Skills	Description
Technology skills to:	• use precision measuring equipment, such as micrometers and vernier calipers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for using personal protective equipment (PPE) and hand tools.

Assessment Requirements for AURTTA022 Develop and apply mechanical system modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- develop and apply one of the following significant and non-routine modifications on the mechanical system of two different vehicles, vessels, machinery or equipment:
  - adapt or modify mechanical system to a significantly changed capability
  - adapt mechanical system for different work conditions
  - modify or install a significant mechanical system for a special purpose.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to developing and applying mechanical system modifications, including procedures for using personal protective equipment (PPE) and hand tools
- principles and processes involved in planning and implementing modifications to mechanical systems
- principles and processes involved in planning and implementing modifications to mechanical systems
- types, functions, operation and limitations of mechanical systems being modified
- types, functions, operation and limitations of diagnostic testing equipment required for mechanical system modifications
- requirements of Australian Design Rules (ADRs) and Vehicle Safety Bulletins (VSBs) relating to mechanical system modifications
- procedures for documenting and reporting the modification specifications and outcomes.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mechanical systems that they have modified, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer mechanical system specifications
- ADRs and VSBs relating to mechanical system modifications
- two different vehicles, vessels, machinery or equipment requiring mechanical system modification
- testing equipment for mechanical system modification
- tools, equipment and materials appropriate for completing mechanical system modifications.

AURTTA023 Develop and apply hydraulic system modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to develop, apply and validate significant modifications to existing hydraulic systems in order to vary or enhance performance. It involves identifying the modification requirement, developing the modification specifications, applying and testing the modification, and completing workplace processes and documentation.

Significant and non-routine modifications are those that require compliance with Australian Design Rules and Vehicle Safety Bulletins.

It applies to those working in the automotive service and repair industry. The hydraulic systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the modification requirement	1.1 Job requirements are determined from workplace instructions 1.2 Reasons for the modification are identified and confirmed with appropriate persons 1.3 Modification options are identified and presented to appropriate persons according to workplace procedures 1.4 Hazards associated with the work are identified and risks are managed 1.5 Legal and safety impacts of the modification are considered, as required, according to regulatory requirements
2. Develop and validate the modification specification	2.1 Manufacturer specifications for the existing hydraulic system are sourced and interpreted 2.2 Criteria for selecting the modification method and evaluating the outcomes are identified and documented 2.3 Proposed modification method is identified, selected and evaluated from available options 2.4 Selected option, including material choices and processes, is developed in detail and progressively assessed against established criteria 2.5 Modification specification is documented according to workplace procedures
3. Apply and test the modification specification	3.1 Tools, test equipment and materials required to support the modification procedure are identified, selected and prepared for use 3.2 Selected modification method is carried out according to workplace procedures, and ***safety and environmental requirements*** 3.3 Post-modification testing is carried out according to workplace procedures to confirm modification outcomes are as intended, and any problems detected as having been introduced during the modification process are rectified 3.4 Test results and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.5 Variations needed during the modification process or as a result of testing are incorporated into the modification specification 3.6 Information and detail relating to the modification are documented and provided to the appropriate parties according to regulatory and commercial obligations

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate and evaluate appropriate sources of information.
Reading skills to:	• interpret the operating and testing procedures for hydraulic system testing equipment from workplace and manufacturer literature • research, organise and interpret technical information from manufacturer and workshop literature when seeking hydraulic system specifications and procedures.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting modification findings and recording parts and material used.
Oral communication skills to:	• clarify instructions, gain information from supervisors, and report modification outcomes.
Numeracy skills to:	• measure hydraulic system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications • interpret precision measuring equipment and test equipment units and scales.
Planning and organising	• plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
skills to:	within workplace timeframes.
Technology skills to:	• use precision measuring equipment, such as micrometers and vernier calipers • use specialised testing equipment, such as flow and pressure gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for dealing with high pressure fluid systems • environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydraulic systems.

AURTTA026 Diagnose complex faults in electronic over hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose complex faults in electronic over hydraulic systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, choosing the diagnostic procedure and tools, applying the diagnostic procedure, reporting conclusions and making repair recommendations.

Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

It applies to those working in the automotive service and repair industry. The electronic over hydraulic systems include those of agricultural machinery, heavy commercial vehicles, marine vessels or mobile plant machinery, which may be wheeled or track type machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTA026 Diagnose complex faults in electronic over hydraulic systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose a complex fault in three different electronic over hydraulic systems
- the above diagnosis must involve two of the following types of complex faults:
  - an intermittent fault
  - a fault that affects more than one system
  - a fault introduced as a result of a system repair
  - an indirect fault caused by the influence of external systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing complex faults in electronic over hydraulic systems, including procedures for working with high pressure fluid systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydraulic systems
- types of complex faults relating to electronic over hydraulic systems, including:
  - intermittent
  - multi-system
  - introduced as a result of system repair
  - indirect, caused by the influence of external systems
- types, functions, operation and limitations of electronic over hydraulic systems and components, including:
  - input sensors

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - output actuators
    - computer systems
- testing procedures for different electronic over hydraulic systems, including:
    - electronic control analysis
    - component wear analysis
    - system operation analysis
- types, functions, operation and limitations of diagnostic testing equipment required to diagnose complex faults in different electronic over hydraulic systems, including:
    - scan tools
    - vacuum gauges
    - oil pressure gauges
- procedures for accessing and interpreting scan tool system data, including:
    - diagnostic trouble codes (DTCs), including:
        - conditions that set the DTCs
        - conditions for running DTCs
    - live data
    - freeze frame data
    - waveforms
    - vehicle continuous and non-continuous monitored systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the electronic over hydraulic systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

AURTTB001 Inspect and service braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service braking systems according to manufacturer specifications. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The braking systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, motorcycles, mobile plant machinery, outdoor power equipment or trailers. The braking systems may be hydraulic, air over hydraulic, air, mechanical, or hand and parking braking systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service braking system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect braking system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and ***safety and environmental requirements*** 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service braking system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 ***Post-service testing*** is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to braking systems.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report inspection finding and make repair recommendations.
Numeracy skills to:	• measure brake components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications • interpret measuring equipment scales.
Technology skills to:	• use measuring equipment, such as vernier calipers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • lifting and supporting vehicles or machinery
	  • managing and controlling brake dust and brake fluids
	• environmental requirements, including procedures for trapping, storing and disposing of brake dust and brake fluid released from braking systems.

Post-service testing must include**:**	• static and dynamic testing of braking system.

  - mechanical braking systems
  - air over hydraulic systems
  - air braking systems
- types, applications and testing of brake hydraulic fluids
- inspection procedures for braking system components, including:
  - component wear analysis
  - brake fluid testing
- service and adjustment procedures for braking systems, including:
  - brake bleeding
  - brake adjustment
  - park brake adjustment
- post-service testing procedures for braking systems, including static and dynamic testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer braking system specifications
- two different vehicles or machinery with disc and drum braking systems requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing braking systems.

AURTTB004 Inspect and service air braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service air braking systems according to manufacturer specifications. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The air braking systems include those of agricultural machinery, heavy commercial vehicles or mobile plant machinery.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service air braking system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect air braking system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and ***safety and environmental requirements*** 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service air braking system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to ***components*** or systems 3.2 ***Post-service testing*** is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature when seeking inspection and service procedures and specifications relating to air braking systems.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report inspection findings and make repair recommendations.
Numeracy skills to:	• measure brake components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications • interpret measuring equipment scales.
Technology skills to:	• use precision measuring equipment, such as vernier calipers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • managing and controlling brake dust
	  • working with stored energy
	• environmental requirements, including procedures for trapping, storing and disposing of brake dust released from air braking systems.

Components must include:	• air compressor, filters, air drier, receivers and tanks • drive belts • spring brake chambers, hoses and adjusters • discs, pads, drums and linings • brake valves • brake lights

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• trailer brake valves.
Post-service testing must include:	• static and dynamic testing of braking system.

Assessment Requirements for AURTTB004 Inspect and service air braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the air braking systems of two different vehicles or machinery, including:
  - one air disc braking system
  - one air drum braking system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing air braking systems, including procedures for:
  - managing and controlling brake dust
  - working with stored energy
- environmental requirements, including procedures for trapping, storing and disposing of brake dust released from air braking systems
- identification and function of major air braking components, including:
  - air compressor, filters, air drier, receivers and tanks
  - drive belts
  - spring brake chambers, hoses and adjusters
  - discs, pads, drums and linings
  - brake valves
  - brake lights
  - trailer brake valves
- basic operation of air braking systems, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - mechanical
  - pneumatic
- inspection procedures for air braking systems, including:
  - component wear analysis
  - air system assessment
- service and adjustment procedures for air braking systems, including:
  - brake adjustment
  - parking and emergency brake adjustment
- post-service testing procedures for air braking systems, including static and dynamic testing.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air braking systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer air braking system specifications
- two different vehicles or machinery with air disc and air drum braking systems requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing air braking systems.

AURTTB006 Inspect, service and repair auxiliary braking systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, service and repair auxiliary braking systems. It involves preparing for the task, inspecting the system, servicing and carrying out any necessary repairs to the system, performing post-service or repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The auxiliary braking systems include those of agricultural machinery, heavy commercial vehicles or mobile plant machinery. The unit applies to vehicles or machinery fitted with speed reducing or control devices, such as engine brakes, exhaust brakes or hydraulic or electrical retarders.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

AURTTB007 Remove and replace brake assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the front and rear brake assemblies of a vehicle. It requires the learner to plan and prepare the task; identify types of brake assemblies; inspect components and identify their function; remove and replace the front and rear brake assemblies; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Unit Sector

Technical - Brakes

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and replace brake	1.1 ***Safety and environmental requirements*** are sourced and interpreted

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
assemblies	1.2 Task instruction is interpreted and vehicle brake assemblies to be worked on are identified 1.3 Manufacturer specifications and workplace procedures for brake assemblies removal and replacement are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Tools and equipment required for removing and replacing brake assemblies are identified according to manufacturer specifications
2. Remove and inspect brake assemblies	2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements 2.2 Vehicle is prepared for brake assemblies removal according to workplace procedures and safety and environmental requirements 2.3 ***Brake assemblies*** are removed according to workplace procedures and safety and environmental requirements, and without causing damage to components, tools or equipment 2.4 Brake assemblies' components are arranged, identified and inspected according to manufacturer specifications 2.5 Brake assemblies' inspection results are recorded
3. Replace brake assemblies	3.1 Brake assemblies are prepared for replacement 3.2 Brake assemblies are replaced according to workplace procedures, manufacturer specifications, and safety and environmental requirements, and without causing damage to components, tools or equipment 3.3 Brake assemblies are adjusted and bled
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use or storage according to workplace procedures 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 4.4 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of vehicle braking system information and brake assembly removal and replacement procedures.
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace front and rear brake assemblies • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• read and interpret numerical information in brake system component identification codes • use specialist tools and measuring equipment correctly, including verniers, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) • use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate clearances.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	• set up and operate equipment and tools required to remove and replace front and rear brake assemblies.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
	  • use of personal protective equipment, including safety glasses, ear protection and safety footwear
	  • use of hand tools and lifting equipment
	  • application of procedures for handling and disposing of used brake fluid, lubricants and asbestos-based products, including brake dust.

Brake assemblies must include:	• both front disc brake assemblies • both rear drum brake assemblies.

Unit Mapping Information

No equivalent unit.

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace the brake assemblies of at least two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
  - use of personal protective equipment, including safety glasses, ear protection and safety footwear
  - use of hand tools and lifting equipment
  - safety data sheets (SDS) and procedures for handling and disposing of waste brake fluid, lubricants and asbestos-based products, including brake dust
- types, application and basic operation of brake assembly, including:
  - disc brake systems
  - drum brake systems
  - hand brake systems
  - brake fluids
- brake assembly function and basic principles of operation
- brake assembly component names and their functions
- brake assembly dismantling procedures, including:
  - disc caliper, pad and disc removal
  - brake drum, shoes and wheel cylinder removal
- brake assembly inspection procedures, including:
  - brake hose serviceability
  - disc thickness

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - disc runout
  - brake shoe serviceability
  - brake drum wear
- brake assembly replacement procedures, including:
  - disc pad replacement
  - caliper pin lubrication
  - disc replacement
  - brake cylinder and shoe replacement
  - bleeding and adjustment procedures
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced front and rear brake assemblies, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two vehicles fitted with front and rear brake assemblies, including disc and drum brake assemblies
- tools and special equipment, including lifting equipment.

AURTTB012 Attach friction materials and radius grind

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to attach brake and clutch friction materials using bonding, riveting or screwing methods and radius grind brake shoes. It involves preparing for the task, selecting and attaching friction material, radius grinding, and completing workplace processes and documentation.

This unit applies to those working within the automotive vehicle body repair industry. The friction materials include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to attach friction materials	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret friction material attaching procedures and information in order to identify friction material attaching options required for the job 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify tools and equipment required for the job and examine for serviceability

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.5 Measure components and evaluate against manufacturer specifications 1.6 Identify and prepare components for bonding or riveting according to workplace procedures, workplace health and safety and environmental requirements
2. Attach friction materials	2.1 Identify and prepare friction materials to be attached according to workplace procedures, workplace health and safety, and environmental requirements 2.2 Attach friction materials to components according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements
3. Radius grind brake shoes	3.1 Obtain and interpret radius grinding procedures from manufacturer specifications 3.2 Radius grind brake shoes according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements 3.3 Measure brake shoes against manufacturer specifications and according to workplace procedures and rectify any issues identified 3.4 Test brake shoes according to workplace procedures, workplace health and safety and environmental requirements
4. Complete work processes	4.1 Carry out final inspection to ensure work is to workplace expectations and components are ready for use or stored according to workplace procedures 4.2 Clear work area and dispose of or recycle materials according to workplace procedures 4.3 Examine and store tools and equipment according to workplace procedures 4.4 Complete documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate relevant sources of friction attaching material and radius grinding information efficiently
Reading skills to:	• read and interpret information from workplace procedures and documentation on safe operating procedures for attaching friction materials and using radius grinding machinery

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Writing skills to:	• legibly and accurately fill out workplace documentation when making recommendations and recording parts and material used
Oral communication skills to:	• clarify instructions • report findings • make recommendations
Numeracy skills to:	• measure components • use basic mathematical operations, including addition and subtraction • calculate tolerances and deviations from manufacturer specifications
Problem solving skills to:	• identify risk factors and take action to minimise risk
Technology skills to:	• use radius grinding machinery • use measuring equipment including tape measures, rulers and vernier calipers

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
AURTTB012 Attach friction materials and radius grind (Release 1)	AURTTB002 Attach friction materials and radius grind (Release 1)	Wording changes to ensure compliance with Standards for Training Packages. Assessment Requirements for AURTTB012 Attach friction materials and radius grind

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must attach friction materials to and radius grind the following two vehicle components:

- one set of brake shoes
- one clutch plate
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for attaching friction materials and radius grinding including:

- how to locate and interpret manufacturers specifications or equivalent information and workplace procedures for attaching friction materials and radius grinding
- the following workplace health and safety requirements relating to attaching friction materials and radius grinding:
  - procedures for working with brake machining equipment
  - selecting and using personal protective equipment (PPE)
  - procedures for handling and controlling brake dust
- the following technical information relating to attaching friction materials and radius grinding including:
  - material selection procedures
  - procedures for preparing components for friction material attachment:
  - friction material removal procedures
  - component cleaning procedures
  - friction material shaping and sizing procedures
  - procedures for attaching friction materials:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - bonding
  - riveting
  - procedures for radius grinding brake shoes
- environmental procedures for trapping, storing and disposing of brake dust produced during radius grinding
- workplace housekeeping and documentation procedures

Attaching friction materials and radius grinding technical information, including:

- coefficient of friction
-

Assessment Conditions

The assessment must:

- include access to:
  - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
  - repair orders and workplace instructions relating to attaching friction materials and radius grinding activity
  - workplace procedures relating to attaching friction materials and radius grinding activity
  - manufacturer specifications or equivalent documentation for attaching friction materials and for radius grinding
  - PPE for attaching friction materials and radius grinding
  - brake shoes and clutch plate requiring friction material attachment and radius grinding
  - bonding and riveting materials
  - radius grinding machinery
  - equipment, hand and power tooling suitable for attaching friction materials and radius grinding
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessors of this unit must:

satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards

AURTTB013 Machine brake drums and brake disc rotors

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to measure, evaluate and machine vehicle brake drums and brake disc rotors to manufacturer specifications. It involves preparing for the task, machining disc brake rotors and brake drums, and completing workplace processes and documentation.

This unit applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to machine brake drums and brake disc rotors	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret brake drum and disc rotor machining procedures and information to identify machining options required for the job 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify and examine tools and equipment required for the job, including disc and drum brake lathe and examine for serviceability

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.5 Measure brake drums and brake disc rotors and evaluate against manufacturer specifications 1.6 Prepare brake drums and brake disc rotors for machining according to workplace procedures, workplace health and safety and environmental requirements
2. Carry out machining operations	2.1 Position brake drums and brake disc rotors in brake lathe according to manufacturer specifications, workplace procedures, and workplace health and safety requirements 2.2 Machine brake drums and brake disc rotors according to manufacturer specifications, workplace procedures and workplace health and safety requirements 2.3 Measure brake drums and brake disc rotors against manufacturer specifications according to workplace procedures 2.4 Visually evaluate brake drums and brake disc rotors to ensure safe operation according to workplace procedures
3. Complete work processes	3.1 Carry out final inspection to ensure work meets workplace expectations and brake drums and brake disc rotors are ready for use or stored according to workplace procedures 3.2 Clear work area and dispose of or recycle materials according to workplace procedures 3.3 Examine and store tools and equipment according to workplace procedures 3.4 Complete workplace documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate relevant sources of machining brake drums and brake disc rotors information efficiently
Reading skills to:	• read and interpret information and ideas from workplace procedures and documentation on safe operating procedures for brake drums and brake disc rotor machining equipment • read and interpret information from manufacturer specifications
Writing skills to:	• legibly and accurately fill out workplace documentation when recording measurements, and recording parts and material used

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Oral communication skills to:	• clarify instructions • make repair recommendations
Numeracy skills to:	• measure braking drums and brake disc rotors • use basic mathematical operations, including addition and subtraction • calculate distances, tolerances and deviations from manufacturer specifications
Planning and organising skills to:	• plan own work requirements • prioritise actions to achieve required outcomes • ensure tasks are completed within workplace timeframes
Technology skills to:	• use braking system measuring equipment, including vernier calipers, micrometers and brake drum micrometers • use brake lathes

Assessment Requirements for AURTTB013 Machine brake drums and brake disc rotors

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate evidence of machining the following:

- the four disc rotors of a four wheel disc brake system
- the two brake drums of a rear drum brake system or all four brake drums of a four wheel drum brake system
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for machining brake drums and brake disc rotors including:

- how to locate and interpret manufacturer specifications or equivalent documentation and workplace procedures relating to machining brake drums and brake disc rotors
- the following workplace health and safety requirements relating to machining brake drums and brake disc rotors:
  - procedures for working safely with brake machining equipment
- the following measurement and evaluation procedures for brake drums and brake disc rotors:
  - using vernier calipers, micrometers, brake drum micrometers and dial gauge indicators
  - visual inspection procedures for brake drums and brake disc rotors
- environmental procedures for trapping, storing and disposing of metal swarf produced during machining
- workplace housekeeping and documentation procedures

Machining brake drums and brake disc rotors technical information including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- the purpose and operation of the following brake drum and brake disc rotor machining equipment:
  - off-vehicle machining
  - on-vehicle machining
  -

Assessment Conditions

The assessment must:

- include access to:
  - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
  - repair orders and workplace instructions relating to machining brake drums and brake disc rotors activity
  - workplace procedures relating to machining brake drums and brake disc rotors activity
  - manufacturer specifications or equivalent documentation for machining brake drums and brake disc rotors
  - brake drums and brake disc rotors requiring machining as specified in the performance evidence
  - brake drum and brake disc rotor machining equipment
  - measuring equipment for light vehicle braking systems including, vernier calipers, micrometers, brake drum micrometers and dial gauge indicators
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

AURTTB015 Assemble and fit braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to assemble and fit braking system components to vehicles. It involves preparing for the task, assembling and fitting brake components, post-fitting testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The braking systems include those of vehicles in all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Brakes

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to assemble and fit braking system components	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret procedures and information for assembling and fitting braking system components to identify options required for the job 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify tools and equipment required for the job and examine for serviceability
2. Assemble and fit	2.1 Inspect components for suitability and report faults according to

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

components	workplace procedures 2.2 Assemble components according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements 2.3 Fit components according to manufacturer specifications, workplace procedures, and workplace health and safety requirements
3. Test components	3.1 Obtain and interpret testing procedures from manufacturer specifications 3.2 Test braking system according to manufacturer specifications and adjust as required 3.3 Tag failed components for further work 3.4 Record test results according to workplace procedures
4. Complete work processes	4.1 Carry out final inspection to ensure work is to workplace expectations and vehicle is ready for use according to workplace procedures 4.2 Clear work area and dispose of or recycle materials according to workplace procedures 4.3 Examine and store tools and equipment according to workplace procedures 4.4 Complete workplace documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate relevant sources of braking system information efficiently
Reading skills to:	• read and interpret information and ideas from workplace procedures and documentation on safe operating procedures for assembling, fitting and testing braking system equipment • read and interpret information from manufacturer specifications
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting findings, making repair recommendations, and recording parts and material used
Oral communication skills to:	• clarify instructions • report faulty components

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• make fitting recommendations
Numeracy skills to:	• measure braking system and vehicle components • use basic mathematical operations, including addition and subtraction • calculate distances and tolerances
Planning and organising skills to:	• plan own work requirements • prioritise actions to achieve required outcomes • ensure tasks are completed within workplace timeframes
Technology skills to:	• use braking system measuring equipment including vernier calipers, micrometers and brake drum calipers

Assessment Requirements for AURTTB015 Assemble and fit braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate assembling and fitting three different components from one of the following braking systems:

- hydraulic
- pneumatic over hydraulic
- vacuum over hydraulic
- electric
- electric over hydraulic
- pneumatic
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for assembling and fitting braking system components including:

- how to locate and interpret manufacturer specifications or equivalent documentation and workplace procedures for assembling and fitting braking system components
- the following workplace health and safety requirements relating to assembling and fitting brake system components:
  - procedures for lifting and supporting vehicles
  - procedures for handling and controlling brake dust and brake fluids
- the following technical braking systems information including:
  - procedures and techniques for assembling braking system components
  - procedures and techniques for fitting and testing braking system components
- environmental procedures for trapping, storing and disposing of brake dust and brake fluid released during assembly and fitting process
- workplace housekeeping and documentation procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Technical braking systems information including:

- the operation of the following braking systems and their components:
  - hydraulic
  - pneumatic over hydraulic
  - vacuum over hydraulic
  - electric
  - electric over hydraulic
  - pneumatic
  -

Assessment Conditions

The assessment must:

- include access to:
  - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
  - workplace instructions relating to the assembly and fit of braking system component
  - workplace procedures relating to assembly and fit of braking system components
  - manufacturer specifications or equivalent information relating to the assembly and fit of braking system components
  - components of the braking systems specified in the performance evidence
  - vehicles requiring the fitting and assembly of the braking systems specified in the performance evidence
  - equipment, hand and power tooling appropriate for assembling, fitting and testing braking systems and associated components
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

AURTTC001 Inspect and service cooling systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service air and liquid cooling systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, reporting the inspection findings, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The cooling systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycle or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Cooling Systems

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service cooling system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect cooling system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and ***safety and environmental requirements*** 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service cooling system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or equipment is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to cooling systems.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report inspection findings and make repair recommendations.
Numeracy skills to:	• calculate and adjust coolant volumes and ratios using basic mathematical operations, including addition, subtraction, multiplication and division • determine cooling system pressures for comparison to specifications.
Technology skills to:	• use cooling system test equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with:
	  • hot pressurised cooling systems
	  • rotating fans, belts and pulleys
	  • coolant additives
	• environmental requirements, including procedures for trapping, storing and disposing of fluids released from cooling systems.

