1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for heavy commercial vehicle steering or suspension systems are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Steering or suspension system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Make recommendations	<p>4.1 Options for responding to the objective are determined from further research of technical support information</p> <p>4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications</p> <p>4.3 Report is prepared specifying analysis and evaluation process, and detailing and justifying rectification method or variation to the rectification method</p>
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to heavy commercial vehicle steering and suspension systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Skills	Description
Technology skills to:	<ul style="list-style-type: none"> use specialised heavy commercial vehicle steering and suspension system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with: <ul style="list-style-type: none"> stored energy in springs, air springs, torsion bars and air storage high pressure and high temperature steering system fluids environmental requirements, including procedures for trapping, storing and disposing of hydraulic fluid released from steering and suspension systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none"> diagnostic process, sequence, tests and testing equipment.

Assessment Requirements for AURHTD005 Analyse and evaluate faults in heavy commercial vehicle steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - steering system of a heavy commercial vehicle
 - suspension system of a different heavy commercial vehicle
 - steering or suspension system of a third heavy commercial vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in heavy commercial vehicle steering and suspension systems, including procedures for working with:
 - stored energy in springs, air springs, torsion bars and air storage
 - high pressure and high temperature steering system fluids
- environmental requirements, including procedures for trapping, storing and disposing of hydraulic fluid released from steering and suspension systems
- principles and processes involved in planning and implementing analysis and evaluation of steering and suspension system faults
- design and planning of diagnostic procedures of heavy commercial vehicle steering and suspension system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - pneumatic faults

- electrical faults
- procedures for analysing and evaluating heavy commercial vehicle steering and suspension system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of the following systems:
 - steering system, including:
 - steering system theory, including steering angles
 - mechanical steering system components
 - power assisted steering system
 - suspension system, including:
 - spring suspension
 - air suspension
 - influences of trailer operations on the heavy commercial vehicle:
 - steering performance
 - suspension performance
- associated vehicle systems and their impact on steering and suspension system operation, including trailers and loads
- testing procedures for heavy commercial vehicle steering and suspension systems, including:
 - steering component wear
 - power assisted steering pressures and operation
 - suspension component wear
 - wheel and chassis alignment
 - axle parallelism
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in steering and suspension systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to heavy commercial vehicle steering and suspension systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle steering and suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer heavy commercial vehicle steering and suspension system specifications
- three different heavy commercial vehicles with steering and suspension system faults
- diagnostic equipment for heavy commercial vehicle steering and suspension systems
- tools, equipment and materials appropriate for analysing and evaluating heavy commercial vehicle steering and suspension systems.

AURHTD006 Diagnose complex faults in heavy commercial vehicle steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in heavy commercial vehicle steering and suspension systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The steering and suspension systems include those of heavy commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in heavy commercial vehicle steering or suspension system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to perform diagnosis	2.1 Manufacturer specifications and other technical information for steering or suspension system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking heavy commercial vehicle steering and suspension system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure steering and suspension system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and vernier calipers use specialised diagnostic equipment, such as pressure gauges and scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for AURHTD006 Diagnose complex faults in heavy commercial vehicle steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the:
 - steering system of a heavy commercial vehicle
 - suspension system of a different heavy commercial vehicle
 - steering or suspension system of a third heavy commercial vehicle
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in heavy commercial vehicle steering and suspension systems, including procedures for working with:
 - stored energy in springs, air springs, air storage and torsion bars
 - high pressure and high temperature steering system fluids
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from steering and suspension systems
- types of complex faults relating to heavy commercial vehicle steering and suspension systems, including:

- intermittent
- multi-system
- introduced as a result of system repair
- indirect, caused by the influence of external systems
- types, function and operation of heavy commercial vehicle steering and suspension systems, including:
 - manual steering systems
 - power assisted steering systems, including:
 - power steering pumps
 - power steering boxes
 - rack and pinion steering
 - electronic and load sensing steering systems
 - leaf spring suspension
 - equaliser beam-leaf spring and solid rubber spring suspension
 - rubber block and torsion bar suspension
 - air spring suspension, including:
 - pneumatic
 - combination pneumatic and leaf spring
 - axle alignment
- testing procedures for heavy commercial vehicle steering and suspension systems, including procedures for:
 - vehicle dynamic and static testing, including hydraulic tests of power assisted steering systems
 - component inspection
 - abnormal noise analysis
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in heavy commercial vehicle steering and suspension systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle steering and suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer heavy commercial vehicle steering and suspension specifications
- three different heavy commercial vehicles with complex faults in their steering and suspension systems
- heavy commercial vehicle steering and suspension system diagnostic equipment, including:
 - pressure gauge
 - scan tool
- heavy commercial vehicle steering and suspension system specifications
- tools, equipment and materials appropriate for diagnosing complex faults in heavy commercial vehicle steering and suspension systems.

AURHTE001 Remove and install heavy vehicle engine assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and install engine assemblies fitted to heavy vehicles. It involves preparing for the task, removing and installing the engine assembly, performing post-installation testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The heavy vehicle engines include those of agricultural machinery, heavy commercial vehicles, marine vessels or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove heavy vehicle engine assembly	1.1 Job requirements are determined from workplace instructions 1.2 Engine removal and installation procedures and information are sourced and interpreted 1.3 Engine removal and installation options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment are selected and checked for serviceability
2. Remove engine assembly	2.1 Engine assembly is removed according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> , and without causing damage to components or systems 2.2 Engine assembly, components and systems are inspected and faults are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Install engine assembly	3.1 Installation options are analysed and those most appropriate to the circumstances are selected 3.2 Engine assembly is installed according to manufacturer specifications and workplace procedures, and without causing damage to components or systems 3.3 <i>Post-installation checks, adjustments and tests</i> are carried out according to manufacturer specifications and workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURHTE001 Remove and install heavy vehicle engine assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and install two heavy vehicle engines, in which the work must involve:
 - removing and refitting ancillary components and systems
 - adjusting oil and fluid levels
 - post-installation adjustments
 - post-installation testing.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removal and installation of heavy vehicle engines, including:
 - isolating and stabilising vehicle or machinery
 - using vehicle or machinery lifting devices and supporting equipment'
 - working with compression ignition engines
- environmental requirements, including procedures for trapping, storing and disposing of oils, fluids, coolants and gases released during removal and installation of engine assemblies
- methods of disconnecting and reconnecting related systems, including:
 - air conditioning system
 - cooling system
 - electrical systems
 - exhaust system
 - fuel system

- power steering system
- hydraulic system
- transmission systems, including:
 - automatic transmission
 - manual transmission
- removal procedures for heavy vehicle engine assemblies, including:
 - correct use of engine lifting devices and supporting equipment
 - item tagging procedures
 - methods for correctly disposing of hazardous substances
- installation procedures for heavy vehicle engine assemblies
- post-installation testing and adjustment procedures for heavy vehicle engine assemblies, including:
 - engine pre-start procedures
 - operational testing and run-in procedures
 - engine adjustments and cylinder head bolt retensioning as required
 - throttle adjustments
 - coolant adjustments
 - ancillary engine systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle engine assemblies that they have removed and installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications

- two different heavy vehicles requiring removal and installation of engine assemblies
- tools, equipment and materials appropriate for removing and replacing heavy vehicle engines, including engine lifting devices and supporting equipment.

Assessment Requirements for AURHTE002 Diagnose and repair heavy vehicle compression ignition engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different heavy vehicle compression ignition engines, including diagnosing and repairing a fault in:
 - an engine cylinder head, which must include removing the cylinder head from the engine
 - an engine bottom end, which must include removing the crankshaft, pistons and connecting rods from the engine
- dismantle and reassemble one of the above compression ignition engines, ensuring that engine is running at the end of the repair.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy vehicle compression ignition engines, including procedures for:
 - isolating and stabilising heavy vehicles or machines
 - lifting and supporting heavy vehicle compression ignition engines
 - working with compression ignition engines
- environmental requirements, including procedures for trapping, storing and disposing of oil and fluid released from compression ignition engines
- operating principles of heavy vehicle compression ignition engines and associated components, including:
 - combustion, including:

- combustion cycle
- swept volume and engine volume
- compression ratio
- valve timing
- engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency
- torque and horsepower, including brake horsepower
- application, purpose and operation of heavy vehicle compression ignition engines and components, including:
 - lubrication system, cylinder blocks, cylinder liners, pistons, cylinder heads, combustion chambers, inlet and exhaust manifolds, connecting rods, crankshafts, pistons, piston rings, gudgeon pins, camshafts, timing gears, vibration dampers and flywheels
- diagnostic testing procedures for heavy vehicle compression ignition engines, including:
 - engine compression tests
 - cylinder leakage tests
 - oil pressure tests
 - source of fluid leak diagnosis
 - exhaust smoke diagnosis
 - abnormal engine noise diagnosis
- dismantling, inspection and reassembly procedures for heavy vehicle compression ignition engines, including procedures for:
 - measuring clearances and tolerances, including:
 - crankshaft and camshaft bearings and journals
 - main bearing and connecting rod tunnels
 - cylinder bores and pistons
 - liner depths and protrusions
 - cylinder heads
 - inspecting components
- repair procedures for heavy vehicle compression ignition engines, including procedures for removing and refitting the:
 - cylinder head
 - piston and connecting rod
 - crankshaft
 - cylinder liner
- post-repair testing procedures for heavy vehicle compression ignition engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle compression ignition engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- two different heavy vehicle compression ignition engines with faults
- diagnostic equipment for heavy vehicle compression ignition engines
- tools, equipment and materials appropriate for repairing and adjusting heavy vehicle compression ignition engines.

AURHTE003 Diagnose complex faults in heavy vehicle diesel engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in heavy vehicle diesel engines and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The diesel engines include those of agricultural machinery, heavy commercial vehicles, marine vessels or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in heavy vehicle diesel engine is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to perform diagnosis	2.1 Manufacturer specifications and other technical information for diesel engine are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently from different sources apply diagnostic skills to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking heavy vehicle diesel engine specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure diesel engine components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and vernier calipers use specialised diagnostic equipment, such as: <ul style="list-style-type: none"> compression testers cylinder leakage testers oil pressure gauges scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental</i>	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety
--	---

requirements must include:	(OHS) requirements, including procedures for working with hot engine components and rotating engine components <ul style="list-style-type: none">• environmental requirements, including procedures for trapping, storing and disposing of fluids released from diesel engines.

Assessment Requirements for AURHTE003 Diagnose complex faults in heavy vehicle diesel engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose complex faults in three different heavy vehicle diesel engines
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in heavy vehicle diesel engines, including procedures for working with hot engine components and rotating engine components
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from diesel engines
- types of complex faults relating to heavy vehicle diesel engines, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- types, function and operation of heavy vehicle diesel engines, including:
 - intake, exhaust, lubrication, cooling and engine mounting systems and components
 - turbochargers

- valve timing
- testing procedures for heavy vehicle diesel engines, including:
 - wet and dry compression tests
 - cylinder leakage tests
 - oil pressure tests
 - sources of fluid leaks
 - exhaust smoke diagnosis
 - abnormal noise analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in heavy vehicle diesel engines
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle diesel engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- workplace instructions
- manufacturer heavy vehicle diesel engine specifications
- three different heavy vehicle diesel engines with complex faults
- heavy vehicle diesel engine diagnostic equipment, including:
 - compression tester
 - cylinder leakage tester
 - oil pressure gauge
 - scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in heavy vehicle diesel engines.

AURHTE004 Analyse and evaluate faults in heavy commercial vehicle engine and fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in heavy commercial vehicle engine and fuel systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The engine and fuel systems include those of heavy commercial vehicles. This unit does not apply to agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Engines

Assessment Requirements for AURHTE004 Analyse and evaluate faults in heavy commercial vehicle engine and fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - engine system of a heavy commercial vehicle
 - fuel system of a different heavy commercial vehicle
 - engine or fuel system of a third heavy commercial vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in heavy commercial vehicle engine and fuel systems, including procedures for working with high fuel pressures
- environmental requirements, including procedures for containing and handling fluids released from engine and fuel systems
- principles and processes involved in planning and implementing analysis and evaluation of engine and fuel system faults
- design and planning of diagnostic procedures of heavy commercial vehicle engine and fuel system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults
- procedures for analysing and evaluating heavy commercial vehicle engine and fuel system faults, including:
 - system failure analysis

- component failure analysis
- types, functions, operation and limitations of the following systems:
 - engine and components
 - fuel system and components
- impact of other associated vehicle systems on engine and fuel system operation, including:
 - engine electrical system and components
 - intake system and components
 - exhaust system and components
 - lubrication system and components
 - cooling system and components
- testing procedures for heavy commercial vehicle engine and fuel systems, including:
 - engine wear analysis
 - engine performance
 - exhaust gas analysis
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in engine and fuel systems
- procedures for documenting and reporting the system analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to heavy commercial vehicle engine and fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle engine and fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

- manufacturer heavy commercial vehicle engine and fuel system specifications
- three different heavy commercial vehicles with engine or fuel system faults
- diagnostic equipment for heavy commercial vehicle engine and fuel systems
- tools, equipment and materials appropriate for analysing and evaluating heavy commercial vehicle engine and fuel systems.

AURHTF001 Inspect heavy commercial vehicle fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect heavy commercial vehicle fuel systems and components according to manufacturer specifications. It involves preparing for the task, inspecting the system, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Fuel Systems

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect fuel system and components	1.1 Task instruction is interpreted and vehicle to be worked on is identified 1.2 Inspection information is sourced and interpreted 1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect fuel system and components	2.1 Fuel system and components are inspected according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

AURHTF002 Diagnose and repair heavy vehicle diesel fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the diesel fuel injection systems of heavy vehicles and machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The diesel fuel injection systems include those in agricultural machinery, heavy commercial vehicles, marine vessels or mobile plant machinery. The unit does not apply to electronic compression ignition engine management systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Assessment Requirements for AURHTF002 Diagnose and repair heavy vehicle diesel fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different heavy vehicle diesel fuel injection systems, completing the following with each system:
 - testing the low pressure fuel supply
 - removing and refitting a low pressure fuel pump
 - removing, refitting and timing a diesel high pressure pump
 - removing, refitting and testing injectors
 - bleeding a diesel fuel injection system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing vehicle diesel fuel injection systems, including procedures for:
 - working with:
 - high fuel pressures
 - stored fuel pressures
 - high voltage diesel fuel injectors
 - engine start-up and shut-down
- environmental requirements, including procedures for trapping, storing and disposing of diesel fuel released from injection systems
- operating principles of diesel fuel injection systems and associated components, including:
 - phases of combustion

- composition of diesel fuel
- application, purpose and operation of diesel fuel injection systems and components, including:
 - low pressure fuel supply systems, including:
 - fuel pumps
 - filters and separators
 - high pressure diesel fuel injection systems, including:
 - distributor type injection pumps
 - in-line injection pumps
 - electronic unit injection (EUI)
 - hydraulic electronic unit injection (HEUI)
 - high pressure injection (HPI)
 - injectors
- diagnostic testing procedures for diesel fuel injection systems, including:
 - assessing exhaust smoke
 - testing low pressure fuel systems
 - testing injector opening pressure, back leakage, nozzle leakage and spray pattern
 - assessing air induction systems
 - measuring individual cylinder exhaust temperature to determine underperforming cylinders
- repair procedures for diesel fuel injection systems, including procedures for:
 - dismantling, cleaning, adjusting and reassembling conventional injectors
 - removing, installing and timing high pressure injection pumps
 - adjusting and tuning mechanical unit injection systems
 - bleeding fuel systems
- post-repair testing procedures for diesel fuel injection systems, including procedures for:
 - checking fuel system leakage
 - assessing engine performance.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle diesel fuel injection systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer heavy vehicle diesel fuel injection system specifications
- two different heavy vehicles with faults in their diesel fuel injection systems
- diagnostic equipment for diesel fuel injection systems
- tools, equipment and materials appropriate for repairing and adjusting heavy vehicle diesel fuel injection systems.

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect heavy commercial vehicle wheels and tyres according to manufacturer specifications. It involves preparing for the task, inspecting the wheels and tyres, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect heavy commercial vehicle wheels and tyres	1.1 Task instruction is interpreted and wheels and tyres to be worked on are identified 1.2 Inspection information is sourced and interpreted 1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect wheel and tyre assemblies	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle or wheels and tyres are presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer and workshop literature when seeking inspection procedures and specifications relating to wheels and tyres.

Skills	Description
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> measure tread depth for comparison to manufacturer specifications measure tyre inflation pressures.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with: <ul style="list-style-type: none"> high air pressure tyres and split and multi-piece wheel rims.

Assessment Requirements for AURHTJ001 Inspect heavy commercial vehicle wheels and tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect two front and two rear wheels and tyres of a heavy commercial vehicle, including:
 - wheels
 - wheel attachments
 - tyre condition
 - inflation fittings.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) occupational health and safety (OHS) procedures, equipment, material and personal safety requirements relating to inspecting heavy commercial vehicle wheels and tyres, including procedures for working with:
 - high air pressure
 - tyres and split and multi-piece wheel rims
- identification and function of wheels, rims and tyres, including:
 - types of rims and wheels
 - tyre construction
 - tyre coding
 - tyre inflation
 - wheel and rim attachments
- inspection procedures for heavy commercial vehicle wheels and tyres, including:
 - tyre inflation

- tyre tread depth
- flat spots
- cuts and damage
- sidewall condition
- abnormal tyre wear patterns
- wheel and rim condition
- wheel and rim attachments.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle wheels and tyres that they have inspected e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer wheel and tyre specifications
- heavy commercial vehicle wheels and tyres as specified in the performance evidence n
- tools, equipment and materials appropriate for inspecting heavy commercial vehicle wheels and tyres.

AURHTJ002 Select heavy vehicle tyres, wheels and rims for specific applications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to select heavy vehicle tyres, wheels and rims to suit specific applications. It involves identifying and confirming work requirements; preparing for the work; selecting tyres, wheels and rims; and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The tyres, wheels and rims include those of agricultural machinery, forklifts, heavy commercial vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to select tyres, wheels and rims for specific applications	1.1 Job requirements are determined from workplace instructions 1.2 <i>Tyre, wheel and demountable rim</i> information is sourced and interpreted 1.3 Options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed
2. Select tyres, wheels and rims for specific applications	2.1 Tyre, wheel and rim options are analysed to identify technical compliance and economic benefits 2.2 Tyres, wheels and rims are selected according to manufacturer specifications, workplace procedures, relevant Australian Design Rules, and customer requirements
3. Complete work processes	3.1 Selection is provided to appropriate personnel or customer as required and according to workplace procedures 3.2 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer specifications and workshop literature when seeking tyre, wheel and rim specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, making recommendations regarding selected tyres, wheels and rims.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information when selecting tyres, wheels and rims understand both metric and imperial units of measurement.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Tyre, wheel and demountable rim</i> must include:</p>	<ul style="list-style-type: none"> • tubeless and tubed tyres • bias ply and radial ply tyres • demountable rims • disc wheels • tyre tread designs.

Assessment Requirements for AURHTJ002 Select heavy vehicle tyres, wheels and rims for specific applications

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- select the tyres, wheels and rims for four different heavy vehicles to suit specific customer requirements, which must involve accessing and interpreting information in manufacturer specifications relating to the selection.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- Australian Design Rules relating to heavy vehicle tyres and rims
- heavy vehicle tyre fitment guide
- heavy vehicle tyre, wheel and demountable rim assembly terminology and codes
- heavy vehicle tread patterns, and tyre, wheel and rim assembly types
- specific tyre applications for varying terrain, soils and weather conditions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle tyres, wheels and rims that they have selected, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- vehicle manufacturer tyre, wheel and rim specifications and tyre, wheel and rim fitment guide
- Australian Design Rules relating to heavy vehicle tyres, wheels and rims
- four different heavy vehicles for the selection of tyres, wheels and rims
- equipment and material appropriate for selecting heavy vehicle tyres, wheels and rims for specific applications.

AURHTJ003 Remove, inspect and refit heavy vehicle wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove, inspect and refit the wheel and tyre assemblies of heavy vehicles. It involves identifying and confirming work requirements; preparing for the work; removing, inspecting and refitting the wheel and tyre assembly; and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The wheel and tyre assemblies include those of agricultural machinery, forklifts, heavy commercial vehicles or mobile plant machinery. This unit does not apply to off-the-road tyres of mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove wheel and tyre assembly	1.1 Job requirements are determined from workplace instructions 1.2 Removal, inspection and refitting information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Remove and inspect wheel and tyre assembly	2.1 <i>Wheel and tyre assembly</i> is removed according to manufacturer specifications, workplace procedures and <i>safety requirements</i> , and without causing damage to components or systems 2.2 Wheel and tyre assembly, mounting points and attachment devices are inspected for condition, damage and wear 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs, replacements or adjustments
3. Refit wheel and tyre assembly	3.1 Refitting options are analysed and those most appropriate to the circumstances are selected 3.2 Wheel and tyre assembly is fitted and adjusted according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.3 Tightening sequence and torque settings are completed according to manufacturer specifications and workplace procedures 3.4 Wheel and tyre assembly is checked for correct assembly, run-out and alignment according to manufacturer specifications and workplace procedures
4. Complete work processes	4.1 <i>Final inspection</i> is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking wheel and tyre specifications, including tightening procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, making repair recommendations, and recording parts and material used.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in: <ul style="list-style-type: none"> manufacturer specifications, including wheel nut tension settings demountable rim assembly documentation tyres disc wheels tyre inflation gauges understand numerical divisions in metric and imperial units of measurement.
Technology skills to:	<ul style="list-style-type: none"> operate wheel and tyre assembly removal, inspection, refitting and adjustment tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Wheel and tyre assembly</i> must include:	<ul style="list-style-type: none"> tyre and demountable rim assembly tyre and disc wheel.

Assessment Requirements for AURHTJ003 Remove, inspect and refit heavy vehicle wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, inspect, refit and adjust the wheel and tyre assemblies on the steer and drive axle dual wheels of a heavy vehicle
- remove, inspect, refit and adjust the demountable rim and tyre assemblies on the steer and drive axle dual wheels of a second heavy vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to heavy vehicle wheel and tyre assemblies, including procedures for:
 - working with wheel and tyre assemblies and air inflation pressures
 - working with two piece split wheels, split and multi-piece wheels and rims
 - manually handling wheel and tyre assemblies
 - lifting and supporting heavy vehicles
- types and applications of wheel assemblies, including:
 - cast spoke wheels
 - disc wheels, including:
 - stud piloted wheels
 - hub piloted wheels
 - studs and nuts for disc wheels
 - two piece split wheels
 - demountable rims, including:
 - single piece tyre-to-rim assemblies

- multi-piece tyre-to-rim assemblies
- spacer band
- rim clamps, studs and nuts for demountable rims
- procedures for removing, inspecting and refitting heavy vehicle wheel and tyre assemblies, including:
 - wheel nut tensioning procedures
 - manufacturer wheel and tyre assembly specifications appropriate to the assemblies specified in the performance evidence
- post-fitting procedures and checks of heavy vehicle wheel and tyre assemblies, including wheel and tyre assembly run-out.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle wheel and tyre assemblies that they have worked on e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer wheel and tyre assembly specifications
- two different heavy vehicles and heavy vehicle wheel and tyre assemblies, including:
 - disc wheels and tyres
 - demountable rims, tyres and cast spoke wheels
- tools, equipment and materials appropriate for removing, inspecting and refitting heavy vehicle wheel and tyre assemblies.

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, inspect, repair and refit agricultural tyres and tubes, including:
 - two tyres and tubes fitted to split or multi-piece wheels
 - two tyres and tubes fitted to drop centre wheels.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) relating to agricultural tyres and tubes, including procedures for:
 - deflating and inflating tyres on agricultural equipment
 - raising and supporting machinery on unstable surfaces
 - manual handling when lifting wheel assemblies
 - removing, repairing and refitting tyres and tubes
- environmental requirements, including procedures for trapping and disposing of tyre material produced during repair procedures
- procedures for removing, inspecting, repairing and refitting tyres and tubes, including:
 - rim or hub mounted multi-piece rims
 - one piece wheels
- types and applications of tyres, tubes, wheels and rims, including:
 - radial and bias ply tyres
 - tubed and tubeless tyres
 - rim or hub mounted multi-piece wheels

- one piece wheels
- types, application and operation of tyre changing equipment and tyre and tube repair equipment
- post-fitting procedures and checks of agricultural tyres and tubes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

AURHTJ005 Identify and apply heavy vehicle pneumatic wheeled traction performance enhancement systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify and apply pneumatic wheeled traction performance enhancement systems in heavy vehicles. It involves identifying and confirming work requirements, preparing for the work, identifying and applying ballasting, chains, weights, inflation levels and tyre tread designs, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The traction systems include those of agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify traction performance enhancement systems	1.1 Job requirements are determined from workplace instructions 1.2 Wheeled traction system information is sourced and interpreted 1.3 Options are analysed and those most appropriate to the circumstances are selected 1.4 Technical requirements for traction performance enhancement are identified and support equipment is identified and prepared 1.5 Hazards associated with the work are identified and risks are managed 1.6 Tools, materials and required lifting equipment are selected and checked for serviceability
2. Apply a traction performance enhancement system	2.1 Wheeled traction performance enhancement is applied according to manufacturer specifications, workplace procedures and safety requirements 2.2 Wheel adjustments made during the traction enhancement comply with manufacturer specifications
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use, including protective guards, safety features and cowlings 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer specifications and workshop literature relating to heavy vehicle pneumatic wheeled traction performance enhancement systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, making recommendations, and recording parts and material used.
Numeracy skills to:	<ul style="list-style-type: none"> measure traction performance enhancement components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications interpret pressure gauge scales.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> conduct performance testing of components, systems and equipment use measuring equipment, including scales, pressure gauges and tape measuring devices.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> manually handling heavy vehicle traction performance enhancement systems inflating tyres safely tagging out and isolating machines wheel chocking.

Assessment Requirements for AURHTJ005 Identify and apply heavy vehicle pneumatic wheeled traction performance enhancement systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- identify and apply heavy vehicle pneumatic wheeled traction performance enhancement systems on at least two different heavy vehicles or machinery, in which the work must involve:
 - identifying and applying traction performance enhancement systems that suit the load and weight distribution, and soil and terrain conditions
 - complying with manufacturer specifications and workplace procedures in the selection and application of the systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to traction performance enhancement systems, including procedures for:
 - manually handling the systems
 - inflating tyres safely
 - tagging out and isolating machines
 - wheel chocking
- traction performance enhancement systems appropriate to the following operating conditions:
 - soil and terrain condition
 - load and weight distribution

- application, purpose and operation of traction performance enhancement systems, including:
 - ballasting
 - chains, including chain tensioning equipment
 - weights
 - inflation
 - tread pattern variations
- post-fitting testing procedures for wheeled traction performance enhancement systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle or machinery pneumatic wheeled traction performance enhancement systems that they have applied, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer wheeled traction performance enhancement system specifications
- two different heavy vehicles or machinery for applying wheeled traction performance enhancement systems
- tools, equipment and materials appropriate for applying wheeled traction performance enhancement systems.

AURHTJ006 Remove, inspect, repair and refit heavy vehicle tyres and tubes

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and refit heavy vehicle tyres and tubes from wheels and rims. It involves identifying and confirming work requirements, preparing for the work; inspecting, repairing and refitting the heavy vehicle tyres and tubes, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The tyres and tubes include those of agricultural machinery, forklifts, heavy commercial vehicles or mobile plant machinery. This unit does not apply to off-the-road (OTR) tyres of mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove, inspect, repair and refit heavy vehicle tyres and tubes	1.1 Job requirements are determined from workplace instructions 1.2 Tyre and tube removal, inspection, repair and refitting information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Remove and inspect tyres, tubes, wheels and rims	2.1 Tyres and tubes are removed from wheels or rims according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Tyres, tubes, wheels or rims are inspected according to manufacturer specifications and workplace procedures 2.3 Inspection findings and recommendations for necessary repairs are reported according to workplace procedures
3. Repair and refit tyres and tubes	3.1 Repair options are analysed and those most appropriate to the circumstances are selected 3.2 Tyres and tubes are repaired according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Tyre is mounted to wheel or rim according to manufacturer specifications and workplace procedures, and without causing damage to components or systems 3.4 Assembled wheel and tyre are checked for serviceability and correct assembly, and are inflated according to manufacturer specifications and workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and wheel assembly is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information in manufacturer specifications and workshop literature when seeking tyre and tube repair procedures and specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, making repair recommendations, and recording parts and material used.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information when repairing tyres and tubes understand both metric and imperial units of measurement.
Technology skills to:	<ul style="list-style-type: none"> operate tyre changing tools and equipment operate tyre and tube repair equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> deflating and inflating heavy vehicle tyres manual handling when lifting wheel assembly removing, repairing and refitting tyres and tubes environmental requirements, including procedures for trapping and disposing of tyre material produced during repair procedures.

Assessment Requirements for AURHTJ006 Remove, inspect, repair and refit heavy vehicle tyres and tubes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, inspect, repair and refit heavy vehicle tyres to both split lock ring and one piece wheels, including repairs to:
 - two bias ply tyres
 - two tubes
 - two radial ply tyres.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to heavy vehicle tyres and tubes, including procedures for:
 - deflating and inflating tyres
 - manual handling when lifting wheel assembly
 - removing, repairing and refitting tyres and tubes
- environmental requirements, including procedures for trapping and disposing of tyre material produced during repair procedures
- procedures for removing, inspecting, repairing and refitting tyres and tubes, including:
 - split lock rings
 - rim or hub mounted multi-piece rims
 - one piece wheels
 - two piece split wheels
- types and applications of tyres, tubes, wheels and rims, including:
 - radial and bias ply tyres

- tubed and tubeless tyres
- rim or hub mounted multi-piece wheels
- one piece wheels
- two piece split wheels
- types, application and operation of tyre changing equipment and tyre and tube repair equipment
- post-fitting procedures and checks of heavy vehicle tyres and tubes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle tyres and tubes that they have worked on e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer tyre and tube repair procedures and specifications
- heavy vehicle tyres, tubes, wheel and rim assemblies specified in the performance evidence
- tools, equipment and materials appropriate for removing, inspecting, repairing and refitting heavy vehicle tyres and tubes, including:
 - tyre and tube repair tools and equipment
 - tyre and tube repair consumables
 - tyre changing tools and equipment.

AURHTJ007 Remove, inspect, repair and refit industrial tyres and tubes

Modification History

Not applicable.

Application

This unit describes the performance outcomes required to remove and refit tyres and tubes from the wheels and rims of industrial equipment. It involves identifying and confirming work requirements, preparing for the work, inspecting, repairing and refitting the tyres and tubes, and completing workplace processes and documentation.

It applies to those who fit tyres to wheel assemblies and rim assemblies in the automotive industrial sector.

Licensing, legislative, regulatory, Australian standards or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to remove, repair and refit industrial tyres and tubes	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret tyre and tube remove, inspect, repair and refit information 1.3 Identify hazards and environmental issues, assess potential risks, and implement control measures in line with workplace policies 1.4 Select tools, equipment and materials and check for serviceability

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
2. Remove and inspect tyres, tubes and wheels	<p>2.1 Remove tyres and tubes from wheels according to manufacturer procedures, workplace procedures and safety and environmental requirements</p> <p>2.2 Inspect tyres, tubes, wheels or rims according to manufacturer specifications and workplace procedures</p> <p>2.3 Report inspection findings and make recommendations for necessary repairs according to workplace procedures</p>
3. Repair and refit tyres and tubes	<p>3.1 Analyse repair options and select those most appropriate to the circumstances according to workplace procedures</p> <p>3.2 Repair tyres and tubes according to manufacturer specifications, workplace procedures, and safety and environmental requirements</p> <p>3.3 Mount tyre to wheel or rim according to manufacturer specifications and workplace procedures without causing damage to components or systems</p> <p>3.4 Check assembled wheel for serviceability and correct assembly, and inflate according to manufacturer specifications and workplace procedures</p>
4. Complete work processes	<p>4.1 Complete final inspection to ensure work meets workplace expectations and assembled wheel is presented ready for use</p> <p>4.2 Clear work area and dispose of waste or recycle materials according to workplace procedures</p> <p>4.3 Examine and store tools and equipment according to workplace procedures</p> <p>4.4 Complete documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of information recognise and adapt to different workplace tyre management

Assessment Requirements for AURHTJ007 Remove, inspect, repair and refit industrial tyres and tubes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate removing, inspecting, repairing and refitting industrial equipment tyres and tubes that safely follows workplace procedures to meet required outcomes.

This includes removing, inspecting, repairing and refitting:

- two tyres and tubes fitted to split or multi-piece wheels
- two tyres and tubes fitted to drop centre wheels.

Whilst completing the above work, individuals must demonstrate they can:

- select appropriate tools, equipment and materials
- safely remove tyres and tubes from wheels according to manufacturer specifications and workplace procedures
- mount tyre to wheel or rim without causing damage to components or systems and check assembled wheel for serviceability and correct assembly
- conduct post-work inspection and complete work processes, including storage of equipment and documentation.
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for removing, inspecting, repairing and refitting industrial equipment tyres and tubes, including:

- how to locate and interpret manufacturers specifications, and workplace procedures for removing, inspecting, repairing and fitting industrial tyres and tubes
- work health and safety (WHS) relating to industrial tyres and tubes, including procedures for:
 - deflating and inflating tyres on industrial equipment

- raising and supporting machinery on unstable surfaces
- manual handling when lifting wheel assemblies
- removing, repairing and refitting tyres and tubes
- environmental requirements, including procedures for trapping and disposing of tyre material produced during repair procedures
- procedures for removing, inspecting, repairing and refitting tyres and tubes, including:
 - split or multi-piece rims
 - drop centre wheels
- post-fitting procedures and checks of industrial tyres and tubes

Key types and applications of tyres, tubes, wheels and rims, including:

- radial and bias ply tyres
- tubed and tubeless tyres
- rim or hub mounted multi-piece wheels
- one piece wheels

Key types, application and operation of tyre changing equipment and tyre and tube repair equipment including:

- workplace tyre management systems.
-

Assessment Conditions

The assessment must:

- include access to:
 - a workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - workplace instructions
 - manufacturer tyre and tube repair procedures and specifications
 - industrial tyres and tubes specified in the performance evidence
 - tools, equipment and materials appropriate for removing, inspecting, repairing and fitting industrial tyres and tubes, including:
 - tyre and tube repair tools and equipment
 - tyre and tube repair consumables
 - tyre changing tools and equipment.
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment

- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

AURHTL001 Inspect, diagnose and repair alternative fuel systems in heavy vehicle engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, diagnose and repair alternative fuel systems in heavy vehicle engines. It involves preparing for the task, inspecting the system and selecting the correct diagnostic procedure, carrying out diagnosis and repair work, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working on the alternative fuel systems of agricultural machinery, heavy commercial vehicles, marine vessels or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Alternative Fuels

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect alternative fuel system	1.1 Job requirements are determined from workplace instructions 1.2 Alternative fuel system information and procedures are sourced and interpreted 1.3 Options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment are selected and checked for serviceability
2. Inspect fuel system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Prepare to diagnose fuel system	3.1 System diagnostic procedures and information are sourced and interpreted 3.2 Diagnosis options are analysed and those most appropriate to the circumstances are selected 3.3 Diagnostic tools and equipment are selected and checked according to manufacturer specifications and workplace procedures
4. Diagnose fuel system and analyse results	4.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Diagnostic test results are compared with manufacturer specifications 4.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
5. Repair fuel system	5.1 Repair procedures and information are sourced and interpreted 5.2 Repair options are analysed and those most appropriate to the circumstances are selected 5.3 Repair tools, equipment and materials are selected and checked according to manufacturer specifications and workplace procedures

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	<p>5.4 System components are repaired, replaced and adjusted according to relevant manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems</p> <p>5.5 Post-repair testing is carried out according to workplace procedures</p>
6. Complete work processes	<p>6.1 Final inspection is made to ensure work is to workplace expectations and system is presented ready for use</p> <p>6.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>6.3 Tools and equipment are checked and stored according to workplace expectations</p> <p>6.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking alternative fuel system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions.
Numeracy skills to:	<ul style="list-style-type: none"> measure alternative fuel system components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.

Skills	Description
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment and diagnostic equipment, including exhaust gas analyser.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> working with alternative fuel systems selecting and using personal protective equipment (PPE) environmental requirements, including procedures for preventing fuel leakage from fuel systems.

Assessment Requirements for AURHTL001 Inspect, diagnose and repair alternative fuel systems in heavy vehicle engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, diagnose and repair alternative fuel systems in two different heavy vehicle engines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, diagnosing and repairing alternative fuel systems, including procedures for:
 - working with alternative fuel systems
 - selecting and using personal protective equipment (PPE)
- environmental requirements, including procedures for preventing fuel leakage from fuel systems
- operating principles of alternative fuel systems
- application, purpose and function of alternative fuel systems
- inspect and repair procedures for alternative fuel systems
- diagnostic testing procedures for alternative fuel systems
- post-repair testing procedures for alternative fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the alternative fuel systems that they have inspected and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer alternative fuel system specifications
- two different heavy vehicle engines with alternative fuel systems requiring repair
- diagnostic equipment for alternative fuel systems, including exhaust gas analyser
- repair tools, equipment and materials for alternative fuel systems in heavy vehicle engines.

AURHTQ001 Inspect heavy commercial vehicle driveline components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect heavy commercial vehicle driveline components according to manufacturer specifications. It involves preparing for the task, inspecting the components, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
----------	----------------------

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect driveline components	<p>1.1 Task instruction is interpreted and vehicle components to be worked on are identified</p> <p>1.2 Inspection information is sourced and interpreted</p> <p>1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor</p> <p>1.4 Tools, equipment and materials are selected and checked for serviceability</p>
2. Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect the driveline components of one heavy commercial vehicle, including:
 - universal joints and centre bearings
 - drive shafts and half shafts
 - yokes and flanges.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting heavy commercial vehicle driveline components, including procedures for preventing entanglement in rotating shafts
- identification and function of driveline components, including:
 - universal joints, constant velocity joints and centre bearings
 - drive shafts and half shafts
 - yokes and flanges
- inspection procedures for heavy commercial vehicle driveline components, including:
 - component wear or damage
 - lubricant leaks
 - drive shaft mounts and support brackets.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle driveline components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer driveline specifications
- one heavy commercial vehicle with driveline components
- tools, equipment and materials appropriate for inspecting heavy commercial vehicle driveline components.

AURHTQ002 Diagnose and repair heavy commercial vehicle final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the final drive assemblies of heavy commercial vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The final drive assemblies include those in heavy commercial vehicles. This unit does not apply to agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used,

	further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair heavy commercial vehicle final drive assembly	<p>1.1 Job requirements are determined from workplace instructions</p> <p>1.2 Diagnostic information is sourced and interpreted</p> <p>1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected</p> <p>1.4 Hazards associated with the work are identified and risks are managed</p> <p>1.5 Diagnostic tools and equipment are selected and checked for serviceability</p>
2. Diagnose final drive assembly	<p>2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures, and environmental and safety requirements</p> <p>2.2 Faults are identified from diagnostic test results and causes of faults are determined</p> <p>2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures</p>
3. Repair final drive assembly	<p>3.1 Repair information is sourced and interpreted</p> <p>3.2 Repair options are analysed and those most appropriate to the circumstances are selected</p> <p>3.3 Repair tools, equipment and materials are selected and checked according to manufacturer procedures</p> <p>3.3 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems</p> <p>3.4 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified</p>
4. Complete work processes	<p>4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or assembly is presented ready for use</p> <p>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>4.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking drive assembly specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure final drive components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as vernier calipers, micrometers, dial indicator gauges and spring gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> isolating and stabilising vehicles lifting and supporting final drive assemblies.
<i>Environmental requirements</i> must include:	<ul style="list-style-type: none"> procedures for trapping, storing and disposing of oil released from final drive assemblies.

Assessment Requirements for AURHTQ002 Diagnose and repair heavy commercial vehicle final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in one heavy commercial vehicle final drive assembly and:
 - undertake a complete dismantle and reassembly of a crown wheel and pinion final drive assembly
 - remove, refit or replace one final drive assembly
 - remove, refit or replace one rear axle wheel bearing assembly.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy commercial vehicle final drive assemblies, including procedures for:
 - isolating and stabilising vehicles
 - lifting and supporting final drive assemblies
- environmental requirements, including procedures for trapping, storing and disposing of oil released from final drive assemblies
- operating principles of heavy commercial vehicle final drive assemblies and associated components, including:
 - final drive gears, including:
 - gear types
 - gear ratios and torque reduction and multiplication
 - differential function

- application, purpose and operation of heavy commercial vehicle final drive assemblies and components, including:
 - single reduction
 - two-speed reduction
 - double reduction
 - tandem drive
 - power divider
 - differentials, including limited slip differentials
 - axle shafts and bearings
- diagnostic testing procedures for heavy commercial vehicle final drive assemblies, including:
 - road-testing procedures, including:
 - final drive assembly noise diagnosis
 - final drive assembly operation
 - pre-dismantling inspection procedures
- repair procedures for heavy commercial vehicle final drive assemblies, including procedures for:
 - dismantling assemblies
 - inspecting assemblies
 - reassembling and adjusting the following components:
 - pinion depth
 - pinion bearing preload
 - crown wheel and pinion backlash
 - side bearing preload
 - crown wheel and pinion tooth contact
- post-repair testing procedures for heavy commercial vehicle final drive assemblies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle final drive assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer final drive assembly specifications
- heavy commercial vehicle crown wheel and pinion final drive assembly with faults
- diagnostic equipment for heavy commercial vehicle final drive assemblies
- tools, equipment and materials appropriate for repairing and adjusting heavy commercial vehicle final drive assemblies.

AURHTQ003 Diagnose and repair heavy vehicle drive shafts

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in heavy vehicle drive shafts. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. Drive shafts include those in agricultural machinery, heavy commercial vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and	1.1 Job requirements are determined from workplace instructions

repair heavy vehicle drive shaft	<p>1.2 Diagnostic information is sourced and interpreted</p> <p>1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected</p> <p>1.4 Hazards associated with the work are identified and risks are managed</p> <p>1.5 Diagnostic tools and equipment are selected and checked for serviceability</p>
2. Diagnose drive shaft	<p>2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i></p> <p>2.2 Faults are identified from diagnostic test results and causes of faults are determined</p> <p>2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures</p>
3. Repair drive shaft	<p>3.1 Repair information is sourced and interpreted</p> <p>3.2 Repair options are analysed and those most appropriate to the circumstances are selected</p> <p>3.3 Repair tools, equipment and materials are selected and checked according to manufacturer procedures</p> <p>3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems</p> <p>3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified</p>
4. Complete work processes	<p>4.1 Final inspection is made to ensure work is to workplace expectations and drive shaft or vehicle is presented ready for use</p> <p>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>4.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking drive shaft specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure drive shaft components and use basic mathematical operations, including addition and subtraction, to calculate angles, distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment such as drive line angle gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> isolating and stabilising vehicles or machines working with rotating shafts.

Assessment Requirements for AURHTQ003 Diagnose and repair heavy vehicle drive shafts

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in one heavy vehicle drive shaft, including:
 - replacing one universal joint
 - completing two of the following further actions:
 - replacing centre support bearing assembly
 - measuring drive shaft angles and phasing
 - measuring run-out of drive shaft
 - balancing drive shaft
 - replacing slip spline.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy vehicle drive shafts, including procedures for:
 - isolating and stabilising vehicles or machines
 - working with rotating shafts
- operating principles of heavy vehicle drive shafts and associated components, including:
 - universal joint working angles
 - drive shaft phasing angles
 - velocity fluctuation of universal joints
- application, purpose and operation of heavy vehicle drive shafts and components, including:

- single and multi-piece shafts
- universal joints
- centre support assembly
- slip joints
- shaft alignment
- diagnostic testing procedures for heavy vehicle drive shafts, including:
 - drive shaft noise and vibration diagnosis
 - drive line geometry and phasing
 - drive shaft run-out
- repair procedures for heavy vehicle drive shafts, including procedures for:
 - dismantling drive shafts
 - inspecting drive shafts
 - reassembling drive shafts and aligning their components
- post-repair testing procedures for heavy vehicle drive shafts.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle drive shafts that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer drive shaft specifications
- heavy vehicle with faults in its drive shaft
- diagnostic equipment for heavy vehicle drive shafts
- tools, equipment and materials appropriate for repairing and adjusting heavy vehicle drive shafts.

AURHTR005 Diagnose and repair heavy commercial trailer electronically controlled roll stability systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the electronically controlled roll stability systems of trailers over 4.5 tonnes. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The electronically controlled roll stability systems are fitted to heavy commercial trailers.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used,

	further information is detailed in the range of conditions section.
1. Assessment Requirements for AURHTR005 Diagnose and repair heavy commercial trailer electronically controlled roll stability systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the electronically controlled roll stability systems of two different heavy commercial trailers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements including procedures for:
 - diagnosing and repairing heavy trailer electronically controlled roll stability systems
 - using specialised tools and equipment
- application, purpose and operating principles of heavy commercial trailer electronically controlled roll stability systems and components, including:
 - roll stability control module
 - wheel speed sensor
 - yawl sensor
 - load sensor
 - electrical wiring and connector
- diagnostic testing procedures for heavy commercial trailer electronically controlled roll stability systems, including:
 - accessing and interpreting diagnostic trouble codes
 - analysing system operation using electrical test equipment, scan tools and other industry-relevant test equipment

- visual, aural and functional assessments, including component damage and wear
- repair procedures for heavy commercial trailer electronically controlled roll stability systems and their components, including:
 - roll stability control module
 - wheel speed sensor
 - yawl sensor
 - load sensor
 - electrical wiring and connector
- post-repair testing procedures for heavy trailer electronically controlled roll stability systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the trailer electronically controlled roll stability systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer heavy trailer roll stability specifications
- two different heavy commercial trailers with faults in their electronically controlled roll stability systems
- diagnostic equipment for heavy trailer electronically controlled roll stability systems
- tools, equipment and materials appropriate for repairing and adjusting heavy trailer electronically controlled roll stability systems.

Assessment Requirements for AURHTX001 Diagnose and repair heavy vehicle manual transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- disassemble and reassemble one heavy vehicle manual transmission that has a minimum of 9 speeds.
- diagnose and repair a fault in three of the following components of a heavy vehicle manual transmission:
 - input shaft
 - gear shift mechanisms
 - gears and shafts
 - transmission bearings
 - auxiliary section and controls
 - gasket and seal leaks
- remove, refit or replace a heavy vehicle manual transmission.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy vehicle transmissions, including procedures for:
 - using transmission lifting and supporting equipment
 - manual handling heavy vehicle manual transmissions
- environmental requirements, including procedures for trapping, storing and disposing of clutch dust, brake fluid and oils released from manual transmissions

- operating principles of heavy vehicle manual transmissions and associated components, including:
 - gears, including:
 - gear types
 - gear ratios and torque reduction and multiplication
 - simple gear trains
 - compound gear trains
- application, purpose and operation of heavy vehicle manual transmissions and components, including:
 - power flows, including:
 - longitudinal manual transmissions
 - transfer cases
 - synchromesh operation
 - gearshift mechanisms, including:
 - mechanical
 - air
 - electrical/pneumatic
 - electronically automated manual transmissions
 - transfer cases
 - power take-off
- diagnostic testing procedures for heavy vehicle manual transmissions, including:
 - abnormal noise diagnosis
 - electronic diagnosis
 - shift diagnosis
- dismantling procedures for heavy vehicle manual transmissions, including:
 - measuring clearances and tolerances
 - inspecting components
- repair procedures for heavy vehicle manual transmissions, including:
 - gears, shafts and bearings
 - electronic control systems
 - gear shift mechanism
- post-repair testing procedures for heavy vehicle manual transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the trailer electronically controlled roll stability systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer manual transmission specifications
- one heavy vehicle with faults in its manual transmission that has a minimum of 9 speeds
- diagnostic equipment for heavy vehicle manual transmissions
- tools, equipment and materials appropriate for repairing and adjusting heavy vehicle manual transmissions.

AURHTX002 Inspect, test and replace heavy vehicle automatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, test and replace automatic or power shift transmissions and associated components. It involves preparing for the task, inspecting and testing the transmission, replacing the transmission, performing post-installation testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The automatic transmissions include those of agricultural machinery, heavy commercial vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and test transmission	1.1 Job requirements are determined from workplace instructions 1.2 Inspection and testing procedures and information are sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and test equipment and materials are selected and checked for serviceability
2. Inspect and test transmission and analyse results	2.1 Inspection and tests are carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Inspection and test results are compared with manufacturer specifications 2.3 Inspection and test findings are reported according to workplace procedures, including recommendations for necessary repairs, replacement or adjustments
3. Prepare to remove and replace transmission	3.1 Hazards associated with the work are identified and risks are managed 3.2 Removal and replacement procedures and information are sourced and interpreted 3.3 Tools, equipment and materials are selected and checked for serviceability
4. Remove and replace transmission	4.1 Transmission is removed and replaced according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Adjustments during removal and replacement are made according to manufacturer specifications and workplace procedures 4.3 Post-replacement testing is carried out according to workplace procedures
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking inspection, testing and replacement procedures and specifications relating to heavy vehicle automatic transmissions.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection and test findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report test findings and make recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> interpret test equipment readings and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, tolerances and deviations from manufacturer specifications calculate liquid volumes.
Planning and Organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use transmission test equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> using lifting and supporting equipment when working with transmissions

Assessment Requirements for AURHTX002 Inspect, test and replace heavy vehicle automatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, test and replace the automatic transmissions of two different heavy vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, testing and replacing heavy vehicle automatic transmissions, including procedures for:
 - using lifting and supporting equipment when working with transmissions
 - manually handling heavy vehicle transmissions
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions
- operating principles of heavy vehicle automatic transmissions, including:
 - fluid couplings
 - mechanical systems, including:
 - gear types
 - gear ratios and torque
 - simple and compound planetary gear trains
 - gear range and transfer case power flows
 - hydraulic systems and components
 - electronic systems, including:
 - electronic control units (ECU)

- electronic sensors
- solenoids
- inspection procedures for heavy vehicle automatic transmissions, including:
 - visual, aural and functional assessment, including:
 - fluid leakage
 - oil condition
 - speed and range selection
 - wear, damage, and corrosion
 - electrical circuit faults
- testing procedures for heavy vehicle automatic transmissions, including:
 - stall testing
 - pressure testing
 - scan tool testing
- replacement procedures for heavy vehicle automatic transmissions
- post-replacement testing procedures for heavy vehicle automatic transmissions, including operational testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the automatic transmissions of heavy vehicles or machinery that they have inspected, tested and replaced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer automatic transmission specifications
- two different heavy vehicles or machinery with automatic transmissions requiring testing and replacement
- test equipment for heavy vehicle automatic transmissions

- tools, equipment and materials appropriate for inspecting, testing and replacing heavy vehicle automatic transmissions.

AURHTX003 Diagnose and repair heavy vehicle automatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the automatic transmissions of heavy vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The automatic transmissions include those in agricultural machinery, heavy commercial vehicles or mobile plant machinery. The unit does not apply to electronic control drive management systems or power shift transmissions.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair heavy vehicle automatic transmission	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose automatic transmission	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures, and environmental and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair automatic transmission	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked according to manufacturer procedures 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or transmission is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.5 Workplace documentation is processed according to workplace

Assessment Requirements for AURHTX003 Diagnose and repair heavy vehicle automatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- disassemble and reassemble one heavy vehicle automatic transmission
- diagnose and repair a fault in two of the following components of a heavy vehicle automatic transmission:
 - torque converter
 - transmission oil pump
 - front pump seal
 - valve body
 - shift or pressure solenoid
 - clutch pack
 - one-way clutch
 - planetary gear set
 - internal bearings or thrust washers
 - gasket and seal leaks
 - governor
 - sensors
 - heat exchanger
- remove, refit or replace a heavy vehicle automatic transmission.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing automatic transmissions, including procedures for:
 - using transmission lifting and supporting equipment
 - isolating and stabilising vehicles
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from automatic transmissions
- operating principles of heavy vehicle automatic transmissions and associated components, including:
 - fluid couplings
 - mechanical systems, including:
 - gear types
 - gear ratios and torque
 - simple and compound planetary gear trains
 - gear range and transfer case power flows
 - hydraulic systems
 - electronic systems, including:
 - electronic control unit (ECU)
 - electronic sensors
 - solenoids
- application, purpose and operation of heavy vehicle automatic transmissions and components, including:
 - torque converters, including:
 - impeller, stator, one-way clutch and turbine operation
 - lock-up torque converters
 - automatic transmission mechanical components, including:
 - clutch packs, one-way clutches, simple and compound planetary gear sets, and transfer case
 - power flows, including:
 - longitudinal automatic transmissions
 - transfer case
 - power take-off
 - automatic transmission hydraulic components and hydraulic control components, including:
 - oil pumps
 - valve body and hydraulic valves
 - heat exchanger
 - automatic transmission electronic components, including:
 - ECU input sensors
 - ECU outputs
- diagnostic testing procedures for heavy vehicle automatic transmissions, including:
 - stall testing

- pressure testing
- scan tool testing
- repair procedures for heavy vehicle automatic transmissions, including for hydraulic, mechanical and electrical components
- dismantling procedures for heavy vehicle automatic transmissions, including:
 - measuring clearances and tolerances
 - inspecting components
- post-repair testing procedures for heavy vehicle automatic transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle automatic transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer automatic transmission specifications
- one heavy vehicle with faults in its automatic transmission
- diagnostic equipment for heavy vehicle automatic transmissions
- tools, equipment and materials appropriate for repairing and adjusting heavy vehicle automatic transmissions.

Assessment Requirements for AURHTX004 Diagnose and repair heavy vehicle clutch systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in one heavy vehicle clutch system, which must involve:
 - removing and refitting the heavy vehicle manual transmission
 - removing and replacing the clutch friction disc, clutch pressure plate assembly, and release bearing
- diagnose and repair a fault in one heavy vehicle clutch operating system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy vehicle clutch systems, including procedures for:
 - using transmission lifting and supporting equipment
 - controlling hazards associated with clutch dust and brake fluid
- environmental requirements, including procedures for trapping, storing and disposing of clutch dust and brake fluid released from clutch systems
- application, purpose and operation of heavy vehicle clutch systems and components, including:
 - single-disc clutch assemblies
 - multi-disc clutch assemblies
 - coil spring clutches
 - diaphragm spring clutches
 - clutch brakes

- flywheel
- clutch operating systems, including:
 - mechanical
 - hydraulic
 - pneumatic
 - electronic
- diagnostic testing procedures for heavy vehicle clutch systems, including:
 - inspecting and evaluating clutch assembly components
 - inspecting and evaluating clutch operating system
 - testing stationary and mobile clutch performance
- repair procedures for heavy vehicle clutch systems, including procedures for:
 - clutch operating systems
 - removing and refitting clutch assembly
 - inspecting and evaluating clutch components
 - adjusting clutches
- post-repair testing procedures for heavy vehicle clutch systems, including testing stationary or mobile performance.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle clutch systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

AURHTX005 Analyse and evaluate faults in heavy commercial vehicle transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in heavy commercial vehicle transmission and driveline systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The transmission and driveline systems include those of heavy commercial vehicles, and include automatic or manual transmissions. This unit does not apply to agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements	Performance Criteria
----------	----------------------

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	<p>1.1 Objective of the analysis and evaluation is determined from workplace instructions</p> <p>1.2 Specifications for heavy commercial vehicle transmission or driveline system are sourced and interpreted</p> <p>1.3 System faults, deficiencies or discrepancies are identified and confirmed</p> <p>1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i></p>
2. Prepare for analysis and evaluation	<p>2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation</p> <p>2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information</p> <p>2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures</p> <p>2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use</p> <p>2.5 Transmission or driveline system and components are prepared for the diagnostic process</p>
3. Carry out failure analysis	<p>3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures</p> <p>3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements</p> <p>3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes</p> <p>3.4 Analytical findings and results are assessed against evaluation criteria</p> <p>3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements</p>
4. Make recommendations	<p>4.1 Options for responding to the objective are determined from further research of technical support information</p> <p>4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications</p> <p>4.3 Report is prepared specifying analysis and evaluation process, and detailing and justifying rectification method or variation to the rectification method</p>
5. Complete work	5.1 Final inspection is made to ensure work is to workplace

processes	<p>expectations</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Assessment Requirements for AURHTX005 Analyse and evaluate faults in heavy commercial vehicle transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - transmission system of a heavy commercial vehicle
 - driveline system of a different heavy commercial vehicle
 - transmission or driveline system of a third heavy commercial vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in heavy commercial vehicle transmission and driveline systems, including procedures for:
 - lifting, supporting and manually handling heavy vehicle transmissions
 - working with rotating shafts
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmission and driveline systems
- principles and processes involved in planning and implementing analysis and evaluation of transmission and driveline system faults
- design and planning of diagnostic procedures of heavy commercial vehicle transmission and driveline system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - pneumatic faults

- electrical faults
- procedures for analysing and evaluating heavy commercial vehicle transmission and driveline system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of the following systems:
 - clutch
 - manual transmission
 - automated manual transmission (AMT)
 - automatic transmission
 - drive shafts
 - final drive assemblies
- testing procedures for heavy commercial vehicle transmission and driveline systems, including:
 - oil and pneumatic pressures
 - transmission performance
 - powertrain management
 - driveline angles
 - driveline vibrations
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in transmission and driveline systems
- requirements of Australian Design Rules (ADRs) relating to heavy commercial vehicle transmission and driveline systems
- procedures for documenting and reporting the analysis and evaluation process.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle transmission and driveline systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer heavy commercial vehicle transmission and driveline system specifications
- three different heavy commercial vehicles with transmission and driveline system faults
- diagnostic equipment for heavy commercial vehicle transmission and driveline systems
- tools, equipment and materials appropriate for analysing and evaluating heavy commercial vehicle and driveline systems.

AURHTX006 Diagnose complex faults in heavy commercial vehicle transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in heavy commercial vehicle transmission and driveline systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The transmission and driveline systems include those of heavy commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in heavy commercial vehicle transmission or driveline system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for transmission or driveline system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking heavy commercial vehicle transmission and driveline system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure transmission and driveline system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and vernier calipers use specialised diagnostic equipment, such as oil pressure gauges and scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for lifting, supporting and manual handling heavy commercial vehicle transmission and driveline systems
---	--

	<ul style="list-style-type: none">• environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmission and driveline systems.

Assessment Requirements for AURHTX006 Diagnose complex faults in heavy commercial vehicle transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the:
 - transmission system of a heavy commercial vehicle
 - driveline system of a different heavy commercial vehicle
 - transmission or driveline system of a third heavy commercial vehicle
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in heavy commercial vehicle transmission and driveline systems, including procedures for lifting, supporting and manual handling heavy commercial vehicle transmission and driveline systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmission and driveline systems
- types of complex faults relating to heavy commercial vehicle transmission and driveline systems, including:
 - intermittent

- multi-system
- introduced as a result of system repair
- indirect, caused by the influence of external systems
- types, function and operation of heavy commercial vehicle transmission and drivelines, including:
 - automatic transmissions
 - manual and automated manual transmissions
 - Hooke's-type joints
 - drive shafts
 - final drives
- testing procedures for heavy commercial vehicle transmission and driveline systems, including procedures for:
 - vehicle dynamic and static testing
 - abnormal noise analysis
 - transmission oil pressure tests
 - sources of fluid leaks
 - driveline angle measurement
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in heavy commercial vehicle transmission and driveline systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy commercial vehicle transmission and driveline systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer heavy commercial vehicle transmission and driveline system specifications
- three different heavy commercial vehicles with complex faults in their transmission and driveline systems
- transmission and driveline diagnostic equipment, including:
 - oil pressure gauge
 - scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in heavy commercial vehicle transmission and driveline systems.

AURHTY001 Inspect and service mechanical connections of heavy vehicles and trailers over 4.5 tonnes

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service mechanical connections fitted to both heavy vehicles and trailers over 4.5 tonnes. It involves preparing for the task, inspecting the mechanical connections, reporting the inspection findings, servicing and adjusting the connections, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The mechanical connections of heavy vehicles and trailers over 4.5 tonnes include those of agricultural machinery, heavy commercial vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Chassis and Frame

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service mechanical connection system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information relating to <i>mechanical connections of heavy vehicle and trailer</i> is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect mechanical connection system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service mechanical connection system	3.1 <i>Service</i> and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 <i>Final inspection</i> is made to ensure work is to workplace expectations and vehicle and trailer are presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to mechanical connections of heavy vehicles and trailers over 4.5 tonnes.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical operations, including addition and subtraction, to measure and compare components to manufacturer specifications and tolerances.

