> to match job requirements 1.7 Camshaft is positioned in grinder and clamped according to manufacturer specifications and workplace procedures, and centre run-out and bend are checked
2. Grind camshaft lobes	2.1 Camshaft grinder movement is set to master according to manufacturer procedures, and position of camshaft to master is <i>verified statically</i> 2.2 First set of camshaft lobes are ground according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.3 Master is re-phased to suit next cylinder's lobes, and lobes are ground according to manufacturer specifications, workplace procedures, and safety and environmental requirements 2.4 Remaining camshaft lobes are ground according to manufacturer specifications, workplace procedures, and safety and environmental requirements 2.5 Camshaft is measured to ensure compliance with specifications and that base circles are true
3. Finish camshaft grinding	3.1 Camshaft is prepared for phosphating according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.2 Camshaft is phosphated according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Journals are finished according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.4 Camshaft profile is identified on camshaft according to workplace procedures 3.5 Bright surfaces are treated with rust prevention solution and

Assessment Requirements for AURTTM012 Carry out camshaft grinding

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- grind one camshaft of an in-line engine with at least four cylinders.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
 - procedures for selecting and using personal protective equipment (PPE) for:
 - handling camshafts
 - using chemical cleaning agents
 - operational risk assessment and treatments associated with:
 - electrical safety of grinding machinery
 - grinding machinery movement and operation
- environmental requirements, including procedures for trapping, storing and disposing of cleaning and lubricating fluids released during the grinding process
- types, characteristics and limitations of camshaft grinding machines, including use of cam doctors
- cleaning and inspection procedures, including:
 - determining camshaft lobe profile and timing requirements
 - checking camshaft centre run-out
 - checking camshaft for bend
- procedures for preparing camshaft grinding wheel, including:

- dressing and truing to restore original cutting geometry and correct flatness and roundness
- procedures for camshaft lobe grinding, including:
 - roughing and finishing
- procedures for finalising camshaft grinding, including:
 - finishing
 - phosphating
 - identifying camshaft profile on camshafts
- requirements of Australian standards relevant to engine reconditioning, including:
 - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
 - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-grinding procedures, including protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the camshaft grinding that they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer camshaft specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- camshaft from engine as specified in the performance evidence
- engine camshaft grinding machine

- precision measuring equipment, including:
 - dial indicators
 - inside and outside metric and imperial micrometers.

AURTTQ001 Inspect and service final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service final drive assemblies. It involves preparing for the task, inspecting the assembly, reporting the inspection findings, servicing and adjusting the assembly, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The final drive assemblies include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service final drive assembly	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect final drive assembly	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service final drive assembly	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURTTQ001 Inspect and service final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the final drive assemblies of two different vehicles or machinery, in which the work must involve:
 - evaluating lubricant condition
 - inspecting and adjusting lubricant levels
 - visually inspecting the assemblies for leaks or damage.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing final drive assemblies, including procedures for working with hazardous final drive lubricants
- environmental requirements, including procedures for trapping, storing and disposing of oil released from final drive assemblies
- identification and function of final drive assemblies and components, including:
 - banjo-type final drives
 - unitised final drives
 - transaxle final drives
 - differentials, including limited slip differentials
- types and applications of final drive assembly lubricants and additives
- inspection procedures for final drive assembly, including:
 - checking assembly for lubricant leaks or physical damage
 - checking lubricant condition and levels

- service and adjustment procedures for final drive assembly, including topping up or replacing lubricant as required
- post-service testing procedures for final drive assembly.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the final drive assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer final drive specifications
- two different vehicles or machinery with final drive assemblies requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing final drive assemblies.

Assessment Requirements for AURTTQ002 Remove and refit driveline components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and refit the following driveline components:
 - both drive shafts of a front wheel drive light vehicle
 - drive shaft of a rear wheel drive light vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and refitting driveline components, including procedures for:
 - using driveline tools and equipment
 - lifting and supporting vehicles
- principles of driveline operation
- construction of drive shafts, including:
 - constant velocity (CV) joints
 - universal joints
- driveline test procedures
- dismantling, assembling and adjusting procedures, including:
 - types and applications of lubricants
 - methods of fitting retaining clips to CV joints.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the driveline components that they have removed and refitted, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application

The following resources must be made available:

- workplace location or simulated workplace
- workplace instructions
- vehicle driveline specifications
- driveline components specified in the performance evidence
- tools, equipment and materials for removing and refitting driveline components.

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service drive shaft	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect drive shaft	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service drive shaft	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements , and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> locate information from manufacturer and workshop literature when seeking service procedures and specifications relating to drive shafts.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Problem solving skills to:	<ul style="list-style-type: none"> refer problems outside area of responsibility to appropriate person.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> working with rotating shafts handling lubricants.

Assessment Requirements for AURTTQ003 Inspect and service drive shafts

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the drive shafts of two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing drive shafts, including procedures for:
 - working with rotating shafts
 - handling lubricants
- identification and function of drive shaft components, including:
 - single and multi-piece shafts
 - universal joints
 - rubber type couplings
 - slip joints
 - support bearings
 - constant velocity joints
- types and applications of drive shaft lubricants
- inspection procedures for drive shafts, including:
 - component wear or damage
 - lubricant leaks
- service and adjustment procedures for drive shafts, including lubricating components as required

- post-service testing procedures of drive shafts.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the drive shafts that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer drive shaft specifications
- two different vehicles or machinery with drive shafts requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing drive shafts.

AURTTQ004 Overhaul final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return a final drive assembly to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the final drive assembly, carrying out the overhaul procedures, reassembling and testing the final drive assembly, and completing workplace processes and documentation.

It applies to those working on final drive assemblies in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURTTQ004 Overhaul final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul three different final drive assemblies, one of which must include a limited slip final drive assembly.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) procedures relating to overhauling final drive assemblies, including procedures for using:
 - specialised final drive assembly overhaul tools, equipment and machinery
 - chemicals and toxic substances
 - manual and mechanical lifting equipment
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from final drive assemblies
- types, characteristics and operating principles of final drive assemblies, including limited slip differentials
- final drive assembly overhaul procedures, including:
 - methods for cleaning and preparing final drive assemblies for overhaul
 - final drive dismantling procedures
 - final drive component inspection, measuring and evaluation procedures, including:
 - non-destructive testing procedures, including dye penetrant testing and magnetic particle testing
 - measuring crown wheel run-out and differential case assembly side play
 - measuring ring gear mounting surface run-out

- measuring limited slip differential components
- final drive component repair and adjustment procedures, including:
 - bearings and shims
 - collapsible spacers
 - limited slip differential components
- final drive assembly procedures, including procedures for adjusting component tolerances, including:
 - pinion gear depth
 - pinion bearing preload
 - crown wheel and pinion backlash
 - side bearing preload
 - obtaining and interpreting pinion to crown wheel contact pattern
 - adjustment procedures to gain correct contact pattern
- post-overhaul testing procedures for final drive assemblies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the final drive assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer final drive assembly specifications
- three different final drive assemblies requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting final drive assemblies.

AURTTR001 Diagnose complex faults in engine management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in engine management systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The engine management systems include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnosis requirements are determined from workplace instructions 1.2 Existence of fault in engine management system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety requirements</i>
2. Prepare to perform diagnosis	2.1 Manufacturer specifications and other technical information for engine management system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle or machinery is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles or machinery.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking engine management system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure engine management system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications use electrical measuring equipment and interpret units, such as amperes, ohms, volts and watts.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as vernier calipers use specialised diagnostic equipment, such as scan tools and oscilloscopes.

Range of Conditions

Assessment Requirements for AURTTR001 Diagnose complex faults in engine management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in three different engine management systems
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in engine management systems, including procedures for:
 - working with high pressure petrol fuel systems
 - working on vehicle high voltage ignition systems
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- types of complex faults relating to engine management systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- types, functions and operation of engine management systems, including:

- injectors
- air flow meters
- temperature sensors
- pressure sensors
- throttle position sensors
- testing procedures for engine management systems, including procedures for:
 - dynamic and static testing of vehicle or machinery
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in engine management systems, including:
 - scan tools
 - oscilloscopes
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine management systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine management system specifications
- three different vehicles or machinery with complex faults in their engine management systems
- engine management system diagnostic equipment, including scan tools and oscilloscopes
- tools, equipment and materials appropriate for diagnosing complex faults in engine management systems.

Assessment Requirements for AURTTW001 Carry out soft soldering techniques

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out soft soldering to repair:
 - a radiator or fuel tank using a soldering iron
 - a radiator using a direct flame.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to soft soldering, including procedures for working with:
 - cleaning and heating equipment
 - corrosive fluxes
 - volatile liquids and fumes
- environmental requirements, including procedures for trapping, storing and disposing of waste produced during soft soldering process
- soft soldering procedures, including:
 - component cleaning and preparation
 - types and applications of fluxes
 - methods of applying heat, including:
 - soldering irons
 - direct flame
- soft soldering testing procedures, including pressure testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the soft soldering work they have completed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- components as specified in the performance evidence requiring soft soldering repair or assembly
- tools, equipment and materials appropriate for soft soldering components, including:
 - required fluxes
 - required heating equipment, including:
 - soldering iron
 - direct flame equipment.

AURTTW002 Set, operate and monitor specialist reconditioning machines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to set, operate and monitor specialist machines used in reconditioning engine or vehicle components. It involves preparing for the task, setting up, operating and monitoring specialist machines, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. This unit does not cover crankshaft or camshaft grinding.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for work	1.1 Job requirements are determined from workplace instructions 1.2 Machine information is sourced, procedures and methods are analysed, and tools required for the machining process are selected 1.3 Tools and measuring equipment are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Technical and calibration requirements for machining are determined and support equipment is identified and prepared 1.6 Components are measured and required repair action is determined
2. Set machine	2.1 Machine is set up according to manufacturer specifications and workplace procedures, and without causing damage to any component or system 2.2 Component is positioned and clamped according to manufacturer specifications and workplace procedures 2.3 Machine is adjusted to meet operational requirements and specifications using appropriate measuring equipment and according to manufacturer specifications and workplace procedures 2.4 Tooling and accessories for the job are selected, and worn or damaged tooling is identified and changed or sharpened, according to manufacturer specifications and workplace procedures
3. Operate and monitor machine	3.1 Machine is operated according to workplace procedures and <i>safety requirements</i> , following machinery safe operating procedures and without causing damage to any component or system 3.2 Components are measured to ensure compliance with specifications 3.3 Sharpness of tooling is monitored and tooling is sharpened or replaced to meet requirements 3.4 Finished product is checked for alignment, tolerance and finish according to specifications and workplace procedures
4.1 Complete work	4.1 Final inspection is made to ensure finished work complies with

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
processes	<p>workplace requirements</p> <p>4.2 Bright surfaces are treated with rust prevention solution and component is prepared for further process or storage according to workplace procedures</p> <p>4.3 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information quickly and efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret machinery safe operating procedures from workshop literature and signs.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when recording parts and material used.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts use basic mathematical operations, including addition and subtraction, to: <ul style="list-style-type: none"> convert metric dimensions to imperial, and imperial dimensions to metric use metric and imperial precision measuring equipment calculate tolerances and clearances, and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> prepare work area and machines for operations select best tooling option for the work and sequence procedure to reduce time and material wastage.

Assessment Requirements for AURTTW002 Set, operate and monitor specialist reconditioning machines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- set up, operate and monitor machine operations for three tasks, including:
 - one precision grinding operation
 - one milling or boring operation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to setting up, operating and monitoring specialist machinery, including:
 - procedures for selecting and using personal protective equipment (PPE), including:
 - eye, hand and feet protection
 - protective clothing
 - operational risk assessment and treatments associated with:
 - electrical safety of machinery
 - machinery movement and operation
- basic machining procedures for commonly used specialist reconditioning machines, including:
 - sharpening and shaping tools
 - identifying worn and damaged cutting tools
 - correctly mounting and positioning cutting tools
 - setting machining parameters to achieve job requirements and maximise tool life, including speeds and feeds

- types and application of coolants and lubricants
- measuring to specified tolerances and dimensions
- type, characteristics, uses and limitations of commonly used specialist reconditioning machines
- techniques for reading and interpreting technical information, including technical drawings.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the specialist machines that they have set, operated and monitored, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions detailing work requirements, including work specifications
- specialist reconditioning machines specified in the performance evidence
- precision measuring equipment, including micrometers
- material relevant to carrying out machining operations.

AURTTW003 Carry out machining operations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out machining operations on a range of automotive components to specific tolerances. It involves preparing for the task, selecting the correct machining operation, setting up and machining components to specifications, and completing workplace processes and documentation. It also involves restoring surface finishes and tolerances, and aligning components.

It applies to those working in the automotive service and repair industry. The machining operations apply to those using lathes, and milling or surface grinding machines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to machine material	1.1 Job requirements are determined from workplace instructions 1.2 Machine and material information is sourced and interpreted 1.3 Machining procedures and methods are analysed, and those most appropriate to the circumstances are selected 1.4 Hazards associated with work are identified and risks managed 1.5 Tools and equipment are selected and prepared for operation according to manufacturer specifications and workplace procedures
2. Set up machinery prior to machining	2.1 Components to be machined are positioned and clamped according to manufacturer specifications, workplace procedures and safety requirements 2.2 Speed and feed that suit component materials are selected according to manufacturer specifications and workplace procedures 2.3 Machine and components are set up according to industry standards and manufacturer current specifications for methods, equipment used and tolerances relative to component
3. Machine components	3.1 Components are machined according to workplace procedures and safety requirements, and following machinery safe operating procedures 3.2 Component is measured for size and finish according to manufacturer specifications and workplace procedures 3.3 Size and finish are compared with specifications 3.4 Machining is completed to required specifications according to workplace procedures and safety requirements, and following machinery safe operating procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and component is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Assessment Requirements for AURTTW003 Carry out machining operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out machining operations on both ferrous and non-ferrous materials, using two of the following machines:
 - lathe
 - mill
 - surface grinder.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out machining operations, including operational risk assessment and treatments associated with:
 - electrical safety of machinery
 - machinery movement and operation
- basic machining procedures, including:
 - sharpening and shaping tools
 - identifying worn and damaged cutting tools
 - mounting and positioning cutting tools
 - setting machining parameters to achieve job requirements and maximise tool life, including speeds and feeds
 - types and application of coolants and lubricants
 - measuring to specified tolerances and dimensions
- procedures for machining using a lathe, mill and surface grinder, including:

- clamping and mounting work pieces
- setting speeds and feeds
- machining ferrous and non-ferrous materials
- requirements of Australian standards relevant to engine reconditioning, including:
 - AS4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
 - AS4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the machining operations that they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions detailing work requirements, including work specifications
- AS4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- machinery as specified in the performance evidence
- precision measuring equipment, including inside and outside metric and imperial micrometers
- ferrous and non-ferrous material relevant to carrying out machining operations.

AURTTX001 Remove and tag driveline components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, remove and tag a range of driveline components. It involves preparing for the work, removing and tagging driveline components by title, job number and driveline application, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation for entering the automotive retail, service and repair industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and tag driveline component	1.1 Task instructions are interpreted and vehicle to be worked on is identified 1.2 Driveline component information is sourced and interpreted 1.3 Potential hazards and risks associated with the task are identified and reported to workplace supervisor 1.4 Tools and equipment are selected and checked for serviceability
2. Remove component	2.1 Driveline component for removal is identified 2.2 Component is removed according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> , and without causing damage to components or systems 2.3 Removed component is inspected and findings are recorded according to workplace procedures
3. Tag component	3.1 Tagging procedures are identified 3.2 Removed component is legibly <i>tagged</i> according to workplace procedures and without causing damage 3.3 Tagged component is stored according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instructions and workplace standards 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description

Assessment Requirements for AURTTX002 Inspect and service manual transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the manual transmissions of two different vehicle or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing manual transmissions, including procedures for handling transmission oils
- environmental requirements, including procedures for trapping, storing and disposing of oils released from transmissions
- identification and function of manual transmissions, including:
 - major components
 - gearshift mechanisms
- basic operation of manual transmissions, including:
 - transaxle
 - longitudinal transmission
 - transfer case
- types and applications of transmission oils
- inspection procedures for manual transmissions, including:
 - evaluating lubricant condition
 - carrying out visual inspections for damage or lubricant leaks
- service and adjustment procedures for manual transmissions, including:
 - replacing oils as required

- inspecting and adjusting lubricant levels
- adjusting linkages as required
- post-service testing procedures for manual transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the manual transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer manual transmission specifications
- two different vehicles or machinery with manual transmissions requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing manual transmissions.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service automatic transmission	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect automatic transmission	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service automatic transmission	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to automatic transmissions.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> calculate liquid volumes and service schedule intervals using basic mathematical operations, including addition and subtraction.
Technology skills to:	<ul style="list-style-type: none"> use automatic transmission servicing tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for handling transmission fluids environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions.

Assessment Requirements for AURTTX003 Inspect and service automatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the automatic transmissions of two different vehicles or machinery, including:
 - replacing transmission fluid and filter
 - making transmission adjustments.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing automatic transmissions, including procedures for handling transmission fluids
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions
- identification and function of automatic transmission components, including:
 - torque converter
 - control valve body
 - housings
 - gear trains
 - bands and clutch packs
 - servos
 - oil pumps
 - electronic controls
 - selector mechanisms

- basic operation of automatic transmission, including:
 - torque converter
 - transaxle
 - longitudinal transmission
- types and applications of transmission fluids
- inspection procedures for automatic transmissions, including:
 - fluid levels and condition
 - fluid leaks
 - internal and external physical condition
 - transmission sensors and controls
- service and adjustment procedures for automatic transmissions, including:
 - replacing transmission fluid and filter
 - checking transmission fluid levels
 - adjusting bands, linkages and sensors as required
- post-service testing procedures for automatic transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the automatic transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer automatic transmission specifications
- two different vehicles or machinery with automatic transmissions requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing automatic transmissions.

AURTTX004 Inspect and service hydrostatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service hydrostatic transmissions and associated components. It involves preparing for the task, inspecting the transmission and components, reporting the inspection findings, servicing and adjusting the transmission, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The hydrostatic transmissions include those of agricultural machinery, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

AURTTX006 Diagnose and repair hydrostatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in hydrostatic transmissions and their associated components. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The unit applies to hydrostatic transmissions in agricultural machinery, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTX006 Diagnose and repair hydrostatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the hydrostatic transmission systems of two different vehicles or machinery, including in three of the following components:
 - charge pump
 - main pump
 - drive motor
 - hydraulic lines
 - heat exchanger
 - control valve.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing hydrostatic transmissions, including procedures for:
 - working with high pressure and stored energy hazards
 - isolating and stabilising machines
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydrostatic transmissions
- operating principles of hydrostatic transmissions and associated components, including:
 - closed loop
 - charge circuitry
 - flushing circuit

- application, purpose and operation of hydrostatic transmissions and components, including:
 - charge pump
 - main pump, including pilot control systems
 - drive motor, including control systems
 - filtering
 - hydraulic lines
 - heat exchanger
 - reservoir
- diagnostic testing procedures for hydrostatic transmissions, including:
 - testing charging system
 - testing closed loop system
 - testing flushing system
 - measuring case drains
 - testing internal and external fluid leaks
 - checking abnormal noises and operation
 - using scan tools and multimeter
- repair procedures for hydrostatic transmissions, including procedures for:
 - isolating faults
 - dismantling components and parts
 - inspecting and evaluating worn components
 - repairing and replacing parts
- post-repair flow and pressure testing procedures for hydrostatic transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the hydrostatic transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for hydrostatic transmissions
- two different vehicles or machinery with faults in the hydrostatic transmission components specified in the performance evidence
- diagnostic equipment for hydrostatic transmissions
- tools, equipment and materials appropriate for repairing and adjusting hydrostatic transmissions.

AURTTX007 Overhaul clutch assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return a clutch assembly to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the clutch assembly, carrying out the overhaul procedures, reassembling and testing the clutch assembly, and completing workplace processes and documentation.

It applies to those working on clutch assemblies in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle clutch assembly	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate clutch assembly and components	2.1 Clutch assembly is dismantled in a logical sequence according to manufacturer and workplace procedures, and <i>safety and environmental requirements</i> , and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble clutch assembly and components	4.1 Clutch assembly is assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of clutch assembly is completed within workplace timeframes and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly process are rectified

Elements	Performance Criteria

Assessment Requirements for AURTTX007 Overhaul clutch assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul three different clutch assemblies, including one of the following:
 - diaphragm clutch
 - coil spring clutch
 - dual mass flywheel.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling clutch assemblies, including procedures for:
 - trapping, storing and disposing of brake dust and brake fluids
 - using specialised clutch assembly overhaul tools, equipment and machinery
 - using chemicals and toxic cleaning substances
- environmental requirements, including procedures for trapping, storing and disposing of fluids and dust released from clutch assemblies
- types, characteristics and operating principles of clutch assemblies, including:
 - diaphragm clutches
 - coil spring clutches
 - multi-plate wet clutches
 - dual mass flywheels
 - dog clutches
 - clutch operating systems, including:

- cable systems
- hydraulic systems
- clutch assembly overhaul procedures, including:
 - methods for removing clutch assemblies from flywheels
 - methods for cleaning and preparing clutch assemblies for overhaul
 - clutch dismantling procedures, including:
 - diaphragm clutches
 - coil spring clutches
 - clutch component inspection, measuring and evaluation procedures, including:
 - non-destructive testing procedures, including dye penetrant testing and magnetic particle testing
 - flywheel, including surface damage and run-out, ring gear serviceability, and pilot bearing serviceability
 - pressure plate assembly, including pressure plate surface damage, pressure plate surface run-out and warping, diaphragm spring serviceability, coil spring and associated components serviceability, and clutch cover damage
 - friction disc serviceability
 - release bearing serviceability
 - crankshaft, including pilot bearing bore run-out and crankshaft end float
 - clutch release fork and transmission input shaft inspection
 - clutch repair and adjustment procedures, including flywheel and pressure plate machining
 - clutch assembly procedures, including procedures for adjusting component tolerances and clearances
- post-overhaul testing procedures for clutch assemblies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the clutch assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer clutch assembly specifications
- three different clutch assemblies requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting clutch assemblies.

Assessment Requirements for AURTTX008 Overhaul manual transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul three different manual transmissions, one of which must include a transaxle transmission.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling manual transmissions, including procedures for using:
 - specialised manual transmission overhaul tools, equipment and machinery
 - chemicals and toxic substances
 - manual and mechanical lifting equipment
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from manual transmissions
- types, characteristics and operating principles of manual transmissions, including transaxles and conventional transmissions
- manual transmission overhaul procedures, including:
 - methods for cleaning and preparing manual transmissions for overhaul
 - transmission dismantling procedures
 - transmission component inspection, measuring and evaluation procedures, including:
 - non-destructive testing procedures, including dye penetrant testing and magnetic particle testing
 - assessing transmission case damage and alignment to engine

- measuring tolerances and clearances of components, including extension housing seal and bushing, bearings, gear wear and damage, synchroniser units and baulk rings, shift rails and forks, detents and interlock systems, and input, main, counter and output shafts
- transmission component repair and adjustment procedures, including:
 - bearings and shims
 - seals and bushings
 - speedometer drive gears
- transmission assembly procedures, including procedures for adjusting component tolerances, including:
 - bearing preload
 - shaft end float
 - final drive bearing preload
- post-overhaul testing procedures for manual transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the manual transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer manual transmission specifications
- three different manual transmissions requiring overhaul, one of which must be a transaxle
- tools, equipment and materials appropriate for overhauling and adjusting manual transmissions.

AURTTX009 Overhaul automatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return an automatic transmission to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the transmission, carrying out the overhaul process, reassembling and testing the transmission, and completing workplace processes and documentation.