Assessment Requirements for AURTTC001 Inspect and service cooling systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the cooling systems of two different vehicles or machinery
- undertake post-service testing of above systems, which must include:
  - pressure testing
  - testing and adjusting coolant additives.

Knowledge Evidence

- Individuals must be able to demonstrate knowledge of:
- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing cooling systems, including procedures for working with:
  - hot pressurised cooling systems
  - rotating fans, belts and pulleys
  - coolant additives
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from cooling systems
- identification, function and basic operation of liquid cooling system, including:
  - engine coolant additives
  - water pumps
  - filters
  - thermostats
  - mechanical, hydraulic and electric fans
  - radiators and radiator caps

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - heater core and heater valve
  - expansion tanks
  - heat exchangers
  - core plugs
  - hoses
  - drive belts
  - temperature sensors and gauges
  - keel cooling, heat exchanger, raw water cooling and sacrificial anodes
- identification, function and basic operation of air cooling system, including:
  - cooling system controls, fans, fins and cowlings
- types, quantities and applications of coolant additives, including coolant concentration
- inspection procedures for cooling systems, including:
  - coolant concentration test
  - transient voltage test
  - cooling system components
  - cooling system pressure testing
- service and adjustment procedures for cooling systems, including:
  - system cleaning
  - coolant replacement
  - cooling system bleeding
- post-service testing procedures for cooling systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the cooling systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- workplace instructions
- manufacturer cooling system specifications
- two different vehicles or machinery with cooling systems requiring servicing
- cooling system test equipment
- tools, equipment and materials appropriate for inspecting and servicing cooling systems.

AURTTC004 Remove and replace radiators

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the radiator of a vehicle. It requires the learner to plan and prepare the task; remove the radiator and inspect it and its associated components; replace the radiator; top up the cooling system and check for leaks; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Cooling Systems

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and replace radiator	1.1 ***Safety and environmental requirements*** are sourced and interpreted

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Task instruction is interpreted and vehicle radiator to be worked on is identified 1.3 Manufacturer specifications and workplace procedures for radiator removal and replacement are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Tools and equipment required for removing and replacing radiator are identified according to manufacturer specifications
2. Remove radiator	2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements 2.2 Vehicle is prepared for radiator removal according to workplace procedures and safety and environmental requirements 2.3 ***Vehicle radiator*** is removed according to workplace procedures and manufacturer specifications, and without causing damage to components, tools or equipment 2.4 Radiator and associated components are inspected according to manufacturer specifications 2.5 Results of inspection of radiator and its associated components are recorded
3. Replace radiator	3.1 Radiator is prepared for replacement 3.2 Radiator is replaced according to workplace procedures, manufacturer specifications, and safety and environmental requirements, and without causing damage to components, tools or equipment 3.3 ***Cooling system is tested*** according to manufacturer specifications 3.4 Cooling system test results are recorded
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use or storage according to workplace procedures 4,2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 4.4 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of information on vehicle cooling system and radiator removal and refitting procedures.
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace radiators • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• read and interpret numerical information in cooling system information • use specialist tools and measuring equipment correctly, including pressure testers, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. kPa for kilopascals) • use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate ratios of coolant.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	• set up and operate equipment and tools required to remove and replace radiators.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including: • use of personal protective equipment, including safety glasses, ear protection and safety footwear • use of automotive hand tools • application of procedures for handling and disposing of used coolant.
Vehicle radiator must include:	• radiator for an engine with a liquid cooling system.
Cooling system is tested must include:	• pressure-testing the cooling system.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTC004 Remove and replace radiators

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly and safely remove and replace the radiators of at least two different vehicles or engine assemblies.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS)and environmental requirements, including:
  - use of personal protective equipment, including safety glasses, ear protection and safety footwear
  - use of automotive hand tools and lifting equipment
  - safety data sheets (SDS) and procedures for handling and disposing of used coolant
- types, application and basic operation of radiators, including:
  - vertical flow radiators
  - cross flow radiators
  - cooling system coolants and additives
  - radiator hoses and clamps
- radiator removal procedures, including procedures for catching and storing engine coolant
- radiator and associated component inspection procedures
- radiator replacement procedures, including:
  - calculating coolant system filling and additive concentration
  - coolant system bleeding
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced radiators, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two motor vehicles or engine assemblies with engines with a liquid cooling system
- automotive hand tools and special equipment, including cooling system pressure tester.

AURTTD001 Inspect steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and test steering system components and assess their condition. It involves preparing for the task, inspecting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The steering systems are both mechanical and power assisted steering systems and include those of heavy commercial vehicles or light vehicles.

This unit applies to those inspecting steering systems prior to conducting a wheel alignment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Steering and Suspension

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect steering system	1.1 Job requirements are determined from workplace instructions 1.2 Inspection information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect steering system	2.1 ***Inspection*** is carried out according to manufacturer specifications, workplace procedures and ***safety requirements*** 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature when seeking inspection procedures and specifications relating to steering systems.
Writing skills to:	• legibly and accurately fill out documentation when reporting inspection findings and making recommendations.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Oral communication skills to:	• clarify instructions • report inspection findings to appropriate personnel.
Numeracy skills to:	• compare component wear against manufacturer specifications and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Problem solving skills to:	• refer problems outside area of responsibility to appropriate person.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Inspection must include:	• visual, aural and functional assessments of mechanical, hydraulic and electrical steering system components, including for damage, corrosion, wear and leakage.
Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for lifting and supporting vehicles.

Assessment Requirements for AURTTD001 Inspect steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect the following components of two different vehicle steering systems:
  - hydraulic components
  - steering column and couplings
  - steering linkages.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting steering systems, including procedures for lifting and supporting vehicles
- identification and function of major steering components, including:
  - steering wheel, column and couplings
  - rack and pinion
  - steering box
  - power steering pump, pipes and hoses
  - steering linkages, including:
    - ball joints
    - tie rods and tie rod ends
    - idler arms
    - connecting rod, track rod or drag link
    - pitman arms

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - steering arms
    - king pins
- basic operation of steering systems, including:
    - manual steering systems
    - power assisted steering systems
    - electronically controlled systems
- inspection and reporting procedures for steering systems and components, including:
    - component wear analysis
    - fluid leaks.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the steering systems that they have inspected, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer steering system specifications
- two different vehicles with steering systems requiring inspection prior to wheel alignment
- tools, equipment and materials appropriate for inspecting steering systems.

Assessment Requirements for AURTTD002 Inspect and service steering systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the steering systems of two different vehicles or machinery, including one of the following:
  - manual steering
  - electric power assisted steering
  - hydraulic power assisted steering
  - full hydraulic steering.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing steering systems, including procedures for isolating and stabilising vehicles or machines
- environmental requirements, including procedures for trapping, storing and disposing of oil and fluid released from steering systems
- identification, function and basic operation of steering systems, including:
  - manual steering
  - electric power assisted
  - hydraulic power assisted steering
  - full hydraulic steering
- identification and function of major steering components
- types and applications of lubricants and hydraulic fluids
- inspection procedures for steering systems, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - component wear analysis
  - oil and fluid leaks
- physical damage
- service and adjustment procedures for steering systems, including:
  - adjusting and replenishing oil and fluid levels as required
  - lubricating components
- post-service testing procedures of steering systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the steering systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer steering system specifications
- two different vehicles or machinery with the steering systems specified in the performance evidence and requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing steering systems.

Assessment Requirements for AURTTD004 Inspect and service suspension systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the front and rear suspension systems of two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing suspension systems, including procedures for:
  - working with stored energy
  - isolating and stabilising vehicles and machinery
- environmental requirements, including procedures for trapping, storing and disposing of lubricants and fluids released from suspension systems
- identification, function and basic operation of major front and rear suspension components, including:
  - spring types and dampers
  - suspension arms
  - suspension components
- types and applications of lubricants and fluids
- inspection procedures for suspension systems, including:
  - analysing component wear
  - checking fluid and air leaks
  - evaluating physical damage
- service and adjustment procedures for suspension systems, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - adjusting and replenishing oil and fluid levels as required
  - lubricating components
- post-service testing procedures for suspension systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer suspension system specifications
- two different vehicles or machinery with suspension systems requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing suspension systems.

AURTTD005 Overhaul steering system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return steering system components to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the steering system components, carrying out the overhaul procedures, reassembling and testing the components, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The steering systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery or outdoor power equipment. The unit does not apply to the steering systems of motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle steering system components	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted 1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate steering system components	2.1 Components are dismantled in a logical sequence according to manufacturer and workplace procedures, and ***safety and environmental requirements***, and without causing unnecessary damage to components or systems 2.2 Component is cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Component is measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 serviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble components	4.1 Components are assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of components is completed within workplace timeframes and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace

Skills	Description
	operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	• plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use precision measuring equipment, such as vernier calipers and micrometers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for using:
	  • specialised steering system component overhaul tools, equipment and machinery
	  • chemicals and toxic substances
	• environmental requirements, including procedures for trapping, storing and disposing of fluids released from steering systems.

Assessment Requirements for AURTTD005 Overhaul steering system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the following steering system components:
  - two different power steering pumps
  - one of the following components:
    - power rack and pinion steering box
    - steering column
    - recirculating ball steering box.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling steering system components, including procedures for using:
  - specialised steering system component overhaul tools, equipment and machinery
  - chemicals and toxic substances
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from steering systems
- types, characteristics and operating principles of steering systems and associated components
- steering system component overhaul procedures, including:
  - methods for cleaning and preparing steering system components for overhaul
  - steering system component dismantling procedures
  - steering system component inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - steering system component repair and adjustment procedures, including:
    - power steering pumps
    - power rack and pinion steering boxes
    - steering columns
    - recirculating ball steering boxes
  - steering system component assembly procedures, including procedures for measuring and calculating tolerances, and adjusting components
- post-overhaul testing procedures for steering system components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the steering system components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer steering system component specifications
- steering system components specified in the performance evidence and requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting steering system components.

AURTTD006 Remove and replace vehicle front suspension springs

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the front suspension springs of a vehicle. It requires the learner to plan and prepare the task; remove the springs and inspect them and associated components; replace the springs and check the vehicle ride height; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Steering and Suspension

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and	1.1 ***Safety requirements*** are sourced and interpreted

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
replace vehicle front suspension springs	1.2 Task instruction is interpreted and vehicle suspension to be worked on is identified 1.3 Manufacturer specifications and workplace procedures for removing and replacing suspension springs are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 Tools and equipment required for suspension spring removal and replacement are identified according to manufacturer specifications
2. Remove and inspect front suspension springs	2.1 ***Tools, equipment and materials*** are selected and checked prior to use according to manufacturer specifications and safety requirements 2.2 Vehicle is prepared for suspension springs removal according to workplace procedures and safety requirements 2.3 ***Front suspension springs*** are removed according to workplace procedures and safety requirements, and without causing damage to components, tools or equipment 2.4 Front suspension spring components are arranged, identified and inspected according to manufacturer specifications 2.5 Results of inspecting front suspension spring components are recorded
3. Replace front suspension springs	3.1 Front suspension components are prepared for assembly 3.2 Front suspension is assembled according to workplace procedures, manufacturer specifications and safety requirements, and without causing damage to components, tools and equipment 3.3 Vehicle ride height is checked according to manufacturer specifications
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use or storage according to workplace procedures 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 4.4 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance criteria and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of vehicle suspension system information and suspension spring removal and replacement procedures.
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace vehicle front suspension springs • select and interpret key information from workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• read and interpret numerical information in suspension system information • use specialist tools and measuring equipment correctly, including tape measures, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) • use basic mathematical operations, including addition and subtraction to calculate length.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	• set up and operate equipment and tools required to remove and replace vehicle front suspension springs.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety requirements must include:	• information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
	  • use of personal protective equipment, including safety glasses, ear protection and safety footwear
	  • use of hand tools and lifting equipment.

Tools, equipment and materials must include:	• automotive hand tools • lifting and supporting equipment • related special tools, including spring compressors.

Front suspension spring must include:	• front suspension springs from one of the following:
	  • passenger or light commercial vehicle
	  • motor cycle
	  • constructed vehicle.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTD006 Remove and replace vehicle front suspension springs

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace the front suspension springs of at least two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
  - dangers of working with stored energy in suspension springs
  - use of personal protective equipment, including safety glasses, ear protection and safety footwear
  - use of hand tools and lifting and supporting equipment
- types, application and basic operation of front suspension springs, including:
  - MacPherson strut
  - coil springs
- suspension spring removal procedures, including procedures for compressing springs
- suspension spring and associated component inspection procedures
- suspension spring replacement procedures, including ride height measurement procedures
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced front suspension springs, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two vehicles with complete front suspension assemblies
- tools and special equipment, including lifting and supporting equipment.

AURTTE001 Apply knowledge of engine science

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply knowledge of the construction and operation of engines and their components during engine repair or reconditioning activities. It involves identifying engine components and describing their function.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify relevant information of engine	1.1 Components of engine are identified during repair or reconditioning activities

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
construction and operation	1.2 Functions of engine components are identified during repair or reconditioning activities 1.3 Relationships between engine components, including effects on other components' tolerances and clearances, are identified during repair or reconditioning activities 1.4 Engine configurations are identified during repair or reconditioning activities
2. Apply relevant information of engine construction and operation to work activities	2.1 Knowledge of engine construction and operation is used during repair or engine reconditioning activities to carry out work according to manufacturer specifications and workplace procedures 2.2 Knowledge of engine diagnosis is used during repair or reconditioning activities to identify causes of engine component wear or failure
3. Evaluate knowledge of engine science	3.1 Knowledge of engine science is regularly checked with colleagues and supervisor to ensure currency and accuracy 3.2 Knowledge of engine science is updated as required to complement own work role

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate engine reconditioning procedures and engine specifications in workshop and manufacturer literature efficiently.
Reading skills to:	• interpret technical information and terminology found in workshop manuals and automotive textbooks relating to engines.
Communication skills to:	• discuss interpretation of engine science with colleagues and supervisor using listening skills and correct industry terminology.
Numeracy skills to:	• interpret numbers and units in information relating to engines in workshop manuals and automotive textbooks • use basic mathematical operations, including addition,

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	subtraction and multiplication, to calculate engine dimensions • use simple formulas, such as $A = \pi r^2$ • interpret numbers and units used with measuring equipment, such as compression gauges and cylinder leakage testers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

There is no Range of Conditions for this unit.

Assessment Requirements for AURTTE001 Apply knowledge of engine science

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria and foundation skills:

- apply knowledge of engine science to three different multi-cylinder engines when diagnosing and repairing engine faults or reconditioning engine components
- evaluate and expand knowledge of engine science, including demonstrating knowledge of one of the following:
  - new repair or reconditioning procedure
  - new engine technology
  - new reconditioning machine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- classifications of engines, including:
  - internal and external combustion
  - rotary and reciprocating engines
  - spark ignition and compression ignition engines
  - engine cylinder arrangements
- engine configurations, including:
  - inline engines, V type engines and slant cylinder engines
  - opposed cylinder engines
- camshaft and valve locations, including:
  - overhead cam (OHC)
  - overhead valve (OHV)

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- engine operating principles, including:
  - combustion, including:
    - air to fuel ratios and flame propagation
    - direct and indirect fuel injection
    - detonation and pre-ignition
  - two-stroke and four-stroke cycles
- procedures for measuring engines and engine performance, including:
  - bore and stroke, including:
    - over square, square and under square engines
    - crank throw
  - swept volume and engine volume
  - compression ratio
  - engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency
  - torque and horsepower, including brake horsepower
- construction and operation of petrol engines, including:
  - basic metallurgy relating to engines
  - identification of metric and imperial threads
  - engine components, including cylinder blocks, cylinders, pistons, cylinder heads, combustion chambers, inlet and exhaust manifolds, connecting rods, crankshafts, piston rings, gudgeon pins, camshafts, cams and flywheels
- combustion chambers, including:
  - L head, bathtub, wedge, trapezoidal, hemispherical and heron-type shapes
  - multiple valve designs
- construction and operation of diesel engines, including:
  - direct and indirect injection
  - swirl chambers
  - pre-combustion chambers
- engine diagnosis, including:
  - wet and dry compression tests
  - cylinder leakage tests
  - cylinder power balance tests
  - vacuum tests
  - oil pressure tests
  - sources of fluid leaks
  - exhaust smoke diagnosis
- engine noise diagnosis, including procedures for identifying:
  - common engine noises
  - common abnormal combustion noises
- procedures for expanding knowledge, including location and content of:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- technical literature relating to engine science
- technical information relating to new and emerging engine technologies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine science they have applied to engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- three different multi-cylinder engines
- technical literature relating to engine science.

AURTTE003 Remove and tag engine system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, remove and tag a range of engine components. It involves preparing for the work, removing and tagging engine components prior to engine dismantling by title, job number and engine application, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation for entering the automotive retail, service and repair industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTE003 Remove and tag engine system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and tag five of the following components from one engine:
  - intake manifold
  - exhaust manifold
  - starter motor
  - alternator
  - ignition components
  - fuel system components
  - turbocharger
  - power steering pump
  - hydraulic pump.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and tagging engine system components, including procedures for working with oils and fluids
- environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from engines
- identification and basic function of the engine system components specified in the performance evidence
- procedures for removing and tagging engine system components, including:
  - component removal

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- component inspection
- component tagging, including key information required on tags
- component storage.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine components that they have removed and tagged, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer engine component specifications
- one engine with the components specified in the performance evidence requiring removal and tagging
- tools, equipment and materials appropriate for removing and tagging engine system components.

AURTTE004 Inspect and service engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service engines. It involves preparing for the task, inspecting the engine, reporting the inspection findings, servicing and adjusting the engine, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engines include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant or motorcycles. The unit does not apply to outdoor power equipment engines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
service engine	1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect engine	2.1 ***Inspection*** is carried out according to manufacturer specifications, workplace procedures and ***safety requirements*** 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service engine	3.1 ***Service*** and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and ***environmental requirements***, and without causing damage to components or systems 3.2 ***Post-service testing*** is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	when seeking engine service procedures and specifications.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report inspection findings and make repair recommendations.
Numeracy skills to:	• calculate liquid volumes and service schedule intervals, using mathematical operations, including addition and subtraction.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Inspection must include**:**	• pre- and post-service inspections for oil and fluid leaks • analysing abnormal engine noises • inspecting ancillary components.

Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with:
	  • rotating and hot components
	  • engine oils
	  • high energy ignition and charging systems.

Service must include:	• replacing oil and oil filter.
Environmental requirements must include:	• procedures for trapping, storing and disposing of fluids released from engines.
Post-service testing must include:	• starting up and running engine to operating temperature • checking for leaks and abnormal noises.

Assessment Requirements for AURTTE004 Inspect and service engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the engines of two different vehicles or machinery, including replacing the engine oil and filters.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing engines, including procedures for working with:
  - rotating and hot components
  - engine oils
  - high energy ignition and charging systems
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- identification and function of major engine components, including:
  - cylinder block and head
  - piston and connecting rod
  - crankshaft
  - valve train
  - manifolds
  - ports and reed valve
- identification and function of engine systems, including:
  - lubrication
  - cooling system

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - fuel system
    - air system
- basic operation of spark ignition engines and compression ignition engines, including:
    - two-stroke spark ignition engines
    - four-stroke spark ignition engines
    - four-stroke compression ignition engines
- types and applications of engine configurations, including:
    - two-stroke spark ignition engines
    - four-stroke spark ignition engines
    - four-stroke compression ignition engines
- types and applications of engine oils and filters
- inspection procedures for engines, including:
    - oil and fluid leaks
    - ancillary components, including:
        - mountings
        - belts, pulleys and hoses
- service and adjustment procedures for engines, including:
    - adjusting or replacing engine components
    - replacing oil
    - replacing filter
- post-service testing procedures for engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engines that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- workplace instructions
- manufacturer engine specifications
- two different vehicles or machinery with engines requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing engines.

AURTTE005 Overhaul engines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return an engine removed from its chassis to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the engine, carrying out the overhaul procedures, reassembling and testing the engine, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry on two and four-stroke spark ignition and four-stroke compression engines. The engines include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery or motorcycles.

This unit does not apply to outdoor power equipment engines and marine outboard engines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Engines

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle engine	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted 1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate engine and components	2.1 Engine and relevant components are dismantled in a logical sequence according to manufacturer and workplace procedures, and ***safety and environmental requirements***, and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble engine and components	4.1 Engine is assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of engine is completed within workplace timeframes and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	process are rectified
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and engine is presented ready for use or storage 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate sources of information for engines efficiently.
Reading skills to:	• interpret and assess information from manufacturer and workshop literature when seeking engine specifications and procedures.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	• measure engine components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Planning and organising skills to:	• plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Technology skills to:	• use precision measuring equipment, such as micrometers and dial bore gauges
	• use specialised engine overhaul equipment, such as:
	  • hones
	  • valve and valve seat cutting machinery.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for using:
	  • specialised engine overhaul tools, equipment and machinery
	  • chemicals and toxic substances
	  • manual and mechanical lifting equipment
	• environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines.

Assessment Requirements for AURTTE005 Overhaul engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul two different multi-cylinder engines, including one engine with cylinder sleeves.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling engines and associated components, including procedures for:
  - using personal protective equipment (PPE) when handling engines and using chemical cleaning agents
  - using slings, chains and other lifting equipment and machinery
  - using specialised equipment, including heating torches, ovens and presses
  - handling freezing substances, including liquid nitrogen
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from engines
- types, characteristics and operating principles of engines and associated engine components
- engine overhaul procedures, including:
  - methods for cleaning and preparing engine for overhaul
  - engine dismantling procedures
  - engine and engine component inspection, measuring and evaluation procedures, including:
    - non-destructive testing procedures, including dye penetrant testing and magnetic particle testing
    - methods for measuring and calculating tolerances and clearances

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- engine and engine component repair and adjustment procedures, including:
  - engine cylinder head and block machining
  - engine crankshaft and camshaft grinding
  - engine cylinder and engine sleeve fitting, boring and honing
  - engine bearing tunnel and connecting rod repair
  - engine component heat treating, straightening and reclamation
  - engine component balancing
- engine assembly procedures, including procedures for tolerance measuring and calculating and adjusting components, including:
  - piston to connecting rod big-end alignment
  - big-end bearing to crankshaft journal clearance
  - big-end bearing crush with bearing blue
  - piston ring end gap, back clearance and side clearance
  - main bearing to crankshaft journal clearance
  - main bearing crush with bearing blue
  - semi-flanged thrust bearings to crankshaft clearance
  - finished camshaft bearings to camshaft clearance
  - camshafts and cam followers
  - camshaft end float
  - crankshaft end float
  - gear backlash
  - oil pump sealing and pick-up oil piping
- component assembly procedures and processes, including:
  - welsh plugs and oil gallery plugs
  - piston and connecting rod assemblies
  - big-end bearings
  - piston rings to pistons
  - main bearings and thrust washers
  - semi-flanged thrust bearings
  - crankshafts, including protection measures for crankshaft journals, bearings, rings and bores
  - finished camshaft bearings
  - camshafts and cam followers
  - timing gears
  - chains and tensioners
  - oil pumps, oil squirters and oil pump pick-ups
  - balance shafts
  - fitting ancillary components, including covers and seals, housings, diesel fuel injection pumps, oil coolers, crankshaft pulleys, flywheels and bell housings
- post-overhaul testing procedures for engines.