Assessment Requirements for AURHTY001 Inspect and service mechanical connections of heavy vehicles and trailers over 4.5 tonnes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the mechanical connections of two different heavy vehicles and their trailers, including five of the following:
 - fifth wheel assembly
 - king pins and upper couplers
 - pintle hook and drawbar
 - landing gear systems
 - electrical connections
 - pneumatic connections.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing mechanical connections of heavy vehicles and trailers, including procedures for:
 - lifting and supporting heavy vehicles and trailers
 - safely manoeuvring heavy vehicles and trailers
- environmental requirements, including procedures for trapping, storing and disposing of lubricants released from mechanical connections
- identification and function of mechanical connections of heavy vehicles and trailers over 4.5 tonnes, including:
 - fifth wheel assembly

- king pins and upper couplers
- pintle hook and drawbars
- landing gear systems
- electrical connections
- pneumatic connections
- types and applications of mechanical connection lubricants
- inspection procedures for mechanical connections of heavy vehicles and trailers over 4.5 tonnes
- service and adjustment procedures for mechanical connections of heavy vehicles and trailers over 4.5 tonnes
- post-service testing procedures for mechanical connections of heavy vehicles and trailers over 4.5 tonnes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicles and trailers over 4.5 tonnes that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mechanical connection specifications
- two different heavy vehicles and trailers over 4.5 tonnes with mechanical connections requiring servicing
- lubricating equipment for mechanical connections of heavy vehicles and trailers over 4.5 tonnes
- tools, equipment and materials appropriate for inspecting and servicing mechanical connections of heavy vehicles and trailers over 4.5 tonnes.

Assessment Requirements for AURHTY002 Diagnose and repair mechanical connections of heavy vehicles and trailers over 4.5 tonnes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following mechanical connections of a heavy vehicle and trailer:
 - fifth wheel assembly
 - king pins and upper couplers
 - pintle hook and drawbar
 - landing gear
- diagnose and repair a fault in both of the following:
 - electrical connections of a heavy vehicle and trailer
 - pneumatic connection of a heavy vehicle and trailer.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing mechanical connections of heavy vehicles and trailers, including procedures for:
 - lifting and supporting heavy vehicles and trailers
 - safely manoeuvring heavy vehicles and trailers
- environmental requirements, including procedures for safely handling and disposing of lubricants
- application, purpose and operation of mechanical connections of heavy vehicles and trailers, including:

- fifth wheel assemblies
- king pins and upper couplers
- pintle hook and drawbar
- landing gear
- electrical connections
- pneumatic connections
- types and applications of fifth wheel lubricants
- diagnostic testing procedures for mechanical connection of heavy vehicles and trailers, including:
 - checking for slack in the fifth wheel operation when connected to a trailer
 - inspecting top plate and brackets for cracks
 - inspecting the fifth wheel and mounting plate welds
 - checking fifth wheel operation using a lock tester
 - testing electrical connections
 - testing pneumatic connections
- repair and adjustment procedures for mechanical connection of heavy vehicles and trailers, including:
 - fifth wheel assembly
 - king pins and upper couplers
 - pintle hook and drawbar
 - landing gear
 - electrical connections
 - pneumatic connections
- post-repair testing procedures for mechanical connection of heavy vehicles and trailers.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

AURHTZ001 Diagnose and repair heavy vehicle emission control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the emission control systems of heavy vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The emission control systems include those in agricultural machinery, heavy commercial vehicles, marine vessels or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Heavy Vehicle

Unit Sector

Technical - Emission and Exhaust

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair heavy vehicle emission control system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose emission control system	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures, and environmental and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair emission control system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or system is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are cleaned and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

Assessment Requirements for AURHTZ001 Diagnose and repair heavy vehicle emission control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three of the following heavy vehicle emission control systems:
 - closed crankcase ventilation system
 - exhaust gas recirculation system
 - diesel engine particulate filter system
 - selective catalytic reduction system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing heavy vehicle emission control systems, including procedures for working safely with engines producing toxic emissions
- environmental requirements, including procedures for containing and disposing of emission control system fuels, fluids and components
- heavy vehicle emissions and their effects on the environment and health:
 - carbon monoxide
 - oxides of nitrogen
 - ozone
 - sulphur dioxide
 - particulate matter
 - hydrocarbons

- application, purpose and operating principles of heavy vehicle emission control systems and components, including:
 - closed crankcase ventilation system
 - exhaust gas recirculation system
 - diesel engine particulate filter system
 - selective catalytic reduction system
 - catalytic converter system
- diagnostic testing procedures for heavy vehicle emission control systems, including:
 - closed crankcase ventilation system operation
 - exhaust gas recirculation system operation
 - diesel engine particulate filter system operation
 - selective catalytic reduction system operation
 - catalytic converter system operation
 - exhaust gas analysis
- repair procedures for heavy vehicle emission control systems, including procedures for removing, replacing and adjusting the system components
- post-repair testing procedures for heavy vehicle emission control systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the heavy vehicle emission control systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer heavy vehicle emission control system specifications
- heavy vehicle engines with faults in the emission control systems specified in the performance evidence

- diagnostic equipment for testing heavy vehicle emission control systems
- tools, equipment and materials appropriate for repairing, replacing and adjusting heavy vehicle emission control systems.

AURJTA001 Carry out minor adjustments to motorcycles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out minor adjustments to motorcycle systems, components and equipment. It involves preparing for the work, inspecting the motorcycle and determining the work requirement, carrying out minor adjustments, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation for entering the automotive retail, service and repair industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to carry out minor adjustments	1.1 Task instructions are interpreted and motorcycle to be worked on is identified 1.2 Motorcycle component information is sourced and interpreted 1.3 Potential hazards and risks associated with the task are identified and reported to workplace supervisor 1.4 Tools and equipment are selected and checked for serviceability
2. Inspect motorcycle and determine work requirement	2.1 Inspection is carried out according to workplace procedures and safety requirements 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary minor adjustments
3. Undertake minor adjustment activities	3.1 Adjustment options are analysed and those most appropriate to the circumstances are selected 3.2 Adjustments are carried out according to manufacturer specifications and workplace procedures, and without causing damage to components or systems 3.3 Post-adjustment testing is carried out to ensure safe and correct operation of motorcycle
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instructions and workplace standards 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer specifications, workplace procedures and safety requirements relating to adjustment procedures and specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including tags, using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> measure component tolerances and compare findings with manufacturer specifications.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> lifting and supporting motorcycles avoiding entanglement when working with chains, sprockets, belts and pulleys.

Assessment Requirements for AURJTA001 Carry out minor adjustments to motorcycles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out minor adjustments to one motorcycle, including:
 - clutch
 - chain tension
 - one of the following:
 - brakes
 - suspension and steering
 - engine, attachments and controls
 - foot controls
 - handlebars and hand controls
 - accessories.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out minor adjustments to motorcycles, including procedures for:
 - lifting and supporting motorcycles
 - avoiding entanglement when working with chains, sprockets, belts and pulleys
- identification and function of motorcycle systems, including:
 - clutch
 - chain drive
 - brakes

- suspension
- steering
- engine, attachments and controls
- foot controls
- handlebars and hand controls
- accessories
- motorcycle adjustment procedures, including hand and foot controls
- motorcycle post-adjustment testing procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the minor adjustments that they have carried out on motorcycle components and equipment, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer motorcycle specifications
- one motorcycle and the motorcycle components specified in the performance evidence
- tools, equipment and materials appropriate for carrying out minor adjustments to motorcycles.

AURJTA002 Remove and replace motorcycle components and accessories

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and replace motorcycle components and accessories. It involves preparing for the work, removing and replacing the component, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and replace motorcycle component or accessory	1.1 Task requirements are determined from workshop or activity instructions 1.2 Removal and replacement procedures and information are sourced and interpreted 1.3 Potential hazards and risks associated with the task are identified and reported to workplace supervisor 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Remove component or accessory	2.1 Component or accessory is identified and removed according to manufacturer specifications and without causing damage to other components or systems 2.2 Inspection of component or accessory is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.3 Inspection findings are reported according to workplace procedures, including recommendations for replacement and minor adjustments
3. Replace component or accessory	3.1 Component or accessory is replaced according to manufacturer specifications and without causing damage to components or systems 3.2 Adjustments are made to component or accessory according to manufacturer specifications 3.3 Post-replacement testing is carried out according to workplace procedures and further adjustments are made as required
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instructions and workplace standards 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer specifications, workplace procedures, and safety requirements relating to motorcycle components and accessories.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> measure components and accessories, compare with specifications, and perform minor adjustments to them.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace three of the following motorcycle components and accessories:
 - wheels
 - mudguards
 - lighting system components
 - suspension system components
 - brake system components
 - fuel tank
 - oil tank
 - seat
 - control cables
 - ignition system components
 - handlebars and hand controls
 - foot controls and foot pegs
 - mufflers and exhaust pipes
 - windshield
 - pannier bags
 - luggage racks.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and replacing motorcycle components and accessories, including:
 - lifting and supporting motorcycles
 - selecting and using personal protective equipment (PPE)
 - avoiding entanglement when working with chains, sprockets, belts and pulleys
- environmental requirements, including procedures for trapping, storing and disposing of lubricants, oils and fluids released during the adjustment process
- identification and function of the motorcycle components and accessories specified in the performance evidence
- motorcycle removal and replacement procedures, including the use of tools and equipment
- testing procedures and adjustment methods relating to motorcycle component and accessory removal and replacement
- motorcycle post-adjustment testing procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

AURJTA003 Analyse and evaluate faults in motorcycle engine and transmission systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in motorcycle engine and transmission systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The engine and transmission systems include those of motorcycles, motor scooters or all-terrain vehicles (ATVs).

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for motorcycle engine or transmission system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Engine or transmission system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from the available evidence and documented to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to motorcycle engine and transmission systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised motorcycle engine and transmission system diagnostic equipment.

Range of Conditions

Assessment Requirements for AURJTA003 Analyse and evaluate faults in motorcycle engine and transmission systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - engine system of a motorcycle
 - transmission system of a different motorcycle
 - engine or transmission system of a third motorcycle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in motorcycle engine and transmission systems, including procedures for:
 - lifting and supporting motorcycle engine and transmission systems
 - avoiding entanglement in chains, sprockets, belts and pulleys
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engine and transmission systems
- principles and processes involved in planning and implementing analysis and evaluation of motorcycle engine and transmission system faults
- design and planning of diagnostic procedures of motorcycle engine and transmission system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults

- procedures for analysing and evaluating motorcycle engine and transmission system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of motorcycle engines and components, including two-stroke and four-stroke engines
- types, functions, operation and limitations of motorcycle transmission systems and components, including:
 - continuously variable transmission (CVT)
 - dual clutch transmission
 - constant mesh transmission
 - dry, wet and centrifugal clutch
- operation and limitations of motorcycle driveline systems and components, including:
 - chain drive
 - belt drive
 - shaft drive
- testing procedures for motorcycle engine and transmission systems, including for engine performance under load
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in motorcycle engine and transmission systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to motorcycle engine and transmission systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle engine and transmission systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle engine and transmission system specifications
- three different motorcycles with faults in the engine and transmission systems
- diagnostic equipment for motorcycle engine and transmission systems
- tools, equipment and materials appropriate for analysing and evaluating motorcycle engine and transmission systems.

AURJTB001 Diagnose and repair motorcycle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the braking systems of motorcycles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working on motorcycles in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair motorcycle	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
braking system	1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose braking system	2.1 Diagnostic tests are performed according to workplace procedures, and <i>safety and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair braking system	3.1 Repair information is sourced and interpreted 3.2 pair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and motorcycle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of braking system information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking braking system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure braking system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use braking system measuring equipment, such as vernier calipers, micrometers and brake drum micrometers.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Assessment Requirements for AURJTB001 Diagnose and repair motorcycle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the following braking systems of two different motorcycles:
 - one hydraulically-operated two-wheel disc braking system, in which the work must involve:
 - removing, bleeding and adjusting hand brake lever and brake pedal, master cylinder, brake hose, brake calipers, brake pads and brake rotors
 - refitting or replacing them
 - one mechanically-operated drum braking system, in which the work must involve:
 - removing and adjusting hand brake lever and brake pedal, cables and rods, brake drums and shoes, and actuating mechanisms
 - refitting or replacing them.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing motorcycle braking systems, including procedures for:
 - lifting and supporting motorcycles
 - managing and controlling brake dust and brake fluid
- environmental requirements, including procedures for trapping, storing and disposing of brake dust and brake fluid released from braking systems
- operating principles of motorcycle braking systems and associated components, including:
 - levers

- friction
- hydraulics, including force, pressure and area relationship
- application, purpose and operation of motorcycle disc and drum braking systems and components, including:
 - master cylinders
 - brake fluids
 - disc brake systems, including:
 - types of brake discs
 - disc pads
 - self-adjustment of disc pads
 - fixed, floating and multi-piston brake calipers
 - drum brake systems, including:
 - self-energising, servo effect
 - mechanically operated systems
 - hydraulically operated systems
 - manual and self-adjustment systems
 - combined braking systems
- diagnostic testing procedures for motorcycle braking systems, including:
 - operational testing of master cylinder
 - testing brake fluid
 - operational testing of disc and drum brake, including rod and cable checking and measurement
 - measuring and evaluating brake drums, shoes, discs and pads
- repair procedures for motorcycle braking systems, including:
 - procedures for removing, replacing and adjusting hydraulic system components, including master cylinder, switches, brake hoses and lines, rods and cables, disc calipers and disc pads, brake drums, brake shoes and wheel cylinders
 - procedures for removing, replacing and adjusting mechanical braking system components, including brake lever, rods and cables, brake drums and brake shoes
 - methods of bleeding brake systems
- post-repair testing procedures for motorcycle braking systems, including procedures for:
 - brake bedding-in
 - road testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motorcycle repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle braking system specifications
- two different motorcycles with faults in the braking systems specified in the performance evidence
- diagnostic equipment for motorcycle braking systems
- tools, equipment and materials appropriate for repairing motorcycle braking systems.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b4278d82-d487-4070-a8c4-78045ec695b1>

Assessment Requirements for AURJTB002 Analyse and evaluate faults in motorcycle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - mechanical braking system of a motorcycle
 - hydraulic braking system of a different motorcycle
 - anti-lock braking (ABS) system of a third motorcycle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in motorcycle braking systems, including procedures for:
 - lifting and supporting motorcycle braking systems
 - managing and controlling brake dust and brake fluid
- environmental requirements, including procedures for trapping, storing and disposing of brake dust and brake fluid released from braking systems
- principles and processes involved in planning and implementing analysis and evaluation of motorcycle braking system faults
- design and planning of diagnostic procedures of motorcycle braking system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults
- procedures for analysing and evaluating motorcycle braking system faults, including:

- system failure analysis
- component failure analysis
- types, functions, operation and limitations of motorcycle braking systems and components, including:
 - friction materials
 - mechanical systems
 - hydraulic systems
 - ABS systems
 - electronic control circuits and valves
- testing procedures for motorcycle braking systems, including:
 - mechanical cables and linkages
 - hydraulic lines and cylinder integrity and leaks
 - operation of electronic control module
 - stopping efficiency
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in motorcycle braking systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to motorcycle braking systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle braking system specifications

- three different motorcycles with faults in the braking systems specified in the performance evidence
- diagnostic equipment for motorcycle braking systems
- tools, equipment and materials appropriate for analysing and evaluating motorcycle braking systems.

AURJTD001 Inspect motorcycle suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect motorcycle suspension systems according to manufacturer specifications. It involves preparing for the task, identifying both the front and rear suspension systems, inspecting the general condition of the motorcycle, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect motorcycle suspension system	1.1 Task instruction is interpreted and motorcycle to be worked on is identified 1.2 Inspection information is sourced and interpreted 1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect suspension system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instruction and workplace standards, and motorcycle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate sources of information on suspension system specifications.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer and workshop literature when seeking inspection procedures and specifications relating to suspension systems.

Skills	Description
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate suspension travel distances.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as tape measures and rulers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> working with stored energy in springs lifting and supporting motorcycles.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect the front and rear suspension systems of at least two different motorcycles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) relating to inspecting motorcycle suspension systems, including procedures for:
 - working with stored energy in springs
 - lifting and supporting motorcycles
- identification and function of motorcycle suspension systems, including:
 - shock absorbers, including:
 - twin shock absorbers
 - mono-shock absorbers
 - telescopic fork suspension
 - inverted telescopic fork suspension
 - front telelever and duolever
 - rear swing arm suspension
- types and applications of suspension fluids and lubricants
- inspection procedures for motorcycle suspension systems, including:
 - oil leaks
 - ride height
 - component wear

- tyres and inflation
- mounting bolts and attachments
- suspension bearings and bushing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle suspension systems that they have inspected, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer suspension system specifications
- two different motorcycles
- tools, equipment and materials appropriate for inspecting motorcycle suspension systems.

Assessment Requirements for AURJTD003 Diagnose and repair motorcycle suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the front suspension systems of two different motorcycles, in which the work must involve:
 - removing, dismantling, reassembling, refitting and adjusting front forks
 - changing seals, valves, bushings and oil
- diagnose and repair a fault in the rear suspension systems of two different motorcycles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing motorcycle suspension systems, including procedures for working with:
 - stored energy in springs
 - suspension system oils
 - gas struts
- environmental requirements, including procedures for trapping, storing and disposing of oils released from suspension systems
- operating principles of motorcycle suspension systems and associated components, including:
 - brake dive
 - fork spring rate
 - fork compression damping

- application, purpose and operation of the following motorcycle suspension systems and components, including:
 - shock absorbers, including:
 - twin shock absorbers
 - mono-shock absorbers
 - telescopic fork suspension
 - inverted telescopic fork suspension
 - front tele-lever and duo-lever
 - rear swing arm suspension (twin-sided, mono-shock and para-lever)
 - gas struts
- diagnostic testing procedures for motorcycle suspension systems, including procedures for:
 - evaluating performance
 - analysing component wear
 - analysing system noise
- repair procedures for motorcycle suspension systems, including procedures for:
 - adjusting pre-load and damping
 - removing, dismantling, reassembling and replacing components, including:
 - seal, bushing and valve replacement
 - oil replacement
 - air purging
 - replacing front fork slider bushes
 - removing and replacing rear shock absorbers
 - dismantling and repairing rear shock absorbers
 - repairing steering damper assemblies
- post-repair testing procedures for motorcycle suspension systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motorcycle repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle braking system specifications
- two different motorcycles with faults in the braking systems specified in the performance evidence
- diagnostic equipment for motorcycle braking systems
- tools, equipment and materials appropriate for repairing motorcycle braking systems.

Assessment Requirements for AURJTD004 Diagnose and repair motorcycle steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the steering systems of two different motorcycles, in which the work must involve removing, refitting or replacing, and adjusting:
 - headset bearings
 - front fork units in the triple clamps
 - handlebars.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing motorcycle steering systems, including procedures for:
 - working with stored energy in springs
 - handling steering system bearing grease
- operating principles of motorcycle steering systems and associated components, including:
 - wheelbase
 - steering axis angle
 - fork offset
 - fork length
 - trail
 - wheel flop

- application, purpose and operation of the following components of motorcycle steering systems and components, including:
 - head tubes
 - headset bearings
 - triple clamps
 - hydraulic steering dampers
- diagnostic testing procedures for motorcycle steering systems, including:
 - analysing component wear
 - checking abnormal system noises
- repair procedures for motorcycle steering systems, including procedures for:
 - removing, refitting and adjusting triple clamp forks
 - aligning front axles
- post-repair testing procedures for motorcycle steering systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle steering systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motorcycle repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle steering system specifications
- two different motorcycles with steering system faults
- diagnostic equipment for motorcycle steering systems
- tools, equipment and materials appropriate for repairing motorcycle steering systems.

AURJTD005 Diagnose complex faults in motorcycle steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in motorcycle steering and suspension systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The steering and suspension systems include those of motorcycles, motor scooters or all-terrain vehicles (ATVs).

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnosis requirements are determined from workplace instructions 1.2 Existence of fault in motorcycle steering or suspension system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety requirements</i>
2. Prepare to perform diagnosis	2.1 Manufacturer specifications and other technical information for motorcycle steering or suspension system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Motorcycle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different motorcycles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking motorcycle steering and suspension system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure motorcycle steering and suspension system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications use gauges and interpret units, such as kilopascals and pounds per square inch (PSI).
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> lifting and supporting motorcycles working with stored energy in springs

Assessment Requirements for AURJTD005 Diagnose complex faults in motorcycle steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the:
 - steering system of a motorcycle
 - suspension system of a different motorcycle
 - steering or suspension system of a third different motorcycle
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing motorcycle steering and suspension systems, including procedures for:
 - lifting and supporting motorcycles
 - working with stored energy in springs
 - handling steering system bearing grease
- types of complex faults relating to motorcycle steering and suspension systems, including:
 - intermittent
 - multi-system

- introduced as a result of system repair
- indirect, caused by the influence of external systems
- types, function and operation of motorcycle steering and suspension systems, including:
 - telescopic forks, including:
 - fork tubes
 - gaiters
 - stanchions
 - triple clamps
 - steering dampers
 - upside down forks
 - anti-dive fork systems
 - trailing link fork suspension
 - leading link fork suspension, including:
 - springer fork
 - Earles fork
 - girder fork
 - Saxon-Motodd (telelever) fork
 - duolever front suspension (Hossack or Fior)
 - coaxial steering front suspension
 - non-fork front suspension, including hub centre steering
 - rear suspension, including:
 - twin shock swingarm
 - monoshock swingarm
 - monoshock single sided swingarm
 - rear monolever
 - rear paralever
 - steering angles, including:
 - wheelbase
 - trail
 - offset
 - rake angle
- testing procedures for motorcycle steering and suspension systems, including:
 - abnormal noise analysis
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in motorcycle steering and suspension systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle steering and suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle steering and suspension specifications
- three different motorcycles with complex faults in their steering and suspension systems
- diagnostic equipment for motorcycle steering and suspension systems
- tools, equipment and materials appropriate for diagnosing complex faults in motorcycle steering and suspension systems.

AURJTD006 Analyse and evaluate faults in motorcycle steering, suspension and frame systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in motorcycle steering, suspension and frame systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The steering, suspension and frame systems include those of motorcycles, motor scooters or all-terrain vehicles (ATVs).

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for motorcycle steering, suspension or frame system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Motorcycle steering, suspension or frame system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to motorcycle steering, suspension and frame systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised motorcycle steering, suspension and frame system diagnostic equipment.

Range of Conditions

- environmental requirements, including procedures for trapping, storing and disposing of oils released from steering, suspension and frame systems
- principles and processes involved in planning and implementing analysis and evaluation of motorcycle steering, suspension and frame system faults
- design and planning of diagnostic procedures of motorcycle steering, suspension and frame system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults
- procedures for analysing and evaluating motorcycle steering, suspension and frame system faults, including:
 - system failure analysis

- component failure analysis
- types, functions, operation and limitations of the following systems, including:
 - steering, including:
 - head tube
 - headset bearings
 - triple clamp
 - suspension, including:
 - shock absorbers, including twin shock and mono-shock absorbers
 - telescopic fork suspension
 - inverted telescopic fork suspension
 - front telelever and duolever
 - rear suspension, including twin shock swingarm, monoshock swingarm, monoshock single sided swingarm, rear monolever and rear paralever
 - frames, including:
 - tubular frame
 - alloy formed section
 - composite materials
- testing procedures for motorcycle steering, suspension and frame systems, including:
 - mechanical linkages
 - shock absorber performance under load
 - damper performance under load
 - frames for fatigue and stress
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in motorcycle steering, suspension and frame systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to motorcycle steering, suspension and frame systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

AURJTE001 Diagnose and repair motorcycle engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the engines of motorcycles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working on motorcycles in the automotive service and repair industry. This unit does not apply to the engines of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair motorcycle engine	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose engine	2.1 Diagnostic tests are performed according to workplace procedures and safety requirements 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Dismantle engine	3.1 Tools, equipment and materials are selected and checked 3.2 Engine is dismantled as required according to workplace procedures, and safety and environmental requirements 3.3 Engine is cleaned and components arranged for inspection according to workplace procedures, and safety and environmental requirements 3.4 Engine components are measured and compared with manufacturer specifications 3.5 Final repair recommendations are made and reported according to workplace procedures
4. Repair and reassemble engine	4.1 Repair information is sourced and interpreted 4.2 Repair options are analysed and those most appropriate to the circumstances are selected 4.3 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or system 4.4 Engine is reassembled according to manufacturer specifications, workplace procedures and safety requirements 4.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURJTE001 Diagnose and repair motorcycle engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three different motorcycle engines in which the work must involve removing, dismantling, reassembling, replacing and adjusting the engine cylinder heads
- remove and refit or replace one of the above motorcycle engines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing motorcycle engines, including procedures for lifting and supporting motorcycle engines
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from motorcycle engines
- operating principles of motorcycle engines and associated components, including combustion, such as:
 - air-fuel ratios and combustion cycles
 - direct injection
 - detonation
- key features of engine design, including:
 - swept volume and engine volume
 - compression ratio
 - engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency

- torque and horsepower, including brake horsepower
- application, purpose and operation of the following components of motorcycle engines and components, including:
 - lubrication systems, cylinder blocks, cylinders, pistons, cylinder heads, combustion chambers, inlet and exhaust manifolds, connecting rods, crankshafts, piston rings, gudgeon pins, camshafts, timing gears, vibration dampers and flywheels
- diagnostic testing procedures for motorcycle engines, including:
 - testing wet and dry compression
 - testing cylinder leakage
 - testing oil pressure
 - testing sources of fluid leaks
 - exhaust smoke diagnosis
 - checking abnormal engine noises
- dismantling procedures for motorcycle engines, including procedures for:
 - measuring clearances and tolerances
 - inspecting components
- repair procedures for removing, replacing and adjusting motorcycle engines
- assembly procedures for motorcycle engines, including:
 - fitting components
 - checking tolerances and clearances
 - torquing retaining bolts
- post-repair testing procedures for motorcycle engines, including:
 - checking oil pressure
 - road testing under load
 - checking for fluid leaks.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motorcycle repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle engine specifications
- three different motorcycles with engine faults
- diagnostic equipment for motorcycle engines
- tools, equipment and materials appropriate for repairing motorcycle engines.

AURJTE002 Diagnose complex faults in motorcycle engine and transmission systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in motorcycle engine and transmission systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician’s diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The engine and transmission systems include those of motorcycles, motor scooters or all-terrain vehicles (ATVs).

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Assessment Requirements for AURJTE002 Diagnose complex faults in motorcycle engine and transmission systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the:
 - engine system of a motorcycle
 - manual transmission of a different motorcycle
 - automatic transmission or continuously variable transmission (CVT) of a third motorcycle
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in motorcycle engine and transmission systems, including procedures for lifting and supporting motorcycles
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engine and transmission systems
- types of complex faults relating to motorcycle engine and transmission systems, including:
 - intermittent
 - multi-system

- introduced as a result of system repair
- indirect, caused by the influence of external systems
- types, function and operation of motorcycle engine and transmission systems, including:
 - two and four-stroke air and liquid-cooled engines
 - manual transmissions
 - automatic transmissions
 - CVT
- testing procedures for motorcycle engine and transmission systems, including procedures for:
 - vehicle dynamic and static testing
 - abnormal noise analysis
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in motorcycle engine and transmission systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - motorcycle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle engine and transmission systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle engine and transmission system specifications
- three different motorcycles with complex faults in their engine and transmission systems
- motorcycle engine and transmission system diagnostic equipment
- tools, equipment and materials appropriate for diagnosing complex faults in motorcycle engine and transmission systems.

AURJTJ001 Remove, inspect and refit motorcycle wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove, inspect and refit wheel and tyre assemblies fitted to motorcycles. It involves identifying and confirming work requirements, preparing for the work, removing, inspecting and refitting the wheel and tyre assembly, and completing workplace processes and documentation.

It applies to those working in the motorcycle service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
wheel and tyre assembly	1.2 Removal, inspection and refitting information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Remove and inspect wheel and tyre assembly	2.1 Wheel and tyre assembly is removed according to manufacturer specifications, workplace procedures and safety requirements , and without causing damage to components or systems 2.2 Wheel and tyre assembly, mounting points, and fitting are inspected for condition, damage and wear 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs, replacements or adjustments
3. Refit wheel and tyre assembly	3.1 Refitting options are analysed and those most appropriate to the circumstances are selected 3.2 Wheel and tyre assembly is fitted and adjusted according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.3 Tightening sequence and torque settings are completed according to manufacturer specifications and workplace procedures 3.4 Wheel and tyre assembly is checked for correct operation and alignment according to manufacturer specifications and workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and motorcycle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer specifications and workshop literature when seeking tyre and wheel rim specifications, including tightening procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, making recommendations and recording parts and material used.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in: <ul style="list-style-type: none"> workplace instructions manufacturer specifications tyres and wheels tyre inflation gauges understand numerical divisions in metric and imperial units of measurement.
Problem solving skills to:	<ul style="list-style-type: none"> recognise limitations and seek advice seek information and assistance to solve problems.
Technology skills to:	<ul style="list-style-type: none"> operate wheel and tyre assembly removal, inspection, refitting and adjustment tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> lifting and supporting motorcycles manually handling wheel and tyre assemblies.
<i>Final inspection</i> must include:	<ul style="list-style-type: none"> wheel and tyre assembly run-out and alignment testing testing the operation of motorcycle systems affected by the removal and refitting of wheel and tyre assemblies

	<ul style="list-style-type: none">• checking chain and belt drive tension.

Assessment Requirements for AURJTJ001 Remove, inspect and refit motorcycle wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, inspect, refit and adjust the wheel and tyre assemblies of three different motorcycles, including:
 - one front wheel assembly
 - one of each of the following rear wheel assemblies:
 - chain driven
 - belt driven
 - driveshaft driven.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing, inspecting and refitting motorcycle wheel and tyre assemblies, including procedures for:
 - lifting and supporting motorcycles
 - manually handling wheel and tyre assemblies
- types and applications of wheel assemblies, including:
 - wire spoke wheels
 - composite type wheels
 - one piece wheels
- types and applications of motorcycle drives, including:
 - chain drive

- belt drive
- driveshaft drive systems
- procedures for removing and refitting motorcycle wheel and tyre assemblies, including:
 - spoke tensioning
 - axle nut tensioning
 - drive chain and drive belt tensioning
- procedures for inspecting motorcycle wheel and tyre assemblies, including:
 - tyre condition
 - rim condition
 - anti-lock braking sensor and signal rotor
 - tyre pressure monitoring units
- post-fitting procedures and checks of motorcycle wheel and tyre assemblies, including:
 - wheel balancing
 - wheel and tyre assembly run-out
 - correct operation of other systems affected by removing and refitting wheel assemblies, including checking wheel assembly coding of the electronic control unit (ECU).

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle wheel and tyre assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle wheel and tyre assembly specifications
- three different motorcycles with the front and rear wheel assemblies specified in the performance evidence

- tools, equipment and materials appropriate for removing, inspecting and refitting motorcycle wheel and tyre assemblies.

AURJTJ002 Remove, inspect, repair and refit motorcycle tyres and tubes

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove tyres and tubes from motorcycle wheels, inspect the tyre and wheel to assess serviceability, carry out tyre and tube repairs, and reassemble the wheel assembly. It involves identifying and confirming work requirements, preparing for the work, inspecting, repairing and refitting motorcycle tyres and tubes, and completing workplace processes and documentation.

It applies to those working in the motorcycle service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Wheels and Tyres

Assessment Requirements for AURJTJ002 Remove, inspect, repair and refit motorcycle tyres and tubes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, inspect, repair and refit each of the following motorcycle tyres and their tubes:
 - road radial tyre
 - road bias tyre
 - off road tyre.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing, inspecting, repairing and refitting motorcycle tyres and tubes, including procedures for:
 - deflating and inflating motorcycle tyres
 - manually handling motorcycle wheel assemblies
- environmental requirements, including procedures for trapping and disposing of tyre material produced during repair procedures
- types and applications of different types of tyres, tubes and wheels, including:
 - road radial
 - road bias
 - off road
 - race
- types, application and function of tyre changing equipment and tyre and tube repair equipment
- procedures for deflating, dismantling and inspecting wheel assemblies, including:

- rim locks
- spoke rims
- one piece wheels
- procedures for repairing tyres and tubes
- procedures for reassembling and inflating wheel assemblies, including:
 - rim locks
 - spoke rims
 - one piece wheels
 - post-assembly checks of wheel assemblies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle tyres and tubes that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motorcycle repair workplace or simulated workplace
- workplace instructions
- manufacturer tyre and tube repair procedures and specifications
- motorcycle tyres, tubes and wheel assemblies specified in the performance evidence
- tools, equipment and materials appropriate for removing, inspecting, repairing and refitting motorcycle tyres and tubes, including:
 - tyre and tube repair tools and equipment
 - tyre and tube repair patches and plugs
 - tyre changing tools and equipment.

AURJTJ003 Remove and refit motorcycle wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and refit wheel and tyre assemblies fitted to motorcycles. It involves preparing for the work, removing and refitting the wheel and tyre assembly, and completing the workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove wheel and tyre assembly	1.1 Environmental and <i>safety requirements</i> are sourced and interpreted 1.2 Task instruction is interpreted and wheel and tyre assembly to be worked on is identified 1.3 Manufacturer specifications for removing and replacing wheel and tyre assembly are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Tools and equipment required for removing and replacing wheel and tyre assembly are identified and checked for serviceability
2. Remove wheel and tyre assembly	2.1 Motorcycle is prepared for wheel removal according to workplace procedures and safety requirements 2.2 Wheel and tyre assembly is removed according to workplace procedures and manufacturer specifications, and without causing damage to components, tools or equipment 2.3 Wheel and tyre assembly is identified according to manufacturer specifications
3. Refit wheel and tyre assembly	3.1 Wheel and tyre assembly is prepared for replacement 3.2 Wheel and tyre assembly is replaced according to workplace procedures, manufacturer specifications and safety requirements, and without causing damage to components, tools or equipment 3.3 Wheel and tyre assembly on motorcycle is checked for correct operation
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and motorcycle is presented ready for use 4.2 and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information.
Reading skills to:	<ul style="list-style-type: none"> interpret key information from manufacturer literature when seeking tyre, wheel specifications, including tightening procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information on tyre inflation gauges.
Technology skills to:	<ul style="list-style-type: none"> operate wheel and tyre assembly removal, refitting and adjustment tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS), occupational health and safety (OHS) requirements, including procedures for using: <ul style="list-style-type: none"> safety glasses, ear protection and safety footwear motorcycle lifting and supporting equipment motorcycle wheel assembly removal and refitting equipment.

AURJTQ001 Inspect and service motorcycle driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service motorcycle driveline systems. It involves preparing for the task, servicing and adjusting the chain and sprocket, belt and driveshaft drive systems, reporting the inspection findings, and completing workplace processes and documentation.

It applies to those working in the motorcycle service and repair industry. The driveline systems include those of motorcycles and motor scooters, and include road, off-road, agricultural or race motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURJTQ001 Inspect and service motorcycle driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service each of the following motorcycle driveline systems:
 - chain
 - belt
 - shaft

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing motorcycle driveline systems, including procedures for avoiding entanglement in chains, sprockets, belts and pulleys
- environmental requirements, including procedures for handling, trapping and storing oils and lubricants released from driveline systems
- identification, function and basic operation of motorcycle driveline systems, including:
 - chain and sprocket
 - belt drive
 - driveshaft drive
- inspection procedures for driveline systems, including:
 - chain free play
 - gear tooth condition
 - drive shaft backlash
- service and adjustment procedures for driveline systems, including:
 - servicing and adjusting chain tension and wheel alignment

- measuring and adjusting belt tension and wheel alignment
- lubricating shaft drives
- post-service testing procedures for motorcycle driveline systems.

Assessment Conditions

Assessors must satisfy NVR/ AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle driveline systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motorcycle repair workplace or simulated workplace
- workplace instructions
- manufacturer driveline system specifications
- three different motorcycles with the driveline systems specified in the performance evidence requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing motorcycle driveline systems.

AURJTQ002 Diagnose and repair motorcycle driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the driveline systems of motorcycles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working on motorcycles in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair motorcycle	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
driveline system	1.3 Diagnosis options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose driveline system	2.1 Diagnostic tests are performed according to workplace procedures, safety <i>and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair driveline system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and motorcycle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking driveline system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure driveline system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as tape measures, rulers and vernier calipers.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for handling shaft and chain driveline oils and lubricants environmental requirements, including procedures for trapping, storing and disposing of oils and lubricants released from shaft and chain drivelines.

Assessment Requirements for AURJTQ002 Diagnose and repair motorcycle driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the following driveline systems of three different motorcycles:
 - one chain drive system, in which the work must involve removing, replacing or refitting the chain and sprockets
 - one belt drive system, in which the work must involve removing, replacing or refitting the belt and sprockets
 - one shaft drive system, in which the work must involve removing, replacing or refitting the drive shaft.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing motorcycle driveline systems, including procedures for handling shaft and chain driveline oils and lubricants
- environmental requirements, including procedures for trapping, storing and disposing of oils and lubricants released from shaft and chain drivelines
- operating principles of motorcycle driveline systems and associated components, including final drive gear ratios for:
 - chain drive systems
 - belt drive systems
 - shaft drive systems
- application, purpose and operation of motorcycle driveline systems and components, including:

- chain drive systems, including:
 - chain construction, including chain pitch, roller width and roller diameter
 - cush drives
 - types of sprockets
- belt drive systems, including:
 - belt construction
 - methods of tensioning belts
- shaft drive systems, including:
 - side gear assemblies
 - final gear assemblies
- diagnostic testing procedures for motorcycle driveline systems, including procedures for analysing:
 - component wear
 - abnormal system noise
- repair procedures for motorcycle driveline systems, including procedures for:
 - repairing chain drives, including:
 - procedures for removing and refitting front and rear chain sprockets
 - procedures for removing chains and fitting new chains
 - procedures for adjusting chain tension and wheel alignment
 - repairing belt drives, including:
 - procedures for removing and refitting toothed belt sprockets
 - procedures for removing belts and fitting new belts
 - procedures for measuring and adjusting belt tension and wheel alignment
 - repairing shaft drive systems
- post-repair testing procedures for motorcycle driveline systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle driveline systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motorcycle repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle driveline system specifications
- one motorcycle with a fault in its chain drive system
- one motorcycle with a fault in its belt drive system
- one motorcycle with a fault in its shaft drive system
- diagnostic equipment for motorcycle driveline systems
- tools, equipment and materials appropriate for repairing motorcycle driveline systems.

AURJTR001 Analyse and evaluate faults in motorcycle electrical and electronic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in motorcycle electrical and electronic systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The electrical and electronic systems include those of motorcycles, motor scooters or all-terrain vehicles (ATVs).

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for motorcycle electrical or electronic systems are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Electrical or electronic system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures and safety requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from the available evidence and documented to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process, and detailing and justifying rectification method or variation to

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to motorcycle electrical and electronic systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised motorcycle electrical and electronic system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:<ul style="list-style-type: none">• working with motorcycle ignition system high voltage• identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none">• diagnostic process, tests, test sequence and testing equipment.

Assessment Requirements for AURJTR001 Analyse and evaluate faults in motorcycle electrical and electronic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in:
 - one single wire (non CAN-bus) networked circuit of a motorcycle
 - one two-wire high and low speed (CAN-bus) networked system of a different motorcycle
 - one non CAN-bus or one CAN-bus networked system of a third motorcycle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in motorcycle electrical and electronic systems, including procedures for:
 - working with motorcycle ignition system high voltage
 - identifying hazards and controlling risks associated with wearing jewellery while working around high current wiring systems
- principles and processes involved in planning and implementing analysis and evaluation of motorcycle electrical and electronic system faults
- design and planning of diagnostic procedures of motorcycle electrical and electronic system faults, including procedures for diagnosing:
 - lighting
 - charging
 - starting
 - ignition

- immobiliser
- fuel injection
- engine management
- anti-lock braking (ABS)
- procedures for analysing and evaluating motorcycle electrical and electronic system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of motorcycle electrical and electronic systems, including:
 - lighting
 - charging
 - starting
 - ignition
 - immobiliser
 - fuel injection
 - engine management
 - ABS systems
- testing procedures for motorcycle electrical and electronic systems, including the use of:
 - multimeters
 - diagnostic scan tools
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in motorcycle electrical and electronic systems
- procedures for documenting and reporting the system analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to motorcycle electrical and electronic systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle electrical and electronic systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle electrical and electronic system specifications
- three different motorcycles with faults in the electrical and electronic systems specified in the performance evidence
- diagnostic equipment for motorcycle electrical and electronic systems
- tools, equipment and materials appropriate for analysing and evaluating motorcycle electrical and electronic systems.

AURJTX001 Diagnose and repair motorcycle clutch systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the clutch systems of motorcycles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working on motorcycles in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair motorcycle clutch	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
system	1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose clutch system	2.1 Diagnostic tests are performed according to workplace procedures and <i>safety and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair clutch system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, safety and environmental requirements, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and motorcycle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following motorcycle clutch systems:
 - wet multi-plate clutch system, in doing so removing, replacing or refitting the clutch pack
 - cable operated clutch system
 - hydraulic operated clutch system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing motorcycle clutch systems, including procedures for handling transmission fluids and clutch materials
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions and clutches
- operating principles of motorcycle clutch systems and associated components, including coefficient of friction
- application, purpose and operation of components of motorcycle wet multi-plate clutch, slipper clutch and dry clutch systems and components, including:
 - pressure plates, including:
 - coil spring
 - diaphragm
 - types and compatibility of clutch system oils and additives
 - clutch operating systems, including:

- cable
- hydraulic
- diagnostic testing procedures for motorcycle clutch systems, including procedures for analysing:
 - component wear
 - abnormal system noise
- repair procedures for motorcycle clutch systems, including procedures for removing, dismantling, reassembling and adjusting system components
- post-repair testing procedures for motorcycle clutch systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment Requirements for AURJTX003 Diagnose and repair motorcycle automatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different motorcycles with different automatic transmissions, in which the work must involve removing, dismantling, reassembling and refitting the transmissions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing motorcycle automatic transmissions, including procedures for handling transmission fluids and clutch materials
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions
- operating principles of motorcycle automatic transmissions and associated components, including:
 - gears types
 - gear ratios
- application, purpose and operation of the following motorcycle automatic transmissions and components, including:
 - continuously variable transmissions (CVT), including:
 - wet types
 - dry types
 - semi-automatic transmissions
 - dual clutch transmissions

- automatic transmission electronic components, including:
 - electronic control module
 - input sensors, including vehicle speed sensor, throttle position sensor, mass air flow (MAF) sensor, manifold absolute pressure (MAP) sensor, transmission range sensor, engine speed sensor and temperature sensors
 - electronic control module outputs, including indicator lamps, shift solenoids and pressure control solenoids
- types and compatibility of transmission system oils and additives
- types of diagnostic trouble codes and procedures for accessing codes
- diagnostic testing procedures for motorcycle automatic transmissions, including procedures for analysing:
 - component wear
 - abnormal system noise
- repair procedures for motorcycle automatic transmissions, including procedures for removing, dismantling, reassembling, refitting and adjusting components
- post-repair testing procedures for motorcycle automatic transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle automatic transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motorcycle repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle automatic transmission specifications
- two different motorcycles with different automatic transmissions with faults
- diagnostic equipment for motorcycle automatic transmissions

- tools, equipment and materials appropriate for repairing motorcycle automatic transmissions.

AURJTY001 Repair and align motorcycle frames

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect motorcycle frames, determine and carry out required repairs, and then align the frames and their components. It involves preparing for the task, inspecting, measuring, repairing and aligning motorcycle frames, and completing workplace processes and documentation.

It applies to those working in the motorcycle service and repair industry. It includes all types of motorcycle frames, including those with side cars and carrying compartments.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Motorcycle

Unit Sector

Technical - Chassis and Frame

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
measure motorcycle frame	1.2 Frame specifications and repair procedures are sourced and interpreted 1.3 Inspection and measurement options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Inspection and measurement tools and equipment are selected and checked according to manufacturer procedures
2. Inspect and measure frame	2.1 Frame is inspected and repair requirements are determined according to workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair frame	3.1 Repair procedures and information are sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked for serviceability 3.4 Frame is repaired, replaced and adjusted according to manufacturer specifications, workplace procedures, and safety requirements, and without causing damage to components or systems
4. Align frame	4.1 Alignment procedures and information are sourced and interpreted 4.2 Alignment options are analysed and those most appropriate to the circumstances are selected 4.3 Alignment tools, equipment and materials are selected and checked according to manufacturer procedures 4.4 Frame is aligned according to manufacturer specifications, workplace procedures, and safety requirements, and without causing damage to components or systems
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and frame is presented ready for use or stored 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking repair and alignment specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting findings, making repair and alignment recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report findings and make repair and alignment recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure frame alignment and use basic mathematical operation, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as tape measures, rulers and vernier calipers use motorcycle alignment jigs.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:<ul style="list-style-type: none">• selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear• lifting and supporting motorcycles• using motorcycle frame straightening rigs.

Assessment Requirements for AURJTY001 Repair and align motorcycle frames

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair and align frames on two of the following motorcycles:
 - road fully fared
 - road naked
 - cruiser
 - off road
 - scooter.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing and aligning motorcycle frames, including procedures for:
 - selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear
 - lifting and supporting motorcycles
 - using motorcycle frame straightening rigs
- types and application of motorcycle frames, including those of:
 - road fully fared motorcycles
 - road naked motorcycles
 - cruiser motorcycles
 - off road motorcycles
 - scooters

- principles of frame alignment and steering geometry as applied to motorcycles
- frame repair procedures, including application, purpose and operation of straightening jigs
- frame alignment and adjustment procedures, including procedures for checking and adjusting swing arm alignment
- regulatory requirements relating to repairing and aligning motorcycle frames, including Australian Design Rules.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle frames that they have repaired and aligned, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- motorcycle manufacturer frame alignment specifications
- Australian Design Rules
- two different motorcycles as specified in the performance evidence
- motorcycle frame alignment jig
- tools, equipment and materials appropriate for repairing and aligning motorcycle frames.

AURKKJ001 Manage use of tyre management software

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to identify the scope of information available in tyre management software, and to make decisions using the software. The unit also involves monitoring the use of tyre management software, and providing support for others using the software.

It applies to those who use tyre management software to coordinate the effective use of tyres in a vehicle fleet or similar operation.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Information Technology - Wheels and Tyres

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Identify scope of tyre management software	<p>1.1 Categories of information held in tyre management software are identified and accessed</p> <p>1.2 Categories of information relevant to organisation are identified</p> <p>1.3 Information available for inputting into tyre management</p>

ELEMENTS	PERFORMANCE CRITERIA
	software is identified
2. Use tyre management software	2.1 Data is identified and accessed using software 2.2 Completed tasks are entered into software 2.3 Work processes that require information from tyre management software are identified 2.4 Data and information on current tyre performance are obtained from tyre management software
3. Make decisions using information from tyre management software	3.1 Tyre management software is interrogated to find required current, historical or predicted information 3.2 Information is interpreted and analysed 3.3 Actions are taken in response to information, according to workplace procedures and Australian standards
4. Monitor the use of tyre management software	4.1 Tyre management software is routinely monitored 4.2 Use and performance of tyre management software are reviewed with team
5. Support others to use tyre management software	5.1 Regular communication with team or other work groups is undertaken 5.2 Improvements to software and team use of software are identified 5.3 Actions to implement improvements are taken and recorded

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> read and interpret workplace procedures and Australian standards interpret and analyse written information on tyre performance.
Writing skills to:	<ul style="list-style-type: none"> document performance improvement actions complete a range of workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> communicate performance information and receive feedback from team and other work groups report tyre performance data results.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret both metric and imperial systems of measurement. interpret numerical tyre performance data.

Skills	Description
Digital literacy skills to:	<ul style="list-style-type: none"> manipulate data in tyre management software produce reports using tyre management software.
Initiative skills to:	<ul style="list-style-type: none"> plan and prioritise own work to achieve required outcomes.
Planning and organising skills to:	<ul style="list-style-type: none"> use appropriate processes and procedures recognise limitations and seek timely advice.
Self-management skills to:	<ul style="list-style-type: none"> seek information and assistance as required to solve problems.
Problem-solving skills to:	<ul style="list-style-type: none"> identify software deficiencies and determine required actions.
Teamwork skills to:	<ul style="list-style-type: none"> monitor team use of software support team to achieve required outcomes identify team deficiencies and take appropriate action.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Communication</i> must include:	<ul style="list-style-type: none"> face to face use of tyre management software.

Assessment Requirements for AURKKJ001 Manage use of tyre management software

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must have competently used tyre management software on a minimum of three occasions, inputting and accessing at least two different types of tyre reports.

Individuals must demonstrate they can:

- communicate effectively with team regarding software and its use
- input and access data into tyre management software
- prioritise own work
- read, interpret and analyse tyre management information
- use basic and advanced computer functions that support the use of tyre management software.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- basic and advanced computer functions relating to tyre management software
- Australian standards and workplace procedures relating to tyre management
- key features of the following types of tyre reports:
 - end of month reports
 - health safety and environment (HSE) reports
 - job safety analysis reports
 - rim reports
 - tyre failure reports
 - tyre maintenance reports
- tyre management software.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the tyre management software that they have worked on, e.g. tyre reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- Australian standards and workplace procedures relevant to tyre management
- a range of tyre reports
- tyre management software.

AURKTA001 Synchronise plant and equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to synchronise plant and equipment. It involves preparing for the task, selecting the correct synchronising procedure, carrying out the synchronisation, performing post-synchronising testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The plant and equipment include those of agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- synchronise two different pieces of plant and equipment, in which the work must involve:
 - selecting synchronising procedures appropriate to the circumstances
 - synchronising the plant and equipment
 - testing and inspecting synchronised plant and equipment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to synchronising plant and equipment, including procedures for:
 - operating engines
 - following electrical safety requirements
 - isolating and stabilising plant and equipment
- environmental requirements, including procedures for trapping, storing and disposing of oils or fluids released from plant and equipment during synchronisation process
- operating principles of plant and equipment and associated components, including:
 - electrical
 - hydraulic
 - mechanical
- plant and equipment synchronisation procedures, including:
 - electrical:
 - connect and disconnect

- electronic control module
- electronic control of implement settings and adjustments
- hydraulic:
 - connect and disconnect
 - pressure adjustment
 - fluid, leaks, and pressures
- mechanical:
 - weight
 - power take-off (PTO)
 - three point linkage
 - towed implement
- post-synchronisation testing procedures for plant and equipment, including operational test procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

AURKTA002 Inspect, service and repair crop harvesting equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, service and repair faults in crop harvesting equipment. It involves preparing for the task, inspecting the equipment to determine the service and repair requirements, carrying out the service and repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The crop harvesting equipment is that of agricultural machinery and refers to the specialised equipment involved in harvesting crops, such as grain, sugar cane, cotton, rice, vegetable and fruit crops. It does not cover generalised equipment and systems that form the platform or the towing vehicle. This unit is not for the cutting, raking or harvesting of hay.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURKTA002 Inspect, service and repair crop harvesting equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair two different crop harvesting equipment, which must include equipment that harvests one of the following crop types:
 - grain
 - sugar cane
 - cotton
 - rice
 - potatoes
 - vegetable
 - fruit.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing crop harvesting equipment, including procedures for:
 - isolating and stabilising equipment and machines
 - working with rotating shafts
- environmental requirements, including procedures for waste management, machine hygiene, dust and clean-up management
- operating principles of crop harvesting equipment, including:
 - threshing
 - air flow systems

- variable speed drives
- sheaves
- eccentric drives
- rotor separation systems
- application, purpose and operation of crop harvesting equipment, including:
 - cutting and feeding systems
 - threshing and separation systems
 - trash ejection
 - grain or crop handling
 - electronic monitoring systems
- inspection procedures for harvesting equipment, including:
 - component wear analysis
 - system operation analysis
 - electronic fault code interrogation
- service and repair procedures for harvesting equipment, including removing, replacing, repairing and adjusting equipment components
- post-repair testing procedures for harvesting equipment, including:
 - variable operating parameters
 - impact of environmental factors.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the crop harvesting equipment that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

- manufacturer harvesting equipment specifications
- two different operational crop harvesting equipment requiring service and repair
- diagnostic equipment for crop harvesting equipment
- tools, equipment and materials appropriate for inspecting, servicing, repairing and adjusting crop harvesting equipment.

AURKTA003 Inspect, service and repair crop planting and seeding equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, service and repair faults in crop planting and seeding equipment. It involves preparing for the task, inspecting the equipment to determine the service and repair requirements, carrying out the service and repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The crop planting and seeding equipment is that of agricultural machinery and refers to specialised equipment involved in planting and seeding. It does not cover generalised equipment and systems that form the platform or the towing vehicle. Work involves purpose-designed and constructed crop planting and seeding and air seeding equipment, which may be self-propelled or towed.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect crop planting and seeding equipment	1.1 Job requirements are determined from workplace instructions 1.2 Inspection procedures and information are sourced and interpreted 1.3 Options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Conduct inspection and analyse results	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, and include recommendations for necessary service, repairs or adjustments
3. Service and repair crop planting and seeding equipment	3.1 Service and repair procedures and information are sourced and interpreted 3.2 Service and repair tools, equipment and materials are selected and checked 3.3 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.5 Equipment and systems are test run and adjustments are carried out as required
4. Prepare equipment for operation	4.1 Variable operating parameters are identified from manufacturer specifications and analysis of proposed work environment and conditions 4.2 Equipment variables, including management system settings, controls and monitoring systems, are established and prepared for proposed operations 4.3 Equipment and systems are test run and final adjustments are carried out 4.4 Post-repair testing is carried out according to workplace

Assessment Requirements for AURKTA003 Inspect, service and repair crop planting and seeding equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair:
 - one air feed crop planting and seeding equipment
 - one conventional feed crop planting and seeding equipment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing crop planting and seeding equipment, including procedures for:
 - isolating and stabilising equipment and machines
 - working with rotating shafts and crushing hazards
- environmental requirements, including procedures for waste management, machine hygiene, dust and clean-up management
- operating principles of crop planting and seeding equipment, including air feed and conventional planting and seeding systems
- application, purpose and operation of crop planting and seeding equipment, including:
 - electronic monitoring system
 - metering system
 - seeding delivery system
 - adjustable tine tension system
 - adjustable press wheels
- inspection procedures for crop planting and seeding equipment, including:

- component wear analysis
- system operation analysis
- electronic fault code interrogation
- service and repair procedures for crop planting and seeding equipment, including:
 - removing, replacing, repairing and adjusting crop planting and seeding equipment
 - adjusting pressure, volume and coverage of crop planting and seeding equipment
- post-repair testing procedures for crop planting and seeding equipment, including:
 - variable operating parameters
 - impact of environmental factors.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the crop planting and seeding equipment that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer crop planting and seeding equipment specifications
- crop planting and seeding equipment specified in the performance evidence and requiring service and repair
- diagnostic equipment for crop planting and seeding equipment
- tools, equipment and materials appropriate for inspecting, servicing, repairing and adjusting crop planting and seeding equipment.

Assessment Requirements for AURKTA004 Inspect, service and repair spraying and spreading equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair:
 - one spraying equipment
 - one spreading equipment
- during above work, adjust flow and pressure of delivery system to manufacturer specifications.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing spraying and spreading equipment, including procedures for working with:
 - spraying chemicals
 - high pneumatic and hydraulic pressures
 - rotating shafts
- environmental requirements, including procedures for waste and chemical management, machine hygiene, dust and clean-up management
- procedures for flushing chemicals from spraying and spreading equipment prior to inspect, service and repair work
- operating principles of spraying and spreading equipment, including:
 - pumps, pressure and flow
 - drive systems
- application, purpose and operation of spraying and spreading equipment, including:

- spraying equipment for distributing liquid pesticides, herbicides and fertilisers, including:
 - pumping system
 - nozzle liquid delivery system
 - mixing system
 - marking and covering system
 - electronic weed identification system
- spreading equipment for distributing solids and semi-solids, including fertilisers and waste products:
 - distribution control
 - delivery system
 - pumping system
 - material handling and storage
- inspection procedures for spraying and spreading equipment, including:
 - component wear analysis
 - system operation analysis
 - electronic system interrogation
- service and repair procedures for spraying and spreading equipment, including:
 - removing, replacing and repairing components
 - adjusting pressure, volume and coverage of spraying and spreading equipment
- post-repair testing procedures for spraying and spreading equipment, including:
 - variable operating parameters
 - impact of environmental factors.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment Requirements for AURKTA005 Inspect, service and repair track type drive and support systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair one machine track type drive and support system, including four of the following components:
 - carrier roller
 - track roller
 - undercarriage idler
 - drive sprocket
 - track chain
 - recoil spring
 - track chain tensioner
 - track plate
 - track frame, including its alignment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing track type drive and support systems, including procedures for:
 - manually handling system components
 - isolating and stabilising machines
 - releasing track chain tensioner
 - working with recoil spring stored energy

- disassembling track chain tensioner
- working with stored hydraulic pressure
- environmental requirements, including procedures for:
 - trapping, storing and disposing of lubricants and fluids released from track type drive and support systems
 - waste management, machine hygiene, dust and clean-up management
- operating principles of track type drive and support systems, including:
 - track system
 - undercarriage system
- application, purpose and operation of track type drive and support systems, including:
 - track links, pins, bushings and track shoes
 - undercarriage idlers, carrier rollers, drive sprockets, track chain tensioners, recoil spring, accumulator, track plate, track frame and guards
- inspection procedures for track type drive and support systems, including:
 - component wear analysis
 - system operation analysis
- diagnostic testing procedures for track type drive and support systems, including:
 - component wear analysis, including:
 - track links, pins, bushings and track shoes
 - undercarriage idlers, rollers, drive sprockets, tensioners, track frame and guards
 - track frame alignment
- reclamation principles of track type drive components
- service and repair procedures for track type drive and support systems, including removing, replacing, repairing and adjusting system components
- post-repair testing procedures for track type drive and support systems, including:
 - track tension adjustment
 - track frame alignment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the track type drive and support systems that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer track type drive specifications
- machinery with track type drive and support system requiring service and repair
- track drive system inspection and measurement tools and gauges, including:
 - track chain, track link, pin, bushing and track shoe
 - undercarriage tensioner, roller, idler and drive sprocket
- tools, equipment and materials appropriate for inspecting, servicing, repairing and adjusting track type drive and support systems.

AURKTA006 Analyse and evaluate faults in track type mobile plant transmission, steering and braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in track type mobile plant transmission, steering and braking systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The track type transmission, steering and braking systems include those of agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1 Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for track type mobile plant transmission, steering or braking system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Track type mobile plant transmission, steering or braking system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to track type mobile plant transmission, steering and braking systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised track type mobile transmission, steering and braking system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for tagging out and isolating machines• environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from transmission, steering and braking systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none">• diagnostic process, sequence, tests and testing equipment.

Assessment Requirements for AURKTA006 Analyse and evaluate faults in track type mobile plant transmission, steering and braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - transmission system of a track type mobile plant machine
 - steering system of a different track type mobile plant machine
 - braking system of a third track type mobile plant machine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in track type mobile plant transmission, steering and braking systems, including procedures for tagging out and isolating machines
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from transmission, steering and braking systems
- principles and processes involved in planning and implementing analysis and evaluation of faults in track type mobile plant transmission, steering and braking systems
- design and planning of diagnostic procedures of track type mobile plant transmission, steering and braking system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - pneumatic faults
 - electrical faults

- procedures for analysing and evaluating track type mobile plant transmission, steering and braking system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of the following systems:
 - transmissions, including:
 - continuously variable transmission (CVT)
 - powershift transmission
 - hydrostatic transmission
 - retarding system
 - steering and braking: including:
 - mechanical and hydraulic operated steering clutch and brake
 - independent drives
 - planetary and differential planetary
 - hydrostatic drive
 - single and multi-disc brake units
- testing procedures for track type mobile plant transmission, steering and braking systems, including:
 - system pressure, flow rates and temperature
 - transmission, steering and braking performance
 - stall testing
 - sensor, actuator and wiring harness integrity
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in track type mobile plant transmission, steering and braking systems
- procedures for documenting and reporting the analysis and evaluation process.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the track type mobile plant transmission, steering and braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer track type mobile plant transmission, steering and braking system specifications
- three different track type mobile plant machinery with transmission, steering and braking system faults
- diagnostic equipment for track type mobile plant transmission, steering or braking systems
- tools, equipment and materials appropriate for analysing and evaluating track type mobile plant transmission, steering and braking systems.