It applies to those working on automatic transmissions in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle automatic transmission	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted 1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate automatic transmission and components	2.1 Transmission is dismantled in a logical sequence according to manufacturer and workplace procedures, and <i>safety and environmental requirements</i> , and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble transmission and components	4.1 Transmission is assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of transmission is completed within workplace timeframes and without causing damage to other components or systems 4.5 Post-assembly testing is carried out according to workplace

AURTTX012 Dismantle and assemble conventional manual transmissions

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to dismantle and reassemble a conventional manual transmission. It requires the learner to plan and prepare the task; dismantle the transmission and inspect the components; reassemble the transmission and check the transmission operation; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

2. Dismantle a conventional manual transmission	<p>2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements</p> <p>2.2 Manual transmission is dismantled according to workplace procedures and safety and environmental requirements, and without causing damage to components, tools or equipment</p> <p>2.3 Transmission components are cleaned and arranged for identification according to workplace procedures</p>
3. Inspect and identify gears and bearings	<p>3.1 Measuring equipment and tools are selected and checked according to manufacturer specifications and workplace safety procedures</p> <p>3.2 Gears and bearings are inspected and measured, and measurements are compared against manufacturer specifications</p> <p>3.3 Transmission bearing information is sourced and interpreted, and bearing type and associated loads are identified</p> <p>3.4 Gear types are identified and gear ratios calculated and recorded</p>
4. Inspect components and re-assemble transmission	<p>4.1 Transmission seals, sealants and gasket information is sourced and interpreted; and seals, sealants and gaskets are identified</p> <p>4.2 Transmission component's inspection results are recorded</p> <p>4.3 Transmission components are prepared for assembly according to manufacturer specifications and safety and environmental requirements</p> <p>4.4 Transmission is assembled according to manufacturer specifications and requirements</p>
5. Complete work processes	<p>5.1 Final inspection is made to ensure work meets task instruction and workplace standards, and conventional manual transmission is presented ready for use or storage according to workplace procedures</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored</p>

ELEMENTS	PERFORMANCE CRITERIA
	<p>according to environmental requirements and workplace procedures</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle transmission information and transmission dismantle and reassembly procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely dismantle and assemble a conventional manual transmission select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information in transmission information use specialist tools and measuring equipment correctly, including verniers, micrometers and torque wrenches, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate clearances and ratios.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.

Skills	Description
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to dismantle and assemble a conventional manual transmission.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including: <ul style="list-style-type: none"> use of personal protective equipment, including safety glasses, ear protection and safety footwear applying procedures for disposing of used oil, lubricants and coolants.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> micrometers and other measurement instruments torque wrench.
<i>Manual transmission</i> must include:	<ul style="list-style-type: none"> a complete conventional manual transmission, with at least four gears.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTX012 Dismantle and assemble conventional manual transmissions

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle and re-assemble a minimum of two different conventional manual transmissions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - use of personal protective equipment, including safety glasses, ear protection and safety footwear
 - procedures for disposing of used oil and lubricants
- types of manual transmissions, including:
 - conventional
 - transaxle
- transmission operating principles, including:
 - types of gears
 - gear ratios
 - transmission bearings, seals and gaskets
 - transmission oils
- construction and operation of transmissions, including:
 - power flows
 - gear selector mechanisms and interlocks
 - synchromesh units
- transmission dismantling procedures
- transmission inspection procedures

- transmission reassembly procedures
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to dismantling and re-assembling a conventional manual transmission e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two different conventional manual transmissions with at least four gears
- tools and special equipment, including lifting equipment.

AURTTX013 Remove and replace clutch assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the clutch assembly of a vehicle. It requires the learner to plan and prepare the task; remove the clutch assembly and inspect it and its associated components; replace the clutch assembly and check the clutch operation; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Transmission

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and replace clutch assembly	1.1 <i>Safety and environmental requirements</i> are sourced and interpreted

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Task instruction is interpreted and clutch assembly to be worked on is identified 1.3 Manufacturer specifications and workplace procedures for clutch assembly removal and replacement are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Tools and equipment required for removing and replacing clutch assembly are identified according to manufacturer specifications
2. Remove clutch assembly	2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements 2.2 Clutch assembly is removed according to workplace procedures and safety and environmental requirements, and without causing damage to components, tools or equipment 2.3 Clutch components are identified and inspected according to manufacturer specifications 2.4 Clutch assembly component inspection results are recorded
3. Replace clutch assembly	3.1 Clutch assembly components are prepared for assembly 3.2 Clutch is replaced according to safety and environmental requirements, workplace procedures and manufacturer specifications, and without causing damage to components, tools or equipment 3.3 Clutch assembly finger height is measured and compared to manufacturer specifications
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and clutch assembly is presented ready for use or storage according to workplace procedures 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle clutch assembly information and clutch assembly removal and replacement procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace clutch assemblies select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret numerical information in clutch system information use specialist tools and measuring equipment correctly, including verniers and torque wrenches, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate length and clearances.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	<ul style="list-style-type: none"> recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to remove and replace a clutch assembly.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> • use of personal protective equipment, including safety glasses, ear protection and safety footwear • use of hand tools and lifting equipment • application of procedures for handling used transmission fluid and asbestos-based products, including brake dust.
<i>Tools, equipment and materials</i> must include:	<ul style="list-style-type: none"> • automotive hand tools • transmission lifting equipment • clutch aligning tool • cleaning agents.
<i>Clutch assembly</i> must include:	<ul style="list-style-type: none"> • the complete clutch assembly from one of the following: <ul style="list-style-type: none"> • passenger or light commercial motor vehicle • heavy vehicle • motorcycle • constructed vehicle.

Assessment Requirements for AURTTX013 Remove and replace clutch assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace a clutch assembly from an operating vehicle with a manual transmission.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - use of personal protective equipment, including safety glasses, ear protection and safety footwear
 - use of hand tools and lifting equipment
 - safety data sheets (SDS) and procedures for handling and disposing of waste brake fluid, lubricants and asbestos-based products, including brake dust
- clutch assembly types, application and basic operation, including:
 - diaphragm clutch
 - coil spring clutch
- clutch assembly removal procedures
- clutch assembly and associated component inspection procedures
- clutch assembly replacement procedures, including:
 - clutch aligning
 - clutch finger height measurement
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the clutch assemblies that they have removed and replaced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- an appropriate vehicle fitted with a manual transmission and clutch assembly
- automotive hand tools
- transmission lifting machine
- clutch aligning tool
- cleaning agents.

AURTTX015 Inspect and service clutch systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to inspect and service clutch systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

This unit applies to those working in the automotive service and repair industry. The clutch systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to inspect and service clutch system	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret servicing information 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify tools, equipment and materials required for the job, and examine for serviceability
2. Inspect clutch system	2.1 Carry out inspection according to manufacturer specifications, workplace procedures and workplace health and safety and

	<p>environmental requirements</p> <p>2.2 Compare inspection results with manufacturer specifications</p> <p>2.3 Report inspection findings and make recommendations for necessary repairs or adjustments according to workplace procedures</p>
3. Service clutch system	<p>3.1 Carry out service and adjustment activities according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements, and without causing damage to components or systems</p> <p>3.2 Carry out post-service testing according to workplace procedures and rectify any issues identified</p>
4. Complete work processes	<p>4.1 Carry out final inspection to ensure work meets workplace expectations and vehicle or machinery is ready for use</p> <p>4.2 Clear work area and dispose of or recycle materials according to workplace procedures</p> <p>4.3 Examine and store tools and equipment according to workplace procedures</p> <p>4.4 Complete workplace documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of clutch systems information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from manufacturer specifications, workplace procedures and documentation ,when seeking clutch systems service procedures and specifications
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making repair recommendations, and recording parts and material used
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings make repair recommendations
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical operations, including addition and subtraction measure clutch system components compare measurements against specifications

Problem solving skills to:	<ul style="list-style-type: none"> refer problems outside area of responsibility to relevant person

Assessment Requirements for AURTTX015 Inspect and service clutch systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate inspecting and servicing the clutch systems of two different vehicles or machinery, including:

- one mechanically operated clutch system
- one hydraulically operated clutch system
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for the inspection and service of clutch, including:

- how to locate and interpret manufacturer specifications or equivalent documentation and workplace procedures for inspecting and servicing clutch systems
- the following workplace health and safety requirements for inspecting and servicing clutch systems:
 - procedures for controlling clutch dust and clutch fluid hazards
- the following environmental requirements and procedures for inspecting and servicing clutch systems:
 - trapping, storing and disposing of clutch fluid released during clutch bleeding
- the following inspection procedures for clutch systems:
 - mechanically or cable operated clutch component wear
 - hydraulic operating system for leaks
- service and adjustment procedures for clutch systems, including:
 - adjusting clutch pedal
 - adjusting release fork
 - bleeding clutch fluid
- post-service testing procedures for clutch systems

- workplace housekeeping and documentation procedures

Clutch systems technical information including:

- the identification, function and operation of the following clutch system and components:
 - clutch plate
 - pressure plate
 - flywheel
 - release bearing and release fork
 - pedals and cables
 - master cylinder
 - slave cylinder
- basic operation of the following clutch systems:
 - dry single or multi-plate clutch
 - wet multi-plate clutch
 - centrifugal clutch
 - hydraulically operated clutch
 - mechanically or cable operated clutch
- types and applications of clutch fluids
-

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to inspect and service activity
 - workplace procedures relating to inspect and service activity
 - manufacturer clutch system specifications or equivalent documentation to complete inspect and service activity
 - two different vehicles or machinery with clutch systems requiring servicing
 - tools, equipment and materials suitable for inspecting and servicing clutch systems
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

AURTTY001 Repair vehicle chassis, frame and associated components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, repair and align chassis, frame and components to vehicles. It involves preparing for the task, selecting and using specialist tools and equipment, identifying damage, taking pre-repair measurements, conducting repairs, taking post-repair measurements according to original equipment manufacturer (OEM) or authorised agency specifications, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Chassis and Frame

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to repair vehicle chassis, frame and associated components	1.1 Job requirements are determined from workplace instructions 1.2 Type of damage is identified, and inspection report is completed and documented according to workplace procedures 1.3 Repair specifications from OEM or authorised agency are sourced and interpreted 1.4 Hazards associated with the work are identified and risks are managed 1.5 <i>Repair tools and equipment</i> and personal protective equipment (PPE) are selected and checked for serviceability 1.6 Work is planned to identify repair methods, minimise waste and use time efficiently
2. Carry out repairs	2.1 Repair or replacement and alignment activities are carried out according to OEM or authorised agency repair specifications, workplace procedures, and <i>safety and environmental requirements</i> , within industry time lines, and without causing damage to other vehicle components or systems 2.2 Measuring equipment is used to take accurate measurements and to align the chassis, frame and components
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communications skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions and procedures clearly report issues or outcomes relating to repair.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate tolerances from manufacturer specifications interpret repair and alignment measurements.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> correctly and safely use specialist repair equipment and tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Repair tools and equipment</i> must include:	<ul style="list-style-type: none"> hydraulic repair equipment measuring and alignment equipment.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE using specialist tools and equipment identifying workplace hazards environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURTTY001 Repair vehicle chassis, frame and associated components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair one chassis and its frame and components, in which the work must involve two of the following types of damage:
 - diamond and twist damage
 - kick-up and kick-down
 - sag
 - mash and sway.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle chassis, frame and associated components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using specialist tools and equipment
 - identifying workplace hazards
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- steps in repair inspection process
- original equipment manufacturer (OEM) or authorised agency specifications and recommended repair procedures
- features of different types of chassis damage, including:
 - diamond and twist damage

- kick-up and kick-down
- sag
- mash and sway
- procedures for determining chassis reparability
- vehicle design characteristics, including:
 - mono unitised
 - alloy and high strength steel (HSS) chassis
- chassis repair, replacement and alignment techniques
- key characteristics of welding types and techniques
- limitations on drilling and welding to chassis
- type and use of chassis repair tools and equipment, including:
 - application of heat colours, heat crayons and thermal temp gun
 - hydraulic repair equipment
 - equipment maintenance procedures
- measuring and alignment procedures
- type and use of measuring equipment, including:
 - gun sight gauges
 - drop lining
 - trammel gauges
 - tape measures
- final inspection procedures
- work area clean-up and maintenance requirements
- procedures for completing workplace documentation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle chassis, frames and components that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- OEM specifications and repair instructions
- PPE required to repair chassis, frame and components
- one chassis requiring repair, and its frame and associated components
- measuring and alignment equipment
- tools and equipment appropriate for repairing vehicle chassis, frame and components.

AURTTZ001 Inspect and service emission control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service emission control systems on petrol or diesel powered engines. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The emission control systems include those of agricultural equipment, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

This unit does not include emission control systems associated with engine management systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Emission and Exhaust

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service emission control system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect emission control system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service emission control system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to emission control systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Problem solving skills to:	<ul style="list-style-type: none"> refer problems outside area of responsibility to appropriate person.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with vehicles and machinery that produce toxic exhaust gas.

Assessment Requirements for AURTTZ001 Inspect and service emission control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service two different vehicle or machinery emission control systems on petrol or diesel powered engines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing emission control systems, including procedures for working with vehicles and machinery that produce toxic exhaust gas
- basic principles of emission control, including:
 - types of vehicle emissions and their effects on the environment
 - sources of emissions from petrol and diesel vehicles and machinery, including:
 - fuel system
 - engine crankcase
 - engine exhaust system
- identification and function of emission control systems, including:
 - fuel evaporative control systems, including:
 - fuel tank and cap
 - charcoal canister
 - crankcase ventilation systems
 - exhaust emission control systems, including:
 - particulate filters
 - catalytic converters

- exhaust gas recirculation (EGR) systems
- supplementary catalytic reduction (SCR) systems
- inspection procedures for emission control systems, including:
 - identifying deterioration and damage of components
 - checking for fuel or exhaust gas leaks
- service and adjustment procedures for emission control systems, including cleaning or replacing components as required
- post-service testing procedures for emission control systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the emission control systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer emission control system specifications
- two different vehicles or machinery with emission control systems requiring servicing
- equipment, tools and materials appropriate for inspecting and servicing emission control systems.

AURTTZ002 Diagnose and repair exhaust systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the exhaust systems of vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The unit applies to exhaust systems in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Emission and Exhaust

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair an exhaust system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose an exhaust system	2.1 Diagnostic tests are performed according to workplace procedures and safety requirements 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair an exhaust system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and system or vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking exhaust system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace literature when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure exhaust system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> diagnostic equipment for exhaust systems

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements must include:</i>	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with hot components and exhaust systems producing toxic gases.

Assessment Requirements for AURTTZ002 Diagnose and repair exhaust systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following components in the exhaust systems of two different vehicles:
 - exhaust manifold or extractor pipes
 - manifold gasket fitted to a vehicle
 - catalytic converter
 - muffler or resonator
 - exhaust pipe.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing exhaust systems, including procedures for working with hot components and exhaust systems producing toxic gases
- operating principles of features of exhaust systems and associated components, including scavenging and back pressure
- application, purpose and operation of exhaust systems and components, including:
 - mufflers
 - extractor pipes
 - catalytic converters
 - diesel particulate filters
- diagnostic testing procedures for exhaust systems, including:
 - exhaust leak testing

- vibration and noise locating procedures
- back pressure testing
- repair procedures for exhaust systems, including procedures for removing, replacing and aligning components
- post-repair testing procedures for exhaust systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the exhaust systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer exhaust system specifications
- two different vehicles with faults in the exhaust system components specified in the performance evidence
- diagnostic equipment for exhaust systems
- tools, equipment and materials appropriate for repairing exhaust systems, including metal heating equipment.

AURVLA001 Identify and report vehicle claim fraud indicators

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to identify and report fraud indicators associated with a vehicle insurance claim.

The unit applies to those who identify signs of fraudulent activity on inspection of vehicles; collecting and evaluating information, and providing a written assessment report. Work may relate to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Vehicle Body

Unit Sector

Regulatory and Legal

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for vehicle assessment	1.1 <i>Assessment information</i> is gathered 1.2 Assessment information is reviewed and interpreted 1.3 <i>Safety requirements</i> relating to vehicle claim fraud indicators are identified
2. Inspect the vehicle for	2.1 <i>Fraud indicators</i> are identified and recorded

ELEMENTS	PERFORMANCE CRITERIA
fraud	2.2 <i>Workplace policies and procedures, industry guidelines and legal requirements</i> are read and interpreted 2.3 Vehicle is assessed in line with compliance requirements
3. Determine suitable action	3.3 Possible actions to deal with fraud indicators are determined 3.2 Action consistent with nature of claim, assessment made, and workplace and legal restraints is decided
4. Prepare assessment report	4.1 Comprehensive report is prepared specifying full results of identified fraud and vehicle assessment 4.2 Recommendations are documented, including actions and justifications 4.3 Report is submitted and filed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret information relating to automotive insurance claims and assessment information.
Writing skills to:	<ul style="list-style-type: none"> write a comprehensive assessment report integrating information from a range of sources and using appropriate support material, such as photographs and measurements.
Oral communication skills to:	<ul style="list-style-type: none"> gather and interpret information from customers and others relating to a fraudulent vehicle insurance claim.
Numeracy skills to:	<ul style="list-style-type: none"> use calculations of actual damage when reviewing vehicle claims to identify and report vehicle claim fraud indicators.
Problem-solving skills to:	<ul style="list-style-type: none"> establish diagnostic processes relating to identifying and reporting vehicle claim fraud indicators.
Teamwork skills to:	<ul style="list-style-type: none"> work effectively with customers, repairers and supervisors.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p>Assessment information must include:</p>	<ul style="list-style-type: none"> • assessment notification detailing: <ul style="list-style-type: none"> • claims handler • insurance policy details where applicable • vehicle owner details • vehicle details • driver details • incident details • vehicle inspection details, including assess without prejudice or assess and authorise • digital images • quote for repairs or total loss determination.
<p>Safety requirements must include:</p>	<ul style="list-style-type: none"> • first aid equipment • personal protective equipment and clothing • safety equipment.
<p>Fraud indicators must include two of the following:</p>	<ul style="list-style-type: none"> • claim report inconsistent with vehicle damage • manufactured damage • staged accidents.
<p>Workplace policies and procedures must include:</p>	<ul style="list-style-type: none"> • recording and reporting procedures • safe work procedures.
<p>Industry guidelines must include:</p>	<ul style="list-style-type: none"> • instructions issued by authorised organisation or external persons • industry codes of practice • verbal, written and graphical instructions.
<p>Legal requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and must include:</p>	<ul style="list-style-type: none"> • commercial-in-confidence practices • Competition and Consumer Act • confidentiality and privacy • Motor Vehicle Insurance and Repair Industry Code of Conduct • personal legal liability • relevant industry codes of practice • Written-Off Vehicles Register (WOVR) managed by each State and Territory.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURVLA001 Identify and report vehicle claim fraud indicators

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- assess vehicles to identify and report indicators of vehicle claim fraud, including a minimum of two of the following:
 - staged vehicle accidents
 - manufactured damage
 - damage inconsistent to claim report
- complete an assessment report relating to each claim.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- principles of fraud investigation
- procedures for identifying and reporting fraud indicators
- types of fraud indicators, including:
 - accidents in an industrial area late at night
 - claim report inconsistent with vehicle damage
 - consistent colour transfer
 - consistent striation or scratching of a car
 - damage consistent with weather conditions, such as rain, snow and sleet
 - damage to trim
 - forced entry
 - locks tampered with
 - manufactured damage
 - no independent witnesses
 - no police report

- no signs of towing or tow truck driver
- staged accidents
- vehicle has a low value
- technical knowledge of motor vehicle mechanical, electrical, surface and structural damage and faults
- general insurance industry knowledge, including relevant sections of:
 - contract and insurance law
 - Insurance Contracts Act
 - Motor Vehicle Insurance and Repair Industry Code of Conduct
 - state or territory Fair Trading Act
- methods for sourcing manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory laws, regulations and standards relating to identifying and reporting vehicle claim fraud indicators, including:
 - commercial-in-confidence practices
 - Competition and Consumer Act
 - copyright law
 - environmental regulations
 - intellectual property
 - personal legal liability
 - Privacy Act
 - Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to identifying and reporting vehicle claim fraud indicators, including:
 - recording and reporting procedures
 - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have assessed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of damaged vehicles, including damage consistent with fraudulent activity
- computer hardware and software, calculators and general office equipment
- fraudulent vehicle claim details and documentation
- industry codes of practice and other relevant documents

- internet access
- workplace procedures.

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for vehicle assessment	1.1 <i>Assessment information</i> is gathered 1.2 Assessment information is reviewed and interpreted 1.3 <i>Materials, resources and safety equipment</i> are located and

ELEMENTS	PERFORMANCE CRITERIA
	checked for safe use
2. Inspect vehicle	2.1 Vehicle assessment process is determined and followed 2.2 Vehicle to be inspected is located 2.3 <i>Safety requirements</i> are read and complied with 2.4 Vehicle is inspected in line with insurance claim requirements and workplace policies and procedures 2.5 Preferred dismantling and inspection methods are determined that conform to workplace policies and procedures and vehicle manufacturer, component supplier, and legal requirements 2.6 Dismantling and inspection methods are negotiated and agreed with the repair estimator in a fair and transparent manner 2.7 Damage and faults to vehicle system and component are determined 2.8 Required outsourcing to specialist services is determined
3. Determine vehicle repair action	3.1 Preferred repair method for vehicle system and components is selected that conforms to workplace policies and procedures and vehicle manufacturer, component supplier, and legal requirements 3.2 Preferred repair methods for paint, trim and accessories are selected that conform to workplace policies and procedures and vehicle manufacturer, component supplier, and legal requirements 3.3 Job procedures are determined that use exchanged or recycled parts as appropriate 3.4 Repair methods are communicated and agreed to with repairer and/or specialist services 3.5 Estimated cost of repairs is calculated 3.6 <i>Settlement action</i> is decided and agreed to with repairer and/or specialist services
4. Prepare assessment report	4.1 Repairs are authorised where assess and authorise instructions are included in assessment information 4.2 Where assess without prejudice is included in assessment information a settlement amount is determined and documented 4.3 <i>Recommendations</i> are documented as required by industry and organisation 4.4 Assessment report is completed, including either authorised estimated cost of repairs or settlement amount
5. Complete post-assessment administration	5.1 Assessment report is submitted according to workplace policies and procedures 5.2 Repairer invoice is compared against authorised cost estimate 5.3 Discrepancies between invoice and authorised costs are

ELEMENTS	PERFORMANCE CRITERIA
	investigated where applicable following industry codes and legislative requirements 5.4 Payment of invoice is validated where the invoice and authorised costs are confirmed

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> • interpret assessment information • interpret technical information and specifications • analyse information relating to insurance claims and inspection requirements • understand safety procedures.
Writing skills to:	<ul style="list-style-type: none"> • use common industry terminology when completing vehicle assessment reports.
Oral communication skills to:	<ul style="list-style-type: none"> • engage with repairers and specialist providers • negotiate settlement action • obtain vehicle assessment information from others • report work outcomes and problems.
Numeracy skills to:	<ul style="list-style-type: none"> • calculate cost estimates • interpret technical measurements.
Digital literacy skills to:	<ul style="list-style-type: none"> • use communication devices and computerised equipment to: <ul style="list-style-type: none"> • determine current values and costs • prepare vehicle assessment reports • search and gather supporting material, including digital images.
Planning and organising skills to:	<ul style="list-style-type: none"> • identify and avoid planning and scheduling problems.
Problem-solving skills to:	<ul style="list-style-type: none"> • identify technical and procedural problems and resolve within scope of own role • prevent time and material wastage.
Technology skills to:	<ul style="list-style-type: none"> • take digital images.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Assessment information</i> must include:</p>	<ul style="list-style-type: none"> • assessment notification detailing: <ul style="list-style-type: none"> • claims handler • driver details • incident details • insurance policy details where applicable • report items • vehicle details • vehicle inspection details, including assess without prejudice or assess and authorise • vehicle location • vehicle owner details • digital images • quote for repairs.
<p><i>Materials, resources and safety equipment</i> must include:</p>	<ul style="list-style-type: none"> • digital camera • electronic or paper-based information and reports • internet connection • personal computer, laptop or tablet • maps • personal protective equipment (PPE) kit.
<p><i>Safety requirements</i> must include:</p>	<ul style="list-style-type: none"> • ensuring safe location of vehicle to be inspected • following workplace safety procedures • identifying potential safety hazards.
<p><i>Settlement action</i> must include one or more of the following:</p>	<ul style="list-style-type: none"> • cash settlement • repair • total loss.
<p><i>Recommendations</i> must include one or more of the following:</p>	<ul style="list-style-type: none"> • additional labour • additional parts • approved or denied report items • in-house specialist repair services • sublet specialist repair services.