AURTTE006 Remove and replace conventional engine assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace the conventional engine assembly of a vehicle. It requires the learner to plan and prepare the task; remove the engine and inspect the associated components; replace the engine and check its operation; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance criteria and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of engine information and engine removal and replacement procedures.
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace engines • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• read and interpret numerical information in engine information • use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate ratios and volumes.
Planning and organising skills to:	• plan own work requirements and prioritise actions to complete engine removal and replacement.
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	• set up and operate equipment and tools required to complete engine removal and replacement.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental	• information about key aspects of work health and safety

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

requirements must include:	(WHS), occupational health and safety (OHS) and environmental requirements, including: • use of personal protective equipment, including safety glasses, ear protection and safety footwear • use of hand tools and lifting equipment • collection and disposal of used engine lubricants and coolant.
Tools and equipment must include:	• engine lifting equipment and related special tools.
Engine and associated components must include:	• cooling system components • electrical system components • exhaust system components • fuel system components.
Engine must include:	• an engine in a front engine, rear wheel drive vehicle.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTE006 Remove and replace conventional engine assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace at least one engine assembly from a conventional rear wheel drive vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
  - use of safety glasses, ear protection and safety footwear
  - use of engine lifting equipment
  - collection and disposal of used engine lubricants and coolant
- types, application and basic operation of engines, including:
  - multi-cylinder configurations
  - petrol and diesel classifications
  - engine lubrication requirements, including types and classifications of engine lubricants
- engine assembly removal procedures
- engine assembly and associated component inspection procedures, including procedures for inspecting:
  - cooling system components
  - electrical system components
  - exhaust system components
  - fuel system components
- engine assembly replacement procedures, including pre-startup checks and post-startup checks

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced the engine assembly, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- an operable vehicle with rear wheel drive
- automotive tools, engine assembly lifting equipment and attachments
- engine oil
- engine coolant.

ELEMENTS	PERFORMANCE CRITERIA
re-assemble a single cylinder four-stroke petrol engine	interpreted 1.2 Task instruction is interpreted and engine to be worked on is identified 1.3 Manufacturer specifications and workplace procedures for engine dismantle and assembly are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 ***Tools and equipment*** required for dismantling and assembling four-stroke petrol engine are identified according to manufacturer specifications
2. Dismantle engine and clean its components	2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements 2.2 Engine is cleaned according to manufacturer specifications and workplace procedures 2.3 ***Engine*** is dismantled without causing damage to components, tools or equipment 2.4 Engine components are cleaned and arranged for identification according to workplace procedures
3. Identify, inspect and measure engine components	3.1 Measuring equipment and tools are selected and checked according to manufacturer specifications and workplace safety procedures 3.2 Engine components are measured and results compared against manufacturer specifications 3.3 Engine bearing information is sourced and interpreted, and engine bearing type and associated loads are identified 3.4 Information on engine seals, sealants and gaskets is sourced and interpreted, and engine seals, sealants and gaskets are identified 3.5 Engine component inspection results are recorded
4. Inspect engine cooling system and components and identify type	4.1 Information on the function, type, and components of cooling system is sourced and interpreted 4.2 Cooling system components are identified and inspected according to manufacturer specifications 4.3 Cooling system component inspection results are recorded
5. Re-assemble engine and perform operational tests	5.1 Engine components are prepared for assembly according to manufacturer specifications and safety and environmental requirements 5.2 Engine is assembled according to manufacturer specifications, and without causing damage to components, tools and equipment 5.3 Engine is tested for correct assembly and operation 5.4 Engine assembly and testing procedures are recorded

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
6. Complete work processes	6.1 Final inspection is made to ensure work meets task instruction and workplace standards, and engine is presented ready for use or storage according to workplace procedures 6.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 6.3 Tools and equipment are checked and stored in a condition ready for use according to workplace procedures, or tagged and reported where necessary 6.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of vehicle engine information and engine dismantle and reassembly procedures.
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely dismantle and assemble a single cylinder four-stroke engine • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• read and interpret numerical information in engine information • use specialist tools and measuring equipment correctly, including verniers and micrometers, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) • use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate clearances and ratios.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
	  • use of safety glasses, ear protection and safety footwear
	  • use of engine dismantling and re-assembly equipment
	  • collection and disposal of used engine lubricants and coolant.

Tools and equipment must include:	• micrometers and other measurement instruments • torque wrench.
Engine must include one or more of the following:	• operational single cylinder four-stroke petrol engine with air/direct cooling • complete engine assembly with carburettor, manifold, ignition system and flywheel.

Unit Mapping Information

No equivalent unit.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle and assemble at least two different single cylinder four-stroke petrol engines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
  - use of safety glasses, ear protection and safety footwear
  - use of engine dismantling and re-assembly equipment
  - collection and disposal of used engine lubricants and coolant
- types of engines and engine operating principles for:
  - four and two-stroke engines
  - single and multi-cylinder configuration
- construction and operating principles of single cylinder four-stroke engine and functions of their major components
- functions of the lubricating system
- components of the lubricating system and their function
- functions of the cooling system
- components of the cooling system and their functions
- types and application of:
  - seals
  - gaskets
  - bearings
- dismantling procedures for engines, including:
  - bolt loosening sequences

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - procedures for noting component positions
- measurement and calculation methods for:
  - piston to bore and connecting rod bearing clearance
  - swept volume
  - clearance volume
  - compression ratio and engine capacity
- reassembly procedures for engines, including:
  - bolt tightening sequences and torque requirements
  - piston ring compression procedures
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engines that they have dismantled and assembled, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two different single cylinder four-stroke petrol engines
- tools and measuring instruments, including lifting equipment.

AURTTE008 Dismantle and assemble multi-cylinder four-stroke petrol engines

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to dismantle and reassemble a multi-cylinder four-stroke engine. It requires the learner to plan and prepare the task; dismantle the engine and inspect the components; reassemble the engine and check the engine operation; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Engines

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to dismantle and	1.1 ***Safety and environmental requirements*** are sourced and

ELEMENTS	PERFORMANCE CRITERIA
re-assemble a multi-cylinder four-stroke petrol engine	interpreted 1.2 Task instruction is interpreted and engine to be worked on is identified 1.3 Manufacturer specifications and workplace procedures for engine dismantle and assembly are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 ***Tools and equipment*** required for dismantling and assembling multi-cylinder four-stroke petrol engine are identified according to manufacturer specifications
2. Dismantle engine and clean its components	2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements 2.2 Engine is cleaned according to manufacturer specifications and workplace procedures 2.3 ***Engine*** is dismantled without causing damage to components, tools or equipment 2.4 Engine components are cleaned and arranged for identification according to workplace procedures
3. Identify, inspect and measure engine components	3.1 Measuring equipment and tools are selected and checked according to manufacturer specifications and workplace safety procedures 3.2 Engine and components are measured and results compared against manufacturer specifications 3.3 Engine bearing information is sourced and interpreted, and engine bearing type and associated loads are identified 3.4 Information on engine seals, sealants and gaskets is sourced and interpreted, and engine seals, sealants and gaskets are identified 3.5 Engine component inspection results are recorded
4. Inspect engine cooling system and components and identify type	4.1 Information on the function, type and components of cooling system is sourced and interpreted 4.2 Cooling system components are identified and inspected according to manufacturer specifications 4.3 Cooling system component inspection results are recorded
5. Re-assemble engine and perform operational tests	5.1 Information on engine seals, sealants and gaskets is sourced and interpreted 5.2 Engine components are prepared for assembly according to manufacturer specifications and safety and environmental requirements 5.3 Engine is re-assembled according to manufacturer specifications, and without causing damage to components, tools and equipment

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	5.4 Engine is tested for correct assembly and operation 5.5 Engine re-assembly and testing procedures are recorded
6. Complete work processes	6.1 Final inspection is made to ensure work meets task instruction and workplace standards, and engine is presented ready for use or storage according to workplace procedures 6.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 6.3 Tools and equipment are checked and stored in a condition ready for use according to workplace procedures, or tagged and reported where necessary 6.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of vehicle engine information and engine dismantle and reassembly procedures.
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely dismantle and assemble a multi-cylinder four-stroke engine • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• read and interpret numerical information in engine information • use specialist tools and measuring equipment correctly, including verniers, micrometers and torque wrenches, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters)

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	• use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate clearances and ratios.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
	  • use of safety glasses, ear protection and safety footwear
	  • use of engine dismantling and re-assembly equipment
	  • collection and disposal of used engine lubricants and coolant.

Tools and equipment must include:	• micrometers and other measurement instruments • torque wrench.

Engine must include one or more of the following:	• operational multi-cylinder four-stroke petrol engine with:
	  • 2, 4, 6 or 8 cylinder configurations
	  • overhead valve with push rods or overhead camshaft
	• complete multi-cylinder four-stroke engine assembly with carburettor, manifold, ignition system and flywheel.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTE008 Dismantle and assemble multi-cylinder four-stroke petrol engines

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle and assemble at least two different multi-cylinder four-stroke petrol engines.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
  - use of safety glasses, ear protection and safety footwear
  - use of engine dismantling and re-assembly equipment
  - collection and disposal of used engine lubricants and coolant
- types of engines and engine operating principles for:
  - four and two-stroke engines
  - single and multi-cylinder configuration, including straight, vee and horizontally-opposed engine configurations
- construction and operating principles of multi-cylinder four-stroke engine and functions of their major components
- functions of the lubricating system
- components of the lubricating system and their function, including:
  - sump
  - oil pumps
  - oil filters
  - oil galleries
- functions of the cooling system
- components of the cooling system and their function, including:
  - engine cooling galleries

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - radiators and hoses
    - thermostats
- types and applications of:
    - seals
    - gaskets
    - bearings
- dismantling procedures for engines, including:
    - bolt loosening sequences
    - procedures for noting component positions and order
- measurement and calculation methods for:
    - piston to bore and connecting rod bearing clearance
    - swept volume
    - clearance volume
    - compression ratio and engine capacity
- reassembly procedures for engines, including:
    - bolt tightening sequences and torque requirements
    - piston ring compression procedures
    - procedures for fitting pistons in bores in pairs
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engines they have dismantled and re-assembled, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two different multi-cylinder four-stroke petrol engines
- tools and measuring instruments, including lifting equipment.

Skills	Description
skills to:	
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	• set up and operate equipment and tools required to remove and replace an engine cylinder head.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
	  • use of safety glasses, ear protection and safety footwear
	  • use of engine cylinder head removal, dismantling, reassembly and replacement equipment
	  • collection and disposal of used engine lubricants and coolant.

Tools and equipment must include:	• automotive hand tools and cylinder head lifting equipment and attachments.
Engine cylinder head must include:	• the cylinder head of a multi-cylinder engine assembly, including all operational fitting attachments.
Engine cylinder head is dismantled must include:	• removing the valve operating mechanisms and valves from the cylinder head.
Engine cylinder head is replaced must include	• correctly torqueing cylinder head bolts and associated component retaining bolts

Assessment Requirements for AURTTE009 Remove and replace engine cylinder heads

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace at least two different cylinder heads.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
  - use of safety glasses, ear protection and safety footwear
  - use of cylinder head removal and replacement equipment
  - collection and disposal of used engine lubricants and coolant
- types of engines and engine operating principles for:
  - four and two-stroke engines
  - single and multi-cylinder configuration
  - petrol and diesel classification
- construction, function and operating principles of major engine components
- component lubricating systems, including:
  - principles and function
  - splash and pressure systems, including system components
- engine cooling systems, including:
  - principles and function
  - air-cooled and water-cooled systems, including system components
- types and application of:
  - seals
  - gaskets

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - bearings
- measurement and calculation methods for:
  - swept volume
  - clearance volume
  - compression ratio and engine capacity
- engine cylinder head removal procedures
- engine cylinder head dismantling procedures
- engine cylinder head inspection procedures, including testing for warping
- engine cylinder reassembly procedures
- engine cylinder head replacement procedures, including methods for torqueing cylinder head to engine
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to having removed and replaced engine cylinder heads, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- two different vehicle or stand-mounted operable engines
- tools and measuring instruments
- cylinder head lifting equipment and attachments.

AURTTF002 Inspect and service diesel fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service diesel fuel injection systems. It involves preparing for the task, inspecting the fuel injection system for leaks, inspecting the air filter, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The diesel fuel injection systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, motorcycles, mobile plant or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Fuel Systems

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service diesel fuel injection system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect diesel fuel injection system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, and ***safety and environmental requirements*** 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service diesel fuel injection system	3.1 ***Service*** and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures, including engine start-up check for leaks and operation
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to diesel fuel injection systems.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report inspection findings and make repair recommendations.
Numeracy skills to:	• calculate liquid volumes and service schedule intervals using basic mathematical operations, including addition and subtraction.
Problem solving skills to:	• refer problems outside area of responsibility to appropriate person.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • working with high pressure diesel fuel systems
	  • working with high voltage diesel fuel injectors
	  • working with stored fuel pressures
	  • engine start-up and shut-down
	• environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel systems.

Service must include**:**	• replacing fuel filters • servicing sedimenter filters • bleeding fuel systems as required • servicing air filters.

Assessment Requirements for AURTTF002 Inspect and service diesel fuel injection systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service a diesel fuel injection system on two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing diesel fuel injection systems, including procedures for:
  - working with high pressure diesel fuel systems
  - working with high voltage diesel fuel injectors
  - working with stored fuel pressures
  - engine start-up and shut-down
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel systems
- application, purpose and operation of air filter and air intake housing and ducting
- identification and function of mechanically controlled diesel fuel injection system and components, including:
  - types and applications of fuels, including diesel and biofuels
  - fuel tank and lines
  - fuel filters and sedimenter filters
  - fuel supply pumps
  - injection pumps, including:
    - in-line
    - rotary

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - injector pipes
  - injectors
  - overflow or leak-off pipes
- identification and function of electronic diesel fuel injection systems and common rail fuel systems and components, including:
  - fuel tank and lines
  - fuel filters and sedimenter filter
  - fuel supply pumps
  - injection pumps
  - pressure and injector pipes
  - fuel rail
  - injectors
  - overflow or leak-off pipes
  - electronic control unit and sensors
- inspection procedures for diesel fuel injection systems, including procedures relating to leaks, damaged piping and sedimentary sight glasses
- service and adjustment procedures for diesel fuel injection systems, including:
  - servicing sedimenter filter
  - replacing fuel filter
  - bleeding fuel system as required
  - servicing air filter and air intake housing and ducting
  - engine speed adjustments as required and operational testing
- post-service testing procedures for diesel fuel injection system.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the diesel fuel injection systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Assemble components	4.1 Components are assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of components is completed within workplace timeframes and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly process are rectified
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and components are presented ready for use or storage 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate sources of information for fuel system components efficiently.
Reading skills to:	• interpret and assess information from manufacturer and workshop literature when seeking fuel system component specifications and procedures.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations,

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	and recording parts and material used.
Oral communication skills to:	• clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	• measure fuel system components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	• plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use precision measuring equipment, such as vernier calipers and micrometers • use specialised fuel system component overhaul equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for using:
	  • specialised fuel system component overhaul tools, equipment and machinery
	  • chemicals and toxic cleaning substances
	• environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel injection systems.

Assessment Requirements for AURTTF003 Overhaul diesel fuel injection system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul the following diesel fuel injection system components:
  - two different diesel fuel high pressure pumps
  - two different sets of diesel fuel injectors.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling diesel fuel injection system components, including procedures for using:
  - specialised fuel system component overhaul tools, equipment and machinery
  - chemicals and toxic cleaning substances
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from fuel injection systems
- types, characteristics and operating principles of diesel fuel injection systems and associated components
- diesel fuel injection system component overhaul procedures, including:
  - methods for cleaning and preparing components for overhaul
  - component dismantling procedures
  - component inspection, measuring and evaluation procedures, including methods for measuring and calculating tolerances and clearances
  - component repair and adjustment procedures, including:
    - diesel fuel low pressure pumps

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - diesel fuel high pressure pumps
    - diesel fuel injectors
  - component assembly procedures, including procedures for measuring and calculating tolerances, and adjusting components
- post-overhaul testing procedures for diesel fuel injection system components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the diesel fuel injection systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer diesel fuel injection system component specifications
- diesel fuel injection system components specified in the performance evidence and requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting diesel fuel injection system components.

AURTTF005 Diagnose and repair engine forced-induction systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in engine forced-induction systems. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. Forced-induction systems include those in agricultural machinery, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Fuel Systems

Assessment Requirements for AURTTF005 Diagnose and repair engine forced-induction systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a turbocharger fault in an engine forced-induction system
- diagnose and repair a fault in two of the following components of engine forced-induction systems:
  - variable turbocharger
  - compound turbocharger
  - waste-gate actuator
  - intercooler
  - supercharger.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing engine forced-induction systems, including procedures for working with high temperature exhaust and intake system components
- operating principles of engine forced-induction systems and associated components, including volumetric efficiency
- application, purpose and operation of engine forced-induction systems and components, including:
  - turbochargers, including:
    - twin scroll
    - twin turbocharger
    - turbo compounding

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - variable geometry turbocharger
    - waste-gate operation
    - lubrication and cooling
    - intercooler operation, including air to air and water to air
  - supercharger operation
- diagnostic testing procedures for engine forced-induction systems, including:
  - intake manifold pressure and vacuum testing
  - intake and exhaust system leak testing
  - turbo boost air pressure
  - intercooler pressure and temperature checks, types include air to air and air to water
  - oil supply
  - oil return to sump
  - turbocharger waste-gate testing
  - visual inspection for oil leakage
  - turbine rotating assembly end float and axial movement
- repair procedures for engine forced-induction systems, including procedures for:
  - removing and replacing turbochargers
  - testing, removing, replacing and adjusting waste-gates
- post-repair testing procedures for engine forced-induction systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

AURTTF007 Overhaul carburettor fuel system components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return carburettor fuel system components to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the carburettor fuel system components, carrying out the overhaul procedures, reassembling and testing the carburettor fuel system components, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The carburettor fuel systems include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Fuel Systems

Elements and Performance Criteria

AURTTJ003 Remove and replace wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to remove and replace wheel and tyre assemblies. It requires the learner to plan and prepare the task; identify wheel and tyre assemblies; remove wheel and tyre assemblies; inspect components and identify their function; replace the wheel and tyre assembly; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Wheels and Tyres

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to remove and	1.1 ***Safety requirements*** are sourced and interpreted

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
replace wheel and tyre assemblies	1.2 Task instruction is interpreted and vehicle wheel and tyre assemblies to be worked on are identified 1.3 Manufacturer specifications and workplace procedures for removing and replacing wheel and tyre assembly are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.5 ***Tools and equipment*** required for wheel and tyre assembly removal and replacement are identified according to manufacturer specifications
2. Remove and inspect vehicle wheel and tyre assemblies	2.1 Tools, equipment and materials are selected and checked prior to use according to manufacturer specifications and safety requirements 2.2 ***Vehicle*** is prepared for wheel removal according to workplace procedures and safety requirements 2.3 ***Wheel and tyre assemblies*** are removed according to workplace procedures and manufacturer specifications, and without causing damage to components, tools or equipment 2.4 Wheel and tyre assemblies are identified and inspected according to manufacturer specifications 2.5 Wheel and tyre assembly inspection results are recorded
3. Replace wheel and tyre assemblies	3.1 Wheel and tyre assemblies are prepared for replacement 3.2 Wheel and tyre assemblies are replaced according to workplace procedures, manufacturer specifications and safety requirements without causing damage to components, tools or equipment 3.3 Wheel and tyre assembly on vehicle is checked for correct operation
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle wheels and tyres are presented ready for use or storage according to workplace procedures 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 4.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 4.4 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of wheel and tyre assembly information and assembly removal and replacement procedures.
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely remove and replace wheel and tyre assemblies • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• read and interpret metric and imperial systems of measurement • read and interpret numerical information in wheel and tyre identification codes • use specialist tools correctly, including pressure gauges, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. kPa for kilopascals) • use basic mathematical operations, including addition and subtraction, to calculate length.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes.
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	• set up and operate equipment and tools required to remove and replace wheel and tyre assemblies.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety requirements must include:	• information about key aspects of work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
	  • use of personal protective equipment, including safety glasses, ear protection and safety footwear
	  • use of hand tools and lifting and supporting equipment
	  • application of procedures for handling wheel and tyre assemblies.

Tools and equipment must include:	• automotive hand tools • vehicle lifting and supporting equipment, including wheel chocks.
Vehicles must include one or more of the following:	• passenger motor vehicle • motor cycle • constructed vehicle.
Wheel and tyre assemblies must include:	• one vehicle fitted with steel wheels • one vehicle fitted with alloy wheels.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURTTJ003 Remove and replace wheel and tyre assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace the wheel and tyre assemblies of at least two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
  - use of personal protective equipment, including safety glasses, ear protection and safety footwear
  - use of hand tools and lifting equipment
  - procedures for handling wheel and tyre assemblies
- types and application of wheel assemblies, including:
  - stamped or pressed steel wheels
  - alloy wheels
  - wheel studs and nuts
  - tyres, including cross-ply and radial tyres
- inspection procedures for tyre and wheel assemblies, including wheel inspection and tyre wear
- removal and replacement procedures and precautions
- tyre air pressure setting and test procedures
- work area clean-up and maintenance requirements.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed and replaced wheel and tyre assemblies, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- a vehicle fitted with steel wheels
- a vehicle fitted with alloy wheels
- automotive hand tools and lifting equipment.

AURTTJ011 Balance wheels and tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to balance automotive wheels and tyres. It involves identifying and confirming work requirements; preparing for the work; inspecting, balancing and refitting wheel and tyre assemblies; and completing workplace processes and documentation.

It applies to those working within the automotive light vehicle service and repair or light vehicle wheel alignment industry. The wheels and tyres include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery, motorcycles or trailers.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical – Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to balance wheels and tyres	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret wheel balancing information from manufacturer specifications 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify tools, equipment and materials required for the job and examine for serviceability
2. Conduct wheel and tyre	2.1 Carry out wheel and tyre pre-balance inspection according to manufacturer specifications, workplace procedures and workplace

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

pre-balance inspection	health and safety requirements 2.2 Report inspection findings according to workplace procedures, including recommendations for necessary repair or replacement
3. Carry out balancing procedures	3.1 Inspect wheel balancing machine according to manufacturer specifications, workplace procedures and safety requirements 3.2 Balance wheel according to manufacturer specifications, workplace procedures and safety requirements without causing damage to wheel or tyre
4. Complete work processes	4.1 Carry out final inspection to ensure work meets workplace expectations and vehicle and wheels are ready for use 4.2 Clear work area and dispose of or recycle materials according to workplace procedures 4.3 Examine and store tools and equipment according to workplace procedures 4.4 Complete workplace documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate relevant sources of balancing wheels and tyres information efficiently
Reading skills to:	• read and interpret information from manufacturer specifications and workshop literature relating to wheel balance procedures and specifications
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used
Numeracy skills to:	• measure wheel balancing weights • use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications • calculate balance weights in metric and imperial units of measurement • set and calibrate wheel balancing machine
Technology skills to:	• operate wheel balance machines

Assessment Requirements for AURTTJ011 Balance wheels and tyres

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate balancing of wheels and tyres that safely follows workplace procedures to meet required outcomes. This includes:

- balancing four different wheels and tyres, in which work must involve:
  - selecting appropriate methods and techniques to balance wheels and tyres
  - conducting wheel and tyre pre-balance inspection for damage and excessive run-out

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for balancing wheels and tyres, including:

- how to locate and interpret manufacturers specifications or equivalent information and workplace procedures for balancing wheels and tyres
- the following workplace health and safety requirements and procedures relating to balancing wheels and tyres:
  - lifting and supporting vehicles and wheels
  - working with balancing machines, including rotating components and flying objects
- environmental requirements relating to balancing wheels and tyres
- procedures for pre-balance inspection of wheels and tyres
- workplace housekeeping and documentation procedures

Wheel balancing machinery, including:

- off vehicle balancers
- on vehicle balancers

Wheel balancing equipment and concepts, including:

- tyre and wheel run-out

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- static and dynamic balance
- the following out of balance effects on wheels:
  - wheel hop or tramp
  - wheel shimmy
  - vibration
  - tread wear
- types and applications of wheel weights
-

Assessment Conditions

The assessment must:

- include access to:
  - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
  - repair orders and workplace instructions relating to balancing wheels and tyres activity
  - workplace procedures relating to balancing wheels and tyres activity
  - manufacturer wheel balancing specifications or equivalent documentation
  - four different wheels and tyres for balancing
  - wheel balancing machinery
  - two different vehicles or machinery requiring wheel/tyre balancing
  - tools, equipment and materials appropriate for balancing wheels and tyres
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards

AURTTJ012 Remove, inspect and refit wheel hubs and associated brake components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to remove, inspect and refit wheel hubs and associated brake components during the rectification of faults in steering and suspension systems. It involves identifying and confirming work requirements, preparing for the task, removing and refitting the wheel hubs and associated brake components, and completing workplace processes and documentation.