AURKTA007 Analyse and evaluate faults in mobile plant hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in mobile plant hydraulic systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The hydraulic systems include those of agricultural machinery or mobile plant machinery, which may be wheeled or track type machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for mobile plant hydraulic system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 <i>Testing equipment</i> is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Mobile plant hydraulic system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 <i>Tests</i> are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to mobile plant hydraulic systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> determine and justify the rectification method.
Technology skills to:	<ul style="list-style-type: none"> use specialised mobile plant hydraulic system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for tagging out and isolating machines environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from hydraulic systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none"> diagnostic process, sequence, tests and testing equipment.
<i>Testing equipment</i> must include:	<ul style="list-style-type: none"> stop watches, pressure gauges, flow meters, multimeters, electronic scan tools and temperature sensing devices.
<i>Tests</i> must include:	<ul style="list-style-type: none"> pressure, flow and temperature, cycle time performance, filter inspection, sequencing, sensor and actuator integrity, and wiring harness integrity.

AURKTA009 Diagnose complex faults in mobile plant hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in mobile plant hydraulic systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The hydraulic systems include those of agricultural machinery or mobile plant machinery, which may be wheeled or track type machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in mobile plant hydraulic system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for hydraulic system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Mobile plant is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

Assessment Requirements for AURKTA009 Diagnose complex faults in mobile plant hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the hydraulic systems of three different mobile plant machinery
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in mobile plant hydraulic systems, including procedures for:
 - managing stored energy in springs and accumulators
 - working with high pressure fluid hazards
 - tagging out and isolating machines, and wheel chocking
- environmental requirements, including procedures for trapping, storing and disposing of fluid released from hydraulic systems
- types of complex faults relating to mobile plant hydraulic systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair

- indirect, caused by the influence of external systems
- requirements of AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- types, function and operation of mobile plant hydraulic systems, including:
 - reservoirs
 - accumulators
 - pumps
 - valves
 - actuators
 - motors
 - filters
 - conductors and connectors
- testing procedures for mobile plant hydraulic systems, including:
 - abnormal noise analysis
 - implement creep
 - oil flow and pressure testing
 - excessive internal leakage in both actuators and pumps
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in mobile plant hydraulic systems, including:
 - scan tool
 - oil pressure gauge
 - temperature measuring equipment
 - flow meter
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant hydraulic systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mobile plant hydraulic system specifications
- hydraulic systems of three different mobile plant machinery with complex faults
- mobile plant hydraulic system diagnostic equipment, including:
 - scan tool
 - flow meter
 - oil pressure gauge
 - temperature measuring equipment
- AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- tools, equipment and materials appropriate for diagnosing complex faults in mobile plant hydraulic systems.

AURKTA010 Inspect, service and repair hay cutting, raking and baling equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, service and repair faults in hay cutting, raking and baling equipment. It involves preparing for the task, inspecting the equipment to determine the service and repair requirements, carrying out the service and repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The hay cutting, raking and baling equipment is that of agricultural machinery and refers to specialised equipment involved in baling hay. It does not cover generalised equipment and systems that form the platform or the towing vehicle. This unit does not apply to the use of headers for grain, sugar cane, cotton, rice, vegetable and fruit crops.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect hay cutting, raking and baling equipment	1.1 Job requirements are determined from workplace instructions 1.2 Inspection procedures and information for hay cutting, raking and baling equipment are sourced and interpreted 1.3 Options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Conduct inspection and analyse results	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, and include recommendations for necessary service, repairs or adjustments
3. Service and repair equipment	3.1 Service and repair procedures and information are sourced and interpreted 3.2 Service and repair tools, equipment and materials are selected and checked 3.3 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.5 Equipment and systems are test run and adjustments are carried out as required
4. Prepare equipment for operation	4.1 Variable operating parameters are identified from manufacturer specifications and analysis of proposed work environment and conditions 4.2 Equipment variables, including management system settings, controls and monitoring systems, are established and prepared for proposed operations 4.3 Equipment and systems are test run and final adjustments are

Assessment Requirements for AURKTA010 Inspect, service and repair hay cutting, raking and baling equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair:
 - hay cutting equipment
 - hay raking equipment
 - hay baling equipment, including one of the following:
 - round baler
 - small or large rectangular baler.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing hay cutting, raking and baling equipment, including procedures for:
 - isolating and stabilising equipment and machines
 - working with rotating shafts
- environmental requirements, including procedures for waste management, machine hygiene, dust and clean-up management
- operating principles of equipment, including:
 - hay cutting equipment
 - hay raking equipment
 - hay baling equipment, including for round bales or small and large rectangular bales
- application, purpose and operation of hay cutting, raking and baling equipment, including:
 - hay cutting equipment:

- disc mowers
- sickle bar mowers
- hay raking equipment:
 - side delivery rakes
 - wheel rakes
 - tedders
- round and rectangular hay baling equipment, including:
 - electronic monitoring control
 - pick-up and feed system
 - packing system
 - compression system
 - knotting system
 - ejection system
- inspection procedures for hay cutting, raking and baling equipment, including:
 - component wear analysis
 - system operation analysis
 - electronic fault code interrogation
- service and repair procedures for hay cutting, raking and baling equipment, including removing, replacing, repairing and adjusting hay cutting, raking and baling equipment components
- post-repair testing procedures for hay cutting, raking and baling equipment, including:
 - variable operating parameters
 - impact of environmental factors.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the hay cutting, raking and baling equipment that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer hay cutting, raking and baling equipment specifications
- operational hay cutting, raking and baling equipment specified in the performance evidence and requiring service and repair
- diagnostic equipment for hay cutting, raking and baling equipment
- tools, equipment and materials appropriate for inspecting, servicing, repairing and adjusting hay cutting, raking and baling equipment.

Assessment Requirements for AURKTA011 Diagnose and repair mobile plant hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the hydraulic systems of two different mobile plant or agricultural machinery, and:
 - remove, refit or replace two different types of hydraulic valves
 - remove, refit or replace one hydraulic cylinder
- in the course of the above work, undertake two the following:
 - rebuild hydraulic cylinder
 - rebuild motor or pump
 - remove, refit or replace hose
 - remove, refit or replace pump
 - remove, refit or replace motor
 - remove, refit or replace accumulator.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing mobile plant hydraulic systems, including procedures for:
 - using raising, lowering and supporting equipment
 - isolating and stabilising machines
 - working with stored hydraulic pressure
 - working with escaping high pressure oil

- working with hot fluid hazards
- environmental requirements, including procedures for trapping, storing and disposing of hydraulic fluid released from hydraulic systems
- AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- operating principles of hydraulic systems and associated components, including:
 - transmission of energy by hydraulic fluid
 - mechanical advantage
 - hydraulic circuits, including open and closed centred systems
 - temperature, force, pressure, area and flow
- application, purpose and operation of hydraulic systems and components, including:
 - reservoirs
 - gas loaded accumulators
 - pumps, including gear and piston
 - valves, including:
 - directional control, including valve banks
 - pressure control, including spike or circuit protection valving
 - flow control, including meter in and meter out
 - linear and rotary actuators
 - hoses, pipes fittings and couplings
 - heat exchangers
 - hydraulic fluids
 - hydraulic system schematics
- diagnostic testing procedures for hydraulic systems, including:
 - applying and using a flow meter to diagnose faults by carrying out an in-line, bypass or 'Tee' test to evaluate system components
 - visually inspecting hoses, pipes and connectors
 - oil sampling and contamination control
- repair procedures for hydraulic systems, including procedures for removing, replacing, repairing and adjusting hydraulic system components
- post-repair testing procedures for hydraulic systems, including:
 - operational functionality
 - flow testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant hydraulic systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mobile plant hydraulic system specifications
- two different mobile plant or agricultural machinery with hydraulic systems requiring the work specified in the performance evidence
- diagnostic tools and equipment for hydraulic systems, including pressure gauges and flow meters
- AS 1101.1 Graphic symbols for general engineering, Part 1: Hydraulic and pneumatic systems
- tools, equipment and materials appropriate for repairing and adjusting mobile plant hydraulic systems.

AURKTB001 Diagnose and repair mobile plant braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the braking systems of agricultural machinery and mobile plant machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The braking systems include those in agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair mobile plant braking system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose braking system	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair braking system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked according to manufacturer procedures 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for AURKTB001 Diagnose and repair mobile plant braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different spring applied hydraulically released mobile plant braking systems
- diagnose and repair a fault in one of the following mobile plant braking systems:
 - hydraulic applied
 - full air actuated
 - air over full hydraulic.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing mobile plant braking systems, including procedures for:
 - working with high fluid pressure and high pneumatic pressure
 - working with stored hydraulic accumulator pressures and stored pneumatic pressures
 - isolating and stabilising machines
- environmental requirements, including procedures for trapping, storing and disposing of hydraulic fluids, brake fluids and brake fibres released from braking systems
- operating principles of mobile plant braking systems and associated components, including:
 - levers
 - friction
 - pneumatics

- hydraulics, including the relationship between force, pressure and area
- mobile plant braking systems, including:
 - multi-disc wet braking systems, including associated cooling systems
 - disc braking systems
 - parking brake systems
- application, purpose and operation of mobile plant braking systems and components, including:
 - air over full hydraulic
 - full air actuated
 - hydraulic applied
 - spring applied hydraulically released
- diagnostic testing procedures for mobile plant braking systems, including:
 - component wear analysis
 - system operation analysis
- repair procedures for mobile plant braking systems, including procedures for repairing and adjusting the following braking system components:
 - multi-disc wet braking systems, including wheel end and inboard mounted
 - disc braking systems
 - parking brake systems
- post-repair testing procedures for mobile plant braking systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- workplace instructions
- manufacturer mobile plant braking system specifications
- three different mobile plant braking systems specified in the performance evidence
- diagnostic equipment for mobile plant braking systems
- tools, equipment and materials appropriate for repairing and adjusting mobile plant braking systems.

AURKTB002 Analyse and evaluate faults in wheeled mobile plant braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in wheeled mobile plant braking systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The braking systems include those of agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Workplace instructions and reports are used to determine the objective of the analysis and evaluation requirements 1.2 Benchmark specifications for wheeled mobile plant braking system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Wheeled mobile plant braking system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 <i>Tests</i> are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements and financial implications 4.3 Report is prepared specifying the analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying the rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to wheeled mobile plant braking systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised wheeled mobile plant braking system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for tagging out and isolating machines • environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from braking systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none"> • diagnostic process, sequence, tests and testing equipment.
<i>Tests</i> must include:	<ul style="list-style-type: none"> • accumulator pressure • disc stack height • pressure • system performance with regard to distance and balance • sensor, actuator and wiring harness integrity • sampling collection and processing • wear analysis relating to drums, discs and lining material • analysis of diagnostic systems.

AURKTB003 Diagnose complex faults in mobile plant braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in mobile plant braking systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The braking systems include those of agricultural machinery or mobile plant machinery, which may be wheeled or track type machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in <i>mobile plant braking system</i> is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for braking system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 <i>Testing equipment</i> is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Mobile plant is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different mobile plant.

Assessment Requirements for AURKTB003 Diagnose complex faults in mobile plant braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the braking systems of three different mobile plant machinery
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS)) requirements relating to diagnosing complex faults in mobile plant braking systems, including procedures for:
 - managing stored energy in springs and accumulators
 - working with high pressure fluid hazards
 - tagging out and isolating machines, and wheel chocking
- environmental requirements, including procedures for trapping, storing and disposing of hazardous materials and substances released from braking systems, including hydraulic fluid, brake fluids and brake fibres
- types of complex faults relating to mobile plant braking systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair

- indirect, caused by the influence of external systems
- types, function and operation of mobile plant braking systems, including:
 - hydraulic pressurised
 - spring applied hydraulically released
 - braking systems, including:
 - multi-disc wet braking systems, including wheel end and inboard mounted
 - disc braking systems
 - parking brake systems
- testing procedures for mobile plant braking systems, including:
 - abnormal noise analysis
 - brake performance test
 - oil pressure and flow testing
 - accumulator pressure
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in mobile plant braking systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mobile plant braking system specifications
- braking systems of three different mobile plant with complex faults
- mobile plant braking system diagnostic equipment, including:
 - scan tool
 - brake performance test equipment
 - oil pressure gauge
 - accumulator pressure gauge
 - component wear gauge
- tools, equipment and materials appropriate for diagnosing complex faults in mobile plant braking systems.

Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the suspension systems of mobile plant. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The suspension systems include those in agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair mobile plant suspension system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose suspension system	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures and safety requirements 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair suspension system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and prepared 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures and manufacturer specifications to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking suspension system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure suspension system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications interpret suspension system hydraulic and gas pressure gauges.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> operate diagnostic and testing equipment conduct performance testing of components, systems and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> suspension lock-out isolating and stabilising machines working with stored fluid pressures from accumulators working with high pressure fluid hazards
---	---

	<ul style="list-style-type: none">• using lifting, jacking and supporting equipment.

Assessment Requirements for AURKTD001 Diagnose and repair mobile plant suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three mobile plant suspension systems as follows:
 - one gas charged hydraulic suspension
 - two of the following:
 - pivoting axle suspension
 - solid rubber suspension
 - hydraulic suspension.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing mobile plant suspension systems, including procedures for:
 - suspension lock-out
 - isolating and stabilising machines
 - working with stored fluid pressures from accumulators
 - working with high pressure fluid hazards
 - using lifting, jacking and supporting equipment
- application, purpose and operating principles of mobile plant suspension systems and components, including:
 - suspension hydraulic circuitry
 - pivoting axle suspension

- solid rubber suspension
- gas charged hydraulic suspension
- hydraulic suspension
- pneumatic tyres
- diagnostic testing procedures for mobile plant suspension systems, including analysing:
 - component wear
 - abnormal system noise
 - suspension cylinder
 - erratic operation
- repair procedures for mobile plant suspension systems, including procedures for:
 - repairing and adjusting suspension components
 - recharging suspension cylinders
- post-repair testing procedures for mobile plant suspension systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mobile plant suspension system specifications
- three different mobile plant suspension systems specified in the performance evidence with system faults
- diagnostic equipment for mobile plant suspension systems
- tools, equipment and materials appropriate for repairing and adjusting mobile plant suspension systems.

Assessment Requirements for AURKTD002 Diagnose and repair mobile plant steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three mobile plant steering systems as follows:
 - one articulated steering system
 - two of the following systems:
 - front wheel steering
 - all wheel steering
 - differential steer
 - steering clutch and brake
- inspect and charge one accumulator according to manufacturer specifications and relevant Australian standards.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing mobile plant steering systems, including procedures for:
 - isolating and locking articulated steering systems
 - isolating and stabilising machines
 - working with stored fluid pressures from accumulators
 - working with high pressure fluid hazards
 - using lifting, jacking and supporting equipment
- environmental requirements, including procedures for trapping, storing and disposing of hydraulic fluid released from steering systems

- operating principles of mobile plant steering systems and associated components, including full hydraulic steering and:
 - safety protection valves in the circuits
 - hand metering units (HMUs) and flow amplifier
 - hydraulic and electrohydraulic control
 - accumulator steering circuit
- application, purpose and operation of mobile plant steering systems and components, including:
 - articulated steering
 - front wheel steering
 - all wheel steering
 - differential steer
 - steering clutch and brake
- identification, function and adjustment of toe-in and toe-out steering angles
- diagnostic testing procedures for mobile plant steering systems, including:
 - pressure and flow testing the system and individual components
 - accumulator tests
 - HMU and flow amplifier tests
 - testing the pressure settings on all safety protection valves in the circuit
- repair and adjustment procedures for mobile plant steering systems, including:
 - accumulator inspection and charging procedures that reflect manufacturer specifications and Australian standards
 - pressure settings and adjustment procedures for main and safety protection valves in the steering circuit
- post-repair testing procedures for mobile plant steering systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant steering systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mobile plant steering system specifications
- three different mobile plant steering systems specified in the performance evidence with system faults
- diagnostic equipment for mobile plant steering systems
- tools, equipment and materials appropriate for repairing and adjusting mobile plant steering systems.

AURKTD003 Analyse and evaluate faults in wheeled mobile plant steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in wheeled mobile plant steering and suspension systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The steering and suspension systems include those of agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for wheeled mobile plant steering or suspension system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Wheeled mobile plant steering or suspension system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Make recommendations	<p>4.1 Options for responding to the objective are determined from further research of technical support information</p> <p>4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements and financial implications</p> <p>4.3 Report is prepared specifying analysis and evaluation process, and detailing and justifying rectification method or variation to the rectification method</p>
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - steering system of a wheeled mobile plant machine
 - suspension system of a different wheeled mobile plant machine
 - steering or suspension system of a third wheeled mobile plant machine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in wheeled mobile plant steering and suspension systems, including procedures for:
 - isolating and locking articulated steering systems
 - tagging out and isolating machines
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from steering and suspension systems
- principles and processes involved in planning and implementing analysis and evaluation of faults in wheeled mobile plant steering and suspension systems
- design and planning of diagnostic procedures of wheeled mobile plant steering and suspension system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults

- procedures for analysing and evaluating wheeled mobile plant steering and suspension system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of the following systems, including:
 - steering system and components, including:
 - steering system theory
 - power assisted steering
 - hydrostatic steering
 - electrohydraulic steering
 - steer-by-wire steering
 - influences of trailer operations on mobile plant steering performance
 - suspension system and components, including:
 - wheels and tyres
 - equalising beam suspension
 - rigid frame suspension
 - oscillating axle suspension
 - hydrostatic suspension
 - gas charged hydraulic suspension
 - cushion hitch suspension
 - influences of trailer operations on mobile plant suspension performance
- testing procedures of wheeled mobile plant steering and suspension systems, including:
 - system pressure, flow rates and temperature
 - accumulator pressure
 - component wear analysis
 - suspension levellers
 - sensor, actuator and wiring harness integrity
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in wheeled mobile plant steering and suspension systems
- procedures for documenting and reporting the analysis and evaluation process.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment Requirements for AURKTD004 Analyse and evaluate faults in track type mobile plant undercarriage and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - undercarriage system of a track type mobile plant machine
 - suspension system of a different track type mobile plant machine
 - undercarriage or suspension system of a third track type mobile plant machine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in track type mobile plant undercarriage and suspension systems, including procedures for tagging out and isolating machines
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from undercarriage and suspension systems
- principles and processes involved in planning and implementing analysis and evaluation of faults in track type mobile plant undercarriage and suspension systems
- design and planning of diagnostic procedures of track type mobile plant undercarriage and suspension system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults
- procedures for analysing and evaluating track type mobile plant undercarriage and suspension system faults, including:

- system failure analysis
- component failure analysis
- types, functions, operation and limitations of the following systems, including:
 - undercarriage system and components, including:
 - track
 - rollers
 - idlers
 - frames
 - recoil mechanisms
 - suspension system and components, including:
 - rigid platform
 - low track
 - live axle
 - dead axle
 - elevated sprocket
 - equaliser bars
 - oscillating undercarriage
- testing procedures of track type mobile plant undercarriage and suspension systems, including:
 - component wear analysis
 - track alignment
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in track type mobile plant undercarriage and suspension systems
- procedures for documenting and reporting the analysis and evaluation process.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the track type mobile plant undercarriage and suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer track type mobile plant undercarriage and suspension system specifications
- three different track type mobile plant machinery with undercarriage and suspension system faults
- diagnostic equipment for track type mobile plant undercarriage and suspension systems
- tools, equipment and materials appropriate for analysing and evaluating track type mobile plant undercarriage and suspension systems.

AURKTD005 Diagnose complex faults in mobile plant steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in mobile plant steering and suspension systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician’s diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The steering and suspension systems include those of agricultural machinery or mobile plant machinery, which may be wheeled or track type machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in mobile plant steering or suspension system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to perform diagnosis	2.1 Manufacturer specifications and other technical information for steering or suspension system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.4 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Mobile plant is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different mobile plant.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking mobile plant steering and suspension system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure steering and suspension system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications use gauges and interpret units, such as kilopascals and pounds per square inch (PSI).
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and vernier calipers use specialised diagnostic equipment, such as: <ul style="list-style-type: none"> flow meter temperature and pressure gauges scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Safety and environmental requirements</i> must include:</p>	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:<ul style="list-style-type: none">• identifying hazards and controlling risks associated with hazardous materials and substances, including hydraulic fluid and nitrogen gas• managing stored energy in springs and accumulators• working with high pressure and high temperature fluid hazards• tagging out and isolating machines, and wheel chocking• environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from steering and suspension systems.

Assessment Requirements for AURKTD005 Diagnose complex faults in mobile plant steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the:
 - steering system of a mobile plant machinery
 - suspension system of a different mobile plant machinery
 - steering or suspension system of a third mobile plant machinery
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in mobile plant steering and suspension systems, including procedures for:
 - identifying hazards and controlling risks associated with hazardous materials and substances, including hydraulic fluid and nitrogen gas
 - managing stored energy in springs and accumulators
 - working with high pressure and high temperature fluid hazards
 - tagging out and isolating machines, and wheel chocking
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from steering and suspension systems

- types of complex faults relating to mobile plant steering and suspension systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- types, function and operation of mobile plant steering and suspension systems, including:
 - steering systems, including:
 - articulated steering
 - front wheel steering
 - all wheel steering
 - differential steer
 - steering clutch and brake system
 - suspension systems, including:
 - spring
 - solid rubber
 - gas charged hydraulic
 - hydraulic
- testing procedures for mobile plant steering and suspension systems, including procedures for:
 - operational tests
 - abnormal noise analysis
 - flow, temperature and pressure tests
 - component wear analysis
 - sources of fluid leaks
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in mobile plant steering and suspension systems, including flow, temperature and pressure gauges
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant steering and suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mobile plant steering and suspension system specifications
- steering and suspension systems of three different mobile plant machinery with complex faults
- mobile plant steering and suspension system diagnostic equipment, including:
 - flow, temperature and pressure gauges
 - scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in mobile plant steering and suspension systems.

AURKTE001 Analyse and evaluate faults in mobile plant engine and fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in mobile plant engine and fuel systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The engine and fuel systems include those of agricultural machinery or mobile plant machinery, which may be wheeled or track type machinery.

This unit does not apply to heavy commercial vehicle engines and fuel systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for mobile plant engine or fuel system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Mobile plant engine or fuel system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to mobile plant engine and fuel systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.

Assessment Requirements for AURKTE001 Analyse and evaluate faults in mobile plant engine and fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - engine system of a mobile plant machine
 - fuel system of a different mobile plant machine
 - engine or fuel system of a third mobile plant machine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in mobile plant engine and fuel systems, including procedures for:
 - working with high pressure fuel hazards
 - tagging out and isolating machines
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from engine and fuel systems
- principles and processes involved in planning and implementing analysis and evaluation of mobile plant engine and fuel system faults
- design and planning of diagnostic procedures of mobile plant engine and fuel system faults, including procedures for diagnosing:
 - mechanical faults
 - electrical faults
 - fuel system faults

- procedures for analysing and evaluating mobile plant engine and fuel system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of the following systems:
 - engine and components
 - fuel system and components
- impact of other associated vehicle systems on mobile plant engine and fuel system operation, including:
 - engine electrical system and components
 - intake system and components, including:
 - air charge cooling
 - after/inter-cooling arrangements
 - exhaust system and components, including single and multi-staged turbo charging
 - lubrication system and components
 - cooling system and components
- testing procedures for mobile plant engine and fuel systems, including:
 - engine wear analysis
 - engine performance
 - intake, exhaust, crank case and turbocharger boost
 - exhaust gas analysis
 - sensor, actuator and wiring harness integrity
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in mobile plant engine and fuel systems
- procedures for documenting and reporting the analysis and evaluation process.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant engine and fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mobile plant engine and fuel system specifications
- three different mobile plant machinery with engine and fuel system faults
- diagnostic equipment for mobile plant engine and fuel systems
- tools, equipment and materials appropriate for analysing and evaluating mobile plant engine and fuel systems.

AURKTJ004 Conduct non-destructive testing of wheel and rim assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to conduct non-destructive testing of vehicle wheel and rim assemblies. It requires the ability to use technical skills to prepare for and conduct non-destructive testing.

It applies to those who conduct non-destructive testing of vehicle wheels and rims in order to determine their serviceability by checking for material defects and malfunctions.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for non-destructive testing	<p>1.1 Workplace procedures and manufacturer instructions are used to determine job requirements</p> <p>1.2 Inspection area is cleaned and prepared for testing using workplace materials and in line with required procedures</p> <p>1.3 Tools and equipment are checked for safety and serviceability</p>

ELEMENTS	PERFORMANCE CRITERIA
	1.4 Non-destructive test equipment is prepared according to manufacturer instructions and workplace procedures 1.5 Work area and equipment problems are reported to appropriate personnel
2. Perform non-destructive testing	2.1 Testing methods are determined in line with workplace procedures and manufacturer specifications 2.2 Hazards and safety requirements associated with testing are identified and addressed 2.3 Testing is performed according to workplace procedures and manufacturer instructions 2.4 Non-conformance and defects are identified against workplace procedures and manufacturer instructions 2.5 Test results are verified and documented according to workplace procedures
3. Clean work area	3.1 Testing equipment is maintained and stored according to workplace procedures 3.2 Work area is cleaned and prepared for subsequent use

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description

Assessment Requirements for AURKTJ004 Conduct non-destructive testing of wheel and rim assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must have competently conducted non-destructive testing on wheels and rims on a minimum of four occasions, using at least two of the following hardness testing methods:

- penetrant
- magnetic
- Rockwell
- Brinell.

Individuals must demonstrate they can:

- prepare equipment for testing, including zeroing and calibration checks
- select and apply testing methods
- verify test results
- record test outcomes.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- principles and methods of penetrant, magnetic, Rockwell and Brinell hardness testing, and limitations, advantages and hazards associated with the testing
- non-destructive testing terminology
- non-destructive test equipment use, maintenance and storage
- non-destructive testing preparation procedures
- non-destructive testing verification methods and techniques
- non-destructive testing analysis techniques
- reporting and recording procedures relevant to non-destructive testing.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the equipment that they have worked on, e.g. test results.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- Australian standards relevant to the non-destructive testing of wheel and rim assemblies
- workplace procedures and manufacturer instructions
- non-destructive testing equipment
- workplace location or simulated workplace.

AURKTJ011 Remove, inspect and fit earthmoving and off-the-road tyres

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove, inspect and fit earthmoving and off-the-road (OTR) tyres to construction and mining vehicles. It involves removing the tyre from the rim, identifying and controlling risks, inspecting the tyre, assembling the wheel and rim, recommending required repair action, inflation, deflation, and preparing the tyre, wheel and rim assembly for use or storage.

It applies to those who fit tyres to wheel and rim assemblies of not less than 600 mm (24 inches) nominal diameter.

Licensing, legislative, regulatory, Australian standards or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Assess and control risks	1.1 Identify and control hazardous conditions in the work environment 1.2 Identify and apply safety requirements to control hazardous tyre, wheel and rim assembly conditions, noting points where safety checks are required 1.3 Obtain and interpret emergency procedures and be prepared for fires, accidents and emergencies

ELEMENTS	PERFORMANCE CRITERIA
	1.4 Identify hazards and environmental issues, assess potential risks, and implement control measures in line with workplace policies
2. Prepare to remove tyre from wheel or rim	2.1 Obtain and interpret manufacturer procedures original equipment manufacturer (OEM) specifications, workplace procedures, and applicable standards for earthmoving and off-the-road tyres 2.2 Obtain, interpret, clarify and confirm work requirements 2.3 Plan sequence of work, noting points where safety checks are required 2.4 Select and wear personal protective equipment required for the work activity 2.5 Coordinate and communicate planned activities with others at the site as per work requirements 2.6 Identify tyre, wheel and rim components 2.7 Select and inspect tools and equipment according to manufacturer instructions and workplace procedures 2.8 Prepare, clean and inspect tyre, wheel and rim assembly for damage, wear, corrosion, foreign material, cracks, and compatibility of component
3. Deflate and remove tyre from wheel or rim	3.1 Isolate, jack, raise and support vehicle according to workplace procedures 3.2 Deflate tyre according to manufacturer instructions and workplace procedures 3.3 Verify appropriate deflation of tyre in line with workplace procedures and OEM requirements 3.4 Apply workplace procedures for the safe removal and purging of hazardous fill substances 3.5 Remove tyre according to workplace procedures and without causing component damage or injury
4. Inspect tyre, wheel or rim and recommend repair and replacement actions for unserviceable components	4.1 Clean and visually inspect tyre, wheel or rim for serviceability and compatibility for application according to workplace procedures and OEM specifications 4.2 Record and report inspection findings according to workplace procedures 4.3 Document recommended repair and replacement actions and report to relevant personnel according to workplace procedures
5. Fit tyre to wheel or rim	5.1 Access and interpret workplace procedures and OEM specifications for fitting tyres 5.2 Assess need for tyre additive and nitrogen and add where required

ELEMENTS	PERFORMANCE CRITERIA
	<p>5.3 Fit tyre according to workplace and manufacturer procedures</p> <p>5.4 Perform post-fit inspections of tyre, wheel and rim assembly according to workplace procedures to confirm correct assembly, component compatibility, serviceability, and correct seating of components prior to inflation</p>
6. Inflate tyre	<p>6.1 Identify and apply tyre inflation safety procedures</p> <p>6.2 Inflate tyre for transport, storage or use according to workplace procedures and manufacturer specifications</p> <p>6.3 Monitor tyre, wheel and rim assembly during inflation according to workplace procedures</p>
7. Complete work processes	<p>7.1 Perform final inspection to ensure work meets workplace requirements and OEM requirements</p> <p>7.2 Prepare tyre, wheel and rim assembly for use or storage according to workplace procedures</p> <p>7.3 Inspect and store tools and equipment according to workplace procedures, tagging or reporting where necessary</p> <p>7.4 Complete workplace documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> • read and interpret: <ul style="list-style-type: none"> • written information in workplace procedures, manufacturer instructions, and work health and safety (WHS) requirements relating to removing, inspecting and fitting earthmoving and off-the-road (OTR) tyres • charts, lists, drawings and other applicable documents.
Writing skills to:	<ul style="list-style-type: none"> • document inspection findings and recommend repair and replacement actions • engage with workplace documents.
Oral communication skills to:	<ul style="list-style-type: none"> • ask questions to clarify inspection observations, instructions and procedures

	<ul style="list-style-type: none"> • report inspection results • brief team and customers
Numeracy skills to:	<ul style="list-style-type: none"> • read and interpret metric and imperial systems of measurement • read and interpret mathematical information, including charts and drawings • use specialist tools and measuring equipment, including: <ul style="list-style-type: none"> • gauges and pressure regulators • pressure testing tools.
Digital literacy skills to:	<ul style="list-style-type: none"> • use workplace computerised technology and tools relating to the removal and refitting of earthmoving and OTR tyres.
Planning and organising skills to:	<ul style="list-style-type: none"> • plan and prioritise own work to achieve required outcomes • plan appropriate risk controls to minimise risks before, during and after the tyre fitting process.
Self-management skills to:	<ul style="list-style-type: none"> • select and use appropriate equipment, materials, processes and procedures • recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> • seek information and assistance as required to solve problems • identify tyre, wheel and rim assembly condition and performance • match tyres to wheel and rim assemblies and vehicle type.
Teamwork skills to:	<ul style="list-style-type: none"> • work alongside other team members in a work environment, including those fulfilling other roles, such as riggers, dogmen, mechanics, tyre fitters, drivers and site operators.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Safety requirements must include:	<ul style="list-style-type: none"> • those prescribed under applicable standards, WHS Acts and regulations, and workplace policies and procedures • isolation procedures • hazard control • manual-handling techniques • personal protective clothing and equipment • using tools and equipment • working with hazardous substances, including: <ul style="list-style-type: none"> • nitrogen gas • chemicals • hydraulic pressure
-----------------------------------	---

	<ul style="list-style-type: none"> • compressed air • polyurethane resin (PUR) tyre fill • tyre additive
Tools and equipment must include:	<ul style="list-style-type: none"> • tyre handling equipment • bead breakers • rim and wheel assembly stands • inspection stands • hand tools • inflation and deflation tools and pressure gauges • lock ring catcher • mufflers • pneumatic tools • hydraulic tools • power tools • soft face hammers • support stands or jacks • torque tools • tyre levers • wire brushes • air compressors • gauges
Hazardous conditions must include:	<ul style="list-style-type: none"> • changing and unstable ground conditions • dust • sparks from use of grinders • hard, soft or uneven ground conditions • line of fire during inflation of tyre, wheel or rim assembly • noise • vehicles/pedestrians/machinery/other personnel within the workplace • handling of tyres, rim components and assemblies
Hazardous tyre and wheel or rim conditions must include:	<ul style="list-style-type: none"> • damage • wear • corrosion • foreign material • cracks • heat damage, including pyrolysis • compatibility of rim components • hazardous fill substances, including nitrogen gas, calcium chloride and polyurethane resin (PUR) • under- or over-inflated tyre
Rim and wheel component	<ul style="list-style-type: none"> • adaptor rings and plates

assemblies must include:	<ul style="list-style-type: none"> • bolts • cleats • nuts • reducers • spacer bands • studs • washers • wedge bands • wedges

Assessment Requirements for AURKTJ011 Remove, inspect and fit earthmoving and off-the-road tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate removing, inspecting, and refitting industrial earthmoving and off-the-road (OTR) tyres and tubes that safely follows workplace procedures to meet required outcomes on a minimum of three occasions. The candidate must:

- locate and interpret required documentation, policies and procedures
- complete workplace documentation, including:
 - risk assessments
 - work health and safety (WHS) documentation
 - workplace tyre change documentation.
- mitigate site and task hazards, including one of the following hazardous substances:
 - chemicals
 - hydraulic pressure
 - compressed air
 - nitrogen gas
 - polyurethane resin (PUR) tyre fill
 - tyre additive
- identify tyre profile and matching requirements
- identify and control hazardous conditions, including:
 - inspection of tyres, wheel and rim assemblies for:
 - damage
 - wear
 - corrosion
 - foreign material
 - cracks
 - heat damage, including pyrolysis
 - compatibility of components

- hazardous fill substances
- the inspections listed above must take place on the following wheel and rim configurations:
 - three piece wheel or rim assembly
 - five piece wheel or rim assembly
 - split wheel or rim assembly
- deflate tyre and remove from wheel or rim without causing component damage
- clean and inspect tyre, wheel or rim assembly for serviceability
- inspect mounting components and fasteners for cleanliness, damage, wear, corrosion, foreign material and cracks
- fit tyre to wheel or rim and conduct post-fit inspection
- inflate tyre, monitoring tyre, and wheel or rim assembly throughout
- undertake post-work inspection and complete work processes

The above work must be performed on tyres fitted to wheel or rim assemblies of not less than 600 mm (24 inches) nominal diameter. In the course of the work above, tyre handling equipment must be utilised at least once.

Knowledge Evidence

The candidate must demonstrate the following knowledge:

- Key policies and procedures for removing, inspecting and fitting earthmoving and OTR tyres, including:
 - how to locate and interpret manufacturers specifications, applicable standards for earthmoving and OTR tyres, and workplace procedures for removing, inspecting and fitting earthmoving and off-the-road tyres
 - WHS requirements relevant to removing, inspecting and fitting earthmoving and OTR tyres
 - applicable standards, including Australian standards, and workplace policies relevant to removing, inspecting and fitting earthmoving and OTR tyres
 - procedures relating to earthmoving and OTR tyres:
 - hazard identification and risk control methods, including operating indoors and outdoors, as well as at night time
 - inflation and deflation, including pre- and post-checks
 - pre-removal inspection
 - ballast identification, types and application
 - tyre fill identification, types and application
 - tyre fill adding/removal methods
 - tyre additives types and applications
 - post-fitting inspection
 - serviceability requirements relating to tyres, wheels and rims
 - crack testing for rim components
- removal procedures of earthmoving and OTR wheel and rim assemblies relating to:

- methods for undoing fasteners
 - methods for handling earthmoving and OTR wheel and rim assemblies
 - wheel and rim and components, including identification and matching criteria
 - split wheel
 - rim or hub-mounted multi-piece rim
 - one piece wheel and rim
-
- Earthmoving and OTR vehicle tyres, wheels and rim assembly information including:
 - types and classifications of earthmoving and OTR tyres, rims and wheel assemblies
 - types of mounting systems, tools and equipment for removing and fitting earthmoving and OTR wheel and rim assemblies
 - workplace tyre management systems, including:
 - paper-based tyre management systems
 - digital tyre management systems

Assessment Conditions

The assessment must:

- include access to:
 - a workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to removing, inspecting and fitting earthmoving and OTR tyres, wheels and rim assemblies
 - WHS requirements and workplace procedures relevant to removing, inspecting and fitting earthmoving and OTR tyres
 - manufacturer specifications and procedures or equivalent documentation to remove, inspect and fit earthmoving and OTR tyres
 - applicable standards for removing, inspecting and fitting earthmoving and OTR tyres, wheels and rim assemblies
 - tyre handing equipment, including one of the following:
 - crane
 - earthmoving and OTR tyre handler
 - forklift
 - grab truck
 - integrated tool handler
 - earthmoving and OTR tyres, wheels and rim assemblies of not less than 600mm (24 inches) nominal diameter
 - tyre, wheel and rim assembly specifications and workplace instructions

- tools and equipment required for removing, inspecting and fitting earthmoving and OTR tyres
- personal protective clothing and equipment required for the activities described in the performance evidence be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards

Links

Companion Volume Implementation Guides are found in VETNet -

AURKTJ012 Remove, inspect and fit earthmoving and off-the-road wheel and rim assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove, inspect and fit earthmoving and off-the-road (OTR) wheel and rim assemblies and fasteners for fitment. It involves assessing and controlling risks, preparing for the task, removing, inspecting and refitting wheel and rim assemblies, inflating the tyre and completing workplace processes and documentation.

It applies to those who fit wheel assemblies and rim assemblies of not less than 600 mm (24 inches) nominal diameter.

Licensing, legislative, regulatory, Australian standards or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Assess and control risk	1.1 Identify and control hazardous conditions in work environment 1.2 Identify and control hazardous wheel and rim assembly conditions, noting points where safety checks are required 1.3 Obtain and interpret emergency procedures and be prepared for fires, accidents and emergencies 1.4 Identify hazards and environmental issues, assess potential risks, and implement control measures in line with workplace policies

<p>2. Prepare to remove wheel and rim assembly from vehicle</p>	<p>2.1 Obtain and interpret manufacturer instructions, original equipment manufacturer (OEM) specifications, workplace procedures safety information and applicable standards for earthmoving and off-the-road tyres</p> <p>2.2 Obtain, interpret, clarify and confirm work requirements</p> <p>2.3 Plan sequence of work, noting points where safety checks are required</p> <p>2.4 Select and wear personal protective equipment appropriate for work activities</p> <p>2.5 Coordinate and communicate planned activities with others at the site prior to commencement of work activity</p> <p>2.6 Select and inspect tools and equipment according to manufacturer instructions and workplace procedures</p> <p>2.7 Identify wheel and rim assembly type, fastening system and handling equipment required to complete work activity</p> <p>2.8 Clean wheel and rim assembly, and inspect visually for damage, wear, corrosion, foreign material, cracks and compatibility of components to assess potential health and safety threats according to workplace procedures</p>
<p>3. Remove wheel and rim assembly from vehicle</p>	<p>3.1 Isolate, jack, raise and support vehicle according to workplace procedures, including vertical mounting procedures</p> <p>3.2 Deflate tyre before removal from vehicle according to workplace procedures</p> <p>3.3 Verify appropriate deflation of tyre in line with workplace procedures and OEM requirements</p> <p>3.4 Remove tyre, wheel and rim assembly according to workplace procedures and without causing component damage or injury</p> <p>3.5 Apply workplace procedures for transport and storage of wheel and rim assembly</p>
<p>4. Inspect mounting surfaces and fasteners</p>	<p>4.1 Visually inspect mounting components, fasteners and surfaces for damage, wear, corrosion, foreign material and cracks according to manufacturer instructions and workplace procedures, and discard damaged fasteners</p> <p>4.2 Record and report findings according to workplace procedures</p>
<p>5. Fit wheel and rim assembly</p>	<p>5.1 Compare condition of wheel and rim assembly against manufacturer specifications and ensure it is suitable for application, managing non-conformance as per workplace procedures</p> <p>5.2 Assess cleanliness of mating surfaces, and clean where required</p> <p>5.3 Fit wheel and rim assembly using handling equipment according</p>

	<p>to workplace procedures</p> <p>5.4 Check positioning and alignment of wheel and rim assembly prior to fastening</p> <p>5.5 Vertically mount wheel and rim assembly in accordance with workplace procedures</p> <p>5.6 Apply wheel and rim assembly tightening sequence and torque settings according to manufacturer specifications and workplace procedures</p>
6. Inflate tyre	<p>6.1 Identify and apply tyre inflation safety procedures prior to inflating tyre</p> <p>6.2 Inflate tyre according to workplace procedures and manufacturer recommendations</p> <p>6.3 Monitor tyre, wheel and rim assembly during inflation according to workplace procedures</p>
7. Complete work processes	<p>7.1 Lower vehicle according to workplace procedures</p> <p>7.2 Re-check wheel and rim fastener torque settings according to workplace procedures and manufacturer specifications</p> <p>7.3 Check wheel and rim assembly clearances according to manufacturer specifications</p> <p>7.4 Perform final inspection to ensure work meets workplace requirements</p> <p>7.5 Inspect and store tools and equipment according to workplace procedures, tagging or reporting where necessary</p> <p>7.6 Complete and process workplace documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> • read and interpret: <ul style="list-style-type: none"> • written information in workplace procedures, manufacturer instructions, and work health and safety (WHS) requirements relating to removing, inspecting and fitting earthmoving and off-the-road (OTR) wheel and rim assemblies • charts, lists, drawings and other applicable documents.
Writing skills to:	<ul style="list-style-type: none"> • document inspection findings and recommended repair actions.

Skills	Description
	<ul style="list-style-type: none"> engage with workplace documents.
Oral communication skills to:	<ul style="list-style-type: none"> follow oral instructions ask questions to clarify observations, instructions and procedures report inspection results brief team and customers.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret metric and imperial systems of measurement use specialist tools and measuring equipment, including: <ul style="list-style-type: none"> gauges pressure testing tools read and interpret mathematical information, including charts and drawings.
Digital literacy skills to:	<ul style="list-style-type: none"> use workplace computerised technology and tools relating to removing and refitting earthmoving and OTR wheel and rim assemblies.
Planning and organising skills to:	<ul style="list-style-type: none"> plan and prioritise own work to achieve required outcomes plan appropriate risk controls to minimise risks before, during and after the tyre fitting process.
Self-management skills to:	<ul style="list-style-type: none"> select and use appropriate equipment, materials, processes and procedures recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	<ul style="list-style-type: none"> seek information and assistance as required to solve problems identify tyre condition and performance match wheel and rim assemblies to tyres and vehicle type.
Teamwork skills to:	<ul style="list-style-type: none"> work alongside other team members in a work environment, including those fulfilling other roles, such as riggers, dogmen, mechanics, tyre fitters, drivers and site operators.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Safety requirements must include:	<ul style="list-style-type: none"> those prescribed under applicable standards, workplace health and safety regulations, and workplace policies and procedures isolation procedures hazard control
-----------------------------------	---

	<ul style="list-style-type: none"> • manual-handling techniques • personal protective clothing and equipment • use of tools and equipment • working with dangerous or toxic substances: <ul style="list-style-type: none"> • chemicals • compressed air • nitrogen gas • polyurethane resin (PUR) tyre fill • tyre additive.
Wheel and rim assembly must include:	<ul style="list-style-type: none"> • demountable type or disk type wheel assemblies • split wheel or multi-piece wheel • tyre and rim assembly • tyre and rim mounted to a hub.
Tools and equipment must include:	<ul style="list-style-type: none"> • tyre handling equipment. • bead breakers • hand tools • inflation and deflation tools and pressure gauges • jacks • mufflers • pneumatic tools • hydraulic tools • power tools • soft face hammers • support stands • torque tools • tyre levers • wire brushes • inflation pressure gauges.
Hazardous conditions must include:	<ul style="list-style-type: none"> • changing and unstable ground conditions • dust • hard, soft or uneven ground conditions • line of fire for tyre components • noise • vehicles/pedestrians/machinery/other personnel within the workplace.
Hazardous wheel and rim assembly conditions must include:	<ul style="list-style-type: none"> • wheel and rim component defects • tyre defects • other conditions may include: <ul style="list-style-type: none"> • blocked or damaged valves • cracks • corrosion

	<ul style="list-style-type: none"> • cuts and damage • distortion • dislodged components • heat damage • leakage • mechanical damage • structural damage • under- or over-inflated tyre • valve gear • wear.
Mounting components and fasteners must include:	<ul style="list-style-type: none"> • bolts • cleats • nuts • reducers • spacer bands • studs • washers • wedge or cleat retaining systems.

Assessment Requirements for AURKTJ012 Remove, inspect and fit earthmoving and off-the-road wheel and rim assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate removing, inspecting, and refitting industrial earthmoving and off-the-road (OTR) wheel and rim assemblies that safely follows workplace procedures to meet required outcomes on a minimum of three occasions. The candidate must:

- locate and interpret required documentation, policies and procedures
- apply appropriate control measures to mitigate hazardous conditions in work environment and hazardous tyre, wheel and rim assembly conditions
- use raising and supporting equipment to raise vehicle in accordance with workplace procedures
- deflate tyre safely and in accordance with workplace procedures
- remove wheel and rim assembly in accordance with workplace procedures
- inflate tyre safely and in accordance with workplace procedures
- monitor tyre, wheel and rim assembly throughout inflation of tyre
- fit tyre, wheel and rim assembly including using the correct:
 - isolation procedures
 - tightening sequence
 - torque settings
 - inflation process and pressure
 - alignment
- check and confirm the following prior to fastening:
 - component compatibility
 - tyre, wheel and rim component serviceability
 - correct assembly of wheel and rim assembly
- safely lower vehicle
- undertake post-work inspection and complete work processes, including storage of tools and equipment
- transport and store tyre, wheel and rim assembly

- complete workplace documentation, including:
 - relevant risk assessments
 - tyre, wheel and rim assembly change documentation.

The above work must be performed on tyres fitted to wheel assemblies and rim assemblies of not less than 600 mm (24 inches) nominal diameter. In the course of the work above, the candidate must:

- utilise tyre handing equipment at least once.
- prepare, clean and inspect tyre, wheel and rim assembly for damage and serviceability, recommending repair and replacement actions for each of the following wheel or rim configurations:
 - three piece wheel or rim assembly
 - five piece wheel or rim assembly
 - split wheel or rim assembly
 -

Knowledge Evidence

The candidate must demonstrate the following knowledge:

- Key policies and procedures for removing, inspecting and fitting earthmoving and OTR wheel and rim assemblies, including:
 - how to locate and interpret manufacturers specifications, applicable standards and workplace procedures for removing, inspecting and fitting earthmoving and off-the-road wheel and rim assemblies
 - applicable standards for removing, inspecting and fitting earthmoving and OTR wheel and rim assemblies
 - WHS requirements relevant to removing, inspecting and fitting earthmoving and OTR tyres
- procedures relating to earthmoving and OTR wheel and rim assemblies:
 - fitting
 - hazard identification and risk control methods, including but not limited to those relating to:
 - hydraulic tooling
 - pneumatic tooling
 - torque measurement when tightening wheel or rim fasteners
 - inflation and deflation of tyres
 - inspection
 - pre-removal inspection
 - post-fitting inspection
- raising, supporting and lowering procedures for mining and construction vehicles that include soft ground support procedures and systems
- removal procedures of earthmoving and OTR wheel and rim assemblies:
 - methods for undoing wheel or rim fasteners

- handling methods
 - two piece industrial rim
 - disk or demountable multi piece rim
 - one piece wheel and rim
- Earthmoving and OTR vehicle tyres, wheels and rim assembly information including:
 - types and classifications of earthmoving and OTR tyres, wheels and rim assemblies
 - types of mounting systems for earthmoving and OTR wheel and rim assemblies.
 -

Assessment Conditions

The assessment must:

- include access to:
 - a workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to removing, inspecting and fitting earthmoving and OTR wheel and rim assemblies
 - WHS requirements and workplace procedures relevant to removing, inspecting and fitting earthmoving and OTR wheel and rim assemblies
 - manufacturer specifications and procedures or equivalent documentation to remove, inspect and fit earthmoving and OTR wheel and rim assemblies
 - applicable standards relevant to removing, inspecting and fitting earthmoving and OTR wheel and rim assemblies
 - tyre handing equipment, including one of the following:
 - crane
 - earthmoving and OTR tyre handler
 - forklift
 - grab truck
 - integrated tool handler
 - earthmoving and OTR wheel and rim assemblies
 - WHS requirements relevant to removing, inspecting and fitting earthmoving and OTR wheel and rim assemblies
 - tools and equipment appropriate for removing and fitting earthmoving and OTR wheel and rim assemblies
 - tyre, wheel and rim assembly specifications and workplace instructions
 - operational vehicles with earthmoving and OTR wheel and rim assemblies
 - personal protective clothing and equipment required for the activities described in the performance evidence

- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.
-

AURKTJ013 Perform minor repairs to earthmoving and off-the-road tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and perform minor repairs to earthmoving and off-the-road (OTR) tyres. It involves preparing for the task, inspecting and carrying out minor tyre repairs and completing work processes.

It applies to those who fit earthmoving and OTR tyres, wheel and rim assemblies of not less than 600 mm (24 inches) nominal diameter.

Licensing, legislative, regulatory, Australian standards or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for inspection of the tyre	1.1 Obtain and interpret Australian standards for earthmoving and OTR tyres, workplace procedures and safety information 1.2 Identify site and task hazards, assess potential risks, and implement control measures in line with workplace policies 1.3 Complete initial workplace documentation for tyre inspection 1.4 Prepare and clean tyre for inspection

ELEMENTS	PERFORMANCE CRITERIA
	1.5 Position and secure tyre for inspection
2. Inspect the tyre	2.1 Identify extent and nature of internal and external tyre damage 2.2 Categorise damage in line with Australian standards 2.3 Identify repairable and non-repairable damage 2.4 Assess overall repairability and extent of repairs required
3. Carry out minor repair	3.1 Access and interpret information on appropriate manufacturer instructions and Australian standards 3.2 Identify task hazards and risks and apply risk controls to the equipment to be used 3.3 Carry out minor repair to tyre according to workplace procedures, manufacturer instructions and Australian standards
4. Complete work processes	4.1 Complete workplace documentation relating to tyre repair 4.2 Complete inspection documentation according to Australian standards 4.3 Store tyre according to workplace procedures 4.4 Clear work area and dispose of or recycle waste materials according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify information and assistance in manufacturer instructions and Australian standards relating to the inspection and repair of earthmoving and OTR tyres
Reading skills to:	<ul style="list-style-type: none"> read and interpret information in: <ul style="list-style-type: none"> written Australian standards, workplace procedures and manufacturer instructions charts, lists, drawings and other applicable documents.
Writing skills to:	<ul style="list-style-type: none"> document required repair actions complete inspection documentation.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions and procedures report inspection and repair results.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret metric and imperial systems of measurement. read and interpret mathematical information, including charts and

Assessment Requirements for AURKTJ013 Perform minor repairs to earthmoving and off-the-road tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate performance of minor repairs to earthmoving and off-the-road (OTR) tyres that safely follows workplace procedures to meet required outcomes, on a minimum of three occasions. This includes:

- determining control measures required to mitigate site and task hazards
- cleaning, preparing, positioning and securing the tyre for inspection
- inspecting the tyre for internal and external damage, categorise damaging and determining repairability of damage
- safely carry out minor repairs utilising workplace procedures, manufacturer instructions and Australian standards
- completing work processes, including storage of equipment and documentation.

The above work must be performed on wheel assemblies and rim assemblies of not less than 600 mm (24 inches) nominal diameter.

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for performing of minor repairs to earthmoving and OTR tyres, including:

- how to locate and interpret manufacturers specifications, Australian standards and workplace procedures for inspecting and repairing earthmoving and OTR tyres
- hazard identification procedures and risk control methods relevant to inspecting and repairing earthmoving and OTR tyres
- inspection procedures for earthmoving and OTR tyres
- procedures for identifying and undertaking minor repairs to earthmoving and OTR tyres
- procedures for reporting damage and repair work on earthmoving and OTR tyres

Key types of tyre damage, including repairable and non-repairable damage including:

- indicators of tyre damage.
-

Assessment Conditions

The assessment must:

- include access to:
 - a workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to performing minor repairs to earthmoving and OTR tyres
 - WHS requirements and workplace procedures relevant to performing minor repairs to earthmoving and OTR tyres
 - manufacturer specifications and procedures or equivalent documentation for performing minor repairs to earthmoving and OTR tyres
 - Australian standards relevant to performing minor repairs to earthmoving and OTR tyres
 - earthmoving and OTR tyres
 - manufacturer instructions and workplace procedures relevant to performing minor repairs to earthmoving and OTR tyres
 - tools and equipment required for performing minor repairs to earthmoving and OTR tyres
 - workplace location or simulated workplace
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.
-

AURKTJ015 Select earthmoving and off-the-road tyres, wheels and rim assemblies for specific applications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to select earthmoving and off-the-road (OTR) vehicle tyres, wheels and rim assemblies to suit specific applications. It involves identifying and confirming work requirements, preparing for work, selecting tyres, wheels and rim assemblies and completing work finalisation processes.

It applies to those working on earthmoving and OTR vehicle tyres, wheels and rim assemblies in the mining, construction and other industrial environments.

Licensing, legislative, regulatory, Australian standards or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to select tyres, wheels and rim assemblies	1.1 Identify customer and job requirements from workplace instructions 1.2 Source information required to select tyres, wheels and rim assemblies
2. Determine appropriate	2.1 Access information required to select earthmoving and OTR

ELEMENTS	PERFORMANCE CRITERIA
tyres, wheels and rim assemblies	<p>tyres, wheels and rim assemblies from manufacturer and component supplier specifications</p> <p>2.2 Analyse tyre, wheel and rim assembly options to identify technical compliance, economic benefits and operational requirements</p> <p>2.3 Carry out selection procedures according to workplace instructions and work health and safety (WHS) requirements</p> <p>2.4 Select product according to customer requirements, manufacture and component supplier specifications</p>
3. Complete selection of tyres, wheels and rim assemblies	<p>3.1 Brief customer on product selection</p> <p>3.2 Complete required documentation regarding selection according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> identify sources of information and assistance in selecting earthmoving and OTR tyres, wheels and rim assemblies.
Reading skills to:	<ul style="list-style-type: none"> read and interpret written information in: <ul style="list-style-type: none"> job instructions manufacturer and component supplier specifications workplace instructions.
Writing skills to:	<ul style="list-style-type: none"> complete workplace documentation document product selection.
Oral communication skills to:	<ul style="list-style-type: none"> ask questions to clarify instructions, procedures or customer requirements brief customer on product selection follow oral instructions.
Numeracy skills to:	<ul style="list-style-type: none"> read and interpret both metric and imperial systems of measurement. interpret numerical information in: <ul style="list-style-type: none"> job instructions manufacturer and component supplier specifications workplace instructions relating to wheels, rim assemblies, and tyres.

Skills	Description
Problem-solving skills to:	<ul style="list-style-type: none"> • seek information and assistance to solve problems.

Assessment Requirements for AURKTJ015 Select earthmoving and off-the-road tyres, wheels and rim assemblies for specific applications

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate selection of two different earthmoving and off-the-road (OTR) tyres, wheels and rim assemblies for specific applications that follows workplace procedures to meet required outcomes. This includes:

- accessing and interpreting information required for selecting tyres, wheels and rim assemblies
- selecting a range of earthmoving and OTR vehicle tyres, wheels and rim assemblies appropriate to customer, workplace, manufacturer and component supplier requirements, whilst observing safety procedures and requirements.

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for selecting earthmoving and OTR tyres, including:

- how to locate and interpret manufacturers specifications, Australian standards and workplace procedures for to earthmoving and OTR vehicle tyres, wheels and rim assemblies
- work health and safety (WHS) requirements relating to selecting earthmoving and OTR vehicle tyres, wheels and rim assemblies

Earthmoving and OTR vehicle tyres, wheels and rim assembly information including:

- tyres, wheels and rim assembly terminology and codes
- tread patterns
- tyre and wheel and rim assembly types and their applications
-

Assessment Conditions

The assessment must:

- include access to:
 - a workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to selecting earthmoving and OTR tyres, wheels and rim assemblies
 - WHS requirements and workplace procedures relevant to selecting earthmoving and OTR tyres
 - manufacturer specifications and procedures or equivalent documentation to selecting earthmoving and OTR tyres
 - Australian standards relating to earthmoving and OTR vehicle tyres, wheels and rim assemblies
 - earthmoving and OTR vehicles with tyres, wheels and rim assemblies
 - manufacturer and component supplier specifications
 - workplace instructions.
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.
-

AURKTJ016 Use earthmoving and off-the-road tyre handlers

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to use an earthmoving and off-the-road (OTR) tyre handler. It includes checking the tyre handler and work site for suitability, operating the tyre handler, and completing work according to operational requirements.

It applies to those who fit earthmoving and OTR tyres, wheels and rim assemblies of not less than 600 mm (24 inches) nominal diameter, noting that this may vary based on the occupation of the learner.

Earthmoving and OTR tyre handlers must be operated in compliance with the licence requirements and regulations of the relevant state or territory authority.

Licensing, legislative, regulatory, Australian standards or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Check tyre handler and work site for suitability	1.1 Select work site for operations according to workplace procedures 1.2 Check work area for obstructions and proximity to vehicles and

ELEMENTS	PERFORMANCE CRITERIA
	<p>equipment</p> <p>1.3 Erect barriers and warning signs in areas where there may be passing traffic</p> <p>1.4 Select specialist equipment and tools according to job requirements and workplace procedures</p> <p>1.5 Inspect tyre handler for serviceability and compliance with relevant Australian standards</p>
2. Operate tyre handling equipment	<p>2.1 Conduct tyre handler pre-operational checks, and identify and address operating hazards</p> <p>2.2 Operate tyre handler, specialist equipment and tools within safe working limits to maximise efficiency of operations</p> <p>2.3 Handle tyres, wheels and rim assemblies according to workplace procedures, manufacturer handling recommendations, and Australian standards</p>
3. Complete work processes	<p>3.1 Remove and store barriers and warning signs</p> <p>3.2 Return tyre handler, and specialist equipment and tools to appropriate storage or parking area</p> <p>3.3 Complete documentation according to workplace procedures and report any damage or faults</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> read and interpret written information in Australian standards and workplace procedures relating to the use of earthmoving and OTR tyre handlers.
Writing skills to:	<ul style="list-style-type: none"> document actions required during work.
Oral communication skills to:	<ul style="list-style-type: none"> report damage or faults communicate with other personnel in a work context.
Numeracy skills to:	<ul style="list-style-type: none"> interpret tyre handler instruments and indicators read and interpret metric and imperial systems of measurement.
Initiative skills to:	<ul style="list-style-type: none"> identify and avoid potential work obstructions and danger to passing traffic.
Planning and organising	<ul style="list-style-type: none"> prepare and lay out work area, and obtain equipment and material to avoid wastage, backtracking and workflow interruptions.

Assessment Requirements for AURKTJ016 Use earthmoving and off-the-road tyre handlers

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate using earthmoving and off-the-road tyre handlers that safely follows workplace procedures to meet required outcomes on a minimum of three occasions.

The candidate must:

- locate and interpret required documentation, policies and procedures
- select an appropriate work site and determine safety and hazard requirements
- select appropriate equipment and tools for operation determine suitability of tyre handler for work site
- select methods and techniques to operate an earthmoving and OTR tyre handler appropriate to the circumstances, for at least one of the following pieces of equipment:
 - forklift mounted tyre handler
 - truck mounted tyre handler
 - grab truck
- check tyre handler for faults or damage, including at least one of the following:
 - specialist equipment and tool damage
 - tyre, wheel and rim assembly damage
 - tyre handler damage or faults
 - work area damage
- complete work processes, including storage of equipment and completing documentation.

The above work must be performed on tyres fitted to wheel assemblies and rim assemblies of not less than 600 mm (24 inches) nominal diameter.