Unit Mapping Information

Assessment Requirements for AURVNA001 Provide vehicle loss assessments and identify repair requirements

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- provide vehicle loss assessment and identify repair requirements on a minimum of two occasions, which involve:
 - one vehicle with paint damage
 - a further vehicle with mechanical damage
- prepare and submit vehicle assessment report relating to the above assessments.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle mechanical, electrical, paint, panel and structural:
 - extensive damage, which is damage that affects the safety and roadworthiness of a vehicle and includes:
 - body panel damage
 - bolt-on vehicle component damage
 - mechanical component damage
 - structural component damage
 - structural damage
 - welded or bonded key structural components, such as chassis rails damage
 - faults
 - dismantling and repair methods
 - minor damage, which is damage that does not affect the safety and roadworthiness of a vehicle and includes:
 - bumper bar graze
 - hail damage
 - panel damage

- types of specialist services, including:
 - air conditioning
 - automotive glaziers
 - battery electric vehicle (BEV)
 - brake systems
 - cooling systems
 - electrical and electronic systems
 - hybrids
 - liquid petroleum gas (LPG)
 - suspension and wheel alignments
 - transmission
 - trimming
- methods for sourcing current retail costs of vehicles and vehicle components and materials
- vehicle inspection and damage assessment procedures and methodologies, including repair set-up and dismantling procedures
- current assessing and quoting methodologies
- relevant automotive websites to locate information on current best practice and future trends in vehicle loss assessment
- general insurance industry knowledge, including relevant sections of:
 - contract and insurance law
 - Insurance Contracts Act
 - Motor Vehicle Insurance and Repair Industry Code of Conduct
 - state or territory Fair Trading Act
- methods for sourcing original equipment manufacturer (OEM) or authorised agencies' repair procedures and component supplier specifications, workshop manuals and repair guides
- applicable commonwealth, state or territory laws, regulations and standards relating to inspecting vehicles and determining vehicle damage, including:
 - commercial-in-confidence practices
 - environmental regulations
 - intellectual property
 - personal legal liability
 - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to inspecting vehicles and determining vehicle damage, including:
 - recording and reporting procedures
 - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have assessed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of operational vehicles with both minor and extensive vehicle damage
- relevant information, including OEM or authorised agencies' repair specifications, workshop manuals and repair guides
- relevant materials, resources and safety equipment, including digital camera, paperwork and personal protective equipment kit
- relevant safety materials, including workplace safety procedures
- vehicle assessment information, including assessment notification, digital images and quote.

AURVNA002 Provide vehicle total loss assessments

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to provide a vehicle total loss assessment. It involves determining vehicle damage and repair action and cost, calculating prior accident and salvage values, and completing post-assessment documentation.

The unit applies to those undertaking a total loss assessment of a damaged vehicle in the loss assessment environment. Loss assessment may relate to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Assessment Requirements for AURVNA002 Provide vehicle total loss assessments

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- provide a vehicle total loss assessment on a minimum of two occasions, on different damaged vehicles
- complete and submit Written-Off Vehicles Register (WOVR) information and vehicle assessment report.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle mechanical, electrical, paint, panel and structural:
 - minor and extensive damage and faults
 - dismantling and repair methods
 - transferred damage and individual vehicle design
- methods for sourcing current retail costs of vehicles and vehicle components and materials
- vehicle inspection and damage assessment procedures and methodologies, including repair set-up and dismantling procedures
- current assessing and quoting methodologies, including total loss calculation
- relevant automotive websites to locate information on current best practice and future trends in vehicle loss assessment
- general insurance industry knowledge, including relevant sections of:
 - Insurance Contracts Act
 - state or territory Fair Trading Act
 - Motor Vehicle Insurance and Repair Industry Code of Conduct
 - contract and insurance law
- methods for sourcing manufacturer and component supplier specifications, including workshop manuals and repair guides

- applicable commonwealth, state or territory laws, regulations and standards relating to inspecting vehicles and determining vehicle damage, including:
 - commercial-in-confidence practices
 - Competition and Consumer Act
 - copyright law
 - intellectual property
 - personal legal liability
 - WOVR legislation
 - Workplace Health and Safety Act or Occupational Health and Safety Act
 - environmental regulations
- workplace policies and procedures relating to vehicle inspection and determining vehicle damage, including:
 - recording and reporting procedures
 - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have assessed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of operational vehicles with both minor and extensive vehicle damage
- relevant information:
 - original equipment manufacturer (OEM)
 - recognised agency information
 - design specification
 - repair procedures
 - body repair manuals
- relevant materials, resources and safety equipment, including digital camera, paperwork and personal protective equipment kit
- relevant safety materials, including workplace safety procedures
- vehicle assessment information, including assessment notification, digital images and quote.

AURVNA003 Review vehicle repair quotations

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to review a vehicle repair quotation. It involves reviewing cost and time requirements in the repairer's quote to ensure that they accurately represent the repair method to reinstate the vehicle to pre-damage condition, and to determine that the repair cost is fair and reasonable. It also involves ensuring that quotation figures are accurate and completing the required documentation.

The unit applies to those reviewing a body repair shop quotation to repair a damaged vehicle in the loss assessment environment. Vehicles to be repaired may include light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for work	1.1 <i>Quotation</i> and workplace policies and procedures are located 1.2 Quotation information and supporting documents are collected

ELEMENTS	PERFORMANCE CRITERIA
2. Review time requirements	2.1 Viable repair time requirements are estimated 2.2 Turn-around time for subcontracted specialist services is estimated 2.3 Total time for <i>repair work</i> is estimated 2.4 Time requirement estimations are documented
3. Review part requirements	3.1 Viability of replacement parts compared to repair is determined while meeting quality standards, <i>legal requirements</i> , <i>safety requirements</i> , and workplace practices 3.2 Relevance of identified parts for the repair is checked 3.3 Potential variations to the original parts costing is determined 3.4 Cost of parts and consumables is estimated using industry and workplace pricing standards 3.5 Findings relating to parts are documented
4. Review subcontract specialist services work	4.1 Nature and scope of subcontract testing, service and repair work are determined 4.2 Completed subcontracted repair work is checked 4.3 Potential variations to subcontract work costing are identified 4.4 Cost of subcontract testing, service and repair work is estimated using industry and workplace pricing standards 4.5 Subcontract testing, parts, service and repair work requirements are documented
5. Agree on quotation with repairer	5.1 Time requirements and costs are negotiated and agreed with repairer in a fair and transparent manner 5.2 Quotation adjustments are made if required 5.3 Quotation is agreed and finalised 5.4 Authorisation to proceed with the repair is provided as required to reinstate the vehicle to pre-damage condition following workplace policies and procedures
6. Finalise quotation review	6.1 Findings are documented using workplace-approved quotation format 6.2 Findings and repair authorisation documentation are reported to appropriate persons as required by workplace policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> review a vehicle repair quotation to: <ul style="list-style-type: none"> interpret technical information research information understand common industry terminology understand manufacturer and component specifications.
Oral communication skills to:	<ul style="list-style-type: none"> discuss and finalise quotation with repairer discuss quotation with supervisor, subcontractors and customers report work outcomes and problems.
Numeracy skills to:	<ul style="list-style-type: none"> estimate costs, time requirements and subcontract work.
Digital literacy skills to:	<ul style="list-style-type: none"> access repair and time data document and review quotation results.
Problem-solving skills to:	<ul style="list-style-type: none"> identify technical and procedural problems prevent time and material wastage problems.
Teamwork skills to:	<ul style="list-style-type: none"> work effectively and cooperatively with others to optimise workflow and productivity.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Quotations</i> must include:	<ul style="list-style-type: none"> customer details labour cost estimates replacement parts required and their cost subcontracted or specialist work vehicle details work to be performed.
<i>Repair work</i> must include:	<ul style="list-style-type: none"> all vehicle damage, including minor and extensive damage.
<i>Legal requirements</i> are to be in accordance with applicable commonwealth, state, or territory legislation, regulations, certification requirements and codes of practice, and must include:	<ul style="list-style-type: none"> environmental regulations intellectual property.

<p><i>Safety requirements</i> are to be in accordance with applicable commonwealth, state or territory Workplace Health and Safety Act or Occupational Health and Safety Act and must include:</p>	<ul style="list-style-type: none">• ensuring safe location of vehicle to be inspected• following workplace safety procedures• identifying potential safety hazards.

Assessment Requirements for AURVNA003 Review vehicle repair quotations

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- review a minimum of two vehicle repair quotations for vehicle repair jobs, one relating to minor damage, the other to extensive damage.
- for each quotation:
 - agreeing on a final quotation with repairer
 - completing a vehicle assessment report.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle mechanical, electrical, paint, panel and structural:
 - extensive damage, which is damage that affects the safety and roadworthiness of a vehicle and includes:
 - body panel damage
 - bolt-on vehicle component damage
 - mechanical component damage
 - structural component damage
 - structural damage
 - welded or bonded key structural components, such as chassis rails damage
 - faults
 - dismantling and repair methods
- minor damage, which is damage that does not affect the safety and roadworthiness of a vehicle and includes:
 - bumper bar graze
 - hail damage
 - panel damage

- types of specialist services, including:
 - air conditioning
 - automotive glaziers
 - battery electric vehicle (BEV)
 - brake systems
 - cooling systems
 - electrical and electronic systems
 - hybrids
 - liquid petroleum gas (LPG)
 - suspension and wheel alignments
 - transmission
 - trimming
- basic principles of estimating and costing
- methods for sourcing current retail costs of vehicles and vehicle components and materials
- current assessing and quoting methodologies
- relevant automotive websites to locate information on current best practice and future trends in the vehicle loss assessment environment
- general insurance industry knowledge, including relevant sections of:
 - contract and insurance law
 - Insurance Contracts Act
 - Motor Vehicle Insurance and Repair Industry Code of Conduct
 - state or territory fair Trading Act
- applicable commonwealth, state or territory laws, regulations and standards relating to reviewing a vehicle repair quotation, including:
 - commercial-in-confidence practices
 - environmental regulations
 - intellectual property
 - personal legal liability
 - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to reviewing a vehicle repair quotation, including:
 - recording and reporting procedures
 - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third party evidence, individuals must provide evidence that links them to the vehicle repair quotes that they have reviewed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of motor vehicles with both minor and extensive damage
- relevant information:
 - original equipment manufacturer (OEM)
 - recognised agency information
 - design specification
 - repair procedures
 - body repair manuals
- relevant materials, resources and safety equipment, including digital camera, paperwork and personal protective equipment kit
- relevant safety materials, including workplace safety procedures
- vehicle assessment information, including assessment notification, digital images and quotes
- Repair Times manuals.

AURVNA004 Apply insurance industry knowledge to vehicle loss assessments

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to apply insurance industry knowledge to vehicle loss assessment. It involves using insurance industry terminology and trends; and applying policy, Acts and regulations to ensure the correct conduct of a vehicle loss assessment.

It applies to those applying insurance industry knowledge to a vehicle loss assessment in the loss assessment environment. Loss assessment may relate to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Vehicle Body

Unit Sector

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Develop and apply an understanding of the insurance industry	1.1 Sources of information on the structure and functions of the insurance industry are identified and accessed according to workplace policies and procedures

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Broad structures of the insurance industry and their relationship with each other are identified and appropriately applied to day-to-day work 1.3 Insurance industry <i>terminology and vocabulary</i> are used in the correct context 1.4 <i>Trends and technology</i> in the insurance industry are monitored on an ongoing basis to inform personal work practices 1.5 Insurance organisation-specific policies, procedures and processes are identified, clarified where necessary, and applied
2. Develop and apply an understanding of government Acts and regulations relevant to the insurance industry	2.1 Statutory insurance industry <i>principles, obligations and compliance requirements</i> of a loss assessor are interpreted and complied with 2.2 <i>Reporting requirements</i> and procedures are identified 2.3 Requirements under privacy law are identified, clarified where necessary, and complied with
3. Develop and apply an understanding of loss assessment processes	3.1 Knowledge of <i>loss assessment processes, procedures and policy</i> is interpreted 3.2 <i>Condition of vehicle</i> compared to incident description is analysed to determine incident-related damage 3.3 Conflict resolution principles are applied 3.4 Statutory insurance industry principles, obligations and compliance requirements, and their relationship to identified vehicle damage are interpreted, clarified where necessary, and applied 3.5 Automotive industry technical knowledge and experience are applied to determine accuracy of vehicle damage estimate to return the vehicle to pre-damage condition that conforms to manufacturer guidelines and industry standards

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> • apply loss assessment processes, procedures and policies • interpret and apply statutory insurance industry principles, obligations and compliance requirements • understand broad insurance industry structure, functions and relationships

Skills	Description
	<ul style="list-style-type: none"> • apply organisation-specific policies, procedures and processes.
Writing skills to:	<ul style="list-style-type: none"> • use common industry terminology • compile reports, including vehicle assessment reports and Written-Off Vehicles Register (WOVR) information • complete templates and proformas.
Oral Communication skills to:	<ul style="list-style-type: none"> • use insurance industry terminology and vocabulary • engage with repairers and specialist providers • engage with vehicle owners.
Numeracy skills to:	<ul style="list-style-type: none"> • interpret technical measurements • determine accuracy of vehicle damage estimate.
Digital Literacy skills to:	<ul style="list-style-type: none"> • access insurance industry information.
Problem Solving skills to:	<ul style="list-style-type: none"> • clarify policy and privacy law discrepancies • compare and analyse condition of vehicle to incident description to determine incident-related damage.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Terminology and vocabulary</i> must include:	<ul style="list-style-type: none"> • agreed value • assessments • certificates of insurance • claims • depreciation • excess • indemnity • market value • misrepresentation • mitigation • no claim: <ul style="list-style-type: none"> • bonus • discount • rating • non-disclosure • policy book • pool of funds
--	--

	<ul style="list-style-type: none"> • premium • pre-accident condition • product disclosure statement (PDS) • reinsurance • renewals • subrogation • underwriting • unreasonable or capricious grounds.
<i>Trends and technology</i> must include the following:	<ul style="list-style-type: none"> • digital imaging • electronic-based researching and reporting • personal electronic devices, such as: <ul style="list-style-type: none"> • laptop • mobile phone • tablet.
<i>Principles, obligations and compliance requirements</i> must include:	<ul style="list-style-type: none"> • Australian Prudential Regulatory Authority (APRA) regulations • Financial Services Reform (FSR) Act • General Insurance Code of Practice • Insurance Contracts Act, including: <ul style="list-style-type: none"> • duty of disclosure • utmost good faith • intellectual property principles and practice • Motor Vehicle Insurance and Repair Industry Code of Conduct • Commercial-In-Confidence practices • Competition and Consumer Act • privacy law • commonwealth, state or territory regulatory requirements • statutory changes to the criteria of the national WOVV.
<i>Reporting requirements</i> must include the following:	<ul style="list-style-type: none"> • assessment report • WOVV information for total loss assessment.
<i>Loss assessment processes, procedures and policy</i> must include at least three of the following:	<ul style="list-style-type: none"> • assessment report • WOVV • fraud indicator report • vehicle condition report.
<i>Condition of vehicle</i> must include the following:	<ul style="list-style-type: none"> • direction of impact (DOI) appropriate to incident description • old and inconsistent damage • pre-accident condition and potential contributing factors.

AURVNA005 Inspect quality of vehicle repair work

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to inspect vehicle repair work to ensure that it is being undertaken as agreed by the insurer and repairer.

The unit applies to those involved in inspecting the technical quality of repair work in the vehicle loss assessment environment, at the request of either the customer or the repairer.

Repair work may be to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for work	1.1 Work instructions are used to determine job requirements 1.2 Vehicle to be inspected is located 1.3 <i>Workplace policies and procedures, legal requirements, and component specifications</i> are read and interpreted 1.4 Workplace requirements, <i>safety requirements</i> and <i>workplace</i>

ELEMENTS	PERFORMANCE CRITERIA
	<p><i>environmental practices</i> and policies are identified</p> <p>1.5 Safety equipment and tooling equipment are selected and checked</p> <p>1.6 <i>Vehicle inspection methods</i> are determined to minimise waste material and components</p>
2. Inspect vehicle to identify saleable systems and components	<p>2.1 Vehicle systems and components are dismantled and inspected without causing damage</p> <p>2.2 Serviceable vehicle systems and components are identified</p> <p>2.3 Saleable <i>vehicle salvage</i>, or vehicle systems and components, are determined and documented following legal requirements</p>
3. Determine vehicle and component retail price	<p>3.1 Value of identified saleable salvage, or vehicle systems and components is determined</p> <p>3.2 <i>Category of vehicle salvage</i> is determined</p> <p>3.3 Retail price of each saleable system and component is estimated</p> <p>3.4 Details of total loss vehicle are reported to the relevant statutory body according to workplace policies and procedures</p>
4. Clean up work area	<p>4.1 Reusable material is collected and stored</p> <p>4.2 Waste and scrap are removed according to workplace policies and procedures</p> <p>4.3 Equipment and work area are cleaned and inspected to serviceable condition according to workplace procedures</p> <p>4.4 Faults in unsaleable equipment are determined and tagged according to workplace policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret manufacturer specifications analyse information relating to workplace policies and procedures understand common industry terminology, plans and safety procedures and follow Written-Off Vehicles Register (WOVR) requirements.
Writing skills to:	<ul style="list-style-type: none"> report on vehicle salvage saleable items and their value.
Numeracy skills to:	<ul style="list-style-type: none"> use sources of information to work out value of saleable items,

Skills	Description
	<ul style="list-style-type: none"> correctly entering data into salvage report decide and check on estimation of retail prices.
Digital literacy skills to:	<ul style="list-style-type: none"> use computerised technology and communications devices to research and report on vehicle salvage saleable items and their value.
Planning and organising skills to:	<ul style="list-style-type: none"> identify and avoid planning and scheduling problems.
Problem-solving skills to:	<ul style="list-style-type: none"> avoid time and material wastage identify technical and procedural problems.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Workplace policies and procedures</i> must include:	<ul style="list-style-type: none"> recording and reporting procedures safe work procedures.
<i>Legal requirements</i> are to be in accordance with applicable commonwealth, state, or territory legislation, regulations, certification requirements and codes of practice, and must include:	<ul style="list-style-type: none"> environmental regulations intellectual property.
<i>Component specifications</i> must include at least one of the following:	<ul style="list-style-type: none"> vehicle design specifications and drawings repair instructions and procedures component replacement instructions and procedures inspecting vehicles for saleable components.
<i>Safety requirements</i> are to be in accordance with applicable commonwealth, state or territory Workplace Health and Safety Act or Occupational Health and Safety Act and must include:	<ul style="list-style-type: none"> ensuring safe location of vehicle to be inspected following workplace safety procedures identifying potential safety hazards.

<i>Workplace environmental practices</i> must include:	<ul style="list-style-type: none"> managing clean-up managing waste minimising dust and noise.
<i>Vehicle inspection methods</i> must include at least one of the following:	<ul style="list-style-type: none"> aural, visual and operational checking of damage to vehicle and components visually examining digital images of damage to vehicle and components.
<i>Vehicle salvage</i> must include at least one of the following:	<ul style="list-style-type: none"> bumper bar saleable items as listed on the policy tow bar vehicle components vehicle system.
<i>Category of vehicle salvage</i> must include at least one of the following:	<ul style="list-style-type: none"> repairable write-off statutory write-off.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURVNA006 Identify and value vehicle salvage

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- identify and value vehicle salvage on a minimum of two occasions, including:
 - accurately calculating vehicle salvage value
 - correctly identifying vehicle salvage category.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle mechanical, electrical, paint, panel and structural:
 - dismantling and repair methods
 - loss recovery methods and costs
 - inspection methods and procedures
- general insurance industry knowledge, including relevant sections of:
 - contract and insurance law
 - Insurance Contracts Act
 - Motor Vehicle Insurance and Repair Industry Code of Conduct
 - state or territory Fair Trading Act
- methods for sourcing original equipment manufacturer (OEM) or authorised agencies' repair procedures, and component supplier specifications, workshop manuals and repair guides
- methods for sourcing current retail costs of vehicles, vehicle components and materials
- methods for accessing independent sources with the required skills to value vehicle salvage
- salvage disposal contractors and auction houses
- applicable commonwealth, state or territory laws, regulations and standards relating to identifying vehicle salvage saleable items and determining their value, including:

- commercial-in-confidence practices
- environmental regulations
- intellectual property
- personal legal liability
- applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to identifying vehicle salvage saleable items and determining their value, including:
 - recording and reporting procedures
 - work organisation and planning processes.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle salvage that they have valued, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- work instructions
- a range of total loss vehicles
- computer hardware and software, calculators and general office equipment
- internet access.

AURVNA007 Apply automotive mechanical and electrical knowledge to vehicle loss assessments

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to apply automotive mechanical and electrical knowledge to identify mechanical and electrical damage resulting from a vehicular accident.

It applies to those applying specialist automotive knowledge to a vehicle loss assessment in the loss assessment environment. Loss assessment may relate to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Vehicle Body

Unit Sector

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Develop and apply an understanding of automotive mechanical knowledge	1.1 Knowledge of the operating principles of <i>suspension and steering systems, brake systems, transmission and driveline assembly</i> , and <i>engine and fuel systems</i> is developed 1.2 Knowledge of suspension and steering systems, brake systems,

ELEMENTS	PERFORMANCE CRITERIA
	transmission and driveline assembly, and engine and fuel systems is applied to loss assessment processes, procedures and policies 1.3 Mechanical damage is identified
2. Develop and apply an understanding of automotive electrical knowledge	2.1 Knowledge of the operating principles of <i>electrical and electronic systems</i> is developed 2.2 Knowledge of electrical and electronic systems is applied to loss assessment processes, procedures and policies 2.3 Electrical damage is identified
3. Develop and apply an understanding of advanced specialist vehicle knowledge	3.1 Knowledge of specific vehicle types is developed, clarified where necessary, and applied to loss assessment processes, procedures and policies 3.2 Knowledge of <i>latest technology</i> relating to automotive mechanical and electrical systems is developed, clarified where necessary, and applied to loss assessment processes, procedures and policies 3.3 <i>Research techniques</i> and advanced specialist knowledge are employed to identify vehicle damage

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURVNA008 Apply automotive body and paint knowledge to vehicle loss assessments

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- apply specialist automotive knowledge to vehicle loss assessment processes and procedures on a minimum of two occasions, including:
 - automotive paintwork and body knowledge
 - latest automotive technology knowledge
 - specific vehicle type knowledge
 - identification of vehicle body and paint damage.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- operating principles of paint preparation and refinishing process and techniques, including:
 - colour matching
 - imperfection identification
 - paint products
- operating principles of supplementary restraint systems (SRS)
- operating principles of vehicle structural repair and procedures, including:
 - measuring and alignment systems
 - welding, bonding and fastening methods and types
- operating principles of vehicle structure, including:
 - alloys
 - metals
 - other materials
- paintwork and body:

- damage and faults
- dismantling and repair methods
- technical knowledge relating to a specific vehicle type
- technical knowledge of latest technology relating to vehicle paintwork and body repair, including:
 - composite materials
 - high-strength steels
 - waterborne paints
 - painting preparation and procedures
 - SRS
- vehicle inspection and damage assessment procedures and methodologies, including repair set-up and dismantling procedures
- current assessing and quoting methodologies
- relevant automotive websites to locate information on current best practice and future trends in vehicle loss assessment
- methods for sourcing original equipment manufacturer (OEM) or authorised agencies' repair procedures, component supplier specifications and repair guides
- applicable commonwealth, state or territory laws, regulations and standards relating to vehicle loss assessment and reporting requirements, including:
 - environmental regulations
 - intellectual property
 - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to vehicle loss assessment and reporting requirements, including:
 - recording and reporting procedures
 - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have assessed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of vehicles with paint and body damage
- relevant information, including OEM or authorised agencies' repair procedures, component supplier specifications and repair guides
- relevant materials and resources.

AURVNN001 Evaluate vehicle bodywork for damage and identify repair requirements

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to evaluate the bodywork of a vehicle for damage and to identify the materials, equipment and processes required to repair it. It involves using vehicle paint, body and mechanical technical knowledge; and locating, evaluating and documenting relevant information when selecting materials, equipment and processes.

The unit applies to those evaluating the bodywork of a vehicle for damage and selecting materials, equipment and processes to repair the vehicle in a vehicle repair or vehicle loss assessment environment. Vehicles may include light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Assessment Requirements for AURVNN001 Evaluate vehicle bodywork for damage and identify repair requirements

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- evaluate the damage on bodywork of a minimum of two vehicles and identify repair requirements, with at least one evaluation relating to minor damage and the other relating to extensive damage
- for each evaluation:
 - determine the impact of decisions in terms of commercial and safety risks
 - document bodywork materials, equipment and processes.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle mechanical, electrical, paint, panel and structural:
 - extensive damage, which is damage that affects the safety and roadworthiness of a vehicle and includes:
 - body panel damage
 - bolt-on vehicle component damage
 - mechanical component damage
 - structural component damage
 - structural damage
 - welded or bonded key structural components, such as chassis rails damage
 - faults
 - dismantling and repair methods
 - minor damage, which is damage that does not affect the safety and roadworthiness of a vehicle and includes:
 - bumper bar graze
 - hail damage

- panel damage
- methods for sourcing current retail costs of vehicles and vehicle components and materials
- vehicle inspection and damage assessment procedures and methodologies, including repair set-up and dismantling procedures
- current assessing and quoting methodologies
- vehicle testing machines and procedures
- current vehicle materials and retail costs
- relevant automotive websites to locate information on current best practice and future trends in the vehicle loss assessment environment
- general insurance industry knowledge, including relevant sections of:
 - contract and insurance law
 - Insurance Contracts Act
 - intellectual property
 - Motor Vehicle Insurance and Repair Industry Code of Conduct
 - state or territory Fair Trading Act
- methods for sourcing original equipment manufacturer (OEM) or recognised agency information, component supplier specifications, workshop manuals and repair guides
- applicable commonwealth, state or territory laws, regulations and standards relating to evaluating vehicle damage, and suggesting repair materials, equipment and processes, including:
 - commercial-in-confidence practices
 - environmental regulations
 - intellectual property
 - personal legal liability
 - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to evaluating vehicle damage, and suggesting repair materials, equipment and processes, including:
 - recording and reporting procedures
 - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have assessed, e.g. assessment reports

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of vehicles with both minor and extensive vehicle damage

- computer hardware, software and calculators
- internet access
- necessary tools and equipment
- relevant information, including OEM or recognised agency information and repair procedures, workshop and body repair manuals
- workplace technology.