This unit applies to those working within the automotive service and repair industry. The hubs and associated brake components include those of light vehicles, four wheel drive vehicles or light commercial vehicles. This unit does not involve servicing or repairing braking systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical – Wheels and Tyres

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to remove and refit wheel hubs and associated brake components	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret wheel hub and braking component removal, refitting and adjustment information 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.4 Identify tools, equipment and materials required for the job and examine for serviceability
2. Remove and inspect wheel hubs and associated brake components	2.1 Identify components to be removed and remove according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements, and without causing damage to components or systems 2.2 Inspect components according to manufacturer specifications and workplace procedures 2.3 Report inspection findings and make recommendations for necessary repairs or replacements and adjustments according to workplace procedures
3. Refit and adjust wheel hubs and associated brake components	3.1 Obtain and interpret refitting information in order to identify refitting options required for the job 3.2 Fit and adjust wheel hubs and associated brake components according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements 3.3 Tighten wheel hub adjustment and wheel nuts according to manufacturer specifications and workplace procedures
4. Complete work processes	4.1 Carry out final inspection to ensure correct assembly and operation, and ensure work meets workplace expectations and vehicle is ready for use 4.2 Clean work area and dispose of or recycle materials according to workplace procedures 4.3 Examine tools and equipment and store according to workplace procedures 4.4 Complete workplace documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate relevant sources of wheel hub and braking components information efficiently
Reading skills to:	• read and interpret information from manufacturer specifications, workplace procedures and documentation when seeking removal, refitting and adjustment procedures and specifications
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making repair recommendations,

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	and recording parts and material used
Oral communication skills to	• clarify instructions • make repair recommendations
Numeracy skills to:	• interpret precision measuring tool scales • understand numerical divisions in metric and imperial units of measurement for tensioning fasteners
Technology skills to:	• use precision measuring equipment • operate fastener tensioning tools

Unit Mapping Information

Assessment Requirements for AURTTJ012 Remove, inspect and refit wheel hubs and associated brake components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate removing, inspecting, refitting and adjusting the following wheel hubs safely according to workplace procedures to meet required outcomes:

- one disc brake hub and associated brake components
- one drum brake hub and associated brake components

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures relating to the removal, inspection and refitting of wheel hubs and brake components, including:

- how to locate and interpret manufacturer specifications or equivalent documentation, manufacturer procedures and workplace procedures for removing, inspecting and refitting wheel hubs and associated brake components
- the following workplace health and safety requirements relating to removing, inspecting and refitting wheel hubs and associated brake components, including procedures for:
  - lifting and supporting vehicles and wheel hubs
  - handling and controlling brake dust and brake fluids
- the following environmental requirements and procedures:
  - trapping, storing and disposing of brake dust and brake fluid
- procedures for removing, inspecting, refitting and adjusting wheel hubs and associated brake components, including:
  - brake bleeding
  - brake and park brake adjustment
  - wheel bearing lubrication and adjustment
- post-fitting procedures and checks of wheel hubs and associated brake components
- workplace housekeeping and documentation procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Wheel hubs and associated brake components technical information, including:

- the purpose of:
  - discs, pads and brake calipers
  - drums, brake linings, wheel cylinders and hydraulic components
  - park braking devices
  - wheel bearing types
- the basic operation of the following braking systems:
  - hydraulic braking systems
  - mechanical braking systems
- the types and uses of brake hydraulic fluids and wheel bearing greases
-

Assessment Conditions

The assessment must:

- include access to:
  - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
  - repair orders and workplace instructions relating to remove, inspect and refit activity
  - workplace procedures relating to remove, inspect and refit activity
  - manufacturer specifications or equivalent documentation for wheel hubs and associated brake component
  - vehicle for removing and refitting the wheel hubs and associated brake components specified in the performance evidence
  - tools, equipment and materials appropriate for removing, inspecting and refitting wheel hubs and associated brake components
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards

AURTTK001 Use and maintain measuring equipment in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to select, use, maintain and store automotive measuring equipment. It involves selecting and maintaining measuring equipment, and using measuring equipment to determine length, width, angles, ovality, depth, out of square, clearances, run-out, pressure and temperature of automotive components and materials.

It applies to those working in all sectors of the automotive industry. This unit does not apply to electrical measuring equipment that measures voltage, resistance or current flow.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Tools and Equipment

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1 Select and use measuring equipment	1.1 Job requirements are determined from workplace instructions 1.2 Measuring equipment is selected to meet job requirements 1.3 Measuring equipment is checked for serviceability and calibration according to manufacturer and workplace procedures 1.4 Hazards associated with the work are identified and risks are managed 1.5 Measuring equipment is used according to manufacturer and ***safety requirements***
2 Service, maintain and store measuring equipment	2.1 Measuring equipment is serviced, calibrated and maintained according to workplace and manufacturer schedules and procedures to ensure safe and accurate operation, within scope of own responsibility 2.2 Damaged, worn or inaccurate measuring equipment is tagged and removed from the workplace and reported according to workplace procedures 2.3 Remaining measuring equipment is cleaned, checked and stored according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret measuring equipment information from manufacturer instruction manuals.
Writing skills to:	• legibly and accurately tag faulty measuring equipment • complete measuring equipment service and maintenance schedules.
Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate distance, area and volume • understand metric units of measurements and decimal

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	increments.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including safe operating procedures for specific measuring equipment.

Assessment Requirements for AURTTK001 Use and maintain measuring equipment in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- use and maintain each of the following pieces of measuring equipment:
  - inside and outside micrometers
  - vernier calipers
  - dial indicators
  - steel rulers
  - squares
  - straight edges
  - feeler gauges
  - pressure gauges
  - temperature gauges.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to using and maintaining measuring equipment, including safe operating procedures for specific measuring equipment
- types, uses, limitations and operation of measuring equipment specified in the performance evidence, including:
  - using metric and imperial units of measurement
  - using analogue and digital measuring equipment
- procedures for selecting measuring equipment suitable to job requirements
- identification and tagging procedures for faulty measuring equipment

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- basic maintenance, adjustment, calibration and storage procedures for measuring equipment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the measuring equipment that they have used and maintained, e.g. repair orders with calculated tolerances.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- measuring equipment specified in the performance evidence requiring maintenance
- vehicles, components or materials that require the use of automotive measuring equipment
- material relevant to maintaining automotive measuring equipment, including:
  - measuring equipment operating instructions or manuals
  - relevant measuring equipment and adjusting or calibration equipment
  - tagging material.

Assessment Requirements for AURTTK002 Use and maintain tools and equipment in an automotive workplace

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- use and maintain the following workplace tools and equipment:
  - five different hand tools
  - two different power tools
  - two different air tools
  - one piece of vehicle lifting equipment
  - one piece of vehicle supporting equipment.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to using and maintaining workplace tools and equipment, including procedures for:
  - using specific tools and equipment
  - selecting and using personal protective equipment (PPE)
- types, uses, limitations and operating procedures for hand and power tools, including:
  - sockets and ratchets
  - spanners, including ring spanners, open-ended spanners, combination spanners and flare nut spanners
  - wrenches, including torque wrenches and adjustable wrenches
  - oil filter removal tools
  - allen keys

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - screwdrivers, including impact screwdrivers
    - pliers, including combination, adjustable, long nose, snap ring, side cutting and vice grip pliers
    - hammers
    - chisels and punches
    - hacksaws
    - files
    - bench grinders
    - presses
    - impact guns
    - air ratchets and blowguns
- types, characteristics, uses and limitations of workplace equipment, including:
    - vehicle lifting and supporting equipment, including:
        - jacks, including air jacks
        - jack stands
        - vehicle hoists
    - fasteners, including:
        - bolts
        - washers
        - nuts
        - studs
        - screws
    - specialised tools, including:
        - screw extractors
        - stud installation and removal tools
        - gear and bearing pullers
        - sealing and adhesive equipment
- procedures for selecting tools and equipment
- identification and tagging procedures for faulty tools and equipment
- basic maintenance and storage procedures for tools and equipment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

AURTTL001 Inspect and service CNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service compressed natural gas (CNG) fuel systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The CNG fuel systems include those of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Alternative Fuels

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to inspect and service CNG fuel system	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with work are identified and risks are managed according to ***safety and environmental requirements*** 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect CNG fuel system	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures, safety requirements, and AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service CNG fuel system	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures, AS/NZS 2739, and safety and environmental requirements, and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or system is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature when seeking service procedures and specifications relating to CNG fuel systems.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report inspection findings and make repair recommendations.
Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate service schedule intervals.
Problem solving skills to:	• refer problems outside area of responsibility to appropriate person.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • working with a lighter-than-air flammable gas
	  • avoiding cold burns
	  • storing CNG
	• environmental requirements, including procedures for preventing loss of gas to atmosphere.

Assessment Requirements for AURTTL001 Inspect and service CNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following compressed natural gas (CNG) fuel systems:
  - two different light vehicle CNG fuel systems

or

  - two different heavy commercial vehicle CNG fuel systems

or

  - two different forklift CNG fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing CNG fuel systems, including procedures for:
  - working with a lighter-than-air flammable gas
  - avoiding cold burns
  - storing CNG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- licensing requirements for working on CNG systems
- identification and function of CNG fuel system components
- basic operation of CNG fuel systems
- requirements of AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- inspection procedures for CNG fuel systems, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - leakage check
  - CNG container identity
  - container life
  - container recertification date
  - container corrosion and damage
  - container attachment
  - automatic fuel shut-off device
  - manual valves
  - compartment and sub-compartment refuelling connection
  - refuelling interlock device
  - flexible piping and hoses
  - ground clearances
  - vehicle identification, including identification markers
- service and adjustment procedures for CNG fuel systems, including checking compliance of fuel system emissions
- post-service testing procedures for CNG fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle CNG fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- ASNZS 2739 Natural gas (NG) fuel systems for vehicle engines
- manufacturer servicing schedules and vehicle CNG fuel system specifications
- vehicles and machinery specified in the performance evidence with operating CNG fuel systems requiring servicing

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- tools, equipment and materials appropriate for inspecting and servicing CNG fuel systems.

AURTTL002 Diagnose and repair CNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the compressed natural gas (CNG) fuel systems of vehicles or machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The unit applies to CNG fuel systems in agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Alternative Fuels

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section**.**
1. Prepare to diagnose and repair CNG fuel system	1.1 Job requirements are determined from workplace instructions 1.2 Diagnostic information is sourced and interpreted 1.3 Diagnostic options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Diagnostic tools and equipment are selected and checked for serviceability
2. Diagnose CNG fuel system	2.1 Diagnostic tests are performed according to workplace procedures and ***safety and environmental requirements*** 2.2 Faults are identified from diagnostic test results and causes of faults are determined 2.3 Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Repair CNG fuel system	3.1 Repair information is sourced and interpreted 3.2 Repair options are analysed and those most appropriate to the circumstances are selected 3.3 Repair tools, equipment and materials are selected and checked 3.4 Repairs and component replacements and adjustments are carried out according to manufacturer specifications, workplace procedures, safety and environmental requirements, and AS/NZ 2739 Natural gas (NG) fuel systems for vehicle engines, and without causing damage to components or system 3.5 Post-repair testing is carried out according to workplace procedures and AS/NZ 2739 to confirm fault rectification, and any further problems detected as having been introduced during the repair process are rectified
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace expectations 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret Australian standards relating to repairing CNG fuel systems • interpret information from manufacturer and workshop literature when seeking CNG fuel system specifications and procedures.
Writing skills to:	• legibly and accurately fill out workplace literature when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report diagnostic findings and make repair recommendations.
Numeracy skills to:	• measure CNG fuel system components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use precision measuring equipment, including exhaust gas analyser

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: • working with extremely cold and flammable gas

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• storing CNG • environmental requirements, including procedures for preventing loss of gas to atmosphere.

Assessment Requirements for AURTTL002 Diagnose and repair CNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two vehicles with different compressed natural gas (CNG) fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing CNG fuel systems, including procedures for:
  - working with extremely cold and flammable gas
  - storing CNG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- key requirements of AS/NZ 2739 Natural gas (NG) fuel systems for vehicle engines
- application, purpose and operating principles of CNG fuel systems and associated components, including:
  - mixers
  - regulators
  - fuel lock-off valves
  - filters
  - tanks
  - control valves and switches
- diagnostic testing procedures for CNG fuel systems, including:
  - mixers

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - regulators
  - fuel lock-off valves
  - electronic control valves and switches
- repair procedures for CNG fuel systems, including procedures for removing, replacing and adjusting the systems
- post-repair testing procedures for CNG fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the CNG fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer vehicle CNG fuel system specifications
- AS/NZ 2739 Natural gas (NG) fuel systems for vehicle engines
- two vehicles with different CNG fuel systems with faults
- diagnostic equipment for CNG fuel systems, including exhaust gas analyser
- tools, equipment and materials appropriate for repairing CNG fuel systems.

1. Prepare to install CNG fuel system	1.1 Job requirements are determined from workplace instructions 1.2 CNG fuel system installation information is sourced and interpreted 1.3 Installation options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked according to manufacturer specifications and workplace procedures
2. Carry out installation activities	2.1 CNG fuel system is checked for correct application and components are checked for damage 2.2 ***CNG fuel system components*** are installed according to workplace procedures, manufacturer specifications, ***safety and environmental requirements*** and AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines, and without causing damage to components or systems 2.3 Installed ***CNG fuel system is tested*** for correct operation and required adjustments are made according to manufacturer specifications, workplace procedures, safety requirements, and AS/NZS 2739
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and system is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret Australian standards relating to installing CNG fuel systems • interpret manufacturer and workshop literature when seeking CNG system installation procedures and specifications.
Writing skills to:	• legibly and accurately fill out workplace documentation when recording parts and material used.
Oral communication skills to:	• clarify instructions.
Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to measure components and vehicle when calculating installation positions and material lengths • interpret gauges of testing equipment.
Digital literacy skills to:	• navigate computer programs in testing equipment and scan tools while testing and adjusting fuel system.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	• determine most appropriate method of installing fuel system while meeting relevant Australian standards.
Technology skills to:	• use specialist tooling, measuring equipment and computerised equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

CNG fuel system components must include:	• fill valve and fill hose • fuel container and mounting • service line • vaporiser • regulator • safety lock-off devices • mixers or injectors • associated electrical and electronic system, including selector and safety switches • compliance plates.
Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with extremely cold and flammable gas • environmental requirements, including procedures for preventing loss of gas to atmosphere.
Testing CNG fuel system must include:	• system leak testing • exhaust gas analysis to ensure compliance with relevant emission control standards.

Release	Comment
Release 1	AURTTL3003 Install CNG fuel systems

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install one complete compressed natural gas (CNG) fuel system in a vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing CNG fuel systems, including procedures for working with extremely cold and flammable gas
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- requirements of AS/NZS 2739 Natural gas (NG) fuel systems, including:
  - containers and fuel system components
  - fuel service lines and materials
  - fuel control equipment
- Australian standard inspection, testing and commissioning requirements
- CNG system adjustment procedures, including exhaust gas analysis
- Australian standard certification, compliance plate, and marking and label requirements.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

AURTTL004 Inspect and service LNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service liquefied natural gas (LNG) fuel systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The LNG fuel systems include those of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Assessment Requirements for AURTTL004 Inspect and service LNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following liquefied natural gas (LNG) fuel systems:
  - two different light vehicle LNG fuel systems

or

  - two different heavy commercial vehicle LNG fuel systems

or

  - two different forklift LNG fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing LNG fuel systems, including procedures for:
  - working with a lighter-than-air flammable gas
  - avoiding cold burns
  - storing LNG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- licensing requirements for working on LNG systems
- identification and function of LNG fuel system components
- basic operation of LNG fuel systems
- requirements of AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- inspection procedures for LNG fuel systems, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - leakage check
  - LNG container identity
  - container life
  - container recertification date
  - container corrosion and damage
  - container attachment
  - automatic fuel shut-off device
  - manual valves
  - compartment and sub-compartment refuelling connection
  - refuelling interlock device
  - flexible piping and hoses
  - ground clearances
  - vehicle identification, including identification markers
- service and adjustment procedures for LNG fuel systems, including checking compliance of fuel system emissions
- post-service testing procedures for LNG fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle LNG fuel systems that they have worked on, e.g. repair orders.

fuel system	1.2 LNG fuel system installation information is sourced and interpreted 1.3 Installation options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools, equipment and materials are selected and checked for serviceability
2. Carry out installation activities	2.1 LNG fuel system is checked for correct application and components are checked for damage 2.2 ***LNG fuel system components*** are installed according to workplace procedures, manufacturer specifications, ***safety and environmental requirements*** and AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines**,** and without causing damage to components or systems 2.3 Installed ***LNG fuel system is tested*** for correct operation and required adjustments are made according to manufacturer specifications, workplace procedures, safety requirements, and AS/NZS 2739
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and system is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Reading skills to:	• interpret Australian standards relating to installing LNG fuel systems • interpret manufacturer and workshop literature when seeking LNG system installation procedures and specifications.
Writing skills to:	• legibly and accurately fill out workplace documentation when recording parts and material used.
Oral communication skills to:	• clarify instructions.
Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to measure components and vehicle when calculating installation positions and material lengths • interpret gauges of testing equipment.
Digital literacy skills to:	• navigate computer programs in testing equipment and scan tools while testing and adjusting fuel system.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	• determine most appropriate method of installing fuel system while meeting relevant Australian standards.
Technology skills to:	• use specialist tooling, measuring equipment and computerised equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

LNG fuel system components must include:	• fill valve and fill hose • fuel container and mounting • service line • vaporiser • regulator • safety lock-off devices • mixers or injectors • associated electrical and electronic system, including selector and safety switches

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• compliance plates.
Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with extremely cold and flammable gas • environmental requirements, including procedures for preventing loss of gas to atmosphere.
Testing LNG fuel system must include:	• system leak testing • exhaust gas analysis to ensure compliance with relevant emission control standards.

Assessment Requirements for AURTTL006 Install LNG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install one complete liquefied natural gas (LNG) fuel system in a vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing LNG fuel systems, including procedures for working with extremely cold and flammable gas
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- requirements of AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines, including:
  - containers and fuel system components
  - fuel service lines and materials
  - fuel control equipment
  - inspection, testing and commissioning requirements
- Australian standard inspection, testing and commissioning requirements
- LNG system adjustment procedures, including exhaust gas analysis
- Australian standard certification, compliance plate, and marking and label requirements.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the LNG fuel systems that they have installed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- manufacturer vehicle LNG system specifications
- one vehicle requiring installation of an LNG fuel system
- LNG installation kit, including:
  - fill valve and fill hose
  - fuel container and mounting
  - service line
  - vaporiser
  - regulator
  - safety lock-off devices
  - mixers or injectors
  - associated electrical and electronic system, including selector and safety switches
  - compliance plates
- testing equipment for LNG fuel systems, including exhaust gas analyser
- tools, equipment and materials for installing LNG fuel systems.

AURTTL007 Inspect and service LPG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service liquefied petroleum gas (LPG) fuel systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The LPG fuel systems include those of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical – Alternative Fuels

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURTTL007 Inspect and service LPG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the following liquefied petroleum gas (LPG) fuel systems:
  - two different light vehicle LPG fuel systems

or

  - two different heavy commercial vehicle LPG fuel systems

or

  - two different forklift LPG fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing LPG fuel systems, including procedures for:
  - working with heavier-than-air flammable gas
  - avoiding cold burns
  - storing LPG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- licensing requirements for working on LPG systems
- identification and function of LPG fuel system components
- basic operation of LPG fuel systems
- requirements of AS/NZS 1425 LP Gas fuel systems for vehicle engines

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- inspection procedures for LPG fuel systems according to relevant Australian standards, including:
  - leakage check
  - fuel container life
  - container corrosion and attachment checks
  - accuracy of the automatic fuel limiter
  - operation of fuel containment system, including testing automatic fuel shut-off device
  - fuel control systems, including automatic fuel shut-off device and fuel selector
  - manual valves
  - compartment or sub-compartment
  - filler connection
  - hydrostatic relief valve
  - safety valve system
  - liquids
  - ground clearances
  - vehicle identification, including identification markers
- service and adjustment procedures for LPG fuel systems, including:
  - draining oil from converters
  - checking compliance of fuel system emissions
- post-service testing procedures for LPG fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle LPG fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

- workplace instructions
- AS/NZS 1425 LP Gas fuel systems for vehicle engines
- manufacturer servicing schedules and vehicle LPG fuel system specifications
- vehicles and machinery specified in the performance evidence with operating LPG fuel systems requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing LPG fuel systems.

AURTTL008 Diagnose and repair LPG fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in the liquefied petroleum gas (LPG) fuel systems of vehicles or machinery. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The unit applies to LPG fuel systems in agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two vehicles with different liquefied petroleum gas (LPG) fuel systems.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing LPG fuel systems, including procedures for:
  - working with extremely cold and flammable gas
  - storing LPG
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- key requirements of AS/NZ 1425 LP Gas fuel systems for vehicle engines
- licensing requirements for working on LPG fuel systems
- application, purpose and operating principles of LPG fuel systems and associated components, including:
  - mixers
  - regulators
  - fuel lock-off valves
  - filters
  - tanks
  - control valves and switches
- diagnostic testing procedures for LPG fuel systems, including:

AURTTL010 Install LPG, CNG and LNG electrical control equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to install liquefied petroleum gas (LPG), compressed natural gas (CNG) and liquefied natural gas (LNG) electrical control equipment. It involves identifying and confirming work requirements, preparing for the work, installing LPG, CNG or LNG electrical control equipment, testing the installed equipment, and completing work finalisation processes, including clean-up and documentation.

It applies to those working in the automotive service and repair industry. The gas fuel system electrical control equipment includes that of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS), occupational health and safety (OHS) requirements, including procedures for:
	  • working with extremely cold and flammable gas
	  • avoiding ignition of flammable gas when working on electrical systems
	• environmental requirements, including procedures for preventing loss of gas to atmosphere.

Australian standards must	• AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

include:	• AS/NZS 1425 LP Gas fuel systems for vehicle engines.

Assessment Requirements for AURTTL010 Install LPG, CNG and LNG electrical control equipment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- install one piece of liquefied petroleum gas (LPG), compressed natural gas (CNG) or liquefied natural gas (LNG) electrical control equipment in a vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing LPG, CNG and LNG electrical control equipment, including procedures for:
  - working with extremely cold and flammable gas
  - avoiding ignition of flammable gas when working on electrical systems
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- requirements of Australian standards relating to installing LPG, CNG and LNG electrical control equipment:
  - AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
  - AS/NZS 1425 LP Gas fuel systems for vehicle engines
- properties of LP, CN and LN gases
- operating principles of LPG, CNG and LNG electrical control equipment
- post-installation testing procedures for LPG, CNG and LNG electrical control equipment, including fuel trim and exhaust gas analysis.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the LPG, CNG and LNG electrical control equipment they have installed in vehicles, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- AS/NZS 2739 Natural gas (NG) fuel systems for vehicle engines
- AS/NZS 1425 LP Gas fuel systems for vehicle engine
- manufacturer specifications for vehicle LPG, CNG or LNG systems
- one piece of LPG, CNG or LNG electrical control equipment requiring installation
- testing equipment for LPG, CNG or LNG electrical control equipment
- tools, equipment and materials for installing LPG, CNG or LNG electrical control equipment.

AURTTL014 Analyse and evaluate faults in gas fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to analyse and evaluate faults in gas fuel systems in order to initiate action to sustain, vary or enhance performance. It involves identifying, evaluating, selecting, justifying and documenting the most appropriate rectification method or variation to the rectification method. The unit includes the analysis of multi-system and intermittent faults which may be caused by operating in adverse conditions.