Knowledge Evidence

The candidate must demonstrate the following knowledge:

- Key policies and procedures for using earthmoving and OTR tyre handlers, including:
 - how to locate and interpret manufacturers specifications, Australian standards and workplace procedures for earthmoving and OTR tyre handlers
 - duty of care requirements relating to operating an earthmoving and OTR tyre handler
 - handling procedures for earthmoving and OTR tyre handlers
 - earthmoving and OTR tyre handler controls, instruments and indicators and their use
 - operating hazards and procedures to be followed in the event of an operational emergency
 - procedures for pre-operational checks
- Key factors affecting selection of work site, including site layout and obstacles
- Typical damage and faults related to operating earthmoving and off-the-road tyre handlers, including:
 - specialist equipment and tool damage
 - tyre, wheel and rim assembly damage
 - tyre handler damage or faults
 - work area damage.
 -

Assessment Conditions

The assessment must:

- include access to:
 - a workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to removing, inspecting and fitting earthmoving and OTR tyres, wheels and rim assemblies
 - WHS requirements and workplace procedures relevant to removing, inspecting and fitting earthmoving and OTR tyres
 - manufacturer specifications and procedures or equivalent documentation to remove, inspect and fit earthmoving and OTR tyres
 - earthmoving and OTR tyre and wheel and rim assemblies
 - tools and equipment required for the use of an earthmoving and OTR tyre handler
 - earthmoving and OTR tyre handler
 - operational vehicles with earthmoving and OTR tyres, wheel and rim assemblies
 - workplace instructions relating to the use of earthmoving and OTR tyre handlers
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed

- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.
-

AURKTQ001 Diagnose and repair mobile plant final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the final drive assemblies of mobile plant. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The final drive assemblies include those in agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair mobile plant final drive assembly	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose final drive assembly	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures, and environmental and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair final drive assembly	3.1 <i>Repair information</i> is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked according to manufacturer procedures 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking final drive assembly specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure final drive assembly components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, tolerances and deviations from manufacturer specifications calculate gear ratios and torque reduction and multiplication.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and dial indicator gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for isolating and stabilising machines.
<i>Repair information</i> must include procedures relating	<ul style="list-style-type: none"> removing and replacing final drive assemblies dismantling, repairing, reassembling and adjusting final drive assemblies.

to:	
<i>Environmental requirements</i> must include:	<ul style="list-style-type: none">procedures for trapping, storing and disposing of oils and fluids released from final drive assemblies.

Assessment Requirements for AURKTQ001 Diagnose and repair mobile plant final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair faults in two mobile plant final drive assemblies as follows:
 - one differential carrier assembly
 - one of the following final drive assemblies:
 - double reduction
 - planetary final drive
 - chain drive.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing mobile plant final drive assemblies, including procedures for isolating and stabilising machines
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from final drive assemblies
- operating principles of mobile plant final drive assemblies and their:
 - final drive gears, including:
 - gear types and specific lubrication requirements
 - gear ratios and torque reduction and multiplication
 - differential function
 - chain drives
- application, purpose and operation of mobile plant final drive assemblies and components, including:

- differential carrier
- limited slip, no-spin and differential lock
- double reduction
- planetary final drive
- chain drive
- diagnostic testing procedures for mobile plant final drive assemblies, including:
 - sources of fluid leaks
 - abnormal final drive vibration, noises and operation
 - pre-dismantling inspection procedures
- repair procedures for mobile plant final drive assemblies, including procedures for:
 - dismantling final drive assemblies
 - inspecting final drive assemblies
 - reassembling and adjusting:
 - pinion depth, pinion bearing preload, crown wheel and pinion backlash, side bearing preload, and crown wheel and pinion tooth contact
 - chain drive system
- post-repair testing procedures for mobile plant final drive assemblies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant final drive assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mobile plant final drive assembly specifications

- two different mobile plant with the final drive assemblies specified in the performance evidence
- diagnostic equipment for mobile plant final drive assemblies
- tools, equipment and materials appropriate for repairing and adjusting mobile plant final drive assemblies.

Assessment Requirements for AURKTR001 Diagnose and repair electronic over hydraulic control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in electronic over hydraulic control system components as follows:
 - all four of the following:
 - hydraulic proportional control solenoids (flow, pressure and directional)
 - joysticks, potentiometer or touchscreens
 - sensors and feedback devices
 - electronic control amplifier units
 - one of the following:
 - electronic over hydraulic circuitry
 - servo control valves (flow, pressure and directional)
 - electronic control unit (ECU).

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing electronic over hydraulic control systems, including procedures for:
 - working with high pressure fluid hazards
 - isolating and stabilising machines
- operating principles of electronic over hydraulic systems and associated components, including operating principles of flow, pressure and directional control in:
 - electronic open loop circuits

- electronic semi open loop circuits
- electronic closed loop circuits
- application, purpose and operation of electronic over hydraulic control systems and components, including:
 - hydraulic proportional control solenoids
 - servo control units
 - sensors
 - feedback devices
 - electronic control amplifier units
 - joysticks
 - electronic control units
 - electronic over hydraulic circuitry
- diagnostic testing procedures for electronic over hydraulic control systems, including:
 - electronic system analysis while using industry-relevant test equipment
 - component wear analysis
 - system operation analysis
- procedures for inspecting and evaluating the following components:
 - proportional control valves
 - servo control units
 - electronic control units
 - sensors
 - feedback devices
- repair procedures for electronic over hydraulic control systems, including procedures for:
 - testing electronic devices
 - replacing electronic devices and adjusting the following:
 - maximum and minimum flow points
 - dither
 - opening ramps
 - closing ramps
- post-repair testing procedures for electronic over hydraulic control systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electronic over hydraulic control systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer electronic over hydraulic control system specifications
- two different electronic over hydraulic control systems with faults as specified in the performance evidence
- diagnostic equipment for electronic over hydraulic control systems
- tools, equipment and materials appropriate for repairing and adjusting mobile plant electronic over hydraulic control systems.

Assessment Requirements for AURKTX001 Diagnose and repair powershift transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different vehicles or machines with the following powershift transmissions:
 - multiple countershaft transmission
 - planetary shift transmission
- conduct powershift transmission stall test during above work according to manufacturer specifications and workplace procedures.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing powershift transmissions, including procedures for isolating and stabilising machines
- environmental requirements, including procedures for trapping, storing and disposing of hydraulic fluid released from powershift transmissions
- operating principles of powershift transmissions and associated components, including:
 - torque converters, torque divider torque converters and variable capacity torque converters
 - electronically modulated transmission
 - countershaft transmissions, including:
 - gear types
 - gear ratios and torque reduction and multiplication
 - simple and compound gear trains

- compound planetary transmissions, including:
 - gear types
 - gear ratios and torque reduction and multiplication
 - simple and compound planetary gear trains
- transmission control valves and solenoids
- hydraulic circuits and schematics
- application, purpose and operation of powershift transmissions and components, including:
 - power flows in:
 - multiple countershaft transmissions
 - compound planetary transmissions
 - torque converters, torque divider torque converters, and variable capacity torque converters
 - hydraulic components and hydraulic control components, including:
 - oil pumps
 - hydraulic valves
 - electronic transmission pressure modulation
 - power train electronic control system
 - mechanical components, including:
 - clutch packs
 - one-way clutches
 - planetary gears
 - compound gear sets
 - powershift electronic control systems
 - transfer cases
 - hydraulic oils and filters
- diagnostic testing procedures for powershift transmissions, including:
 - following safety requirements when stall testing
 - stall testing according to manufacturer specifications and workplace procedures
- dismantling procedures for powershift transmissions, including:
 - measuring clearances and tolerances
 - inspecting components
- repair procedures for powershift transmissions, including procedures for inspecting, evaluating and measuring component wear
- post-repair testing procedures for powershift transmissions, including:
 - stall testing according to manufacturer specifications and workplace procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the powershift transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer powershift transmission specifications
- two different vehicles or machines with powershift transmission faults
- diagnostic equipment for powershift transmissions
- tools, equipment and materials appropriate for repairing and adjusting powershift transmissions.

AURKTX002 Analyse and evaluate faults in wheeled mobile plant transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in wheeled mobile plant transmission and driveline systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The transmission and driveline systems include those of agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for wheeled mobile plant transmission or driveline system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Wheeled mobile plant transmission or driveline system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to wheeled mobile plant transmission and driveline systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised diagnostic equipment for wheeled mobile plant transmission and driveline systems.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for tagging out and isolating machines• environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from transmission and driveline systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none">• diagnostic process, sequence, tests and testing equipment.

Assessment Requirements for AURKTX002 Analyse and evaluate faults in wheeled mobile plant transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - transmission system of a wheeled mobile plant machine
 - driveline system of a different wheeled mobile plant machine
 - transmission or driveline system of a third wheeled mobile plant machine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in wheeled mobile plant transmission and driveline systems, including procedures for tagging out and isolating machines
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from transmission and driveline systems
- principles and processes involved in planning and implementing analysis and evaluation of wheeled mobile plant transmission and driveline system faults
- design and planning of diagnostic procedures of wheeled mobile plant transmission and driveline system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - pneumatic faults
 - electrical faults
- procedures for analysing and evaluating wheeled mobile plant transmission and driveline system faults, including:

- system failure analysis
- component failure analysis
- types, functions, operation and limitations of the following systems:
 - transmission systems, including:
 - mechanical transmissions
 - power shift transmissions
 - automatic transmissions
 - continuously variable transmissions (CVTs)
 - driveline systems, including:
 - drive shafts
 - final drive assemblies
 - differential assemblies
- testing procedures for wheeled mobile plant transmission and driveline systems, including:
 - oil and pneumatic pressures
 - transmission performance
 - stall testing
 - powertrain management
 - driveline vibrations
 - sensor, actuator and wiring harness integrity
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in wheeled mobile plant transmission and driveline systems
- procedures for documenting and reporting the analysis and evaluation process.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the wheeled mobile plant transmission and driveline systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer wheeled mobile plant transmission and driveline specifications
- three different wheeled mobile plant machinery with transmission and driveline system faults
- diagnostic equipment for wheeled mobile plant transmission and driveline systems
- tools, equipment and materials appropriate for analysing and evaluating wheeled mobile plant transmission and driveline systems.

AURKTX003 Diagnose complex faults in mobile plant transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in mobile plant transmission and driveline systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The transmission and driveline systems include those of agricultural machinery or mobile plant machinery, which may be wheeled or track type machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in mobile plant transmission or driveline is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for transmission or driveline system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Mobile plant is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different mobile plant.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking mobile plant transmission and driveline system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure transmission and driveline system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and vernier calipers use specialised diagnostic equipment, such as oil pressure gauges and scan tools.

Range of Conditions

Assessment Requirements for AURKTX003 Diagnose complex faults in mobile plant transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the:
 - transmission of a mobile plant machine
 - driveline of a different mobile plant machine
 - transmission or driveline of a third mobile plant machine
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in mobile plant transmission and driveline systems, including procedures for:
 - tagging out and isolating machines, and wheel chocking
 - working with rotating shaft hazards
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from transmission and driveline systems
- types of complex faults relating to mobile plant transmission and driveline systems, including:
 - intermittent

- multi-system
- introduced as a result of system repair
- indirect, caused by the influence of external systems
- types, function and operation of mobile plant transmission and driveline systems, including:
 - transmissions
 - drivelines
 - final drives
- testing procedures for mobile plant transmission and driveline systems, including:
 - transmission and driveline performance test
 - abnormal noise analysis
 - component wear analysis
 - transmission oil pressure test
 - sources of fluid leaks
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in mobile plant transmission and driveline systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mobile plant transmission and driveline systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mobile plant transmission and driveline system specifications
- transmission and driveline systems of three different types of mobile plant machinery with complex faults
- mobile plant transmission and driveline system diagnostic equipment, including:
 - oil pressure gauge
 - scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in mobile plant transmission and driveline systems.

AURKTX004 Diagnose and repair continuously variable transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the continuously variable transmissions of agricultural machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The continuously variable transmissions include those in agricultural machinery or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Mobile Plant

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair continuously variable transmission	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose continuously variable transmission	2.1 Diagnostic tests are carried out according to manufacturer specifications, workplace procedures, and environmental and safety requirements 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Repair continuously variable transmission	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked according to manufacturer procedures 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements , and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace

Assessment Requirements for AURKTX004 Diagnose and repair continuously variable transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different machines with continuously variable transmissions
- remove, refit or replace one of the above transmissions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing continuously variable transmissions, including procedures for:
 - tagging out and isolating machines, and wheel chocking
 - working with high pressure fluid hazards
 - using lifting, jacking and supporting equipment
- environmental requirements, including procedures for trapping, storing and disposing of hydraulic fluid released from transmissions
- operating principles of continuously variable transmissions and associated components, including:
 - hydrostatic systems
 - countershaft transmissions
 - planetary transmissions
 - transmission control valves and solenoids
 - hydraulic circuits and schematics
 - electronic control system

- application, purpose and operation of continuously variable transmissions and components, including:
 - power flows, including compound planetary transmissions
 - hydrostatic components
 - hydraulic components and hydraulic control components, including:
 - oil pumps
 - air pumps
 - filters
 - hydraulic valves
 - power train electronic control system
 - mechanical components, including clutch packs and compound gear sets
 - continuously variable electronic control system, including:
 - sensors
 - solenoids
 - electronic controllers
 - calibration
- diagnostic testing procedures for continuously variable transmissions that comply with manufacturer specifications, including:
 - accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs)
 - live data
 - freeze frame data
 - waveforms
- repair procedures for continuously variable transmissions, including procedures for removing, replacing and adjusting them
- post-repair testing procedures for continuously variable transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the continuously variable transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer continuously variable transmission specifications
- two different machines with continuously variable transmission faults
- diagnostic equipment for continuously variable transmissions
- tools, equipment and materials appropriate for repairing and adjusting continuously variable transmissions.

AURLLD011 Determine compliance of steering and suspension modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to advise customers on the compliance of steering and suspension modifications with Australian Design Rules (ADRs) for normal road usage. It involves clarifying modifications, determining modification compliance with ADRs, and completing workplace processes and documentation.

This unit applies to those working as an automotive service and repair technician. The steering and suspension systems are those of four-wheel drive (4WD) vehicles, light vehicles and light commercial vehicles. This unit does not apply to agricultural machinery, heavy commercial vehicles, marine vessels, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Regulatory or Legal - Steering and Suspension

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Clarify details of steering and suspension modification	1.1 Discuss and confirm nature of steering and suspension modification with the customer 1.2 Document modification specifications and dimensions 1.3 Identify and document non-standard steering and suspension components

2. Interpret legality of steering and suspension modification	2.1 Obtain and interpret ADR bulletin applicable to modification to identify the ruling on the legality of intended modification 2.2 Document compliance of intended modification specifications against ADR requirements 2.3 Clarify and discuss interpretation of ruling with customer
3. Recommend a plan of action to achieve ADR requirements	3.1 Develop suitable plan of action to meet ADR requirements 3.2 Clarify and discuss plan with customer 3.3 Complete workplace documentation, including recommendations for modification, according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of ADR information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from ADR bulletins containing specialised vocabulary read and interpret information from manufacturer and workplace procedures when seeking steering and suspension system specifications apply information to intended modification
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting compliance of steering and suspension modifications
Numeracy skills to:	<ul style="list-style-type: none"> understand and communicate steering and suspension system numerical information in degrees, and in metric and imperial distances measure steering and suspension system components use basic mathematical operations, including addition and subtraction calculate distances, tolerances and deviations from manufacturer specifications
Oral communication skills to:	<ul style="list-style-type: none"> discuss and clarify ADR requirements with the customer
Problem solving skills to:	<ul style="list-style-type: none"> develop a suitable plan of action to meet ADR requirements

Assessment Requirements for AURLLD011 Determine compliance of steering and suspension modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must determine and document the compliance of two of the following vehicle steering and suspension modifications:

- lowered or raised normal ride heights
- increased track width
- variations between front and rear ride heights
- replacement wheel and tyre assemblies
- replacement steering wheel
- fitted or replacement sway bar, track rod or strut brace
- conversion of vehicle from left-hand drive to right-hand drive
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies, workplace procedures and standards for steering and suspension modification including:

- how to locate, read and interpret Australian Design Rules (ADRs) and manufacturer specifications for steering and suspension system modification
- workplace procedures for negotiating and communicating with customers
- workplace procedures for determining compliance of vehicle steering and suspension system modifications against ADR requirements
- procedures for making recommendations and documenting non-compliant modifications

Common types of vehicle steering and suspension modifications, including:

- lowering or raising vehicle ride heights, including setting different front and rear ride heights
- increasing vehicle track width

- replacing wheel and tyre assemblies
- replacing steering wheels
- fitting or replacing sway bar, track rod or strut braces
- converting vehicle from left-hand drive to right-hand drive
-

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions for steering and suspension modification activity
 - workplace procedures for steering and suspension modification activity
 - vehicle manufacturer steering and suspension system specifications
 - vehicle ADRs relevant to steering and suspension system modifications
 - vehicles requiring the steering and suspension system modifications specified in the performance evidence
 - tools, equipment and materials suitable for determining the compliance of steering and suspension modifications
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
 - be conducted in a safe environment
 - be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
 - confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify the function and basic operation of a range of vehicle mechanical systems and components. It involves preparing for the task, locating information on the systems and components, and demonstrating knowledge of mechanical systems.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Locate and identify mechanical system and its components	1.1 Task instruction is interpreted and vehicle or machinery to be worked on is identified 1.2 Technical information regarding mechanical system to be identified is located 1.3 Mechanical system major components are located and identified on a vehicle or machinery according to <i>safety requirements</i> and task instructions
2. Demonstrate knowledge of mechanical system	2.1 System function is determined from technical information and demonstrated during workplace activities 2.2 System major component function and basic operation are determined from technical information and demonstrated during workplace activities 2.3 System relationship to vehicle or machinery operation is determined from technical information and demonstrated during workplace activities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of technical information.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	<ul style="list-style-type: none"> participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	<ul style="list-style-type: none"> use and communicate basic numerical information that relates to automotive systems and components.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:<ul style="list-style-type: none">• selecting and using personal protective equipment (PPE)• using tools and equipment• working safely.

Assessment Requirements for AURLTA001 Identify automotive mechanical systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- identify, locate and demonstrate knowledge of the operation of the following vehicle mechanical systems while carrying out workplace activities that involve all of the following systems:
 - engine systems
 - transmission and drivetrain
 - steering system
 - suspension system
 - fuel system
 - cooling system
 - braking system
 - exhaust system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to identifying vehicle mechanical systems and components, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - using tools and equipment
 - working safely
- basic theory and principles of automotive mechanical systems, including:
 - mechanical advantage

- gear ratio
- hydraulics
- pneumatics
- identification, function and basic operation of vehicle mechanical systems and components, including:
 - engine systems
 - transmission and drivetrain
 - steering system
 - suspension system
 - fuel system
 - cooling system
 - braking system
 - exhaust system
- automotive terminology relating to mechanical systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles or machinery that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workshop or task instructions
- information regarding basic mechanical principles and fundamentals
- information regarding vehicle mechanical systems and components
- workplace safety equipment, including PPE
- vehicle or a range of automotive mechanical systems and components
- automotive tools and equipment.

AURLTB001 Overhaul light vehicle braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return light vehicle braking system components to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the braking system components, carrying out the overhaul procedures, reassembling and testing the components, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The braking systems include those of light vehicles, light commercial vehicles or outdoor power equipment. This unit does not apply to the braking systems of agricultural machinery, heavy commercial vehicles, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle braking system components	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted 1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate braking system components	2.1 Components are dismantled in a logical sequence according to manufacturer and workplace procedures, and <i>safety and environmental requirements</i> , and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble components	4.1 Components are assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of components is completed within workplace timeframes and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly process are rectified
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and components are presented ready for use or storage 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate sources of information for braking systems efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret and assess information from manufacturer and workshop literature when seeking braking system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure braking system components and use basic mathematical

Skills	Description
	operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as vernier calipers and micrometers use specialised braking system component overhaul equipment, such as brake disc and drum lathes.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> trapping, storing and disposing of brake dust and brake fluids using specialised braking system component overhaul tools, equipment and machinery safely using chemicals and toxic substances environmental requirements, including procedures for trapping, storing and disposing of fluids released from braking systems.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the following light vehicle braking system components:
 - tandem brake master cylinder
 - vacuum brake booster
 - front and rear brake calipers and disc rotors
 - drum brake wheel cylinders, brake shoes and drums
 - brake line.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling braking system components, including procedures for:
 - trapping, storing and disposing of brake dust and brake fluids
 - using specialised braking system component overhaul tools, equipment and machinery
 - safely using chemicals and toxic substances
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from braking systems
- types, characteristics and operating principles of light vehicle braking systems and associated components
- light vehicle braking system component overhaul procedures, including:
 - methods for cleaning and preparing braking system components for overhaul
 - braking system component dismantling procedures

- braking system component inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances
- braking system component repair and adjustment procedures, including:
 - tandem brake master cylinders
 - vacuum brake boosters
 - front and rear brake calipers
 - disc rotors
 - drum brake wheel cylinders
 - brake shoes and drums
 - brake lines
- component assembly procedures, including procedures for measuring and calculating tolerances, and adjusting components
- post-overhaul testing procedures for light vehicle braking system components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the braking system components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle braking system component specifications
- light vehicle braking system components specified in the performance evidence and requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting light vehicle braking system components.

AURLTB002 Analyse and evaluate faults in light vehicle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in light vehicle braking systems in order to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The braking systems include those of light vehicles, light commercial vehicles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for light vehicle braking system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Braking system and components are prepared for the diagnostic process
3. Carry out analysis and evaluation	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to light vehicle braking systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised light vehicle braking system diagnostic equipment.

Assessment Requirements for AURLTB002 Analyse and evaluate faults in light vehicle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - hydraulic braking system of a light vehicle
 - mechanical braking system of a different light vehicle
 - electronic braking system of a third light vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in light vehicle braking systems, including procedures for working with brake friction materials
- environmental requirements, including procedures for managing and controlling brake dust and brake fluid released from braking systems
- principles and processes involved in planning and implementing analysis and evaluation of light vehicle braking system faults
- design and planning of diagnostic procedures of light vehicle braking system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults
- procedures for analysing and evaluating light vehicle braking system faults, including:
 - system failure analysis
 - component failure analysis

- types, functions, operation and limitations of the following systems, including:
 - disc and drum assemblies
 - parking brake
 - hydraulic components, including:
 - master cylinder
 - braking system valves and switches
 - electronic systems, including:
 - anti-lock braking systems (ABS)
 - electronic braking systems (EBS)
- testing procedures for light vehicle braking systems, including:
 - disc and drum assemblies
 - parking brakes
 - hydraulic components
 - electronic components
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in light vehicle braking systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to light vehicle braking systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle braking system specifications

- three different light vehicles with faults in the braking systems specified in the performance evidence
- diagnostic equipment for light vehicle braking systems
- tools, equipment and materials appropriate for analysing and evaluating light vehicle braking systems.

AURLTB003 Diagnose and repair light vehicle hydraulic braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the hydraulic braking systems of light vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The hydraulic braking systems include those in light vehicles, light commercial vehicles or outdoor power equipment. This unit does not apply to agricultural machinery, heavy commercial vehicles, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Assessment Requirements for AURLTB003 Diagnose and repair light vehicle hydraulic braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in:
 - two different light vehicle four-wheel disc hydraulic braking systems, in which the work must involve removing and refitting or replacing the brake calipers, disc pads and disc rotors
 - one light vehicle drum braking system, in which the work must involve removing and refitting or replacing brake drums, brake shoes and wheel cylinders
 - one light vehicle brake master cylinder, in which the work must involve removing and refitting or replacing the brake master cylinder.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing light vehicle hydraulic braking systems, including procedures for:
 - lifting and supporting light vehicles
 - handling and controlling brake dust and brake fluids
- environmental requirements, including procedures for trapping, storing and disposing of brake dust and brake fluid released from hydraulic braking systems
- operating principles of light vehicle hydraulic braking systems and associated components, including:
 - levers
 - friction

- hydraulics, including the relationship between force, pressure and area
- properties of brake fluids, including:
 - Department of Transportation (DOT) classification
 - synthetic and non-synthetic
 - compatibility of fluid types
- application, purpose and operation of light vehicle hydraulic braking systems and components, including:
 - front and rear split systems
 - diagonal split systems
 - master cylinders, including:
 - tandem master cylinders
 - compensating-type master cylinders
 - centre-valve master cylinders
 - drum braking system and components, including:
 - self-energising or servo effect
 - leading and trailing shoe braking systems
 - duo-servo braking systems
 - two-leading shoe braking systems
 - wheel cylinders
 - manual and self-adjustment systems of drum braking systems
 - disc braking systems and components, including:
 - types of brake discs
 - disc pads
 - self-adjustment of disc pads
 - fixed, floating and dual-piston brake calipers
 - parking brake systems and components, including:
 - parking brake levers
 - drum parking brakes
 - disc parking brakes
 - electronic parking brake systems
 - braking system valves and switches, including:
 - pressure differential valves and switches
 - proportioning valves
 - load-sensing proportioning valves
 - drum brake check valves
 - fluid-level warning devices
 - vacuum operated brake boosting systems
- diagnostic testing procedures for light vehicle hydraulic braking systems, including procedures for:
 - checking brake pedal

- operational tests of brake booster
- operational tests of master cylinder
- testing brake fluid
- operational tests of hand brake
- operational tests of drum and disc brakes
- measuring and evaluating brake drums, shoes, discs and pads
- repair procedures for light vehicle hydraulic braking systems, including procedures for:
 - removing, replacing and adjusting hydraulic system components, including master cylinder, proportioning valves, switches, brake hoses and lines, disc calipers and wheel cylinders
 - removing, replacing and adjusting braking system components, including brake booster, master cylinder, hand brake lever and cables, brake shoes and drums, brake pads and brake discs
 - bleeding brakes, including anti-lock braking systems (ABS)
- post-repair testing procedures for light vehicle hydraulic braking systems, including procedures for road testing and bedding in brakes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle hydraulic braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer braking system specifications
- two different light vehicles with four-wheel hydraulic disc brake systems with faults
- one light vehicle with a rear drum brake system
- diagnostic equipment for light vehicle hydraulic braking systems

- tools, equipment and materials appropriate for repairing light vehicle braking systems.

AURLTB004 Diagnose complex faults in light vehicle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in light vehicle braking systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The braking systems include those of light vehicles or light commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in light vehicle braking system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for light vehicle braking system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures and safety requirements 3.2 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.3 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking light vehicle braking system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure braking system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and vernier calipers use specialised diagnostic equipment, such as scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for managing and controlling brake dust and brake fluid environmental requirements, including procedures for trapping, storing and disposing of fluids and material released from braking systems.

Assessment Requirements for AURLTB004 Diagnose complex faults in light vehicle braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in three different light vehicle braking systems including one anti-lock braking system
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in light vehicle braking systems, including procedures for managing and controlling brake dust and brake fluid
- environmental requirements, including procedures for trapping, storing and disposing of fluids and material released from braking systems
- types of complex faults relating to light vehicle braking systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- types, functions and operation of light vehicle braking systems, including mechanical, hydraulic and electronic subsystems

- testing procedures for light vehicle braking systems, including procedures for:
 - vehicle dynamic and static testing
 - abnormal noise analysis
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in light vehicle braking systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle braking system specifications
- three different light vehicles with complex faults in their braking systems, including a vehicle with an anti-lock braking system
- light vehicle braking system diagnostic equipment, including scan tool

- tools, equipment and materials appropriate for diagnosing complex faults in light vehicle braking systems.

AURLTD001 Select and install performance enhanced suspension system products

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to select, install and adjust products to suit a customer's suspension system modification requirements.

It applies to those working in the automotive service and repair industry. The suspension systems are those of four-wheel drive (4WD) vehicles, light vehicles, light commercial vehicles or motor sport vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify customer	1.1 Purpose of proposed modifications is established and confirmed

Assessment Requirements for AURLTD001 Select and install performance enhanced suspension system products

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- select and fit performance enhanced suspension systems on two different vehicles, in which the work must involve two of the following:
 - suspension coil springs with modified spring rates
 - modified shock absorbers and struts
 - modified sway bars
 - modified suspension bushes
 - modified torsion bars.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to selecting and installing performance enhanced suspension system products, including procedures for managing stored energy in springs and torsion bars
- operating principles of suspension systems, including:
 - rigid and independent suspensions
 - sprung and unsprung mass
 - ride and curb height
- application, purpose and operation of performance enhanced suspension system products, including:
 - shock absorbers
 - coil springs, torsion bars and leaf springs
 - adjustable coil-overs

- rubber and urethane bushings
- sway bars and sway bar links
- strut mounts
- tower bars
- procedures for removing suspension system components
- requirements of Australian Design Rules (ADRs) relating to suspension systems
- procedures for fitting and adjusting performance enhanced suspension system components
- procedures for operating equipment to test suspension systems, including shock absorber testers
- suspension system road testing principles and procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the performance enhanced suspension system products that they have selected and installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- manufacturer vehicle and suspension product specifications
- ADRs
- two vehicles requiring the installation of performance enhanced suspension system products
- tools, equipment and materials appropriate for selecting and installing performance enhanced suspension system products.

AURLTD002 Service and repair light vehicle lift assisted suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service, locate and repair faults in hydraulic or pneumatic light vehicle lift assisted suspension systems. It involves preparing for the task, servicing, repairing and post-repair testing the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The lift assisted suspension systems include those of light vehicles, four wheel drives or light commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service and repair lift assisted suspension system	1.1 Job requirements are determined from workplace instructions 1.2 Service and repair information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect and service lift assisted suspension system	2.1 System is inspected according to workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications to identify service and repair requirements 2.3 Inspection findings are reported according to workplace procedures 2.4 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems 2.5 Post-service testing is carried out according to workplace procedures
3. Repair lift assisted suspension system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and prepared 3.4 System is repaired according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.5 Post-repair testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking lift assisted suspension system service and repair procedures and specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings to appropriate personnel.
Numeracy skills to:	<ul style="list-style-type: none"> measure and calculate suspension system heights calculate distance, volume and pressure for servicing and repairing lift assisted suspension systems.
Problem solving skills to:	<ul style="list-style-type: none"> determine underlying causes of faults identify risk factors and take action to minimise risk.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> using vehicle lifting and supporting equipment working with lift assisted suspension systems, including: <ul style="list-style-type: none"> hydraulic and pneumatic pressures hydraulic fluids stored energy in springs.

Assessment Requirements for AURLTD004 Diagnose and repair light vehicle steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in a light vehicle power-assisted rack and pinion steering assembly
- diagnose and repair a fault in a light vehicle power steering pump
- diagnose and repair a fault in one of the following light vehicle steering components:
 - power steering hose
 - tie-rod end.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing light vehicle steering systems, including procedures for working with high pressure and high temperature steering systems
- environmental requirements, including procedures for trapping, storing and disposing of power steering hydraulic fluid released from steering systems
- operating principles of light vehicle steering systems and associated components, including:
 - manual steering systems
 - power steering systems
- application, purpose and operation of the following components of light vehicle steering systems and components, including:
 - steering wheels, including clock springs
 - steering columns

- manual steering systems, including:
 - rack and pinion
 - steering boxes
- hydraulic power steering systems, including:
 - integral piston
 - power assisted rack and pinion
 - electronically controlled power steering systems
- electric steering systems, including steering angle sensors
- identification, function and basic operating principles of steering angles, including:
 - steering angles:
 - toe-in and toe-out
 - toe-out on turns
 - caster
 - camber
 - Ackermann principle of steering
 - steering axis inclination
- diagnostic testing procedures for light vehicle steering systems, including:
 - operational testing
 - hydraulic steering system testing
 - electronic and load sensing steering testing
 - analysing component wear analysis
- repair procedures for light vehicle steering systems, including procedures for removing, replacing and adjusting the systems
- post-repair testing procedures for light vehicle steering systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle steering systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer steering system specifications
- one light vehicle with faults in its power-assisted rack and pinion steering system
- diagnostic equipment for light vehicle steering systems
- tools, equipment and materials appropriate for diagnosing and repairing light vehicle steering systems.

Diagnose suspension system	2.1 Diagnostic tests are performed according to workplace procedures and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair suspension system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking suspension system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> understand suspension system information in degrees and metric units of measurement measure suspension system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as tape measures, rulers and vernier calipers.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> working with stored energy in springs and torsion bars, including when removing tension from suspension components moving heavy suspension components.

Assessment Requirements for AURLTD005 Diagnose and repair light vehicle suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in a light vehicle MacPherson strut suspension system, in which the work must involve removing and refitting or replacing the MacPherson strut
- diagnose and repair a fault in a light vehicle coil spring suspension system, in which the work must involve removing and refitting or replacing the coil spring
- diagnose and repair a fault in one of the following suspension system components, in which the work must involve removing the spring component from the vehicle:
 - leaf spring suspension system
 - torsion bar suspension system
 - pneumatic suspension system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing light vehicle suspension systems, including procedures for:
 - working with stored energy in springs and torsion bars, including when removing tension from suspension components
 - moving heavy suspension components
- operating principles of light vehicle suspension systems and associated components, including:
 - rigid and independent suspensions
 - sprung and unsprung mass

- ride and curb height
- application, purpose and operation of light vehicle suspension systems and components, including:
 - coil spring suspension, including:
 - types of coil springs and deflection rates
 - front coil spring suspension arrangements, including short arm and long arm suspension
 - rear coil spring suspension arrangements
 - strut or MacPherson suspension
 - leaf spring suspension
 - torsion bar suspension
 - multi-link suspension
 - hydraulic suspension
 - pneumatic suspension
 - suspension system components, including:
 - ball joint function and operation
 - stabiliser bar function and operation
 - Watts link and Panhard rod function and operation
 - independent rear suspension arrangements and operation
 - shock absorber function and operation, including:
 - gas-filled shock absorbers
 - strut or MacPherson shock absorbers
 - hub assemblies and bearing arrangements, including:
 - hubs with tapered roller bearings
 - hubs with unitised bearings
- diagnostic testing procedures for light vehicle suspension systems, including procedures for analysing:
 - component wear
 - abnormal system noise
- repair procedures for light vehicle suspension systems, including procedures for:
 - removing and replacing ball joints, suspension bushes, shock absorbers, MacPherson struts, coil springs, leaf springs and torsion bars
 - compressing coil springs
 - replacing and adjusting bearings for hubs with:
 - tapered roller bearings
 - unitised bearings
- post-repair testing procedures for light vehicle suspension systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer suspension system specifications
- light vehicles with faults in the suspension systems specified in the performance evidence
- diagnostic equipment for light vehicle suspension systems
- tools, equipment and materials appropriate for repairing light vehicle suspension systems.

AURLTD006 Carry out light vehicle wheel alignment operations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out light vehicle wheel alignment operations. It involves identifying and confirming work requirements, preparing for the work, carrying out pre-alignment inspection and wheel alignment, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The wheel alignment operations include those with light vehicles or light commercial vehicles. The unit does not apply to agricultural machinery, heavy commercial vehicles, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Carry out wheel alignment pre-checks	1.1 Job requirements are determined from workplace instructions 1.2 Alignment pre-check information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Alignment pre-checks of vehicle wheels, steering and suspension condition are carried out according to manufacturer specifications, workplace procedures and safety requirements 1.5 Faults are identified and reported according to workplace procedures as necessary
2. Carry out vehicle wheel alignment activities	2.1 Vehicle wheel alignment specifications are sourced and interpreted 2.2 Wheel alignment measuring equipment is connected to vehicle according to manufacturer specifications and workplace procedures 2.3 Wheel alignment is carried out without causing damage to components or systems, and readings are recorded 2.4 Corrective adjustments are carried out according to workplace procedures and safety requirements, and within manufacturer specifications 2.5 Wheel alignment is re-checked to confirm accuracy of adjustments 2.6 Post-adjustment wheel alignment readings are recorded and reported according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret safe operating procedures for wheel alignment equipment from workplace signs and procedures and manufacturer specifications interpret information from manufacturer specifications and workshop literature when seeking vehicle wheel alignment specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting findings, making recommendations and recording vehicle pre-alignment checks and pre- and post-wheel alignment readings.
Numeracy skills to:	<ul style="list-style-type: none"> measure steering and suspension system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications understand measurements in metric and imperial units of measurement and angles in degrees.
Planning and organising skills to:	<ul style="list-style-type: none"> select and prepare the appropriate tools and equipment to allow the job to be completed without time wastage.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring wheel alignment equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for using air jacks.

Assessment Requirements for AURLTD006 Carry out light vehicle wheel alignment operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- align all four wheels of:
 - one front wheel drive vehicle
 - one rear wheel drive vehicle
- above wheel alignment must include adjusting the following steering angles:
 - camber
 - caster
 - steering axis inclination (SAI)
 - toe (toe-in and toe-out)
 - toe-out on turns.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to light vehicle wheel alignment, including procedures for using air jacks
- application, purpose and operating principles of steering geometry and wheel alignment angles, including:
 - Ackermann principle of steering
 - camber
 - caster
 - SAI
 - thrust angle

- toe-in and toe-out
- toe-out on turns
- included angle
- point of intersection
- scrub radius
- vehicle pre-alignment inspection procedures, including:
 - analysing tyre wear
 - determining wheel run-out
 - determining vehicle height
 - checking frame alignment
- types and operation of wheel alignment systems, including:
 - laser aligners
 - visual aligners
 - camera aligners
- relationships between fault symptoms and component defects
- procedures for measuring and adjusting steering angles, including:
 - camber
 - caster
 - steering axis inclination
 - thrust angle
 - toe
 - toe-out on turns
- procedures for carrying out four-wheel alignments
- steering system reset procedures to calibrate on-board system sensors with the steering geometry.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle wheel alignments that they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer wheel alignment specifications
- one front wheel drive light vehicle and one rear wheel drive light vehicle requiring the adjustments specified in the performance evidence
- wheel alignment equipment for light vehicles
- tools, equipment and materials appropriate for carrying out wheel alignment operations on light vehicles.

AURLTD007 Analyse and evaluate faults in light vehicle steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in light vehicle steering and suspension systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The steering and suspension systems include those of light vehicles, light commercial vehicles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for light vehicle steering or suspension system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Steering or suspension system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to light vehicle steering and suspension systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised light vehicle steering and suspension system diagnostic equipment.

Range of Conditions

AURLTD009 Diagnose complex faults in light vehicle steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in light vehicle steering and suspension systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The steering and suspension systems include those of light vehicles or light commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in light vehicle steering or suspension system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare to perform diagnosis	2.1 Manufacturer specifications and other technical information for light vehicle steering or suspension system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles.

Assessment Requirements for AURLTD009 Diagnose complex faults in light vehicle steering and suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the:
 - steering system of a light vehicle
 - suspension system of a different light vehicle
 - steering or suspension system of a third light vehicle
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in light vehicle steering and suspension systems, including procedures for working with:
 - stored energy in springs, air springs and torsion bars
 - high pressure and high temperature steering system fluids
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from steering and suspension systems
- types of complex faults relating to light vehicle steering and suspension systems, including:
 - intermittent

- multi-system
- introduced as a result of system repair
- indirect, caused by the influence of external systems
- types, function and operation of light vehicle steering and suspension systems, including:
 - hydraulic power assisted steering
 - electric power assisted steering
 - active suspension
 - adaptive suspension
- testing procedures for light vehicle steering and suspension systems, including procedures for:
 - vehicle dynamic and static testing
 - abnormal noise analysis
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in light vehicle steering and suspension systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle steering and suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle steering and suspension specifications
- three different light vehicles with complex faults in their steering and suspension systems
- steering and suspension system diagnostic equipment
- tools, equipment and materials appropriate for diagnosing complex faults in steering and suspension systems.

AURLTD013 Carry out advanced light vehicle wheel alignment operations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to carry out advanced light vehicle wheel alignment operations. It involves assessing any modifications made to a steering system against safety and Australian Design Rule (ADR) compliance, carrying out pre-alignment inspection, performing any necessary adjustments, testing the vehicle and completing workplace processes and documentation.

It applies to those working within the automotive light vehicle service and repair or light vehicle wheel alignment industry. The wheel alignment operations include those of four wheel drive (4WD) vehicles, light vehicles, light commercial vehicles or motorsport vehicles. The unit does not apply to agricultural machinery, heavy commercial vehicles, marine vessels, mobile plant machinery or motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

This unit of competency may only be undertaken following completion of the below unit or its equivalent:

- AURLTD006 Carry out light vehicle wheel alignment operations
-

Unit Sector

Technical - Steering and Suspension

essential outcomes.	achievement of the element.
1. Assess compliance of the proposed modification	1.1 Establish purpose for resetting vehicle wheel alignment from workplace instructions and confirm with customer 1.2 Assess practicality of modification specifications and discuss with customer 1.3 Assess proposed modification against safety and ADR compliance and adjust if necessary
2. Carry out light vehicle wheel alignment pre-checks	2.1 Test vehicle according to workplace procedures and workplace health and safety requirements to ensure its condition enables light vehicle wheel alignment to be safely conducted 2.2 Obtain and interpret vehicle wheel alignment pre-check information 2.3 Complete vehicle wheel alignment pre-check according to manufacturer and workplace procedures and workplace health and safety requirements 2.4 Identify and report faults according to workplace procedures
3. Adjust light vehicle alignment to achieve required specifications	3.1 Obtain and interpret light vehicle wheel alignment information 3.2 Identify and examine wheel alignment equipment and tools according to manufacturer and workplace procedures 3.3 Connect wheel alignment measuring equipment to vehicle according to manufacturer specifications, workplace procedures and workplace health and safety requirements 3.4 Perform and record wheel alignment measurements according to manufacturer specifications, workplace procedures and workplace health and safety requirements 3.5 Adjust vehicle wheel alignment according to manufacturer specifications, workplace procedures and workplace health and safety requirements 3.6 Perform and record post-adjustment wheel alignment measurements according to manufacturer specifications, workplace procedures and workplace health and safety requirements
4. Complete work processes	4.1 Test vehicle to confirm accuracy of adjustments according to workplace procedures 4.2 Carry out final inspection to ensure work meets workplace expectations and vehicle is ready for use 4.3 Clear work area and dispose of or recycle materials according to workplace procedures 4.4 Complete wheel aligner maintenance, examine and store tools and equipment according to workplace procedures 4.5 Enter alignment adjustment data into customer's vehicle records 4.6 Complete workplace documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of information for light vehicle wheel alignment pre-checks and light vehicle wheel alignment efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret complex information and ideas from workplace procedures, documentation and Australian Design Rules read and interpret safe operating procedures for wheel alignment equipment from workplace signs, procedures and manufacturer procedures interpret information from manufacturer specifications and workshop literature when seeking light vehicle wheel alignment specifications
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting findings, making recommendations and recording vehicle pre-alignment checks, pre- and post-wheel alignment readings
Numeracy skills to:	<ul style="list-style-type: none"> measure steering and suspension system components use basic mathematical operations, including addition, subtraction and understanding of angles in degrees calculate distances, tolerances and deviations from manufacturer specifications understand measurements in metric and imperial units of measurement
Digital literacy skills to:	<ul style="list-style-type: none"> navigate computer-based wheel alignment software
Technology skills to:	<ul style="list-style-type: none"> use precision measuring wheel alignment equipment
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements prioritise actions to achieve required outcomes ensure tasks are completed within workplace timeframes select and prepare suitable tools and equipment to allow the job to be completed identify and prepare the appropriate tools and equipment to allow the job to be completed without time wastage
Problem solving skills to:	<ul style="list-style-type: none"> determine job requirements and select suitable tools or equipment assess practicality of customer specifications recommend steering system alignment adjustments based on

	safety and ADR compliance

Assessment Requirements for AURLTD013 Carry out advanced light vehicle wheel alignment operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate advanced light vehicle wheel alignment operations to customer specifications that safely follows workplace procedures to meet required outcomes. This includes:

- measuring, recording and adjusting all of the following angles on all four wheels of two different light vehicles:
 - camber
 - caster
 - steering axis inclination (SAI)
 - toe (toe-in and toe-out)
 - toe-out on turns
 -

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for carrying out light vehicle wheel alignment operations, including:

- how to locate and interpret manufacturers specifications, Australian Design Rules and workplace procedures for carrying out light vehicle wheel alignment pre-checks and light vehicle wheel alignment operations
- workplace procedures for communicating with customers
- the following workplace health and safety requirements relating to light vehicle wheel alignment:
 - procedures for using air jacks
- environmental requirements for carrying out advanced light vehicle wheel alignment operations

- steering system reset procedures to calibrate on-board system sensors with the steering geometry
- vehicle wheel alignment pre-check procedures, including:
 - assessing steering system alignment adjustments against safety and Australian Design Rule (ADR) compliance
 - road testing
 - analysing tyre wear
 - determining wheel run-out
 - determining vehicle height
 - checking frame alignment
- measuring and adjusting steering angles procedures, including:
 - caster
 - camber
 - toe-in
 - toe-out on turns
- workplace housekeeping and documentation procedures

Steering geometry and wheel alignment angles, including:

- Ackermann principle of steering
- camber
- caster
- SAI
- thrust angle
- toe-in and toe-out
- toe-out on turns
- included angle
- point of intersection
- scrub radius

Key reasons for making non-standard alignment settings on driving and ride characteristics, including:

- fitting modified road springs
- fitting revised shock absorbers
- fitting modified sway bars
- altering ride height
- fitting non-standard wheel and tyre combinations
- variations to understeer and oversteer
- off-road use

Key types and uses of wheel alignment systems, including:

- laser aligners
- visual aligners
- camera aligners
-

Assessment Conditions

The assessment must:

- include access to:
 - automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to wheel alignment activity
 - workplace procedures relating to wheel alignment activity
 - manufacturer steering system alignment specifications required to complete wheel alignment activity
 - Australian Design Rules
 - two different vehicles requiring steering system adjustments to the angles specified in the performance evidence
 - tools, equipment and materials required for carrying out advanced light vehicle wheel alignment operations
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

AURLTE001 Remove and install light vehicle engine assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and install engine assemblies fitted to light vehicles. It involves preparing for the task, removing and installing the engine assembly, performing post-installation testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine assemblies include those of light vehicles, motorcycles or light commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove light	1.1 Job requirements are determined from workplace instructions

vehicle engine assembly	<p>1.2 Engine removal and installation procedures and information are sourced and interpreted</p> <p>1.3 Engine removal and installation options are analysed and those most appropriate to the circumstances are selected</p> <p>1.4 Hazards associated with the work are identified and risks are managed</p> <p>1.5 Tools and equipment are selected and checked for serviceability</p>
2. Remove engine assembly	<p>2.1 Engine assembly is removed according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems</p> <p>2.2 Engine assembly, components and systems are inspected and faults are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Install engine assembly	<p>3.1 Installation options are analysed and those most appropriate to the circumstances are selected</p> <p>3.2 Engine assembly is installed according to manufacturer specifications and workplace procedures, and without causing damage to components or systems</p> <p>3.3 Post-installation checks, adjustments and tests are carried out according to manufacturer specifications and workplace procedures</p>
4. Complete work processes	<p>4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>4.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>4.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking engine removal and installation specifications and

Skills	Description
	procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify workplace instructions and determine job requirements.
Numeracy skills to:	<ul style="list-style-type: none"> measure components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications calculate and adjust lubricants and coolant volumes.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> using engine lifting devices and supporting equipment handling oils, fuels and coolant environmental requirements, including procedures for trapping, storing and disposing of oils, fluids, coolants and gases released from engine assemblies.
<i>Post-installation checks, adjustments and tests</i> must include:	<ul style="list-style-type: none"> pre-start procedures operational testing and run-in procedures engine adjustments and cylinder head bolt re-tensioning as required throttle adjustments coolant adjustments ancillary engine systems.

Assessment Requirements for AURLTE001 Remove and install light vehicle engine assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and install:
 - one front wheel drive engine assembly with water cooling
 - one rear wheel drive engine assembly with water cooling.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and installing light vehicle engines, including procedures for:
 - using engine lifting devices and supporting equipment
 - handling oils, fuels and coolant
- environmental requirements, including procedures for trapping, storing and disposing of oils, fluids, coolants and gases released from engine assemblies
- licensing requirements relating to removing and installing engines fitted with alternative fuels and energy sources
- methods of disconnecting related systems, including:
 - air conditioning system
 - cooling system
 - electrical systems
 - exhaust system
 - fuel system
 - power steering system
 - transmission systems, including:

- automatic transmission
- manual transmission
- removal procedures for engine assemblies, including item tagging procedures
- installation procedures for engine assemblies
- post-installation testing and adjustment procedures for engine assemblies, including:
 - pre-start procedures
 - operational testing and run-in procedures
 - engine adjustments and cylinder head bolt re-tensioning as required
 - throttle adjustments
 - coolant adjustments
 - ancillary engine systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle engine assemblies that they have removed and installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle engine assembly specifications
- two different light vehicle engine assemblies as specified in the performance evidence
- tools, equipment and materials appropriate for removing and installing light vehicle engine assemblies, including engine lifting devices and supporting equipment.

AURLTE002 Diagnose and repair light vehicle engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the spark ignition engines and compression ignition engines of light vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engines include those in light vehicles or light commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURLTE002 Diagnose and repair light vehicle engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair the following faults in three different light vehicle engines:
- a fault in an engine cylinder head with an overhead camshaft, in which the work must involve removing the cylinder head from the engine
- a fault in two of the following components, in which the work must involve removing the components from the engine:
 - engine valve timing belt
 - engine valve timing chain
 - engine valve lifters
 - cylinder head valve stem seals
 - camshaft
 - camshaft bearings
 - crankshaft
 - balance shaft or its bearings
 - pistons and connecting rods
 - cylinder block sleeves
 - main bearings and big-end bearings
 - internal oil pump
- dismantle and reassemble one of the above engines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing light vehicle engines, including procedures for lifting and supporting light vehicle engines
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- operating principles of light vehicle engines and associated components, including:
 - combustion, including:
 - air-fuel ratios and combustion cycles
 - direct injection
 - detonation
- engine design, including:
 - swept volume and engine volume
 - compression ratio
 - engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency
 - torque and horsepower, including brake horsepower
- application, purpose and operation of the following components of light vehicle engines and components, including:
 - lubrication systems, cylinder blocks, cylinders, pistons, cylinder heads, combustion chambers, inlet and exhaust manifolds, connecting rods, crankshafts, piston rings, gudgeon pins, camshafts, timing gears, vibration dampers and flywheels
- diagnostic testing procedures for light vehicle engines, including:
 - wet and dry compression tests
 - cylinder leakage tests
 - oil pressure tests
 - checking sources of fluid leaks
 - exhaust smoke diagnosis
 - checking abnormal engine noises
- dismantling procedures for light vehicle engines, including procedures for:
 - measuring clearances and tolerances
 - inspecting components
- repair procedures for removing, replacing and adjusting light vehicle engines
- assembly procedures for light vehicle engines, including procedures for removing, replacing and adjusting them
- post-repair testing procedures for light vehicle engines, including:
 - checking oil pressure
 - road testing under load
 - checking for fluid leaks.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- three different light vehicle engines with faults specified in the performance evidence
- diagnostic equipment for light vehicle engines
- tools, equipment and materials appropriate for repairing light vehicle engines.

AURLTE003 Analyse and evaluate faults in light vehicle engine and fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in light vehicle engine and fuel systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The engine and fuel systems may be petrol or diesel and include those of light vehicles or light commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of analysis and evaluation is determined from workplace instructions 1.2 Specifications for light vehicle engine or fuel system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Engine or fuel system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process, and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to light vehicle engine and fuel systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within

Skills	Description
skills to:	workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised light vehicle engine and fuel system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with: <ul style="list-style-type: none"> hot engine components and rotating engine components hazardous substances, including: <ul style="list-style-type: none"> diesel fuel petrol fuel engine oil and coolants environmental requirements, including procedures for trapping, storing and disposing of fluids released from engine and fuel systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none"> diagnostic process, sequence, tests and testing equipment.

Assessment Requirements for AURLTE003 Analyse and evaluate faults in light vehicle engine and fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - engine system of a light vehicle
 - fuel system of a different light vehicle
 - engine or fuel system of a third light vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in light vehicle engine and fuel systems, including procedures for working with:
 - hot engine components and rotating engine components
 - hazardous substances, including:
 - diesel fuel
 - petrol fuel
 - engine oil and coolants
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engine and fuel systems
- principles and processes involved in planning and implementing analysis and evaluation of light vehicle engine and fuel system faults
- design and planning of diagnostic procedures of light vehicle engine and fuel system faults, including procedures for diagnosing:
 - hydraulic faults

- mechanical faults
- electrical faults
- procedures for analysing and evaluating light vehicle engine and fuel system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of the following engine and fuel systems:
 - petrol engines
 - diesel engines
 - petrol fuel systems
 - diesel fuel systems
- testing procedures for light vehicle engine and fuel systems, including:
 - engine performance under load
 - fuel flow and pressure
 - cooling system performance under load
 - oil pressure
 - exhaust flow
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in light vehicle engine and fuel systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to light vehicle engine and fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle engine and fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle engine and fuel system specifications
- three different light vehicles with engine and fuel system faults
- diagnostic equipment for light vehicle engine and fuel systems
- tools, equipment and materials appropriate for analysing and evaluating light vehicle engine and fuel systems.

AURLTE004 Diagnose complex faults in light vehicle petrol engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in light vehicle petrol engines and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The petrol engines include those of light vehicles or light commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in light vehicle petrol engine is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare to carry out diagnosis	2.1 Manufacturer specifications and other technical information for petrol engine are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are selected from the range of available options 2.4 Testing equipment is selected and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.2 Diagnostic findings are confirmed, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.4 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking light vehicle petrol engine specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure petrol engine components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications use gauges and interpret units, such as kilopascals and pounds per square inch (PSI).
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers use specialised diagnostic equipment, such as: <ul style="list-style-type: none"> compression gauges vacuum gauges cylinder leak-down gauges oil pressure gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental</i>	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety
--	---

requirements must include:	(OHS) requirements, including procedures for: <ul style="list-style-type: none">• working with hot engine components and rotating engine components• controlling hazards associated with hazardous substances, including engine oil and coolants• environmental requirements, including procedures for trapping, storing and disposing of fluids released from petrol engines.

Assessment Requirements for AURLTE004 Diagnose complex faults in light vehicle petrol engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in three different light vehicle petrol engines
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in light vehicle petrol engines, including procedures for:
 - working with hot engine components and rotating engine components
 - controlling hazards associated with hazardous substances, including engine oil and coolants
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from petrol engines
- types of complex faults relating to light vehicle petrol engines, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems

- types, function and operation of light vehicle petrol engines, including:
 - intake, exhaust, lubrication, cooling and engine mounting systems and components
 - valve timing and variable valve timing
- testing procedures for light vehicle petrol engines, including:
 - abnormal noise analysis
 - compression testing
 - cylinder leak-down testing
 - oil pressure testing
 - component failure analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in light vehicle petrol engines
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle petrol engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle petrol engine specifications
- three different light vehicles with complex faults in their petrol engines
- engine diagnostic equipment, including:
 - compression gauge
 - vacuum gauge
 - cylinder leak-down gauge
 - oil pressure gauge
- tools, equipment and materials appropriate for diagnosing complex faults in light vehicle petrol engines.

Assessment Requirements for AURLTF001 Diagnose and repair light vehicle mechanical fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three mechanical fuel injection system components as follows:
 - one fuel distributor
 - two of the following:
 - fuel injector
 - fuel pressure regulator
 - fuel pump and filter
 - fuel accumulator.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing mechanical fuel injection systems, including procedures for working with high pressure petrol fuel systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel systems
- operating principles of mechanical fuel injection systems and associated components, including carburation
- application, purpose and operation of mechanical fuel injection systems and components, including:
 - fuel supply, including:
 - high and low pressure system

- electric fuel pump
- fuel accumulator
- fuel metering, including:
 - air-flow sensor
 - fuel distributor
 - differential pressure valves
 - fuel injectors
- cold-start enrichment and warm-up enrichment, including:
 - cold-start valve
 - thermo-time switch
 - warm-up regulator
 - auxiliary air device
- full load enrichment
- diagnostic testing procedures for mechanical fuel injection systems, including procedures for:
 - testing injectors, including:
 - opening pressure
 - leakage integrity
 - spray shape
 - chatter
 - testing system pressure, including:
 - primary system pressure
 - control pressure
 - analysing exhaust gas
- repair procedures for mechanical fuel injection systems, including procedures for removing, replacing and injection pump timing mechanical fuel injection systems
- post-repair testing procedures for mechanical fuel injection systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mechanical fuel injection systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mechanical fuel injection system specifications
- vehicles with faults in the mechanical fuel injection system components specified in the performance evidence
- diagnostic equipment for mechanical fuel injection systems, including exhaust gas analyser
- tools, equipment and materials appropriate for repairing mechanical fuel injection systems.

AURLTF002 Diagnose and repair light vehicle diesel fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to diagnose and repair faults in the mechanically controlled diesel fuel injection systems of vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The diesel fuel injection systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant or outdoor power equipment. This unit does not apply to electronic compression ignition engine management systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Fuel Systems

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair diesel fuel injection system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose diesel fuel injection system	2.1 Engine tune adjustments are checked and rectified as required according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Fuel system diagnostic tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 2.3 Faulty components are identified from diagnostic test results and causes of faults are determined 2.4 Diagnosis findings and recommendations for necessary repairs or adjustments are reported according to workplace procedures
3. Repair diesel fuel injection system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, safety and environmental requirements, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURLTF002 Diagnose and repair light vehicle diesel fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair two different light vehicles with diesel engines, in which the work must involve:
 - removing, refitting and timing a diesel high pressure pump
 - removing, refitting and testing injectors
 - bleeding a diesel fuel injection system
 - removing and refitting a low pressure fuel pump.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing diesel fuel injection systems, including procedures for working with high pressure fuel systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel injection systems
- operating principles of diesel fuel injection systems and associated components, including:
 - phases of combustion
 - composition of diesel fuel, including cetane and sulphur content
- application, purpose and operation of diesel fuel injection systems and components, including:
 - high pressure injection pump systems
 - distributor pumps, including axial and radial types
 - in-line injection pump systems

- mechanically controlled unit type systems
- testing procedures for diesel fuel injection systems, including procedures for:
 - assessing exhaust smoke
 - testing low fuel pressure pump
 - testing injector opening pressure and spray pattern
 - testing injector for back leakage and nozzle leakage
 - assessing and testing air induction system
 - assessing and testing engine performance
- repair procedures for diesel fuel injection systems, including procedures for:
 - dismantling, cleaning, adjusting and reassembling conventional and two-spring injectors
 - removing, installing and timing high pressure injection pumps
 - bleeding fuel systems
- post-repair testing procedures for diesel fuel injection systems, including assessing:
 - system leakage
 - engine performance.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle diesel fuel injection systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle diesel fuel injection specifications
- two different light vehicles with diesel engines with faults
- diagnostic equipment for diesel fuel injection systems

- tools, equipment and materials appropriate for repairing diesel fuel injection systems.

AURLTJ002 Remove, inspect, repair and refit light vehicle tyres and tubes

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and refit light vehicle tyres and tubes from wheels. It involves identifying and confirming work requirements, preparing for the work; inspecting, repairing and refitting the tyres and tubes, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The tyres and tubes include those of light vehicles, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove, inspect, repair and refit light vehicle tyres and tubes	1.1 Job requirements are determined from workplace instructions 1.2 Tyre and tube removal, inspection, repair and refitting information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Remove and inspect tyres, tubes and wheels	2.1 Tyres and tubes are removed from wheels according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Tyres, tubes and wheels are inspected according to manufacturer specifications and workplace procedures 2.3 Inspection findings and recommendations for necessary repairs are reported according to workplace procedures
3. Repair and refit tyres and tubes	3.1 Repair options are analysed and those most appropriate to the circumstances are selected 3.2 Tyres and tubes are repaired according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Tyre is mounted to wheel according to manufacturer specifications and workplace procedures, and without causing damage to components or systems 3.4 Assembled wheel and tyre are checked for serviceability and correct assembly, and inflated according to manufacturer specifications and workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and wheel assembly is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer specifications and workshop literature when seeking tyre and tube repair procedures and specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, making repair recommendations, and recording parts and material used.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information when repairing tyres and tubes understand both metric and imperial units of measurement.
Technology skills to:	<ul style="list-style-type: none"> operate tyre changing tools and equipment operate tyre and tube repair equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> deflating and inflating light vehicle tyres manual handling light vehicle wheel assemblies environmental requirements, including procedures for trapping and disposing of tyre material produced during repair procedures.