AURVNP001 Evaluate vehicle paintwork for damage and identify refinish requirements

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to evaluate vehicle paintwork for damage and identify the paint refinish required to repair a vehicle. It involves using technical understanding of paint applications and procedures; and locating, evaluating and documenting relevant information.

The unit applies to those evaluating the paintwork on a vehicle for damage and identifying appropriate paint refinish to repair the vehicle in a vehicle repair or vehicle loss assessment environment. Vehicles may include light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Vehicle Body

Unit Sector

Loss Assessment and Repair Quoting - Paint

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for work	1.1 Work instructions are used to determine job requirements 1.2 Workplace <i>safety requirements</i> and <i>workplace environmental</i>

ELEMENTS	PERFORMANCE CRITERIA
	<p><i>practices</i> and policies are read and complied with</p> <p>1.3 <i>Workplace policies and procedures, legal requirements, and component supplier specifications</i> are read and interpreted</p> <p>1.4 Safety equipment, <i>tools, materials and other equipment</i> are selected and checked</p>
2. Assess vehicle paintwork for damage	<p>2.1 Vehicle to be inspected is located</p> <p>2.2 Preferred inspection method is determined that conforms to workplace policies and procedures, legal requirements, and specifications of vehicle manufacturer or component suppliers</p> <p>2.3 Paintwork is inspected to identify <i>vehicle paintwork damage</i> and potential <i>paint problems</i></p> <p>2.4 Vehicle is inspected in line with workplace policies and procedures, legal requirements, specification of vehicle manufacturer or component suppliers, safety requirements and workplace environmental practices</p>
3. Gather data and specifications	<p>3.1 Painting specifications are identified and documented</p> <p>3.2 Staff and management are consulted to identify additional or altered specifications</p> <p>3.3 Existing paint refinish materials and equipment are evaluated</p> <p>3.4 Data and specifications are compiled and documented</p>
4. Evaluate and select materials, equipment and processes	<p>4.1 Materials and equipment options are determined</p> <p>4.2 Materials and equipment are assessed for quality finish and conformity to standards</p> <p>4.3 Specifications of materials and equipment are compared for performance and cost</p> <p>4.4 Commercial, environmental and safety impact of materials and equipment selected is determined</p> <p>4.5 Materials, equipment and processes are selected based on performance, cost, specifications and impact comparison</p> <p>4.6 Evaluation report detailing required specifications and repair process is completed according to workplace policies and procedures, and legal requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
--------	-------------

Reading skills to:	<ul style="list-style-type: none"> analyse information relating to paintwork materials and equipment interpret technical specifications analyse regulatory, environmental and safety procedures, best practice and future trends research evaluation results.
Oral communication skills to:	<ul style="list-style-type: none"> consult with staff and management to inform research and data gathering.
Planning and organising skills to:	<ul style="list-style-type: none"> organise activities systematically identify, research and evaluate options.
Problem-solving skills to:	<ul style="list-style-type: none"> identify and resolve potential technical and procedural problems and variables within scope of own responsibility.
Teamwork skills to:	<ul style="list-style-type: none"> work effectively and cooperatively with others in identifying specifications that contribute to evaluation of paintwork repair requirements.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> are to be in accordance with applicable commonwealth, state or territory Workplace Health and Safety Act or Occupational Health and Safety Act and must include:	<ul style="list-style-type: none"> ensuring safe location of vehicle to be inspected following workplace safety procedures identifying potential safety hazards.
<i>Workplace policies and procedures</i> must include:	<ul style="list-style-type: none"> environment and sustainability job specifications manufacturer specifications and industry codes of practice quality policies and procedures, including Australian standards reporting and recording procedures safe work procedures.
<i>Legal requirements</i> are to be in accordance with applicable commonwealth, state, or territory	<ul style="list-style-type: none"> environmental regulations intellectual property.

legislation, regulations, certification requirements and codes of practice, and must include:	
Component supplier specifications must include at least one of the following:	<ul style="list-style-type: none"> • vehicle design specifications and drawings • repair instructions and procedures • component replacement instructions and procedures.
Tools, materials and other equipment must include:	<ul style="list-style-type: none"> • calculators and general office equipment • computer hardware and software • digital camera • paint code list • portable light • recording equipment, such as a laptop or notebook • specialist tools, including: <ul style="list-style-type: none"> • colour spectrometer • paint film thickness gauge.
Vehicle paintwork damage must include:	<ul style="list-style-type: none"> • bolt-on vehicle painted components • paint blend • welded vehicle painted components.

Unit Mapping Information

No equivalent unit.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURVNP001 Evaluate vehicle paintwork for damage and identify refinish requirements

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- evaluate vehicle paintwork for damage and identify refinish requirements on a minimum of two different damaged vehicles
- determine the impact of decisions in terms of commercial, environmental and safety risks
- document refinish materials, equipment and processes.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle paintwork damage and refinishing techniques, including:
 - damage and faults
 - paint problems, including:
 - blistering
 - delaminating
 - flaking
 - humidity bubbles
 - inclusions
 - incorrect:
 - colour
 - film build
 - mottle
 - orange peel
 - poor cover or hiding
 - paint types:
 - acrylic enamel

- air dry enamel
 - clear over base (COB)
 - fillers
 - multi-layer
 - pearls
 - polyurethane
 - special effects
 - waterborne paint
 - two-pack paint
- current assessing and quoting methodologies
 - vehicle paint testing equipment and procedures
 - current vehicle material allowances
 - relevant automotive websites to locate information on current best practice and future trends in the vehicle loss assessment environment
 - general insurance industry knowledge, including relevant sections of:
 - contract and insurance law
 - Insurance Contracts Act
 - intellectual property
 - Motor Vehicle Insurance and Repair Industry Code of Conduct
 - state or territory Fair Trading Act
 - methods for sourcing paint manufacturer specifications
 - applicable commonwealth, state or territory laws, regulations and standards relating to evaluating the paintwork of a damaged vehicle, and suggesting repair materials, equipment and processes, including:
 - commercial-in-confidence practices
 - environmental regulations
 - intellectual property
 - personal legal liability
 - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
 - workplace policies and procedures relating to evaluating paintwork of a damaged vehicle, and suggesting refinish materials, equipment and processes, including:
 - recording and reporting procedures.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have evaluated, e.g. evaluation reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of vehicles with both minor and extensive paint damage
- computer hardware, software and calculators
- internet access
- paint testing equipment
- relevant information, including paint manufacturer specifications
- workplace technology.

Assessment Requirements for AURVTA001 Prepare vehicles for customer use

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- prepare three different vehicles for customer use, cleaning each vehicle's:
 - exterior
 - interior, including:
 - seats
 - carpets
 - door trims
 - dash and steering wheel.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to preparing vehicles for customer use, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using safety data sheets (SDS) for cleaning products
 - using tools and equipment
 - handling and storing cleaning products
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and cleaning chemicals
- type and use of cleaning materials, including:
 - vehicle washing liquid
 - polishes and glazes

- window cleaners
- type and operation of cleaning equipment, including:
 - high pressure washer
 - vacuum cleaner
- procedures and requirements for protecting vehicle and components when preparing vehicles for use, including electrical wiring and electrical connections
- procedures for final inspection of vehicle to ensure it is ready for customer use.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have prepared for customer use, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- SDS for cleaning products
- three different vehicles that require cleaning and detailing
- PPE required to clean vehicles
- cleaning materials to prepare vehicle for customer use
- tools, equipment and materials appropriate for preparing vehicles for customer use.

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- deactivate, remove and replace supplementary restraint systems (SRS) on two different vehicles, in which the work must involve two of the following:
 - steering wheel airbag
 - dash panelling airbag
 - side curtain airbag
 - seat belt pre-tensioners.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and replacing vehicle SRS, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling SRS systems and components
 - using hand tools and equipment
- types and operation of SRS components, including:
 - airbag systems, including:
 - steering wheel airbag
 - dash panelling airbag
 - side curtain airbag
 - seat belt pre-tensioners
- replacement procedures for SRS components, including:

- deactivation
- removal
- installation
- resetting
- inspection
- procedures for protecting vehicle when removing and replacing SRS
- procedures for final inspection of fitted SRS, including compliance with:
 - original equipment manufacturer (OEM) specifications
 - authorised agency instructions and specifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to vehicles where they have removed and replaced SRS, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required to remove and replace SRS components
- OEM or authorised agency instructions and specifications
- OEM-approved materials required to remove and replace SRS components
- two different vehicles requiring SRS replacement
- tools, equipment and materials appropriate for removing and replacing vehicle SRS.

Assessment Requirements for AURVTA003 Inspect vehicle paint, trim and accessories and recommend repair procedures

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and recommend repair procedures for two different vehicles covering:
 - vehicle paint
 - vehicle trim
 - vehicle accessories.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting vehicle paint, trim and accessories, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using hand tools and lifting equipment
- original equipment manufacturer (OEM) or authorised agency repair specifications
- inspection and repair procedures for vehicle paint, trim and accessories, including:
 - paint condition, including:
 - damage
 - fading
 - non-matching
 - trim condition, including wear and damage
 - accessories, including damage and improper operation
- workplace repair quality requirements
- post-inspection procedures, including preparation of repair report.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have inspected, e.g. inspection and/or rectification reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required to inspect vehicles
- a range of vehicles to inspect with unsatisfactory paint, trim and accessories
- workplace vehicle inspection procedures
- OEM or authorised agency repair specifications
- tools, equipment and materials appropriate for inspecting vehicle paint, trim and accessories.

AURVTA004 Inspect damaged vehicle systems and recommend repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect damaged vehicle systems and recommend repair options. It involves preparing for the task, inspecting vehicle system damage, determining the extent of damage by measuring and recommending repair options consistent with original equipment manufacturer (OEM) or authorised agency repair instructions, and completing workplace processes and other documentation, including a final inspection report.

It applies to those working in the automotive body service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for inspection	1.1 Job requirements are determined from workplace instructions 1.2 Vehicle <i>specifications</i> are sourced and interpreted from OEM or authorised agency and workplace inspection procedures 1.3 <i>Inspection methods</i> are analysed, and most appropriate option for vehicle and job requirement is selected and prepared 1.4 Hazards associated with the work are identified and risks are managed 1.5 Technical and calibration equipment for vehicle system inspection is sourced and checked for serviceability
2. Inspect damaged vehicle	2.1 Inspection is carried out according to workplace procedures and <i>safety requirements</i> 2.2 Extent of vehicle damage and damage location are recorded during inspection
3. Analyse inspection results	3.1 Results are compared with vehicle specifications to identify compliance or non-compliance 3.2 Preferred repair action is determined following analysis of options 3.3 Repair options are documented with supporting evidence and information 3.4 Final inspection report is completed according to workplace procedures
4. Complete work processes	4.1 Technical and calibration equipment is checked and stored according to workplace procedures 4.2 Workplace documentation, including report on repair recommendations, is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURVTA004 Inspect damaged vehicle systems and recommend repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect two of the following systems on different vehicles, and recommend suitable repair options:
 - air conditioning system
 - braking system
 - cooling system
 - electrical system
 - exhaust system
 - steering and suspension system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting damaged vehicle systems and recommending repairs, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using hand tools and lifting equipment
- operating principles of vehicle systems, including:
 - air conditioning system
 - braking system
 - cooling system
 - electrical system

- exhaust system
- steering and suspension system
- original equipment manufacturer (OEM), authorised agency and component supplier specifications, and recommended repair and replacement procedures
- procedures for inspecting damaged vehicles and determining repair action, including:
 - repair quality requirements
 - inspection and reporting procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have inspected, e.g. inspection reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- OEM or authorised agency component specifications and repair methods
- workplace instructions
- two different vehicles with damaged systems requiring inspection
- tools, equipment and materials appropriate for inspecting damaged vehicle systems and determining repair action.

AURVTA005 Clean vehicles

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to clean a vehicle. It requires the learner to plan and prepare the task; clean the vehicle interior, exterior and engine bay; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to clean vehicle	1.1 <i>Safety and environmental requirements</i> are sourced and interpreted 1.2 <i>Vehicle</i> to be worked on is identified and manufacturer

ELEMENTS	PERFORMANCE CRITERIA
	<p>specifications and workplace procedures for vehicle cleaning are sourced and interpreted</p> <p>1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.4 Tools and equipment required for vehicle cleaning are identified according to manufacturer specifications</p>
2. Clean vehicle interior and fittings	<p>2.1 Tools, equipment and materials are selected and checked according to manufacturer specifications and workplace procedures</p> <p>2.2 Vehicle is prepared prior to cleaning interior and fittings according to safety and environmental requirements</p> <p>2.3 Interior surfaces are cleaned and vacuumed using correct cleaning materials and equipment, without causing damage to components, tools or equipment</p>
3. Clean vehicle exterior and fittings	<p>3.1 Tools, equipment and materials are selected and checked according to manufacturer specifications</p> <p>3.2 Vehicle is prepared prior to cleaning exterior and fittings according to safety and environmental requirements</p> <p>3.3 Vehicle exterior and fittings are cleaned using correct techniques and without causing damage to components, tools or equipment</p>
4. Clean engine bay	<p>4.1 Tools, equipment and materials are selected and checked according to manufacturer specifications and workplace procedures</p> <p>4.2 Vehicle is prepared prior to cleaning engine bay according to safety and environmental requirements</p> <p>4.3 Electronic components and electrical connections are protected from water ingress</p> <p>4.4 Engine bay is cleaned without causing damage to components, tools or equipment</p>
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace standards and vehicle is presented ready for use or storage according to workplace procedures</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary</p> <p>5.4 Problems with cleaning equipment or tools are reported according to workplace procedures</p>

ELEMENTS	PERFORMANCE CRITERIA
	5.5 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> • select and interpret key information from manufacturer specifications, safety requirements and workplace procedures for cleaning a vehicle • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> • legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> • participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> • use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate ratios and amounts of cleaning products.
Planning and organising skills to:	<ul style="list-style-type: none"> • plan own work requirements and prioritise actions to complete the vehicle cleaning task.
Self-management skills to:	<ul style="list-style-type: none"> • recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> • identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	<ul style="list-style-type: none"> • set up and operate equipment and tools required to clean a vehicle.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: <ul style="list-style-type: none"> use of personal protective equipment, including safety glasses, ear protection, gloves and safety footwear applying procedures for preventing waste water from entering storm water systems.
<i>Vehicle</i> must include one or more of the following:	<ul style="list-style-type: none"> passenger motor vehicle light commercial heavy vehicle motor cycle constructed vehicle.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> hoses and washing equipment chemicals and cleaning solutions polishing equipment.
<i>Interior surfaces</i> must include:	<ul style="list-style-type: none"> cloth glass leather.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURVTA005 Clean vehicles

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria and foundation skills:

- safely and correctly clean a minimum of two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
 - personal protective equipment, including safety glasses, gloves, ear protection and safety footwear
 - operation of equipment and tools, including pressurised hoses
 - safety data sheets (SDS) and types, use and location of cleaning products
 - procedures for preventing waste water from entering storm water system
 - disposal of chemicals, oil and rubbish
- identification and location of vehicle components, including:
 - engine bay
 - engine electrical components
 - interior and exterior fittings
- types of vehicle body finishes
- vehicle cleaning procedures, including:
 - types, application and use of vehicle cleaning areas and vehicle bays
 - types, application and use of cleaning equipment and materials
 - component protection procedures, including:
 - protection of engine bay air intake and electrical and electronic components
 - protection of body electrical components
 - vehicle interior, exterior, fitting and engine bay cleaning procedures
 - cloth and leather interior surfaces cleaning procedures

- chrome and polished alloy wheels cleaning procedures
- clean-up and maintenance requirements for vehicle cleaning area.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have cleaned, e.g. job card.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- a minimum of two different vehicles with cloth, glass and leather interior components, requiring cleaning
- vehicle cleaning tools, equipment and materials, including:
 - hoses and washing equipment
 - chemicals and cleaning solutions
 - polishing equipment
- vehicle cleaning area.

AURVTG001 Repair laminated glass windscreens

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair chipped or cracked laminated glass windscreens. It involves preparing for the task, selecting and using specialist tools and equipment, cleaning and removing moisture from chipped or cracked laminated glass windscreens, injecting resin into chip or crack, finishing repair work to industry standard, and completing workplace processes and documentation.

It applies to those working in the automotive glazing service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Glazing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to repair	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
laminated glass windscreen	1.2 Size of chip or crack is identified and checked against <i>industry repair standards</i> to determine compliance requirements 1.3 Repair method is interpreted from glass repair system specifications and <i>materials</i> are checked for quality 1.4 Work is planned to minimise waste and use time efficiently 1.5 Vehicle is inspected to ensure there is no prior damage and that all related accessories are operating correctly 1.6 Required glass repair chemicals and their safety data sheets (SDS) are sourced and interpreted 1.7 Hazards associated with the work are identified and risks are managed 1.8 <i>Tools and equipment</i> , including personal protective equipment (PPE), are selected and checked for serviceability 1.9 Vehicle is protected and safely located according to workplace procedures
2. Repair chipped and cracked laminated glass	2.1 <i>Repair process for chipped or cracked glass</i> is followed according to glass repair system specifications, workplace procedures, industry standards, and <i>safety and environmental requirements</i> 2.2 Glass surface is finished according to glass repair system specifications and SDS 2.3 Repair is completed without causing damage to vehicle or components
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations, related accessories are operating correctly, and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures report issues or outcomes relating to laminated glass repairs.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate quantities of required materials.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise action to achieve required outcomes and ensure task are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> correctly and safely use specialised glass repair equipment and tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Industry repair standards</i> must include:	<ul style="list-style-type: none"> AS/NZS 2366.1 Windscreen repairs - Repair procedures AS/NZS 2366.2 Windscreen repairs - Repair systems.
<i>Materials</i> must include:	<ul style="list-style-type: none"> repair resins vehicle protection covers glass cleaning and polishing materials.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> specialised tools for the repair of laminated glass.
<i>Process for repairing chipped or cracked glass</i> must include:	<ul style="list-style-type: none"> opening windscreen chip or crack to allow access for the repair resin cleaning repair area and removing moisture from laminated glass removing air from repair area using a vacuum tool injecting repair resin into chip or crack at pressure to ensure capillary action takes place.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:

	<ul style="list-style-type: none">• selecting and using PPE• using glass repair systems• using SDS when working with chemicals and resins• material handling and storage• environmental requirements, including procedures for trapping, storing and disposing of waste chemicals, resins and materials.

Assessment Requirements for AURVTG001 Repair laminated glass windscreens

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair three different laminated glass windscreens, including:
 - one chipped windscreen
 - one cracked windscreen.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing laminated glass windscreens, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using glass repair systems
 - using safety data sheets (SDS) when working with chemicals and resins
 - material handling and storage
- environmental requirements, including procedures for trapping, storing and disposing of waste chemicals, resins and materials
- location and content of SDS relating to repair chemicals and resins
- requirements of:
 - AS/NZS 2366.1 Windscreen repairs - Repair procedures
 - AS/NZS 2366.2 Windscreen repairs - Repair systems
- laminated glass repair systems and procedures for:
 - identifying types and use of laminated glass repair resins
 - opening windscreen chip or crack

- cleaning repair area
- removing moisture from laminated glass
- removing air from repair area using a vacuum tool
- pressure injection of repair resin
- ensuring capillary action
- finishing glass surfaces
- procedures for protecting vehicle systems and components during repair work
- pre- and post-inspection procedures for laminated glass windscreen repairs.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the laminated glass windscreens that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive glazing workplace, off-site workplace location or simulated workplace
- workplace instructions
- SDS for repair chemicals and resins
- PPE required to repair laminated glass
- AS/NZS 2366.1 Windscreen repairs - Repair procedures
- AS/NZS 2366.2 Windscreen repairs - Repair systems
- glass repair resins and materials
- three different laminated glass windscreens as specified in the performance evidence requiring repair
- vehicle protection equipment
- cleaning products
- tools, specialist equipment and materials appropriate for repairing laminated glass.

Assessment Requirements for AURVTG003 Remove and install butyl sealed windscreens

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and install butyl sealed windscreens on two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and installing butyl sealed windscreens, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using safety data sheets (SDS) for butyl sealants
 - material handling and storage
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and chemicals
- removal and installation methods and techniques for butyl sealed windscreens, including:
 - type and use of windscreen specialist tools and equipment
 - vehicle manufacturer or specific workplace technical specifications
 - windscreen handling techniques
 - butyl sealing methods
- procedures for protecting vehicle and components during windscreen removal and installation
- procedures for final inspection of fitted butyl sealed windscreens.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the butyl sealed windscreens they have removed and installed, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive glazing workplace, off-site workplace location or simulated workplace
- workplace instructions
- SDS for butyl sealants
- PPE required to remove and install butyl sealed windscreens
- vehicle manufacturer, windscreen supplier, and specific workplace technical specifications
- two different vehicles or frames requiring windscreen to be fitted using butyl sealed techniques
- vehicle protection covers
- cleaning agents
- tools, equipment and materials appropriate for removing and installing butyl sealed windscreens.

AURVTG004 Remove and install direct glazed windscreens

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and install direct glazed windscreens in a variety of vehicles. It involves preparing for the task, selecting and using specialist tools and equipment, removing the windscreen, applying primers, activators and adhesives, installing the windscreen according to manufacturer specifications, cleaning and finishing it, and completing workplace processes and documentation.

It applies to those working in the automotive glazing service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Glazing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for removal and	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
installation of direct glazed windscreen	1.2 Removal and installation information is accessed and interpreted from windscreen and vehicle manufacturer specifications, workplace procedures, and safety data sheets (SDS) for primers, activators and adhesives 1.3 Work is planned to minimise waste and use time efficiently 1.4 Vehicle is inspected to ensure there is no prior damage and that all related accessories are operating correctly 1.5 Materials and windscreen are selected according to windscreen and vehicle manufacturer specifications, and are inspected for quality 1.6 Hazards associated with the work are identified and risks are managed 1.7 Tools and equipment are selected and checked for serviceability 1.8 Vehicle is protected and safely located according to workplace procedures
2. Carry out removal and installation activities	2.1 Windscreen is removed according to manufacturer specifications, and safety and environmental requirements , and without causing damage to vehicle or components 2.2 Replacement windscreen is installed, bonded and finished according to manufacturer specifications and safety and environmental requirements 2.3 Adhesive is cured according to adhesive manufacturer specifications and timelines, as required
3.. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations, related accessories are operating correctly, customer is informed of time to wait before driving vehicle, and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report issues or outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate adhesive curing times.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify defects in direct glazed windscreens.
Technology skills to:	<ul style="list-style-type: none"> use specialist removal and installation equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Materials</i> must include:	<ul style="list-style-type: none"> direct glazing materials, including: <ul style="list-style-type: none"> adhesives activators primers cleaning agents.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> personal protective equipment (PPE) specialist tools for removing direct glazed windscreens lifting assistance tools to help install windscreens.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE

	<ul style="list-style-type: none">• using tools and lifting equipment• using SDS for primers, activators and adhesives• material handling and storage• environmental requirements, including procedures for trapping, storing and disposing of waste materials and chemicals.

AURVTG006 Apply vehicle window tinting

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare various glass surfaces of vehicles and apply window tinting material. It involves preparing for the task, selecting and using specialist tools and equipment, producing templates according to window size and shape, cutting tint film, installing tint film on glass surface according to workplace procedures, cleaning and finishing window, and completing workplace processes and documentation.