It applies to those working in the automotive service and repair industry. The gas fuel systems include those of agricultural machinery, heavy commercial vehicles, forklifts, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements apply to this unit. Users are advised to check with the relevant regulatory authority.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Alternative Fuels

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Identify and confirm the work requirement	1.1 Objective of the analysis and evaluation is determined from workplace instructions 1.2 Specifications for gas fuel system are sourced and interpreted 1.3 System faults, deficiencies or discrepancies are identified and confirmed 1.4 Hazards associated with the work are identified and risks are managed according to workplace procedures, and ***safety and environmental requirements***
2. Prepare for analysis and evaluation	2.1 Evaluation criteria are developed or adopted to meet the objective of the analysis and evaluation 2.2 ***Analytical and evaluative methodology*** is developed or identified from technical information 2.3 Testing equipment is prepared according to manufacturer specifications and workplace procedures 2.4 Tools and materials required to support the diagnostic procedure are identified, selected and prepared for use 2.5 Gas fuel system and components are prepared for the diagnostic process
3. Carry out failure analysis	3.1 Selected analytical and evaluative methodology is followed according to manufacturer specifications and workplace procedures 3.2 Tests are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Analytical and other diagnostic findings are verified, as required, by using reliable alternative or optional processes 3.4 Analytical findings and results are assessed against evaluation criteria 3.5 Valid conclusions are drawn from available evidence and documented according to workplace requirements
4. Make recommendations	4.1 Options for responding to the objective are determined from further research of technical support information 4.2 Rectification method is selected from an analysis of the options, operating conditions, regulatory requirements, Australian Design Rules, and financial implications 4.3 Report is prepared specifying analysis and evaluation process, and detailing and justifying rectification method or variation to

	the rectification method
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• apply learning and processes to different situations.
Reading skills to:	• research, organise and interpret technical information relating to gas fuel systems.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting failure analysis findings • document and complete reports.
Numeracy skills to:	• use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate testing equipment and present analytical results.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialised gas fuel system diagnostic equipment.

Assessment Requirements for AURTTL014 Analyse and evaluate faults in gas fuel systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- analyse and evaluate a fault in:
  - a gas fuel system
  - the electrical control of a different gas fuel system
  - the electronic control of a third gas fuel system.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to analysing and evaluating faults in gas fuel systems, including procedures for working with extremely cold and flammable gas
- environmental requirements, including procedures for preventing loss of gas to atmosphere
- principles and processes involved in planning and implementing analysis and evaluation of gas fuel system faults
- design and planning of diagnostic procedures of gas fuel system faults, including procedures for diagnosing:
  - fuel faults
  - mechanical faults
  - electrical faults
- procedures for analysing and evaluating gas fuel system faults, including:
  - system failure analysis
  - component failure analysis

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- types, functions, operation and limitations of gas fuel systems, including:
  - compressed natural gas (CNG)
  - liquefied natural gas (LNG)
  - liquefied petroleum gas (LPG)
- impact of other associated vehicle systems on gas fuel system operation, including:
  - ignition system and components
  - engine and components
  - cooling system and components
  - intake system and components
  - exhaust system and components
- testing procedures for gas fuel systems, including:
  - gas system performance under load
  - safety cut-out operation
  - convertor operation
  - mixer or injector operation
- types, functions, operation and limitations of diagnostic testing equipment required to analyse and evaluate faults in gas fuel systems
- procedures for documenting and reporting the analysis and evaluation process
- requirements of Australian Design Rules (ADRs) and Australian standards relating to gas fuel systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the gas fuel systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

AURTTL015 Develop and apply gas fuel system modifications

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to develop, apply and validate significant modifications to existing gas fuel systems in order to vary or enhance performance. It involves identifying the modification requirement, developing the modification specifications, applying and testing the modification, and completing workplace processes and documentation.

Significant and non-routine modifications are those that require compliance with Australian Design Rules and Vehicle Safety Bulletins.

It applies to those working in the automotive service and repair industry. The gas fuel systems include those of agricultural machinery, forklifts, heavy commercial vehicles, light vehicles or mobile plant machinery.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate and evaluate appropriate sources of information.
Reading skills to:	• interpret the operating and testing procedures for gas fuel system testing equipment from workplace and manufacturer literature • research, organise and interpret technical information from manufacturer and workshop literature when seeking gas fuel system specifications and procedures.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting modification findings and recording parts and material used.
Oral communication skills to:	• clarify instructions, gain information from supervisors, and report modification outcomes.
Numeracy skills to:	• measure gas fuel system components and use basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications • interpret precision measuring equipment and test equipment units and scales.
Planning and organising skills to:	• plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

AURTTM001 Operate and monitor computer numerical control machines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to operate and monitor computer numerical control (CNC) machines during machining operations of engine components as part of an engine reconditioning process. It involves preparing for the task, operating a CNC machine, selecting the appropriate program, performing machining to specifications and workplace requirements, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret engine component specifications from workshop literature • interpret CNC machinery safe operating procedures from operating manuals and signs.
Writing skills to:	• legibly and accurately fill out workplace documentation to record measurements.
Oral communication skills to:	• clarify instructions • gain information when setting up machine operation.

Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts
	• use basic mathematical operations, including addition and subtraction, to:
	  • convert metric dimensions to imperial, and imperial dimensions to metric
	  • calculate tolerances and clearances
	• interpret metric and imperial increments on precision measuring equipment.

Digital literacy skills to:	• navigate computer software, selecting and confirming options.
Problem solving skills to:	• determine the most appropriate method of component adjustment or machining for the situation.
Technology skills to:	• use metric and imperial precision measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- conduct computer numerical control (CNC) machining of a shape in aluminium alloy, in which the work must involve:
  - drilling and tapping four holes
  - machining a pocket in the shape
  - surface machining one face on the shape
- conduct CNC machining of a shape in cast iron, in which the work must involve:
  - drilling and tapping four holes
  - machining a pocket in the shape
  - surface machining one face on the shape.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to operating and monitoring CNC machines, including operational risk assessment and treatments associated with:
  - selecting and using personal protective equipment (PPE) when working with CNC machines and using chemical cleaning and lubricating agents
  - safe operating procedures for operating CNC machinery
- environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during machining process
- procedures for accessing computer-controlled programs installed in the machine controller, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - posting appropriate program to the machine
  - selecting tool specified by the program and for the material to be machined
  - selecting appropriate speeds and feeds
- computer-controlled machine operating procedures, including:
  - zeroing the machine axes
  - engaging warm-up procedures, and checking lubricant levels, coolant levels, and machine slide ways
  - mounting tools in tool holders
  - setting tool speed and feed rates
  - setting tool height manually
  - setting machine offset parameters to correct tool number and height
  - setting work piece datum
  - recording data in machine offsets
  - selecting dry run mode on CNC controller and single block to test program
- procedures for basic editing of computer program to reflect specific job requirements
- typical machine malfunctions, including:
  - programming
  - non-optimal speeds and feeds
  - inflexible controller
- tool wear and effect of wear on product or part specifications
- procedures to be followed once tool wear has been detected
- pre-set tool replacement procedures
- adjustment procedures for tool offsets
- effects of adjustments on machining specifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the CNC machines that they have operated and monitored, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

engine bearing tunnels	swarf according to workplace procedures and safety requirements 4.2 Tools and equipment for honing are selected and checked for serviceability 4.3 Measuring and calibration requirements for honing are determined 4.4 Honing machine is prepared to accept engine block or cylinder head according to manufacturer specifications and workplace procedures 4.5 Engine block or cylinder head is positioned and securely clamped, and required hone stroke is set according to manufacturer specifications and workplace procedures 4.6 Hone stones are selected and speed is set to achieve required finish
5. Hone engine bearing tunnels	5.1 Tunnels are honed at correct speed and rate to required finish according to workplace procedures and safety requirements, and following machinery safe operating procedures 5.2 Components are measured to ensure compliance with manufacturer specifications 5.3 Honing operations are completed to required tunnel to journal clearance according to workplace procedures and safety requirements, and following machinery safe operating procedures
6. Prepare to repair connecting rods	6.1 Connecting rods are ***cleaned and checked for serviceability*** according to workplace procedures and safety requirements 6.2 Connecting rods are checked for straightness and straightened as required according to workplace procedures and safety requirements, and following machinery safe operating procedures 6.3 Connecting rod boring machine is prepared to accept connecting rod 6.4 Connecting rod is positioned ready for honing, and securely clamped if machining
7. Repair connecting rod	7.1 Connecting rod little ends and big ends are resized according to workplace procedures and safety requirements, and following machinery safe operating procedures 7.2 Components are measured to ensure compliance with manufacturer specifications
8. Complete repair process	8.1 Engine block or cylinder head is thoroughly cleaned of residual honing oil according to workplace procedures 8.2 Final inspection is made to ensure finished work complies with workplace requirements 8.3 Bright surfaces are treated with rust prevention solution and engine

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	block or cylinder head is prepared for further process or storage according to workplace procedures 8.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret engine component specifications from manufacturer and workshop literature • interpret machinery safe operating procedures from operating manuals and signs.
Writing skills to:	• legibly and accurately fill out workplace documentation to record measurements.

Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop literature, and machinery dials and gauges
	• use basic mathematical operations, including addition and subtraction, to:
	  • convert metric dimensions to imperial, and imperial dimensions to metric
	  • calculate tolerances and clearances
	• interpret numerical measurements on metric and precision measuring equipment.

Planning and organising skills to:	• select best tooling option for the work and sequence procedure to reduce time and material wastage.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Calibration requirements must include:	• determining depths of cuts and required honing allowances • determining tunnel to journal clearance.
Preparing engine block or cylinder head must include:	• removing main bearing caps from engine block • machining bearing cap and engine block parting faces • fitting bearing caps to required tensions.

Safety and environmental requirements must include:	• work health and safety (WHS), and occupational health and safety (OHS) requirements, including:
	  • procedures for:
	  • selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear
	  • using hand tools and lifting equipment
	  • operational risk assessment and treatments associated with:
	  • electrical safety of line boring and honing machinery
	  • line boring and honing machinery movement and operation
	• environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during machining process.

Preparing line boring machine must include:	• sharpening and shaping cutting tools • identifying worn and damaged cutting tools • mounting and positioning cutting tools • correctly using clamps, jigs and rails.
Positioning and clamping must include:	• setting work piece into line boring machine and aligning work piece to centre line of boring bar • using appropriate and sufficient clamping of work piece.
Setting and locking tool must include:	• setting tool to required diameter • locking tool according to manufacturer specifications.
Line boring at correct speeds and feed rates must include:	• using coolant and lubricant correctly • setting machining parameters to achieve job requirements and maximise tool life • setting speed and feed rates for tunnel material and diameter.
Specifications and honing	• consideration of speed and feed and nose radius of boring tool.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

allowances must include:	
Cleaning and checking for serviceability must include:	• crack testing connecting rod • measuring little end and big end size • checking big end fitment in connecting rod.

Assessment Requirements for AURTTM002 Repair bearing tunnels and connecting rods in engines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- set up the following multi-cylinder engine configurations on a line boring machine:
  - a V configured engine
  - an in-line configured engine
- line bore the main bearing tunnels of a cylinder block, including each of the following:
  - relocating a main bearing cap
  - fitting a semi-finished main bearing cap
  - sleeving a main bearing tunnel
- repair camshaft bearing tunnels of an overhead camshaft cylinder head
- repair full set of connecting rods
- repair one connecting rod with a stepped parting face.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS), and occupational health and safety (OHS) requirements relating to repairing bearing tunnels and connecting rods in engines, including:
  - procedures for:
    - selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear
    - using hand tools and lifting equipment
  - operational risk assessment and treatments associated with:
    - electrical safety of line boring and honing machinery

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - line boring and honing machinery movement and operation
- environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during machining process
- types, characteristics and limitations of line boring and honing machines, including:
    - types and grades of boring tools
    - types and grades of honing stones
- tool sharpening and dressing methods, including:
    - maintaining sharpness of tools throughout boring operations
    - dressing procedures for stones
- line boring methods and procedures, including:
    - preparing line borer to accept engine block or cylinder head
    - setting engine block or cylinder head into line boring machine and aligning to centre line of boring bar
    - setting line boring tool to correct diameter and locking boring tool
    - welding and relocating main bearing caps
    - machining top and bottom of bearing caps
    - machining parting faces of cylinder head camshaft bearing
    - line boring cylinder head camshaft tunnels
    - line boring damaged tunnels to oversize to accept sleeving operation
    - machining parting faces of cylinder block
    - line boring cylinder block tunnels to accept oversized back bearings
    - line boring tunnels to leave a honing allowance
    - line boring rear main bearing areas and thrust bearing diameters to original size
    - machining and squaring thrust faces in engine blocks
    - line boring semi-finished camshaft bearings
- line honing methods and procedures, including:
    - procedures for setting diameter of honing stone
    - rotational and oscillating speeds of honing bar
- connecting rod repair methods and procedures, including:
    - removing rod eye bush and measuring rod eye bore
    - checking alignment of connecting rod and straightening connecting rod
    - boring rod eye for oversized bush
    - removing cap bolts and nuts and machining parting faces on connecting rod and big end cap, including cracked rods
    - resizing big end for standard and oversize back bearings
    - fitting new little end bushes and pin boring little ends
    - types and application of cleaning and lubricating agents
- requirements of Australian standards relevant to engine reconditioning, including:
    - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-repair operations, including rust protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the bearing tunnels and connecting rods in engines that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- multi-cylinder engine blocks and cylinder heads specified in the performance evidence
- engine line boring and honing machines
- precision measuring equipment, including:
  - dial bore gauges
  - dial indicators
  - inside and outside metric and imperial micrometers.

AURTTM003 Apply metal to rebuild engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply metal spray and hard chrome and weld materials, and perform the necessary machining to rebuild engine components. It involves preparing for the task, determining repair requirements, rebuilding engine components, bearing tunnels and connecting rods in engines, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to undertake metal building procedures	1.1 Job requirements are determined from workplace instructions 1.2 Information is sourced, procedures and methods are analysed, and appropriate tools are selected for rebuilding engine components 1.3 Tools and ***measuring equipment*** are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Engine component is prepared for appropriate metal application method according to workplace procedures and ***safety and environmental requirements***
2. Apply metal to engine component	2.1 Metal application process is used to rebuild damaged engine component according to workplace procedures and safety requirements, and following machinery safe operating procedures 2.2 Engine component is measured to ensure compliance with specifications 2.3 Metal application process is completed in readiness for further repair according to workplace procedures and safety requirements, and following machinery safe operating procedures
3. Perform necessary machining to rebuild component	3.1 Machining is carried out according to workplace procedures and safety and environmental requirements, and following machinery safe operating procedures 3.2 Component is measured to ensure compliance with manufacturer specifications 3.3 Machining operations are completed according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and following machinery safe operating procedures
4. Complete rebuild processes	4.1 Component surfaces are finished to manufacturer specifications and within allowable tolerances according to workplace procedures and safety and environmental requirements, and following machinery safe operating procedures 4.2 Final inspection is made to ensure finished work complies with workplace requirements 4.3 Bright surfaces are treated with rust prevention solution and engine component is prepared for further process or storage according to workplace procedures 4.4 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected

Assessment Requirements for AURTTM003 Apply metal to rebuild engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair a cast iron cylinder head
- repair a crack in an aluminium alloy cylinder head
- build up camshaft lobes or journals by welding, metal spraying and hard chroming, and machine to specifications
- build up crankshaft journals or thrust surfaces or bearing faces by welding, metal spraying and hard chroming, and machine to specifications.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying metal to rebuild engine components, including procedures for :
  - selecting and using personal protective equipment (PPE)
  - safely operating welding, metal spraying and hard chroming machinery
- environmental requirements, including procedures for trapping, storing and disposing of cooling and lubricating fluids released during the machining process
- procedures for identifying existing heat treatment processes, including nitriding, Tufftriding and induction hardening
- specific welding procedures, including:
  - manual metal arc welding (MMAW)
  - gas metal arc welding (GMAW)
  - gas tungsten arc welding (GTAW)
  - flux core

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - metal spraying
  - submerged arc
- procedures for hard chrome application
- repair operations for components, including:
  - crankshaft journals
  - camshaft journals and lobes
  - seal areas
  - crankshaft nose and keyway
  - pulley retaining thread damage
- crankshaft radius treatment, including:
  - shot peening
  - radius rolling
  - deep fillet radius rolling
- requirements of Australian standards relevant to engine reconditioning, including:
  - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
  - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-repair operations, including rust protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine components that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- manufacturer engine specifications
- multi-cylinder crankshafts, camshafts, and engine cylinder heads specified in the performance evidence
- hand, air and power tools, welding equipment and materials for rebuilding engine components
- precision measuring equipment, including:
  - dial indicators
  - inside and outside metric and imperial micrometers.

AURTTM004 Assemble engine blocks and sub-assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to assemble a short engine block and sub-assemblies, and check clearances and tolerances in an engine reconditioning process. It involves preparing for the task, selecting the correct assembly procedure, carrying out the assembly and performing post-assembly testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine blocks and sub-assemblies include those in vehicles from all sectors of the industry. This unit does not cover fitting semi-finished sleeves, or boring and honing cylinders.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to assemble engine block and sub-assembly	1.1 Job requirements are determined from workplace instructions 1.2 Information is sourced, procedures and methods are analysed, and appropriate tools are selected for assembling engine block and sub-assemblies 1.3 ***Tools*** and measuring equipment are prepared and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 ***Pre-assembly cleaning*** of engine components is carried out according to ***safety and environmental requirements***, and components are laid out in logical order 1.6 Replacement component parts are checked for size and suitability according to manufacturer specifications and job requirements
2. Check engine block and sub-assembly clearances and tolerances	2.1 ***Clearances and tolerances are measured*** to the tolerance required by manufacturer specifications 2.2 ***Clearances and tolerances are adjusted*** according to workplace procedures and to the tolerance required by manufacturer specifications
3. Assemble engine block and engine sub-assembly	3.1 Engine sub-assemblies are ***assembled*** in correct order and without damage, against manufacturer specifications and tolerances and according to workplace procedures and relevant Australian standards and safety requirements 3.2 Engine blocks are assembled in correct order against manufacturer specifications and tolerances and according to workplace procedures, relevant ***Australian standards***, and safety requirements, and without causing damage to components or systems 3.3 Assembled components are measured according to manufacturer specifications and workplace procedures 3.4 Assembled component clearances and tolerances are adjusted according to workplace procedures and to the tolerance required by manufacturer specifications
4. Complete assembly process	4.1 Final inspection is made to ensure finished work complies with workplace requirements 4.2 Bright surfaces are treated with rust prevention solution and engine block and sub-assemblies are prepared for further process or storage according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	4.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• identify and interpret engine component specifications from workshop literature • interpret machinery safe operating procedures from operating manuals and signs.
Writing skills to:	• legibly and accurately fill out workplace documentation when making recommendations and recording parts and material used.

Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts
	• use basic mathematical operations, including addition and subtraction, to:
	  • convert metric dimensions to imperial, and imperial dimensions to metric
	  • calculate tolerances and clearances.

Planning and organising skills to:	• determine best tooling option for the work and sequence procedure to reduce time and material wastage.
Technology skills to:	• use metric and imperial precision measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools must include:	• fixed and portable hand, air and power tools • lifting equipment • torque wrench • material suitable for assembling engine block.
Pre-assembly cleaning must include:	• removing machining residue • ensuring gasket faces are clean, and oil and water passageways are clear using appropriate tools, such as a rifle brush.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including operational risk assessment and treatments associated with:
	  • power tool electrical safety
	  • manual and mechanical lifting and shifting equipment
	  • toxic cleaning substances
	• environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids released during the assembly process.

Measuring clearances and tolerances must include:	• back clearance and side clearance • bearing to journal clearance • end floats • piston ring end gap • piston to bore clearance.
Adjusting clearances and tolerances must include:	• adjusting gear backlash • machining semi-finished thrust bearings • machining piston protrusion and valve pockets • pin-boring connecting rod little ends.
Assembled must include:	• gaskets • seals.
Australian standards must include:	• AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines • AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines.

Assessment Requirements for AURTTM004 Assemble engine blocks and sub-assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- assemble two different engine blocks, one of which must be a V configuration engine block, and the sub-assemblies of those engine blocks, in which the work must involve:
  - a multi-cylinder diesel engine
  - a multi-cylinder petrol engine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to assembling engine blocks and sub-assemblies, including procedures for:
  - selecting and using personal protective equipment (PPE) for handling engine blocks and sub-assemblies and using chemical cleaning agents
  - correctly operating specialised equipment, including heating torches, ovens and presses
  - handling freezing substances, including liquid nitrogen
  - manual handling techniques, including:
    - using machinery for lifting engine blocks and engine components
    - using slings, chains and other lifting equipment according to safe work practices
- environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids released during the assembly process
- procedures for clearance testing and adjusting or machining components, including:
  - piston to connecting rod big end alignment
  - big end and main bearing crush with bearing blue

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- piston ring end gap, back clearance and side clearance
- bearing to crankshaft clearances with plastigage and measuring and calculating clearances
- semi-flanged thrust bearings
- finished camshaft bearings and measuring clearances
- camshafts and cam followers
- camshaft end float
- crankshaft end float
- gear backlash
- oil pump sealing and pick-up oil piping

- component assembly procedures and processes, including:
  - pre-assembly wash procedures for components
  - welsh plugs and oil gallery plugs
  - piston and connecting rod assemblies
  - big end bearings
  - piston rings to pistons, including procedures for using ring compressors
  - main bearings and thrust washers
  - semi-flanged thrust bearings
  - crankshafts, including protection measures for crankshaft journals, bearings, rings and bores
  - finished camshaft bearings
  - camshafts and cam followers
  - timing gears
  - chains and tensioners
    - oil pumps, oil squirters and oil pump pick-ups
    - balance shafts
    - fitting ancillary components, including:
    - covers and seals
    - housings
    - diesel fuel injection pumps
    - oil coolers
    - crankshaft pulleys
    - flywheels
    - bell housings
- requirements of Australian standards relevant to engine reconditioning, including:
  - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
  - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine block and sub-assemblies that they have assembled, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- two different multi-cylinder engine blocks, including:
  - in-line engine blocks
  - V configuration engine blocks
- full gasket and seal set for the engine block
- fixed and portable hand, air and power tools, lifting equipment, torque wrench and material suitable for assembling engine block
- precision measuring equipment, including:
  - dial bore gauges
  - dial indicators
  - inside and outside metric and imperial micrometers.

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to balance rotating and reciprocating engine component	1.1 Job requirements are determined from workplace instructions 1.2 Methods of balancing component are sourced and interpreted from manufacturer literature and workplace procedures 1.3 Tools and measuring equipment are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Engine component is ***prepared*** for balancing operations and balancing machine is prepared to accept component according to ***safety requirements***
2. Balance rotating and reciprocating engine component	2.1 Component is mounted and engaged with machine according to workplace procedures and safety requirements, and following machinery safe operating procedures 2.2 Rotating and reciprocating engine components are balanced in line with workplace requirements and according to workplace procedures, safety requirements, and machinery safe operating procedures, and without causing damage to components or system
3. Complete balancing processes	3.1 Final inspection is made to ensure work is to workplace requirements 3.2 Component is cleaned and presented ready for use or stored according to workplace procedures 3.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Reading skills to:	• identify and interpret engine component specifications from workshop literature • interpret safe operating procedures for engine component balancing machinery from operating manuals.
Writing skills to:	• legibly and accurately fill out workplace documentation when recording measurements.
Oral communication skills to:	• clarify instructions.

Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop manuals, and machinery dials and gauges
	• use basic mathematical operations, including addition, subtraction, division and multiplication to:
	  • convert metric dimensions to imperial, and imperial dimensions to metric
	  • weigh engine components to determine weight to be removed or added.

Digital literacy skills to:	• navigate and operate computerised balancing machinery.
Problem solving skills to:	• determine the most appropriate balancing method for the situation.
Technology skills to:	• use metric and imperial precision measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Preparing must include:	• procedures for chemically cleaning components without damage • checking all components to ensure no further machining is required.

Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including operational risk assessment and treatments associated with:
	  • electrical safety of balancing equipment and machinery
	  • equipment and machinery movement and operation.