Assessment Requirements for AURLTJ002 Remove, inspect, repair and refit light vehicle tyres and tubes

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, inspect, repair and refit light vehicle tyres to both steel and alloy wheels, including repairs to:
 - two bias ply tyres
 - two tubes
 - two radial ply tyres.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to light vehicle tyres and tubes, including procedures for:
 - deflating and inflating tyres
 - manually handling light vehicle wheel assemblies
- environmental requirements, including procedures for trapping and disposing of tyre material produced during repair procedures
- procedures for removing, inspecting, repairing and refitting tyres and tubes, including:
 - split lock rings
 - one piece wheels
- types and applications of tyres, tubes and wheels, including:
 - radial and bias or diagonal ply tyres
 - tubed and tubeless tyres
 - steel and alloy wheels
 - run flat tyres

- types, application and operation of tyre changing equipment and tyre and tube repair equipment
- post-fitting procedures and checks of light vehicle tyres and tubes.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle tyres and tubes that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer tyre and tube repair procedures and specifications
- light vehicle tyres, tubes and wheels specified in the performance evidence
- tools, equipment and materials appropriate for removing, inspecting, repairing and refitting light vehicle tyres and tubes, including:
 - tyre and tube repair tools and equipment
 - tyre and tube repair consumables
 - tyre changing tools and equipment.

AURLTJ004 Provide advice on the effects of wheel and tyre combinations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to provide advice to customers regarding specific non-standard wheel and tyre combinations that could affect the ride and handling characteristics of their vehicle. It involves confirming customer needs, analysing technical needs and options, providing advice on compliance with Australian Design Rules, recommending best options for wheel and tyre combinations, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The wheel and tyre combinations include those for light vehicles, including four wheel drive (4WD) vehicles, light commercial vehicles or motorsport vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Confirm customer requirement	1.1 Customer is consulted to determine required wheel and tyre combinations 1.2 Alternative wheel and tyre combinations are discussed and confirmed with customer as required 1.3 Specifications of proposed or actual <i>wheel and tyre combinations</i> are clarified with customer
2. Locate and confirm data to inform technical opinion	2.1 Technical product personnel from wheel and tyre manufacturers are consulted as required to obtain technical information and advice 2.2 Compliance of wheel and tyre combinations with Australian Design Rules is confirmed and reported according to workplace procedures 2.3 Proposed or actual combinations are confirmed if they contravene Australian Design Rules and reported according to workplace procedures 2.4 Colleagues are consulted for technical knowledge and experience as necessary
3. Recommend wheel and tyre options that meet customer requirements	3.1 Effects of wheel and tyre combinations on vehicle performance, handling and comfort are discussed with customer 3.2 Advice on suitability of wheel and tyre combination is provided and discussed with customer 3.3 Options that meet customer needs are developed according to workplace procedures 3.4 Where wheel and tyre combination does not comply with Australian Design Rules, implications are discussed with customer 3.5 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> research wheel and tyre technical specifications.
Reading skills to:	<ul style="list-style-type: none"> interpret ADR regulations interpret manufacturers' wheel and tyre technical specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, such as job cards.
Oral communication skills to:	<ul style="list-style-type: none"> clarify and confirm information and instructions speak clearly and directly to present problems or issues to appropriate personnel.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information in wheel and tyre specifications interpret metric and imperial units of measurement.
Problem solving skills to:	<ul style="list-style-type: none"> determine suitable or alternative wheel and tyre combinations.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Wheel and tyre combinations</i> must include:	<ul style="list-style-type: none"> wheel rim sizes wheel material wheel diameters tyre sizes tyre compounds tyre tread designs.

Assessment Requirements for AURLTJ004 Provide advice on the effects of wheel and tyre combinations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- provide advice to three different customers on the effects of different wheel and tyre combinations on their vehicles' ride and handling characteristics
- demonstrate effective communication techniques when discussing technical information with above customers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- principles of wheel and tyre technology, including:
 - directional tyres
 - wheel offsets
 - wheel track
 - tyre to road contact
- effects of wheel and tyre combinations on vehicle comfort, handling and safety
- Australian Design Rules (ADRs) relating to wheels and tyres
- legislation concerning ADR compliance.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the wheel and tyre advice that they have provided, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- three different customers requiring advice on wheel and tyre combinations
- manufacturer wheel and tyre specifications
- ADRs relating to wheel and tyre combinations.

AURLTJ011 Select light vehicle wheels and tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to select light vehicle tyres and wheels to suit specific applications. It involves identifying and confirming work requirements, preparing for the work, selecting tyres and wheels, and completing workplace processes and documentation.

This unit applies to those working within the automotive service and repair industry. The tyres and wheels include those of light vehicles or trailers that are used on sealed or unsealed surfaces.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify tyre and wheel options	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret tyre and wheel information in order to identify tyre and wheel options required for the job 1.3 Identify hazards and issues associated with the work, assess potential risks and implement control measures from workplace health and safety requirements
2. Select tyres and wheels	2.1 Assess technical compliance and economic benefits of tyre and

for specific applications	wheel options 2.2 Select tyres and wheels according to manufacturer specifications, workplace procedures, Australian Design Rules, and customer requirements
3. Complete work processes	3.1 Communicate selection to appropriate personnel or customer according to workplace procedures 3.2 Complete and process workplace documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of light vehicle tyres and wheels information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from manufacturer specifications, ADRs, workplace procedures and documentation when seeking tyre and wheel specifications
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, making recommendations regarding selected tyres and wheels

Assessment Requirements for AURLTJ011 Select light vehicle wheels and tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must select light vehicle tyres and wheels for specific applications that safely follows workplace procedures to meet required outcomes. This includes:

- selecting the tyres and wheels of four different light vehicles to suit specific customer requirements, in which the work must involve accessing and interpreting information in manufacturer specifications relating to the selection
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures relating to the selection of tyres and wheels including:

- how to locate and apply manufacturer specifications for the following light vehicle wheels and tyres:
 - tubeless and tubed tyres
 - bias ply and radial ply tyres
 - directional tyres
 - steel wheels
 - alloy wheels
- how to locate and apply Australian Design Rules relating to light vehicle tyres and wheels
- how to communicate with customers the selection of tyres and wheels
- workplace procedures and documentation for light vehicle wheels and tyres
- workplace health and safety requirements and procedures relating to light vehicle wheels and tyres
- workplace housekeeping and documentation procedures

Light vehicle tyres and wheels technical information, including:

- light vehicle tyre fitment guide
- light vehicle tyre and wheel assembly terminology and codes
- light vehicle tread patterns, and tyre and wheel assembly types
- specific tyre applications for varying terrain, soil and weather conditions
-

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair order and workplace instructions relating to the selection of light vehicle wheels and tyres
 - workplace procedures relating to the selection of light vehicle wheels and tyres
 - at least one customer requiring advice on tyres and wheels
 - manufacturer specifications and tyre and wheel fitment guide
 - Australian Design Rules relating to light vehicle tyres and wheels
 - four different light vehicles for the selection of tyres and wheels
 - equipment and material appropriate for selecting light vehicle tyres and wheels for specific applications
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies and procedures and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

AURLTJ013 Remove, inspect and refit light vehicle wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to remove, inspect and refit light vehicle wheel and tyre assemblies. It involves identifying and confirming work requirements, preparing for the task, removing, inspecting and refitting wheel and tyre assemblies, and completing workplace processes and documentation.

This unit applies to those working within the automotive light vehicle service and repair industry. The wheel and tyre assemblies include those of light vehicles, light commercial vehicles or trailers. The work does not involve removing the tyre from the wheel. This unit does not apply to motorcycle or heavy vehicle wheel assemblies.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to remove light vehicle wheel and tyre assembly	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret wheel and tyre assembly removal, inspection and refitting information 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies

	1.4 Identify tools, equipment and materials required for the job, and examine for serviceability
2. Remove and inspect wheel and tyre assembly	<p>2.1 Remove wheel and tyre assembly according to manufacturer and workplace procedures, workplace health and safety requirements and without causing damage to components or systems</p> <p>2.2 Inspect condition of wheel and tyre assembly, mounting points and fittings for damage and wear</p> <p>2.3 Report inspection findings and make recommendations for necessary repairs or replacements and adjustments according to workplace procedures</p>
3. Refit wheel and tyre assembly	<p>3.1 Obtain and interpret refitting information in order to identify refitting options required for the job</p> <p>3.2 Fit and adjust wheel and tyre assembly according to manufacturer specifications, workplace procedures and workplace health and safety requirements</p> <p>3.3 Carry out tightening sequence and torque settings according to manufacturer specifications and workplace procedures</p> <p>3.4 Examine wheel assembly for correct assembly and run-out according to manufacturer specifications and workplace procedures, and rectify any issues identified</p>
4. Complete work processes	<p>4.1 Carry out final inspection to ensure work meets workplace expectations and vehicle is ready for use</p> <p>4.2 Clear work area and dispose of or recycle materials according to workplace procedures</p> <p>4.3 Examine and store tools and equipment according to workplace procedures</p> <p>4.4 Complete workplace documentation according to workplace procedures</p>

Foundation Skills

Assessment Requirements for AURLTJ013 Remove, inspect and refit light vehicle wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate removing, inspecting and refitting a light vehicle wheel and tyre assembly that safely follows workplace procedures to meet required outcomes on at least three different light vehicle wheel and tyre assemblies. This includes:

- removing, inspecting and refitting three of the following wheel and tyre assemblies:
 - one steel wheel assembly
 - one alloy wheel assembly
 - one four wheel drive vehicle wheel assembly
 - one split or multi-piece wheel assembly
 -

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures relating to the removal, inspection and refitting of light vehicle wheel and tyre assemblies, including:

- how to locate and identify manufacturer specifications, manufacturer procedures and workplace procedures for removing, inspecting and refitting light vehicle wheel and tyre assemblies
- the following workplace health and safety requirements and procedures relating to removing, inspecting and refitting light vehicle wheel and tyre assemblies:
 - lifting and supporting vehicles
 - using wheel assembly removal tools
 - manually handling wheel assemblies
 - working with high air pressure
 - working with split and multi-piece wheels

- environmental procedures for removing, inspecting and refitting light vehicle wheel and tyre assemblies
- the following light vehicle wheel and tyre assembly removal, inspection and refitting procedures:
 - pre-removal inspections of wheel assemblies, including split and multi-piece wheels
 - removing, inspecting and refitting light vehicle wheel and tyre assemblies, including wheel nut tensioning procedures
 - post-fitting procedures and checks of light vehicle wheel assemblies, including wheel and tyre assembly run-out
- workplace housekeeping and documentation procedures

Key types and uses of different wheel assemblies, including:

- stamped or pressed steel wheels
- alloy wheels
- wheel studs and nuts
- run flat tyres
-

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair order and workplace instructions relating to remove, inspect and refit activity
 - workplace procedures relating to remove, inspect and refit activity
 - manufacturer wheel and tyre specifications
 - three different light vehicles with the wheel and tyre assemblies specified in the performance evidence
 - tools, equipment and materials appropriate for removing, inspecting and refitting light vehicle wheel and tyre assemblies
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

Links

AURLTQ001 Diagnose and repair light vehicle final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the final drive assemblies of light vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. Final drive assemblies include those in light vehicles or light commercial vehicles. This unit does not apply to agricultural machinery, heavy commercial vehicles, marine vessels, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair light vehicle final drive assembly	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose final drive assembly	2.1 Diagnostic tests are performed according to workplace procedures and <i>safety and environmental requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair final drive assembly	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and assembly or vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking final drive assembly specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure final drive assembly components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications, and calculate gear ratios, torque reduction and multiplication.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and dial indicator gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with hazardous oils environmental requirements, including procedures for trapping, storing and disposing of oils released from final drive assemblies.
---	--

Assessment Requirements for AURLTQ001 Diagnose and repair light vehicle final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following light vehicle final drive assemblies:
 - removable carrier housing (banjo) type
 - integral carrier housing type.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing light vehicle final drive assemblies, including procedures for working with hazardous oils
- environmental procedures for trapping, storing and disposing of oils released from final drive assemblies
- operating principles of light vehicle final drive assemblies and associated components, including:
 - final drive gears, including:
 - gear types
 - gear ratios and torque reduction and multiplication
 - differential function
- application, purpose and operation of the following components of light vehicle final drive assemblies and components, including:
 - removable carrier housing (banjo) type final drives
 - integral carrier housing type final drives
 - transaxle final drives

- differentials, including limited slip differentials
- axle shafts for rigid axles, including:
 - semi floating live axles
 - three quarter floating live axles
 - fully floating live axles
- diagnostic testing procedures for light vehicle final drive assemblies, including:
 - road testing procedures, including:
 - final drive assembly noise diagnostic
 - wheel bearing noise diagnostic
 - pre-dismantling inspection procedures
- repair procedures for light vehicle final drive assemblies, including procedures for:
 - dismantling final drive assemblies
 - inspecting final drive assemblies
 - reassembling and adjusting pinion depth, pinion bearing preload, crown wheel and pinion backlash, side bearing preload and crown wheel and pinion tooth contact
 - repairing wheel bearings of rear wheel drive light vehicles
- post-repair testing procedures for light vehicle final drive assemblies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle final drive assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle final drive assembly specifications
- two different light vehicles:

- one with faults in its removable carrier housing (banjo) type final drive assembly
- one with faults in its integral carrier housing type final drive assembly
- diagnostic equipment for light vehicle final drive assemblies
- tools, equipment and materials appropriate for light vehicle final drive assemblies.

AURLTQ003 Analyse and evaluate faults in light vehicle transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in light vehicle transmission and driveline systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The transmission and driveline systems include those of light vehicles, light commercial vehicles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for light vehicle transmission or driveline system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Transmission or driveline system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to light vehicle transmission and driveline systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use specialised light vehicle transmission and driveline system diagnostic equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:<ul style="list-style-type: none">• lifting, supporting and manually handling light vehicle transmission and driveline systems• working with rotating shafts• environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmission and driveline systems.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none">• diagnostic process, sequence, tests and testing equipment.

Assessment Requirements for AURLTQ003 Analyse and evaluate faults in light vehicle transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the:
 - transmission system of a light vehicle
 - driveline system of a different light vehicle
 - transmission or driveline system of a third light vehicle.

Knowledge Evidence

- Individuals must be able to demonstrate knowledge of:
- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in light vehicle transmission and driveline systems, including procedures for:
 - lifting, supporting and manually handling light vehicle transmission and driveline systems
 - working with rotating shafts
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmission and driveline systems
- principles and processes involved in planning and implementing analysis and evaluation of light vehicle transmission and final drive system faults
- design and planning of diagnostic procedures of light vehicle transmission and driveline system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults

- procedures for analysing and evaluating light vehicle transmission and driveline system faults, including:
 - system failure analysis
 - component failure analysis
- types, functions, operation and limitations of light vehicle transmission and driveline systems and components, including:
 - clutches
 - manual transmissions
 - automatic transmissions
 - torque converters
 - drive shafts
 - final drives
- types, functions, operation and limitations of four-wheel drive system components, including:
 - transfer cases
 - differentials
 - free wheel hubs
- testing procedures for light vehicle transmission and driveline systems, including:
 - transmission shift quality
 - drive shaft run-out
 - driveline operating angles
 - clutch performance under load
 - transmission fluid quality
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in light vehicle transmission and driveline systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to light vehicle transmission and driveline systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle transmission and driveline systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle transmission and driveline system specifications
- three different light vehicles with transmission and driveline system faults
- diagnostic equipment for light vehicle transmission and driveline systems
- tools, equipment and materials appropriate for analysing and evaluating light vehicle transmission and driveline systems.

AURLTQ012 Diagnose and repair light vehicle drive shafts

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to diagnose and repair faults in the drive shafts of light vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

This unit applies to those working within the automotive light vehicle service and repair industry. The drive shafts include those in light vehicles or light commercial vehicles. This unit does not apply to agricultural machinery, heavy commercial vehicles, marine vessels, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Diagnose light vehicle drive shaft	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret diagnostic information in order to identify diagnostic options required for the job 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify diagnostic tools and equipment required for the job and

	<p>examine for serviceability</p> <p>1.5 Perform diagnostic tests according to workplace procedures and workplace health and safety requirements</p> <p>1.6 Examine diagnostic test results to identify causes of faults, report findings and make recommendations for necessary repairs or adjustments according to workplace procedures</p>
2. Repair and test light vehicle drive shaft	<p>2.1 Obtain and interpret repair information in order to identify repair options required for the job</p> <p>2.2 Identify repair tools, equipment and materials for the job and examine for serviceability</p> <p>2.3 Carry out repairs or component replacements and adjustments according to workplace procedures, manufacturer specifications, workplace health and safety and environmental requirements</p> <p>2.4 Carry out post-repair testing according to workplace procedures, workplace health and safety and environmental requirements to confirm fault rectification and repair any issues identified</p>
3. Complete work processes	<p>3.1 Carry out final inspection to ensure work meets workplace expectations and drive shaft or vehicle is ready for use</p> <p>3.2 Clear work area and dispose of or recycle materials according to workplace procedures</p> <p>3.3 Examine and store tools and equipment according to workplace procedures</p> <p>3.4 Complete documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of light vehicle drive shaft information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from workplace procedures and documentation when seeking drive shaft specifications and procedures
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings make repair recommendations

Numeracy skills to:	<ul style="list-style-type: none"> measure drive shaft components use basic mathematical operations, including addition, subtraction and understanding of angles in degrees calculate distances, angles, tolerances and deviations from manufacturer specifications
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements prioritise actions to achieve required outcomes ensure tasks are completed within workplace timeframes
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, including vernier calipers, micrometers and inclinometers

Assessment Requirements for AURLTQ012 Diagnose and repair light vehicle drive shafts

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate a diagnosis and repair of light vehicle drive shafts that safely follows workplace procedures to meet required outcomes. This includes:

- diagnosis and repair of one rear wheel drive vehicle with drive shaft with universal joints, demonstrating the ability to:
 - remove the drive shaft from the vehicle
 - replace one universal joint
 - refit the drive shaft
- diagnosis and repair of one front wheel drive vehicle with constant velocity joint drive shaft, demonstrating the ability to:
 - remove the drive shaft from the vehicle
 - refit the drive shaft
 -

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures relating to the diagnosis, testing and repair of light vehicle drive shafts, including:

- how to locate and identify manufacturers specifications or equivalent documentation and workplace procedures for the diagnosis and repair of light vehicle drive shafts
- the following workplace health and safety requirements for diagnosis and repair of light vehicle drive shafts:
 - safety procedures for working with hazardous oils
- the following environmental requirements for diagnosis and repair of light vehicle drive shafts:
 - procedures for trapping, storing and disposing of oils released from drive shafts

- the following diagnostic testing procedures for light vehicle drive shafts:
 - road testing that include drive shaft noise and vibration
- the following repair procedures for light vehicle drive shafts:
 - dismantling drive shafts
 - inspecting drive shafts
 - reassembling and aligning components
- post-repair testing procedures for light vehicle drive shafts
- workplace housekeeping procedures

Light vehicle drive shafts and associated components information, including:

- the operating principles of:
 - torque reaction of rear axle housings
 - torque steer
- the purpose and operation of the following propeller shafts:
 - single and multi-piece shafts
 - universal joints
 - cross and yoke joints
 - double cardan joints
 - lobro joints
 - velocity fluctuation of universal joints
 - shaft alignment
- the purpose and operation of the following constant velocity joints:
 - tripod joints
 -

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to diagnose and repair activity
 - workplace procedures relating to diagnose and repair activity
 - manufacturer light vehicle drive shaft specifications and procedures or equivalent documentation to complete diagnose and repair activity
 - light vehicle with front engine and rear wheel drive
 - light vehicle with front wheel drive constant velocity joint drive shaft
 - diagnostic equipment for light vehicle drive shafts

- tools, equipment and materials required for repair of light vehicle drive shafts
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- automotive repair workplace or simulated workplace
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

Assessment Requirements for AURLTX001 Diagnose and repair light vehicle manual transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair two of the following faults in two different light vehicle manual transmissions, including faults in two of the following components:
 - input or primary shaft gear or bearing
 - secondary shaft or main shaft gear or bearing
 - synchroniser assembly
 - shift rail, shift fork, interlock and detent mechanisms
 - counter shaft gear or bearing
- remove, refit or replace one manual transmission in a light vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing light vehicle manual transmissions, including procedures for lifting, supporting and manual handling light vehicle manual transmissions
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmissions
- operating principles light vehicle manual transmissions, including:
 - gear types
 - gear ratios and torque reduction and multiplication
 - simple gear trains
 - compound gear trains
 - lubricant types

- application, purpose and operation of light vehicle manual transmissions and components, including:
 - power flows, including:
 - longitudinal manual transmissions
 - transaxles
 - transfer cases
 - synchromesh operation
 - gearshift mechanisms
 - transfer cases, including:
 - part-time four wheel drives
 - full-time four wheel drives
 - all-wheel drives
- diagnostic testing procedures for light vehicle manual transmissions, including:
 - abnormal noise diagnosis
 - shift diagnosis
- repair procedures for light vehicle manual transmissions, including procedures for removing, replacing and adjusting them
- post-repair testing procedures for light vehicle manual transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle manual transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle manual transmission specifications

- two different light vehicles with faults in the manual transmission components specified in the performance evidence
- diagnostic equipment for light vehicle manual transmissions
- tools, equipment and materials appropriate for repairing light vehicle manual transmissions.

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different light vehicles with different automatic transmissions, in which the faults must involve two of the following components:
 - torque converter
 - transmission oil pump
 - front pump seal
 - valve body
 - shift or pressure solenoid
 - clutch pack
 - brake band
 - brake band servo
 - one-way clutch
 - planetary gear set
 - continuously variable transmission (CVT) belt or pulley
 - internal bearings or thrust washers
- remove, refit or replace one of the above light vehicle automatic transmissions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing light vehicle automatic transmissions, including procedures for lifting, supporting and manual handling light vehicle automatic transmissions

- environmental requirements, including procedures for trapping, storing and disposing of fluids released from light vehicle automatic transmissions
- operating principles of light vehicle automatic transmissions and associated components, including:
 - fluid couplings
 - planetary gears, including:
 - single planetary gear operation
 - types of compound planetary gears, including Ravigneaux and Simpson planetary gear sets
 - gear ratios and torque reduction and multiplication
 - lubricant types and properties
- application, purpose and operation of light vehicle automatic transmissions and components, including:
 - torque converters, including:
 - impeller, stator, one-way clutch and turbine operation
 - lock-up torque converters
 - automatic transmission mechanical components, including brake bands, clutch packs, one-way clutches, and compound planetary gear sets
 - power flows, including:
 - longitudinal automatic transmissions
 - automatic transaxles
 - automatic transmission hydraulic components and hydraulic control components, including:
 - oil pumps
 - hydraulic valves, including pressure regulating valves, manual valves, shift valves, governor valves and throttle pressure valves
 - automatic transmission electronic components, including:
 - electronic control module
 - input sensors, including vehicle speed sensor, throttle position sensor, mass air flow (MAF) sensor, manifold absolute pressure (MAP) sensor, transmission range sensor, engine speed sensor and temperature sensor
 - electronic control module outputs, including indicator lamps, shift solenoids, pressure control solenoids and torque converter clutch solenoids
 - continuously variable transmissions, including operating principles of belts and pulleys
- diagnostic testing procedures for light vehicle automatic transmissions, including procedures for:
 - stall tests
 - pressure test
 - using scan tools when testing
- repair procedures for light vehicle automatic transmissions , including procedures for removing, replacing and adjusting them
- post-repair testing procedures for light vehicle automatic transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle automatic transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle automatic transmission specifications
- two different light vehicles with faults in the automatic transmission components specified in the performance evidence
- diagnostic equipment for light vehicle automatic transmissions
- tools, equipment and materials appropriate for repairing light vehicle automatic transmissions.

AURLTX004 Diagnose complex faults in light vehicle automatic transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in light vehicle automatic transmission and driveline systems, including drive shafts and final drives, and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The transmission and driveline systems include those of light vehicles or light commercial vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Light Vehicle

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Nature and objective of diagnostic requirements are determined from workplace instructions 1.2 Existence of fault in light vehicle automatic transmission or driveline system is confirmed from direct or indirect evidence 1.3 Hazards associated with the work are identified and risks are managed according to workplace procedures, and <i>safety and environmental requirements</i>
2. Prepare to perform diagnosis	2.1 Manufacturer specifications and other technical information for automatic transmission or driveline system are accessed and interpreted 2.2 Diagnostic procedures and options are identified 2.3 Diagnostic method sequence, tests and testing processes are identified and selected from the range of available options 2.4 Testing equipment is obtained and prepared according to manufacturer specifications and workplace procedures 2.5 Tools, equipment and materials required to support the diagnostic process are identified, selected and prepared for use
3. Apply diagnostic procedures	3.1 Selected diagnostic process is followed and testing is carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.2 Diagnostic findings are verified, as required, by using reliable alternative or optional process according to manufacturer specifications and workplace procedures 3.3 Conclusions are drawn from findings and documented according to workplace procedures, including recommendations for necessary repairs 3.5 Conclusions are provided to appropriate personnel or customer to confirm further action to be taken
4. Complete work processes	4.1 Vehicle is presented ready to be repaired or returned to the customer 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate and evaluate appropriate sources of information efficiently apply diagnostic skills to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information from manufacturer and workshop literature when seeking light vehicle automatic transmission and driveline system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, gain information from customers and supervisors, report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure transmission and driveline system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and vernier calipers use specialised diagnostic equipment, such as pressure gauges and scan tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none">• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for lifting, supporting and manually handling light vehicle automatic transmission and driveline systems• environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmission and driveline systems.

Assessment Requirements for AURLTX004 Diagnose complex faults in light vehicle automatic transmission and driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in the:
 - automatic transmission of a light vehicle
 - driveline system of a different light vehicle
 - electronically controlled automatic transmission or driveline system of a third light vehicle
- the above diagnosis must involve two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in light vehicle automatic transmission and driveline systems, including procedures for lifting, supporting and manually handling light vehicle automatic transmission and driveline systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from transmission and driveline systems
- types of complex faults relating to light vehicle automatic transmission and driveline systems, including:

- intermittent
- multi-system
- introduced as a result of system repair
- indirect, caused by the influence of external systems
- types, function and operation of light vehicle automatic transmission and driveline systems, including:
 - electronically controlled automatic transmissions
 - continuously variable transmissions (CVTs)
 - constant velocity joints
 - Hooke-type joints
 - rear wheel drive shafts
 - rear wheel drive final drives
 - front wheel drive final drives
- testing procedures for light vehicle automatic transmission and driveline systems, including:
 - test drive procedures
 - abnormal noise analysis
 - transmission oil pressure tests
 - sources of fluid leaks
 - driveline angle measurement
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in light vehicle automatic transmission and driveline systems
- procedures for accessing and interpreting scan tool system data, including:
 - diagnostic trouble codes (DTCs), including:
 - conditions that set the DTCs
 - conditions for running DTCs
 - live data
 - freeze frame data
 - waveforms
 - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle automatic transmission and driveline systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle automatic transmission and driveline system specifications
- three different light vehicles with complex faults in their automatic transmission or driveline systems, including one vehicle with an electronically controlled automatic transmission
- automatic transmission and driveline system diagnostic equipment, including:
 - oil pressure gauge
 - scan tool
- tools, equipment and materials appropriate for diagnosing complex faults in the automatic transmission and driveline systems of light vehicles.

AURLTX013 Diagnose and repair light vehicle clutch systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to diagnose and repair faults in the clutch systems of light vehicles. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive light vehicle service and repair industry. Clutch systems include those in light vehicles or light commercial vehicles. This unit does not apply to agricultural machinery, heavy commercial vehicles, marine vessels, mobile plant machinery or motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Diagnose a light vehicle clutch system	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret diagnostic information in order to identify diagnostic options required for the job 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify diagnostic tools and equipment required for the job and

	<p>examine for serviceability</p> <p>1.5 Perform diagnostic tests according to workplace procedures and workplace health and safety requirements</p> <p>1.6 Examine diagnostic test results to identify causes of faults, report findings and make recommendations for necessary repairs or adjustments according to workplace procedures</p>
2. Repair light vehicle clutch system	<p>2.1 Obtain and interpret repair information in order to identify repair options required for the job</p> <p>2.2 Identify repair tools, equipment and materials for the job and examine for serviceability</p> <p>2.3 Carry out repair or replacement and adjustments according to workplace procedures, manufacturer specifications, workplace health and safety and environmental requirements</p> <p>2.4 Carry out post-repair testing according to workplace procedures, workplace health and safety and environmental requirements to confirm fault rectification and repair any issues identified</p>
3. Complete work processes	<p>3.1 Carry out final inspection to ensure work meets workplace expectations and vehicle is ready for use</p> <p>3.2 Clear work area and dispose of or recycle materials according to workplace procedures</p> <p>3.3 Examine and store tools and equipment according to workplace procedures</p> <p>3.4 Complete documentation according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate relevant sources of light vehicle clutch systems information efficiently
Reading skills to:	<ul style="list-style-type: none"> read and interpret information from workplace procedures and documentation when seeking clutch system specifications and procedures
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings make repair recommendations

Numeracy skills to:	<ul style="list-style-type: none"> • measure clutch system components • use basic mathematical operations, including addition, subtraction and multiplication • calculate distances, areas, tolerances and deviations from manufacturer specifications
Planning and organising skills to:	<ul style="list-style-type: none"> • plan own work requirements • prioritise actions to achieve required outcomes • ensure tasks are completed within workplace timeframes
Technology skills to:	<ul style="list-style-type: none"> • use precision measuring equipment, including vernier calipers, micrometers and dial indicators

Assessment Requirements for AURLTX013 Diagnose and repair light vehicle clutch systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate a diagnosis and repair of light vehicle clutch system that safely follows workplace procedures to meet required outcomes. This includes demonstrating the ability to:

- remove and refit a light vehicle manual transmission
- diagnose and repair of a light vehicle clutch system in which the work must include removing, refitting or replacing the following components:
 - light vehicle flywheel
 - clutch friction disc
 - clutch pressure plate assembly
 - clutch pressure plate release bearing
 -

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures relating to the diagnosis and repair of light vehicle clutch systems including:

- how to locate and interpret manufacturer specifications and workplace procedures for the diagnosis and repair of light vehicle clutch systems
- the following workplace health and safety requirements for diagnosis and repair of light vehicle clutch systems:
 - safety procedures for lifting and supporting light vehicle transmissions
 - safety procedures handling and controlling clutch dust and clutch fluid
- the following environmental requirements for diagnosis and repair of light vehicle clutch systems:
 - procedures for trapping, storing and disposing of brake dust and brake fluid released from clutch systems

- the following diagnostic testing procedures for light vehicle clutch systems:
 - road testing procedures
- the following repair procedures for light vehicle clutch systems:
 - removing, replacing and adjusting the systems
- post-repair testing procedures for light vehicle clutch systems
- workplace housekeeping and documentation procedures

Key features of light vehicle clutch systems and associated components, including:

- the operating principles of:
 - coefficient of friction
- the purpose and operation of the following light vehicle clutch systems and components:
 - wet and dry single and multi-plate clutch
 - dual mass flywheels
 - dampening systems
 - cable operated clutch
 - hydraulically operated clutch
 - dual clutch systems
 -

Assessment Conditions

The assessment must:

- include access to:
 - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
 - repair orders and workplace instructions relating to diagnose and repair activity
 - workplace procedures relating to diagnose and repair activity
 - manufacturer light vehicle clutch systems specifications and procedures or equivalent documentation to complete diagnose and repair activity
 - light vehicle with manual transmission and with clutch system faults
 - diagnostic equipment for light vehicle clutch systems
- tools, equipment and materials appropriate for repairing light vehicle clutch systems, including:
 - transmission lifting equipment
 - clutch aligning tool
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment

- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

Assessment Requirements for AURLTZ001 Diagnose and repair light vehicle emission control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the emission control systems of two different light vehicles as follows:
 - one from the following systems:
 - positive crankcase ventilation system
 - evaporative control system
 - air injection system
 - one from the following systems:
 - exhaust emission control system
 - exhaust gas recirculation system
 - diesel engine particulate filter system
 - diesel engine selective catalytic reduction (SCR) system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing light vehicle emission control systems, including procedures for working with vehicles that produce toxic emissions
- operating principles light vehicle emission control systems, including:
 - combustion chemistry and combustion emissions
 - engine blow-by
 - fuel volatility

- application, purpose and operation of petrol and diesel light vehicle emission control systems and components, including:
 - evaporative control systems, including:
 - fuel tank vapour space
 - charcoal canister
 - crankcase ventilation systems, including:
 - positive crankcase ventilation (PCV)
 - diesel engine crankcase ventilation systems
 - exhaust emission control systems, including:
 - reduction and oxidation catalytic converters
 - air injection systems
 - diesel engine particulate filter systems
 - diesel engine SCR systems
 - exhaust gas recirculation (EGR) systems
 - emission control through engine design, including:
 - combustion chamber design
 - valve overlap
 - variable valve timing
- diagnostic testing procedures for light vehicle emission control systems, including procedures for testing:
 - evaporative control system operation
 - crankcase ventilation system operation
 - catalytic converter operation
 - air injection system operation
 - diesel engine particulate filter system operation
 - diesel engine SCR system operation
 - exhaust gas analysis
 - EGR system operation
- repair procedures for light vehicle emission control systems, including procedures for removing, replacing and adjusting the systems
- post-repair testing procedures for light vehicle emission control systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light vehicle emission control systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer light vehicle emission control system specifications
- two different light vehicles with emission control systems specified in the performance evidence
- diagnostic equipment for petrol or diesel light vehicle emission control systems, including exhaust gas analyser
- tools, equipment and materials appropriate for repairing petrol or diesel light vehicle emission control systems.

AURMBA001 Transport light competition vehicles and support equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare support equipment and a light competition vehicle for transportation. It involves preparing for the task, selecting and packing tools and equipment, fitting transportation devices, components and covers to a competition vehicle, and loading and unloading required tools, equipment and competition vehicle.

It applies to those working in the motor sport industry. The light competition vehicles are under 300 kg of unladen weight, including go-carts, motorcycles, mountain bikes or jet skis.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Support and Logistics

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare requirements for motor sport event	1.1 <i>Job requirements</i> are determined from team instructions, category rules and supplementary regulations 1.2 Specific tooling and equipment needed for event are sourced and selected 1.3 Tools and equipment are packed for transportation and secured to avoid damage 1.4 Equipment listing is checked and resources are accounted for
2. Load and secure light competition vehicle and tools and equipment for transportation	2.1 Checklist for securing resources and vehicle is compiled 2.2 Vehicle, tools and equipment are loaded according to <i>safety requirements</i> and team procedures 2.3 Vehicle, tools and equipment are secured and restraint mechanisms checked according to safety requirements and team procedures 2.4 Hazardous material is stored according to safety requirements and team procedures 2.5 Transporter tailgates, ramps, doors and bins are secured as required according to safety requirements and team procedures
3. Unload vehicle, tools and equipment	3.1 Vehicle, tools and equipment are released from restraints and unloaded according to safety requirements and team procedures 3.2 Transport vehicle is cleaned and prepared for subsequent use 3.3 Restraint mechanisms and holding points are checked for integrity according to team procedures 3.4 Problems with transport vehicle are reported to appropriate personnel as required and according to team procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> • interpret equipment listings.

Skills	Description
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out equipment logs and official documentation.
Oral communication skills to:	<ul style="list-style-type: none"> report problems with transport vehicle to team members.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to: <ul style="list-style-type: none"> count equipment calculate weight.
Planning and organising skills to:	<ul style="list-style-type: none"> use available space within transporter efficiently interpret loading and unloading sequence and avoid backtracking or workflow interruptions.
Problem solving skills to:	<ul style="list-style-type: none"> determine methods of loading and unloading disabled or damaged vehicles.
Teamwork skills to:	<ul style="list-style-type: none"> work as part of a team to ensure materials are available as needed and time wastage is minimised.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Job requirements</i> must include:	<ul style="list-style-type: none"> light competition vehicle to be transported materials and equipment to be loaded.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE), including hearing and eye protection manually handling loads transporting and storing dangerous goods and hazardous chemicals.

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- load and unload two different light competition vehicles, each under 300 kg of unladen weight, and support equipment on and off a vehicle transporter, including one vehicle at a sanctioned motor sport event.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to transporting light competition vehicles and support equipment, including procedures for:
 - selecting and using personal protective equipment (PPE), including hearing and eye protection
 - manually handling loads
 - transporting and storing dangerous goods and hazardous chemicals
- procedures for transporting light competition vehicles and support equipment, including:
 - preparing light competition vehicles for transportation
 - preparing support equipment for transportation, including tools, tyres and wheels
 - loading and unloading light competition vehicles and support equipment
 - securing vehicles and support equipment
- procedures for cleaning and preparing transport vehicles for subsequent use, including procedures for checking restraints, mechanisms and holding points.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light competition vehicles that they have transported, e.g. team event documentation.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events, including one sanctioned event
- PPE, including hearing and eye protection
- two different light competition vehicles and support equipment requiring transport to a motor sport event
- vehicle transporter suitable for a light competition vehicle.

AURMBA002 Load and unload competition vehicles and support equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare, load and unload competition vehicles and support equipment for transportation. It involves preparing for the task, selecting and packing tools and equipment, fitting transportation devices, components and covers to a competition vehicle, and loading and unloading the tools, equipment and competition vehicle.

It applies to those working in the motor sport industry. The competition vehicles are over 300 kg of unladen weight. This unit does not apply to loading and loading vehicles from car trailers.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Support and Logistics

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare requirements for motor sport event	1.1 <i>Job requirements</i> are determined from team instructions, category rules and supplementary regulations 1.2 Toolboxes and storage containers are checked for completeness and security to avoid damage during transportation 1.3 Additional or replacement equipment and materials are sourced as required 1.4 Transporter storage area is checked and cleaned as required 1.5 Straps and restraint mechanisms are checked for serviceability
2. Prepare competition vehicle for transportation	2.1 Competition vehicle is cleaned and prepared for transportation according to schedule, and electrical system is deactivated 2.2 Transportation devices, components and covers are fitted 2.3 Tie-down points on vehicle and transporter are identified 2.4 Problems with equipment or vehicle are reported to appropriate persons as required
3. Load and secure competition vehicle and support equipment for transportation	3.1 Vehicle and support equipment are loaded on to transporter according to team procedures and <i>safety requirements</i> 3.2 Vehicle and support equipment are secured according to team requirements and restraints are checked 3.3 Hazardous material is stored according to safety requirements and team procedures 3.4 Transporter tailgates, ramps, doors and bins are closed and secured according to safety requirements and team procedures
4. Unload vehicle and support equipment	4.1 Competition vehicle and support equipment are released from restraints and unloaded according to safety requirements and team procedures 4.2 Transporter is cleaned and prepared for subsequent use 4.3 <i>Safety equipment</i> is checked for currency and sufficiency, and restraint mechanisms and holding points are checked for integrity 4.4 Team documentation is completed

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret labels on dangerous goods and hazardous chemicals interpret loading and unloading sequence interpret event scheduling and location details on team documentation.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out team documentation and material stock lists.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions from race engineers, team manager and team members report progress against schedule to team members.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to count equipment and calculate weight from volumes of substances.
Planning and organising skills to:	<ul style="list-style-type: none"> use available space within transporter efficiently.
Problem solving skills to:	<ul style="list-style-type: none"> determine methods of loading and unloading disabled or damaged vehicles.
Teamwork skills to:	<ul style="list-style-type: none"> work as part of a team to ensure materials are available as needed and time wastage is minimised.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Job requirements</i> must include:	<ul style="list-style-type: none"> competition vehicle to be transported materials, tools and equipment to be loaded.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE), including hearing and eye protection handling 200 litre fuel drums, compressed gas bottles, and dry ice working at heights

	<ul style="list-style-type: none">• transporting and storing dangerous goods and hazardous chemicals.
<i>Safety equipment</i> must include:	<ul style="list-style-type: none">• fire extinguishers• spill kits• PPE, including hearing protection, gloves and sun protection.

Assessment Requirements for AURMBA002 Load and unload competition vehicles and support equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- load and unload two different competition vehicles, each over 300 kg of unladen weight and with different tie-down requirements, in which the work must involve:
 - loading and unloading on two different occasions
 - one load and unload at a sanctioned motor sport event.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to loading and unloading competition vehicles and equipment, including procedures for:
 - selecting and using personal protective equipment (PPE), including hearing and eye protection
 - handling 200 litre fuel drums, compressed gas bottles, and dry ice
 - working at heights
 - transporting and storing dangerous goods and hazardous chemicals
- procedures for transporting, using and storing safety equipment, including fire extinguishers, spill kits, hearing protection, gloves and sun protection
- procedures for preparing vehicle for transportation, including:
 - fitting travel tyres and wheels
 - fitting tie-down points
 - de-fuelling vehicle
 - removing compressed gas containers

- additional requirements for transportation by a third party, via road freight, air, rail or sea
- load distribution principles for safely loading a transporter
- loading and unloading techniques, including use of:
 - winches
 - tailgate loaders
 - trolleys and dollies
- procedures for securing vehicles and equipment, including use of:
 - ratchet straps
 - chains and dogs
 - wheel chocks
- procedures for recording material and consumable use.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles and support equipment that they have loaded and unloaded, e.g. load list.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport events, including one sanctioned event
- one vehicle transporter over 4.5 tonne unladen
- two different competition vehicles requiring transport to a motor sport event
- support equipment, tools and materials, including lifting and material handling equipment
- load lists, schedules and team procedures.

AURMCA001 Manage motor sport team media liaison

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to liaise with the media on behalf of a motor sport team and to support team members during media interviews and appearances. It involves researching the media liaison needs of the team and identifying the most appropriate media outlets, arranging media interviews, and preparing a budget to support media liaison activities. The unit requires individuals to demonstrate discretion, judgement and problem-solving skills when developing media releases and arranging media interviews.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Sales and Marketing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify team media requirements and limitations	1.1 Desired outcomes of media liaison are identified in relation to team goals 1.2 Limitations on information to be provided are <i>identified</i> 1.3 Media liaison budget is developed 1.4 Media outlets and persons are researched, and decision regarding choice of required media is made according to team requirements, ethical conduct, and promotional partner requirements
2. Prepare media information	2.1 Type of media suitable for promotional strategy and team requirements is selected 2.2 Specific media outlet information needs are researched 2.3 Media needs and requests are considered in light of team objectives, confidentiality requirements and ethical issues 2.4 Team information and performance statistics are researched and documented 2.5 <i>Suitable information</i> is prepared for release
3. Issue media information	3.1 Media personnel are contacted and timing arrangements for release are agreed 3.2 Team management approval is obtained and information provided to media outlet 3.3 Promotional partner representatives are advised of release details
4. Arrange media interviews	4.1 Media persons are contacted and requirements negotiated 4.2 Interview schedule and agenda are determined 4.3 Material for interviews is researched and prepared 4.4 Team persons are briefed and coached in presentation techniques as required 4.5 Team management is regularly informed of arrangements and outcomes 4.6 Promotional partner representatives are advised of interview details
5. Evaluate publicity benefits	5.1 Exposure statistics are obtained from media outlets 5.2 Promotional partner feedback on media release and interview is obtained 5.3 Data and feedback are analysed to assess effectiveness 5.4 Outcomes are measured against media liaison budget and team objectives

Foundation Skills

Assessment Requirements for AURMDA001 Develop and update motor sport industry knowledge

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop and document knowledge of the organisational structure, competition categories, event rules and regulations, and roles of officials and volunteers in one of the following motor sport industry disciplines:
 - automobile (car, truck or go-cart)
 - motorcycle
 - powerboat
- compile a calendar of events for the above selected motor sport discipline.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key features of the motor sport industry, including:
 - structure and hierarchy
 - motor sport disciplines
 - general knowledge of different types of motor sports
 - participation opportunities within the motor sport industry
- key characteristics of motor sport discipline selected in the performance evidence, including:
 - competition categories and scope
 - event rules and regulations, including supplementary regulations
 - types and roles of officials and volunteers
 - protocols and procedures for communicating with stewards, officials and other relevant persons

- key motor sport organisations and associations
- legal and ethical issues that impact on motor sport officials and volunteers, including ethical conduct while officiating.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having developed and updated their motor sport industry knowledge, e.g. event sign-on sheet.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- information and communication technology, including the internet
- current sources of motor sport industry information
- National Competition Rules (NCR) and event supplementary regulations
- industry magazines and related publications.

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Personal requirements are identified and equipment is checked and prepared for safe and operational condition 1.3 <i>Conditions</i> on the day are checked and prepared for 1.4 Pre-event briefing session is attended, and roles and responsibilities are confirmed
2. Carry out assigned duties	2.1 Designated work practices are confirmed with supervisor 2.2 Instructions for assigned duties are followed and safety hazards and risks are monitored 2.3 Activities are carried out according to event rules and regulations, required code of practice, and organisational safety and emergency procedures 2.4 Own limitations are recognised and advice and help sought as required
3. Review and analyse performance	3.1 Post-event debriefing session is attended as required 3.2 Feedback is sought and analysed on own performance to identify areas for improvement 3.3 Personal plan is developed in consultation with support personnel to improve own officiating performance 3.4 Additional training is undertaken as required to improve performance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret event documentation, including event rules and regulations, required code of practice, and organisational safety and emergency procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out documentation required by officiating duties.
Oral communication skills to:	<ul style="list-style-type: none"> clarify documentation with event organiser seek advice and feedback on own performance.

Skills	Description
Teamwork skills to:	<ul style="list-style-type: none"> work with others and in a team using cooperative approaches to optimise work practices and contribute to a productive team environment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Conditions</i> must include:	<ul style="list-style-type: none"> weather personal comfort.

Assessment Requirements for AURMDA002 Assist with officiating duties at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- act as a trainee official or volunteer at two different motor sport events, including at one sanctioned motor sport event.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to assisting with motor sport officiating duties, including procedures for selecting and using personal protective equipment (PPE) required for event
- key information relating to above motor sport events, including:
 - organisational structures of events, including authority and communication lines
 - rules and regulations of motor sport events
- procedures for officiating at above motor sport events, including:
 - personal preparation
 - selecting and checking resources and equipment required for officiating
- policies and procedures relating to above events and own officiating role, including:
 - ethical requirements
 - emergency response procedures
 - reporting and recording procedures
 - planning processes for event.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having assisted with officiating duties at motor sport events, e.g. team event documentation.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events, including one sanctioned event
- motor sport event officiating documentation, including event organisation documentation, rules and regulations, and safety procedures
- motor sport event officiating equipment, including PPE.

AURMDA004 Recover vehicles at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to recover damaged or broken down vehicles in motor sport events in a safe and timely manner and without causing further damage to the vehicle. It involves planning, setting up and recovering vehicles that require retrieval due to accident or mechanical breakdown at a motor sport event, and completing workplace processes and documentation. It includes carrying out pre-operational checks on recovery equipment, and operating the recovery equipment and ancillary equipment.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Assess situation and plan recovery	1.1 Type of vehicle to be towed and critical aspects of vehicle design that could impact on recovery operations are identified 1.2 Personnel, equipment and techniques required to carry out the recovery are identified 1.3 Availability of recovery equipment and personnel to carry out the job is confirmed 1.4 Recovery operation is <i>planned</i> with consideration for security and safety of persons, vehicles and property
2. Set up and secure the recovery situation	2.1 Recovery situation is <i>set up</i> and secured according to established recovery operation action plan 2.2 Safety of spectators and other personnel in vicinity of recovery situation is managed according to safety procedures and security requirements 2.3 Recovery equipment is positioned and attachment points on vehicle are identified 2.4 Weight of vehicle being recovered is checked to ensure it is consistent with established guidelines, regulatory requirements, and permissible safe working loads for recovery equipment
3. Recover vehicle	3.1 Vehicle to be recovered is manoeuvred into position using appropriate equipment and according to standard operating procedures and <i>safety requirements</i> , and without causing damage to components or systems 3.2 Recovery equipment is operated according to manufacturer procedures, safe work practices and regulatory requirements 3.3 Recovered vehicle is secured using appropriate winches, ropes and cables according to relevant load restraint regulations and standard operating procedures 3.4 Recovered vehicle is conveyed to designated location and unloaded or unhitched according to standard operating procedures and safety requirements
4. Complete work processes	4.1 Recovery area and its near vicinity are cleared of debris and any spills are cleaned up 4.2 Recovery equipment is checked for operational effectiveness according to standard operating procedures 4.3 Faulty equipment is identified, tagged, isolated and reported according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret recovery equipment operating procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out recovery equipment log, incident reports and official forms tag faulty equipment.
Oral communication skills to:	<ul style="list-style-type: none"> direct vehicle driver, spectators and event officials during vehicle recovery process report problems with recovery equipment to team members.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, when determining vehicle loads and load limits.
Problem solving skills to:	<ul style="list-style-type: none"> adapt or modify equipment to overcome differing vehicle recovery situations.
Teamwork skills to:	<ul style="list-style-type: none"> work as part of a team to ensure vehicle is recovered safely and efficiently.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Planning</i> must include:	<ul style="list-style-type: none"> identifying potential hazards at recovery site identifying potential hazards during recovery operation managing risks associated with identified hazards.
<i>Set-up</i> must include:	<ul style="list-style-type: none"> safety equipment barriers and warning signs.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including: <ul style="list-style-type: none"> procedures to be followed in the event of an emergency when operating recovery equipment, including using portable fire extinguishers and personal protective equipment (PPE) potential workplace hazards, risks and emergency situations principles of risk management.

Assessment Requirements for AURMDA004 Recover vehicles at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- recover three different motor sport vehicles during one or more motor sport events.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to recovering motor sport vehicles at events, including:
 - procedures to be followed in the event of an emergency when operating recovery equipment, including using portable fire extinguishers and personal protective equipment (PPE)
 - potential workplace hazards, risks and emergency situations
 - principles of risk management
- motor sport vehicle recovery procedures, including:
 - types and application of safety equipment, barriers and warning signs
 - types and application of towing equipment for motor sport vehicles
 - key features of towing vehicles, including vehicle designs that could impact on recovery
 - preparing vehicle for recovery, including identifying towing equipment attachment points and weight of vehicle
 - methods of cleaning recovery area and its near vicinity
- recovery vehicle operating procedures, including:
 - required pre-operational checks for recovery vehicle and its equipment, and resultant potential action

- typical recovery vehicle controls, instruments and indicators
- recovery vehicle manoeuvring procedures, including with and without a tow or load
- types and application of vehicle log books, incident reports and official forms relating to vehicle recovery operations
- motor sport event communication procedures, including reporting lines in the motor sport environment
- commonwealth, state or territory legislation, regulations, standards and codes of practice relating to recovering vehicles in a motor sport event, including safety and environmental regulations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motor sport vehicles that they have recovered, e.g. recovery vehicle log.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport events
- personal and motor sport team safety procedures and requirements, including PPE
- three different motor sport vehicles requiring recovery
- motor sport vehicle recovery equipment.

AURMDA005 Act as a marshal at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to perform the assigned duties of a marshal at a motor sport event. It involves pre-event preparation, and carrying out general or assigned duties, such as paddock marshal, assembly marshal, grid marshal, pit marshal, communications marshal, course marshal or sector marshal. It requires the ability to observe event conditions and activities in own area of responsibility and correctly apply rules and regulations to ensure safety and compliance.

It applies to those working in the motor sport industry. The unit does not apply to the role of a flag marshal.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

AURMDA007 Act as a steward at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to act as a steward at a motor sport event. It requires strong verbal and written communication skills, as well as extensive knowledge of the conduct of the applicable motor sport category, its rules and regulations, and its judiciary processes.

The steward is usually appointed by the motor sport controlling body and has the authority to act on the body's behalf to ensure the event is conducted in compliance with all applicable rules and regulations. This includes ensuring all aspects of the event organisation meet requirements before the event can proceed. During the event, the steward must ensure it is conducted according to the rules and regulations and has the power to stop the event or suspend participants. The steward can also adjudicate on protests, disputes or breaches of the rules.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Assessment Requirements for AURMDA007 Act as a steward at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- act as a steward in two different motor sport events, one of which must be a sanctioned event and must include an adjudication of a protest or dispute
- produce a final report for each event.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor sport events in performance evidence, including:
 - organisational structures of events, including authority and communication lines
 - category rules and supplementary regulations of events
- motor sport officiating at above events, including:
 - responsibilities and tasks of a steward
 - protocols for communicating with other officials
 - professional and ethical responsibilities of stewards
 - personal preparation, resources and equipment required for officiating
 - motor sport protest, inquiry and appeal processes and procedures
 - principles of administrative law and natural justice when applied to motor sport investigations, protests, inquiries and appeals
 - conflict management techniques
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice relating to motor sport events, including work health and safety (WHS) and environmental regulations

- organisational policies and procedures relating to acting as a motor sport steward, including:
 - emergency response procedures
 - risk management procedures
 - reporting and recording procedures
 - planning processes for event.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having acted as a steward at a motor sport event, e.g. event sign on-sheet.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events, including one sanctioned event
- motor sport event officiating documentation, including rules and regulations, safety procedures and event procedures
- motor sport event officiating equipment.

AURMGA001 Set up and dismantle temporary work location and equipment at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to set up a temporary work location and equipment at a motor sport event according to team requirements. It involves preparing, setting up and dismantling a temporary work location and equipment storage, laying out equipment, erecting team promotional signage, and setting up a functional workspace in the temporary location.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare site	1.1 Site information and requirements are determined and confirmed with site supervisor or circuit manager

<p>Elements</p> <p>Elements describe the essential outcomes.</p>	<p>Performance Criteria</p> <p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.</p>
	<p>1.2 Security and confidentiality issues are considered and risk management measures selected</p> <p>1.3 Hazards associated with work site are identified and risks are managed according to workplace procedures and <i>safety requirements</i></p> <p>1.4 Access paths are considered when positioning equipment and tooling, and measures are taken to eliminate hazards</p>
<p>2. Assemble temporary work shelter</p>	<p>2.1 Tools and equipment are unloaded from transporters according to safety requirements and team requirements and procedures</p> <p>2.2 Work shelter is sourced and fittings information interpreted</p> <p>2.3 Shelter and associated fittings are assembled, erected and secured according to shelter manufacturer procedures, team requirements, event supplementary regulations, and safety requirements</p> <p>2.4 Problems with temporary work shelter are identified and reported to appropriate persons according to team procedures as required</p>
<p>3. Position equipment and tooling in work area</p>	<p>3.1 Equipment is assembled and prepared according to manufacturer procedures, team requirements and safety requirements</p> <p>3.2 Equipment is positioned according to team requirements, controlling body rules, category rules and supplementary regulations, and safety requirements</p> <p>3.3 Required personal protective equipment (PPE) is identified, fitted and installed according to manufacturer specifications and team requirements</p> <p>3.4 Problems with work area are identified and reported to appropriate persons according to team procedures as required</p> <p>3.5 Effectiveness of area layout is monitored during use, and recommendations are made for change to appropriate persons as required</p>
<p>4. Dismantle temporary work shelter</p>	<p>4.1 Shelter is cleaned, dismantled and packed in preparation for transportation according to team procedures and safety requirements</p> <p>4.2 Tooling and equipment are accounted for, checked and packed in preparation for transportation according to team procedures and safety requirements</p> <p>4.3 Shelter, tools and equipment are loaded on to vehicle transporters according to team procedures and safety requirements</p> <p>4.4 Work area is cleaned and inspected for serviceable condition according to team procedures and local requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret labels and signage associated with dangerous goods and hazardous substances.
Oral communication skills to:	<ul style="list-style-type: none"> confirm site requirements with site supervisor or circuit manager report unsafe situations and hazards and clarify team safety procedures and requirements with team members.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to count tools and equipment.
Planning and organising skills to:	<ul style="list-style-type: none"> implement team safety requirements, controlling body rules, category rules or supplementary regulations to manage unsafe situations and hazards.
Teamwork skills to:	<ul style="list-style-type: none"> work with others and in a team using cooperative approaches to optimise work practices.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using PPE identifying hazards and managing risks.

Assessment Requirements for AURMGA001 Set up and dismantle temporary work location and equipment at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly set up and dismantle a temporary work location at three different motor sport event locations, including one sanctioned motor sport event.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to setting up and dismantling a temporary work location and equipment at a motor sport event, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - identifying hazards and managing risks
- key requirements of motor sport event category rules and supplementary regulations
- principles and functionality requirements of the layout of temporary work shelter, including:
 - workflow of pit lane and service area operations
 - tooling and equipment required for specific events
 - methods of monitoring effectiveness of area layout
- temporary shelter assembly and erection methods and techniques, including procedures for:
 - positioning equipment for ease of access, security, logical workflow and ergonomic use
 - setting up equipment for safe and effective operation, including:
 - correct boom height

- securing gas bottles
- securing service area moorings.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

AURMGA002 Manage personal presentation and development in a motor sport environment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to manage personal presentation, learning and career options, develop personal conflict management skills and a health and fitness plan in a motor sport environment. It involves being able to identify personal presentation requirements and personal strengths, and support career paths with appropriate learning, manage physical health and fitness, and communicate effectively in a team.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURMGA002 Manage personal presentation and development in a motor sport environment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- meet team personal presentation requirements throughout three different motor sport events, which must include:
 - workshop
 - competition event
 - promotional activity
- develop a personal résumé, including detailed statements of:
 - qualifications and training
 - experience in the motor sport industry
 - relevant experience beyond the motor sport industry
 - testimony from employers, colleagues or training bodies
- develop a personal health and fitness plan, including detailed statements of:
 - three strategies for managing nutrition needs that demonstrate a knowledge of recommended nutritional intake
 - three strategies for increasing personal fitness in one of the following:
 - flexibility
 - cardiovascular fitness
 - muscular strength and endurance
 - three stress management strategies
- demonstrate conflict resolution strategies during the following situations at a motor sport event:
 - tight timeframes or extended work hours
 - different work styles

- persons external to the team.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- personal presentation standards, including:
 - team roles, responsibilities and relationships
 - motor sport sectors and categories
 - presentation standards of motor sport team roles, including hair, clothes, personal hygiene, posture, body language and speech
- types of career paths in motor sport
- methods for identifying personal strengths
- key features of goal setting methods, such as specific, measurable, achievable, realistic, and timely (SMART)
- key features for developing personal learning management program, including:
 - developing résumé
 - identifying and catering for different learning styles when working together in teams
- key features of personal health and fitness plans, including:
 - human nutritional requirements, food groups and their effect on the human body, including specific nutritional requirements for functioning in a motor sport environment
 - impact of legal and illegal drugs on the human body and their implications in motor sport
 - principles of physical fitness, and fitness requirements for functioning effectively in a motor sport environment
- key features of personal conflict resolution strategies and techniques, including:
 - common causes of conflict within a motor sport team environment
 - communication principles and techniques
 - group dynamics in high pressure environments.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having managed their personal presentation and development in a motor sport environment, e.g. own résumé.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workshop, competition event and promotional activity
- computer with word processing capabilities.

AURMKA001 Manage motor sport data

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to configure a data acquisition system, and analyse and present motor sport data. It involves preparing for the task, analysing data requirements, configuring an electronic system, and retrieving, analysing and presenting data in various forms, including charts, graphs, tables, comparisons and reports. The data may be related to weather, circuit, driver or rider characteristics, system capability, and vehicle design specifications.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Information Technology

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm data acquisition requirements	1.1 Team requirements and controlling body rules, category rules and supplementary regulations are used to specify data requirements 1.2 Benchmark specifications for a correctly functioning electronic data acquisition system are accessed and interpreted
2. Configure electronic data acquisition system	2.1 Tools and material to support data acquisition process are selected and prepared 2.2 Component rates, ratios and parameters for input sensors are calculated and entered into system math channels 2.3 Sample rates most suited to particular data logging channel are entered 2.4 System operation is checked according to manufacturer specifications and team requirements
3. Retrieve data	3.1 Data acquisition system start-up procedure is carried out according to manufacturer procedures 3.2 Data acquisition system is operated according to its designed capacity and purpose, manufacturer specifications and safety requirements 3.3 Retrieved data is verified, where appropriate, using reliable alternative or optional processes according to team requirements 3.4 Data parameter variables and potential for inaccurate results are identified
4. Analyse data	4.1 Sources of collected data are compared for consistency 4.2 Data is analysed using mathematical processes 4.3 Trends and patterns in data are analysed, including non-conforming results outside of predicted outcomes 4.4 Possible reasons for trends and patterns are investigated 4.5 Potential vehicle performance enhancement solutions are identified 4.6 Problems with required data or operation of equipment are reported to appropriate persons
5. Present data	5.1 End users of statistical data and their preferred format are identified 5.2 Data is represented to meet end user needs 5.3 Recommendations are documented and presented with supporting data
6. Complete work processes	6.1 Equipment and support material are cleaned, maintained and prepared ready for further use according to manufacturer

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	<p>procedures and team requirements</p> <p>6.2 Faults in acquisition systems and components are diagnosed</p> <p>6.3 Unserviceable equipment and faults are documented and appropriate action is taken according to team procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> adapt procedures to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> interpret data acquisition system and data analysis software operating procedures from manufacturer instructions.
Oral communication skills to:	<ul style="list-style-type: none"> discuss needs of data end users.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical processes, including addition, subtraction, multiplication and division, to calculate component rates, ratios and parameters for input sensors compare numerical information with expected values perform basic statistical calculations in data, such as mean and standard deviation.
Digital literacy skills to:	<ul style="list-style-type: none"> operate computer-based data acquisition systems and data analysis software to analyse data and represent data in differing formats.
Planning and organising skills to:	<ul style="list-style-type: none"> gather data with a minimum of backtracking or workflow interruptions.
Self-management skills to:	<ul style="list-style-type: none"> work efficiently with minimal supervision and within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> connect and disconnect data acquisition system to vehicle without causing damage.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- configure data acquisition process for each of the following types of motor sport data on two occasions:
 - vehicle data
 - weather data
 - circuit data
 - driver or rider characteristics
- acquire, analyse and present above acquired data.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to collecting and logging motor sport data, including procedures for identifying hazards and managing risks
- types of motor sport data sources, including vehicle, weather, circuit and driver or rider
- motor sport data acquisition systems, including:
 - types, characteristics, components, uses and limitations of signal devices and sensors
 - methods for determining component rates and ratios
 - configuration, inspection and system checks of data acquisition systems
 - operation of data acquisition systems and inputting of variables
 - data retrieval processes and techniques
- data analysis principles, techniques and methodology, including associated mathematical formulas

- types of statistical representations of motor sport data, including vehicle, weather, circuit, and driver or rider
- data security and confidentiality procedures
- data acquisition system inspection, maintenance and system check procedures, including data acquisition system fault diagnosis.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having managed motor sport data, e.g. analysis reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport vehicle
- motor sport data acquisition system
- motor sport data analysis software.