It applies to those working in the automotive glazing service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Assessment Requirements for AURVTG007 Clean vehicle glass surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- clean the internal and external body glass and windscreens of three different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to cleaning vehicle glass surfaces, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and equipment
 - using safety data sheets (SDS) for cleaning products
 - handling and storing cleaning material
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and cleaning chemicals
- methods and techniques for cleaning glass surfaces, including:
 - cleaning materials and equipment
 - glass cleaning equipment safety requirements
 - glass cleaning methods and techniques
- procedures for protecting vehicle and components when cleaning glass surfaces
- procedures for final inspection of cleaned glass surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle glass surfaces that they have cleaned, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- SDS for cleaning products
- PPE required to clean vehicle glass surfaces
- materials to clean vehicle internal and external glass surfaces
- three different vehicles requiring internal and external glass cleaning
- tools and equipment appropriate for cleaning vehicle glass surfaces.

AURVTG008 Cut and process vehicle and machinery flat laminated glass

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to measure, mark, cut and process flat laminated glass for installation into vehicles and machinery. It involves preparing for the task, selecting and using specialist tools and equipment, producing templates according to size, cutting flat laminated glass and finishing glass edges to given specifications, and completing workplace processes and documentation.

It applies to those working in the automotive glazing service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Glazing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to cut and process flat laminated glass	1.1 Job requirements are determined from workplace instructions 1.2 Information is accessed and interpreted from laminated glass supplier specifications 1.3 Laminated glass is sourced according to work order and job specifications and checked for quality 1.4 Hazards associated with the work are identified and risks are managed 1.5 <i>Glass cutting equipment</i> and personal protective equipment (PPE) are selected and checked for serviceability 1.6 Work is planned to minimise off-cuts and use time efficiently
2. Fabricate templates and patterns	2.1 Accurate measurements are taken or checked to prepare templates and patterns 2.2 Suitable materials and equipment are used to fabricate templates and patterns 2.3 Template and pattern are marked out and fabricated according to workplace instructions, workplace procedures, and <i>safety and environmental requirements</i>
3. Process glass	3.1 Glass is measured, marked and cut out according to measurements, template and pattern, and safety and environmental requirements 3.2 Glass cutting is completed according to workplace procedures, and safety and environmental requirements, and without causing damage to glass being cut 3.3 Glass edges are arris or bevel edged according to workplace procedures, and safety and environmental requirements, and without causing damage to glass
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately complete glass cutting plan and other workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report issues or outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition, subtraction and multiplication to: <ul style="list-style-type: none"> correctly measure templates, patterns and laminated glass components to specifications calculate glass requirements and quantities.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify quality issues in cut laminated glass.
Technology skills to:	<ul style="list-style-type: none"> use specialist tools and measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Glass cutting equipment</i> must include:	<ul style="list-style-type: none"> measuring equipment glass templates and patterns tools for grinding and polishing edges hand and power tools.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE using tools and equipment

	<ul style="list-style-type: none">• using safety data sheets (SDS) for laminated glass• material handling and storage• environmental requirements, including procedures for trapping, storing and disposing of waste material.

Assessment Requirements for AURVTG008 Cut and process vehicle and machinery flat laminated glass

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- mark, cut, process and finish two different flat laminated glass sections, including:
 - one arris finish
 - one bevel edge.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to cutting and processing vehicle and machinery flat laminated glass, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and equipment
 - using safety data sheets (SDS) for laminated glass
 - material handling and storage
- environmental requirements, including procedures for trapping, storing and disposing of waste material
- methods and procedures for cutting and processing flat laminated glass, including:
 - manufacturer technical information and specifications
 - template and pattern fabrication
 - different template materials
 - measuring and marking out procedures
 - glass handling and storage processes
 - glass cutting methods and techniques

- use of glass cutting and araising equipment
- type and use of specialist tools and equipment
- workplace glass cutting quality standards
- cleaning materials and techniques
- procedures for final inspection of cut flat laminated glass.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the flat laminated glass that they prepared and cut, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive glazing workplace, off-site workplace location or simulated workplace
- workplace instructions
- SDS for laminated glass
- template and pattern specifications
- PPE required to cut laminated glass
- template materials
- flat laminated glass sheets as specified in the performance evidence
- tools and equipment appropriate for cutting and processing flat laminated glass.

AURVTG009 Remove and install vehicle fixed body glass

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and install fixed body glass in various applications in vehicles. It involves preparing for the task, selecting and using specialist tools and equipment, removing the glass, applying adhesives or sealants, installing the glass according to manufacturer specifications, cleaning and finishing the glass, and completing workplace processes and documentation.

It applies to those working in the automotive glazing service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTG009 Remove and install vehicle fixed body glass

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and install:
 - one direct glazed fixed body glass
 - one rubber glazed fixed body glass.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and installing vehicle fixed body glass, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and lifting equipment
 - using safety data sheets (SDS) for adhesives and sealants
 - material handling and storage
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and chemicals
- location and content of technical information, including manufacturer or supplier specifications and specific workplace fitting instructions
- fixed body glass removal and installation methods and techniques, including:
 - type and use of fixed body glass tools and equipment
 - glass and material handling techniques
 - adhesive and sealant types
 - bonding and sealing methods
- procedures for protecting vehicle and components during removal and installation work

- procedures for final inspection of fitted fixed body glass.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the fixed body glass they have removed and installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive glazing workplace, off-site workplace location or simulated workplace
- workplace instructions
- PPE to remove and install fixed body glass
- SDS for adhesives and sealants
- vehicle manufacturer, fixed body glass supplier, and specific workplace technical specifications
- body glass components as specified in the performance evidence
- vehicles or frames requiring fixed body glass to be fitted
- glass sealants and adhesive
- glass cleaning materials
- tools, equipment and materials appropriate for removing and installing fixed body glass.

AURVTG012 Remove and install heavy vehicle rubber and direct glazed windscreens

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and install rubber and urethane glazed heavy vehicle windscreens. It involves preparing for the task, selecting and using specialist tools and equipment, removing the damaged windscreen, cutting a replacement windscreen according to original size, preparing and applying windscreen sealing rubber, applying primers, activators and adhesives according to manufacturer specifications, cleaning and finishing the windscreen, and completing workplace processes and documentation.

It applies to those working in the automotive glazing service and repair industry. The windscreens include those of trucks, buses and coaches.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for removal and installation of heavy vehicle rubber or direct glazed windscreen	1.1 Job requirements are determined from workplace instructions 1.2 Removal and installation information is accessed and interpreted from windscreen and original equipment manufacturer (OEM) specifications, workplace procedures, and <i>safety data sheets</i> (SDS) 1.3 Work is planned to minimise waste and use time efficiently 1.4 Vehicle is inspected to ensure there is no prior damage and that all related accessories are operating correctly 1.5 Windscreen and <i>materials</i> are selected according to windscreen and OEM specifications, and are inspected for quality 1.6 Hazards associated with the work are identified and risks are managed 1.7 <i>Tools and equipment</i> are selected and checked for serviceability 1.8 Vehicle is protected and safely located according to workplace procedures
2. Remove heavy vehicle rubber or direct glazed windscreen	2.1 Windscreen is removed according to manufacturer specifications, <i>safety and environmental requirements</i> , and without causing damage to vehicle or components 2.2 Tools and equipment for windscreen removal and support are used safely and correctly 2.3 Equipment required to work safely at heights is used according to manufacturer specifications and workplace procedures
3. Cut and install heavy vehicle rubber or direct glazed windscreen	3.1 New windscreen is cut, installed, bonded or sealed, and finished according to manufacturer specifications and safety and environmental requirements 3.2 Adhesive is cured according to adhesive manufacturer specifications and timeframes, as required 3.3 Installation of windscreen is completed according to workplace procedures and safety requirements, and within accepted workplace timeframes
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations, related accessories are operating correctly, customer is informed of time to wait before driving vehicle, and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> • locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> • legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> • clarify instructions and procedures • clearly report issues or outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> • use basic mathematical operations, including addition and subtraction, to calculate: <ul style="list-style-type: none"> • cutting and fitting dimensions • quantities of required materials.
Planning and organising skills to:	<ul style="list-style-type: none"> • plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> • identify quality issues and potential problems associated with removing and installing heavy vehicle rubber and direct glazed windscreens.
Technology skills to:	<ul style="list-style-type: none"> • use specialist removal and installation equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety data sheets</i> must include those relating to:	<ul style="list-style-type: none"> • primers • activators • adhesives.
<i>Materials</i> must include:	<ul style="list-style-type: none"> • rubber glazing materials, including: <ul style="list-style-type: none"> • rubber sections • sealants • direct glazing materials, including: <ul style="list-style-type: none"> • adhesives • activators • primers • cleaning materials.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> • personal protective equipment (PPE) • application equipment for adhesives and sealants • specialist tools and equipment for: <ul style="list-style-type: none"> • removing and installing heavy vehicle windscreens • measuring and cutting replacement windscreens • lifting assistance tools to help install windscreens • safety harnesses and scaffolds for working at heights.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • selecting and using PPE • using tools and lifting equipment • working at heights using harnesses and scaffolds • using SDS for primers, activators and adhesives • windscreen handling and storage • environmental requirements, including procedures for trapping, storing and disposing of waste materials and chemicals.

Assessment Requirements for AURVTG012 Remove and install heavy vehicle rubber and direct glazed windscreens

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and install windscreens in two different types of heavy vehicles, in which the work must involve:
 - one rubber glazed windscreen
 - one direct glazed windscreen.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and installing heavy vehicle rubber and direct glazed windscreens, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and lifting equipment
 - working at heights using harnesses and scaffolds
 - using safety data sheets (SDS) for primers, activators and adhesives
 - windscreen handling and storage
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and chemicals
- location and content of windscreen supplier or vehicle manufacturer technical specifications and fitting instructions
- removal and installation methods and techniques for heavy vehicle rubber and direct glazed windscreens, including:
 - types of rubber and direct glazed windscreens

- type and use of windscreen specialist tools and equipment
- windscreen handling techniques
- windscreen support systems and work height safety harness equipment
- sealing methods
- adhesive curing times and finishing techniques
- procedures for protecting vehicle and components during removal and installation of windscreens
- procedures for final inspection of fitted heavy vehicle rubber and direct glazed windscreens.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle rubber and direct glazed windscreens they have removed and installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive glazing workplace, off-site workplace location or simulated workplace
- workplace instructions
- SDS for primers, activators and adhesives
- PPE required to remove and install heavy vehicle rubber and direct glazed windscreens
- safety harnesses and scaffold equipment to remove and install large vehicle windscreens
- heavy vehicle manufacturer and windscreen supplier specifications and fitting instructions
- heavy vehicle rubber and direct glazed windscreens
- two different types of heavy vehicles requiring rubber or direct glazed windscreens to be fitted
- vehicle protection covers
- tools, equipment and materials appropriate for removing and installing heavy vehicle rubber and direct glazed windscreens.

Assessment Requirements for AURVTG013 Remove and install large vehicle windscreens

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and install windscreens on two different large vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and installing large vehicle windscreens, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and lifting and support equipment
 - working at heights using harnesses and scaffolds
 - using safety data sheets (SDS) for adhesives
 - material handling and storage
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and chemicals
- location and content of vehicle manufacturer technical specifications and fitting instructions
- removal and installation methods and techniques for different types of large vehicle windscreens, including:
 - type and use of windscreen specialist tools and equipment
 - rubber and direct glazed installation methods
 - windscreen handling techniques
 - windscreen support systems
 - flat laminated glass cutting equipment and processes

- windscreen attachment methods, including frames, clamps and special rubber sections
- types of glass, including:
 - sealing methods
 - adhesive curing times and finishing techniques
 - potential problems and consequences
- procedures for protecting vehicle and components during windscreen removal and installation work
- procedures for final inspection of fitted large vehicle windscreens.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the large vehicle windscreens they have removed and installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive glazing workplace, off-site workplace location or simulated workplace
- workplace instructions
- SDS for adhesives
- PPE required to remove and install large vehicle windscreens, including safety harnesses and scaffold equipment
- vehicle manufacturer, windscreen supplier, and specific workplace technical specifications
- materials for preparing templates
- windscreen or glass components
- flat laminated glass and cutting equipment
- two different large vehicles requiring windscreens to be fitted
- vehicle protection covers
- cleaning agents

- tools, equipment and materials appropriate for removing and installing large vehicle windscreens.

Assessment Requirements for AURVTK001 Use and maintain vehicle body repair hand tools

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- use and maintain body repair hand tools to complete three different minor vehicle body repairs.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to using and maintaining vehicle body repair hand tools, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using vehicle body repair hand tools
- types, characteristics, uses and limitations of vehicle body repair hand tools, including:
 - application and operation
 - hazards and control measures
 - manufacturer specifications relating to operating procedures and maintenance requirements for the tools
- procedures for selecting tools
- procedures for identifying and tagging faulty tools
- basic maintenance and storage procedures for tools.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the use and maintenance of body repair tools in an automotive repair workplace, e.g. equipment maintenance program.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- body repair hand tools to use and maintain
- PPE applicable to the tools
- vehicles, components or materials that require the use of tools specified in the performance evidence
- material relevant to maintaining body repair hand tools, including:
 - tool operating instructions and manuals
 - relevant tool adjusting or calibration equipment
 - tagging material.

AURVTN001 Remove and tag vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify and tag a range of vehicle body components. It involves preparing for the work, removing and tagging body components by title, job number and application, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive body repair industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN002 Carry out non-structural vehicle panel repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out non-structural vehicle panel repairs on three different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out non-structural vehicle panel repairs, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling vehicle panels
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- panel repair methods and techniques, including:
 - panel repair tools, equipment and materials
 - panel beating techniques
 - body filler types and recommended applications
 - abrasive grades and types
 - body filler finishing procedures
 - repair quality requirements to pre-paint condition
- procedures for final inspection of completed non-structural panel repairs.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the non-structural panel repairs that they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- original equipment manufacturer (OEM) and component supplier repair specifications
- PPE to carry out non-structural vehicle panel repairs
- three different vehicles with non-structural damage requiring repair
- body filler
- tools, equipment and materials appropriate for carrying out non-structural panel repairs.

AURVTN003 Remove and store vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to perform pre-repair activities by removing and storing vehicle body components. It involves preparing for the task, selecting and using specialist tools and equipment, following workplace instructions in removing, tagging and storing body components as part of pre-repair requirements, and completing workplace processes and documentation.

It applies to those working in the automotive body service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
store vehicle body components	1.2 Workplace procedures and recommended procedures and specifications are sourced and interpreted from original equipment manufacturer (OEM) or authorised agency 1.3 Hazards associated with the work are identified and risks are managed 1.4 <i>Tools and equipment</i> , including personal protective equipment (PPE), are selected and checked for serviceability 1.5 Work is planned to minimise waste according to workplace procedures
2. Remove, tag and store components	2.1 Vehicle components are removed according to specifications of OEM or authorised agency 2.2 Components are tagged and stored according to workplace procedures and without causing damage to system or components 2.3 Additional parts required to complete repair are identified, listed and reported
3. Clean components prior to repair and storage	3.1 Vehicle components are cleaned using recommended cleaning methods and materials according to <i>safety and environmental requirements</i> 3.2 Vehicle components are inspected for damage and repaired according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and components are presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURVTN004 Remove, replace and align bolt-on vehicle body panels and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, replace and align bolt-on body panels and components on four different vehicles, in which the work must involve one combination of three adjoining vehicle bolt-on panels and components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing, replacing and aligning bolt-on vehicle panels and components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling vehicle panels and components
 - using tools and equipment
- location and content of accessing vehicle specifications
- removal, replacement and alignment methods and techniques, including:
 - measuring bolt-on panel gaps
 - electronic warning sensors
 - tagging and storing bolt-on panels and components
 - panel sealant and application
 - headlight and panel alignment techniques
- procedures for protecting vehicle and components during removal, replacement and alignment work, including protecting electrical, electronic and mechanical systems
- procedures for final inspection of fitted bolt-on panels and components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bolt-on panels and components that they have removed, replaced and aligned, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- vehicle manufacturer specifications
- four different vehicles requiring the removal, replacement and alignment of bolt-on panels, sections and components
- bolt-on body panels and components
- tools, equipment and materials appropriate for removing, replacing and aligning bolt-on panels and components, including required PPE.

AURVTN006 Remove and replace mechanical units during vehicle repair

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and replace mechanical units and assemblies to facilitate vehicle body repair activities. It involves preparing for the task, selecting and using specialist tools and equipment, removing and replacing mechanical units according to original equipment manufacturer (OEM) procedures and workplace procedures, and completing workplace processes and documentation.

It applies to those working in the automotive body service and repair industry.

Assistance from licensed persons must be sought in relation to air conditioning, liquefied petroleum gas (LPG), or other alternative fuel systems and components.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and replace mechanical units	1.1 Job requirements are determined from workplace instructions 1.2 Removal and replacement specifications are sourced and interpreted from OEM and workplace procedures 1.3 Hazards associated with the work are identified and risks are managed 1.4 <i>Tools, equipment</i> and materials are selected and checked for serviceability 1.5 Vehicle and work area are prepared according to workplace procedures 1.6 Work is planned to identify methods, minimise waste and prevent damage to vehicle
2. Carry out removal and replacement activities	2.1 Mechanical units and assemblies are removed and replaced using approved procedures, hand tools and equipment and according to <i>safety and environmental requirements</i> 2.2 Assistance from licensed persons is sought when removing and replacing air conditioning, LPG, or other alternative fuel systems and components 2.3 Removal and replacement activities are completed according to OEM specifications and workplace procedures, and without causing damage to vehicle or components
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report issues, defects and outcomes.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify problems and avoid rework and waste.
Teamwork skills to:	<ul style="list-style-type: none"> refer queries to and use strengths of appropriate personnel, including licensed persons, for vehicle systems as required.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> personal protective equipment (PPE) hand and power tools jacking, support and lifting equipment.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE manual handling and storage techniques using tools and equipment environmental requirements, including procedures for trapping, storing and disposing of waste materials and vehicle fluids released during process.

Assessment Requirements for AURVTN006 Remove and replace mechanical units during vehicle repair

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace three of the following mechanical units on two different vehicles:
 - suspension parts and components
 - steering parts and components
 - final drive assembly
 - engine cross member or cradle
 - exhaust system
 - radiator.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and replacing mechanical units during vehicle repair, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manual handling and storage techniques
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and vehicle fluids released during process
- types and layout of hard copy and electronic service and repair manuals, including from:
 - original equipment manufacturer (OEM)
 - component supplier
- removal and replacement procedures for mechanical units, including:

- correct use of tools, materials and safety equipment
- removal and replacement methods and techniques
- brake system fluids and bleeding processes, including anti-lock braking (ABS) systems
- types and functions of mechanical units, including:
 - suspension parts and components
 - steering parts and components
 - final drive assembly
 - engine cross member and cradle
 - exhaust system
 - radiator
- licence requirements associated with removal procedures, including:
 - air conditioning requirements
 - liquefied petroleum gas (LPG) requirements
- procedures for final inspection of fitted mechanical units.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mechanical units and assemblies that they have removed and replaced during vehicle repair, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- OEM specifications for mechanical units
- two different vehicles requiring the mechanical units specified in the performance evidence to be removed and replaced
- tools, equipment and materials appropriate for removing and replacing mechanical units, including required PPE.

AURVTN007 Remove and clean salvageable vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and remove salvageable vehicle components and present for sale. It involves preparing for the task, selecting and using specialist tools and equipment, identifying salvageable components, removing salvageable components according to manufacturer specifications, cleaning and tagging the components for sale, and completing workplace processes and documentation.

It applies to those working in the automotive parts recycling industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove	1.1 Job requirements are determined from workplace instructions

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
salvageable components	<p>1.2 Manufacturer specifications and workplace procedures for removing salvageable components are sourced and interpreted</p> <p>1.3 Hazards associated with the work are identified and risks are managed</p> <p>1.4 <i>Tools and equipment</i> are identified and checked for serviceability</p> <p>1.5 Work is planned to identify <i>removal processes</i>, prevent damage to components, and use time efficiently</p>
2. Remove, clean and prepare salvageable components for sale	<p>2.1 Salvageable components are removed from vehicle according to established removal process, manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i></p> <p>2.2 Components are cleaned, labelled and prepared for sale according to workplace procedures</p>
3. Complete work processes	<p>3.1 Final inspection is made to ensure work meets workplace expectations and salvageable components are presented ready for sale</p> <p>3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored</p> <p>3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures</p> <p>3.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report issues or outcomes.

Skills	Description
Numeracy skills to:	<ul style="list-style-type: none"> • identify salvageable component part numbers • interpret salvageable component labels and part lists • use basic mathematical operations, including addition, subtraction, to calculate and record quantities of components and parts accurately.
Planning and organising skills to:	<ul style="list-style-type: none"> • plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> • hand and power tools • safety equipment, including personal protective equipment (PPE).
<i>Removal processes</i> must include:	<ul style="list-style-type: none"> • inspecting vehicle components • deciding on salvageable components and items • using removal techniques suitable for salvageable components and items.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • selecting and using PPE • manually handling and storing vehicle components • using tools and equipment • environmental requirements, including procedures for trapping, storing and disposing of waste materials and vehicle fluids released during the process.

Assessment Requirements for AURVTN007 Remove and clean salvageable vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, clean and prepare salvageable components for sale from three different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and cleaning salvageable vehicle components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling and storing vehicle components
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and vehicle fluids released during the process
- types, location and content of hard copy and electronic manufacturer service and repair manuals
- techniques and methods for removing salvageable components, including:
 - removal, cleaning and presentation methods and techniques
 - component cleaning materials
 - procedures for inspecting components
 - procedures for preparing and labelling components for sale
- cleaning methods, materials and equipment required to prepare components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle components they have salvaged, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer service and repair manuals
- three different vehicles with salvageable components for removal
- tools, equipment and materials appropriate for removing salvageable components, including:
 - component labels
 - component cleaning materials
 - required PPE.

Assessment Requirements for AURVTN008 Clean vehicle body and door openings

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- wash and clean vehicle body and door openings on six different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to cleaning vehicle body and door openings, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and equipment
 - using safety data sheets (SDS) for cleaning products
 - handling and storing cleaning material
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and cleaning chemicals
- methods and techniques for:
 - preparing and applying detailing and cleaning products
 - using cleaning and washing equipment
- methods for protecting vehicles while cleaning vehicle body exterior and door openings
- procedures for final inspection of vehicle body and door openings.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have cleaned, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive detailing workplace or simulated workplace
- workplace instructions
- SDS for cleaning products
- six different vehicles requiring cleaning and detailing
- tools, equipment and materials appropriate for cleaning vehicle body and door openings, including:
 - cleaning materials required to wash and clean vehicle bodies
 - required PPE.

AURVTN011 Remove and install vehicle rear vision mirrors

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and install rear vision mirrors attached to vehicle windscreens. It involves preparing for the task, selecting and using tools and equipment, selecting glass adhesives, cleaning glass surface, apply adhesive, positioning and securing rear vision mirror, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
install rear vision mirror	1.2 Manufacturer removal and installation information and adhesive safety data sheets (SDS) are sourced and interpreted 1.3 Materials for rear vision mirror installation are selected and checked for quality and serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment are sourced and checked for serviceability 1.6 Work is planned to identify methods, minimise waste, and prevent damage to vehicle
2. Remove and install rear vision mirror	2.1 Rear vision mirror is removed according to workplace procedures and safety and environmental requirements , and without causing damage to vehicle or components 2.2 Glass surface is cleaned and prepared 2.3 Adhesive is prepared and applied to surface for rear vision mirror installation 2.4 Mirror is positioned accurately and installed using manufacturer-approved methods, materials and equipment
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.

Skills	Description
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report issues, defects and outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> measure location for mirror on windscreen and position it accurately.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised tools and measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Materials</i> must include:	<ul style="list-style-type: none"> rear vision mirror adhesives or adhesive system cleaning products.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE) using tools, equipment and adhesives using SDS for adhesives cleaning glass surfaces environmental requirements, including procedures for trapping, storing and disposing of waste materials and adhesives.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURVTN011 Remove and install vehicle rear vision mirrors

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and install rear vision mirrors to three different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and installing vehicle rear vision mirrors, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools, equipment and adhesives
 - using safety data sheets (SDS) for adhesives
 - cleaning glass surfaces
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and adhesives
- mirror removal and installation methods and techniques, including:
 - types and use of equipment and materials
 - glass and rear vision mirror surface cleaning
 - types of mirror adhesives and their application
 - correct placement and location of rear vision mirrors
- procedures for protecting vehicle and components when removing and installing mirrors
- procedures for final inspection of fitted rear vision mirrors.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the rear vision mirrors they have removed and installed, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- SDS for adhesives
- adhesives or adhesive system
- cleaning products
- three different vehicles requiring the removal and installation of rear vision mirrors
- tools, equipment and materials appropriate for removing and installing rear vision mirrors.