Assessment Requirements for AURTTM005 Balance rotating and reciprocating engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- balance one four or six cylinder in-line engine crankshaft assembly, including:
  - front pulley
  - crankshaft and flywheel and pressure plate (manual transmission) or drive plate (automatic transmission)
- balance one V8 engine crankshaft assembly, including:
  - front pulley
  - crankshaft and flywheel and pressure plate (manual transmission) or drive plate (automatic transmission)
- balance one piston and connecting rod assembly
- during the above work, perform each of the following methods of adding or removing weight from engine components:
  - drilling
  - welding
  - machining.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to balancing rotating and reciprocating engine components, including operational risk assessment and treatments associated with:
  - electrical safety of balancing equipment and machinery
  - equipment and machinery movement and operation

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- operating principles of component balancing, including:
  - dynamic balance
  - internally and externally balanced engines
  - reciprocating mass
  - rotating mass
  - sources of torsional vibration
  - gas pressure
  - purpose of counterweights, torsional vibration dampeners, and balance shafts in balancing
  - difference between in-line engine balance, flat plane and V type engine balance, including the effect of the number and angle of cylinders
- balancing procedures and techniques, including:
  - in-line engines, flat plane crankshafts and V type engines
  - protecting crank pins from damage from bob-weight clamping
  - protecting main bearing journals from damage from balancing machine cradle rollers or V block
  - weight matching the pistons and rod ends
  - methods of calculating bob-weight values for V type and in-line engines, including:
    - rotating mass with oil allowance
    - reciprocating mass
    - effect of number of cylinders and V angle on the total calculation
  - mounting bob-weights on crankshafts of V type engines
  - balancing internally balanced engines
  - balancing externally balanced engines
- procedures for adding and removing metal to the crankshaft, including:
  - drilling and linishing to remove weight
  - welding to add weight
  - machining or drilling and adding heavy metal.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the rotating and reciprocating engine components that they have balanced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- material relevant to balancing rotating and reciprocating engine components
- multi-cylinder crankshafts, flywheels and piston and connecting rod assemblies specified in the performance evidence and requiring balancing
- precision measuring equipment, including:
  - dial indicators
  - inside and outside metric and imperial micrometers
  - scales in 0.1 gram graduations
- linishing machine
- hand, air and power tools appropriate to balancing rotating and reciprocating engine components.

AURTTM006 Perform advanced machining and blueprinting of engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to compare engine components to original manufacturer and component supplier specifications and match them in relation to weight, size and capacity. It involves preparing for the task, measuring and machining components to original manufacturer and component supplier specifications, and completing workplace processes and procedures.

It applies to those working in the automotive service and repair industry. The engine components include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to blueprint engine	1.1 Job requirements are determined from workplace instructions 1.2 Information is sourced, procedures and methods are analysed, and appropriate tools are selected for machining and blueprinting engines 1.3 Tools and measuring equipment are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Cylinder block and cylinder head are ***prepared*** for blueprinting according to ***safety and environmental requirements***
2. Measure components	2.1 Measurements, clearances and tolerances are sourced and interpreted from manufacturer and component supplier literature 2.2 Components are measured and clearances and tolerances are calculated according to workplace procedures
3. Machine components	3.1 Components are adjusted or machined to meet manufacturer and component supplier specifications according to workplace procedures and safety and environmental requirements, and following machinery safe operating procedures 3.2 Dummy assembly of engine is performed as required and clearances and tolerances are calculated according to workplace procedures 3.3 Further machining is carried out as required to achieve required clearances and tolerances 3.4 Engine is assembled according to job requirements and clearances, and tolerances are calculated again 3.5 Bright surfaces are treated with rust prevention solution and component is prepared for further process or storage according to workplace procedures 3.6 ***Blueprinting schedule documentation*** is completed according to workplace procedures
4. Complete blueprinting and machining process	4.1 Final inspection is made to ensure finished work complies with workplace requirements 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace

	procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret engine component specifications from workshop literature • interpret machinery safe operating procedures from operating manuals.
Writing skills to:	• legibly and accurately fill out workplace documentation when making recommendations and recording measurements and material used.

Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop literature, and machinery dials and gauges
	• use basic mathematical operations, including addition and subtraction, multiplication and division to:
	  • convert metric dimensions to imperial, and imperial dimensions to metric
	  • calculate tolerances and clearances.

Planning and organising skills to:	• select best tooling option for the work and sequence procedure to reduce time and material wastage.
Technology skills to:	• operate machinery when adjusting or machining engine components • use metric and imperial precision measuring equipment.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Preparation must include:	• ensuring surfaces are clean and oil and water passageways are clear using appropriate tools, such as a rifle brush.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
	  • procedures for selecting and using personal protective equipment (PPE) for:
	  • handling engine blocks and sub-assemblies
	  • using chemical cleaning agents
	  • operational risk assessment and treatments associated with:
	  • electrical safety of machinery
	  • machinery movement and operation
	• environmental requirements, including procedures for trapping, storing and disposing of cleaning and lubricating fluids released during process.

Blueprinting schedule documentation must include:	• record of work performed, including tolerances and clearances achieved.

Assessment Requirements for AURTTM006 Perform advanced machining and blueprinting of engine components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- machine and blueprint two of the following different engine components:
  - engine with multiple overhead camshafts
  - V configuration engine with at least six cylinders
  - multi-cylinder diesel engine.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to performing advanced machining and blueprinting of engine components, including:
  - procedures for selecting and using personal protective equipment (PPE) for:
    - handling engine blocks and sub-assemblies
    - using chemical cleaning agents
  - operational risk assessment and treatments associated with:
    - electrical safety of machinery
    - machinery movement and operation
- environmental requirements, including procedures for trapping, storing and disposing of cleaning and lubricating fluids released during process
- procedures for preparing cylinder blocks and cylinder heads for blueprinting, including:
  - chemically cleaning engine components, including methods for avoiding damage or loss of components
  - chasing threads to remove debris with correct grade tap

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - hardness testing components
  - pressure testing cylinder heads
  - checking cylinder heads for bend on both sides
  - checking cylinder heads for minimum thickness
  - checking valve guides, valve stems, collets and valve springs for wear
  - testing engine block, including sonic testing and crack testing
  - dummy assembling engines, including reasons for dummy assembling engines
- procedures for blueprinting cylinder blocks, including:
  - line boring main tunnels to produce datum
  - fitting bearings and checking crush
  - measuring main bearing tunnel with bearings fitted
  - grinding crankshaft to suit bearings and to achieve desired clearance and phasing consistency
  - sleeving lifter bores to centre line of camshaft and checking lifter to bore clearance and alignment to camshaft
  - fitting camshaft bearings and checking running clearances
  - squaring up deck to crankshaft tunnel to ensure crankshaft is parallel to block
  - fitting torque plate to bore and hone
  - honing cylinders to desired surface finish, matching individual pistons to respective bores
  - setting ring end gap
  - achieving consistent piston height for desired compression ratio and checking rotational clearance
- procedures for blueprinting connecting rods, including:
  - shot peening connecting rods
  - preparing rod for re-sizing, including removing and locating dowels as required
  - selecting bolts
  - tensioning and re-sizing tunnel, maintaining centre-to-centre height
  - checking little end running clearance
  - removing bushes and checking parent bore of rod and bush fitment
  - pin fitting rod, maintaining centre-to-centre height and running clearance
  - checking alignment of rod
  - fitting up bearings, checking crush and running clearance
  - resizing connecting rods and fitting new bolts to ensure centre-to-centre length and alignment is correct
- procedures to blueprint cylinder heads, including:
  - methods for achieving optimum airflow, including limitations of cylinder head modifications
  - machining for larger valves, including identifying machining shifts in castings
  - operating flow bench
  - porting for improved air flow and to balance combustion chambers

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - calculating capacity of individual combustion chambers and machining combustion chambers to achieve consistency
  - calculating compression ratio
  - selecting camshaft
  - setting valve heights
  - calculating installed height of valve springs and seat pressure
  - calculating valve spring open height and pressure
  - calculating valve spring solid height and coil bind clearance
  - calculating spring retainer to stem seal clearance
  - dialling camshaft
  - machining pistons to achieve desired compression ratio
  - setting rocker geometry, including length and sweep
- requirements of Australian standards relevant to engine reconditioning, including:
  - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
  - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-grinding operations, including rust protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine components that they have machined and blueprinted, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- two different multi-cylinder engines as specified in the performance evidence requiring machining and blueprinting
- precision measuring equipment, including:
  - dial bore gauges
  - dial indicators
  - inside and outside metric and imperial micrometers
  - inside and outside spring calipers
  - fixed and portable hand, air and power tools
  - lifting equipment
- material suitable for machining and blueprinting the engine components.

AURTTM007 Carry out crankshaft grinding

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out grinding operations on engine crankshafts to specific under sizes. It involves preparing for the task, determining crankshaft damage and required repair action, preparing and using grinding machines to grind crankshafts to specifications, tolerances and workplace requirements, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The crankshafts include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

	manufacturer procedures 3.6 Constant measuring gauge and steady rest are positioned on main bearing journal taking into account position of oil hole 3.7 Crankshaft is ground at correct rotational speed for crankshaft material and diameter according to safety requirements, and following machinery safe operating procedures 3.8 Crankshaft is inspected to ensure compliance with specifications and tolerances 3.9 Grinding operations are completed to required specifications and tolerances according to safety requirements, and following machinery safe operating procedures
4. Finish crankshaft grinding	4.1 Oil holes are chamfered and dressed 4.2 Journals are linished with correct grade of belt and in right direction of rotation and required finish 4.3 Flange ends and seal areas are faced 4.4 ***Crankshaft is examined and measured*** according to manufacturer specifications and tolerances, and workplace procedures 4.5 Crankshaft is cleaned according to workplace procedures 4.6 Bright surfaces are treated with rust prevention solution and crankshaft is prepared for further process or storage according to workplace procedures
5. Complete work processes	5.1 Final inspection is made to ensure finished work complies with workplace requirements and crankshaft is presented ready for use or storage 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret crankshaft specifications from workshop literature • interpret machinery safe operating procedures from operating manuals.
Writing skills to:	• legibly and accurately fill out workplace documentation to record measurements.

Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts
	• use basic mathematical operations, including addition and subtraction, to:
	  • convert metric dimensions to imperial, and imperial dimensions to metric
	  • calculate tolerances and clearances.

Planning and organising skills to:	• select best tooling option for the work and sequence procedure to reduce time and material wastage.
Technology skills to:	• use metric and imperial precision measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Cleaning and inspecting crankshaft must include:	• following procedures for chemically cleaning nitride and Tufftride crankshafts
	• inspecting crankshaft, including:
	  • coil shot
	  • end shot
	  • hardness
	  • alignment
	  • bend
	  • thread condition
	  • key way condition
	  • seal running surfaces condition

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• rear flange condition • nose gear condition.
Preparation must include:	• selecting wheel to suit radius and journal width • procedures for dressing wheel.
Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: • selecting and using personal protective equipment (PPE) for using grinding machines and chemical cleaning and lubricating agents • identifying hazards associated with rotating grinding machines • manual handling techniques relating to grinding crankshafts.
Examining and measuring crankshaft must include:	• checking journals for: • acceptable surface finish • taper • ovality • barrelling • hourglass • grinding chatter and journal burning • checking crankshaft for straightness in V blocks using a dial indicator.

Assessment Requirements for AURTTM007 Carry out crankshaft grinding

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- grind one crankshaft of an in-line petrol engine with at least four cylinders.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to grinding crankshafts, including procedures for:
  - selecting and using personal protective equipment (PPE) for using grinding machines and chemical cleaning and lubricating agents
  - identifying hazards associated with rotating grinding machines
  - manual handling techniques relating to grinding crankshafts
- types, characteristics and limitations of crankshaft grinding machines, including:
  - hand-held machines for oil hole dressing
  - types and grades of grinding wheels, including grit grades
- dismantling procedures for crankshafts, including:
  - numbering and removing counterweights
  - drive gears
  - oil seal sleeves and dowels
- cleaning and inspection procedures, including:
  - chemically cleaning crankshafts, including methods of avoiding damage to nitride and Tufftride crankshafts
  - identifying crankshaft material

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - identifying heat treatment process, including nitriding, Tufftriding and induction hardening
    - identifying radius treatment, including deep fillet rolling, radius rolling and shot peening
    - checking alignment of crankshaft in V blocks
    - measuring journals against specifications and identifying damaged journals
    - testing procedures for crankshaft, including:
        - crack testing coil shot and end shot
        - testing hardness of journals
- procedures for preparing crankshaft grinding wheel, including:
    - wheel preparation, including selecting wheel to suit radius and journal width of crankshaft
    - dressing procedures for wheel, including:
        - types of diamonds for front and radius dressing
        - procedures for dressing wheel to suit crankshaft radius
        - procedures for dressing front of wheel
- procedures for big end grinding, including:
    - setting crankshaft rotation speed according to crankshaft material and big end diameter
    - setting crankshaft grinder wheel head position
    - setting chuck offsets for big end bearings and adjusting counterweights to suit
    - fitting crankshaft in correct direction of rotation and ensuring that critical surfaces are not damaged by the chuck
    - measuring journal diameters during grinding with constant measuring gauge
- procedures for adjusting crankshaft grinder to suit main bearing journal grinding, including:
    - removing crankshaft from grinder
    - fitting crankshaft in correct direction of rotation
    - setting datum in relation to rear flange and nose for main bearing grinding
- procedures for main bearing journal grinding, including:
    - setting crankshaft rotation speed according to crankshaft material and journal size
    - setting crankshaft grinder wheel head position
    - measuring journal diameters during grinding with constant measuring gauge
- procedures for finishing journal grinding, including:
    - chamfering and dressing oil holes
    - linishing journals according to grade of belt, required finish, and rotational direction
    - setting up and facing flange ends and seal areas
    - final grinding inspections of crankshaft, including:
        - journal surface finish
        - taper, ovality, barrelling, and hourglass
        - grinding chatter
        - burning of radius and journals

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - methods of correcting faults
- procedures for removing crankshaft from grinder and checking crankshaft for straightness in V blocks using dial indicator
- requirements of Australian standards relating to engine reconditioning, including:
  - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
  - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-grinding operations, including rust protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the crankshaft grinding that they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

AURTTM008 Dismantle and evaluate engine blocks and sub-assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to dismantle and evaluate an engine block and its sub-assemblies as part of an engine repair or reconditioning process. It involves preparing for the task, dismantling and evaluating the engine blocks and sub-assemblies, determining required repair action, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine blocks and sub-assemblies include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• identify and interpret engine component specifications from workshop literature • interpret safe operating procedures for engine component rebuild machinery from operating manuals and signs.
Writing skills to:	• legibly and accurately fill out workplace documentation when making recommendations.

Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts
	• use basic mathematical operations, including addition and subtraction, to:
	  • convert metric dimensions to imperial, and imperial dimensions to metric
	  • calculate tolerances and clearances.

Planning and organising skills to:	• select best tooling option for the work and sequence components to reduce time and material wastage.
Technology skills to:	• use metric and imperial precision measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including operational risk assessment and treatments associated with:
	  • electrical equipment used in dismantling and evaluating engine blocks and sub-assemblies
	  • manual and mechanical lifting and shifting equipment

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• toxic cleaning substances • environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids released during the process.
Inspecting, measuring and testing must include:	• applying surface finishes and wear patterns to: • cylinder bores, crankshafts, pistons, gears, cam followers, and camshafts • bearings and bushes • block facings • parting faces of connecting rod • main bearing caps • crack testing: • connecting rods • crankshaft • camshaft • cylinder block surface • camshaft and main bearing tunnels • main bearing caps • hardness testing: • alloy cylinder blocks, pistons, crankshaft journals and camshaft followers • checking taper, ovality and wear of: • crankshaft and camshaft journals • main bearing and connecting rod tunnels • cylinder bores in conventional engine blocks and parent bores of engine blocks with dry sleeves • checking: • camshaft lobe lift • straightness of shafts • main bearing tunnels for alignment • connecting rod alignment and little end bore size • cylinder block flatness and deck height • piston ring land clearance, piston skirt wear, and gudgeon pin to piston clearance • cylinder liner register in both upper and lower parts of cylinder block • oil pump for serviceability • idler gear hub to bearing clearance.

Assessment Requirements for AURTTM008 Dismantle and evaluate engine blocks and sub-assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle and evaluate the following three different engine blocks and their sub-assemblies:
  - in-line engine block
  - V configuration engine block
  - diesel engine block with sleeves.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to dismantling and evaluating engine blocks and sub-assemblies, including operational risk assessment and treatments associated with:
  - electrical equipment used in dismantling and evaluating engine blocks and sub-assemblies
  - manual and mechanical lifting and shifting equipment
  - toxic cleaning substances
- environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids released during the process
- manual handling techniques, including those relating to:
  - using machinery for lifting engine blocks and engine components
  - using slings, chains and other lifting equipment according to safe work practices
- dismantling methods and procedures, including:
  - reasons for selecting chosen tools, techniques and equipment

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- hazards and fluid control measures associated with removal of engines and engine components, including housekeeping
- procedures for recording positions of components, including photographic evidence
- pre-evaluation checks to determine suitability of component to be re-used
- reasons for checking end float before disassembly
- cleaning solutions and cleaning procedures for components
- use of pullers, presses and specialised tools, and application of heat to dismantle components, including gears, pulleys and dowels
- procedures for recording facing directions of pistons, connecting rods, main and big end caps, and positions of removable counterweights and counterweight shaft assemblies
- precautions to be used when removing connecting rod cap
- removing crankshaft and identifying main bearing caps that have lost register
- removing dry and wet sleeves
- dismantling pistons from connecting rods
- removing camshaft bearings and balance/idler shaft bearings
- removing welsh plugs and oil gallery plugs
- removing diesel injection pumps
- dismantling components that have seized, bent or broken, including seized stud and bolt removal

- inspection, measurement and testing procedures, including:
  - characteristics of surface finishes and wear patterns as applied to:
    - cylinder bores, crankshafts, pistons, gears, cam followers, and camshafts
    - bearings and bushes
    - block facings
    - parting faces of connecting rod
    - main bearing caps
  - crack testing components
  - testing hardness of alloy cylinder blocks, pistons, crankshaft journals and camshaft followers
  - straightness of shafts
  - taper, ovality and wear of:
    - crankshaft and camshaft journals
    - main bearing and connecting rod tunnels
    - cylinder bores in conventional engine blocks and parent bores of engine blocks with dry sleeves
  - camshaft lobe lift
  - straightness of shafts
  - main bearing tunnels for alignment
  - connecting rod alignment and little end bore size
  - cylinder block flatness and deck height

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - piston ring land clearance, piston skirt wear and gudgeon pin to piston clearance
  - cylinder liner register in both the upper and lower parts of the cylinder block
  - oil pump for serviceability
  - idler gear hub to bearing clearance
- requirements of Australian standards relevant to engine reconditioning, including:
  - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
  - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine blocks and sub-assemblies that they have dismantled and evaluated, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- three different multi-cylinder engine blocks specified in the performance evidence
- precision measuring equipment, including:
  - dial bore gauges
  - dial indicators
  - inside and outside metric and imperial micrometers

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- fixed and portable hand, air and power tools and lifting equipment suitable for dismantling and evaluating engine blocks and sub-assemblies.

AURTTM009 Fit sleeves and bore and hone engine cylinders

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to fit sleeves to restore engine cylinder blocks and to bore and hone the sleeves to specific tolerances. It involves preparing for the task, assessing damage and determining required repair action, boring, sleeving and honing engine cylinders, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engines include those in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to bore engine	1.1 Job requirements are determined from workplace instructions

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
cylinder	1.2 Engine block, boring and sleeving information is sourced and interpreted 1.3 Tools and measuring equipment for boring are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Engine cylinder is measured and ***calibration requirements*** for boring are determined 1.6 Engine cylinder block is prepared for boring, and reboring machine is prepared to accept engine cylinder block according to manufacturer specifications and workplace procedures 1.7 Engine cylinder block is correctly positioned and clamped, and limit stop is set according to manufacturer specifications and workplace procedures
2. Bore engine cylinder	2.1 Cutting tools are mounted and positioned, and worn and damaged cutting tools are identified and replaced or sharpened 2.2 Boring operations are carried out at correct speeds and feed rates according to workplace procedures and ***safety and environmental requirements***, and following machinery safe operating procedures 2.3 Engine cylinder is measured to ensure compliance with specifications 2.4 Boring operations are completed to required specifications and honing allowances according to workplace procedures and safety requirements, and following machinery safe operating procedures
3. Prepare to sleeve engine cylinder	3.1 Tools and equipment for sleeving are selected, checked and prepared for operation according to manufacturer specifications and workplace procedures 3.2 Measuring and calibration requirements for sleeving are determined and required sleeve is selected 3.3 Engine cylinder block or barrel is prepared for sleeving according to manufacturer specifications and workplace procedures
4. Sleeve engine cylinder	4.1 Sleeving operations are carried out according to workplace procedures and safety requirements, and following machinery safe operating procedures 4.2 Sleeves are measured to ensure compliance with specifications, including sleeve protrusion 4.3 Sleeves are bored as required to required specifications and honing allowances according to workplace procedures and safety

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	requirements, and following machinery safe operating procedures
5. Prepare to hone engine cylinder	5.1 Bored engine block is cleaned of residue and swarf according to manufacturer specifications and workplace procedures 5.2 Tools and equipment for honing are selected, checked and prepared for operation according to manufacturer specifications and workplace procedures 5.3 Clearances are measured and honing requirements are determined 5.4 Honing machine is prepared to accept engine cylinder block according to manufacturer specifications and workplace procedures 5.5 Engine cylinder block is positioned and securely clamped, and required hone stroke is set according to manufacturer specifications and workplace procedures 5.6 Hone stones are selected and speed is set to achieve required finish and cross hatch
6. Hone engine cylinder	6.1 Engine cylinder is honed at correct speed and rate to required finish according to workplace procedures and safety requirements and following machinery safe operating procedures 6.2 Engine cylinder is measured to ensure compliance with specifications 6.3 Honing operations are completed to required piston to bore clearance according to workplace procedures and safety requirements and following machinery safe operating procedures 6.4 Engine cylinder block is thoroughly cleaned of residual honing oil according to workplace procedures
7. Complete sleeving, boring and honing processes	7.1 Final inspection is made to ensure finished work complies with workplace requirements 7.2 Bright surfaces are treated with rust prevention solution and engine cylinder block is prepared for further process or storage according to workplace procedures 7.3 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 7.4 Workplace documentation is processed according to workplace procedures

Assessment Requirements for AURTTM009 Fit sleeves and bore and hone engine cylinders

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- work on three different engine blocks as follows:
  - bore one engine block to accept parallel liners with correct interference fit
  - bore one engine block to accept flanged liners with correct interference fit
  - bore and hone the cylinders of a different multi-cylinder engine block to achieve correct piston to bore clearance.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to fitting sleeves and boring and honing engine cylinders, including:
  - procedures for selecting and using personal protective equipment (PPE) for:
    - handling engine cylinder blocks
    - using boring and honing machines
    - using chemical cleaning and lubricating agents
  - safe operating procedures for boring and honing machinery, including:
    - electrical safety of boring and honing machinery
    - boring and honing machinery movement and operation
- environmental requirements, including procedures for trapping, storing and disposing of cleaning and lubricating fluids released during the machining process
- types and application of sleeves, including:
  - dry sleeves, including:
    - interference fit parallel sleeve

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

        - interference fit flanged sleeves
        - chrome type finished-to-size dry flanged sleeves
    - wet sleeves, including:
        - flanged
        - stepped
- sleeve fitting procedures, including:
    - interference sleeves, including fitting parallel sleeves to step in parent bore
    - wet sleeves
    - checking sleeve height
- types, characteristics and limitations of honing and boring machines, including:
    - types and grades of boring tools
    - types and grades of honing stones
    - hand-held and machine-operated hones
- tool sharpening methods, including:
    - maintaining sharpness of tool throughout boring operations
    - compensation methods for tool wear throughout boring operations
- boring methods and procedures, including:
    - determining required size of bore, including honing allowance
    - preparing engine cylinder block for boring, and setting engine cylinder block into boring machine, including jigs, rails and clamps
    - setting boring tool to correct diameter, locking boring tool, and setting limit stop
    - reasons for taking a test cut
    - speed and feed rates of boring tool for differing materials, including alloysil or nicolsil, and for bore diameters
    - methods for setting speed and feed rate of boring tools
- honing methods and procedures, including:
    - cleaning engine cylinder block before and after honing
    - preparing portable and stationary honing machines, setting engine cylinder block into honing machine, and setting hone stroke
    - setting honing speeds and feed rates to achieve required finish
    - methods of measuring bores for taper, ovality and barrelling
- types and application of cleaning, lubricating and protective agents, including:
    - material suitability
    - application of lubricating agents for different speeds and feed rates of boring machines and honing machines
    - hazards associated with chemical cleaning and lubricating agents
- requirements of Australian standards relevant to engine reconditioning, including:
    - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
    - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines

- post-repair procedures, including rust protection.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine cylinders that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- three different multi-cylinder engine blocks as specified in the performance evidence
- engine boring and honing machines
- precision measuring equipment, including:
  - dial bore gauges
  - dial indicator gauges
  - inside and outside metric and imperial micrometers.