AURMLA001 Apply motor sport rules and regulations when officiating

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply the relevant rules and regulations of a motor sport event when acting as an official or volunteer at the event. It requires an understanding of the consequences of not following event rules and regulations. It includes the application of some basic strategies to prevent and/or deal with minor disputes regarding decisions made.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Regulatory or Legal

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Assess motor sport event conditions	1.1 Event documentation is read and interpreted, including category rules and supplementary regulations 1.2 Participant status and criteria for event or competition are assessed 1.3 Environment, facilities and equipment within own area of responsibility are assessed according to <i>event rules and regulations</i> 1.4 <i>Safety requirements</i> and other risk management issues within own area of responsibility are assessed prior to event or competition commencing according to event rules and regulations 1.5 Concerns are reported promptly to senior official
2. Observe the conduct of motor sport event or competition	2.1 Area of event or competition within own area of responsibility is observed at all times 2.2 Event or competition compliance within own area of responsibility is assessed against relevant rules and regulations 2.3 Identified problems are responded to without delay, and appropriate safety and risk management actions are taken according to event rules and regulations
3. Interpret and apply rules and regulations	3.1 Rules and regulations of event or competition are followed in the performance of duties and implemented in line with ethical practices 3.2 Rule or regulation appropriate to given situation is determined and interpreted to ensure consistency with competition outcomes 3.3 Directions and requests from stewards and senior officials are complied with according to event rules and regulations
4. Communicate decisions	4.1 Decisions are communicated according to event rules and regulations, and level of competition 4.2 Participant reactions to decisions are managed and conflict situations are dealt with according to event rules and regulations 4.3 Incidents or non-compliant activities are reported to senior officials or stewards according to event rules and regulations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply rules and regulations to different situations and motor sport events.
Reading skills to:	<ul style="list-style-type: none"> interpret motor sport rules and regulations, including category rules and supplementary regulations.
Oral communication skills to:	<ul style="list-style-type: none"> use appropriate language and non-verbal behaviour when managing participant reactions and dealing with conflict situations.
Self-management skills to:	<ul style="list-style-type: none"> work efficiently with minimal supervision.
Teamwork skills to:	<ul style="list-style-type: none"> work as part of a team to ensure event is run safely and efficiently.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Event rules and regulations</i> must include:	<ul style="list-style-type: none"> current edition of the relevant National Competition Rules (NCR) supplementary regulations for motor sport events or competitions policies and procedures of Federation Internationale de l'Automobile (FIA) and Federation Internationale Motocycliste (FIM) Australian Sports Commission Code of Conduct.

Assessment Requirements for AURMLA001 Apply motor sport rules and regulations when officiating

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- officiate at two different motor sport events, in which the work must involve determining and applying decisions regarding rules and regulations.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to acting as an official at a motor sport event, including procedures for identifying hazards and managing risks
- motor sport events in performance evidence, including:
 - organisational structures of events, including authority and communication lines
 - category rules and supplementary regulations of events
- motor sport officiating, including:
 - responsibilities and tasks of officials, and protocols for communicating with other officials
 - processes and procedures relating to appeals and inquiries of officiating decisions
 - basic conflict management techniques
 - personal preparation, resources and equipment required for officiating
- key requirements of motor sport rules and regulations for above events, including:
 - current edition of the relevant National Competition Rules (NCR)
 - supplementary regulations for motor sport events or competitions
 - policies and procedures of Federation Internationale de l'Automobile (FIA) and Federation Internationale Motocycliste (FIM)

- Australian Sports Commission Code of Conduct
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice relating to motor sport officiating, including safety and environmental legislation and regulations
- organisational policies and procedures relating to event and officiating role, including:
 - emergency response
 - reporting and recording procedures
 - planning processes for event.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having applied rules and regulations while officiating at a motor sport event or competition, e.g. event sign-on sheet.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events
- motor sport event officiating documentation, rules and regulations, safety procedures and event procedures, including:
- current edition of the relevant National Competition Rules (NCR)
- supplementary regulations for motor sport events or competitions
- FIA and FIM policies and procedures
- Australian Sports Commission Code of Conduct.

AURMLA002 Monitor motor sport official and volunteer application of rules and regulations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to ensure that officials, support staff and volunteers at a motor sport event are applying the relevant rules and regulations accurately and consistently. It involves monitoring their interpretation and application of rules and regulations, and applying conflict resolution strategies to prevent or address minor disputes arising as a result of decisions made during motor sport events, including in practice sessions.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Regulatory or Legal

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Provide information on rules and regulations	1.1 Relevant rules and regulations, including workplace-specific policies and procedures, are accurately and clearly explained to personnel 1.2 Current and updated rules and regulations are regularly made readily accessible to staff in a timely manner according to workplace procedures 1.3 Information about application and interpretation of rules and regulations is regularly provided and clearly explained to work group 1.4 Opportunities for staff members to <i>discuss</i> and clarify rules and regulations are provided
2. Monitor application of rules and regulations	2.1 Ongoing compliance with rules and regulations, and ethical behaviour in the their application, are monitored 2.2 Prompt and appropriate action is taken to address non-compliance or misinterpretation of rules and regulations 2.3 Effectiveness of rules and regulations in maintaining event integrity and ensuring fair outcomes for participants is monitored 2.4 Timely feedback is provided to appropriate personnel on non-compliance according to workplace procedures
3. Adjudicate on disputed decisions	3.1 Nature of protest or dispute is clarified and applicable rules and regulations are identified 3.2 Evidence is heard and evaluated according to applicable rules and regulations 3.3 Decision is made according to applicable rules and regulations 3.4 Participant reactions to decisions are managed using effective communication skills and according to rules and regulations 3.5 Incidents or non-compliant activities are reported to senior officials or stewards according to applicable rules and regulations, and are documented as required.
4. Identify training needs	4.1 Advice on training needs of individuals and work group is provided based on monitoring of team performance 4.2 Coaching and mentoring assistance to team members are provided and arrangements for fulfilling training needs facilitated in consultation with appropriate management and according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply compliance decisions to different situations and motor sport events locate motor sport event rules and regulations for currency.
Reading skills to:	<ul style="list-style-type: none"> interpret category rules and supplementary regulations.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out documentation when reporting.
Oral communication skills to:	<ul style="list-style-type: none"> clarify, interpret and relay information with other stewards, officials and event personnel discuss rules and regulations, procedures and non-compliance with team members, motor sport drivers and the public.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Discussion</i> must include one or more of the following:	<ul style="list-style-type: none"> application and interpretation of rules and regulations ramifications of poor decisions conflict of interest.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- monitor the application of rules and regulations by motor sport officials, support staff or volunteers at two different events and:
 - determine consistency and accuracy of decisions
 - adjudicate disputed decisions on one occasion.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to monitoring motor sport officials' and volunteers' application of rules and regulations, including selecting and using personal protective equipment (PPE) such as hearing protection
- motor sport events, including:
 - organisational structures of events, including authority and communication lines
 - category rules and supplementary regulations
 - processes and procedures relating to appeals and inquiries of officiating decisions
 - procedures for reporting and documenting incidents, complaints and complaints
 - types of ethical and unethical conduct in officiating
 - types, causes and resolution techniques of conflict that typically occurs at motor sport events
- organisational policies and procedures relating to motor sport events, including:
 - safety requirements
 - officiating or volunteering at a motor sport event.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having monitored compliance with motor sport rules and regulations at a motor sport event, e.g. event sign-on sheet.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events
- motor sport event officiating documentation, including rules and regulations, safety procedures and event procedures.

AURMLA003 Inspect vehicles and equipment at motor sport events for compliance

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect motor sport competition vehicles and safety equipment for compliance with applicable rules and regulations. It involves preparing for the task, confirming driver eligibility for the event, confirming that clothing, competition vehicle and equipment are compliant, and completing workplace processes and documentation. The unit requires sufficient mechanical knowledge and skills to use testing and measuring equipment to check mechanical and safety specifications and to ensure they meet eligibility and safety criteria for the particular event category.

It applies to those working in the motor sport industry as scrutineers at a motor sport event.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor sport

Unit Sector

Regulatory or Legal

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for scrutineering	1.1 Rules and regulations governing vehicle and driver eligibility and safety criteria for the event are interpreted 1.2 Scrutineering bay is checked to ensure availability of required tools and equipment to perform tests and measurements 1.3 Scrutineering documentation is sourced and prepared 1.4 Hazards associated with work are identified and risks are managed according to workplace procedures and safety requirements 1.5 Concerns are reported to Chief Scrutineer or Clerk of Course according to category rules and supplementary regulations as required 1.6 Pre-race briefing session is attended and own role and responsibilities are confirmed
2. Confirm driver eligibility	2.1 Driver documents are examined to confirm status and eligibility for event according to category rules and supplementary regulations 2.2 Driver clothing and equipment are examined for compliance with safety specifications according to category rules and supplementary regulations
3. Confirm vehicle compliance	3.1 Vehicle is examined to ensure it complies with mechanical and safety specifications for event according to category rules and supplementary regulations 3.2 Compliance report is prepared and non-compliance is documented in scrutineering log book as required 3.3 Defective vehicles, components or parts are impounded as required and according to category rules and supplementary regulations
4. Monitor vehicle compliance	4.1 Vehicles are observed in assembly and starting areas to identify mechanical and safety problems 4.2 Work done on vehicle during pit stops is observed to ensure it complies with relevant rules and regulations 4.3 Vehicle damage is examined after an incident to determine roadworthiness for re-entry into event according to category rules and supplementary regulations 4.4 Vehicle damage reports are prepared and logbook updated as required and according to category rules and supplementary regulations

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
5. Communicate decisions and complete reports	<p>5.1 Chief Scrutineer or Clerk of Course is advised of any breach of compliance according to category rules and supplementary regulations</p> <p>5.2 Participant reactions to decisions are managed and conflict situations are dealt with according to category rules, supplementary regulations and official's code of conduct</p> <p>5.3 Inspection reports are checked to ensure they are completed accurately and are then signed</p> <p>5.4 Scrutineer's report is completed at the end of event</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources on information on rules and regulations efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret rules and regulations governing vehicle and driver eligibility and safety criteria check inspection reports for completeness.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out vehicle inspection report and final scrutineer report.
Oral communication skills to:	<ul style="list-style-type: none"> communicate with other event officials and determine own and others' roles communicate information to other event officials, drivers and the public during event discuss inspection findings with drivers and other officials.
Numeracy skills to:	<ul style="list-style-type: none"> measure vehicle components and use basic mathematical operations to calculate tolerances and deviations from specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Self-management skills to:	<ul style="list-style-type: none"> work efficiently with minimal supervision.

Skills	Description
Teamwork skills to:	<ul style="list-style-type: none"> work as part of a team to ensure event is run safely and efficiently.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Safety requirements</i> must include:</p>	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE) lifting and supporting vehicles using safety devices, including fire protection, safety cage, roll bars and safety harness identifying hazards and managing risks associated with controlling public access to scrutineering area.

Assessment Requirements for AURMLA003 Inspect vehicles and equipment at motor sport events for compliance

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect two different motor sport vehicles and their equipment at two different events and determine vehicle and driver compliance with eligibility and safety criteria for the particular event category in which they are entered.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to acting as a scrutineer at a motor sport event, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - lifting and supporting vehicles
 - using safety devices, including fire protection, safety cage, roll bars and safety harness
 - identifying hazards and managing risks associated with controlling public access to scrutineering area
- motor sport events in performance evidence, including:
 - code of conduct
 - organisational structures of events, including authority and communication lines
 - category rules and supplementary regulations of events
- types, characteristics and operating principles of vehicle mechanical systems, including brakes, exhaust, steering and driveline
- key characteristics of motor sport scrutineering, including:
 - responsibilities and tasks of a scrutineer
 - protocols for communicating with other officials

- scrutineering procedures for motor sport vehicles
- personal preparation, resources and equipment required for scrutineering
- procedures for examining vehicles and equipment for mechanical and safety compliance, including:
 - safe operation of testing and measuring instruments and equipment
 - types of scrutineering reports and methods of completing the reports, including procedures for reporting non-compliance and incidents
- organisational policies and procedures relating to motor sport scrutineering suitable to the event type, location and organising body, including:
 - ethical requirements
 - emergency response procedures
 - reporting and recording procedures
 - planning processes for events.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having inspected compliance of motor sport drivers, vehicles and equipment with motor sport event rules and regulations, e.g. event sign-on sheet.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events
- motor sport event scrutineering documentation, including rules and regulations, safety procedures and event procedures
- two different motor sport competition vehicles requiring scrutineering
- equipment and materials appropriate for motor sport event scrutineering, including PPE and testing equipment.

AURMMA001 Operate in a motor sport environment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to determine a career path, meet motor sport team expectations and employment expectations, manage daily work activities, and contribute to the effective working of the team.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Determine potential career path in motor sport and develop	1.1 Structure of motor sport sector is identified, including roles and functions of industry and association bodies 1.2 Personal skills are assessed to identify strengths and weaknesses

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
individual goals	1.3 Motor sport team expectations are researched and determined 1.4 Goals are set to achieve personal expectations 1.5 Potential career paths are researched and matched with personal goals 1.6 Training needs are identified and incorporated into career planning
2. Meet motor sport team employment requirements	2.2 Team organisational structure is identified, including team member roles and responsibilities 2.2 Obligations to employers and others are complied with, including confidentiality requirements 2.3 Regulatory and <i>safety requirements</i> are observed throughout work 2.4 Team lines of communication and authority are identified and complied with 2.5 Applicable legislation, regulations, codes of practice and team expectations, policies and procedures are identified and complied with
3. Manage daily work activities in motor sport environment	3.1 Required lines of communication are used with supervisors, peers and external persons 3.2 Individual tasks are identified, prioritised and completed within designated timeframes and according to team standards and work schedule 3.3 Own work is monitored and adjusted according to feedback obtained from supervisors 3.4 Assistance is sought from appropriate persons when difficulties arise in achieving allocated tasks 3.5 Changes are made to workload or work priorities when unforeseen circumstances or developments occur 3.6 Well organised and safe personal work space is maintained according to team and workplace standards 3.7 Potentially discriminating or hazardous practices and policies are identified and reported to team persons
4. Contribute to productive team environment	4.1 Information and knowledge are shared with team members to ensure designated work goals are met 4.2 Personal work objectives are identified and prioritised according to team requirements 4.3 Constructive feedback from other team members is received, encouraged, and acted upon

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	<p>4.4 Variations from team standards in quality of components or work practices are detected and reported to team members according to team procedures</p> <p>4.5 Assistance is actively sought from, or provided to, other team members when difficulties arise</p> <p>4.6 Communication techniques are used to gather and understand instructions</p> <p>4.7 Signs of interpersonal conflict are identified and constructively acted upon or referred to a supervisor</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> • adapt to different work circumstances • recognise and correct errors in own performance.
Reading skills to:	<ul style="list-style-type: none"> • interpret motor sport codes of practice and team policies and procedures.
Writing skills to:	<ul style="list-style-type: none"> • complete basic workplace documentation, such as job cards.
Oral communication skills to:	<ul style="list-style-type: none"> • clarify and confirm information and instructions using active listening and questioning techniques • speak clearly and directly to present problems or issues to appropriate personnel.
Numeracy skills to:	<ul style="list-style-type: none"> • interpret basic numerical information in work instructions.
Planning and organising skills to:	<ul style="list-style-type: none"> • plan and organise activities, including equipment and resources, to avoid backtracking, workflow interruptions or wastage.
Problem solving skills to:	<ul style="list-style-type: none"> • develop solutions to unpredicted situations, clarify work instructions, and resolve conflict.
Teamwork skills to:	<ul style="list-style-type: none"> • work with others and in a team using cooperative approaches to optimise work practices and contribute to a productive team environment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Assessment Requirements for AURMMA001 Operate in a motor sport environment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- follow task instructions, operating procedures and inspection processes on two occasions in a motor sport environment that result in:
 - minimising the risk of injury to self and others
 - preventing damage to competition vehicle or equipment
- achieve above required outcomes within team time and quality standards
- correctly perform a range of daily work activities for one day in three different motor sport environments, in which the work must involve covering:
 - routine maintenance
 - pre-event preparation
 - a competition event
 - post-event maintenance and repairs
- work with and around other team members, including:
 - participating actively in a work group discussion or meeting
 - providing support on a work task to another group member
 - responding to feedback provided by a group member
 - contributing to the resolution of an issue, problem or conflict experienced by work group.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to operating in a motor sport environment, including procedures for selecting and using personal protective equipment (PPE)
- motor sport fundamentals, including:
 - motor sport categories
 - roles of Australian and international motor sport regulatory bodies
 - structure of the motor sport sector and of roles within teams
 - authority and communication lines within teams
 - motor sport work ethic and team expectations
 - motor sport terminology
- essential requirements of a motor sport environment, including:
 - routine maintenance
 - pre-event preparation
 - structure or format of competition event
- goal setting methods and techniques
- communication principles and techniques
- conflict resolution principles and techniques.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them having operated in a motor sport environment, e.g. team schedule.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace or simulated workplace
- motor sport team policies and procedures relating to job descriptions, authority, and communication lines.

AURMMA002 Manage the preparation of motor sport competition vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to develop competition vehicle preparation specifications, checklists and schedules, and to supervise the preparation and assembly of a motor sport competition vehicle. It involves researching information, assessing personnel capabilities and schedule constraints, and supervising others to prepare a competition vehicle and check the post-preparation vehicle and work area.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor sport

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Develop preparation specifications and checklists	1.1 Job requirements are determined from <i>competition information</i> 1.2 Rules, regulations, and vehicle specifications and tolerances are analysed for competitive advantage 1.3 <i>Work specifications</i> are documented and communicated to appropriate personnel
2. Develop preparation schedule	2.1 Equipment and capabilities of required personnel to meet job specifications are identified and sourced 2.2 <i>Constraints to schedule</i> are analysed and optimum sequence for vehicle preparation is documented 2.3 Critical path is analysed and factors affecting that path are documented 2.4 Preparation schedule is finalised and distributed to required personnel
3. Supervise preparation	3.1 Team adherence to preparation schedule is monitored according to team requirements 3.2 Work area is monitored for appropriate layout for job requirements and for cleanliness 3.3 Checks of vehicle during and after installation of components are carried out to ensure accurate and complete fitting 3.4 Problems with work area or operation of equipment are evaluated and resolved according to <i>safety and environmental requirements</i> 3.5 Proposals for modifications or adaptation of equipment and components are evaluated and changes adapted or adopted as required according to team requirements
4. Supervise post-assembly checks	4.1 Vehicle is inspected, and problems are identified and addressed according to team requirements 4.2 Post-preparation checks and vehicle start-up by team are supervised 4.3 Vehicle baseline set-up by team is supervised 4.4 Clean-up of work area by team is supervised 4.5 Final inspection of work area and vehicle is carried out and documentation completed

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> adapt procedures to different vehicles.
Reading skills to:	<ul style="list-style-type: none"> interpret team instructions and procedures and controlling body rules, category rules and supplementary regulations.
Writing skills to:	<ul style="list-style-type: none"> develop task specifications, preparation checklists and procedures, and preparation schedule.
Oral communication skills to:	<ul style="list-style-type: none"> communicate task specifications and preparation schedule to team members receive and give information and advice to team members during vehicle preparation.
Numeracy skills to:	<ul style="list-style-type: none"> work with units of time when developing timelines within a preparation schedule.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own tasks and those of a team to ensure work proceeds without interruption and within timelines.
Self-management skills to:	<ul style="list-style-type: none"> work efficiently with minimal supervision and within timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> produce solutions to problems with scheduling, component and equipment supply, and personnel capability evaluate a range of options and select efficient solutions.
Teamwork skills to:	<ul style="list-style-type: none"> work as a leader of a team to ensure team member roles are understood and time wastage is minimised.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Assessment Requirements for AURMMA002 Manage the preparation of motor sport competition vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- manage the assembly and preparation by a team of one motor sport competition vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to preparing a competition vehicle, including:
 - selecting and using personal protective equipment (PPE)
 - using chemical cleaning and lubricating agents
- environmental requirements, including procedures for trapping, storing and disposing of chemicals and fluids released when assembling competition vehicles
- methods of determining competition vehicle design, quality, and material, equipment and quantities from team instructions, supplementary regulations and manufacturer specifications
- procedures for analysing rules, regulations, vehicle specifications and tolerances for competitive advantage
- procedures for developing preparation schedules, including:
 - assembly and preparation processes applicable to competition vehicle
 - procedures for analysing team member capability for tasks
 - documentation procedures for preparation schedule
 - procedures for determining work area layout
- procedures for supervising vehicle preparation, including:
 - procedures for developing and monitoring assembly inspection processes

- methods of evaluating and remedying problems with work area and equipment operation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motor sport vehicles that they have prepared, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace
- one motor sport competition vehicle requiring pre-event preparation
- motor sport team with knowledge of competition vehicle pre-event preparation procedures
- tools and equipment required for the preparation of a competition vehicle.

AURMMA003 Manage motor sport operations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to manage motor sport operations and team compliance with motor sport regulatory requirements, and manage logistics and resourcing. It requires skills in motor sport team leadership and decision making.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor sport

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Plan logistics for motor sport operation	1.1 <i>Work plan</i> for team sport operation is developed in consultation with team members and is documented 1.2 <i>Safety requirements</i> , including <i>motor sport regulatory body</i>

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	<p><i>requirements</i>, are sourced and interpreted</p> <p>1.3 Resource and equipment requirements are researched and documented</p> <p>1.4 Resource requirements are prioritised and matched to team budget, and priorities are confirmed or modified after consultation with team members</p> <p>1.5 Operational plans, including instructions and delegations, are documented and amended according to team procedures and expectations</p>
2. Oversee team activities during operation	<p>2.1 Operational plans are implemented and team members briefed with regard to their roles and responsibilities</p> <p>2.2 Operations are checked to ensure optimum use of human and physical resources</p>
3. Evaluate operational process	<p>3.1 Operational progress is evaluated against required quality of work and adherence to budget and time schedule, and is reported to required persons according to team requirements</p> <p>3.2 Opportunities for preventative or corrective changes are identified using outcomes of monitoring activity and feedback from team members</p> <p>3.3 Required changes are communicated to appropriate persons in a logical and accessible manner</p> <p>3.4 Changes are monitored to confirm improvement to team efficiency</p> <p>3.5 Records are maintained of key information relating to operational processes according to team requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate motor sport regulatory body information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from a range of sources, including internet websites, regulatory body written material, and workplace

	internal documentation.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation, including emails, letters, operational work plans, and instructional material for team members.
Oral communication skills to:	<ul style="list-style-type: none"> discuss motor sport operations with a range of people, including team personnel, event management and regulatory body personnel.
Numeracy skills to:	<ul style="list-style-type: none"> interpret dates and time use basic mathematical operations, including addition and subtraction, to calculate team budget requirements.
Planning and organising skills to:	<ul style="list-style-type: none"> set up meetings plan required resources and logistics.
Problem solving skills to:	<ul style="list-style-type: none"> prioritise resource needs and develop and amend operational work plans monitor and evaluate operational processes.
Teamwork skills to:	<ul style="list-style-type: none"> work collaboratively with team members when managing team to maximise team member potential.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Work plan</i> must include:	<ul style="list-style-type: none"> timelines and milestones for team sport operations team goals for operation team member roles and responsibilities team member performance reporting and review mechanisms.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements for motor sport operations, including selecting and using personal protective equipment (PPE).
<i>Motor sport regulatory body requirements</i> must include:	<ul style="list-style-type: none"> Confederation of Australian Motor Sports (CAMS) regulations, including: <ul style="list-style-type: none"> national state technical.

Assessment Requirements for AURMMA003 Manage motor sport operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- complete the development of a significant operational procedure incorporating legislative safety requirements, including:
 - a full analysis of the proposed procedure
 - a step-by-step operational procedure
 - identifying and analysing supporting documents to the procedure
- implement a process for an operational area of the motor sport team, including:
 - disseminating process information
 - monitoring operations
- complete a review and update of a process for an operational area of the motor sport team, including:
 - system and sub-area/sub-system description
 - evaluating effectiveness of the process in achieving desired outcomes
 - legal, regulatory or intellectual property law requirements
 - documentation of modifications to improve the process.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to managing motor sport operations, including selecting and using personal protective equipment (PPE).
- procedures for leading team members, including:
 - leadership models

- delegation strategies
- key features of goal setting methods, such as specific, measurable, achievable, realistic, and timely (SMART)
- methods for reviewing and reporting team member performance
- decision making models and techniques
- procedures for ensuring team compliance with regulatory body requirements, including compliance with national, state and technical regulations of the Confederation of Australian Motor Sports (CAMS)
- procedures for determining team resource requirements
- procedures for determining team logistical requirements, including logistics and procurement management techniques
- procedures for evaluating operational processes, including analytical tools such as:
 - critical path analysis
 - cause and effect
 - force field analysis
 - Pareto analysis
 - strength, weakness, opportunity and threat (SWOT) analysis
 - decision trees.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the instances in which they have managed motor sport team operations, e.g. work plans.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport team or simulated team
- CAMS regulations.

AURMMA004 Manage motor sport team development

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to manage motor sport team development. It includes fostering team morale and teamwork ethics, managing conflict, and supporting the health and safety needs of team members. It involves consulting and working with team members to develop a shared understanding of team goals, roles and responsibilities.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor sport

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Develop and implement	1.1 Team roles and responsibilities in the workshop and event

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
team roles and responsibilities	<p>environment are determined and documented</p> <p>1.2 Role descriptions are written in conjunction with team members</p> <p>1.3 Authority hierarchies are identified and aligned to team roles, and joint responsibilities are identified and documented</p> <p>1.4 Team members are briefed, roles implemented, and modifications to role descriptions made as required</p>
2. Develop and foster motor sport teamwork morale and ethics	<p>2.1 Information on team is documented and disseminated to team members</p> <p>2.2 Personal attitudes needed to succeed in motor sport are discussed with team members and strategies to support team members to reflect desired team image and approach are developed</p> <p>2.3 Expectations of team standards of behaviour, commitment and presentation are communicated to team members</p> <p>2.4 Maintenance of work ethic and image is encouraged, monitored and corrected as required</p>
3. Develop and implement team member health and fitness policy	<p>3.1 Event catering procedures that meet nutritional requirements for persons operating in a motor sport team are developed and documented</p> <p>3.2 Strategies for coping with stress and fatigue are developed, communicated to team members, and monitored</p> <p>3.3 Physical fitness requirements of team members in relation to role requirements are developed, communicated to team members, and monitored</p> <p>3.4 Impact of negative factors on personal competence in a motor sport environment is communicated to team members and monitored</p>
4. Apply conflict resolution strategies	<p>4.1 Opportunities for team members to discuss problems that directly or indirectly affect their work are regularly provided</p> <p>4.2 Conflict situations are identified and assistance is provided to those involved to resolve conflict according to team procedures</p> <p>4.3 Outcomes and resolutions are documented according to team procedures</p> <p>4.4 Records of conflict and outcomes are completed and stored securely according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> research information regarding team member development opportunities.
Reading skills to:	<ul style="list-style-type: none"> interpret team policies and procedures relating to team ethics, image, health and fitness, and workplace conflict avoidance and resolution.
Writing skills to:	<ul style="list-style-type: none"> develop and produce a variety of workplace informative documentation for team members.
Oral communication skills to:	<ul style="list-style-type: none"> discuss personal and work-related matters with team members in a professional manner.
Self-management skills to:	<ul style="list-style-type: none"> work autonomously.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Information on team</i> must include:	<ul style="list-style-type: none"> common purpose and approach team performance goals image or brand ethics and philosophy.
<i>Negative factors</i> must include:	<ul style="list-style-type: none"> misuse of prescription drugs use of illicit drugs poor nutrition or fitness regime stress and fatigue.
<i>Records</i> must be:	<ul style="list-style-type: none"> accurate and complete compliant with workplace requirements administered according to confidentiality and privacy requirements.

Assessment Requirements for AURMMA004 Manage motor sport team development

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- manage the development of one motor sport team, in which the work must involve:
 - developing role descriptions for all team members, including:
 - tasks and sub-tasks
 - responsibilities for outcomes
 - responsibilities for tooling, equipment and material
 - responsibilities for team members
 - responsibilities for systems
 - developing health and safety requirements for team members
 - developing and implementing three conflict resolution strategies, demonstrating for each strategy:
 - rationale for choice of strategy in relation to team environment
 - resolution options for conflict
 - analysis of strengths and weaknesses of strategy.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- procedures for developing and implementing team roles and responsibilities, including typical team roles and hierarchical structure in a motor sport team
- procedures for developing and fostering motor sport teamwork ethics and image, including:
 - personal and work attitudes sought within the motor sport sector

- positive and negative potential of different personal attitudes in a motor sport environment
- positive and negative potential of differences between team and personal goals
- ways in which individual team members can promote or negatively impact on desired team image
- procedures for developing and implementing team member health and fitness policies, including:
 - principles of physical fitness and fitness requirements for operating in a motor sport environment
 - specific nutritional requirements for operating in a motor sport environment
 - impact on the human body of using legal and illegal drugs and implications for a motor sport team
- procedures for applying conflict resolution strategies, including:
 - signs, stages and possible causes of conflict in the workplace
 - options for constructive responses to typical conflict situations
 - typical problems that can occur when applying conflict resolution strategies and related appropriate action that can be taken.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having managed motor sport team development, e.g. team development plan.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport team or simulated team
- job role descriptions
- team procedures and processes documentation.

AURMMA005 Manage team pit lane and service area operations at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to plan, coordinate and oversee the pit lane and service area operations of the technical service crew of a motor sport team. It involves developing and managing pit lane and service area operations and emergency repairs, and coordinating competition vehicle on-track support, persons and team communication during a motor sport event.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor sport

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURMMA005 Manage team pit lane and service area operations at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop a pit lane and service area management plan for the technical service crew at one motor sport event
- implement above management plan, ensuring that strategies and procedures are applied that:
 - ensure safe work practices in pit lane and service area to minimise risk of injury to self or others
 - minimise risk of damage to competition vehicle, tooling and equipment and wastage of material
 - minimise service and emergency repair times
 - address potential problems in pit lane and service area operations.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to managing team pit lane and service area operations, including procedures for identifying hazards and managing risks
- environmental requirements, including procedures for trapping, storing and disposing of contaminants and fluids released during pit lane and service area operations
- key requirements of controlling body rules, category rules and supplementary regulations relating to above motor sport event
- procedures for developing pit lane and service area management plans, including:
 - procedures for controlling safe work practices in pit lane and service area
 - typical communication strategies used in pit lane and service area

- operational tasks and task timing for pit lane and service area
- competition vehicle on-track support strategies
- security procedures for pit lane and service area
- contingency plans for pit lane and service area
- procedures for ensuring operational readiness of pit lane and service area, including typical layouts, including stop and service marking positions
- procedures and techniques for supervising service crews, including:
 - communication principles
 - group dynamic principles
 - effective supervision techniques
 - scenario and logistics planning
 - critical path analysis
 - operational plan development
- procedures for coordinating competition vehicle on-track support, including:
 - communication methods between drivers and crew
 - types of race and team performance records
 - procedures for liaising with event officials
- procedures for supervising post-event operations, including:
 - dismantling, clean-up and waste disposal procedures
 - completing different types of event documentation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having managed team pit lane and service area operations at a motor sport event, e.g. event sign-on sheet.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- one motor sport event

- motor sport team.

AURMMA006 Develop and implement race strategies for motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to develop race strategies for a motor sport event, communicate strategy plan and contingencies to team members, implement race strategies, and conduct post-event reviews. Work involves consulting closely with team members and planning event strategies for competitive advantage.

For the purpose of this unit, a race is defined as each of the items in a motor sport program, such as a heat, final, test run, time trial or promotional ride, as distinct from a race meeting or event.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor sport

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Develop race strategy	1.1 Requirements of controlling body rules, category rules and supplementary regulations for race are checked and interpreted 1.2 Input is sought from team members and compared with available event data, including past performance and points documented 1.3 Team strategies are devised for attaining <i>competitive advantage</i> 1.4 Team members are briefed on security of information and intellectual property procedures 1.5 Contingency plans are developed and documented
2. Communicate strategy to team members	2.1 Responsibilities within strategy, associated plans and contingencies are identified and confirmed with each team member 2.2 Authority hierarchies and relationships are clearly explained 2.3 Team feedback is sought, evaluated and incorporated into strategy
3. Implement race strategy	3.1 Team roles and responsibilities with race strategy and contingency plans are confirmed with team members prior to event 3.2 Strategy is implemented and requirements clearly communicated to team members during event 3.3 Strategy outcomes are monitored and amended as required during event
4. Conduct post-race review of strategy	4.1 Event debrief is conducted with driver or rider and other team members as soon as practicable following race 4.2 Data is analysed and points are documented 4.3 Technician reports are considered and points are documented 4.4 Event strategies are reviewed with team members and revised for future application

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	<ul style="list-style-type: none"> interpret information from controlling body rules, category rules and supplementary regulations.
Writing skills to:	<ul style="list-style-type: none"> produce accurate and legible team event documentation that outlines contingency plans, team member responsibilities, and post-race data documentation.
Oral communication skills to:	<ul style="list-style-type: none"> sequence race strategy information in discussions with team members, including drivers, to ensure understanding and facilitate feedback clearly outline team member responsibilities and event procedures.
Numeracy skills to:	<ul style="list-style-type: none"> compare and interpret race data in both numerical and qualitative terms and make adjustments to strategy to build future competitive advantage.
Self-management skills to:	<ul style="list-style-type: none"> work autonomously.
Problem solving skills to:	<ul style="list-style-type: none"> analyse event regulations and develop a race strategy for driver and team members, and change as required.
Teamwork skills to:	<ul style="list-style-type: none"> manage and work collaboratively with team members.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Competitive advantage</i> must include:	<ul style="list-style-type: none"> promotional advantage technical advantage psychological advantage.

Assessment Requirements for AURMMA006 Develop and implement race strategies for motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop and implement strategies for two different motor sport races, in which the work must involve:
 - consultation with team members
 - use of problem-solving techniques
 - analysis of event variations.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to developing and implementing race strategies, including selecting and using personal protective equipment (PPE)
- procedures and techniques for developing race strategies, including:
 - problem-solving techniques, including:
 - brainstorming and scenario planning
 - critical path analysis
 - force field analysis
 - Pareto analysis
 - strengths, weaknesses, opportunities and threats (SWOT) analysis
 - decision trees
 - psychological advantage
 - technical advantage
 - promotional advantage

- procedures for implementing race strategies, including:
 - typical team roles and responsibilities at motor sport race events
 - types and content of contingency plans
- post-race review methods, including:
 - debriefing team members, including drivers, of types of data to be gathered
 - methods for analysing race data.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having developed and implemented race strategies at motor sport events, e.g. documented race strategies.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport races or simulated races
- motor sport team.

AURMMA007 Follow motor sport event and team safety requirements

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to safely operate in a motor sport team. It involves understanding motor sport event and team safety rules and regulations, and identifying risks in the team operating area.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor sport

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify safety requirements for event	1.1 Controlling body rules, category rules and supplementary regulations are sourced and interpreted

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Unsafe situations and potential hazards are identified, reported and documented as required 1.3 Personal safety requirements are identified from team procedures and controlling body rules
2. Follow safety requirements during event	2.1 Controlling body rules, category rules and supplementary regulations are followed 2.2 Personal and motor sport team <i>safety procedures and requirements</i> are clarified and followed in own work situation 2.3 Dangerous goods and hazardous substances are safely handled and stored according to team procedures 2.4 Team procedures for dealing with incidents, accidents and emergencies are followed as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> source controlling body rules, category rules, and supplementary regulations regarding motor sport event and team safety requirements for individual motor sport events.
Reading skills to:	<ul style="list-style-type: none"> interpret team safety procedures and requirements and controlling body rules, category rules and supplementary regulations interpret labels and signage associated with dangerous goods and hazardous substances.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out documentation relating to unsafe situations and hazards.
Oral communication skills to:	<ul style="list-style-type: none"> report unsafe situations and hazards and clarify team safety procedures and requirements.
Problem solving skills to:	<ul style="list-style-type: none"> implement team safety requirements, controlling body rules, category rules, and supplementary regulations: <ul style="list-style-type: none"> to manage unsafe situations and hazards

Skills	Description
	<ul style="list-style-type: none"> • in own work situation.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<p><i>Safety procedures and requirements</i> must include:</p>	<ul style="list-style-type: none"> • work health and safety (WHS) and occupational health and safety (OHS) requirements relating to motor sport event and team safety procedures, including procedures for: <ul style="list-style-type: none"> • selecting and using personal protective equipment (PPE) • following emergency procedures for accidents and injuries • handling and storing dangerous goods and hazardous substances • undertaking preventative measures, including: <ul style="list-style-type: none"> • maintaining a clean and tidy work area • ensuring tooling and equipment are clean and functional.

Assessment Requirements for AURMMA007 Follow motor sport event and team safety requirements

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- follow motor sport event and team safety requirements at two different motor sport events.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to motor sport event and team safety procedures, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - following emergency procedures for accidents and injuries
 - handling and storing dangerous goods and hazardous chemicals
 - undertaking preventative measures, including:
 - maintaining a clean and tidy work area
 - ensuring tooling and equipment are clean and functional
- key requirements of controlling body rules, category rules and supplementary regulations relating to above motor sport events.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having followed personal and team safety requirements during motor sport events, e.g. event sign-on sheet.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events
- controlling body rules, category rules and supplementary regulations for the motor sport events
- personal and motor sport team safety procedures and requirements, including PPE
- dangerous goods and hazardous chemicals associated with motor sport events.

AURMMA008 Coordinate operations of a motor sport team

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to coordinate operations of a small motor sport team consisting of a minimum of three persons at a club non-professional level. It involves setting team goals and individual roles and responsibilities, and managing team finances, logistics and competition strategy development.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor sport

Unit Sector

Management, Leadership and Supervision

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for motor sport event	1.1 Controlling body rules, category rules and supplementary regulations requirements are checked and interpreted

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.2 Team member roles and responsibilities for event are identified and checked for compliance with controlling body rules, category rules and supplementary regulations and modified as necessary 1.3 Team goals and roles and responsibilities of each team member are clarified with team members 1.4 Agreed roles and responsibilities are documented according to team procedures 1.5 Team financial requirements are estimated in consultation with team members and team budget is prepared
2. Develop team competition strategy	2.1 Input into competition strategy is sought from team members, performance in previous events is reviewed, and current event conditions are examined 2.2 Team strategy is developed to attain <i>competitive advantage</i> 2.3 Contingency plans are developed as part of strategy and documented
3. Coordinate team participation at event	3.1 Team event schedule is developed and distributed to team members 3.2 Team travel and accommodation requirements are arranged 3.3 Event day tasks are allocated and team members briefed 3.4 Competition vehicle preparation is supervised as required and transport requirements are arranged 3.5 Financial transactions are documented according to team procedures 3.6 Team operations are supervised at events and regular checks are made of team members
4. Coordinate post-event activities	4.1 Post-event team debriefing sessions are arranged and attended 4.2 Competition vehicle post-event check and repairs are coordinated as required 4.3 Component and material replenishment is coordinated 4.4 Financial reports are prepared and presented to team members for review as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> source controlling body rules, category rules and supplementary regulations regarding motor sport event requirements to inform preparation for individual motor sport events.
Reading skills to:	<ul style="list-style-type: none"> interpret controlling body rules, category rules and supplementary regulations.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately document roles and responsibilities and financial transactions and reports develop a team event schedule.
Oral communication skills to:	<ul style="list-style-type: none"> consult with team members regarding team member roles and responsibilities, team financial requirements, and team competition strategies brief team members on allocated responsibilities and tasks convey aspects of event and team member performance during post-event debriefing sessions using language and pace appropriate to audience and purpose.
Numeracy skills to:	<ul style="list-style-type: none"> use addition, subtraction, division and multiplication functions to estimate team financial requirements and prepare team budgets interpret calendars when developing team event schedules.
Digital literacy skills to:	<ul style="list-style-type: none"> use computer software to prepare team budgets navigate computer software, programs and web browsers to source information when arranging team schedule and team travel and accommodation requirements.
Planning and organising skills to:	<ul style="list-style-type: none"> prepare a team budget from team financial requirement estimates devise team strategies for attaining competitive advantages.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Competitive advantage</i> must include:	<ul style="list-style-type: none"> promotional advantage technical advantage psychological advantage.

Assessment Requirements for AURMMA008 Coordinate operations of a motor sport team

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop a team competition strategy and implement team operational requirements for two different motor sport events, one of which must be a sanctioned motor sport event
- during above coordination work for each event, demonstrate two of the following:
 - identifying and clarifying team member roles and responsibilities
 - managing team finances
 - coordinating team participation in event
 - coordinating post-event activities.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to coordinating operations of a motor sport team, including procedures for identifying hazards and managing risks
- key requirements of controlling body rules, category rules and supplementary regulations for above events
- principles of group dynamics
- key features of basic bookkeeping systems
- scenario and logistics planning
- time management strategies to prioritise event requirements
- key requirements of commonwealth, state or territory legislation, regulations, standards and codes of practice relating to coordinating the operations of a motor sport team, including reporting and recording procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having coordinated team operations at a motor sport event, e.g. work schedule.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events, including one sanctioned event
- controlling body rules, category rules and supplementary regulations
- equipment, material, work instructions and deadlines appropriate for coordinating operations of a motor sport team.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- work safely throughout one entire motor sport event, in which the work must involve:
 - carrying out a hazard inspection at the event
 - identifying, controlling and reporting a hazard identified at the event
 - identifying fire safety equipment at the event and its correct application
 - identifying emergency evacuation procedures and responsibilities of self and co-workers at the event.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- basic aspects of relevant state or territory safety legislation, including:
 - employer responsibilities for safety of motor sport personnel
 - employee responsibilities for participating in work health and safety (WHS) practices and procedures
 - employee responsibility to ensure the safety of self and others in the motor sport workplace
- common motor sport workplace hazards, risks and emergency situations
- basic principles and procedures for identifying and controlling hazards and assessing risk
- procedures for reporting hazards
- WHS symbols and signs
- common types and uses of personal protective equipment (PPE)
- common types and application of fire extinguishers
- emergency response procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having followed safety and risk management procedures in a motor sport workplace, e.g. risk assessment sheet.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport event or workplace
- fire safety equipment required for the motor sport environment
- workplace information on WHS policies and procedures
- PPE specific to the event.

Assessment Requirements for AURMSA002 Implement and monitor safety and risk management in a motor sport environment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- implement and monitor safety and risk management practice and procedures in:
 - one motor sport event
 - one motor sport workplace.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- relevant state or territory safety legislation, including:
 - employer responsibilities for safety of motor sport personnel
 - employee responsibilities to participate in work health and safety (WHS) practices
 - employee responsibility to ensure safety of self and others in the workplace
- procedures for distributing safety information to personnel
- common types of potential motor sport workplace hazards, risks and emergency situations
- procedures for performing risk analyses and applying appropriate control measures, including:
 - basic principles of risk management
 - commonly used hazard signs and safety symbols
 - common types and purpose of personal protective equipment (PPE)
- procedures for monitoring and evaluating safety control measures to maintain a safe work environment
- communication procedures, including reporting lines, within the motor sport environment

- methods of maintaining and analysing accident and incident reports
- procedures for reporting workplace risks and hazards, including required documentation
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice relating to implementing and monitoring safety and risk management in a motor sport environment, including safety and environmental regulations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having implemented and monitored safety and risk management, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport event and motor sport workplace
- legislative and workplace information on safety policies and procedures
- motor sport event documentation, including rules and regulations, safety procedures and event procedures
- applicable PPE and safety equipment and resources.

AURMTA001 Prepare and service light competition vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare and service an already assembled light competition vehicle in the workshop or at a motor sport event. It involves preparing for the task, servicing the light competition vehicle, making adjustments as required, and completing workplace processes and documentation.

It applies to those working in the motor sport industry. The light competition vehicles are under 300 kg of unladen weight, such as go-carts, motorcycles or jet skis.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

 - selecting and using personal protective equipment (PPE)
 - identifying acceptable tolerance levels for noise, heat and fumes
- environmental requirements, including procedures for trapping, storing and disposing of fluids released during vehicle preparation
- team instructions, category rules and supplementary regulations relating to motor sport events
- competition vehicle servicing and preparation procedures, including:
 - work area and component layout procedures
 - cleaning methods and precautions
 - types of securing devices and securing methods
 - types of shielding devices and shielding methods
 - record keeping procedures
 - procedures for reporting equipment faults and component defects
 - engine pre-start checks
 - procedures for checking vehicle system pressures and temperatures

- common types of abnormal noises and leaks
- procedures for checking and storing tools and equipment
- procedures for cleaning vehicles.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light competition vehicles that they have prepared and serviced, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace or simulated workplace
- team instructions, category rules and supplementary regulations
- manufacturer light competition vehicle specifications
- personal and motor sport team safety procedures and requirements
- two different light competition vehicles requiring service
- tools, equipment and materials appropriate for inspecting, servicing and adjusting light competition vehicles.

AURMTA002 Assemble and prepare competition vehicles for motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to assemble and prepare a competition vehicle in a motor sport environment. It involves preparing for the task, preparing components, installing sub-assemblies and systems, setting vehicle baseline configuration according to team requirements, supplementary regulations and component supplier specifications, and completing workplace processes and documentation.

It applies to those working in the motor sport industry. A competition vehicle is any vehicle that competes in a motor sport event of a competitive nature under one of the following categories: race, speed, rally road, off road, auto test and timed.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Collect event category information and analyse assembly requirements	1.1 Job requirements are determined from <i>event category information</i> and workplace instructions 1.2 Vehicle operating conditions are checked and clarification of specifications sought as required 1.3 Methods for assembly and preparation are sourced and interpreted and those most appropriate to the circumstances are selected 1.4 Modifications or adaptation of equipment are proposed as required 1.5 Component requirements list is prepared and communicated to appropriate persons 1.6 Procedures for minimising waste material are determined
2. Prepare work area and equipment	2.1 Tools and equipment are sourced and checked for safe and effective operation 2.2 Work area is cleaned and laid out for job requirements according to work safety requirements and team procedures 2.3 Hazards associated with the work are identified and risks are managed 2.4 Problems with work area or operation of equipment are reported to appropriate persons according to team procedures
3. Prepare components for assembly	3.1 Assembly procedures and information are sourced and interpreted 3.2 Components are cleaned to facilitate pre-assembly inspection according to team procedures and <i>safety and environmental requirements</i> , and without causing damage to components 3.3 Components are inspected for function and quality to ensure optimum use of resources 3.4 Problems with components are reported to appropriate persons according to team procedures as required
4. Install sub-assemblies	4.1 Sub-assemblies are inspected for quality and readiness for installation according to manufacturer specifications 4.2 Sub-assemblies are installed and fasteners tensioned according to safety requirements and manufacturer installation sequences and techniques 4.3 Checks are made to ensure accurate and complete fitting according to team procedures and manufacturer specifications 4.4 Problems with sub-assemblies are reported to appropriate persons

<p>Elements</p> <p>Elements describe the essential outcomes.</p>	<p>Performance Criteria</p> <p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.</p>
	<p>according to team procedures as required</p>
<p>5. Install ancillary systems</p>	<p>5.1 Critical components are located according to function, susceptibility to damage, and ease of maintenance</p> <p>5.2 Critical components are installed and fasteners tensioned according to team procedures and manufacturer specifications</p> <p>5.3 Optimum layout for wiring loom, connectors, hoses, hard lines and ancillary components is confirmed</p> <p>5.4 Wiring loom, connectors, hoses, hard lines and ancillary components are installed and fasteners tensioned according to manufacturer specifications, team procedures and safety requirements</p> <p>5.5 Entire installation and shield are secured to maximise reliability and minimise susceptibility to damage according to manufacturer specifications, team procedures and safety requirements</p> <p>5.6 Checks are made during and after installation to ensure accurate and complete fitting according to team procedures and manufacturer specifications</p> <p>5.7 Problems with components are reported to appropriate persons according to team procedures as required</p>
<p>6. Conduct post-assembly checks</p>	<p>6.1 Vehicle fluid levels are checked and topped up as required according to team procedures and manufacturer specifications</p> <p>6.2 Temporary bungs and covers are removed and engine <i>pre-start checks</i> are conducted</p> <p>6.3 Sub-assemblies and ancillary systems are checked for correct operation</p>

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
7. Set vehicle baseline configuration	7.1 Vehicle baseline settings are determined from team instructions, category regulations, and component supplier specifications 7.2 Level surface is established on which to place vehicle for set-up 7.3 Springs and dampers are installed according to manufacturer specifications, team procedures and safety requirements 7.4 Ride height and corner weight are measured and adjusted as required and according to manufacturer specifications, team procedures and safety requirements 7.5 Steering angles are measured and adjusted as required and according to manufacturer specifications, team procedures and safety requirements 7.6 Potential or existing problems are reported to appropriate persons according to team procedures as required
8. Complete work processes	8.1 Final inspection is made to ensure work is to workplace expectations and vehicle is cleaned and presented ready for use 8.2 Work area is cleaned, waste and non-recyclable material is disposed of and recyclable material is collected 8.3 Tools and equipment are checked and stored, and surplus components and consumables are packed and stored according to workplace procedures 8.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate supplementary regulations and manufacturer specifications regarding motor sport events and team safety requirements for events.
Reading skills to:	<ul style="list-style-type: none"> interpret team instructions, supplementary regulations and manufacturer specifications.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when

Skills	Description
	recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report problems with the work area, the operation of the equipment, or components and sub-assemblies.
Numeracy skills to:	<ul style="list-style-type: none"> measure components and use basic addition, subtraction, division and multiplication, to calculate tolerances and clearances use basic mathematical operations to calculate volume and area.
Problem solving skills to:	<ul style="list-style-type: none"> determine assembly sequence and avoid backtracking or workflow interruptions.
Teamwork skills to:	<ul style="list-style-type: none"> work as part of a team to ensure components and materials are available as needed and time wastage is minimised.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Event category information</i> must include:	<ul style="list-style-type: none"> supplementary regulations manufacturer specifications, including allowable design, quality, material, equipment and quantities.
<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE) using chemical cleaning and lubricating agents environmental requirements, including procedures for trapping, storing and disposing of chemicals and fluids released during assembly process.
<i>Pre-start checks</i> must include:	<ul style="list-style-type: none"> abnormal noise leaks pressures temperatures.

Assessment Requirements for AURMTA002 Assemble and prepare competition vehicles for motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- assemble and prepare two different competition vehicles, in which the work must involve:
 - installing body, mechanical and electrical systems
 - installing fluid or pneumatic and fire systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to assembling and preparing competition vehicles, including procedures for:
 - selecting and using personal protective equipment (PPE) when assembling competition vehicles
 - using chemical cleaning and lubricating agents
- environmental requirements, including procedures for trapping, storing and disposing of chemicals and fluids released during assembly process
- details of competition vehicle design, quality, and material, equipment and quantities in team instructions, supplementary regulations and manufacturer specifications
- typical stages of competition vehicle assembly
- procedures for setting up work area and component layout
- component cleaning and inspection procedures
- procedures for assembling and installing sub-assemblies and ancillary systems, including:
 - sub-assembly and ancillary system installation sequence and techniques
 - optimum layout for conduits and ancillary components
 - types of securing devices and securing methods

- types of shielding devices and shielding methods
- procedures for checking fitting of sub-assemblies and ancillary systems
- post-assembly checking procedures, including:
 - checking and topping up fluid levels
 - engine pre-start checks
 - measuring pressures, temperatures, noise and checking for leaks of components
 - checking correct operation of sub-assemblies and ancillary systems
- procedures for establishing vehicle baseline configuration
- procedures for installing springs and dampers and measuring and adjusting ride height and corner weight
- procedures for measuring and adjusting steering angles.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the competition vehicles that they have assembled and prepared for a motor sport event, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport repair workplace or simulated workplace
- two different motor sport competition vehicles
- sub-assemblies and ancillary components to be installed in competition vehicles
- controlling body rules, category rules and supplementary regulations for the motor sport event
- personal and motor sport team safety procedures and requirements, including PPE
- tools, equipment and material for assembling and preparing a competition vehicle.

AURMTA003 Determine material suitability for competition vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to determine material suitability for constructing competition vehicle components. It involves determining component performance specifications, researching component operating environments, establishing material specifications for the components, and testing material suitability. It involves producing new components from a design as well as producing existing components from new material.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Establish component performance specifications	1.1 Component specifications are determined from <i>performance specifications</i> 1.2 Component operating environment is established 1.3 Component operating function is confirmed 1.4 Component performance specifications are prepared
2. Establish material performance specifications	2.1 Material operating function is confirmed 2.2 Criteria to be used in selection of material and in evaluation of outcomes are identified and documented 2.3 Specifications for material are accessed and interpreted 2.4 Legal and safety impacts of material chosen are considered and responded to according to regulatory and team obligations and practices 2.5 Material performance specifications are prepared and documented to industry and team standards
3. Test material suitability against material performance specifications	3.1 Material capable of undertaking the required operating function is identified 3.2 Proposed material is selected following identification, consideration and evaluation of full range of available and relevant options 3.3 Material is selected or constructed to component specifications, according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 3.4 Selected option, including material choices and processes, is developed in detail and progressively validated against established criteria 3.5 Test material is tested against material performance specifications 3.6 Causes of material failure are identified as required 3.7 Testing procedures and results are documented, including recommendations for material use
4. Test component suitability against component performance specifications	4.1 Component test procedures are determined 4.2 Component is tested against component performance specifications according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.3 Testing procedures and results are documented, including recommendations for component use

Foundation Skills

Assessment Requirements for AURMTA003 Determine material suitability for competition vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- determine material suitability for two different competition vehicle components of which:
 - one component must be made of metal
 - one component must be made of a composite material.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to determining material suitability for competition vehicle components, including procedures for:
 - following equipment and system isolation requirements
 - selecting and using personal protective equipment (PPE)
- key requirements of regulatory body and category rules and their impact on component supplier specifications
- types of materials suitable for competition vehicle components, including:
 - metals and alloys
 - plastics
 - fibreglass
 - carbon
 - Kevlar
- properties of material suitable for competition vehicle components, including:
 - molecular structure of material
 - physical properties of fabrication material and material composites

- chemical properties of fabrication material and material composites
- mechanical properties of fabrication material and material composites
- material treatment processes
- causes of material degradation
- material and component testing procedures, including:
 - destructive
 - non-destructive.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the material that they have tested to determine its suitability for competition vehicle components, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace or simulated workplace
- workplace instructions
- customer requirements, organisational procedures, safety procedures and regulations
- competition vehicles requiring components specified in the performance evidence
- material, testing equipment and fabrication equipment for the two different competition vehicle components specified in the performance evidence
- tools and equipment appropriate for determining material suitability for competition vehicle components.

AURMTA004 Prepare competition vehicles at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to perform competition vehicle preparations at a motor sport event. It involves preparing for the task, interpreting category and event team specifications, finalising technical preparations, conducting pre-race checks and post-race maintenance, and preparing a vehicle for scrutineering.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

AURMTA005 Perform pit lane and service area operations at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to perform pit lane and service area operations within the time constraints of motor sport events. It involves preparing for the task, following safety procedures, and carrying out repairs, adjustments and service work on competition vehicles during pit lane, pit bay or service area stops.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURMTA005 Perform pit lane and service area operations at motor sport events

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- perform pit lane and service area operations on a competition vehicle at two different motor sport events, including at one sanctioned motor sport event.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to performing pit lane and service area operations, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - identifying acceptable tolerance levels for noise, heat and fumes
 - following pit lane and service area safety procedures
- environmental requirements, including procedures for trapping, storing and disposing of fluids and contaminants released during pit lane and service area operations
- key requirements of controlling body rules, category rules and supplementary regulations relating to above motor sport event
- procedures for pit lane and service area operations, including:
 - layout at an event
 - preparation processes
 - pit stop and service area sequence and conduct
 - pit lane and service area signals and communication techniques
 - emergency repair methods and procedures
 - procedures for reporting equipment faults and component defects
- procedures for completing event records.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the pit lane and service area operations they have performed at motor sport events, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events, including one sanctioned motor sport event
- controlling body rules, category rules and supplementary regulations for the motor sport event
- personal and motor sport team safety procedures and requirements, including PPE
- motor sport team procedures and instructions
- one competition vehicle
- tools, equipment and service materials appropriate for performing pit lane and service area operations on competition vehicles.

AURMTA006 Perform torquing and fastening on motor sport competition vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to torque and fasten motor sport competition vehicle components according to supplier and team specifications. It involves preparing for the task, selecting tools, fastening and securing components, and completing workplace processes and documentation.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for work	1.1 Job requirements are determined from workplace instructions 1.2 Component supplier and team torquing and fastening specifications are sourced and interpreted 1.3 Tools and equipment are selected and checked for serviceability 1.4 Work area is cleaned and laid out for job requirements according to team procedures 1.5 Hazards associated with the work are identified and risks are managed 1.6 Problems with work area and operation of tools and equipment are reported to appropriate persons according to team procedures as required
2. Fasten components	2.1 Components to be fastened are inspected, prepared and assembled using gaskets, sealants, adhesives or lubricants as required and according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Components are installed and checked, and fasteners are tensioned according to team and <i>manufacturer procedures</i> 2.3 Mechanical fastener securing devices are fitted according to team and manufacturer procedures 2.4 Sealant and liquid locking adhesive cure times are observed according to team and manufacturer specifications as required 2.5 Component fastening problems are reported to appropriate persons according to team procedures as required
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to team procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret workplace instructions interpret manufacturer specifications relating to torquing, fastener securing device, and sealant and liquid locking adhesives.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report problems in work area, tools, equipment and component fastening.
Numeracy skills to:	<ul style="list-style-type: none"> interpret angle and torque units of measurement.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working safely with sealants, adhesives, lubricants and greases environmental requirements, including procedures for trapping, storing and disposing of excess materials released during application of sealants and adhesives.
<i>Manufacturer procedures</i> must include:	<ul style="list-style-type: none"> stages and sequence of torquing torque settings.

Assessment Requirements for AURMTA006 Perform torquing and fastening on motor sport competition vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- torque the fasteners of three different competition vehicle components or sub-assemblies
- secure fasteners on six different competition vehicle components or sub-assemblies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to torquing and fastening on motor sport competition vehicles, including procedures for working safely with sealants, adhesives, lubricants and greases
- environmental requirements, including procedures for trapping, storing and disposing of excess materials released during application of sealants and adhesives
- types, characteristics, uses and limitations of fasteners used in motor sport and performance enhancement, including:
 - clips, pins and clamps, nuts and bolts, and screws
 - material stress
- types, characteristics, uses and limitations of mechanical and liquid chemical fastener securing locking devices, including:
 - lock wire and lock tabs
 - liquid locking compounds and adhesives
 - shelf life expiry
- principles, applications, methods and techniques for torquing
- procedures for preparing competition vehicle components for assembly.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the torquing and fastening they have performed on motor sport competition vehicles, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace or simulated workplace
- workplace instructions
- fasteners, locking devices, liquid locking compounds and adhesives
- manufacturer torquing and fastening specifications
- three different competition vehicle components or sub-assemblies that require torquing of their fasteners
- six different competition vehicle components or sub-assemblies that require fastening to other components.