AURVTN012 Install vehicle sunroofs

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to position and install sunroofs in vehicles or machinery. It involves preparing for the task, selecting and using tools and equipment, developing and preparing templates, marking out and cutting roof panels, preparing cut edges, installing, sealing and finishing sunroof to manufacturer specifications, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
vehicle sunroof	1.2 Sunroof installation information is sourced and interpreted from manufacturer and original equipment manufacturer (OEM) specifications and workplace procedures 1.3 Sunroof and <i>materials</i> are sourced and inspected for quality 1.4 Hazards associated with the work are identified and risks are managed 1.5 <i>Tools and equipment</i> are sourced and checked for serviceability 1.6 Work is planned to identify suitable installation methods, minimise waste, and prevent damage to vehicle
2. Fabricate template for sunroof	2.1 Suitable template materials are selected 2.2 Template is fabricated according to sunroof specifications and workplace procedures
3. Mark out and cut roof panels, and prepare cut edges	3.1 Accurate measurements are taken and template is used to mark out roof area to be cut 3.2 Roof panels are cut and trimmed using approved methods and equipment, including vehicle protection equipment, and according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 3.3 Cut edges are filed and prepared for sunroof installation 3.4 Cut roof panel is reinforced according to OEM or approved agency's structural requirements 3.5 Marking out and cutting are completed without causing damage to vehicle or components
4. Install sunroof	4.1 Sunroof is lifted into place without causing damage to vehicle or components 4.2 Sunroof fit is installed and checked prior to sealing 4.3 Sunroof is sealed according to manufacturer specifications 4.4 Installed sunroof is checked for safe operation and is leak tested
5. Complete work processes	5.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 5.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report issues or outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to measure and mark out templates, panel and trim sections.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify defects or quality issues, reinforcement requirements, and potential problems associated with installing sunroofs.
Technology skills to:	<ul style="list-style-type: none"> use specialist tools and measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Materials</i> must include:	<ul style="list-style-type: none"> sunroof templates adhesives and sealants fasteners cleaning materials.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> personal protective equipment (PPE) measuring equipment marking out equipment metal or panel cutting equipment

	<ul style="list-style-type: none"> • vehicle protection equipment.
<p><i>Safety and environmental requirements</i> must include:</p>	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • selecting and using PPE • manually handling sunroofs • using tools and equipment • environmental requirements, including procedures for trapping, storing and disposing of waste materials.

AURVTN013 Carry out paint-less dent repairs on vehicle body panels

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair shallow dents and hail damaged body panels using paint-less dent repair (PDR) processes. It involves preparing for the task, selecting and using specialist tools, repairing vehicle panels to pre-damage condition using PDR methods, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Assessment Requirements for AURVTN013 Carry out paint-less dent repairs on vehicle body panels

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out paint-less dent repairs (PDR) on ten different vehicle body panels, in which the work must involve completing PDR on one panel with shallow dents to a minimum dimension of 20 mm diameter x 2 mm depth.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out PDR on vehicle body panels, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling vehicle body panels
- PDR methods and techniques, including:
 - type and use of PDR tools, lighting equipment, and paint polishing materials
 - trim removal processes
 - paint film build and its effects on PDR
 - PDR push to paint surface
 - paint finishes, including peel and texture
 - paint fractures and delamination
 - corrosion prevention resulting from PDR
 - types of dents appropriate to PDR method
- PDR techniques, including pushing, pressing, reforming, levering, pulling, gluing, and suction cups
- PDR finish and quality standard

- procedures for final inspection of completed PDR repairs.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the PDR repairs they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- vehicles, panels and components requiring PDR as specified in the performance evidence
- tools, equipment and materials appropriate for carrying out paint-less dent repairs, including required PPE.

AURVTN015 Repair vehicle body panels using metal finishing

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out metal finishing to repair vehicle body panels, incorporating heat shrinking. It involves preparing for the task, selecting and using specialist tools and equipment, setting an oxyacetylene plant, panel beating and file finishing vehicle panels to pre-paint condition without using body fillers, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry. It does not cover aluminium panels.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN015 Repair vehicle body panels using metal finishing

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- complete repairs using metal finishing techniques to the following damaged vehicle body panels:
 - front guard or quarter panel with a minimum damage size of 200 mm x 200 mm
 - door skin panel that includes:
 - body style lines
 - pressings damage.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle body panels using metal finishing, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling body panels
 - using tools and equipment, including dust and fume collection equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) or authorised agency repair procedures and specifications
- high strength steel repair processes
- body panel repair techniques and methods, including:
 - use of metal finishing repair tools and equipment
 - panel stripping and preparation

- hand dolly planishing and file finishing
- heat shrinking using oxyacetylene plant
- pre-paint panel finishing
- procedures for final inspection of metal finished repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle body panels that they have repaired using metal finishing techniques, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required for metal finishing
- materials required to repair vehicle body panels using metal finishing
- damaged body panels to be repaired as specified in the performance evidence
- hand tools, equipment and materials appropriate for metal finishing vehicle body panels.

AURVTN016 Repair vehicle body panels using filler

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair vehicle body panels using filler. It involves preparing for the task, selecting and using specialist tools and equipment, identifying body filler type and specifications, calculating and mixing body filler and applying it to panels, completing repairs to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry. Filler used in repair work must include two-pack polyester.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN016 Repair vehicle body panels using filler

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair body panels on five different vehicles using body filler, including the following repairs:
 - one dent to a maximum depth of 3 mm
 - one damaged body panel with minimum dimension of approximately 200 mm x 300 mm, including style lines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle body panels using filler, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling body panels
 - using safety data sheets (SDS) for body fillers
 - using tools and equipment, including dust and fume collection equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- body filler manufacturer specifications
- types of body fillers and application methods and techniques, including:
 - preparing surface and removing paint
 - mixing and applying body fillers
 - correct storage to prevent contamination
 - weld-on dent pulling systems

- pre-paint panel finishing
- procedures and requirements for protecting vehicle and components when using filler to repair body panels
- procedures for final inspection of body filler repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle body panels that they have repaired using body filler, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- SDS for body fillers
- five different vehicles requiring the filler repair work on their body panels specified in the performance evidence
- tools, equipment and materials appropriate for repairing body panels using filler, including:
 - required PPE
 - body filler materials, including two-pack polyester filler.

AURVTN017 Repair vehicle thermoplastic body panels and components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair vehicle interior and exterior thermoplastic panels and components. It involves preparing for the task, selecting and using specialist thermoplastic repair tools and materials, repairing thermoplastic components to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Vehicle - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to repair	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
thermoplastic body panels and components	1.2 Original equipment manufacturer (OEM) or authorised agency's specifications for <i>thermoplastic panel and component repairs</i> and relevant safety data sheets (SDS) are sourced and interpreted 1.3 Repair method is selected, and materials are checked for quality and prepared 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment, including personal protective equipment (PPE), are identified and checked for serviceability 1.6 Work area is prepared and work is planned to minimise waste and use time efficiently
2. Carry out repair activities	2.1 Suitable thermoplastic welding, fusion techniques and adhesives, including adhesion promoter where applicable, are used to repair thermoplastic body panels and components according to <i>safety and environmental requirements</i> 2.2 Body filler that is formulated for the repaired thermoplastic is selected and used 2.3 Repairs are completed to pre-paint condition according to specifications of OEM or authorised agency and workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and thermoplastic body panels are presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report issues or outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate ratios for dilution rates.to: <ul style="list-style-type: none"> calculate repair material quantities measure surface area take accurate measurements using measuring equipment.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialist thermoplastic panel repair tools and measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Thermoplastic panel and component repairs</i> must include:	<ul style="list-style-type: none"> splits tears dents.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE using SDS for thermoplastics manually handling body panels and components using tools and equipment, including dust and fume collection equipment environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTN017 Repair vehicle thermoplastic body panels and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair vehicle thermoplastic body panels on four different vehicles, including:
 - two vehicle exterior thermoplastic panel components with a tear or dent
 - one thermoplastic panel component incorporating a flange and contour with a split of 100 mm
 - one interior or ornamental plastic trim component with a split, tear or dent.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle thermoplastic body panels and components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using safety data sheets (SDS) for thermoplastics
 - manually handling body panels and components
 - using tools and equipment, including dust and fume collection equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) or authorised agency repair specifications specific to the vehicles specified in the performance evidence
- thermoplastic repair procedures and techniques, including:
 - plastic material types
 - plastic repair tools and equipment

- plastic welding
- plastic adhesives
- repair quality requirements
- procedures and requirements for protecting vehicle and components during thermoplastic repair work
- procedures for final inspection of completed thermoplastic repairs.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle thermoplastic components that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace location or simulated workplace
- workplace instructions
- SDS for thermoplastics
- OEM or authorised agency repair specifications
- thermoplastic components specified in the performance evidence requiring repair
- tools, equipment and materials appropriate for repairing vehicle thermoplastic body panels and components, including required PPE.

AURVTN018 Repair and replace vehicle structural damage

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair the structural damage of vehicle body components using straightening and replacement techniques. It involves preparing for the task, selecting and using specialist tools and equipment, fitting, aligning and welding structural sections, finishing repairs to pre-paint condition, undertaking a final inspection of body repair work, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN018 Repair and replace vehicle structural damage

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair and replace structural body components on two different vehicles, in which each repair must include two of the following components:
 - body chassis rails and skirts
 - front or rear chassis rails
 - boot floors
 - upper skirt rail
 - inner or outer wheel arches
 - turrets
 - front and rear hinge pillars
 - inner and outer sill and pillar panels.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing and replacing vehicle structural damage, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling vehicle body components
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- different types of equipment and their use, including:
 - hydraulic and pneumatic straightening equipment

- approved metal inert gas (MIG) and spot welding equipment
- recommended measuring equipment
- location and key features of original equipment manufacturer (OEM) or authorised agency approved repair instructions, specifications and quality standards
- structural repair methods and techniques, including:
 - straightening and realigning
 - body panel measuring
 - panel replacement
- procedures for protecting vehicle and components when repairing or replacing structural body damage
- procedures for final inspection of completed structural body component repairs.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have structurally repaired and welded, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- approved repair procedures and specifications of OEM or authorised agency
- two different damaged vehicles with components specified in the performance evidence requiring structural repairs
- tools, equipment and materials appropriate for repairing and replacing structurally damaged panels on vehicles, including:
 - PPE required to repair and weld structurally damaged sections
 - recommended measuring equipment
 - materials required to repair and replace structurally damaged panels
 - hydraulic and pneumatic straightening equipment

- approved MIG and spot welding equipment.

AURVTN019 Repair vehicle structural damage by riveting

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair a vehicle's structural damage using riveting techniques. It involves preparing for the task, selecting and using specialist tools and equipment, repairing or replacing riveted panels, including straightening, realignment and attachment procedures, finishing repair to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN020 Remove and replace major welded panels on vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace major welded panels on three different vehicles, where each replacement must involve three of the following:
 - quarter panel
 - turret
 - side panel
 - beaver panel
 - outer wheel house or similar non-structural panel
- during above work, conduct welding according to specifications of original equipment manufacturer (OEM) or authorised agency.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and replacing major welded panels on vehicles, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling vehicle panels
 - using tools and equipment when welding panels
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- OEM or authorised agency vehicle specifications
- major welded panel replacement procedures and techniques

- repair and alignment methods and techniques, including:
 - use of tools and equipment, including tagging methods as required
 - approved welding processes
 - types and location of high strength steel (HSS)
- procedures for protecting vehicle and components when replacing panels
- procedures for final inspection of welded panel sections.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the major welded vehicle panels that they have replaced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- PPE required to replace major welded vehicle panels
- universal measuring system
- OEM or authorised agency's specifications
- OEM or authorised agency's approved welding equipment
- three different vehicles or sections of vehicle requiring replacement of major welded panels
- tools, equipment and materials appropriate for replacing major welded vehicle panels.

components using lead wiping	1.2 Lead wiping <i>materials</i> are selected and checked for quality and safety data sheets (SDS) are identified and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 <i>Lead wiping tools and equipment</i> and personal protective equipment (PPE) are identified and checked for serviceability 1.5 Work area is prepared and work is planned to minimise waste and use time efficiently
2. Apply lead wiping for repair	2.1 Metal on body panel to be repaired is cleaned thoroughly and prepared for tinning 2.2 Tinning paste is applied to metal surface according to product manufacturer specifications and workplace procedures 2.3 Body solder is heated to workable consistency and shaped using appropriate lead wiping tool 2.4 Lead wiping is carried out according to <i>safety and environmental requirements</i> 2.5 Repair area is filed using a body file and finished to pre-paint condition and workplace standards
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and components are presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant information efficiently.

Skills	Description
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report issues or outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate quantities of materials needed for lead wiping.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify defects and potential problems associated with lead wiping.
Technology skills to:	<ul style="list-style-type: none"> use lead wiping equipment and materials.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Materials</i> must include:	<ul style="list-style-type: none"> body solder lead wiping fluxes tinning paste.
<i>Lead wiping tools and equipment</i> must include:	<ul style="list-style-type: none"> oxyacetylene plant lead wiping tip body file specialist application tools.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE using SDS for lead and tinning paste materials handling and storing fluxes and lead using lead wiping tools and equipment environmental requirements, including procedures for: <ul style="list-style-type: none"> storing fluxes and lead trapping, storing and disposing of waste lead materials.

Assessment Requirements for AURVTN021 Repair vehicle body components using lead wiping

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- complete a lead wiping repair on two different vehicle body components, including repairing one dent of a minimum size of 100 mm x 50 mm x 2 mm in depth.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle body components using lead wiping, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using safety data sheets (SDS) for lead and tinning paste materials
 - handling and storing fluxes and lead
 - using lead wiping tools and equipment
- environmental requirements, including procedures for:
 - storing fluxes and lead
 - trapping, storing and disposing of waste lead materials
- lead wiping methods and techniques, including:
 - use of lead wiping equipment and application tools
 - lead wiping materials
 - metal tinning processes
 - cleaning repaired area to prevent corrosion
- procedures for protecting vehicle and components during lead wiping repair work
- procedures for final inspection of lead wiped repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle body components they have repaired using lead wiping, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required for lead wiping
- SDS for lead and tinning paste materials
- materials for lead wiping repair of body components
- vehicle body components specified in the performance evidence requiring lead wiping repairs
- tools, equipment and materials appropriate for repairing vehicle body components using lead wiping.

AURVTN022 Repair vehicle body misalignment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair vehicle misalignment. It involves preparing for the task, selecting and using specialist tools and equipment, setting up vehicle body measuring equipment, taking measurements, identifying and repairing vehicle body misalignment to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for work	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Vehicle specifications, and original equipment manufacturer (OEM) or authorised agency's recommended repair procedures and methods, are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment are selected and checked for serviceability 1.5 Work area is prepared and work is planned to minimise waste and use time efficiently
2. Perform pre-repair measurements	2.1 Measuring equipment is selected, prepared and attached to the vehicle according to equipment manufacturer instructions and safety and environmental requirements 2.2 Pre-repair three-dimensional measurements are completed without causing damage to system or components, and extent of misalignment is identified and recorded 2.3 Results of measurements and visual and physical inspections are used to determine type of damage and misalignment repair required
3 .Repair misalignment	3.1 Misalignment is repaired using appropriate repair method 3.2 Misalignment repair is inspected and measured and results are checked against vehicle OEM or authorised agency's specifications and tolerances
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and manufacturer specifications, and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURVTN022 Repair vehicle body misalignment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair vehicle body misalignment, including two of the following sections:
 - vehicle front chassis section
 - rear panels and floor section
 - side sill and pillar section.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle body misalignment, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling measuring equipment
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) or authorised agency's recommended repair procedures for removing, replacing and realigning vehicle bodies
- following vehicle design characteristics and their implications for repair and realignment methods:
 - mono
 - unitised
 - chassis
 - space frame

- types of misalignment damage, including:
 - under and upper body damage
 - sway
 - sag
 - twist
 - kick-up and kick-down
 - mash and diamond
- methods and techniques for identifying misalignment damage, including:
 - visual, mechanical and physical checking
 - use of measuring and alignment equipment
- repair techniques, including:
 - panel beating, welding, mechanical fastening, riveting, removing and aligning vehicle body sections
 - correct use of tools and equipment, including hydraulic or pneumatic repair equipment
 - digital and non-digital measuring equipment and dedicated jigs
 - welding techniques
 - hydraulic reforming
- procedures for final inspection of vehicle body misalignment repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle misalignments that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required to repair vehicle body misalignment

- OEM or authorised agency repair procedures
- vehicle specifications
- welding equipment
- measuring system
- straightening equipment
- two misaligned vehicle body sections as specified in the performance evidence
- tools, equipment and materials appropriate for repairing vehicle misalignment.

AURVTN023 Repair adhesive bonded structural damage on vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair bonded vehicle body panels and structures using an adhesive attachment method. It involves preparing for the task, selecting and using specialist tools and equipment, removing bonded structural damage, repairing panel sections, applying approved adhesives and realigning the structural repair, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Assessment Requirements for AURVTN023 Repair adhesive bonded structural damage on vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace bonded panels on two different vehicles, in which the work must include two of the following:
 - door skins
 - vehicle turret
 - quarter panel
 - boot floor section
- use the following bonding methods and securing techniques during above work:
 - welding and bonding
 - rivet or screwing and bonding.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing adhesive bonded structural damage on vehicles, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using safety data sheets (SDS) for adhesives
 - manual handling vehicle panels
 - storing adhesives
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and adhesives

- original equipment manufacturer (OEM) or authorised agency's recommended bonding procedures
- location and types of structural foams
- types of adhesives and their application methods and techniques
- removal and replacement techniques for bonded panels
- types of adhesive bonding methods
- securing techniques, including:
 - welding and bonding
 - rivet or screwing and bonding
- procedures for protecting vehicle and components when removing and replacing adhesive bonded panels
- procedures for final inspection of bonded structural repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to vehicle structural damage that they have repaired using adhesive bonding, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- OEM or authorised agency repair procedures
- PPE required to remove and replace adhesive bonded panels and structures
- SDS for adhesives
- vehicle specifications
- two different vehicles or frames with bonded panels requiring repair
- adhesives
- cleaning agents and materials
- tools, equipment and materials appropriate for repairing adhesive bonded panels.

AURVTN026 Repair vehicle aluminium body panels without the use of body filler

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair vehicle aluminium body panels without the use of body filler. It involves preparing for the task, selecting and using specialist aluminium repair tools and equipment, including tungsten inert gas (TIG) and metal inert gas (MIG) welding equipment, repairing vehicle aluminium body panels, finishing repair to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN026 Repair vehicle aluminium body panels without the use of body filler

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair and finish two different vehicle aluminium body panels to pre-paint condition without the use of body filler, including:
 - one panel with damage of a minimum size of 300 mm x 50 mm
 - one panel with a split of 150 mm.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle aluminium body panels without the use of body filler, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling vehicle panels
 - using tools and equipment, including tungsten inert gas (TIG) and metal inert gas (MIG) welding equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) or authorised agency repair technical information
- different types of aluminium materials and their characteristics
- types and use of aluminium-specific repair tools and materials to prevent cross-contamination
- aluminium repair and finishing methods and techniques, including:
 - aluminium welding processes and techniques

- pre-paint panel finish
- procedures for final inspection of repaired aluminium body panels.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the aluminium body panels that they have repaired without the use of body filler, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions detailing job requirements
- OEM or authorised agency repair specifications
- PPE required to repair aluminium body panels
- approved aluminium TIG and MIG welding equipment
- two different damaged vehicle aluminium body panels requiring repair and finishing without the use of body filler to pre-paint quality standard
- tools, equipment and materials appropriate for repairing vehicle aluminium body panels without the use of body filler.

AURVTN027 Repair vehicle aluminium body panels using filler

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to follow body filler procedures in order to repair vehicle aluminium body panels. It involves preparing for the task, selecting and using specialist tools and equipment, cleaning panel surfaces, identifying suitable body filler type, calculating body filler amount, mixing and applying body filler to aluminium panels, completing repairs to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to repair aluminium body panels using filler	1.1 Job requirements are determined from workplace instructions 1.2 Original equipment manufacturer (OEM) specifications and workplace procedures are accessed and interpreted 1.3 Body <i>filler</i> and materials for repair are selected and checked for quality and body filler safety data sheets (SDS) are identified and interpreted 1.4 Hazards associated with the work are identified and risks are managed 1.5 Aluminium repair <i>tools and equipment</i> are selected and checked for serviceability 1.6 Work is planned to identify aluminium repair methods, minimise waste, and use time efficiently
2. Carry out repairs using filler	2.1 Aluminium body panels to be repaired are identified according to workplace instructions 2.2 Panels are repaired to pre-filler condition following OEM or approved agency repair procedures, tools and equipment 2.3 Filler is mixed according to manufacturer specifications 2.4 Filler is applied to repair panels using approved body filler instructions and equipment according to workplace procedures, and <i>safety and environmental requirements</i> 2.5 Filler repairs are completed to pre-paint condition following safety and environmental requirements 2.6 Repairs are checked according to workplace quality standards
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle body panel is presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report issues or outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate body filler quantities and mix required ratios.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify quality issues and potential problems associated with repairing aluminium body panels.
Technology skills to:	<ul style="list-style-type: none"> use specialist tools and equipment.

Assessment Requirements for AURVTN027 Repair vehicle aluminium body panels using filler

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair three different aluminium body panels on a vehicle to pre-paint condition using body filler, including repair to an aluminium body panel dent of a minimum of 200 mm x 200 mm to a maximum filler depth of 3 mm.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle aluminium body panels using filler, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using safety data sheets (SDS) for body filler
 - manually handling vehicle panels
 - using tools and equipment, including dust and fume collection equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- body filler specifications
- body filler types, characteristics and application methods
- body filler repair procedures, methods and techniques, including:
 - surface area preparation
 - use of specialist tools and equipment
 - correct storage to prevent contamination
 - pre-paint panel finish

- procedures for final inspection of completed repairs on vehicle aluminium body panels using filler.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the aluminium body panel that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- body filler application specifications
- SDS for body filler
- PPE required to repair aluminium body panel using filler
- body filler materials relevant to repair of vehicle aluminium body panels
- three different aluminium body panels or vehicles requiring filler repairs
- tools, equipment and materials appropriate for repairing aluminium body panels using filler.

AURVTN028 Identify and repair high strength steel vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to locate, identify and repair high strength steel (HSS) vehicle components, including advanced and ultra-high strength steel. It involves preparing for the task, selecting and using specialist tools and equipment, confirming recommended repair procedure from original equipment manufacturer (OEM) or authorised agency, selecting repair procedures and recommended welding method, removing and replacing HSS components, finishing HSS repairs to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Locate OEM or authorised agency repair procedures	1.1 Job requirements are determined from workplace instructions 1.2 <i>OEM or authorised agency repair procedures</i> are sourced, interpreted and incorporated into planning process 1.3 Hazards associated with the work are identified and risks are managed 1.4 Recommended repair tools and equipment and personal protective equipment (PPE) are selected and checked for serviceability 1.5 Work is planned to identify required HSS repair methods, minimise waste, and use time efficiently
2. Repair or replace HSS components	2.1 Sections not subject to repair are protected, using approved methods and equipment 2.2 HSS sections to be replaced are identified and removed using OEM or authorised agency recommended removal methods and equipment, workplace procedures, and <i>safety and environmental requirements</i> 2.3 Damaged surfaces are restored to a condition suitable for fitting replacement HSS components 2.4 Vehicle measuring or jiggging equipment is used to position replacement HSS component correctly according to OEM or authorised agency specifications 2.5 OEM or authorised agency's surface coatings is protected or reapplied 2.6 Replacement HSS components are aligned and secured within OEM or authorised agency's tolerances
3. Weld HSS components	3.1 Recommended welding equipment for HSS is located and checked for correct operation 3.2 Sample welds are conducted using recommended welding techniques, inspected, and destruction tested for defects according to workplace instructions 3.3 HSS components are refitted using recommended repair methods, materials and equipment, and without causing damage to other systems or components 3.4 Grinding procedures are followed according to OEM or authorised agency and weld material specifications
4. Complete work	4.1 Repairs to HSS components are finished to pre-paint condition

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
processes	<p>according to workplace and <i>OEM or authorised agency repair</i> procedures</p> <p>4.2 Final inspection is made to ensure work meets workplace expectations and manufacturer specifications, and components are presented ready for painting</p> <p>4.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored</p> <p>4.4 Tools and equipment are checked, tagged and reported if faulty, and stored according to workplace procedures</p> <p>4.5 Workplace documentation is processed according to workplace procedures</p>

AURVTN029 Set up and operate universal vehicle measuring systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to set up and use a universal measuring system to measure vehicle chassis misalignment at pre- and post-repair intervals. It involves preparing for the task, selecting and using specialist tools and equipment, setting measuring equipment, measuring vehicle upper and underbody in three dimensions, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN029 Set up and operate universal vehicle measuring systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- set up and operate a universal measuring system on two occasions to take three-dimensional measurements (length, width and height) of upper and underbody on two vehicles with different types of chassis, including checking for the following types of damage:
 - diamond
 - twist
 - kick-up and kick-down.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to setting up and operating universal vehicle measuring systems, including procedures for:
 - following universal measuring equipment safety requirements
 - selecting and using personal protective equipment (PPE)
 - manual handling techniques
- vehicle designs, including:
 - mono chassis
 - space frame
- types of vehicle chassis misalignment damage, including:
 - diamond
 - twist

- kick-up and kick-down
- sag
- mash and sway damage
- original equipment manufacturer (OEM) or authorised agency's specifications, including pre- and post-repair measurement intervals
- procedures for final inspection of set-up and operation of a universal measuring system.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have measured and repaired using a universal measuring system, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- OEM or authorised agency specifications and measurements
- PPE required to set up and operate a universal vehicle measuring system
- universal vehicle measuring system
- universal vehicle measuring system operating instructions
- two vehicles with different chassis types requiring pre- and post-repair measuring of the misalignment damage specified in the performance evidence
- tools, equipment and materials appropriate for setting up and operating universal vehicle measuring systems.