AURTTM011 Recondition engine cylinder heads

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to recondition engine cylinder heads as part of an engine reconditioning process. It involves preparing for the task, determining engine cylinder head damage and required repair action, preparing reconditioning machines, performing machining to specifications and workplace requirements, reassembling and testing the cylinder head, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The engine cylinder heads include overhead valve or overhead camshaft design cylinder heads in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to undertake engine cylinder head reconditioning	1.1 Job requirements are determined from workplace instructions 1.2 Cylinder head dismantling procedures are sourced and interpreted 1.3 Tools and measuring equipment are selected and checked for serviceability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Cylinder head is cleaned according to ***safety and environmental requirements*** and relevant ***Australian standards***, and **positions of auxiliary** equipment are recorded, including photographic evidence
2. Dismantle engine cylinder head	2.1 Covers and ancillary components are removed, cleaned and stored according to workshop procedures 2.2 Cylinder head is dismantled according to safety requirements and laid out in a logical order using approved methods, tools and equipment 2.3 Component parts are cleaned using appropriate cleaning agents for the type of material and kept in a logical order in preparation for evaluation
3. Determine repair procedures	3.1 Cylinder head is hardness tested as required according to manufacturer specifications, workplace procedures and safety requirements 3.2 Cylinder head is pressure and/or crack tested according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Cylinder head and component parts are ***inspected, measured and tested*** against manufacturer specifications and tolerances and according to workplace procedures and safety and environmental requirements
4. Recondition engine cylinder head and component parts	4.1 Components are adjusted and/or machined against manufacturer specifications and tolerances and according to workplace procedures, relevant Australian standards, and safety and environmental requirements 4.2 Adjustments and/or machining of components are achieved without causing damage to components or system 4.3 Cylinder head is thoroughly cleaned and oil and waterways are cleared using appropriate tools
5. Assemble engine	5.1 Cylinder head is assembled in correct order and without damage,

cylinder head	against manufacturer specifications and tolerances and according to workplace procedures, relevant Australian standards and safety requirements 5.2 Assembled components are measured according to manufacturer specifications and workplace procedures 5.3 Assembled component clearances and tolerances are adjusted to the tolerance required by manufacturer specifications according to workplace procedures 5.4 Assembled engine cylinder head is tested and adjusted against manufacturer specifications and tolerances and according to workplace procedures, relevant Australian standards and safety requirements 5.5 Bright surfaces are treated with rust prevention solution and cylinder head is prepared for further process or storage according to workplace procedures
6. Complete work processes	6.1 Final inspection is made to ensure finished work complies with workplace requirements and engine cylinder heads are presented ready for use or storage 6.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 6.3 Tools and equipment are checked and stored according to workplace procedures 6.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• identify and interpret engine cylinder head specifications from workshop literature • interpret engine cylinder head rebuild machinery safe operating

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	procedures from operating manuals and signs.
Writing skills to:	• legibly and accurately fill out workplace documentation to record measurements.

Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts
	• use basic mathematical operations, including addition and subtraction, to:
	  • convert metric dimensions to imperial, and imperial dimensions to metric
	  • calculate tolerances and clearances.

Planning and organising skills to:	• select best tooling option for the work and sequence procedure to reduce time and material wastage.
Technology skills to:	• use precision metric and imperial measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
	  • operational risk assessment and treatments associated with:
	  • electrical safety of power tools
	  • manual and mechanical lifting and shifting equipment
	  • toxic cleaning substances
	  • selecting and using personal protective equipment (PPE) for handling engine cylinder heads and using specialised equipment
	• environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids and machining waste released during reconditioning process.

Australian standards must include:	• AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines • AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Inspecting, measuring and testing must include:	• checking for straightness of both sides of cylinder head and all manifold faces • checking camshaft tunnels for wear and pick-up • checking water jackets for corrosion • checking valve suitability for refacing, including stem condition • checking valve guide condition and material • resurfacing valves • sizing and fitting K lines • machining and fitting valve seats • establishing valve stem protrusion.

Assessment Requirements for AURTTM011 Recondition engine cylinder heads

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- recondition two of the following engine cylinder heads:
  - overhead valve (OHV) petrol cylinder head
  - overhead camshaft (OHC) petrol cylinder head
  - diesel cylinder head
- resurface a cylinder head.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to reconditioning engine cylinder heads, including:
  - operational risk assessment and treatments associated with:
    - electrical safety of power tools
    - manual and mechanical lifting and shifting equipment
    - toxic cleaning substances
  - selecting and using personal protective equipment (PPE) for handling engine cylinder heads and using specialised equipment
- environmental requirements, including procedures for trapping, storing and disposing of cleaning fluids and machining waste released during reconditioning process
- procedures for removing cylinder head from engine block
- dismantling methods and procedures relating to cylinder heads
- cleaning methods and procedures relating to cylinder heads
- procedures for measuring, testing and evaluating cylinder heads, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - hardness of aluminium alloy cylinder heads and re-hardening aluminium alloy cylinder heads
    - visual inspections
    - cylinder head testing, including:
        - dye penetrant for alloy cylinder heads
        - wet and dry magnetic particle for cast iron cylinder heads
        - vacuum for valve leakage
        - pressure for porosity
        - inspecting valve guides and valve seats
- procedures for measuring, testing and evaluating associated parts, including inspecting camshafts, valves, valve springs, valve spring seats, valve spring retainers, collets and lash caps, rocker arms, rocker shafts and pushrods
- procedures for repairing cylinder heads and associated components, including:
    - heat treating aluminium alloy cylinder heads
    - straightening cylinder heads
    - repairing cracks in cylinder heads
    - welding aluminium alloy and cast iron cylinder heads
    - types of surface finishes for different cylinder head gaskets
    - surfacing cylinder heads, including manifold faces
    - repairing valve guides, valve seats, rocker arms and rocker shafts
    - replacing valve guides
    - cutting valve seats to required angles
    - re-facing valves in valve re-facer
    - setting valve stem protrusion
    - setting valve masking heights in diesel cylinder heads
    - fitting injector tubes and setting injector protrusion
    - cleaning cylinder heads of residue and swarf, including removing residue from bead cleaning
- procedures for assembling cylinder heads, including:
    - refitting welsh plugs and oil gallery plugs, valves, springs, spring seats, retainers, collets lash caps, camshafts, rocker gear, cam followers and associated components
    - reasons for setting valve timing before fitting cylinder head to block
    - evaluating and setting rocker arm geometry
    - preparing cylinder block to accept cylinder head
    - fitting head gaskets and cylinder heads to engine blocks
    - tightening procedures for cylinder head bolts
- requirements of Australian standards relevant to engine reconditioning, including:
    - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
    - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- post-repair test procedures, including machined surface protection.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the engine cylinder heads that they have reconditioned, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available.

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer engine specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- precision measuring equipment relevant to the engine component and work process
- three different multi-cylinder engine cylinder heads as specified in the performance evidence
- fixed and portable hand, air and power tools, lifting equipment and material suitable for reconditioning cylinder heads.

AURTTM012 Carry out camshaft grinding

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to grind engine camshafts to specific under sizes. It involves preparing for the task, determining camshaft damage and required repair action, preparing and using grinding machines to grind camshafts to specifications and workplace requirements, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The camshafts include those of engines in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Manufacture

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to grind	1.1 Job requirements are determined from workplace instructions

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
camshaft	1.2 Camshaft is ***cleaned and inspected***, lobe lift is measured, and condition is reported 1.3 Camshaft grinding information is sourced, procedures and methods are analysed, and appropriate grinding machine and master are selected for camshaft 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and measuring equipment are selected and checked for serviceability 1.6 Camshaft grinding wheel is ***dressed*** to match job requirements 1.7 Camshaft is positioned in grinder and clamped according to manufacturer specifications and workplace procedures, and centre run-out and bend are checked
2. Grind camshaft lobes	2.1 Camshaft grinder movement is set to master according to manufacturer procedures, and position of camshaft to master is ***verified statically*** 2.2 First set of camshaft lobes are ground according to manufacturer specifications, workplace procedures, and ***safety and environmental requirements*** 2.3 Master is re-phased to suit next cylinder's lobes, and lobes are ground according to manufacturer specifications, workplace procedures, and safety and environmental requirements 2.4 Remaining camshaft lobes are ground according to manufacturer specifications, workplace procedures, and safety and environmental requirements 2.5 Camshaft is measured to ensure compliance with specifications and that base circles are true
3. Finish camshaft grinding	3.1 Camshaft is prepared for phosphating according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.2 Camshaft is phosphated according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.3 Journals are linished according to manufacturer specifications, workplace procedures, and safety and environmental requirements 3.4 Camshaft profile is identified on camshaft according to workplace procedures 3.5 Bright surfaces are treated with rust prevention solution and

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	camshaft is prepared for further process or storage according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure finished work complies with workplace requirements and camshaft is presented ready for use or storage 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate camshaft machine settings in workshop and manufacturer literature.
Reading skills to:	• identify and interpret camshaft specifications from workshop literature • interpret machinery safe operating procedures from operating manuals.
Writing skills to:	• legibly and accurately fill out workplace documentation when recording: • parts and materials used • measurements and camshaft specifications.
Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop literature, and machinery dials, gauges and computer readouts • use basic mathematical operations, including addition and subtraction, to: • convert metric dimensions to imperial, and imperial dimensions to metric

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	• calculate tolerances and clearances.
Planning and Organising skills to:	• select best tooling option for the work and sequence procedure to reduce time and material wastage.
Technology skills to:	• use precision metric and imperial measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Cleaning and inspecting must include:	• determining camshaft lobe profile and timing requirements
	• checking camshaft centre run-out
	• checking camshaft for:
	  • bend
	  • drive pin position and condition
	  • fuel pump lobe
	  • gear condition.

Dressing must include:	• dressing grinding wheel by truing
	• preparing for:
	  • roughing
	  • finishing.

Verifying statically must include:	• checking for lobe taper • checking wheel to lobe contact.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
	  • procedures for selecting and using personal protective equipment (PPE) for:
	  • handling camshafts
	  • using chemical cleaning agents
	  • operational risk assessment and treatments associated with:
	  • electrical safety of grinding machinery
	  • grinding machinery movement and operation
	• procedures for trapping, storing and disposing of cleaning and lubricating fluids released during the grinding process.

Assessment Requirements for AURTTM012 Carry out camshaft grinding

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- grind one camshaft of an in-line engine with at least four cylinders.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
  - procedures for selecting and using personal protective equipment (PPE) for:
    - handling camshafts
    - using chemical cleaning agents
  - operational risk assessment and treatments associated with:
    - electrical safety of grinding machinery
    - grinding machinery movement and operation
- environmental requirements, including procedures for trapping, storing and disposing of cleaning and lubricating fluids released during the grinding process
- types, characteristics and limitations of camshaft grinding machines, including use of cam doctors
- cleaning and inspection procedures, including:
  - determining camshaft lobe profile and timing requirements
  - checking camshaft centre run-out
  - checking camshaft for bend
- procedures for preparing camshaft grinding wheel, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - dressing and truing to restore original cutting geometry and correct flatness and roundness
- procedures for camshaft lobe grinding, including:
    - roughing and finishing
- procedures for finalising camshaft grinding, including:
    - linishing
    - phosphating
    - identifying camshaft profile on camshafts
- requirements of Australian standards relevant to engine reconditioning, including:
    - AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
    - AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- post-grinding procedures, including protection of machined surfaces.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the camshaft grinding that they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer camshaft specifications
- AS 4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS 4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- camshaft from engine as specified in the performance evidence
- engine camshaft grinding machine

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- precision measuring equipment, including:
  - dial indicators
  - inside and outside metric and imperial micrometers.

Assessment Requirements for AURTTQ001 Inspect and service final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the final drive assemblies of two different vehicles or machinery, in which the work must involve:
  - evaluating lubricant condition
  - inspecting and adjusting lubricant levels
  - visually inspecting the assemblies for leaks or damage.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing final drive assemblies, including procedures for working with hazardous final drive lubricants
- environmental requirements, including procedures for trapping, storing and disposing of oil released from final drive assemblies
- identification and function of final drive assemblies and components, including:
  - banjo-type final drives
  - unitised final drives
  - transaxle final drives
  - differentials, including limited slip differentials
- types and applications of final drive assembly lubricants and additives
- inspection procedures for final drive assembly, including:
  - checking assembly for lubricant leaks or physical damage
  - checking lubricant condition and levels

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- service and adjustment procedures for final drive assembly, including topping up or replacing lubricant as required
- post-service testing procedures for final drive assembly.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the final drive assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer final drive specifications
- two different vehicles or machinery with final drive assemblies requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing final drive assemblies.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and refit the following driveline components:
  - both drive shafts of a front wheel drive light vehicle
  - drive shaft of a rear wheel drive light vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and refitting driveline components, including procedures for:
  - using driveline tools and equipment
  - lifting and supporting vehicles
- principles of driveline operation
- construction of drive shafts, including:
  - constant velocity (CV) joints
  - universal joints
- driveline test procedures
- dismantling, assembling and adjusting procedures, including:
  - types and applications of lubricants
  - methods of fitting retaining clips to CV joints.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

1. Prepare to inspect and service drive shaft	1.1 Job requirements are determined from workplace instructions 1.2 Servicing information is sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Inspect drive shaft	2.1 Inspection is carried out according to manufacturer specifications, workplace procedures and ***safety requirements*** 2.2 Inspection results are compared with manufacturer specifications 2.3 Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments
3. Service drive shaft	3.1 Service and adjustments are carried out according to manufacturer specifications, workplace procedures and safety **requirements,** and without causing damage to components or systems 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and vehicle or machinery is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Reading skills to:	• locate information from manufacturer and workshop literature when seeking service procedures and specifications relating to drive shafts.
Writing skills to:	• legibly and accurately fill out documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report inspection findings and make repair recommendations.
Numeracy skills to:	• measure components and use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Problem solving skills to:	• refer problems outside area of responsibility to appropriate person.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • working with rotating shafts
	  • handling lubricants.

Unit Mapping Information

Equivalent to AURTTQ2003 Service final drive (driveline)

Assessment Requirements for AURTTQ003 Inspect and service drive shafts

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the drive shafts of two different vehicles or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing drive shafts, including procedures for:
  - working with rotating shafts
  - handling lubricants
- identification and function of drive shaft components, including:
  - single and multi-piece shafts
  - universal joints
  - rubber type couplings
  - slip joints
  - support bearings
  - constant velocity joints
- types and applications of drive shaft lubricants
- inspection procedures for drive shafts, including:
  - component wear or damage
  - lubricant leaks
- service and adjustment procedures for drive shafts, including lubricating components as required

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- post-service testing procedures of drive shafts.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the drive shafts that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer drive shaft specifications
- two different vehicles or machinery with drive shafts requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing drive shafts.

AURTTQ004 Overhaul final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return a final drive assembly to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the final drive assembly, carrying out the overhaul procedures, reassembling and testing the final drive assembly, and completing workplace processes and documentation.

It applies to those working on final drive assembles in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Driveline and Final Drives

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Assessment Requirements for AURTTQ004 Overhaul final drive assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul three different final drive assemblies, one of which must include a limited slip final drive assembly.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) procedures relating to overhauling final drive assemblies, including procedures for using:
  - specialised final drive assembly overhaul tools, equipment and machinery
  - chemicals and toxic substances
  - manual and mechanical lifting equipment
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from final drive assemblies
- types, characteristics and operating principles of final drive assemblies, including limited slip differentials
- final drive assembly overhaul procedures, including:
  - methods for cleaning and preparing final drive assemblies for overhaul
  - final drive dismantling procedures
  - final drive component inspection, measuring and evaluation procedures, including:
    - non-destructive testing procedures, including dye penetrant testing and magnetic particle testing
    - measuring crown wheel run-out and differential case assembly side play
    - measuring ring gear mounting surface run-out

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - measuring limited slip differential components
  - final drive component repair and adjustment procedures, including:
    - bearings and shims
    - collapsible spacers
    - limited slip differential components
  - final drive assembly procedures, including procedures for adjusting component tolerances, including:
    - pinion gear depth
    - pinion bearing preload
    - crown wheel and pinion backlash
    - side bearing preload
    - obtaining and interpreting pinion to crown wheel contact pattern
    - adjustment procedures to gain correct contact pattern
- post-overhaul testing procedures for final drive assemblies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the final drive assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer final drive assembly specifications
- three different final drive assemblies requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting final drive assemblies.

AURTTW001 Carry out soft soldering techniques

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out soft soldering of vehicle components. It involves preparing for the task, carrying out soft soldering procedures, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The components to be soft soldered include ferrous or non-ferrous materials in vehicles from all sectors of the industry, including vehicle radiators or fuel tanks.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to carry out soft	1.1 Job requirements are determined from workplace instructions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out soft soldering to repair:
  - a radiator or fuel tank using a soldering iron
  - a radiator using a direct flame.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to soft soldering, including procedures for working with:
  - cleaning and heating equipment
  - corrosive fluxes
  - volatile liquids and fumes
- environmental requirements, including procedures for trapping, storing and disposing of waste produced during soft soldering process
- soft soldering procedures, including:
  - component cleaning and preparation
  - types and applications of fluxes
  - methods of applying heat, including:
    - soldering irons
    - direct flame
- soft soldering testing procedures, including pressure testing.

AURTTW002 Set, operate and monitor specialist reconditioning machines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to set, operate and monitor specialist machines used in reconditioning engine or vehicle components. It involves preparing for the task, setting up, operating and monitoring specialist machines, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. This unit does not cover crankshaft or camshaft grinding.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

Assessment Requirements for AURTTW002 Set, operate and monitor specialist reconditioning machines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- set up, operate and monitor machine operations for three tasks, including:
  - one precision grinding operation
  - one milling or boring operation.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to setting up, operating and monitoring specialist machinery, including:
  - procedures for selecting and using personal protective equipment (PPE), including:
    - eye, hand and feet protection
    - protective clothing
  - operational risk assessment and treatments associated with:
    - electrical safety of machinery
    - machinery movement and operation
- basic machining procedures for commonly used specialist reconditioning machines, including:
  - sharpening and shaping tools
  - identifying worn and damaged cutting tools
  - correctly mounting and positioning cutting tools
  - setting machining parameters to achieve job requirements and maximise tool life, including speeds and feeds

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - types and application of coolants and lubricants
  - measuring to specified tolerances and dimensions
- type, characteristics, uses and limitations of commonly used specialist reconditioning machines
- techniques for reading and interpreting technical information, including technical drawings.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the specialist machines that they have set, operated and monitored, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions detailing work requirements, including work specifications
- specialist reconditioning machines specified in the performance evidence
- precision measuring equipment, including micrometers
- material relevant to carrying out machining operations.

AURTTW003 Carry out machining operations

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out machining operations on a range of automotive components to specific tolerances. It involves preparing for the task, selecting the correct machining operation, setting up and machining components to specifications, and completing workplace processes and documentation. It also involves restoring surface finishes and tolerances, and aligning components.

It applies to those working in the automotive service and repair industry. The machining operations apply to those using lathes, and milling or surface grinding machines.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret machinery safe operating procedures from workshop literature and signs.
Writing skills to:	• legibly and accurately fill out workplace documentation when recording parts and material used.
Numeracy skills to:	• interpret numerical information in manufacturer specifications, workshop manuals, and machinery dials and gauges • convert metric dimensions to imperial, and imperial dimensions to metric • use basic mathematical operations, including addition and subtraction, to calculate distances, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	• select best tooling option for the work and sequence procedure to reduce time and material wastage.
Technology skills to:	• use precision measuring equipment, including inside and outside metric and imperial micrometers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools and equipment must include:	• two of the following machines:
	  • lathe
	  • mill
	  • surface grinder
	• measuring equipment, including micrometers and vernier gauges.

Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including operational risk assessment and treatments associated with:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• electrical safety of machinery • machinery movement and operation.
Materials must include:	• ferrous metal • non-ferrous metal.

Assessment Requirements for AURTTW003 Carry out machining operations

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out machining operations on both ferrous and non-ferrous materials, using two of the following machines:
  - lathe
  - mill
  - surface grinder.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out machining operations, including operational risk assessment and treatments associated with:
  - electrical safety of machinery
  - machinery movement and operation
- basic machining procedures, including:
  - sharpening and shaping tools
  - identifying worn and damaged cutting tools
  - mounting and positioning cutting tools
  - setting machining parameters to achieve job requirements and maximise tool life, including speeds and feeds
  - types and application of coolants and lubricants
  - measuring to specified tolerances and dimensions
- procedures for machining using a lathe, mill and surface grinder, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - clamping and mounting work pieces
  - setting speeds and feeds
  - machining ferrous and non-ferrous materials
- requirements of Australian standards relevant to engine reconditioning, including:
  - AS4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
  - AS4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the machining operations that they have carried out, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions detailing work requirements, including work specifications
- AS4182 Automotive repairs – Code of practice for reconditioning reciprocating spark ignition engines
- AS4427 Automotive repairs – Code of practice for reconditioning reciprocating compression ignition engines
- machinery as specified in the performance evidence
- precision measuring equipment, including inside and outside metric and imperial micrometers
- ferrous and non-ferrous material relevant to carrying out machining operations.

AURTTX001 Remove and tag driveline components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, remove and tag a range of driveline components. It involves preparing for the work, removing and tagging driveline components by title, job number and driveline application, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation for entering the automotive retail, service and repair industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Transmission

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and tag driveline component	1.1 Task instructions are interpreted and vehicle to be worked on is identified 1.2 Driveline component information is sourced and interpreted 1.3 Potential hazards and risks associated with the task are identified and reported to workplace supervisor 1.4 Tools and equipment are selected and checked for serviceability
2. Remove component	2.1 Driveline component for removal is identified 2.2 Component is removed according to manufacturer specifications, workplace procedures, and ***safety and environmental requirements***, and without causing damage to components or systems 2.3 Removed component is inspected and findings are recorded according to workplace procedures
3. Tag component	3.1 Tagging procedures are identified 3.2 Removed component is legibly ***tagged*** according to workplace procedures and without causing damage 3.3 Tagged component is stored according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instructions and workplace standards 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate information.
Reading skills to:	• interpret key information from manufacturer specifications, workplace procedures and safety requirements relating to driveline components.
Writing skills to:	• legibly and accurately fill out workplace documentation, including tags, using correct industry terminology and conventions.
Numeracy skills to:	• interpret numerical information in task instructions and part numbers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for working with oils and fluids released from driveline systems • environmental requirements, including procedures for trapping, storing and disposing of oils and fluids released from driveline systems.
Tagged must include:	• component title • component condition • job number.

AURTTX002 Inspect and service manual transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service manual transmissions. It involves preparing for the task, inspecting the transmission, reporting the inspection findings, servicing and adjusting the transmission, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The manual transmissions include those of agricultural machinery, heavy commercial vehicles, light vehicles, motorcycles, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURTTX002 Inspect and service manual transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service the manual transmissions of two different vehicle or machinery.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting and servicing manual transmissions, including procedures for handling transmission oils
- environmental requirements, including procedures for trapping, storing and disposing of oils released from transmissions
- identification and function of manual transmissions, including:
  - major components
  - gearshift mechanisms
- basic operation of manual transmissions, including:
  - transaxle
  - longitudinal transmission
  - transfer case
- types and applications of transmission oils
- inspection procedures for manual transmissions, including:
  - evaluating lubricant condition
  - carrying out visual inspections for damage or lubricant leaks
- service and adjustment procedures for manual transmissions, including:
  - replacing oils as required

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - inspecting and adjusting lubricant levels
  - adjusting linkages as required
- post-service testing procedures for manual transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the manual transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer manual transmission specifications
- two different vehicles or machinery with manual transmissions requiring servicing
- tools, equipment and materials appropriate for inspecting and servicing manual transmissions.