Assessment Requirements for AURMTA007 Conduct non-destructive testing

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out non-destructive testing on four different competition vehicle components, in which the work must involve:
 - dye-penetrant testing of one component
 - magnetic particle testing of one component.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to conducting non-destructive testing, including procedures for using flammable and toxic dye penetrant sprays
- types and limitations of non-destructive tests, including:
 - dye-penetrant
 - wet magnetic particle
 - Rockwell, Brinell and Vickers hardness
 - vacuum
 - pressure
- non-destructive testing procedures, including:
 - preparation, including methods of cleaning that do not mask faults
 - equipment use, maintenance and storage
 - analysis techniques
- procedures for recording results of non-destructive testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the non-destructive testing they have conducted on competition vehicle components, e.g. analysis documentation.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- component specifications
- four different competition vehicle components requiring the non-destructive testing specified in the performance evidence
- equipment, tools and materials appropriate for dye-penetrant testing and magnetic particle testing.

AURMTA008 Apply aerodynamic and vehicle dynamic principles and effects to competition vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to determine aerodynamic and vehicle dynamic requirements of competition vehicles, devise improvement strategies, apply changes and test results. It involves preparing for the task, determining optimum settings, supervising configuration adjustments, applying dynamic principles, and testing vehicle aerodynamics. It requires understanding of the terminology, principles and effects of the physics involved in resistance and motion.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to determine optimum aerodynamic settings	1.1 Job requirements are determined from workplace instructions 1.2 Setting requirements are determined from <i>motor sport event information</i> 1.3 Regulations, specifications and tolerances are examined for possible competitive advantages 1.4 Specifications are checked for required <i>known factors</i> and any required clarification of specifications is sought 1.5 Hazards associated with the work are identified and risks are managed
2. Determine optimum tyre settings	2.1 Tyre setting requirements are calculated and determined according to known factors 2.2 Effects of selected tyre settings on overall vehicle performance are evaluated 2.3 Anticipated performance improvement is quantified and optimum settings are documented
3. Determine optimum steering and suspension settings	3.1 Steering and suspension setting requirements are calculated and determined according to known factors 3.2 Effects of selected steering and suspension settings on overall vehicle performance are evaluated 3.3 Anticipated performance improvement is quantified and optimum settings are documented
4. Determine optimum aerodynamic device settings	4.1 Aerodynamic device setting requirements are calculated and determined according to known factors 4.2 Effects of selected aerodynamic device settings on overall vehicle performance are evaluated 4.3 Anticipated performance improvement is quantified and optimum settings are documented
5. Supervise configuration of aerodynamic and vehicle dynamic settings	5.1 Tooling and equipment are selected and checked for serviceability 5.2 Aerodynamic and vehicle dynamic optimum settings are configured according to team procedures and <i>safety requirements</i> 5.3 Post-configuration checks are made to ensure accurate and complete changes according to team procedures and safety requirements 5.4 Problems with work area or operation of equipment are evaluated and decisions implemented as required

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	5.5 Proposals for modifications or adaptation of equipment or components are evaluated and implemented as required 5.6 Work area cleanliness and layout for job requirements are monitored
6. Test aerodynamic and vehicle dynamic settings	6.1 Test procedures are determined and settings are tested against anticipated performance improvement according to team procedures and safety requirements 6.2 Testing procedure and results are documented 6.3 Recommendations for setting usage are devised and implemented
7. Complete work processes	7.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 7.2 Work area is cleaned, waste and non-recyclable material are disposed of, and recyclable material is collected 7.3 Tools and equipment are checked and stored according to workplace procedures 7.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> adapt procedures to different vehicles, event venues and conditions.
Reading skills to:	<ul style="list-style-type: none"> interpret team instructions and procedures and controlling body rules, category rules and supplementary regulations.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately document optimum settings, performance specifications, and test results of aerodynamic and vehicle dynamic settings.
Oral communication skills to:	<ul style="list-style-type: none"> discuss configuration of aerodynamic and vehicle dynamic settings with team members.
Numeracy skills to:	<ul style="list-style-type: none"> understand units of length, mass, velocity, angles and force

Skills	Description
	<ul style="list-style-type: none"> use basic mathematical operations to calculate mass, velocity, angles and force.
Planning and organising skills to:	<ul style="list-style-type: none"> supervise configuration of vehicle settings to minimise time and material wastage.
Problem solving skills to:	<ul style="list-style-type: none"> analyse a number of factors, including event regulations and vehicle and event conditions, and determine optimum aerodynamic and vehicle dynamic settings.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Motor sport event information</i> must include:	<ul style="list-style-type: none"> controlling body rules category rules supplementary regulations component supplier specifications team requirements.
<i>Known factors</i> must include:	<ul style="list-style-type: none"> regulatory constraints budgetary constraints load and speed characteristics terrain and climate conditions driver or rider preferences.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for identifying hazards and managing risks.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- determine and supervise the configuration of the following settings on two different competition vehicles:
 - tyre settings
 - steering and suspension settings
 - aerodynamic device settings.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying aerodynamic and vehicle dynamic principles and effects to competition vehicles, including procedures for identifying hazards and managing risks
- key requirements of controlling body rules, category rules and supplementary regulations relating to establishing settings
- terminology, principles and effects of the physics involved in resistance and motion
- aerodynamic and vehicle dynamic principles and their effects on competition vehicles, including:
 - tyre settings, including:
 - construction and compound
 - size, including stagger
 - pressures
 - loadings
 - temperatures

- steering and suspension settings, including:
 - wheel rate and linkage or leverage ratios
 - spring rate and spring pre-load
 - vehicle weight, sprung and unsprung weight
 - anti-roll bar rate where fitted
 - steering angles, including toe in and out, camber and caster
 - roll centres
 - ride height
 - centre of gravity
- aerodynamic device settings, including:
 - wing angles, height and location
 - body panels and fittings
 - ground effects and ride height
 - frontal areas
 - lift reduction and drag reduction
 - downforce generation
 - downforce and drag compromise
- competition vehicle test methods and procedures, including procedures for record keeping
- mathematical computations for determining optimum settings.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the competition vehicle settings they have configured, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace or simulated workplace
- two different competition vehicles requiring configuration resetting

- controlling body rules, category rules and supplementary regulations for a motor sport event
- tools and equipment appropriate for adjusting and modifying tyres, steering and suspension, and aerodynamic device settings.

Assessment Requirements for AURMTA009 Collect and log motor sport data

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- collect and log data at two different motor sport events, including at one sanctioned motor sport event
- use both manual and electronic systems at each of the above events
- collect the following types of data at each of the above events:
 - vehicle data
 - weather data
 - circuit data
 - driver or rider characteristics.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to collecting and logging motor sport data, including procedures for:
 - identifying hazards and managing risks
 - identifying acceptable tolerance levels for noise, heat and fumes
- motor sport data acquisition systems, including:
 - types, characteristics, components, uses and limitations
 - types of motor sport data, including data irregularities and tolerance levels
 - end users of motor sport data
 - manual data collection and logging methods
 - electronic data collection and logging methods

- types of data analysis software, including:
 - methods of importing data and performing preliminary data evaluation
 - methods of collating, reporting and recording data findings
- data acquisition system inspection, maintenance and system check procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motor sport data they have collected and logged, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- two different motor sport events, including one sanctioned event
- motor sport vehicle
- manual motor sport data acquisition system, including:
 - stopwatches
 - tyre pyrometer
 - weather station
- electronic motor sport data acquisition system, including data analysis software.

AURMTD001 Test suspension dampers using a dynamometer

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to use a dynamometer to test suspension dampers on a competition vehicle. It involves preparing for the task, conducting suspension damper testing, analysing and interpreting test results in order to maximise damper, and completing processes and documentation, including any associated recommendations for further action.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for	1.1 Job requirements are determined from team instructions, category

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
dynamometer operation	regulations and manufacturer procedures 1.2 Dynamometer is checked for calibration and serviceability, and is prepared for operation according to manufacturer specifications and team procedures 1.3 Hazards associated with the work are identified and risks are managed according to <i>safety requirements</i> 1.4 Tools and equipment for securing dampers are selected and checked for serviceability
2. Conduct dynamometer testing	2.1 Appropriate load and run sequence and test parameters are determined 2.2 Dampers are connected and secured to dynamometer according to manufacturer specifications and team procedures 2.3 Selected dynamometer testing sequence is carried out according to manufacturer and team procedures and safety requirements, and results are documented 2.4 Dynamometer test data is analysed and conclusions are drawn about damper condition and performance according to manufacturer specifications and team procedures 2.5 Findings are reported to appropriate personnel, including recommendations based on dynamometer data for damper configuration or modifications to improve performance, according to team procedures 2.6 Damper modifications are carried out and tested on dynamometer according to manufacturer specifications, team procedures and safety requirements as required 2.7 Data is presented to team members according to team procedures
3. Complete work processes	3.1 Dynamometer shutdown procedure is carried out according to manufacturer specifications, team procedures and safety requirements 3.2 Dampers are disconnected from dynamometer according to manufacturer specifications and team procedures 3.3 Dynamometer, tools and associated equipment are checked, maintained and stored according to workplace procedures 3.4 Dynamometer test results are documented and stored according to team procedures to create or add to damper history

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret safe operating procedures for damper dynamometers from workplace and manufacturer literature interpret information from manufacturer and workshop literature when seeking damper specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting findings and recording work completed.
Oral communication skills to:	<ul style="list-style-type: none"> report findings and make recommendations for adjustments or modifications to the damper.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to measure length and force interpret metric and imperial units of measurement.
Technology skills to:	<ul style="list-style-type: none"> operate dedicated damper dynamometer.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for handling hot dampers.

Assessment Requirements for AURMTD001 Test suspension dampers using a dynamometer

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- test, adjust and retest two different sets of competition vehicle dampers using a damper dynamometer.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to testing suspension dampers using a dynamometer, including procedures for handling hot dampers
- suspension damper principles, construction and operation, including:
 - compression and rebound
 - gas charged
- suspension damper modification and adjustment procedures
- application, purpose and operation of damper dynamometers, including associated hardware and software
- damper dynamometer testing procedures, including:
 - dynamometer preparation procedures
 - damper connection procedures
 - test environment correction factors
 - dynamometer data interpretation and analysis
- dynamometer maintenance procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the suspension dampers that they have tested using a dynamometer, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace or simulated workplace
- workplace instructions
- manufacturer specifications
- two different sets of competition vehicle dampers
- damper dynamometer
- tools and equipment appropriate for testing suspension dampers using a dynamometer.

AURMTD002 Prepare competition vehicle suspension

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to test, dismantle, inspect, reassemble and adjust the suspension of a motor sport competition vehicle. It involves preparing for the task, selecting the correct preparation procedure, carrying out the task, performing post-preparation testing, and completing workplace processes and documentation. It requires the technical ability to determine competition vehicle suspension requirements and the effects of making changes to variables.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Determine competition vehicle suspension requirements	1.1 Job requirements are determined from workplace instructions and category regulations 1.2 Rules and regulations and vehicle specifications and tolerances are analysed for competitive advantage 1.3 Suspension requirements are determined according to vehicle operating criteria 1.4 Component requirements are documented and communicated to appropriate personnel
2. Prepare for work on suspension	2.1 Tools, equipment and materials are selected and checked for serviceability 2.2 Work area is cleaned and laid out for job requirements according to team requirements 2.3 Hazards associated with the work are identified and risks are managed according to <i>safety requirements</i> 2.4 Vehicle is cleaned and prepared for initial measurement according to team requirements 2.5 Existing suspension settings are measured and documented prior to component removal or adjustment according to workplace procedures 2.6 Problems with work area or operation of the equipment are reported to appropriate personnel as required
3. Dismantle, modify and assemble non-sealed dampers	3.1 Damper removal, testing and dismantling procedures are sourced and interpreted 3.2 Dampers are tested, dismantled, cleaned, inspected and measured for wear, and tolerances are determined according to manufacturer specifications and safety and <i>environmental requirements</i> 3.3 Dampers are replaced, repaired or modified as required according to manufacturer specifications, safety requirements and team procedures 3.4 Dampers are <i>prepared and tested</i> according to manufacturer specifications and procedures, and safety requirements
4. Dismantle, replace or change springs	4.1 Methods for removing and dismantling springs according to manufacturer specifications are sourced and interpreted 4.2 Spring dimensions are measured and documented before dismantling 4.3 Springs are disassembled and cleaned, and rates and tolerances are checked according to manufacturer specifications, workplace

Assessment Requirements for AURMTD002 Prepare competition vehicle suspension

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- prepare the suspensions of two different competition vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to preparing competition vehicle suspension, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - managing stored energy in springs
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from dampers
- function, configurations, application and limitations of competition vehicle suspension systems
- suspension system dismantling and testing procedures, including:
 - suspension setting measurement procedures and calculations
 - on-vehicle damper and spring assembly testing procedures
 - damper and spring assembly removal and replacement procedures
 - damper bench-testing, dismantling, inspection, measurement and evaluation procedures
 - spring assembly off-vehicle testing, dismantling, inspection, measurement and evaluation procedures
- suspension system assembly and adjustment procedures, including:
 - damper oil refilling, bleeding and re-gassing procedures

- spring assembly reassembly procedures
- suspension setting adjustment and configuration procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the competition vehicle suspensions that they have prepared, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace or simulated workplace
- suspension components
- two different competition vehicles
- tools and equipment appropriate for preparing competition vehicle suspension.

AURMTE001 Test engines using a dynamometer

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to test engines using a dynamometer. The engines being tested may be in a vehicle or stand alone. It involves preparing for the task, selecting the correct test procedure, carrying out testing, analysing test results, and completing workplace processes and documentation. It involves setting up and conducting dynamometer tests on engines, and logging, analysing and reporting the test data in order to maximise engine performance.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for dynamometer operation	1.1 Job requirements are determined from <i>test information</i> 1.2 Dynamometer is checked for calibration and serviceability according to manufacturer and workplace procedures 1.3 Tools, equipment and materials are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed according to <i>safety and environmental requirements</i> 1.5 Engine or vehicle is checked prior to testing according to manufacturer and workplace procedures 1.6 Engine or vehicle connections to dynamometer are checked and secured according to manufacturer, workplace and safety procedures
2. Conduct dynamometer testing	2.1 Appropriate load and run sequence and test parameters are determined, including run-in period for new engines 2.2 Selected dynamometer testing sequence is carried out according to manufacturer and team procedures and safety requirements, and data is documented 2.3 Correction factors are calculated and applied to data
3. Analyse test results	3.1 Dynamometer test data is analysed and conclusions are drawn about condition and performance of engine and associated systems according to manufacturer specifications and workplace procedures 3.2 Findings are reported based on dynamometer data, including recommendations for engine configuration and/or modifications to improve performance, according to workplace procedures 3.3 Recommended engine modifications are tested on dynamometer according to manufacturer and workplace procedures and safety requirements, and data is documented 3.4 Data is presented to team members according to workplace procedures
4. AURMTF001 Analyse and repair performance carburetted fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and repair carburetted fuel systems and associated components. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. It involves developing and modifying performance improvement strategies in carburetted fuel systems and associated components. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical – Fuel Systems

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm effects of fault in carburetted fuel system	1.1 Objective of analysis and evaluation is determined from workplace instructions 1.2 Specifications for carburetted fuel system are accessed and interpreted 1.3 Details of fault are examined and available preliminary information is documented 1.4 Effects of fault are identified and confirmed from direct and indirect evidence 1.5 Hazards associated with the work are identified and risks are managed according to <i>safety and environmental requirements</i>
2. Prepare for fault analysis	2.1 Evaluative criteria are developed or adopted to meet the objective of analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> are developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer and workplace procedures 2.4 Tools and materials required to support diagnostic procedure are selected and checked for serviceability 2.5 Possible causes of fault are identified from analysis of technical support information and available on-board diagnostic systems
3. Carry out analysis and determine repair and performance enhancement strategies	3.1 Selected analytical and evaluative methodology is followed according to manufacturer and workplace procedures 3.2 Tests are carried out according to manufacturer and workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluative criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements 3.6 Options for responding to analysis and evaluation objective are determined from further research of technical support information 3.7 <i>Repair or modification method</i> is selected and documented
4. Conduct repairs and implement performance improvement strategies	4.1 Repair tools and materials are selected and prepared 4.2 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, team requirements,

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and safety and environmental requirements, and without causing damage to other components or systems 4.3 Post-repair testing and vehicle start-up are carried out to ensure performance and operation are to team requirements
5. Complete work processes	5.1 Tools and equipment are cleaned, maintained and prepared for future use, and stored according to manufacturer specifications and team requirements 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored and problems reported to appropriate personnel according to team requirements 5.4 Workplace documentation is processed according to team requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret controlling body rules, category rules and supplementary regulations interpret information from manufacturer and workshop literature when seeking carburetted fuel system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting analysis findings.
Numeracy skills to:	<ul style="list-style-type: none"> measure system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications interpret units of measurement of pressure and flow.
Planning and organising	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed

Skills	Description
skills to:	within workplace timeframes.
Self-management skills to:	<ul style="list-style-type: none"> work efficiently with minimum supervision.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers, vernier calipers, fuel pressure and flow rate gauges use specialised fuel system diagnostic equipment, such as scan tools and data loggers.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with petrol fuel systems environmental requirements, including procedures for trapping, storing and disposing of petrol fuel released during repairs or testing.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none"> diagnostic process sequence of process tests testing equipment.
<i>Repair or modification method</i> must suit:	<ul style="list-style-type: none"> operating conditions controlling body rules, category rules and supplementary regulations financial implications.

Assessment Requirements for AURMTF001 Analyse and repair performance carburetted fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and repair faults in the performance of the carburetted fuel systems of two different competition vehicles, including:
 - two of the following faults:
 - rough running
 - under or over fuelling
 - contamination or leaks
 - one of the following faults:
 - fuel cells venting
 - fuel pump pressure and/or flow regulation
- conduct post-repair checks on the above fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) and environmental requirements relating to analysing and repairing performance carburetted fuel systems, including procedures for working with petrol fuel systems
- environmental requirements, including procedures for trapping, storing and disposing of petrol fuel released during repairs or testing
- types, function, operation and limitations of carburetted fuel systems and components, including:
 - properties of fuels used in the motor sport industry, including compatibility with carburetted fuel system components

- fuel system components, including:
 - rollover valves
 - fuel cells
 - fuel lines
 - breathers
 - pickup pumps
 - main pumps
 - filters
 - fuel pots, surge tanks and collector tanks
 - pressure and temperature sensors
- multi-barrel carburettors, including:
 - two-barrel and four-barrel carburettors
 - two-stage carburettors, including vacuum and mechanical control of second stage
- diagnostic testing procedures of performance carburetted fuel systems, including:
 - fuel pump pressure, volume and vacuum testing
 - testing for air leaks
 - cold-start enrichment testing
 - exhaust gas analysis
- procedures for repair and improvement of performance carburetted fuel systems, including:
 - fuel pump installation
 - carburettor dismantling, cleaning, repair and reassembly
 - carburettor removal, replacement and adjustment
- post-repair testing procedures of performance carburetted fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the complex performance carburetted fuel systems they have analysed and repaired, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for vehicle performance carburetted fuel systems
- two different competition vehicles with faults in their performance carburetted fuel systems
- diagnostic equipment for performance carburetted fuel systems, including exhaust gas analyser
- repair tools, equipment and materials appropriate for analysing and repairing performance carburetted fuel systems.

AURMTF002 Analyse and repair performance fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and repair performance fuel injection systems and associated components. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. It also involves developing and modifying performance improvement strategies in fuel injection systems and associated components. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical - Fuel Systems

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm effects of faults in fuel injection system	1.1 Objective of analysis and evaluation is determined from workplace instructions 1.2 Specifications for fuel injection system are accessed and interpreted 1.3 Details of fault are examined and available preliminary information is documented 1.4 System faults, deficiencies or discrepancies are identified and confirmed from direct and indirect evidence 1.5 Hazards associated with the work are identified and risks are managed according to <i>safety and environmental requirements</i>
2. Prepare for fault analysis	2.1 Evaluative criteria are developed or adopted to meet the objective of analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> are developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer and workplace procedures 2.4 Tools and materials required to support diagnostic procedure are selected and checked for serviceability 2.5 Possible causes of fault are identified from analysis of technical support information and available on-board diagnostic systems
3. Carry out analysis and determine repair and performance enhancement strategies	3.1 Selected analytical and evaluative methodology is followed according to manufacturer and workplace procedures 3.2 Tests are carried out according to manufacturer and workplace procedures and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluative criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements 3.6 Options for responding to analysis and evaluation objective are determined from further research of technical support information 3.7 <i>Repair or modification method</i> is selected and documented

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Conduct repairs and implement performance improvement strategies	<p>4.1 Repair tools and materials are selected and prepared</p> <p>4.2 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, team requirements and safety and environmental requirements, and without causing damage to other components or systems</p> <p>4.3 Post-repair testing and vehicle start-up are carried out to ensure performance and operation are to team requirements</p>
5. Complete work processes	<p>5.1 Tools and equipment are cleaned, maintained and prepared for future use, and stored according to manufacturer specifications and team requirements</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored and problems reported to appropriate personnel according to team requirements</p> <p>5.4 Workplace documentation is processed according to team requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret controlling body rules, category rules, and supplementary regulations interpret information from manufacturer and workshop literature when seeking fuel injection system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting analysis findings.
Numeracy skills to:	<ul style="list-style-type: none"> measure fuel system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications interpret units of measurement of pressure and flow.

Skills	Description
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Self-management skills to:	<ul style="list-style-type: none"> work efficiently with minimal supervision.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as fuel pressure and flow rate gauges use specialised fuel system diagnostic equipment, such as scan tools and data loggers.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with petrol fuel systems environmental requirements, including procedures for trapping, storing and disposing of petrol fuel released during repair or testing.
<i>Analytical and evaluative methodology</i> must include:	<ul style="list-style-type: none"> diagnostic process sequence of process tests testing equipment.
<i>Repair or modification method</i> must suit:	<ul style="list-style-type: none"> operating conditions controlling body rules, category rules and supplementary regulations financial implications.

Unit Mapping Information

Equivalent to AURMTF4002 Analyse and repair performance fuel injection systems

Links

Assessment Requirements for AURMTF002 Analyse and repair performance fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and repair faults in the performance of the fuel injection systems of three different competition vehicles, including:
 - two of the following faults:
 - rough running
 - under or over fuelling
 - contamination or leaks
 - one of the following faults:
 - fuel cell ventilation
 - pumps
 - pressure and/or flow regulation
- conduct post-repair checks on the above fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and repairing performance fuel injection systems, including procedures for working with petrol fuel systems
- environmental requirements, including procedures for trapping, storing and disposing of petrol fuel released during repair or testing
- types, function, operation and limitations of fuel injection systems and components, including:

- properties of fuels used in the motor sport industry, including compatibility with fuel injection system components
- fuel injection system components, including:
 - air intake systems
 - fuel delivery systems, including fuel rails
 - fuel filters
 - fuel pumps
 - fuel surge tanks
 - adjustable fuel pressure regulators
- fuel injectors, including peak-and-hold and saturated injectors:
 - fuel rails
 - fuel filters
 - fuel pumps
 - fuel surge tanks
 - adjustable fuel pressure regulators
- management systems, including:
 - pressure and temperature sensors
 - electronic control units
- diagnostic testing procedures of performance fuel injection systems, including:
 - symptom and cause differentiation
 - mapping fuel delivery
 - fuel trim and live data
 - fuel pump pressure, volume and vacuum testing
 - testing for air leaks
 - scan tool and data gathering
 - cold-start enrichment testing
 - exhaust gas analysis
- procedures for repair and improvement of performance fuel injection systems, including fuel system component removal, replacement or repair, and adjustment procedures
- post-repair testing procedures of performance fuel injection systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the performance fuel injection systems they have analysed and repaired, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for vehicle performance fuel injection systems
- three different competition vehicles with faults in their performance fuel injection systems
- diagnostic equipment for performance fuel injection systems, including:
 - exhaust gas analyser
 - scan tool or data logger
- tools, equipment and materials appropriate for analysing and repairing performance fuel injection systems.

AURMTJ001 Select and prepare motor sport competition vehicle tyres and wheels

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to select and prepare tyres and wheels for motor sport vehicles to optimise handling performance. It involves identifying and confirming work requirements, preparing for work, identifying application requirements, selecting and preparing tyres, and completing workplace processes and documentation. It includes mounting wheels, conducting pre-race preparation, and post-race maintenance stock control and storage procedures.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical – Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Determine and select competition vehicle tyres and wheels	1.1 Job requirements are determined from workplace instructions 1.2 Supplementary regulations and component supplier specifications are sourced and interpreted to gain a competitive advantage 1.3 Specifications are checked against required operating conditions to determine tyre and wheel requirements 1.4 Tyre and wheel assemblies to be used are selected according to job requirements, and are documented and reported to appropriate personnel as required
2. Prepare for mounting work	2.1 Tools and equipment are selected and checked for serviceability 2.2 Work area is cleaned and laid out according to job and team requirements 2.3 Hazards associated with the work are identified and risks are managed according to safety requirements
3. Mount tyre and wheel assembly to vehicle	3.1 Mounting surfaces and threaded components are cleaned, checked for damage, and treated as required 3.2 Tyre and wheel assemblies are selected from stock according to markings and checked against criteria for event 3.3 Tyre and wheel assemblies are inspected for serviceability according to manufacturer and team procedures 3.4 Selected tyres and wheels are mounted to vehicle according to manufacturer specifications and procedures and safety requirements 3.5 Fasteners are tensioned according to component supplier specifications, and fastener locking device is engaged as required according to safety requirements 3.6 Accurate and complete fitting is checked during and after installation according to manufacturer and team procedures 3.7 Problems with tyre and wheel assemblies are reported to appropriate personnel
4. Conduct pre-race tyre and wheel preparation	4.1 Recommended cold tyre inflation pressures and optimum operating pressure requirements are sourced and interpreted 4.2 Tyre inflation pressures are set to specifications according to manufacturer specifications, team procedures and safety requirements 4.3 Base line tyre temperature and ambient and traction surface temperatures are measured and documented

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	4.4 Tyres are buffed, if specified, according to manufacturer specifications, team procedures and <i>environmental requirements</i> 4.5 Tyre warmers are fitted and turned on, if specified and allowed, according to manufacturer and team procedures
5. Conduct post-race tyre and wheel maintenance	5.1 Tyre pressures and temperatures are checked, tyre contact surface is analysed for handling and wear indications, and data is recorded according to team procedures 5.2 Driver or rider is questioned for assessment of vehicle handling characteristics and data is recorded according to team procedures 5.3 Additional data is sourced as required, and corresponding changes to tyres and wheels required for next race are determined 5.4 Tyres are changed to different compound or pattern as required and according to manufacturer specifications and team procedures 5.5 Removed tyres are tagged or marked for data audit trail according to team procedures
6. Complete work processes	6.1 Tyres are packed and stored according to team procedures 6.2 Tyre and wheel stock inventory is assessed, documented and reported to appropriate personnel 6.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 6.4 Tools and equipment are checked and stored according to workplace procedures 6.5 Workplace documentation is processed according to workplace and team procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret team instructions, manufacturer specifications, event category rules and supplementary regulations

Skills	Description
	<ul style="list-style-type: none"> interpret scrutineer, category official and team markings.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when recording tyre selections tag and mark tyres for data audit trail complete tyre and wheel stock inventory.
Numeracy skills to:	<ul style="list-style-type: none"> interpret numerical information when selecting tyres, wheels and rims understand units of temperature and pressure interpret tyre codes.
Planning and organising skills to:	<ul style="list-style-type: none"> ensure that tools, equipment, tyres and wheels are available to reduce the amount of track time lost.
Technology skills to:	<ul style="list-style-type: none"> use specialised tyre handling and mounting equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Specifications</i> must include:	<ul style="list-style-type: none"> design quality materials equipment quantities.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> manually handling tyres and wheels selecting and using personal protective equipment (PPE).
<i>Markings</i> must include those of:	<ul style="list-style-type: none"> scrutineer or category official team.
<i>Environmental requirements</i> must include:	<ul style="list-style-type: none"> procedures for trapping, storing and disposing of contaminants released during pre-race preparation and post-race maintenance of tyres and wheels.

Assessment Requirements for AURMTJ001 Select and prepare motor sport competition vehicle tyres and wheels

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- select, prepare and fit tyres and wheels to two different motor sport competition vehicles in differing conditions, including:
 - vehicle type
 - track surface
 - weather conditions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to selecting and preparing motor sport tyres and wheels, including procedures for:
 - manually handling tyres and wheels
 - selecting and using personal protective equipment (PPE)
- environmental requirements, including procedures for trapping, storing and disposing of contaminants released during pre-race preparation and post-race maintenance of tyres and wheels
- key requirements of controlling body rules, category rules and supplementary regulations relating to selecting and preparing tyres and wheels for motor sport applications
- types, function, application and limitations of wheels and tyres, including:
 - handling characteristics
 - supplier tyre markings
- procedures for selecting tyres and wheels for motor sport applications, including tyre and wheel considerations for:

- vehicle type
- track surface
- weather conditions
- mounting procedures of wheel assemblies to vehicles, including:
 - tyre and wheel serviceability inspection techniques
 - mounting sequences and techniques
 - types of fasteners and locking devices
- pre-race tyre and wheel preparation procedures, including:
 - procedures for checking tyre, track and ambient temperatures
 - cold and operating or hot pressures of tyres
 - buffing procedures for tyres
 - warming procedures for tyres
- post-race tyre analysis procedures, including:
 - tyre contact surface wear analysis
 - driver or rider questioning techniques
 - tyre contact surface cleaning procedures
 - tyre measurement, including stagger calculations
- tyre storage procedures, including tyre and wheel stock inventory documentation methods.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the tyres and wheels they have selected and prepared for motor sport competition vehicles, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace or simulated workplace
- two different motor sport competition vehicles
- motor sport tyres and wheels for differing conditions

- tools and equipment for mounting and demounting tyres and wheels from motor sport vehicles
- equipment appropriate for measuring tyre pressure and temperature, and track and ambient temperatures.

AURMTQ001 Analyse and repair faults in performance driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and repair performance transmissions, final drive and drivelines, including engine to transmission drive couplings. It involves identifying, evaluating, selecting, justifying, documenting and carrying out the most appropriate rectification method or variation. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of analysis and evaluation is determined from workplace instructions 1.2 Specifications for driveline system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed from direct and/or indirect evidence, and are documented 1.4 Hazards associated with the work are identified and risks are managed according to <i>safety and environmental requirements</i>
2. Prepare for analysis and repairs	2.1 Evaluative criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> are developed or identified from technical information 2.3 Possible causes of faults, including intermittent faults, are identified from analysis of technical support information and available on-board diagnostic systems 2.4 Diagnostic options are analysed and those most appropriate to the circumstances are selected 2.5 Test equipment is selected and prepared according to manufacturer procedures and team requirements 2.6 Tools and materials required to support the diagnostic process are selected and checked for serviceability 2.7 Vehicle driveline system and components are prepared for the diagnostic process
3. Carry out analysis and determine repairs and performance enhancement strategies	3.1 Selected analytical and evaluative methodology is followed according to manufacturer and workplace procedures 3.2 Tests are carried out according to manufacturer and workplace procedures and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against the evaluative criteria 3.5 Valid conclusions are drawn from the available evidence and documented to workplace requirements 3.6 Options for responding to the analysis and evaluation objective are determined from further research of technical support information 3.7 Repair or modification method is selected from an analysis of the options, operating conditions, controlling body rules, category

Assessment Requirements for AURMTQ001 Analyse and repair faults in performance driveline systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out the analysis, repair and post-repair checks on two different competition vehicles with performance driveline system faults, including:
 - gear selection
 - noise
 - vibration
 - harsh engagement
 - slipping.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and repairing faults in performance driveline systems, including procedures for:
 - working with hot oils
 - working with rotating driveline components
- environmental requirements, including procedures for trapping, storing and disposing of oils released from driveline components
- types, function, operation and limitations of performance transmission, final drive and driveline components, including:
 - manual transmissions
 - automatic transmissions
 - drive shafts

- final drives
- drive axles
- diagnostic testing procedures of performance driveline systems, including:
 - noise and vibration analysis
 - road testing procedures
 - scan tool and data logger
- procedures for the repair and improvement of performance driveline systems, including:
 - driveline component dismantling, cleaning, repair and reassembly procedures
 - driveline component replacement and adjustment procedures
- post-repair testing procedures of performance driveline systems, including gear selection.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the performance driveline systems that they have analysed and repaired, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- manufacturer specifications for vehicle performance driveline systems
- two different competition vehicles with faults in their performance driveline systems
- diagnostic equipment for performance driveline systems
- tools, equipment and materials appropriate for analysing and repairing performance driveline systems.

AURMTS001 Construct hose and pipe assemblies for competition vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to construct hose and pipe assemblies for competition vehicles. It involves preparing for the task, selecting the correct assembly procedure, carrying out the assembly, performing post-assembly testing, and completing workplace processes and documentation. It includes calculating material requirements, selecting components, and constructing hose and pipe assemblies.

It applies to those working in the motor sport industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Motor Sport

Unit Sector

Technical - Fabrication

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for work	1.1 Job requirements are determined from <i>competition information</i> 1.2 Materials and consumables are selected and checked according to application and procedures to minimise waste material 1.3 Tools and equipment are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Work area is cleaned and prepared according to job requirements
2. Construct hose and pipe assemblies	2.1 Hose and pipe length is measured and material requirements are calculated 2.2 Hose and pipe are cut to length according to according to team procedures and <i>safety requirements</i> 2.3 Hose and pipe are bent to conform to fitting requirements according to team procedures and safety requirements 2.4 Hose and pipe fittings are connected according to component supplier specifications and procedures and team requirements 2.5 Hose and pipe assembly is cleaned and pressure-tested according to component supplier specifications, team procedures and safety requirements
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable material is disposed of and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Surplus components and consumables are tagged and stored 3.5 Workplace documentation is processed according to team procedures

Assessment Requirements for AURMTS001 Construct hose and pipe assemblies for competition vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- construct and test the following competition vehicle hose and pipe assemblies:
 - two different hose assemblies
 - two different pipe assemblies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to constructing hose and pipe assemblies for competition vehicles, including procedures for safely use:
 - hose and pipe cutting equipment or machinery
 - equipment for joining hoses and pipes to connectors
- types of and procedures for selecting hoses, pipes and fittings, including:
 - sizing of hoses, pipes and fittings, including Army-Navy (AN) thread dash number, Society of Automotive Engineers (SAE) and National Pipe Thread (NPT)
 - swaged and reusable fittings
 - hose and pipe material and construction
 - compatibility of hose and pipe material with fuel, lubricants, coolants, chemicals and heat conditions
- construction procedures for hose and pipe assemblies, including:
 - methods for locating and determining the layout of hose and pipe assemblies
 - hose and pipe assembly measurement and cutting procedures
 - hose and pipe bending and flaring procedures

- hose and pipe assembly procedures
- protection methods for hose and pipe assemblies
- post-construction testing procedures, including hose and pipe assembly flushing and testing procedures
- storage and maintenance procedures for hose and pipe assemblies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the hose and pipe assemblies that they have constructed, e.g. work order.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- motor sport workplace or simulated workplace
- instructions detailing customer requirements
- hose and pipe material required to construct two different hose assemblies and two different pipe assemblies, including hose and pipe fittings
- hose and pipe bending equipment
- hose and pipe assembly cleaning and pressure-testing equipment
- tools and equipment for hose and pipe construction.

AURNTA001 Inspect, service and repair forklift mast assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, service and repair faults in forklift mast assemblies. It involves preparing for the task, inspecting the assembly to determine the service and repair requirements, carrying out the service and repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The forklift mast assemblies include those of agricultural machinery or forklift vehicles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical - Lifting Equipment

Unit Sector

Technical

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect,	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
service and repair forklift mast assembly	1.2 Inspect, service and repair procedures and information are sourced and interpreted 1.3 Options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Inspect forklift mast assembly	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> 2.2 Faults are identified from inspection results and causes of faults are determined 2.3 Inspection findings are reported according to workplace procedures, and include recommendations for necessary repairs or adjustments
3. Service and repair forklift mast assembly	3.1 Service and repair procedures and information are sourced and interpreted 3.2 Service and repair tools, equipment and materials are selected and prepared 3.3 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking forklift mast assembly specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify workplace instructions and determine job requirements.
Numeracy skills to:	<ul style="list-style-type: none"> measure forklift mast assembly components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications understand measuring and test equipment divisions.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as pressure gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Assessment Requirements for AURNTA001 Inspect, service and repair forklift mast assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect, service and repair one forklift mast assembly, including:
 - carriage and forks
 - lifting chain
 - hydraulic system
 - mast operating levers and valves
 - mast and crosshead.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting, servicing and repairing forklift mast assemblies, including procedures for:
 - working with hydraulic pressure
 - manually handling of mast forklift assembly components
 - supporting and securing forklift mast assembly
- environmental requirements, including procedures for trapping, storing and disposing of lubricants and fluids released from forklift mast assembly.
- operating principles of forklift mast assemblies
- identification, function and operation of the forklift mast assembly components specified in the performance evidence
- forklift mast assembly lubricant types and applications
- inspection procedures for forklift mast assemblies, including:

- component wear analysis
- system operation analysis
- service and repair procedures for forklift mast assemblies, including removing, replacing, repairing, lubricating and adjusting forklift mast assembly components
- post-repair testing procedures for forklift mast assemblies, including system performance.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the forklift mast assemblies that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer forklift mast assembly specifications
- vehicle or machinery with forklift mast assembly requiring service and repair
- test equipment for forklift mast assemblies
- tools, equipment and materials appropriate for inspecting, servicing and repairing forklift mast assemblies.

Assessment Requirements for AURNTB001 Diagnose and repair forklift hydraulic braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following types of forklift hydraulic braking systems:
 - drum brake system
 - dry disc brake system
 - wet multi-plate disc brake system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing forklift braking systems, including procedures for working with:
 - working with brake dust and hydraulic oil hazards
 - using lifting, jacking and supporting equipment
- environmental requirements, including procedures for trapping, storing and disposing of hydraulic fluids and brake dust released from braking systems
- operating principles of forklift hydraulic braking systems and associated components, including:
 - levers
 - friction
 - hydraulics, including the relationship between force, pressure and area
- application, purpose and operation of forklift hydraulic braking systems and components, including:

- power assisted systems, including:
 - drum brake systems
 - dry disc brake systems
 - wet multi-plate disc systems
 - parking brake systems
 - master cylinders
 - braking system valves and switches
 - brake boosting systems
- full hydraulic systems, including:
 - wet multi-plate disc systems
 - parking brake systems
 - braking system valves and switches
 - oil pump and cooler
- diagnostic testing procedures for forklift hydraulic braking systems, including:
 - brake pedal checks
 - brake booster operational tests
 - master cylinder operational tests
 - brake or hydraulic fluid tests
 - parking brake operational tests
 - drum, dry disc and wet multi-plate disc brake operational tests
 - brake drum, shoe, disc and pad measurement and evaluation
- repair procedures for forklift hydraulic braking systems, including procedures for removing, repairing, replacing and adjusting:
 - hydraulic system components
 - braking system components
- post-repair testing procedures for forklift braking systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the forklift hydraulic braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer forklift hydraulic braking system specifications
- operational forklifts with faults in two different braking systems
- diagnostic equipment for forklift hydraulic braking systems
- tools, equipment and materials appropriate for repairing and adjusting forklift hydraulic braking systems.

Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three of the following forklift hydrostatic steering system components:
 - king pin assembly
 - steering control unit
 - hydraulic valves
 - pump
 - steering column
 - hydraulic cylinders.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing forklift hydrostatic steering systems, including procedures for:
 - working with high pressure fluid hazards
 - using lifting, jacking and supporting equipment
- environmental requirements, including procedures for trapping, storing and disposing of hydraulic fluids released from hydrostatic steering systems
- operating principles of forklift hydrostatic steering systems and associated components, including full hydraulic steering
- application, purpose and operation of the following forklift hydrostatic steering systems and components, including:

- king pin assembly
- steering control unit
- hydraulic valves
- pump
- steering column
- hydraulic cylinders
- diagnostic testing procedures for forklift hydrostatic steering systems, including:
 - pressure and flow testing the system and individual components
 - system operation analysis
 - component wear analysis
- repair procedures for forklift hydrostatic steering systems, including procedures for removing, replacing and adjusting the systems
- post-repair testing procedures for forklift hydrostatic steering systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

AURPTA001 Carry out pre-repair operations to outdoor power equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare and clean outdoor power equipment prior to repair or storage. It involves preparing for the task, cleaning and tagging equipment for repair or storage, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment service and repair industry. The equipment includes lawn mowers, chainsaws, pumps, post hole borers, portable generators, stationary engines, brush cutters, leaf blowers or other outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Outdoor Power Equipment

Unit Sector

 - leaf blower.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out pre-repair operations, including procedures for:
 - operating cleaning equipment
 - using hazardous chemicals
 - selecting and using personal protective equipment (PPE), including safety glasses, gloves and protective clothing
- environmental requirements, including procedures for trapping, storing and disposing of cleaning agents and residue released during the cleaning process.
- identification and operation of cleaning equipment, including:

- steam cleaning
- high pressure washing
- manual washing
- sand or bead blasting
- cleaning procedures, techniques and materials appropriate to the job requirement
- types and application of cleaning agents
- tagging and storage procedures for cleaned outdoor power equipment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the outdoor power equipment that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- outdoor power equipment repair workplace or simulated workplace
- workplace instructions
- manufacturer cleaning agent specifications
- area and equipment, including PPE, for safe cleaning of equipment
- three different pieces of outdoor power equipment for pre-repair operations as specified in the performance evidence
- tools, equipment and materials appropriate for carrying out pre-repair operations on outdoor power equipment.

AURPTA002 Carry out minor adjustments to outdoor power equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out minor adjustments to outdoor power equipment. It involves preparing for the task, inspecting and carrying out minor adjustments, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment service and repair industry. The equipment includes lawn mowers, chainsaws, pumps, post hole borers, portable generators, stationary engines, brush cutters, leaf blowers or other outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Outdoor Power Equipment

Unit Sector

Technical

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and adjust outdoor power equipment	1.1 Job requirements are determined from workplace instructions 1.2 Inspection and adjustment procedures and information are sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment are selected and checked for serviceability
2. Inspect outdoor power equipment	2.1 Outdoor power equipment is inspected according to manufacturer specifications, workplace procedures, and safety requirements 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments 2.4 Authorisation to proceed is obtained according to workplace procedures
3. Carry out minor adjustments	3.1 Adjusting tools and equipment are selected according to manufacturer specifications and workplace procedures 3.2 Minor adjustments are carried out on outdoor power equipment according to manufacturer specifications, workplace procedures, and safety requirements, and without causing damage to components or systems 3.3 Post-adjustment testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and equipment is presented ready for use, including protective guards, cowlings and safety features 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking minor adjustment specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection finding to appropriate personnel.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, when adjusting equipment to manufacturer specifications interpret gauges and test equipment.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> operate adjusting tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> selecting and using personal protective equipment (PPE), including protective clothing, and hearing and eye protection safely operating equipment to be adjusted.
<i>Post-adjustment testing</i> must include:	<ul style="list-style-type: none"> operating outdoor power equipment through full range and comparing results with manufacturer specifications making adjustments as required and re-testing.

Assessment Requirements for AURPTA002 Carry out minor adjustments to outdoor power equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out minor adjustments to two of the following pieces of outdoor power equipment:
 - lawn mower
 - chainsaw
 - line trimmer
 - mulcher
 - pump
 - post hole borer
 - portable generator
 - stationary engine
 - brush cutter
 - leaf blower.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out minor adjustments to outdoor power equipment, including:
 - selecting and using personal protective equipment (PPE), including protective clothing, and hearing and eye protection
 - safely operating equipment to be adjusted
- identification and basic operation of the outdoor power equipment specified in the performance evidence

- inspection and adjustment procedures for outdoor power equipment, including engine high and low speed adjustments
- post-adjustment testing procedures for outdoor power equipment, including operating equipment through full operating range.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the outdoor power equipment that they have adjusted, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- outdoor power equipment repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for outdoor power equipment
- area and equipment, including PPE, for minor adjustment of equipment
- outdoor power equipment specified in the performance evidence requiring minor adjustments
- tools, equipment and materials appropriate for carrying out minor adjustments to outdoor power equipment.

Assessment Requirements for AURPTA004 Service and repair drum cutting systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- service and repair two different drum cutting systems, including:
 - two of the following:
 - push type single reel
 - motorised single reel
 - gang (multi-reel)
 - all of the following:
 - cutting blades and attachments
 - blade mounting
 - drive system
 - wheels.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing and repairing drum cutting systems, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - working with electrical systems
 - working with drum cutting system
 - checking protective guards, cowlings and safety features
- environmental requirements, including procedures for trapping, storing and disposing of lubricating oils released from drum cutting systems

- application, purpose and operation of drum cutting systems, including push type, electric and internal combustion powered systems, including:
 - reel mowers
 - gang (multi-reel) mowers
- types of lubricants, and their application and methods of lubrication
- service and repair procedures for drum cutting systems, including:
 - grinding, adjusting and aligning cutting blades
 - aligning cutter housing
 - adjusting cutting blade mounting and attachments
 - analysing wear of drive system
- post-repair testing procedures for drum cutting systems, including operating system through full operating range.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the drum cutting systems that they have serviced and repaired, e.g. repair orders.

Assessment Requirements for AURPTA005 Service and repair chainsaw cutting systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- service and repair three different chainsaw cutting systems, including:
- two service and repair jobs that involve sharpening saw chains
- one service and repair job that includes fabricating and replacing a saw chain, and refurbishing or replacing a guide bar.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing and repairing chainsaw cutting systems, including procedures for:
 - starting and checking operation of chainsaw cutting system
 - adjusting and aligning chainsaw cutting system components
 - operating chain brake
 - selecting and using personal protective equipment (PPE)
 - handling and operating chainsaw, including chain brake
- environmental requirements, including procedures for trapping, storing and disposing of lubricating oils released from chainsaw cutting systems
- application, purpose and operation of chainsaw cutting systems, including:
 - saw chain types and mounting bar
 - drive system and sprocket
 - chain brake and overload devices
 - protective guards and cowlings
 - manual and automatic lubrication systems

- chain adjusting systems
- clutch drum assembly
- service and repair procedures for chainsaw cutting systems, including:
 - chain and mounting bar
 - drive system and sprocket
 - chain brake and overload devices
 - protective guards and cowlings
 - manual and automatic lubrication systems
 - chain adjusting systems
 - clutch drum assembly
- types of lubricants, and their application and methods of lubrication
- post-repair testing procedures for chainsaw cutting systems, including operating system through full operating range.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the chainsaw cutting systems that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- outdoor power equipment repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for chainsaw cutting systems
- area and equipment, including PPE, required to safely test chainsaw cutting systems
- three different chainsaw cutting systems requiring service and repair
- tools, equipment and materials appropriate for inspecting, servicing and repairing chainsaw cutting systems, including:
 - sharpening equipment
 - saw chain

- equipment stands and vices
- grinders
- chain breaking and riveting equipment.

AURPTA006 Inspect and service line trimming systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service line trimming systems and components according to manufacturer instructions. It involves preparing for the task, inspecting the system and components, reporting the inspection findings, servicing and adjusting the system and components, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment service and repair industry. The line trimming systems include brush cutters and grass trimmers which may be electric or petrol driven, stand-alone or fitted to other equipment systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Outdoor Power Equipment

Unit Sector

Outdoor Power Equipment

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service line trimming system of outdoor power equipment	1.1 Job requirements are determined from workplace instructions 1.2 Manufacturer <i>inspection and servicing procedures</i> and information are sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect line trimming system	2.1 <i>Line trimming system</i> is inspected and tested according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments 2.4 Authorisation to proceed is obtained according to workplace procedures
3. Service line trimming system	3.1 Service options are selected according to manufacturer maintenance schedule and lubrication charts 3.2 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.3 <i>Post-service testing</i> is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and equipment is presented ready for use, including protective guards, cowlings and safety features 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service specifications and procedures relating to outdoor power equipment line trimming systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure line trimming system components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Inspection and servicing procedures</i> must include:	<ul style="list-style-type: none"> inspecting components making adjustments identifying lubrication requirements testing serviced unit.
<i>Line trimming system</i> must include:	<ul style="list-style-type: none"> auto line feed systems manual line feed systems brush cutters and grass trimmers bent and straight shafts.
<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> starting and operating line trimming equipment adjusting and aligning line trimming systems

	<ul style="list-style-type: none">• using personal protective equipment (PPE) relevant to operating line trimmers.
<i>Post-service testing</i> must include:	<ul style="list-style-type: none">• operating line trimming system• comparing line trimming operation to manufacturer specifications• making system adjustments as required• re-testing system.

Assessment Requirements for AURPTA006 Inspect and service line trimming systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following line trimming systems:
 - auto line feed system
 - manual line feed system
 - bent and straight shaft systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing line trimming systems and components, including procedures for:
 - starting and operating line trimming equipment
 - adjusting and aligning line trimming systems
 - using personal protective equipment (PPE) relevant to operating line trimmers
- application, purpose and operation of line trimming systems , including:
 - overload protection
 - line sizes and types
 - auto and manual line feed systems
 - metal and composite blades
 - handles and harnesses
 - brush cutter angle drives
 - bent and straight shafts

- protective guards and cowlings
- stand-alone or fitted to other equipment systems
- types and application of lubricants, and lubricating methods
- inspection procedures for line trimming systems and components, including:
 - analysing component wear
 - checking bearings and housing condition
 - checking automatic and manual line feed systems
 - checking physical damage to protective guards and cowlings
- service and adjustment procedures for line trimming systems and components, including:
 - lubricating bent and straight shaft drive systems
 - testing automatic and manual line feed systems
 - testing overload devices
- post-repair testing procedures for line trimming systems and components, including operating line trimming system through full operating range.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the line trimming systems and components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- outdoor power equipment repair workplace or simulated workplace
- workplace instructions
- manufacturer line trimming specifications
- outdoor power equipment line trimming system and components specified in the performance evidence and requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing line trimming systems and components.

AURPTA007 Service and repair post boring systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service and repair faults in the post boring systems of outdoor power equipment according to manufacturer specifications. It involves preparing for the task, determining the service and repair requirements, carrying out the service and repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment service and repair industry. The post boring systems may be stand-alone or chainsaw attached, and can be petrol powered or electric powered.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Outdoor Power Equipment

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to service and repair post boring system	1.1 Job requirements are determined from workplace instructions 1.2 <i>Service and repair procedures</i> and information are sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Determine service and repair requirements of post boring system	2.1 System is inspected and tested according to manufacturer specifications, workplace procedures, and <i>safety requirements</i> 2.2 Faults are identified from inspection and causes of faults are determined 2.3 Inspection findings and test results are reported according to workplace procedures, and include recommendations for necessary service, repair or adjustment 2.4 Authorisation to proceed with service and repair is obtained according to workplace procedures
3. Carry out service and repair activities	3.1 Service and repair options are analysed and those most appropriate to the circumstances are selected 3.2 Tools, equipment and materials are selected and checked 3.3 Components are removed and inspected for serviceability according to manufacturer specifications, workplace procedures, and safety requirements 3.4 Reusable, repaired and replacement components are fitted and adjusted according to manufacturer specifications and workplace procedures
4. Check post boring system for normal operation	4.1 System is operated and compared to manufacturer specifications according to workplace procedures and safety requirements 4.2 Adjustments are made as required and post boring system is re-tested
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and equipment is presented ready for use, including protective guards, cowlings and safety features 5.2 Work area is cleaned, waste and non-recyclable material are disposed of and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURPTA009 Service and repair reciprocating cutting systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- service and repair three different reciprocating cutting systems, including the following:
 - double and single sided powered hedge trimmers
 - mechanical tree loppers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health requirements relating to servicing and repairing reciprocating cutting systems, including:
 - selecting and using personal protective equipment (PPE)
 - starting and checking operation, adjustment and alignment of reciprocating cutting system
 - operating overload system
 - working with 240 volt equipment
- application, purpose and operation of reciprocating cutting systems, including:
 - double and single sided powered hedge trimmers
 - mechanical tree loppers
 - power shears
- types of lubricants, and their application and methods of lubrication
- service and repair procedures for reciprocating cutting systems, including:
 - drive system gearbox
 - overload devices

- protective guards and cowlings
- handle assembly
- anti-vibration system
- cleaning, sharpening and adjusting blades
- procedures for using sharpening equipment for reciprocating cutting tools
- post-repair testing procedures for reciprocating cutting systems, including operating system through full operating range.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the reciprocating cutting systems that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- outdoor power equipment repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for reciprocating cutting systems
- area and equipment, including PPE, required to safely test reciprocating cutting systems
- three different reciprocating cutting systems requiring service and repair
- tools, equipment and materials appropriate for inspecting, servicing and repairing reciprocating cutting systems, including reciprocating cutting blade sharpening equipment.

AURPTA010 Inspect and service pumping systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service pumping systems according to manufacturer instructions. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment service and repair industry. The pumping systems include centrifugal pumps used for firefighting, irrigation and water transfer, high pressure piston pumps used for pressure cleaners, or diaphragm pumps used in orchard spraying.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Outdoor Power Equipment

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service pumping system of outdoor power equipment	1.1 Job requirements are determined from workplace instructions 1.2 Manufacturer inspection and <i>servicing procedures</i> and information are sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect pumping system	2.1 <i>Pumping system</i> is inspected and tested according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments 2.4 Authorisation to proceed is obtained according to workplace procedures
3. Service pumping system	3.1 Service options are selected according to manufacturer maintenance schedule and lubrication charts 3.2 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.3 <i>Post-service testing</i> is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and equipment is presented ready for use, including protective guards, cowlings and safety features 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking service specifications and procedures relating to outdoor power equipment pumping systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> interpret pressure and flow volumes and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate tolerances and deviations from manufacturer specifications.
Problem solving skills to:	<ul style="list-style-type: none"> refer problems outside area of responsibility to appropriate personnel.
Technology skills to:	<ul style="list-style-type: none"> use test equipment, such as vacuum and pressure gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Servicing procedures</i> must include:	<ul style="list-style-type: none"> inspecting seals, filters and components testing unit for pressure, suction and discharge replacing service items inspecting hoses, fittings and mountings.
<i>Pumping systems</i> must include:	<ul style="list-style-type: none"> centrifugal pumps high pressure piston pumps diaphragm pumps.
<i>Safety requirements</i> must	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety

include:	(OHS) requirements, including procedures for: <ul style="list-style-type: none"> • safely starting and operating pumping systems • working with exhaust fume hazards • working with 240 volt equipment.
<i>Post-service testing</i> must include:	<ul style="list-style-type: none"> • running pumping system to operating conditions • checking pumping system for pressure and flow • adjusting system • re-testing pumping system.

Assessment Requirements for AURPTA010 Inspect and service pumping systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following three outdoor power equipment pumping systems:
 - centrifugal pumping system
 - high pressure piston pumping system
 - diaphragm pumping system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing pumping systems, including procedures for:
 - safely starting and operating pumping systems
 - working with exhaust fume hazards
 - working with 240 volt equipment
- identification and function of positive and non-positive displacement pumping systems
- application and purpose of pumping systems, including:
 - centrifugal pumps as used for firefighting, irrigation and water transfer
 - high pressure piston pumps as used in pressure cleaners
 - diaphragm pumps as used in orchard spraying
 - drive systems
- types of lubricants and fluids, and their application
- inspection procedures for pumping systems, including:
 - component wear analysis

- system operation analysis
- service and adjustment procedures for pumping systems, including:
 - filters and strainers
 - hose and pipe fittings and attachments
 - overload devices
 - protective guards and cowlings
 - handle assembly
 - lubrication systems
 - mounting brackets and frame
 - test procedures and pump performance
 - drive systems
- post-service testing procedures for outdoor power equipment pumping systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the pumping systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- outdoor power equipment repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for pumping systems
- three pumping systems specified in the performance evidence and requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing pumping systems.

AURPTA011 Diagnose and repair pumping systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the pumping systems of outdoor power equipment according to manufacturer specifications. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The pumping systems are those of outdoor power equipment and include:

- centrifugal pumps used for firefighting, irrigation and water transfer
- diaphragm pumps used in orchard spraying
- high pressure piston pumps used for pressure cleaners

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Outdoor Power Equipment

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the following three pumping systems:
 - one centrifugal pumping system
 - one high pressure piston pumping system
 - one diaphragm pumping system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing pumping systems, including procedures for:
 - starting and operating pumping systems
 - working with exhaust fume hazards
 - working with 240 volt equipment
- operating principles of positive and non-positive displacement pumping systems and associated components
- application, purpose and operation of the following pumping systems and components, including:
 - centrifugal pumps used for firefighting, irrigation and water transfer
 - high pressure piston pumps used in pressure cleaners
 - diaphragm pumps used in orchard spraying
- types of lubricants, and associated application and methods of lubrication
- diagnostic testing procedures for pumping systems, including:
 - testing system for pressure, suction and discharge

- isolating faults, including internal and external leakage
- repair procedures for pumping systems, including:
 - dismantling, inspecting and evaluating, replacing and adjusting the following pumping system components:
 - filters and strainers
 - hose and pipe fittings and attachments
 - overload devices
 - protective guards and cowlings
 - handle assembly
 - lubrication systems
 - drive systems
 - mounting brackets and frame
 - assembling pumping system and completing operational tests
- post-repair testing procedures for pumping systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the pumping systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for pumping systems
- area for safely testing pumping systems
- pressure gauge
- three pumping systems specified in the performance evidence with faults
- tools, equipment and materials appropriate for diagnosing and repairing pumping systems.

AURPTE002 Inspect and service outdoor power equipment engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service engines according to manufacturer instructions. It involves preparing for the task, inspecting the engine, reporting the inspection findings, servicing and adjusting the engine, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment service and repair industry. This unit does not apply to light and heavy vehicle engines. The engines include those of two-stroke and four-stroke spark ignition, or four-stroke compression ignition engines of outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Outdoor Power Equipment

Unit Sector

Technical - Engines

Elements and Performance Criteria

Assessment Requirements for AURPTE002 Inspect and service outdoor power equipment engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following outdoor power equipment engine types:
 - two-stroke spark ignition engine
 - four-stroke spark ignition engine
 - four-stroke compression ignition engine
- the above work must involve:
 - minor engine adjustments
 - replacing oil and oil filter
 - inspecting ancillary components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing outdoor power equipment engines, including procedures for working with:
 - rotating and hot components
 - engine oils
 - high energy ignition and charging systems
- environmental requirements, including procedures for trapping, storing and disposing of lubricant and fluids released from outdoor power equipment engines
- identification and function of two-stroke and four-stroke major engine components, including:
 - cylinder block and head

- piston and connecting rod
- crankshaft
- valve train
- manifolds
- ports and reed valves
- carburettors and fuel injectors
- identification and function of outdoor power equipment engine systems, including:
 - lubrication
 - cooling system, including:
 - air cooled
 - liquid cooled
 - fuel system
- basic operation of spark ignition engines and compression ignition engines, including:
 - two-stroke spark ignition engines
 - four-stroke spark ignition engines
 - four-stroke compression ignition engines
- types and applications of:
 - engine configurations
 - engine oils and filters
- inspection procedures for engines, including:
 - oil and fluid leaks
 - ancillary components, including:
 - mountings
 - belts and pulleys
- service and adjustment procedures for engines, including:
 - minor adjustments
 - changing oil and filter
- post-service testing procedures for outdoor power equipment engines, including operating engine through full operating range.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the equipment or outdoor power equipment engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- outdoor power equipment repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- three different outdoor power equipment engines specified in the performance evidence and requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing outdoor power equipment engines.