AURVTN030 Service air compressors and air lines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service air compressors, pressure regulators, water traps, filters and air lines. It involves cleaning and replacing filters, making necessary adjustments, and completing workplace processes and documentation as part of the day-to-day maintenance of the system.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN030 Service air compressors and air lines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service two different air compressor systems, in which the work must involve the following system components:
 - air compressor motor
 - air compressor tank
 - drive system
 - pressure regulator
 - water trap and filters
 - air lines and fittings.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing air compressors and air lines, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - working with stored energy, compressed air, and rotating shafts, belts and pulleys
- environmental requirements, including procedures for trapping, storing and disposing of air compressor oils and fluids
- types of air compressors and principles of operation, including:
 - single stage reciprocating compressors
 - rotary screw compressors
- identification, function and operation of air compressor system and components specified in the performance evidence

- types and applications of air compressor lubricants
- procedures for final inspection of air compressors and air lines, including:
 - compressor cut-out pressure
 - minimising unintended air loss
 - automatic timing switch adjustment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air compressor systems that they have serviced, e.g. service orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- manufacturer air compressor specifications
- two different air compressor systems and components requiring service
- tools, equipment and materials appropriate for servicing air compressors and air lines.

AURVTN031 Carry out vehicle sectional repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out vehicle sectional repairs and replace components, including structural and non-structural vehicle components. It involves preparing for the task, selecting and using specialist tools and equipment, selecting repair methods, removing damaged components, repairing damaged sections, replacing and aligning new or repaired components, welding and finishing to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to carry out sectional repairs	1.1 Job requirements are determined from workplace instructions 1.2 Original equipment manufacturer (OEM) or authorised agency's specifications for joining methods are accessed and interpreted 1.3 Materials for repair are selected and inspected for quality 1.4 Hazards associated with the work are identified and risks are managed 1.5 <i>Tools and equipment</i> are identified and checked for serviceability 1.6 Work is planned to identify sectional repair methods, minimise waste, and use time efficiently
2. Perform sectional repairs	2.1 Measurements are taken prior to repairs according to workplace procedures 2.2 Damaged sections are removed according to approved <i>repair methods</i> and equipment, <i>safety and environmental requirements</i> 2.3 Damaged surfaces are restored to a condition suitable for fitting new sections 2.4 Replacement sections are aligned, secured and welded according to OEM or authorised agency's specifications 2.5 Sectional repairs are completed without causing damage to other vehicle components or systems 2.6 Post-repair measurements are taken according to workplace procedures and compared with OEM or authorised agency's specifications, and further corrective action is taken where non-compliance is identified
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and manufacturer specifications, and repaired vehicle is presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report quality issues and job outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate: <ul style="list-style-type: none"> OEM or authorised agency's measurements set approved welders set electronic alignment and repair measuring equipment.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialist repair equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> personal protective equipment (PPE) hand tools and equipment specialist measuring and alignment equipment OEM or authorised agency's recommended welding equipment.
<i>Repair methods</i> must include:	<ul style="list-style-type: none"> OEM or authorised agency's recommended procedures removal of damaged components repair, replacement and alignment of components underbody measurements to OEM or authorised agency's specifications alignment or jiggling systems

	<ul style="list-style-type: none"> sectional repairs approved welding equipment and processes pre- and post-repair measurements according to workplace procedures.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE manually handling vehicle components using tools and equipment environmental requirements, including procedures for trapping, storing and disposing of waste materials from repair process.

Assessment Requirements for AURVTN031 Carry out vehicle sectional repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- complete sectional repairs on three different damaged vehicles, where each sectional repair must involve two of the following:
 - body pillar
 - body rail
 - sill panel
 - quarter panel.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out vehicle sectional repairs, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling vehicle components
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials from repair process
- original equipment manufacturer (OEM) or authorised agency's specifications and repair information, including:
 - OEM-approved bonding and riveting
 - sectional repair procedures
 - OEM-recommended procedures
 - removal of damaged components

- repair, replacement and alignment of components
- underbody measurements to OEM or authorised agency specifications
- alignment or jiggling systems
- approved welding equipment and processes
- pre- and post-repair measurements according to workplace procedures
- procedures for identifying structural and non-structural components, including:
 - body pillars
 - body rails
 - sill panels
 - quarter panels
- types of steels and their repair characteristics
- techniques and procedures for carrying out sectional repairs, including:
 - types of repair tools and equipment and their operating procedures
 - use of structural foam
 - use of weld-through primer
 - alignment methods, techniques and procedures
 - approved welding and attachment procedures
 - bonding, riveting and sealant methods and procedures
- procedures for protecting vehicle and components during repair work
- procedures for final inspection of completed sectional repairs.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle sectional repairs they have completed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- workplace instructions
- OEM or authorised agency's specifications and procedures
- vehicle specifications
- PPE required to carry out sectional repairs
- three different damaged vehicles requiring the sectional repairs specified in the performance evidence
- replacement sectional components
- tools, equipment and materials appropriate for carrying out vehicle sectional repairs.

AURVTN032 Inspect vehicle damage and determine repair procedures

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect a vehicle for damage and determine suitable repair procedure. It involves preparing for the task, selecting and using measuring equipment, inspecting damage, determining repair requirements, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
vehicle damage	1.2 Vehicle specifications and repair procedures from original equipment manufacturer (OEM) or authorised agency are accessed and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Vehicle to be inspected is located, checked and confirmed against vehicle information in workplace instructions 1.5 <i>Inspection methods</i> are analysed, and most appropriate option for vehicle and job requirement is selected 1.6 Materials and equipment required to conduct inspection are sourced and prepared
2. Inspect vehicle damage	2.1 Vehicle is inspected to determine location and extent of direct and indirect damage according to OEM or authorised agency's recommended procedures, workplace procedures and <i>safety requirements</i> 2.2 Accurate measurements are taken and inspection findings are recorded, including photographs where appropriate, according to workplace procedures 2.3 Vehicle inspection is completed without causing damage to vehicle or components
3. Complete repair report	3.1 Vehicle inspection report and repair plan are prepared and given to appropriate personnel according to workplace procedures 3.2 Direct and indirect damage to vehicle is clearly identified in <i>report</i> , based on workplace and OEM or authorised agency's recommended repair procedures 3.3 Report is checked for accuracy and completeness and finalised for submission to insurance company and/or customer according to workplace procedures 3.4 Responses to queries about the damage inspection and repair report are provided when requested

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation and rectification reports outlining repair recommendations, and parts and material required.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures convey inspection findings and repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> interpret and calculate OEM or authorised agency repair and vehicle specifications correctly using metric and imperial systems of measurement compare measurements and identify non-conformance measurements use basic mathematical operations, including addition, subtraction, multiplication and division to calculate material for repairs in damage inspection report calculate recommended remove and replacement times in damage inspection report.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> assess implications of damage to vehicle.
Technology skills to:	<ul style="list-style-type: none"> use digital camera to complete reporting tasks.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Inspection methods</i> must include:	<ul style="list-style-type: none"> visual checking physical checking: taking measurements partial dismantling referencing OEM or authorised agency's specifications.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: selecting and using personal protective equipment (PPE)

	<ul style="list-style-type: none">• using measuring equipment.
Report must include:	<ul style="list-style-type: none">• material list• estimation of time required to complete repairs.

AURVTN033 Service and repair air compressors and components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to test, service and repair air compressors and associated components. It involves preparing for the task, cleaning and replacing filters, making adjustments and necessary repairs according to workplace instructions, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The compressors are for workshop air supply, drilling rigs or mobile compressors. This unit is not for air brake compressors on heavy vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

AURVTN034 Evaluate vehicle body repair materials, equipment and work processes

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to research and evaluate vehicle body repair materials, equipment and work processes, and to select those most appropriate for establishing a new body repair facility or updating an existing business. It requires knowledge of original equipment manufacturer (OEM) repair requirements and evolving industry technologies.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Determine process requirements	1.1 Requirements for body repair facility are identified 1.2 Framework and rating system are developed to facilitate comparisons of materials, equipment and processes 1.3 OEM repair requirements are identified and assessed to establish comparisons and benchmarks to be used
2. Identify specifications for required body repair materials, equipment and work processes	2.1 Repair steps and work processes are identified and flow charts produced 2.2 Material and equipment specifications are identified to match repair processes 2.3 Staff and management are consulted to identify additional or altered requirements 2.4 Materials, tooling and equipment requirements for body work undertaken in facility are identified and specifications are documented 2.5 Work health and safety (WHS) and occupational health and safety (OHS) requirements for safe facility and work practices are identified 2.6 Required specification data is compiled and documented
3. Evaluate materials, equipment and work processes against facility requirements	3.1 Material options are identified against required quality, finish and conformity to OEM specifications and repair standards, and are documented 3.2 Equipment options are identified and documented 3.3 Materials and equipment are selected based on facility work processes and comparisons of performance, cost and specifications compared to established rating system 3.4 Outcomes are documented and report is prepared

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant information efficiently.

Skills	Description
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately compile data to be analysed.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate material and data specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> identify, research and evaluate material, equipment and work process options.
Technology skills to:	<ul style="list-style-type: none"> use the full scope of available workplace technology relating to body work materials and equipment for analysis and evaluation.

Range of Conditions

Assessment Requirements for AURVTN034 Evaluate vehicle body repair materials, equipment and work processes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria and foundation skills:

- locate, interpret, evaluate and select materials, equipment and processes suitable for establishing or updating an automotive body repair facility, which must involve consultation with staff
- provide a report on above research, which includes an analysis of:
 - required and available materials and equipment with respect to facility work processes, specifications and standards
 - innovations applying to required materials and equipment
 - equipment capabilities and availability
 - cost-benefit analysis of materials, equipment and processes
 - impact of selected materials, equipment and processes on the environment and workplace safety.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- industry sector developments and trends in bodywork repair materials and equipment
- workplace policies and plans, including forecast systems and products
- body repair processes from original equipment manufacturer (OEM) or authorised agency's specifications
- materials, equipment and processes, including:
 - personal protective equipment (PPE) requirements
 - equipment capabilities
 - costings.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle body repair materials, equipment and work processes that they have evaluated, e.g. cost-benefit analysis.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive or simulated workplace
- bodywork technology information
- tools, equipment and materials appropriate for evaluating vehicle body repair materials, equipment and work processes.

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Review OEM procedures	1.1 Job requirements are determined from workplace instructions 1.2 OEM or authorised agency repair procedures and vehicle specifications are identified 1.3 Procedures and vehicle specifications are confirmed using OEM or authorised agency website or repair manuals 1.4 Repair work is planned to minimise waste and use time efficiently 1.5 OEM or authorised agency repair processes and specifications are analysed and incorporated into planning process
2. Apply knowledge of OEM standards	2.1 Hazards associated with the work are identified and risks are managed 2.2 Vehicle and components are located and prepared for repair work and systems or components not being worked on are protected 2.3 Recommended repair materials, tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 2.4 Repair work is completed following workplace and OEM or authorised agency’s recommended repair procedures and <i>safety and environmental requirements</i> 2.5 Identified non-compliances against OEM or authorised agency’s specifications are reported to appropriate personnel for rectification according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle or component is presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, tagged and reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate specifications and relevant OEM information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report quality issues, non-conformances and job outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction to, calculate OEM or authorised agency repair measurements, including identify non-conformance measurements.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> identify potential or actual hazards and take action to minimise risk identify non-conformances and quality issues associated with repairs refer problems outside area of responsibility to appropriate person and suggest possible causes.
Technology skills to:	<ul style="list-style-type: none"> use specialist repair tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE manually handling vehicle components using tools and equipment environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTN035 Apply original equipment manufacturer repair procedures during vehicle repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- apply original equipment manufacturer (OEM) or authorised agency repair procedures to three different damaged vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying OEM repair procedures during vehicle repairs, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling vehicle components
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- OEM or authorised agency's vehicle specifications and repair procedures, including compliance requirements
- procedures for protecting vehicle and components
- procedures for final inspection of OEM repair procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the OEM or authorised agency repair procedures they have applied when repairing a vehicle, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- OEM or authorised agency repair procedures
- vehicle specifications
- three different damaged vehicles
- PPE requirements
- internet access
- tools, equipment and materials appropriate for applying OEM repair procedures during vehicle repairs.

AURVTN037 Test vehicle components for correct operation

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to test vehicle components to assess their suitability for future use. It involves preparing for the task, selecting and using tools and equipment, removing, cleaning and testing vehicle components for correct operation, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to test components	1.1 Job requirements and units and components to be tested are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 <i>Task information</i> is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment, including personal protective equipment (PPE), are selected and checked for safe and correct operation 1.5 Work is planned to identify disassembly and testing methods, minimise waste, and use time efficiently
2. Disassemble components	2.1 Components are disassembled according to workplace procedures, manufacturer specifications, and <i>safety and environmental requirements</i> 2.2 Disassembled components are checked for damage or wear against manufacturer specifications
3. Clean components	3.1 Cleaning procedure is determined from manufacturer specifications, safety data sheets (SDS), and workplace procedures 3.2 Components are cleaned using approved cleaning products, materials and equipment according to safety and environmental requirements
4. Test components	4.1 Component is tested to determine correct operation and quality standard 4.2 Repair or replacement of component is determined according to test results and workplace procedures
5. Complete work processes	5.1 Final inspection is made to ensure work meets workplace expectations and manufacturer specifications, and components are presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 5.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURVTN037 Test vehicle components for correct operation

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- disassemble, clean and test the following components:
 - three different vehicle mechanical components
 - three different vehicle electrical components, including head light assembly.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to testing vehicle components for correct operation, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using safety data sheets (SDS) for cleaning agents
 - handling and storing vehicle components
 - using tools and equipment
 - using chemicals and cleaning agents
- environmental requirements, including procedures for trapping, storing and disposing of chemicals, cleaning agents and waste materials
- location and content of service and repair manuals
- component checking and testing methods and techniques, including:
 - component disassembly and reassembly
 - cleaning methods
- procedures for final inspection of vehicle component operation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle units and components that they have tested, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- vehicle service and repair manuals
- PPE required to remove and test vehicle components
- SDS for cleaning agents
- cleaning agents
- vehicle components that require testing for correct operation, including:
 - three different vehicle mechanical components
 - three different vehicle electrical components, including head light assembly
- tools, equipment and materials appropriate for testing vehicle components.

AURVTN038 Carry out basic repairs to vehicle body panels

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out basic repairs to vehicle body panels. It involves planning and preparing for the task, identifying and using abrasives, body fillers, and heat shrink and metal finishing procedures, selecting and using tools and equipment, and maintaining the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to repair body panel	1.1 Task instructions are interpreted and vehicle body panel to be worked on is identified 1.2 Manufacturer specifications and workplace procedures for repairing body panel are sourced and interpreted 1.3 <i>Safety and environmental requirements</i> are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Tools and equipment required for repairing body panel are identified and checked for serviceability
2. Carry out basic panel repairs	2.1 Damaged panel is shaped using basic panel beating techniques according to workplace instructions and safety and environmental requirements, and without causing damage to components, tools or equipment 2.2 Body filling and metal finishing are carried out according to workplace procedures and safety and environmental requirements 2.3 Panel repair is completed to pre-paint condition according to workplace instructions and procedures, and safety and environmental requirements
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instructions and workplace standards, and repaired body panel is presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 3.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported as required 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle panel repair information and procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from: <ul style="list-style-type: none"> manufacturer literature, safety requirements and workplace procedures for repairing a body panel environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear using hand tools environmental requirements, including procedures for trapping, storing and disposing of waste produced during body panel repair processes.

Assessment Requirements for AURVTN038 Carry out basic repairs to vehicle body panels

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out basic repairs on two different vehicle body panels, including:
 - one vehicle mud guard
 - one vehicle door.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out basic repairs to vehicle body panels, including procedures for:
 - selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear
 - using hand tools
- environmental requirements, including procedures for trapping, storing and disposing of waste produced during body panel repair processes
- types and construction of vehicle body panels
- body panel repair procedures, including:
 - basic panel beating
 - types and application of body fillers
 - basic body filler repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the body panels that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE for carrying out panel repairs
- one vehicle mud guard
- one vehicle door
- tools, equipment and materials appropriate for repairing body panels.

AURVTN039 Set up body alignment equipment on vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to set up body alignment equipment on a vehicle. It involves planning and preparing for the task, measuring the vehicle, selecting and using tools and equipment, setting up alignment equipment on the vehicle, and maintaining the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to set up vehicle body alignment equipment	1.1 Task instructions are interpreted and vehicle to be worked on is identified 1.2 Manufacturer specifications and workplace procedures for aligning vehicle are sourced and interpreted 1.3 <i>Safety requirements</i> are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor
2. Set up vehicle body alignment equipment	2.1 Vehicle body is measured according to manufacturer specifications, workplace procedures and safety requirements 2.2 Body alignment equipment and tools required for aligning body vehicle are identified and checked for serviceability 2.3 Body alignment equipment is attached to vehicle according to manufacturer specifications, workplace procedures and safety requirements
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use or further process according to workplace procedures 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 3.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported as required 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle body alignment information and procedures.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from: <ul style="list-style-type: none"> manufacturer literature, safety requirements and workplace procedures for aligning a vehicle body environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition, subtraction, multiplication and division, to measure vehicle body alignment and panel gaps.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to realign vehicle bodies.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear using hand tools.

Assessment Requirements for AURVTN039 Set up body alignment equipment on vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly set up body alignment equipment on one vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to setting up body alignment equipment on vehicles, including procedures for:
 - selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear
 - using hand tools
- types and construction of vehicle bodies
- types and application of vehicle body alignment equipment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the body alignment equipment they have set up on vehicles, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE for setting up body alignment equipment
- one vehicle requiring body alignment
- vehicle alignment measuring tools
- tools, equipment and materials appropriate for setting up body alignment equipment on vehicles.

Assessment Requirements for AURVTN040 Repair vehicle plastic components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair two different vehicle plastic components, in which the work must involve:
 - one plastic welding repair
 - one plastic filling repair.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle plastic components, including procedures for:
 - selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear
 - using hand tools
- environmental requirements, including procedures for trapping, storing and disposing of waste produced during repair processes
- types and construction of vehicle plastic components
- plastic component repair procedures, including:
 - plastic welding
 - types and application of body fillers
 - types and application of adhesives
 - repair finish standard.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the plastic components that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE for repairing vehicle plastic components
- two different vehicle plastic components requiring repair
- tools, equipment and materials appropriate for repairing vehicle plastic components.

AURVTN041 Remove and realign vehicle body panels

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and realign vehicle body panels. It involves planning and preparing for the task, identifying types and construction of vehicle body panels, selecting and using tools and equipment, removing, dismantling, reassembling, refitting and realigning body panels, and maintaining the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and realign body panel	1.1 Task instructions are interpreted and vehicle body panel to be worked on is identified 1.2 Manufacturer specifications and workplace procedures for removing and aligning body panel are sourced and interpreted 1.3 <i>Safety requirements</i> are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Tools and equipment required for removing and aligning body panel are identified and checked for serviceability
2. Remove body panel	2.1 Body panel is removed according to workplace procedures and safety requirements, and without causing damage to components, tools or equipment 2.2 Body panel is dismantled according to workplace procedures and safety requirements 2.3 Body panel is inspected according to manufacturer specifications 2.4 Body panel inspection results are recorded
3. Replace and realign body panel	3.1 Body panel is reassembled according to manufacturer specifications, workplace procedures and safety requirements 3.2 Body panel is refitted to vehicle according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components, tools or equipment 3.3 Body panel is adjusted and aligned to vehicle according to manufacturer specifications, workplace procedures and safety requirements 3.4 Body panel is inspected to ensure its correct alignment to vehicle 3.5 Alignment inspection results are recorded
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instructions and workplace standards, and vehicle is presented ready for use, further processes, or storage according to workplace procedures 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported as required 4.4 Workplace documentation is processed according to workplace

	procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of vehicle panel removal and alignment information and procedures.
Reading skills to:	<ul style="list-style-type: none"> select and interpret key information from: <ul style="list-style-type: none"> manufacturer literature, safety requirements and workplace procedures for removing and realigning a body panel workplace procedures to ensure a clean and safe work site.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate distances between panels.
Technology skills to:	<ul style="list-style-type: none"> set up and operate equipment and tools required to remove and realign body panels.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
---	---

	<ul style="list-style-type: none">• selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear• using hand tools.

Assessment Requirements for AURVTN041 Remove and realign vehicle body panels

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and realign the following two different vehicle body panels:
 - one vehicle mud guard
 - one vehicle door.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and realigning vehicle body panels, including procedures for:
 - selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear
 - using hand tools
- types and construction of vehicle body panels
- body panel removal, dismantling, assembly and replacement procedures
- body panel measurement and alignment procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the body panels that they have removed and realigned, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE for removing and realigning vehicle body panels
- two different vehicle body panels as specified in the performance evidence requiring removal and realignment
- tools, equipment and materials appropriate for removing and realigning vehicle body panels.

AURVTN042 Dismantle vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to dismantle vehicle components according to workplace procedures. It involves preparing for the task, selecting and using tools and equipment, including personal protective equipment (PPE), cleaning, labelling and storing recycled components, and completing workplace processes and documentation.

It applies to those working in the automotive parts recycling industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN042 Dismantle vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle, clean and tag five of the following vehicle units in line with workplace procedures:
 - engine and cooling system
 - suspension system
 - steering system
 - final drive assembly
 - exhaust system
 - body panels.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to dismantling vehicle components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - manually handling and storing vehicle components
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of vehicle fluids, gas and other waste materials released during the dismantling process
- dismantling procedures, including:
 - original equipment manufacturer (OEM) specifications
 - procedures for removing salvageable vehicle components
- workplace procedures and products for cleaning vehicle component

- workplace procedures for labelling and storing vehicle components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle components that they have dismantled, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- vehicle manufacturer service and repair manuals
- PPE required to salvage vehicle components
- vehicles with salvageable components as specified in the performance evidence requiring removal
- tools, equipment and materials appropriate for removing salvageable vehicle components.

AURVTP001 Remove paint from vehicle painted surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove paint from vehicle painted surfaces using a variety of industry-approved methods and without causing damage to vehicle and components. It involves preparing for the task, selecting and using specialist tools, equipment and chemicals to remove paint from metal and plastic component surfaces in preparation for repairs or refinishing, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical – Paint

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove paint from vehicle surface	1.1 Job requirements are determined from workplace instructions 1.2 <i>Paint removal information</i> is located and interpreted 1.3 Paint removal <i>materials</i> are selected and checked for quality 1.4 <i>Paint removal tools and equipment</i> and personal protective equipment (PPE) are selected and checked for serviceability 1.5 Paint removal <i>methods</i> are identified and their effect on components determined according to workplace procedures and customer requirements 1.6 Hazards associated with the work are identified and risks are managed 1.7 Work is planned to minimise waste and damage to vehicle
2. Remove paint	2.1 Vehicle metal and plastic components requiring paint removal are identified and prepared 2.2 Vehicle paint is removed according to workplace and paint manufacturer recommended procedures, and <i>safety and environmental requirements</i> 2.3 Paint removal activities are completed without causing damage to vehicle or component surfaces
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle panel or component is presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Assessment Requirements for AURVTP001 Remove paint from vehicle painted surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove paint from vehicle surfaces using chemical and sanding techniques on:
 - three different plastic vehicle body components
 - three different metal vehicle body components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing paint from vehicle painted surfaces, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using safety data sheets (SDS) for paint removing chemicals
 - handling and storing paint removing chemicals
 - using tools and equipment
 - using fume and dust collection equipment, including positive air feed masks
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and chemicals
- paint manufacturer and workplace paint removal methods, including:
 - chemical substance
 - abrasive blasting
 - machine sanding
 - hand sanding
- procedures for protecting vehicle and components during paint removal

- procedures for final cleaning and inspection of vehicle surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to paint removal work they have completed on vehicle body panels, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- paint manufacturer specifications
- PPE for paint removal, including fume and dust extraction equipment
- SDS for paint removing chemicals
- vehicle protection equipment
- chemicals to remove paint
- painted plastic and metal components as specified in the performance evidence requiring paint removal
- tools, equipment and materials appropriate for applying paint removal methods.

Assessment Requirements for AURVTP002 Mask vehicle panels and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- mask the following vehicle panels:
 - complete vehicle front end
 - complete vehicle rear end
 - complete vehicle side
- during above work, mask the following components in situ:
 - doors
 - mud guards
 - boot lid
 - bonnet
 - plastic components
 - glass sections.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to masking vehicle panels and components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- types and use of masking materials, including:

- polyvinyl chloride (PVC)
- door aperture and trim masking tapes
- masking papers, mediums and templates
- masking methods and techniques to reproduce original equipment manufacturer (OEM) paint aesthetics and finish, including operation of masking equipment
- procedures for protecting vehicle and components when masking vehicle panels
- procedures for final inspection of vehicle masking requirements.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the masking work they have carried out on vehicles, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE for masking processes
- masking materials
- vehicle parts specified in the performance evidence requiring masking
- tools, equipment and materials appropriate for masking vehicle panels and components.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- prepare the following spray painting equipment for two different vehicle spray painting tasks:
 - high volume low pressure (HVLP) spray guns
 - paint mixing system and paint agitators
 - positive air feed masks
 - gravity feed spray guns
 - spray and drying booths
 - suction feed spray guns
 - air pressure regulators
 - air compressors and air lines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to preparing vehicle spray painting equipment for use, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- equipment manufacturer specifications and operating instructions relating to spray painting equipment
- types and use of spray painting equipment, including:

- spray gun use and associated equipment set-up and maintenance
- correct use of positive air feed masks
- filters and dryers
- spray equipment cleaning methods and materials
- paint mixing systems
- paint pressure pot systems
- spray and drying booths
- procedures for final inspection of vehicle spray painting equipment operation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to vehicle spray painting equipment that they have prepared, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- equipment manufacturer specifications and operating procedures
- PPE to prepare spray painting materials and equipment
- spray guns
- paint mixing systems
- drying equipment
- tools, equipment and materials appropriate for preparing vehicle spray painting equipment.

AURVTP004 Apply basic colour matching techniques using vehicle paint codes

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to colour match paints using original equipment manufacturer (OEM) paint codes. It involves preparing for the task, selecting and using specialist tools and equipment, preparing colour matching test cards, mixing and spraying paint and conducting a visual colour match, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Paint

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to apply basic colour matching techniques	1.1 Job requirements are determined from workplace instructions 1.2 <i>Colour matching information</i> is accessed and interpreted 1.3 Paint colour matching <i>materials</i> are selected and inspected for quality 1.4 Hazards associated with the work are identified and risks are managed 1.5 Spray painting <i>tools and equipment</i> and personal protective equipment (PPE) are selected and checked for serviceability 1.6 Work is planned to identify colour matching techniques, minimise waste, and use time efficiently
2. Mix paint colour	2.1 Paint measuring system required for job is set up and checked 2.2 Colours are mixed using approved <i>methods</i> , tools, equipment and materials, and without causing damage to vehicle and components 2.3 Mixing activities are completed according to workplace procedures, paint safety data sheets (SDS), and <i>safety and environmental requirements</i>
3. Prepare colour test cards and perform visual matching	3.1 Test cards are prepared and sprayed to enable a visual comparison between matched and original paint 3.2 Visual matching is carried out, comparisons are made between matched and original paint, and paint codes are recorded 3.3 Painting and matching activities are carried out according to workplace procedures, OEM paint codes, and safety and environmental requirements 3.4 Paint is remixed for further matching if first mix does not match original paint
4. Complete work processes	4.1 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.2 Final inspection is made to ensure work meets workplace expectations and matched paint colour is presented ready for use 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report quality issues and job outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> interpret OEM paint codes and formulas use basic mathematical operations, including addition, subtraction, multiplication and division to, determine ratios and calculate quantities of paint and materials.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialist paint mixing and spray painting tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Colour matching information</i> must include:	<ul style="list-style-type: none"> OEM paint codes paint technical data sheets (TDS) paint SDS workplace procedures.
<i>Materials</i> must include:	<ul style="list-style-type: none"> solid colour paints paint thinners paint reducers cleaning materials.
<i>Tools and equipment</i> must include:	<ul style="list-style-type: none"> tinting system scales spray guns

	<ul style="list-style-type: none"> • pressure regulators • air compressors • approved spray area • heating and lighting systems • polishing and cleaning equipment • PPE • metal or cardboard colour matching test cards.
Methods must include:	<ul style="list-style-type: none"> • paint mixing and matching methods • spraying techniques • paint thinning methods.
Safety and environmental requirements must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> • selecting and using PPE • using TDS and SDS for paint material • handling and storing paint materials • using tools and equipment • environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTP004 Apply basic colour matching techniques using vehicle paint codes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- match solid colour paints on two different vehicle panels, in which the work must involve:
 - wet to wet matching
 - edge to edge matching
 - hard line matching.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying basic colour matching techniques using vehicle paint codes, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using technical data sheets (TDS) and safety data sheets (SDS) for paint material
 - handling and storing paint and cleaning materials
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) paint colour codes and formulas
- location and content of vehicle paint code manuals
- paint colour mixing techniques, including:
 - mixing system set-up and operation
 - paint application methods
 - correct use of positive air feed masks

- types and use of paint colour matching equipment, including:
 - spray gun set-up, use and maintenance
 - paint drying equipment and methods
- colour matching techniques, including:
 - wet to wet matching
 - edge to edge matching
 - hard line matching
 - dabbing
- procedures for identifying vehicle paint condition, including paint fade
- procedures for protecting vehicle and components when applying paint
- procedures for final inspection of basic colour matching.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the paint colour matching techniques that they have applied, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- paint codes and formulas
- TDS and SDS for paint material
- two different vehicle panels requiring colour matching
- PPE needed for paint colour matching
- paint and colour matching materials
- paint mixing materials and system
- sample colours to be matched
- tools, equipment and materials appropriate for applying basic colour matching techniques using vehicle paint codes.

Assessment Requirements for AURVTP005 Apply rust prevention and sound deadening materials to vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- apply five of the following rust prevention and sound deadening materials to different vehicle body components:
 - fish oil
 - wax compounds
 - spray-on sound deadening
 - brush-on sound deadening
 - adhesive bonded sound deadening pads
 - joint and seam sealants.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying rust prevention and sound deadening materials to vehicle body components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using technical data sheets (TDS) for sound deadening materials
 - using safety data sheets (SDS) for fish oil, sealers and adhesives
 - handling and storing rust prevention and sound deadening materials
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- sound deadening material manufacturer specifications

- types and uses of rust prevention and sound deadening materials
- rust prevention and sound deadening application methods and techniques
- types and uses of rust prevention and sound deadening equipment, including:
 - spray gun
 - heat gun
 - brush applicators
- procedures for protecting vehicle and components when applying rust protection and sound deadening materials
- procedures for final inspection of fitted sound deadening and rust prevention materials.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the rust prevention and sound deadening materials they have applied to vehicle body components, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- TDS for sound deadening materials
- SDS for fish oil, sealers and adhesives
- PPE to apply rust prevention and sound deadening materials
- rust prevention and sound deadening materials
- vehicle body components requiring the application of rust prevention and sound deadening materials specified in the performance evidence
- tools, equipment and materials appropriate for applying rust prevention and sound deadening materials to vehicle body components.

AURVTP006 Apply refinishing primers to vehicle surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare vehicle surfaces and then apply refinishing primers to them prior to final paint coats. It involves preparing for the task, selecting and using specialist tools and equipment, mixing and applying automotive primers to substrate surfaces according to manufacturer specifications, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTP006 Apply refinishing primers to vehicle surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- prepare and apply the following refinishing primers according to paint manufacturer specifications on two different vehicle panels or substrates to a minimum area of 300 mm x 200 mm:
 - epoxy
 - acid-based
 - ultraviolet (UV) cured
 - sealant
 - non-sandable
 - adhesion promoters.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying refinishing primers to vehicle surfaces, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using technical data sheets (TDS) and safety data sheets (SDS) for paint primers
 - handling and storing paint materials
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- paint manufacturer specifications
- types and uses of primers specified in the performance evidence

- surface preparation and primer mixing and application techniques, including:
 - cleaning paint repair areas
 - wet and dry rubbing procedures
 - correct use of positive air feed masks
 - masking techniques
 - primer application methods
 - paint drying methods
- types of abrasives and grading
- types and use of spray painting equipment and maintenance requirements
- procedures for protecting undamaged vehicle and components when applying refinishing primers
- procedures for final inspection of completed primed surface.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle surfaces they have prepared and primed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- TDS and SDS for primers
- PPE to apply primers for paint repairs
- primers and materials, including:
 - epoxy primer
 - acid-based primer
 - UV cured primer
 - sealant

- non-sandable
- adhesion promoters
- two different vehicles or substrates requiring preparation and primer application
- tools, equipment and materials appropriate for preparing vehicle surfaces and mixing and applying primers.

Assessment Requirements for AURVTP007 Touch up minor vehicle paintwork damage

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- touch up the damaged paintwork on two different vehicles, in which the work must include:
 - blending and clearing a vehicle panel
 - partially blending and fading out blend on a vehicle panel.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to touching up minor vehicle paintwork damage, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using technical data sheets (TDS) and safety data sheets (SDS) for paint and cleaning materials
 - handling and storing paint and cleaning materials
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- paint manufacturer specifications
- types and features of paint materials, including:
 - primers
 - water-based paints
 - two-part enamels
 - hardeners

- paint reducers
- abrasives and polishes
- glazes and sealants
- types and use of painting equipment, including:
 - types of spray guns and maintenance requirements
 - spray gun techniques
 - correct use of positive air feed masks
- paint touch-up techniques, including:
 - surface preparation methods
 - paint mixing procedures
 - paint application methods
 - paint drying methods and procedures
- procedures for protecting vehicle and components during paintwork touch-up
- procedures for final inspection of completed paint touch-up.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the damaged vehicle paintwork that they have touched up, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- TDS and SDS for paint and cleaning materials
- PPE to touch up paint
- paint materials required for paint touch-up
- two different vehicles or panels requiring paint touch-up
- tools, equipment and materials appropriate for applying paint touch-up techniques.

AURVTP008 Clean and polish vehicle paint surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to clean and polish vehicle paint surfaces. It involves preparing for the task, selecting and using cleaning and polishing material to detail vehicle paint surfaces, selecting and using specialist polishing equipment, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Paint

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to clean and polish vehicle paint	1.1 Job requirements are determined from workplace instructions 1.2 <i>Cleaning information</i> is accessed and interpreted

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
surfaces	<p>1.3 Cleaning and polishing <i>materials</i> are selected and checked for quality</p> <p>1.4 Hazards associated with the work are identified and risks are managed</p> <p>1.5 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability</p> <p>1.6 Work is planned to identify cleaning and polishing methods, minimise waste, and avoid damage to vehicle</p>
2. Carry out cleaning and polishing activities	<p>2.1 Cleaning and polishing tools and equipment are used according to workplace procedures and <i>safety and environmental requirements</i></p> <p>2.2 Products are used according to vehicle paint finish type, workplace methods and paint manufacturer specifications</p> <p>2.3 Exterior paint finish is cleaned and polished according to workplace and manufacturer procedures</p> <p>2.4 Cleaning and polishing are completed without causing damage to vehicle components or systems</p>
3. Complete work processes	<p>3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use</p> <p>3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored</p> <p>3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures</p> <p>3.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.

Skills	Description
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report quality issues and job outcomes.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use workplace technology related to preparing a vehicle mechanical and electrical service repair quotation.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Cleaning information</i> must include:	<ul style="list-style-type: none"> paint safety data sheets (SDS) manufacturer procedures workplace procedures.
<i>Materials</i> must include:	<ul style="list-style-type: none"> cleaning and polishing agents polishing tools and equipment.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE using SDS for cleaning and polishing materials handling and storing cleaning and polishing materials using tools and equipment environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTP008 Clean and polish vehicle paint surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- clean and polish the paint surfaces of three different vehicles, in which the work must involve the use of a polishing buff.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to cleaning and polishing vehicle paint surfaces, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using safety data sheets (SDS) for cleaning and polishing materials
 - handling and storing cleaning and polishing materials
 - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- types and use of cleaning and polishing buff and materials and their recommended applications
- procedures for final inspection of cleaned and polished vehicle.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle paint surfaces that they have cleaned and polished, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive detailing workplace or simulated workplace
- workplace instructions
- SDS for cleaning and polishing materials
- PPE required to clean and polish vehicle exterior paint surfaces
- cleaning and polishing materials
- three different painted vehicles requiring cleaning and polishing
- tools, equipment and materials appropriate for cleaning and polishing vehicle paint surfaces.

AURVTP009 Apply vehicle body film wrapping

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare vehicle body surfaces and apply vinyl film wrapping materials. It involves preparing for the task, selecting and using specialist tools, selecting vinyl film materials, checking vinyl film quality, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Paint

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to apply vehicle body film wrapping	1.1 Job requirements are determined from workplace instructions 1.2 Workplace procedures and vinyl film supplier recommended

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	application methods are accessed and interpreted 1.3 Vinyl film wrapping <i>materials</i> are selected and inspected for quality 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.6 Vehicle panel surface is assessed for quality 1.7 Work is planned to apply body film wrapping, minimise waste, and prevent damage to vehicle
2. Measure, cut and apply vinyl film	2.1 Surface area is measured accurately and patterns are produced 2.2 Vinyl film material is cut according to vinyl pattern specifications and <i>safety and environmental requirements</i> 2.3 Body surface is prepared using vinyl film supplier approved methods, materials and equipment 2.4 Vinyl film wrapping materials are applied according to vinyl film supplier specifications and workplace procedures, and without causing damage to body surface
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURVTP009 Apply vehicle body film wrapping

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- apply vinyl film wrapping on three different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying vehicle body film wrapping, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using specialist tools
- environmental requirements, including procedures for trapping, storing and disposing of waste material
- types and uses of vinyl film wrapping materials and tools
- vinyl film supplier recommended methods and techniques for applying vinyl film wrapping, including:
 - surface preparation
 - surface measurements and pattern development
 - quality requirements relating to vinyl film wrapping
- procedures for protecting vehicle and components when applying film wrapping
- procedures for final inspection of vehicle vinyl film wrapping.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the body film wrapping they have applied to vehicles, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- PPE to apply vinyl film wrapping
- vinyl film supplier specifications and application methods
- three different vehicles requiring the application of vinyl film materials
- vinyl film wrapping material
- tools, equipment and materials appropriate for applying vehicle body film wrapping.

Assessment Requirements for AURVTP011 Apply solid acrylic two-pack materials to vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- apply solid acrylic two-pack materials to three different vehicles, in which the work must involve:
 - two different vehicle panels
 - two different vehicle full sides
 - two different vehicle front ends or rear ends
- check the above paintwork and rectify paint surface faults as required.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying solid acrylic two-pack materials to vehicle components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using technical data sheets (TDS) and safety data sheets (SDS) for solid acrylic two-pack materials
 - handling and storing paint materials
 - using tools and equipment
 - using approved drying area
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- paint manufacturer specifications
- types and use of solid acrylic two-pack paint materials

- types and use of spray guns, including:
 - spray gun operation and spraying techniques
 - spray gun cleaning and maintenance methods
- paint application methods and techniques, including:
 - drying methods for solid acrylic two-pack materials
 - paint surface fault identification and rectification procedures
 - correct use of positive air feed masks
- procedures for protecting vehicle and components when applying solid acrylic two-pack materials
- procedures for final inspection of solid acrylic two-pack painted surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the solid acrylic two-pack materials they have applied to vehicle components, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications
- TDS and SDS for solid acrylic two-pack materials
- PPE required to apply solid acrylic two-pack materials
- solid acrylic two-pack paint materials
- three different vehicles with components specified in the performance evidence requiring spray painting using solid acrylic two-pack materials tools, equipment and materials appropriate for applying solid acrylic two-pack materials.
- tools, equipment and materials appropriate for applying solid acrylic two-pack materials.

2. Carry out application activities	2.1 Refinishing materials are mixed and applied according to manufacturer recommended intervals and <i>safety and environmental requirements</i> , and without causing damage to system or components 2.2 Refinishing materials are dried using approved methods and equipment 2.3 <i>Paint finish is checked</i> against specifications 2.4 Paint surface faults are removed using compounds, polishes and glazes
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle or component is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.

Skills	Description
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions and procedures clearly report quality issues and job outcomes.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition, subtraction, multiplication and division to: <ul style="list-style-type: none"> calculate quantities of required materials measure and determine ratios for mixing paint materials set spraying and drying equipment.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialist paint equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Application information</i> must include:	<ul style="list-style-type: none"> manufacturer specifications workplace procedures paint safety data sheets (SDS) paint technical data sheets (TDS).
<i>Refinishing materials</i> must include:	<ul style="list-style-type: none"> air dry synthetic enamels enamel additives polyurethane enamels paint reducers.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE using TDS and SDS for polyurethane refinishing materials handling and storing paint materials using tools and equipment using approved drying area environmental requirements, including procedures for trapping,

	storing and disposing of waste materials.
Checking paint finish must include:	<ul style="list-style-type: none">• checking colour, texture, depth and gloss• ensuring paint finish is contaminant-free• ensuring paint finish blends into surrounding surfaces.

Unit Mapping Information

Equivalent to AURVTP3012 Apply air dry and polyurethane enamel refinishing materials

Assessment Requirements for AURVTP012 Apply air dry and polyurethane refinishing materials

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- apply air dry and polyurethane refinishing materials to two different vehicle body components, in which the work must involve:
 - one component using paint with additive
 - one component using paint without additive.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying air dry and polyurethane refinishing materials, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using technical data sheets (TDS) and safety data sheets (SDS) for polyurethane refinishing materials
 - handling and storing paint materials
 - using tools and equipment
 - using approved drying area
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- paint manufacturer specifications
- types and use of air dry and polyurethane refinishing materials
- air dry and polyurethane refinishing material application methods and techniques, including:

- spray and drying equipment
- paint fault and rectification procedures
- drying methods for air dry and polyurethane refinishing materials
- correct use of positive air feed masks
- types and use of spray guns, including:
 - spray gun operation and spraying techniques
 - spray gun cleaning and maintenance methods
- procedures for protecting vehicle and components when applying paints
- procedures for final inspection of polyurethane refinished surface.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air dry and polyurethane refinishing materials they have applied to vehicle components, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications
- TDS and SDS for air dry and polyurethane refinishing materials
- PPE required to apply air dry and polyurethane refinishing materials
- air dry and polyurethane refinishing materials
- two different vehicles requiring the application of air dry and polyurethane refinishing material
- tools, equipment and materials appropriate for applying air dry and polyurethane refinishing material.

AURVTP013 Prepare vehicle substrates for refinishing

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare vehicle substrates for refinishing by removing surface rust and scale, and applying primers and sealers before the final refinishing. It involves preparing for the task, selecting and using specialist tools and equipment, selecting and using materials, cleaning vehicle substrate surfaces according to manufacturer specifications, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry. The preparation of plastic or composite materials for refinishing is not addressed in this unit.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Paint

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for work	1.1 Job requirements are determined from workplace instructions 1.2 <i>Preparation information</i> is accessed and interpreted 1.3 Vehicle or component is inspected to identify substrate paint film builds 1.4 <i>Materials</i> are selected and inspected for quality 1.5 Hazards associated with the work are identified and risks are managed 1.6 <i>Refinishing tools and equipment</i> and personal protective equipment (PPE) are selected and checked for serviceability 1.7 Work is planned to identify vehicle <i>substrate preparation methods</i> , minimise waste, and prevent damage to vehicle
2. Remove surface rust and apply primers	2.1 Surface rust and scale are removed from substrate using approved methods, materials and equipment and according to workplace procedures and <i>safety and environmental requirements</i> 2.2 Substrate components affected by application processes are protected or removed without causing damage to vehicle or components 2.3 Surfaces to be painted are cleaned and contaminants are removed 2.4 Primers and primer surfaces are applied using approved methods, materials and equipment
3. Prepare primed and sealed surface for refinishing	3.1 Surfaces to be refinished are prepared using approved methods, materials and equipment to workplace quality requirements 3.2 Identified surface defects are recorded and reported
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and prepared surface is presented ready for refinishing 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURVTP013 Prepare vehicle substrates for refinishing

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- prepare two different vehicle substrates for refinishing, in which the work must involve:
 - full steel vehicle body panel with surface rust
 - full aluminium vehicle body panel
 - stainless steel sheet measuring at least 150 mm x 150 mm or stainless steel body moulding
 - galvanised coated sheet measuring at least 150 mm x 150 mm b
 - zinc anneal sheet measuring at least 150 mm x 150 mm.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to preparing vehicle substrates for refinishing, including procedures for:
 - selecting and using personal protective equipment (PPE), including positive air feed masks
 - using technical data sheets (TDS) and safety data sheets (SDS) for primers and chemical cleaners
 - handling and storing paint materials
 - using tools and equipment
 - using approved drying areas
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- paint manufacturer specifications

- types and uses of tools, equipment and materials, including:
 - primers and sealers
 - spray gun set-up, maintenance and application
 - cleaning agents
- surface preparation methods and techniques for primers, sealers and surface repair:
 - masking off areas not to be coated
 - adhesion tests
 - primer mixing techniques
 - application methods for primers, fillers and sealers
 - sanding and blocking
 - feather edging procedures
- procedures for protecting vehicle and components when preparing substrates
- procedures for final inspection of prepared substrates.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle substrates that they have prepared for refinishing, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- TDS and SDS for primers and chemical cleaners
- PPE required to prepare substrates for refinishing
- materials required to prepare substrates for refinishing
- vehicle substrates specified in the performance evidence requiring preparation for refinishing
- tools, equipment and materials appropriate for preparing vehicle substrates for refinishing.

AURVTP014 Colour match multi-layer and clear over base two-pack paints on vehicles and components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to match vehicle or component multi-layer and clear over base paint colours using original equipment manufacturer (OEM) paint codes. It involves preparing for the task, selecting and using specialist tools and equipment, identifying paint codes, preparing colour matching test cards, mixing and spraying paint and conducting a visual colour match, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTP014 Colour match multi-layer and clear over base two-pack paints on vehicles and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- colour match five different vehicle body panels, in which the work must involve the following paint types:
 - metallic paints
 - pearl paints
 - multi-layer paints
 - solid clear over base (COB) paints.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to colour matching multi-layer and clear over base two-pack paints on vehicles and components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using technical data sheets (TDS) and safety data sheets (SDS) for paint materials
 - handling and storing paint materials
 - using tools and equipment
 - using approved drying area
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) paint colour codes and formulas

- types and application methods for automotive paint, including correct use of positive air feed masks
- types and use of paint colour matching equipment, including:
 - paint mixing systems
 - spray gun set-up, use and maintenance
 - paint drying equipment and methods
- colour matching methods and techniques for multi-layer and clear over base paints, including:
 - mixing system set-up and operation
 - colour test cards
 - visual colour matching tests
 - wet to wet matching
 - edge to edge matching
 - hard line matching
 - dabbing
 - paint mixing techniques
- procedures for protecting vehicle and components when colour matching
- procedures for final inspection of colour matched multi-layer and clear over base two-pack paint.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the colour matching of multi-layer and clear over base paints they have undertaken with vehicles and components, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- OEM paint codes and formulas

- TDS and SDS for paint materials
- PPE required to colour match multi-layer and clear over base two-pack paints
- paint and materials to colour match multi-layer and clear over base colours
- colour test cards
- five different vehicle panels requiring painting and colour matching
- tools, equipment and materials appropriate for colour matching multi-layer and clear over base two-pack paints on vehicles and components.