Assessment Requirements for AURPTE003 Diagnose and repair outdoor power equipment engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different outdoor power equipment engines, including in two of the following engine types:
 - two-stroke spark ignition engine
 - four-stroke spark ignition engine
 - four-stroke compression ignition engine
- in working on the above engines, removing, refitting or replacing the:
 - cylinder head
 - camshaft
 - piston and connecting rod
 - crankshaft.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing outdoor power equipment engines, including procedures for working with rotating and hot components
- environmental requirements, including procedures for trapping, storing and disposing of lubricants and fluids released from outdoor power equipment engines
- operating principles of the outdoor power equipment engines and associated components, including:
 - two and four-stroke spark ignition engines and four-stroke compression ignition engines, including:

- combustion cycle
- swept volume and engine volume
- compression ratio
- valve timing
- engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency
- torque and horsepower, including brake horsepower
- engine measurement and performance, including:
 - swept volume and engine volume
 - compression ratio
 - valve timing
 - engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency
- types of lubricants, and associated application and methods of lubrication
- application, purpose and operation of outdoor power equipment engines and components, including:
 - lubrication system, cylinder blocks, cylinders, pistons, cylinder heads, combustion chambers, inlet and exhaust manifolds, connecting rods, crankshafts, pistons, piston rings, gudgeon pins, camshafts, timing gears, vibration dampers and flywheels
- diagnostic testing procedures for outdoor power equipment engines, including:
 - engine compression tests
 - vacuum tests
 - checking for sources of fluid leak
 - checking abnormal engine noises
- dismantling procedures for outdoor power equipment engines, including procedures for :
 - measuring clearances and tolerances
 - inspecting components
- repair procedures for outdoor power equipment engines, including procedures for removing and replacing the:
 - cylinder head
 - piston and connecting rod
 - crankshaft
 - camshaft
- assembly procedures for outdoor power equipment engines, including adjusting components
- post-repair testing procedures for outdoor power equipment engines, including idle and governor adjustments.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the outdoor power equipment engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer outdoor power equipment engine specifications
- different types of outdoor power equipment engines specified in the performance evidence
- diagnostic equipment for outdoor power equipment engines
- tools, equipment and materials appropriate for diagnosing and repairing outdoor power equipment engines.

AURPTE004 Overhaul outdoor power equipment engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return outdoor power equipment engines to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the engine, carrying out the overhaul procedures, reassembling and testing the engine, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment and the engines may be two and four stroke spark ignition and four stroke compression ignition engines. The unit does not apply to light or heavy vehicle engines. This unit does not apply to light or heavy vehicle engines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Outdoor Power Equipment

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle outdoor power equipment engine	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted 1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate engine and components	2.1 Engine and relevant components are dismantled in a logical sequence according to manufacturer and workplace procedures, and <i>safety and environmental requirements</i> , and without causing unnecessary damage to components or systems 2.2 Components are cleaned ready for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced 2.6 Authorisation to proceed is obtained according to workplace procedures
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble engine and components	4.1 Engine is assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of engine is completed within workplace timeframes

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly process are rectified
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and engine is presented ready for use or storage, including protective guards, cowlings and safety features 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate engine overhaul procedures and specifications use websites to download owner manuals, workshop literature and service bulletins.
Reading skills to:	<ul style="list-style-type: none"> interpret and assess information from manufacturer and workshop literature when seeking engine specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure engine components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and

Skills	Description
	deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use precision measuring equipment, such as micrometers and dial bore gauges use specialised engine overhaul equipment, such as: <ul style="list-style-type: none"> hones valve and valve seat cutting equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> operating specialised engine overhaul tools, equipment and machinery using cleaning chemicals and toxic substances environmental requirements, including procedures for trapping, storing and disposing of lubricants and fluids released from engines.

Assessment Requirements for AURPTE004 Overhaul outdoor power equipment engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul two different outdoor power equipment engines as follows:
 - one four-stroke spark ignition engine
 - one of the following:
 - two-stroke spark ignition engine
 - four-stroke compression ignition engine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling engines and associated engine components, including procedures for:
 - operating specialised engine overhaul tools, equipment and machinery
 - using cleaning chemicals and toxic substances
- environmental requirements, including procedures for trapping, storing and disposing of lubricants and fluids released from engines
- types, characteristics and operating principles of outdoor power equipment engines and associated engine components
- outdoor power equipment engine overhaul procedures, including:
 - methods for cleaning and preparing an engine for overhaul
 - engine dismantling procedures
 - engine component inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances

- engine and engine component repair and adjustment procedures, including:
 - engine cylinder head and cylinder block
 - engine crankshaft and camshaft
 - engine cylinder and engine sleeve fitting, boring and honing
 - engine bearing tunnel and connecting rod repair
- engine assembly and adjustment procedures for achieving component tolerances, including:
 - piston to connecting rod big-end alignment
 - big-end bearing to crankshaft journal clearance
 - big-end bearing crush with bearing blue
 - piston ring end gap, back clearance and side clearance
 - main bearing to crankshaft journal clearance
 - cylinder head, valves, guides and seats
 - camshafts and cam followers
 - camshaft end float
 - crankshaft end float
 - gear backlash
 - governors
 - oil pump sealing and pick-up oil piping
- component assembly procedures and processes, including:
 - welsh plugs and oil gallery plugs
 - piston and connecting rod assemblies
 - big-end bearings
 - piston rings to pistons
 - main bearings and thrust washers
 - crankshafts, including protection measures for crankshaft journals, bearings, rings and bores
 - finished camshaft bearings
 - cylinder head and components
 - camshafts and cam followers
 - timing gears
 - oil pumps, oil squirters, oil splashes, and oil pump pick-ups
 - governors
 - balance shafts
 - fitting ancillary components, including covers and cowlings, seals, housings, crankshaft pulleys and flywheels
- post-overhaul testing procedures for engines, including:
 - fuel system adjustments
 - governor speed adjustments
 - engine protection devices.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the outdoor power equipment engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- manufacturer outdoor power equipment engine specifications
- two different outdoor power equipment engines requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting outdoor power equipment engines.

AURPTR001 Test and service 240 volt portable generators

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to test and service 240 volt portable generators according to manufacturer specifications. It involves preparing for the task, testing and servicing the equipment, performing post-service testing, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment service and repair industry. The portable generators may be driven by petrol or diesel engines. Testing and servicing relates only to the 240 volt generator, and not the engine driving the generator.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Outdoor Power Equipment

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

AURPTR003 Service and repair outdoor power equipment engine management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service and repair outdoor power equipment engine management systems (EMS) according to manufacturer specifications. It involves preparing for the task, determining the service and repair requirements, carrying out the service and repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the outdoor power equipment service and repair industry. The EMS include electronic fuel injection and emission systems in hand-held or wheeled equipment. EMS may include those of two- and four-stroke spark ignition engines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Outdoor Power Equipment

Unit Sector

Technical- Electrical and Electronic

Elements and Performance Criteria

Assessment Requirements for AURPTR003 Service and repair outdoor power equipment engine management systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- use diagnostic tools to perform checks on two different outdoor power equipment engine management systems (EMS), in which the work must involve validating error codes and downloading EMS software
- service and repair the above two outdoor power equipment EMS, in which the work must involve the following components:
 - fuel injection pump
 - fuel injector or carburettor
 - spark plug
 - ignition coil pack
 - generator or compensator
 - electronic control unit
 - sensors, including:
 - crankshaft angle
 - engine speed sensor
 - crankcase temperature and pressure sensor
 - emission control systems
- on two occasions carry out EMS diagnosis, calibration and adjustment using relevant manufacturer engine diagnosis device.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing and repairing engine management systems, including procedures for:
 - selecting and using personal protective equipment (PPE)
 - working with electrical systems
 - operating engines safely
- environmental requirements, including procedures for trapping, storing and disposing of fuel released from the EMS
- operating principles of outdoor power equipment EMS, including:
 - air fuel ratios and chemistry of combustion
 - composition of petrol fuel, including octane rating
 - open and closed loop injection
 - engine emissions
- application, purpose and operation of EMS components, including:
 - fuel system components:
 - fuel injection pump
 - fuel injector
 - tank, cap and lines
 - electronic control system components:
 - electronic control unit
 - throttle position sensor
 - generator
 - crankshaft angle and engine speed
 - crankcase air temperature and pressure sensor
 - manifold absolute pressure (MAP) sensor
 - oxygen sensor
 - ignition system, including:
 - spark plug
 - high tension lead
 - coil
 - engine emission control system, including:
 - emission standards
 - engine emission design technology
 - evaporative
 - exhaust
 - crankcase
- identification, selection and operation of EMS diagnostic tools relevant to the engine brand and system type
- procedures for system data retrieval in order to determine usage of product, fuel quality values, system parameters and service history
- service and repair procedures available from EMS manufacturer manuals, including removal, replacement, calibration and adjustment procedures for EMS, including:

- fuel system
- ignition system
- electronic control system
- emission control system
- post-repair testing procedures for EMS, including:
 - operating engine system through full operating range
 - verify manufacturer specifications
 - performance benchmarking product against specifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the EMS that they have serviced and repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- outdoor power equipment repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for EMS
- area and equipment, including PPE, required to safely test EMS
- two outdoor power equipment EMS requiring service and repair
- tools, equipment and materials appropriate for servicing and repairing EMS, including:
 - industry relevant engine diagnosis devices, including computer and system software, communications adaptor and connecting cables
 - multimeter.

AURRGA001 Launch and recover vessels using a trailer

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to use a trailer to launch and recover a motor-driven vessel in an estuary or seaway. It involves preparing for the task, conducting a vessel pre-launch safety inspection, launching the vessel into the water, and recovering the vessel from the water.

It applies to those working in the marine service and repair industry. The vessels are those up to 10 metres in length with a maximum beam of 2.5 metres.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Marine

Unit Sector

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to launch vessel	1.1 Job requirements are determined from workplace instructions 1.2 Tools and equipment are selected and checked for serviceability 1.3 Weather, tides and launch site are checked for safe launch

Assessment Requirements for AURRGA001 Launch and recover vessels using a trailer

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- launch and recover two different vessels of up to 10 metres in length with a maximum beam of 2.5 metres, from different trailers.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to launching and recovering vessels using a trailer, including procedures for:
 - selecting and using personal protective equipment (PPE), including personal flotation devices
 - working safely with rope, chain and steel cables
- tare weight, gross vehicle mass and aggregate trailer mass regulations relating to trailer weights on single, dual and tri-axle trailers
- pre-launch inspection procedures, including inspection procedures for:
 - vessel safety equipment, including:
 - life jackets
 - anchors
 - bailer or fire bucket and lanyard
 - bilge pump
 - compass
 - distress flares
 - emergency position indicating radio beacon (EPIRB)
 - fire extinguisher

- map
- marine radio
- paddles and oars
- safety and capacity labels
- sound signals
- drinking water
- waterproof torch
- hulls and fittings
- trailers, including trailer winch mechanisms
- state or territory legislation, regulations, marine safety laws, standards and codes of practice relating to marine launch sites
- vessel launching and recovery procedures, including:
 - methods of determining water depth required for vessel flotation
 - type, application and operation of trailer winches
 - rope knots applicable to launching and recovering vessels
 - methods of securing vessels to trailers.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vessels that they have launched and recovered using a trailer, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- launch site at an estuary or seaway
- two different vessels as specified in the performance evidence on different trailers
- state and territory marine safety laws
- tools, equipment and materials appropriate for inspecting, launching and recovering vessels.

AURRGA003 Moor motor-driven vessels

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to moor and dock a motor-driven vessel to or from a dockside or swing mooring. It involves preparing for the task, conducting a vessel and equipment safety inspection, moving the vessel from its mooring into a safe area of water, and returning the vessel to its mooring.

It applies to those working in the marine service and repair industry. The vessels are those up to 19 metres in length.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Assessment Requirements for AURRGA003 Moor motor-driven vessels

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- moor two different motor-driven vessels of up to 19 metres in length, in which the work must involve mooring vessel to, off and away from:
 - a swing mooring
 - a dockside.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to mooring motor-driven vessels, including procedures for:
 - selecting and using personal protective equipment (PPE), including personal flotation devices
 - following state or territory legislation, regulations and marine safety laws relating to operating a vessel in an estuary or seaway, including:
 - holding a boat driver licence
 - speed restrictions
 - navigation rules
 - boat capacity
- safety inspection procedures, including inspection procedures for:
 - vessel safety equipment, including:
 - life jackets
 - anchors
 - bailer or fire bucket and lanyard

- bilge pump
- compass
- distress flares
- emergency position indicating radio beacon (EPIRB)
- fire extinguisher
- map
- marine radio
- paddles and oars
- safety and capacity labels
- sound signals
- drinking water
- waterproof torch
- hulls and fittings, including mooring fittings
- inspection procedures for mooring sites, including:
 - rope and chain condition
 - shackle condition
 - buoy condition
 - wharf or pier condition
- knot types for a variety of situations, including dock, fixed pier, jetty, wharf, concrete pontoon and plastic pontoon
- types and application of swing moorings, including single point moorings and twin moorings
- procedures for mooring a vessel, including manoeuvring techniques to position vessel according to tides and currents.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motor-driven vessels that they have moored, e.g. photographs of moored vessels.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- moorings for vessels, including a swing mooring and a dockside mooring
- two different motor-driven vessels up to 19 metres in length requiring mooring
- state and territory marine safety laws
- tools, equipment and materials appropriate for inspecting and mooring motor-driven vessels.

AURRTA001 Inspect and service deck, hull and cabin equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service the equipment of a vessel's deck, hull and cabin. It involves preparing for the task, inspecting the hull and deck of the vessel and the vessel equipment, reporting the inspection findings, servicing and adjusting the equipment as required, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Assessment Requirements for AURRTA001 Inspect and service deck, hull and cabin equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in the unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the deck, hull and cabin equipment of three different vessels, including:
 - anchor
 - bow and stern rails
 - steering system
 - electrical equipment and lighting.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing marine deck, hull and cabin equipment, including procedures for securing vessels prior to beginning work
- environmental requirements, including procedures for trapping, storing and disposing of waste material produced during servicing processes
- basic construction methods of vessels, including building materials
- identification, function and basic operation of marine deck, hull and cabin equipment, including:
 - anchors
 - bow and stern rails
 - steering system
 - global positioning system (GPS)
 - radio communication system

- depth sounder
- inspection procedures for marine:
 - decks and hulls, including procedures for identifying deterioration and damage
 - deck, hull and cabin equipment, including procedures for identifying deterioration, damage and improper operation
- service and adjustment procedures for marine deck, hull and cabin equipment, including procedures for lubricating and adjusting steering systems
- post-service testing procedures for marine deck, hull and cabin equipment, including procedures for testing equipment in and out of water.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vessels that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer vessel specifications
- three different vessels requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing vessel deck, hull and cabin equipment.

AURRTA003 Winterise vessels and engine systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to winterise or prepare a vessel and its engine systems for seasonal shutdown and storage. It involves preparing for the task, testing the vessel systems and engine prior to winterising, making any recommendations for further action, and carrying out treatments of vessel and engine systems.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical

Assessment Requirements for AURRTA003 Winterise vessels and engine systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- winterise two different vessels and their engine systems, in which the work must involve:
 - fogging engine cylinders
 - treating fuel systems
 - disconnecting batteries
 - lubricating linkages and starter drive mechanisms
 - treating cooling systems
 - weatherproofing systems and components.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to testing and winterising vessels and engine systems, including procedures for checking and dealing with flammable gas build-up in boats
- environmental requirements, including procedures for trapping, storing and disposing of fluids drained from engine systems
- pre-winterising testing procedures for vessels and engine systems, including:
 - electrical system testing
 - engine and driveline testing
 - control system testing
- winterising procedures for vessels and engine systems, including:
 - properties and use of servicing fluids, lubricants and anti-corrosion products used in winterising procedures

- fogging engine cylinders
- emptying and treating fuel systems
- disconnecting batteries
- lubricating linkages and starter drive mechanisms
- treating cooling systems
- weatherproofing systems and components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vessels that they have winterised, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer vessel specifications
- two different vessels, engines and associated systems requiring winterising
- testing equipment for vessels and engine systems
- tools, equipment and materials appropriate for winterising vessels and engine systems.

AURRTA006 Water test vessels

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to water test a vessel in order to meet specific customer performance specifications and ensure compliance with statutory regulations. It involves preparing for the task, conducting a vessel safety inspection, water testing the vessel on a waterway, and completing work processes and documentation, including any associated recommendations for further action.

It applies to those working in the marine service and repair industry.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Assessment Requirements for AURRTA006 Water test vessels

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- water test two different vessels with engines, propulsion units and hull fittings, in which the work must involve water testing navigation lights and safety equipment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to water testing vessels, including procedures for:
 - selecting and using personal protective equipment (PPE), including personal flotation devices
 - following state or territory legislation, regulations and marine safety laws relating to operating a vessel in an estuary or seaway, including:
 - holding a boat driver licence
 - speed restrictions
 - navigation rules
 - boat capacity
- pre-launch inspection procedures, including inspection procedures for:
 - vessel safety equipment, including:
 - life jackets
 - anchors
 - bailer or fire bucket and lanyard
 - bilge pump
 - compass
 - distress flares

- emergency position indicating radio beacon (EPIRB)
- fire extinguisher
- map
- marine radio
- paddles and oars
- safety and capacity labels
- sound signals
- drinking water
- waterproof torch
- hulls and fittings
- navigation lights
- steering system
- fuel system
- factors influencing vessel performance, including:
 - basic hull design and hydrodynamics
 - hull type, including:
 - planing
 - displacement
 - single and multi-hull
 - hull fittings
 - engine, including:
 - type
 - size
 - single and multi-cylinder
 - engine and hull match
 - engine propeller match
 - vessel, including:
 - type
 - size
 - age
- modifications and additions to existing vessel
 - water testing procedures for vessels, including water testing engine performance, propulsion units, and hull and hull fittings, including:
 - testing engine performance by operating engine through full operating range
 - testing propulsion unit by operating through full range of speeds and directions
 - testing hull and hull fittings by operating through full range of performance conditions
 - testing to establish that current configuration is performing to manufacturer specifications
- procedures for test report compilation and presentation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vessels that they have water tested, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- appropriate waterway for water testing a vessel
- workplace instructions
- manufacturer vessel specifications
- state and territory marine safety laws
- two different vessels requiring water testing
- tools, testing equipment and materials appropriate for water testing vessels.

AURRTA007 Analyse and evaluate faults in light marine hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in light marine hydraulic systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the marine service and repair industry on inboard, outboard or jet drive marine vessels.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for light marine hydraulic system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures and <i>safety and environmental requirements</i>
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 <i>Analytical and evaluative methodology</i> is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Hydraulic system and components are prepared for the diagnostic process
3. Carry out analysis and evaluation	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 <i>Tests</i> are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	4.3 Report is prepared specifying analysis and evaluation process, and detailing and justifying rectification method or variation to the rectification method
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> apply learning and processes to different situations.
Reading skills to:	<ul style="list-style-type: none"> research, organise and interpret technical information relating to light marine hydraulic systems.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting failure analysis findings document and complete reports.
Numeracy skills to:	<ul style="list-style-type: none"> use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.

Assessment Requirements for AURRTA007 Analyse and evaluate faults in light marine hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the hydraulic systems of three different light marine vessels
- the above analysis and evaluation must involve three of the following systems:
 - power assisted steering
 - hydraulic steering
 - bow thruster
 - trim tabs
 - tilt and trim
 - winch.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in light marine hydraulic systems, including procedures for working with:
 - fluids under pressure
 - stored pressure hazards
 - hot fluid hazards
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydraulic systems
- principles and processes involved in planning and implementing analysis and evaluation of light marine hydraulic system faults

- design and planning of diagnostic procedures of light marine hydraulic system faults, including procedures for diagnosing:
 - hydraulic faults
 - mechanical faults
 - electrical faults
- procedures for analysing and evaluating light marine hydraulic system faults, including:
 - system failure analysis
 - component failure analysis
- hydraulic principles, including pressure, flow and force
- mechanical principles, including levers and mechanical advantage
- types, functions, operation and limitations of light marine hydraulic systems, including:
 - power assisted steering
 - hydraulic steering
 - bow thruster
 - trim tabs
 - tilt and trim
 - winches
- vessel systems and their impact on light marine hydraulic system operation, including vessel electrical system
- testing procedures for light marine hydraulic systems, including:
 - stroke times for tilt and trim operation
 - leak down and creep
 - full load water testing
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in light marine hydraulic systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to light marine hydraulic systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light marine hydraulic systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer hydraulic system specifications
- three different light marine vessels with faults in the systems specified in the performance evidence
- diagnostic equipment for light marine hydraulic systems
- tools, equipment and materials appropriate for analysing and evaluating light marine hydraulic systems.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the hull performance and stability system of three different light marine vessels
- the above analysis and evaluation must involve the following:
 - engine performance and maximum speed
 - propeller matching
 - hull integrity.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in light marine hull performance and stability systems, including procedures for working with rotating shafts and propellers
- principles and processes involved in planning and implementing analysis and evaluation of light marine hull performance and stability systems
- design and planning of diagnostic procedures of light marine hull performance and stability systems
- types, functions, operation and limitations of light marine hull performance and stability systems, including:
 - marine two-stroke, four-stroke and diesel engines
 - marine engine installation and rigging techniques to applicable specifications
 - propeller selection techniques and procedures
 - boat trimming methods and planning aspects

- marine hull performance and design characteristics
- vessel systems and their impact on light marine hull performance and stability system operation, including weight distribution of vessel components
- testing procedures for light marine hull performance and stability systems, including:
 - engine performance and maximum speed
 - propeller matching
 - hull performance and stability water tests
 - hull integrity
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in light marine hull performance and stability systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to light marine hull performance and stability systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light marine performance and stability systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer hull performance and stability system specifications
- three different light marine vessels with faults in the hull performance and stability systems specified in the performance evidence
- diagnostic equipment for light marine hull performance and stability systems
- tools, equipment and materials appropriate for analysing and evaluating light marine hull performance and stability systems.

AURRTA009 Recommission vessels and engine systems

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to prepare vessels and their engine systems for use after seasonal shutdown and storage. It involves testing the vessel and engine systems, reporting faults, recommissioning the vessel and engine systems, and determining the need for water testing.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical

Elements and Performance Criteria

Assessment Requirements for AURRTA009 Recommission vessels and engine systems

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- recommission two different vessels and their engine systems, in which the work must involve:
 - preparing vessel systems for use, including:
 - electrical systems
 - steering system
 - safety systems
 - preparing engine systems for use, including:
 - fuel system
 - cooling system
 - driveline system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to recommissioning vessels and engine systems, including procedures for checking and dealing with flammable gas build-up in boats
- environmental requirements, including:
 - procedures for trapping, storing and disposing of fluids drained from engine systems
 - procedures for disposing of batteries
- recommissioning procedures for vessel and engine systems, including:
 - properties and use of servicing fluids, lubricants and anti-corrosion products used in recommissioning procedures

- preparing vessel systems for use, including:
 - electrical and on-board electronic systems
 - steering system
 - safety systems, including procedures for checking flotation devices and fire extinguishers
- preparing engine systems for use, including:
 - fuel system
 - cooling system
 - driveline system
- post-recommissioning testing procedures for vessel systems, including procedures for water testing vessels and systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vessels that they have recommissioned, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer vessel specifications
- two different vessels and associated engine systems requiring recommissioning
- testing equipment for vessel systems
- tools, equipment and materials appropriate for recommissioning vessels and engine systems.

AURRTC001 Diagnose and repair marine exhaust and cooling systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the exhaust and cooling systems of marine vessels. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical – Cooling Systems

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
repair marine exhaust and cooling system	1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose exhaust and cooling system	2.1 Diagnostic tests are performed according to workplace procedures and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Dismantle exhaust and cooling system	3.1 Tools, equipment and materials are selected and checked 3.2 Exhaust and cooling system is dismantled as required according to workplace procedures, and safety and <i>environmental requirements</i> 3.3 Exhaust and cooling system is cleaned and its components are arranged for inspection according to workplace procedures, and safety and environmental requirements 3.4 Exhaust and cooling system components are inspected, measured and compared with manufacturer specifications 3.5 Final repair recommendations are made and reported according to workplace procedures
4. Repair and reassemble exhaust and cooling system	4.1 Repair information is sourced and interpreted 4.2 Repair options are analysed and those most appropriate to the circumstances are selected 4.3 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 4.4 Exhaust and cooling system is reassembled according to manufacturer specifications, workplace procedures and safety requirements 4.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair

Elements	Performance Criteria

Assessment Requirements for AURRTC001 Diagnose and repair marine exhaust and cooling systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the fresh water cooling exhaust and cooling systems of two different vessels
- diagnose and repair a fault in the raw water exhaust and cooling systems of two different vessels.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing marine exhaust and cooling systems, including procedures for:
 - lifting and supporting exhaust and cooling system components
 - working with hot exhaust and cooling system components
- environmental requirements, including procedures for trapping, storing and disposing of materials released from exhaust systems
- application, purpose and operation of marine exhaust and cooling systems and components, including:
 - fresh water cooling systems, including:
 - circulation pumps
 - thermostats
 - heat exchangers
 - exhaust manifolds
 - turbochargers

- dry exhausts
- raw water cooling systems, including:
 - pumps, including camshaft, belt, shaft and gear driven
 - relief valves
 - engine oil coolers
 - transmission oil coolers
 - sacrificial anodes
 - intercoolers
 - seawater strainers
 - exhaust manifolds
 - exhaust elbows and risers
 - exhaust tubes and hoses
 - wet exhausts
 - mufflers and waterlocks
 - siphon breaks
 - exhaust outlet flappers
- diagnostic testing procedures for exhaust and cooling systems, including:
 - manometer measurement
 - turbocharger boost measurement
 - raw water system pressure and flow measurement
 - fresh water cooling system pressure testing
 - infra-red temperature measurement
- dismantling and repair procedures for exhaust and cooling systems, including procedures for inspecting and evaluating the following components:
 - circulation pumps
 - thermostats
 - heat exchangers
 - turbochargers and intercoolers
 - raw water pumps, including camshaft, belt, shaft and gear driven
 - relief valves
 - sacrificial anodes
 - seawater strainers
 - exhaust manifolds
 - exhaust elbows and risers
 - exhaust tubes and hoses
 - mufflers and waterlocks
 - siphon breaks
 - exhaust outlet flappers
- post-repair testing procedures for exhaust and cooling systems, including water testing procedures while under load.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine exhaust and cooling systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer exhaust and cooling system specifications
- two different marine vessels with faults in their fresh water cooling exhaust and cooling systems
- two different marine vessels with faults in their raw water exhaust and cooling systems
- diagnostic equipment for marine exhaust and cooling systems
- tools, equipment and materials appropriate for dismantling, testing, repairing and reassembling marine exhaust and cooling systems.

Assessment Requirements for AURRTD001 Diagnose and repair marine steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following marine steering systems:
 - mechanical cable
 - hydraulic steering
 - electrohydraulic steering.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing marine steering systems, including:
 - procedures for avoiding pinch points when operating steering systems
 - procedures for working with high hydraulic oil pressures
 - methods for determining safe working loads of ropes, chains and cables
- operating principles of marine steering systems and associated components, including:
 - rudders and the principle of unequal water pressures
 - propwash
- application, purpose and operation of marine steering systems and components, including:
 - rope, cable and chain systems
 - inboard steering systems, including:
 - steering gear
 - balanced and unbalanced rudders
 - electrohydraulic steering

- outboard engine steering, including:
 - mechanical cable
 - hydraulic steering
 - electrohydraulic steering
- stern drive steering, including:
 - power steering
 - electrohydraulic steering
- bow and stern thrusters, including:
 - electric systems
 - hydraulic systems
- diagnostic testing procedures for marine steering systems, including:
 - rudder wear down
 - mechanical cable testing, including:
 - helm evaluation, including backlash
 - draglink wear
 - hydraulic system testing, including:
 - pressure testing
 - testing system for air
 - draglink wear
 - electrohydraulic system testing, including:
 - pressure testing
 - component electrical testing
- repair procedures for marine steering systems, including procedures for:
 - selecting steering system appropriate to vessel
 - dismantling, repairing and lubricating steering system components
 - replacing components
 - replacing helm and ram seal
 - identifying and measuring cables
- post-repair testing procedures for marine steering systems, including procedures for testing for smooth operation and full range of movement.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine steering systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer steering system specifications
- marine vessels with faults in the steering systems specified in the performance evidence
- diagnostic equipment for marine steering systems
- tools, equipment and materials appropriate for repairing and adjusting marine steering systems.

Assessment Requirements for AURRTE001 Carry out wet run tests on vessel outboard engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out wet run testing on two outboard engines, including one outboard engine fitted to a boat.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to wet run testing vessel outboard engines, including procedures for:
 - lifting and supporting outboard engines
 - working with outboard engines, including:
 - rotating components
 - propellers
 - exhaust emissions
 - abnormal noise
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines during wet run testing
- types and classifications of outboard engines, including two- and four-stroke engines
- wet running procedures for outboard engines, including:
 - using test tanks
 - using outboard engine flushers
 - checking throttle, choke and fast idle settings
- testing procedures for wet running outboard engines, including attaching tachometers to engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vessel outboard engines that they have wet run tested, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer outboard engine specifications
- two different marine outboard engines, including one engine fitted to a boat
- wet run testing equipment for outboard engines
- tools, equipment and materials appropriate for carrying out wet run tests on vessel outboard engines.

AURRTE002 Inspect and service marine outboard engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service marine outboard engines and components. It involves preparing for the task, inspecting the vessel engine and its associated components, reporting the inspection findings, servicing and adjusting the engine, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry and includes spark ignition and compression ignition outboard engines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and	1.1 Job requirements are determined from workplace instructions

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
service outboard engine and components	1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect engine and components	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and <i>safety requirements</i> 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service engine and components	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and <i>environmental requirements</i> , and without causing damage to components or systems 3.2 <i>Post-service testing</i> is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and engine is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature

Skills	Description
	when seeking service procedures and specifications relating to outboard engines.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report inspection findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> use basic mathematical operations, including addition and subtraction, to calculate liquid volumes and service schedule intervals.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for identifying hazards and controlling risks associated with working with: <ul style="list-style-type: none"> exhaust fumes high energy ignition systems rotating components.
<i>Environmental requirements</i> must include:	<ul style="list-style-type: none"> procedures for trapping, storing and disposing of fluids released from engines.
<i>Post-service testing</i> must include:	<ul style="list-style-type: none"> running engine to operating temperature and checking cooling system operation checking engine fluid levels checking fuel system for leaks checking for abnormal noises checking operation of gauges and warning devices.

Assessment Requirements for AURRTE002 Inspect and service marine outboard engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following outboard engines:
 - two-stroke spark ignition engine
 - direct injection two-stroke spark ignition engine
 - four-stroke spark ignition engine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing outboard engines, including procedures for identifying hazards and controlling risks associated with working with:
 - exhaust fumes
 - high energy ignition systems
 - rotating components
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- identification and function of major engine components, including:
 - cylinder block and head
 - piston and connecting rod
 - crankshaft
 - camshaft and valves
 - manifolds
 - ports and reed valves

- identification and function of engine systems, including:
 - lubrication
 - cooling system
 - fuel system
- operating principles of spark ignition engines, including:
 - two-stroke engines
 - four-stroke engines
- types and applications of:
 - engine configurations
 - engine oils and filters
- inspection procedures for outboard engines, including:
 - oil and fluid leaks
 - ancillary components, including:
 - mountings
 - belts, pulleys and hoses
- service and adjustment procedures for outboard engines, including:
 - adjusting or replacing engine components
 - replacing oil
 - replacing filters
- post-service testing procedures for outboard engines, including procedures for:
 - running engine to operating temperature and checking cooling system operation
 - checking engine fluid levels
 - checking fuel system for leaks
 - checking for abnormal noises
 - checking operation of gauges and warning devices.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine outboard engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer outboard engine specifications
- three different outboard engines specified in the performance evidence and requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing marine outboard engines.

AURRTE006 Diagnose and repair marine outboard engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the two and four-stroke cycle outboard engines of marine vessels. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair marine outboard	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
engine	1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose engine	2.1 Diagnostic tests are carried out according to workplace procedures and <i>safety requirements</i> 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings, including recommendations for necessary repairs or adjustments, are reported according to workplace procedures
3. Dismantle engine	3.1 Tools, equipment and materials are selected and checked 3.2 Engine is dismantled as required according to workplace procedures, and safety and <i>environmental requirements</i> 3.3 Engine is cleaned and components arranged for inspection according to workplace procedures, and safety and environmental requirements 3.4 Engine components are measured and compared with manufacturer specifications 3.5 Final repair recommendations are made and reported according to workplace procedures
4. Repair and reassemble engine	4.1 Repair information is sourced and interpreted 4.2 Repair options are analysed and those most appropriate to the circumstances are selected 4.3 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 4.4 Engine is reassembled according to manufacturer specifications, workplace procedures and safety requirements 4.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and engine is presented ready for use or stored

Assessment Requirements for AURRTE006 Diagnose and repair marine outboard engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two different marine two-stroke powerheads, in which the work must involve dismantling and reassembling the powerhead
- diagnose and repair a fault in two different marine four-stroke powerheads, in which the work must involve dismantling and reassembling the powerhead.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing outboard engines, including procedures for lifting and supporting outboard engines
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- operating principles of outboard engines and associated components, including:
 - combustion, including:
 - air-fuel ratios and combustion cycles
 - direct injection
 - detonation
 - engine measurement and performance, including:
 - swept volume and engine volume
 - compression ratio
 - engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency

- torque and horsepower, including brake horsepower
- application, purpose and operation of outboard engines and components, including:
 - lubrication systems, cylinder blocks, cylinders, pistons, cylinder heads, combustion chambers, inlet manifolds, poppet and reed valves, connecting rods, crankshafts, piston rings, piston pins, camshafts, timing gears, vibration dampers and flywheels
- diagnostic testing procedures for outboard engines, including:
 - wet and dry compression tests
 - cylinder leakage tests
 - oil pressure tests
 - sources of fluid leaks
 - exhaust smoke diagnosis
 - checking abnormal engine noises
- dismantling procedures for outboard engines, including procedures for:
 - measuring clearances and tolerances
 - inspecting components
- repair procedures for outboard engines, including procedures for repairing cylinder blocks and cylinder heads
- assembly procedures for outboard engines, including procedures for fitting components and obtaining clearances and tolerances
- post-repair testing procedures for outboard engines, including:
 - load testing engines
 - tank testing engines
 - water testing engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer outboard engine specifications
- two different marine two-stroke powerheads with system faults
- two different marine four-stroke powerheads with system faults
- diagnostic equipment for outboard engines and components
- tools, equipment and materials appropriate for dismantling, repairing, reassembling and adjusting outboard engines and components.

Assessment Requirements for AURRTE007 Diagnose and repair marine inboard engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three different marine inboard engines, including:
 - a fault in an engine cylinder head, in which the work must involve removing the cylinder head from the engine
 - a fault in two of the following components, in which the work must involve removing the components from the engine:
 - engine valve timing belt
 - engine valve timing chain
 - engine valve lifters
 - cylinder head valve stem seals
 - camshaft
 - camshaft bearings
 - crankshaft
 - balance shaft or its bearings
 - pistons and connecting rods
 - cylinder block sleeves
 - main bearings and big-end bearings
 - internal oil pump
- dismantle and reassemble one marine inboard engine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing inboard engines, including procedures for lifting and supporting inboard engines
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- operating principles of inboard engines and associated components, including:
 - combustion, including:
 - air-fuel ratios and combustion cycles
 - direct injection
 - detonation
 - engine measurement and performance, including:
 - swept volume and engine volume
 - compression ratio
 - engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency
 - torque and horsepower, including brake horsepower
- application, purpose and operation of inboard engines and components, including:
 - lubrication systems, cylinder blocks, cylinders, pistons, cylinder heads, engine valves, combustion chambers, inlet and exhaust manifolds, connecting rods, crankshafts, piston rings, gudgeon pins, camshafts, timing gears, vibration dampers and flywheels
- diagnostic testing procedures for inboard engines, including:
 - wet and dry compression tests
 - cylinder leakage tests
 - oil pressure tests
 - sources of water ingress
 - checking sources of fluid leaks
 - exhaust smoke diagnosis
 - checking abnormal engine noises
- dismantling procedures for inboard engines, including procedures for:
 - measuring clearances and tolerances
 - inspecting components
- repair procedures for inboard engines, including procedures for repairing cylinder blocks and cylinder heads
- assembly procedures for inboard engines, including procedures for fitting components and obtaining clearances and tolerances
- post-repair testing procedures for inboard engines, including:
 - load testing engines
 - water testing engines.

Assessment Conditions

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine inboard engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer inboard engine specifications
- three different marine inboard engines with the faults specified in the performance evidence
- diagnostic equipment for inboard engines
- tools, equipment and materials appropriate for dismantling, repairing, reassembling and adjusting marine inboard engines.

AURRTE008 Install marine engines, controls and instruments

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install marine engines, controls and instruments. It involves preparing for the task, installing and testing the operation of marine engines, controls and instruments, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install engine, controls and instruments	1.1 Job requirements are determined from workplace instructions 1.2 Installation procedures and information are sourced and interpreted

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.3 Installation options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Install engine	2.1 Engine, controls and instruments are checked for correct application and any damage 2.2 Engine assembly is installed according to manufacturer specifications, workplace procedures, and <i>safety and environmental requirements</i> , and without causing damage to components or systems 2.3 Installed engine is tested for correct operation and required adjustments are made according to manufacturer specifications, workplace procedures and safety requirements
3. Install engine controls	3.1 Engine controls are installed according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 3.2 Installed controls are tested for correct operation and required adjustments are made according to manufacturer specifications, workplace procedures and safety requirements
4. Install engine instruments and commission engine, controls and instruments	4.1 Engine instruments are installed according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems 4.2 Installed engine instruments are tested for correct operation and required adjustments are made according to manufacturer specifications, workplace procedures and safety requirements 4.3 Final adjustments are made and engine, controls and instruments are re-tested in normal operating conditions
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and vessel is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting work performed and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report findings and make installation recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure components and use basic mathematical operations, including addition, subtraction, multiplication and division to calculate distances, areas, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> determine installation methods for different vessels.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as rulers, vernier calipers, test lights and multimeters.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including lifting and supporting procedures for marine engines environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines.

Assessment Requirements for AURRTE008 Install marine engines, controls and instruments

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install and test prior to placing in service:
 - three different marine engines
 - the marine engine controls of the above engines
 - the marine instruments of the above engines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing marine engines, controls and instrumentation, including lifting and supporting procedures for marine engines
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- construction and operating principles of inboard and outboard engines, controls and instruments
- procedures for installing inboard engines, controls and instruments into vessels, including:
 - assessing engine bed dimensions, strength and material to suit engine size and power
 - measuring engine position and determining propeller or input shaft alignment
 - evaluating transom to ensure it suits engine manufacturer requirements, including:
 - measuring transom thickness, parallelism, angle and surface flatness
 - assessing transom condition
 - cutting and sealing transom cut-out to suit stern drive application
 - sealing transom plate to transom

- positioning, aligning and fastening front engine mounts
- lifting, supporting and manoeuvring engine
- checking and adjusting final alignment of engine
- procedures for installing outboard engine, controls and instruments to vessels, including:
 - ensuring engine meets vessel specifications
 - determining engine position according to centre line and height
 - sealing transoms
- procedures for testing the installation of inboard and outboard engines, controls and instruments in vessels, including checking for water leaks, fuel and oil leaks
- commissioning procedures for inboard and outboard engines, controls and instruments, including testing vessels under normal operating conditions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engines, controls and instruments that they have installed in vessels, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer engine, controls and instrument specifications
- three different vessels requiring installation of engines, controls and instruments
- tools, equipment and materials appropriate for installing marine engines, controls and instruments.

AURRTE011 Overhaul two and four-stroke cycle marine outboard engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return marine outboard engines to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the engine, carrying out the overhaul procedures, reassembling and testing the engine, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry. The marine outboard engines include two and four-stroke spark ignition engines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Engines

Elements and Performance Criteria

Assessment Requirements for AURRTE011 Overhaul two and four-stroke cycle marine outboard engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul three different marine outboard engines, including:
 - one two-stroke outboard engine
 - one four-stroke outboard engine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling outboard engines and associated engine components, including procedures for:
 - operating specialised engine overhaul tools, equipment and machinery, including:
 - heating torches, ovens and presses
 - handling freezing substances, including liquid nitrogen
 - using chemicals and toxic substances
 - operating manual and mechanical lifting equipment
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- types, characteristics and operating principles of outboard engines and associated engine components
- outboard engine overhaul procedures, including:
 - methods for cleaning and preparing engine for overhaul
 - engine dismantling procedures

- engine and engine component inspection, measuring and evaluation procedures, including:
 - non-destructive testing (NDT) procedures, including dye penetrant testing and magnetic particle testing
 - methods for measuring and calculating tolerances and clearances
- engine and engine component repair and adjustment procedures, including:
 - engine cylinder head and block machining
 - engine crankshaft and camshaft grinding
 - engine cylinder and engine sleeve fitting, boring and honing
 - engine bearing tunnel and connecting rod repair
 - engine component heat treating, straightening and reclamation
 - engine component balancing
- engine assembly and adjustment procedures for achieving component tolerances, including:
 - piston to connecting rod big-end alignment
 - big-end bearing to crankshaft journal clearance
 - big-end bearing crush with bearing blue
 - piston ring end gap, back clearance and side clearance
 - main bearing to crankshaft journal clearance
 - main bearing crush with bearing blue
 - semi-flanged thrust bearings to crankshaft clearance
 - finished camshaft bearings to camshaft clearance
 - camshafts and cam followers
 - camshaft end float
 - crankshaft end float
 - gear backlash
 - oil pump sealing and pick-up oil piping
- component assembly procedures and processes, including:
 - welsh plugs and oil gallery plugs
 - piston and connecting rod assemblies
 - big-end bearings
 - piston rings to pistons
 - main bearings and thrust washers
 - semi-flanged thrust bearings
 - crankshafts, including protection measures for crankshaft journals, bearings, rings and bores
 - finished camshaft bearings
 - camshafts and cam followers
 - timing gears
 - chains and tensioners

- oil pumps, oil squirters, and oil pump pick-ups
- balance shafts
- fitting ancillary components, including seals, crankshaft pulleys and flywheels
- post-overhaul testing procedures for outboard engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine outboard engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer outboard engine specifications
- three different marine outboard engines requiring overhaul, including one two-stroke engine and one four-stroke engine
- tools, equipment and materials appropriate for overhauling and adjusting marine outboard engines.

AURRTE012 Analyse and evaluate faults in light marine engine and powerhead systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in light marine engine and power head systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the marine service and repair industry on inboard or outboard marine vessels.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Engines

Assessment Requirements for AURRTE012 Analyse and evaluate faults in light marine engine and powerhead systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in the engine and power head systems of three different light marine vessels, including:
 - a fault in one inboard engine system
 - a fault in one outboard engine system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in light marine engine and power head systems, including procedures for:
 - lifting and supporting engines
 - running engines, including working with:
 - exhaust fumes
 - rotating shafts
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engine and power head systems
- principles and processes involved in planning and implementing analysis and evaluation of engine and power head systems
- design and planning of diagnostic procedures of light marine engine and powerhead systems
- design, manufacture, operation and limitations of light marine engine and power head systems and components, including:

- two-stroke and four-stroke petrol engines
- diesel engines
- vessel systems and their impact on engine operation, including:
 - ignition systems
 - intake and exhaust systems
 - lubrication systems
 - cooling systems
 - engine mounting systems
- testing procedures for light marine engine and powerhead systems, including:
 - non-destructive testing (NDT)
 - engine performance and maximum speed
 - full load water testing
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in light marine engine and power head systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) relating to light marine engine and power head systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the light marine engine and power head systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer engine and power head system specifications
- three different light marine vessels with faults in the light marine engine and power head systems specified in the performance evidence

- diagnostic equipment for light marine engine and power head systems
- tools, equipment and materials appropriate for analysing and evaluating light marine engine and power head systems.

AURRTF001 Diagnose and repair petrol and diesel marine fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in marine fuel systems. It involves preparing for the task, recognising and managing safety hazards, selecting the correct diagnostic procedure, carrying out the diagnosis and repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry. Marine fuel systems include those found in both inboard and outboard engines, and diesel and petrol vessels. The unit does not apply to diagnosis and repair of LNG and CNG fuel systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical – Fuel Systems

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and repair marine fuel system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.4 Diagnostic tools and equipment are selected and checked for serviceability
2. Identify hazards and understand safety requirements	2.1 Safety risks applicable to the vessel type are identified and managed 2.2 Methods to assess presence of fumes are undertaken and ventilation requirements are applied 2.3 Hazards and work health and safety standards associated with the work are identified and risks are managed
3. Diagnose marine fuel system	3.1 Diagnostic tests are carried out according to workplace procedures, and safety and environmental requirements 3.2 Faults are identified from diagnostic test results and causes of faults are determined 3.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
4. Repair marine fuel system	4.1 Hazards associated with undertaking the repair are assessed and managed before beginning work 4.2 Repair options are analysed and those most appropriate to the circumstances are selected 4.3 Repair tools, equipment and materials are selected and checked 4.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or system 4.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace standards and system or vessel is presented ready for use 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking marine fuel system specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report diagnostic findings and make repair recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure marine fuel system components and use basic mathematical operations, including addition, subtraction, multiplication and division and subtraction, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	<ul style="list-style-type: none"> use equipment, including fume and vapour detector and bilge blower.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety and environmental requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with flammable diesel and petrol fuels environmental requirements, including procedures for trapping, storing and disposing of fluids and vapours released from fuel systems.
<i>Safety risks</i> must include:	<ul style="list-style-type: none"> differing fuel types, including: <ul style="list-style-type: none"> petrol

	<ul style="list-style-type: none"> • diesel • varying motor type, including: <ul style="list-style-type: none"> • inboard • outboard

Assessment Requirements for AURRTF001 Diagnose and repair petrol and diesel marine fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

diagnose and repair a fault in three marine fuel systems fitted to different vessels. This must include at least one petrol fuel system and one diesel petrol fuel system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing marine fuel systems, including procedures for working with flammable fuels
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel systems
- diagnostic testing procedures for marine fuel systems, including:
 - fuel pump pressure, volume and vacuum testing
 - air and fuel leak testing
 - exhaust gas analysis
- repair procedures for marine fuel systems
- post-repair testing procedures for marine fuel systems.
- knowledge of how to identify, capture and remove fumes, including:
 - understanding of ventilation requirements
 - use of bilge blower
 - use of fume and vapour detectors
- hazards associated with confined spaces
- potential sources and causes of ignition
-

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the carburettors that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer marine fuel system specifications
- three different vessels or engines with faults in the fuel systems
- diagnostic equipment for marine fuel systems
- tools, equipment and materials appropriate for maintenance and repair of marine fuel systems.

Assessment Requirements for AURRTQ002 Inspect and service marine jet drive propulsion systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service two different vessels with jet drive propulsion systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing jet drive propulsion systems, including procedures for identifying hazards and controlling risks associated with working with:
 - exhaust fumes
 - rotating components
 - moving components that have the ability to crush
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from propulsion systems
- identification and function of jet drive propulsion system components, including:
 - centrifugal
 - axial flow
- basic operation of jet drive propulsion systems
- types and applications of lubricants and lubricating fluids for jet drive propulsion systems
- inspection procedures for jet drive propulsion systems, including:
 - oil and fluid leaks
 - ancillary components, including:
 - mountings
 - belts, pulleys and hoses

- service and adjustment procedures for jet drive propulsion systems, including:
 - main bearing lubrication
 - power hydraulic system
 - driveline
 - screens and pick-ups
 - steering system
 - control system with forward, neutral and reverse
- post-service testing procedures for jet drive propulsion systems, including procedures for:
 - running engine to operating temperature and checking cooling system operation
 - checking engine fluid levels
 - checking fuel system for leaks
 - checking for abnormal noises
 - checking gauges and warning devices for operation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment Requirements for AURRTQ004 Diagnose and repair marine inboard propeller drive systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in three different marine inboard propeller drive systems, including two of the following:
 - direct drive
 - V-drive
 - drop-centre.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing inboard propeller drive systems, including procedures for working with rotating shafts
- application, purpose and operation of inboard propeller drive systems and components, including:
 - direct drive, including:
 - drive plate
 - transmission (forward, neutral and reverse)
 - coupling and key
 - propeller shaft
 - gland
 - log
 - strut, including A frame and I type
 - bearing, including cutlass and fibre bearings

- propeller
- V-drive, including:
 - drive plate
 - jack shaft
 - transmission (forward, neutral and reverse)
 - coupling and key
 - propeller shaft
 - gland
 - log
 - strut, including A frame and I type
 - bearing, including cutlass and fibre bearings
 - propeller
- drop-centre drive, including:
 - drive plate
 - transmission (forward, neutral and reverse)
 - coupling and key
 - propeller shaft
 - gland
 - log
 - strut, including A frame, I type and stern tube
 - bearing, including cutlass and fibre bearings
 - propeller
- diagnostic testing procedures for inboard propeller drive systems, including:
 - propeller shaft wear, including trueness and run-out
 - bearing wear and run-out measurements
 - coupling alignment checking methods, including laser and feeler gauge procedures
 - engine and transmission mount testing procedures
- dismantling procedures for inboard propeller drive systems, including procedures for:
 - using propeller pullers
 - using bearing pullers
 - applying heat and cooling
 - inspecting components, including shaft run-out
- repair procedures for inboard propeller drive systems, including procedures for replacing couplings and bearings
- assembly procedures for inboard propeller drive systems, including procedures for:
 - checking and adjusting propeller shaft run-out
 - aligning couplings
- post-repair testing procedures for inboard propeller drive systems, including procedures for water testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the inboard propeller drive systems in marine vessels that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer inboard propeller drive system specifications
- three different marine vessels with faults in the inboard propeller drive systems specified in the performance evidence
- diagnostic equipment for inboard propeller drive systems
- tools, equipment and materials appropriate for repairing and adjusting marine inboard propeller drive systems.

AURRTQ005 Install marine jet drive propulsion systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install marine jet drive propulsion systems. It involves preparing for the task, installing jet drive propulsion systems and testing their operation, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to install jet drive propulsion system	1.1 Job requirements are determined from workplace instructions 1.2 Installation procedures and information are sourced and interpreted

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	<p>1.3 Installation options are analysed and those most appropriate to the circumstances are selected</p> <p>1.4 Hazards associated with the work are identified and risks are managed</p> <p>1.5 Tools, equipment and materials are selected and checked for serviceability</p>
2. Install and commission system	<p>2.1 System is checked for correct application and components are checked for damage</p> <p>2.2 System is installed according to manufacturer specifications, workplace procedures and safety requirements, and without causing damage to components or systems</p> <p>2.3 Installed system is tested for correct operation and required adjustments are made according to manufacturer specifications, workplace procedures and safety requirements</p> <p>2.4 System is re-tested in normal operating conditions and final adjustments are made</p>
3. Complete work processes	<p>3.1 Final inspection is made to ensure work is to workplace expectations and vessel is presented ready for use</p> <p>3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>3.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>3.4 Workplace documentation is processed according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking jet drive propulsion system specifications and procedures.

Skills	Description
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting work performed and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report findings and make installation recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure jet drive propulsion system components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> determine installation methods for different vessels.
Technology skill to:	<ul style="list-style-type: none"> use precision measuring equipment, such as rulers, vernier calipers, micrometers and dial gauge indicators.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including lifting and supporting procedures for jet drive propulsion systems.

Assessment Requirements for AURRTQ005 Install marine jet drive propulsion systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install and test prior to placing in service two different marine jet drive propulsion systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing jet drive propulsion systems, including lifting and supporting procedures for jet drive propulsion systems
- construction and operating principles of jet drive propulsion systems, including:
 - types of jet pumps, including:
 - centrifugal
 - axial flow
 - methods of reversing thrust, including:
 - cable-operated buckets
 - hydraulically-operated buckets
 - electrically-operated buckets
 - gearboxes
- procedures for installing marine jet drive propulsion systems in vessels
- procedures for testing the installation of marine jet drive propulsion systems
- commissioning procedures for marine jet drive propulsion systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the jet drive propulsion systems they have installed in vessels, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- workplace location or simulated workplace
- workplace instructions
- manufacturer jet drive propulsion system specifications
- two different vessels requiring installation of jet drive propulsion systems
- tools, equipment and materials appropriate for installing marine jet drive propulsion systems.

AURRTQ006 Diagnose and repair marine jet drive propulsion systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the jet drive propulsion systems of marine vessels. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to diagnose and	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
repair jet drive propulsion system	1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose propulsion system	2.1 Diagnostic tests are carried out according to workplace procedures and safety requirements 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including initial recommendations for necessary repairs or adjustments
3. Dismantle propulsion system	3.1 Tools, equipment and materials are selected and checked 3.2 Propulsion system is dismantled as required according to workplace procedures, and safety and environmental requirements 3.3 Propulsion system is cleaned and components arranged for inspection according to workplace procedures, and safety and environmental requirements 3.4 Propulsion system components are measured and compared with manufacturer specifications 3.5 Final repair recommendations are made and reported according to workplace procedures
4. Repair and reassemble propulsion system	4.1 Repair information is sourced and interpreted 4.2 Repair options are analysed and those most appropriate to the circumstances are selected 4.3 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 4.4 Propulsion system is reassembled according to manufacturer specifications, workplace procedures and safety requirements 4.5 Post-repair testing is carried out according to workplace procedures to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
5. Complete work processes	<p>5.1 Final inspection is made to ensure work is to workplace expectations and vessel is presented ready for use or stored according to workplace procedures</p> <p>5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected</p> <p>5.3 Tools and equipment are checked and stored according to workplace procedures</p> <p>5.4 Workplace documentation is processed according to workplace procedures</p>

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the following two jet drive propulsion systems in different marine vessels:
 - centrifugal
 - axial flow.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing jet drive propulsion systems, including procedures for lifting and supporting jet drive propulsion systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from jet drive propulsion systems
- operating principles of jet drive propulsion systems and associated components, including:
 - producing thrust using water pressure
 - changing vessel direction
- application, purpose and operation of jet drive propulsion systems and components, including:
 - types of jet pumps, including:
 - centrifugal
 - axial flow
 - methods of reversing thrust, including:
 - cable-operated buckets

- hydraulically-operated buckets
- electrically-operated buckets
- gearboxes
- diagnostic testing procedures for jet drive propulsion systems, including:
 - housing to impeller clearance and wear
 - bearing wear
 - seal wear
 - bilge pump operation
 - gearbox operation
 - bucket operation
- dismantling procedures for jet drive propulsion systems, including procedures for:
 - measuring clearances and tolerances
 - inspecting components
- repair procedures for jet drive propulsion systems, including procedures for:
 - replacing impellers and housing
 - replacing bearings and seals, including oil replacement
 - replacing couplings
 - servicing buckets
- post-repair testing procedures for jet drive propulsion systems, including procedures for water testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the jet drive propulsion systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace

- workplace instructions
- manufacturer jet drive propulsion system specifications
- a centrifugal jet drive propulsion system in a marine vessel with system faults
- an axial flow jet drive propulsion system in a marine vessel with system faults
- diagnostic equipment for jet drive propulsion systems
- tools, equipment and materials appropriate for dismantling, repairing, reassembling and adjusting marine jet drive propulsion systems.

AURRTR001 Inspect, service and maintain marine battery storage systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes to inspect, service and maintain marine battery storage systems. It involves preparing for the task, inspecting the battery storage system, servicing the system, and completing workplace processes and documentation, including any associated recommendations for further action.

It applies to those working in the marine service and repair industry. The battery storage systems include those in recreational boating equipment or marine applications.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Electrical and Electronic

Elements and Performance Criteria

Assessment Requirements for AURRTR006 Diagnose and repair marine electrical systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the following marine electrical systems and components:
 - dash instrumentation
 - switch and fuse panels
 - bilge pump system
 - lighting system
 - depth sounder or fish finder
 - global positioning system (GPS)
 - marine radio.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing marine electrical systems and components, including procedures for:
 - checking and dealing with flammable gas build-up in boats, including LPG and hydrogen, prior to starting electrical system work
 - working with potentially high-current electrical systems
- operating principles of electrical system circuits and associated components, including:
 - Ohm's law
 - electromagnetic interference
- application, purpose and operation of marine electrical systems and components, including:

- marine vessel lighting systems, including marine regulations for vessel lighting
- dash instrumentation
- switch and fuse panels
- bilge pump systems
- depth sounders and fish finders
- GPS
- marine radios
- 12 volt marine accessories, including winches
- autopilot and radar
- marine battery charge management systems
- networked communication topographies
- diagnostic testing procedures for marine electrical systems and components, including:
 - testing for circuit resistance, voltage drop and current draw
 - testing for open and short circuits
 - testing for shorts to power circuits and grounds
 - inspecting for component moisture ingress and connector damage
 - testing marine battery charge management systems
 - testing networked communication topographies
- repair procedures for marine electrical systems and components, including procedures for:
 - selecting wiring gauge
 - soldering wiring
 - insulating wiring
 - crimping terminals
 - removing and replacing connectors
 - repairing networked communication topographies
- post-repair testing procedures for marine electrical systems and components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine electrical systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine repair workplace or simulated workplace
- workplace instructions
- manufacturer electrical system specifications
- marine vessel with faults in the electrical systems and components specified in the performance evidence
- diagnostic equipment for marine vessel electrical systems
- tools, equipment and materials appropriate for repairing marine vessel electrical systems.

Prepare to install marine electrical system and components	1.1 Job requirements are determined from workplace instructions 1.2 Installation procedures and information are sourced and interpreted 1.3 Installation options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked according for serviceability
2. Install and commission electrical system and components	2.1 System is checked for correct application and components are checked for damage 2.2 System and components are installed according to manufacturer specifications, workplace procedures and <i>safety requirements</i> , and without causing damage to components or systems 2.3 Installed system and components are tested for correct operation and required adjustments are made according to manufacturer specifications, workplace procedures and safety requirements 2.4 Final adjustments are made and marine electrical systems and components are re-tested in normal operating conditions
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vessel is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
---------------	--------------------

Skills	Description
Learning skills to:	<ul style="list-style-type: none"> locate appropriate sources of information efficiently.
Reading skills to:	<ul style="list-style-type: none"> interpret information from manufacturer and workshop literature when seeking specifications and procedures.
Writing skills to:	<ul style="list-style-type: none"> legibly and accurately fill out workplace documentation when reporting work performed and recording parts and material used.
Oral communication skills to:	<ul style="list-style-type: none"> clarify instructions report findings and make installation recommendations.
Numeracy skills to:	<ul style="list-style-type: none"> measure components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	<ul style="list-style-type: none"> plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	<ul style="list-style-type: none"> determine most appropriate electrical system and component installation positions on the vessel.
Technology skills to:	<ul style="list-style-type: none"> use measuring equipment, such as rulers, vernier calipers, test lights and multimeters.

Range of Conditions

This section specifies work environments and conditions that may affect performance.

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

<i>Safety requirements</i> must include:	<ul style="list-style-type: none"> work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: <ul style="list-style-type: none"> checking and dealing with flammable gas build-up in boats, including liquefied petroleum gas (LPG) and hydrogen, prior to starting electrical system work working safely with potentially high current electrical systems.

Assessment Requirements for AURRTR007 Install marine electrical systems and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install the following marine electrical components on two different vessels:
 - switch and fuse panels
 - bilge pump
 - lighting
 - depth sounder or fish finder
 - global positioning system (GPS).

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing marine electrical systems and components, including procedures for:
 - checking and dealing with flammable gas build-up in boats, including liquefied petroleum gas (LPG) and hydrogen, prior to starting electrical system work
 - working safely with potentially high current electrical systems
- construction and operating principles of marine electrical systems and components, including:
 - dash instrumentation
 - switch and fuse panels
 - bilge pumps
 - lighting
 - depth sounders and fish finders

- GPS
- marine radios
- marine battery charge management systems
- procedures for selecting, installing and testing marine electrical systems and components in vessels, including:
 - dash instrumentation
 - switch and fuse panels
 - bilge pumps
 - lighting, including marine safety regulations for vessel lighting
 - depth sounders and fish finders
 - GPS
 - marine radios
 - procedures for installing and testing marine electrical systems and components on a bus topography.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine electrical systems and components they have installed in vessels, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- workplace location or simulated workplace
- workplace instructions
- manufacturer electrical system and component specifications
- two different vessels requiring installation of marine electrical systems and components
- the following electrical components:
 - switch and fuse panels
 - bilge pump

-
- lighting
 - depth sounder or fish finder
 - GPS
 - tools, equipment and materials appropriate for installing marine electrical systems and components.

AURRTX001 Inspect and service marine outboard and stern drive transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service marine outboard and stern drive transmissions. It involves preparing for the task, inspecting the transmission, reporting the inspection findings, servicing and adjusting the transmission, and completing workplace processes and documentation.

It applies to those working in the marine service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Marine

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and	1.1 Job requirements are determined from workplace instructions