AURTTX006 Diagnose and repair hydrostatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to diagnose and repair faults in hydrostatic transmissions and their associated components. It involves preparing for the task, selecting the correct diagnostic procedure, carrying out the diagnosis and the repair, performing post-repair testing, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The unit applies to hydrostatic transmissions in agricultural machinery, mobile plant machinery or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Reading skills to:	• interpret information from manufacturer and workshop literature when seeking hydrostatic transmission specifications and procedures.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report diagnostic findings and make repair recommendations.
Numeracy skills to:	• measure hydrostatic transmission components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distance, volume, pressure, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use hydrostatic transmission diagnostic equipment and measuring equipment, such as vernier calipers and micrometers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Diagnostic tests must include:	• using pressure gauges and flow meters to diagnose hydrostatic transmissions, including taking pressure readings of the following systems:
	  • charge
	  • pilot
	  • hot oil

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• main hydrostatic loop.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • working with high pressure and stored energy hazards
	  • isolating and stabilising machines
	• environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydrostatic transmissions.

Unit Mapping Information

Assessment Requirements for AURTTX006 Diagnose and repair hydrostatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in the hydrostatic transmission systems of two different vehicles or machinery, including in three of the following components:
  - charge pump
  - main pump
  - drive motor
  - hydraulic lines
  - heat exchanger
  - control valve.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing hydrostatic transmissions, including procedures for:
  - working with high pressure and stored energy hazards
  - isolating and stabilising machines
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydrostatic transmissions
- operating principles of hydrostatic transmissions and associated components, including:
  - closed loop
  - charge circuitry
  - flushing circuit

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- application, purpose and operation of hydrostatic transmissions and components, including:
  - charge pump
  - main pump, including pilot control systems
  - drive motor, including control systems
  - filtering
  - hydraulic lines
  - heat exchanger
  - reservoir
- diagnostic testing procedures for hydrostatic transmissions, including:
  - testing charging system
  - testing closed loop system
  - testing flushing system
  - measuring case drains
  - testing internal and external fluid leaks
  - checking abnormal noises and operation
  - using scan tools and multimeter
- repair procedures for hydrostatic transmissions, including procedures for:
  - isolating faults
  - dismantling components and parts
  - inspecting and evaluating worn components
  - repairing and replacing parts
- post-repair flow and pressure testing procedures for hydrostatic transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the hydrostatic transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer specifications for hydrostatic transmissions
- two different vehicles or machinery with faults in the hydrostatic transmission components specified in the performance evidence
- diagnostic equipment for hydrostatic transmissions
- tools, equipment and materials appropriate for repairing and adjusting hydrostatic transmissions.

AURTTX007 Overhaul clutch assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return a clutch assembly to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the clutch assembly, carrying out the overhaul procedures, reassembling and testing the clutch assembly, and completing workplace processes and documentation.

It applies to those working on clutch assemblies in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle clutch assembly	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate clutch assembly and components	2.1 Clutch assembly is dismantled in a logical sequence according to manufacturer and workplace procedures, and ***safety and environmental requirements***, and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble clutch assembly and components	4.1 Clutch assembly is assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of clutch assembly is completed within workplace timeframes and without causing damage to other components or systems 4.4 Post-assembly testing is carried out according to workplace procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly process are rectified

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and clutch assembly is presented ready for use or storage 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate sources of information for clutch assemblies efficiently.
Reading skills to:	• interpret and assess information from manufacturer and workshop literature when seeking clutch assembly specifications and procedures.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	• measure clutch assembly components, and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer specifications.
Planning and organising skills to:	• plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use precision measuring equipment, such as micrometers and dial

Assessment Requirements for AURTTX007 Overhaul clutch assemblies

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul three different clutch assemblies, including one of the following:
  - diaphragm clutch
  - coil spring clutch
  - dual mass flywheel.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling clutch assemblies, including procedures for:
  - trapping, storing and disposing of brake dust and brake fluids
  - using specialised clutch assembly overhaul tools, equipment and machinery
  - using chemicals and toxic cleaning substances
- environmental requirements, including procedures for trapping, storing and disposing of fluids and dust released from clutch assemblies
- types, characteristics and operating principles of clutch assemblies, including:
  - diaphragm clutches
  - coil spring clutches
  - multi-plate wet clutches
  - dual mass flywheels
  - dog clutches
  - clutch operating systems, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - cable systems
    - hydraulic systems
- clutch assembly overhaul procedures, including:
    - methods for removing clutch assemblies from flywheels
    - methods for cleaning and preparing clutch assemblies for overhaul
    - clutch dismantling procedures, including:
        - diaphragm clutches
        - coil spring clutches
    - clutch component inspection, measuring and evaluation procedures, including:
        - non-destructive testing procedures, including dye penetrant testing and magnetic particle testing
        - flywheel, including surface damage and run-out, ring gear serviceability, and pilot bearing serviceability
        - pressure plate assembly, including pressure plate surface damage, pressure plate surface run-out and warping, diaphragm spring serviceability, coil spring and associated components serviceability, and clutch cover damage
        - friction disc serviceability
        - release bearing serviceability
        - crankshaft, including pilot bearing bore run-out and crankshaft end float
        - clutch release fork and transmission input shaft inspection
    - clutch repair and adjustment procedures, including flywheel and pressure plate machining
    - clutch assembly procedures, including procedures for adjusting component tolerances and clearances
- post-overhaul testing procedures for clutch assemblies.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the clutch assemblies that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

Assessment Requirements for AURTTX009 Overhaul automatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul three different automatic transmissions, one of which must be a transaxle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling automatic transmissions, including procedures for using:
  - specialised automatic transmission overhaul tools, equipment and machinery
  - chemicals and toxic substances
  - automatic and mechanical lifting equipment
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from automatic transmissions
- types, characteristics and operating principles of automatic transmissions, including transaxles and conventional transmissions
- automatic transmission overhaul procedures, including:
  - methods for cleaning and preparing automatic transmissions for overhaul
  - transmission dismantling procedures
  - transmission component inspection, measuring and evaluation procedures, including:
    - non-destructive testing procedures, including dye penetrant testing and magnetic particle testing
    - transmission case damage and alignment to engine

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - measuring tolerances and clearances of components, including gear train wear and damage, clutch packs, brake bands, oil pumps, valve body and associated components, extension housing seal and bushing, and bearings
    - methods for evaluating electronic actuators, including solenoids
    - transmission component repair and adjustment procedures, including component machining procedures
  - transmission assembly procedures, including procedures for measuring and adjusting component tolerances, including:
    - clutch packs
    - brake bands and servos
    - gear train preloads and end floats
    - final drive bearing preload
- post-overhaul testing procedures for automatic transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the automatic transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer automatic transmission specifications
- three different automatic transmissions requiring overhaul, one of which must be a transaxle
- tools, equipment and materials appropriate for overhauling and adjusting automatic transmissions.

AURTTX010 Overhaul hydrostatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to return a hydrostatic transmission to original manufacturer tolerances and clearances. It involves preparing for the task, dismantling and evaluating the transmission, carrying out the overhaul procedures, reassembling and testing the transmission, and completing workplace processes and documentation.

It applies to those working on hydrostatic transmissions in vehicles from all sectors of the industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Transmission

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to dismantle hydrostatic transmission	1.1 Job requirements are determined from workplace instructions 1.2 Dismantling information is sourced and interpreted 1.3 Dismantling options are analysed and those most appropriate to the circumstances are selected 1.4 Hazards associated with the work are identified and risks are managed 1.5 Dismantling tools and equipment are selected and checked for serviceability
2. Dismantle and evaluate hydrostatic transmission and components	2.1 Transmission is dismantled in a logical sequence according to manufacturer and workplace procedures, and ***safety and environmental requirements***, and without causing unnecessary damage to components or systems 2.2 Components are cleaned for evaluation according to workplace procedures and safety and environmental requirements 2.3 Components are measured and compared with manufacturer specifications and serviceability is determined 2.4 Component repair method is determined 2.5 Unserviceable parts are identified and replacement parts sourced
3. Carry out overhaul	3.1 Overhaul information is sourced and interpreted 3.2 Overhaul options are analysed and those most appropriate to the circumstances are selected 3.3 Overhaul tools and equipment are selected and checked according for serviceability 3.4 Components are machined, repaired and replaced as required, and adjustments are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to components or systems
4. Assemble transmission and components	4.1 Transmission is assembled according to manufacturer specifications, workplace procedures, and safety and environmental requirements 4.2 Tolerances and clearances are measured against manufacturer specifications and necessary adjustments are made 4.3 Assembly of transmission is completed within workplace timeframes and without causing damage to other components or systems

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	4.4 Post-assembly testing is carried out according to workplace procedures and safety and environmental requirements, and any problems detected as having been introduced during the assembly process are rectified
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace expectations and transmission is presented ready for use or storage 5.2 k area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 5.3 Tools and equipment are checked and stored according to workplace procedures 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate sources of information for hydrostatic transmissions efficiently.
Reading skills to:	• interpret and assess information from manufacturer and workshop literature when seeking hydrostatic transmission specifications and procedures.
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting diagnostic findings, making repair recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions, report evaluation findings and make overhaul recommendations.
Numeracy skills to:	• measure hydrostatic transmission components and use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate distances, areas, volumes, tolerances and deviations from manufacturer

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	specifications.
Planning and Organising skills to:	• plan own work requirements and prioritise and sequence actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use precision measuring equipment, such as vernier calipers and micrometers • use specialised hydrostatic transmission overhaul equipment, such as pressure gauges.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for using:
	  • specialised hydrostatic transmission overhaul tools, equipment and machinery
	  • chemicals and toxic substances
	  • manual and mechanical lifting equipment
	• environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydrostatic transmissions.

Unit Mapping Information

Equivalent to AURTTX4010 Overhaul transmissions (hydrostatic)

Assessment Requirements for AURTTX010 Overhaul hydrostatic transmissions

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- overhaul three different hydrostatic transmissions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to overhauling hydrostatic transmissions, including procedures for using:
  - specialised hydrostatic transmission overhaul tools, equipment and machinery
  - chemicals and toxic substances
  - manual and mechanical lifting equipment
- environmental requirements, including procedures for trapping, storing and disposing of fluids released from hydrostatic transmissions
- types, characteristics and operating principles of hydrostatic transmissions
- hydrostatic transmission overhaul procedures, including:
  - methods for cleaning and preparing hydrostatic transmissions for overhaul
  - transmission dismantling procedures
  - transmission component inspection, measuring and evaluation procedures, including:
    - transmission case damage
    - measuring tolerances and clearances of components
  - transmission component repair and adjustment procedures, including procedures for removing and replacing components
  - transmission assembly procedures, including procedures for adjusting component tolerances

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- post-overhaul testing procedures for hydrostatic transmissions.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the hydrostatic transmissions that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- mechanical repair workplace or simulated workplace
- workplace instructions
- manufacturer hydrostatic transmission specifications
- three different hydrostatic transmissions requiring overhaul
- tools, equipment and materials appropriate for overhauling and adjusting hydrostatic transmissions.

AURTTX012 Dismantle and assemble conventional manual transmissions

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to dismantle and reassemble a conventional manual transmission. It requires the learner to plan and prepare the task; dismantle the transmission and inspect the components; reassemble the transmission and check the transmission operation; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

ELEMENTS	PERFORMANCE CRITERIA
	according to environmental requirements and workplace procedures 5.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 5.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of vehicle transmission information and transmission dismantle and reassembly procedures.
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to safely dismantle and assemble a conventional manual transmission • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• read and interpret numerical information in transmission information • use specialist tools and measuring equipment correctly, including verniers, micrometers and torque wrenches, and report and record the results correctly using relevant mathematical symbols and conventions (e.g. mm for millimeters) • use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate clearances and ratios.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	• set up and operate equipment and tools required to dismantle and assemble a conventional manual transmission.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including:
	  • use of personal protective equipment, including safety glasses, ear protection and safety footwear
	  • applying procedures for disposing of used oil, lubricants and coolants.

Tools and equipment must include:	• micrometers and other measurement instruments • torque wrench.
Manual transmission must include:	• a complete conventional manual transmission, with at least four gears.

Unit Mapping Information

No equivalent unit.

Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle and re-assemble a minimum of two different conventional manual transmissions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
  - use of personal protective equipment, including safety glasses, ear protection and safety footwear
  - procedures for disposing of used oil and lubricants
- types of manual transmissions, including:
  - conventional
  - transaxle
- transmission operating principles, including:
  - types of gears
  - gear ratios
  - transmission bearings, seals and gaskets
  - transmission oils
- construction and operation of transmissions, including:
  - power flows
  - gear selector mechanisms and interlocks
  - synchromesh units
- transmission dismantling procedures
- transmission inspection procedures

Assessment Requirements for AURTTX013 Remove and replace clutch assemblies

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- correctly remove and replace a clutch assembly from an operating vehicle with a manual transmission.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS)and environmental requirements, including:
  - use of personal protective equipment, including safety glasses, ear protection and safety footwear
  - use of hand tools and lifting equipment
  - safety data sheets (SDS) and procedures for handling and disposing of waste brake fluid, lubricants and asbestos-based products, including brake dust
- clutch assembly types, application and basic operation, including:
  - diaphragm clutch
  - coil spring clutch
- clutch assembly removal procedures
- clutch assembly and associated component inspection procedures
- clutch assembly replacement procedures, including:
  - clutch aligning
  - clutch finger height measurement
- work area clean-up and maintenance requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the clutch assemblies that they have removed and replaced, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- an appropriate vehicle fitted with a manual transmission and clutch assembly
- automotive hand tools
- transmission lifting machine
- clutch aligning tool
- cleaning agents.

AURTTX015 Inspect and service clutch systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to inspect and service clutch systems. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

This unit applies to those working in the automotive service and repair industry. The clutch systems include those of agricultural machinery, heavy commercial vehicles, light vehicles, mobile plant machinery, motorcycles or outdoor power equipment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Transmission

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to inspect and service clutch system	1.1 Identify job requirements from workplace instructions 1.2 Obtain and interpret servicing information 1.3 Identify hazards and environmental issues, assess potential risks and implement control measures in line with workplace policies 1.4 Identify tools, equipment and materials required for the job, and examine for serviceability
2. Inspect clutch system	2.1 Carry out inspection according to manufacturer specifications, workplace procedures and workplace health and safety and

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	environmental requirements 2.2 Compare inspection results with manufacturer specifications 2.3 Report inspection findings and make recommendations for necessary repairs or adjustments according to workplace procedures
3. Service clutch system	3.1 Carry out service and adjustment activities according to manufacturer specifications, workplace procedures, workplace health and safety and environmental requirements, and without causing damage to components or systems 3.2 Carry out post-service testing according to workplace procedures and rectify any issues identified
4. Complete work processes	4.1 Carry out final inspection to ensure work meets workplace expectations and vehicle or machinery is ready for use 4.2 Clear work area and dispose of or recycle materials according to workplace procedures 4.3 Examine and store tools and equipment according to workplace procedures 4.4 Complete workplace documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate relevant sources of clutch systems information efficiently
Reading skills to:	• read and interpret information from manufacturer specifications, workplace procedures and documentation ,when seeking clutch systems service procedures and specifications
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making repair recommendations, and recording parts and material used
Oral communication skills to:	• clarify instructions • report inspection findings • make repair recommendations
Numeracy skills to:	• use mathematical operations, including addition and subtraction • measure clutch system components • compare measurements against specifications

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Problem solving skills to:	• refer problems outside area of responsibility to relevant person

Assessment Requirements for AURTTX015 Inspect and service clutch systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate inspecting and servicing the clutch systems of two different vehicles or machinery, including:

- one mechanically operated clutch system
- one hydraulically operated clutch system
-

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for the inspection and service of clutch, including:

- how to locate and interpret manufacturer specifications or equivalent documentation and workplace procedures for inspecting and servicing clutch systems
- the following workplace health and safety requirements for inspecting and servicing clutch systems:
  - procedures for controlling clutch dust and clutch fluid hazards
- the following environmental requirements and procedures for inspecting and servicing clutch systems:
  - trapping, storing and disposing of clutch fluid released during clutch bleeding
- the following inspection procedures for clutch systems:
  - mechanically or cable operated clutch component wear
  - hydraulic operating system for leaks
- service and adjustment procedures for clutch systems, including:
  - adjusting clutch pedal
  - adjusting release fork
  - bleeding clutch fluid
- post-service testing procedures for clutch systems

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- workplace housekeeping and documentation procedures

Clutch systems technical information including:

- the identification, function and operation of the following clutch system and components:
  - clutch plate
  - pressure plate
  - flywheel
  - release bearing and release fork
  - pedals and cables
  - master cylinder
  - slave cylinder
- basic operation of the following clutch systems:
  - dry single or multi-plate clutch
  - wet multi-plate clutch
  - centrifugal clutch
  - hydraulically operated clutch
  - mechanically or cable operated clutch
- types and applications of clutch fluids
-

Assessment Conditions

The assessment must:

- include access to:
  - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
  - repair orders and workplace instructions relating to inspect and service activity
  - workplace procedures relating to inspect and service activity
  - manufacturer clutch system specifications or equivalent documentation to complete inspect and service activity
  - two different vehicles or machinery with clutch systems requiring servicing
  - tools, equipment and materials suitable for inspecting and servicing clutch systems
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

AURTTY001 Repair vehicle chassis, frame and associated components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect, repair and align chassis, frame and components to vehicles. It involves preparing for the task, selecting and using specialist tools and equipment, identifying damage, taking pre-repair measurements, conducting repairs, taking post-repair measurements according to original equipment manufacturer (OEM) or authorised agency specifications, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Mechanical Miscellaneous

Unit Sector

Technical - Chassis and Frame

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to repair vehicle chassis, frame and associated components	1.1 Job requirements are determined from workplace instructions 1.2 Type of damage is identified, and inspection report is completed and documented according to workplace procedures 1.3 Repair specifications from OEM or authorised agency are sourced and interpreted 1.4 Hazards associated with the work are identified and risks are managed 1.5 ***Repair tools and equipment*** and personal protective equipment (PPE) are selected and checked for serviceability 1.6 Work is planned to identify repair methods, minimise waste and use time efficiently
2. Carry out repairs	2.1 Repair or replacement and alignment activities are carried out according to OEM or authorised agency repair specifications, workplace procedures, and ***safety and environmental requirements***, within industry time lines, and without causing damage to other vehicle components or systems 2.2 Measuring equipment is used to take accurate measurements and to align the chassis, frame and components
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communications skills to:	• ask questions to clarify instructions and procedures • clearly report issues or outcomes relating to repair.
Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate tolerances from manufacturer specifications • interpret repair and alignment measurements.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• correctly and safely use specialist repair equipment and tools.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Repair tools and equipment must include:	• hydraulic repair equipment • measuring and alignment equipment.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using specialist tools and equipment
	  • identifying workplace hazards
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURTTY001 Repair vehicle chassis, frame and associated components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair one chassis and its frame and components, in which the work must involve two of the following types of damage:
  - diamond and twist damage
  - kick-up and kick-down
  - sag
  - mash and sway.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle chassis, frame and associated components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment
  - identifying workplace hazards
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- steps in repair inspection process
- original equipment manufacturer (OEM) or authorised agency specifications and recommended repair procedures
- features of different types of chassis damage, including:
  - diamond and twist damage

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - kick-up and kick-down
  - sag
  - mash and sway
- procedures for determining chassis reparability
- vehicle design characteristics, including:
  - mono unitised
  - alloy and high strength steel (HSS) chassis
- chassis repair, replacement and alignment techniques
- key characteristics of welding types and techniques
- limitations on drilling and welding to chassis
- type and use of chassis repair tools and equipment, including:
  - application of heat colours, heat crayons and thermal temp gun
  - hydraulic repair equipment
  - equipment maintenance procedures
- measuring and alignment procedures
- type and use of measuring equipment, including:
  - gun sight gauges
  - drop lining
  - trammel gauges
  - tape measures
- final inspection procedures
- work area clean-up and maintenance requirements
- procedures for completing workplace documentation.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle chassis, frames and components that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- OEM specifications and repair instructions
- PPE required to repair chassis, frame and components
- one chassis requiring repair, and its frame and associated components
- measuring and alignment equipment
- tools and equipment appropriate for repairing vehicle chassis, frame and components.

AURTTZ001 Inspect and service emission control systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect and service emission control systems on petrol or diesel powered engines. It involves preparing for the task, inspecting the system, reporting the inspection findings, servicing and adjusting the system, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The emission control systems include those of agricultural equipment, heavy commercial vehicles, light vehicles, marine vessels, mobile plant machinery, motorcycles or outdoor power equipment.

This unit does not include emission control systems associated with engine management systems.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- diagnose and repair a fault in two of the following components in the exhaust systems of two different vehicles:
  - exhaust manifold or extractor pipes
  - manifold gasket fitted to a vehicle
  - catalytic converter
  - muffler or resonator
  - exhaust pipe.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to diagnosing and repairing exhaust systems, including procedures for working with hot components and exhaust systems producing toxic gases
- operating principles of features of exhaust systems and associated components, including scavenging and back pressure
- application, purpose and operation of exhaust systems and components, including:
  - mufflers
  - extractor pipes
  - catalytic converters
  - diesel particulate filters
- diagnostic testing procedures for exhaust systems, including:
  - exhaust leak testing

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - vibration and noise locating procedures
  - back pressure testing
- repair procedures for exhaust systems, including procedures for removing, replacing and aligning components
- post-repair testing procedures for exhaust systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the exhaust systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer exhaust system specifications
- two different vehicles with faults in the exhaust system components specified in the performance evidence
- diagnostic equipment for exhaust systems
- tools, equipment and materials appropriate for repairing exhaust systems, including metal heating equipment.

AURVLA001 Identify and report vehicle claim fraud indicators

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to identify and report fraud indicators associated with a vehicle insurance claim.

The unit applies to those who identify signs of fraudulent activity on inspection of vehicles; collecting and evaluating information, and providing a written assessment report. Work may relate to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Vehicle Body

Unit Sector

Regulatory and Legal

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for vehicle assessment	1.1 ***Assessment information*** is gathered 1.2 Assessment information is reviewed and interpreted 1.3 ***Safety requirements*** relating to vehicle claim fraud indicators are identified
2. Inspect the vehicle for	2.1 ***Fraud indicators*** are identified and recorded

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
fraud	2.2 ***Workplace policies and procedures***, ***industry guidelines*** and ***legal requirements*** are read and interpreted 2.3 Vehicle is assessed in line with compliance requirements
3. Determine suitable action	3.3 Possible actions to deal with fraud indicators are determined 3.2 Action consistent with nature of claim, assessment made, and workplace and legal restraints is decided
4. Prepare assessment report	4.1 Comprehensive report is prepared specifying full results of identified fraud and vehicle assessment 4.2 Recommendations are documented, including actions and justifications 4.3 Report is submitted and filed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	• interpret information relating to automotive insurance claims and assessment information.
Writing skills to:	• write a comprehensive assessment report integrating information from a range of sources and using appropriate support material, such as photographs and measurements.
Oral communication skills to:	• gather and interpret information from customers and others relating to a fraudulent vehicle insurance claim.
Numeracy skills to:	• use calculations of actual damage when reviewing vehicle claims to identify and report vehicle claim fraud indicators.
Problem-solving skills to:	• establish diagnostic processes relating to identifying and reporting vehicle claim fraud indicators.
Teamwork skills to:	• work effectively with customers, repairers and supervisors.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment information must include:	• assessment notification detailing:
	  • claims handler
	  • insurance policy details where applicable
	  • vehicle owner details
	  • vehicle details
	  • driver details
	  • incident details
	  • vehicle inspection details, including assess without prejudice or assess and authorise
	• digital images
	• quote for repairs or total loss determination.

Safety requirements must include:	• first aid equipment • personal protective equipment and clothing • safety equipment.
Fraud indicators must include two of the following:	• claim report inconsistent with vehicle damage • manufactured damage • staged accidents.
Workplace policies and procedures must include:	• recording and reporting procedures • safe work procedures.
Industry guidelines must include:	• instructions issued by authorised organisation or external persons • industry codes of practice • verbal, written and graphical instructions.
Legal requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and must include:	• commercial-in-confidence practices • Competition and Consumer Act • confidentiality and privacy • Motor Vehicle Insurance and Repair Industry Code of Conduct • personal legal liability • relevant industry codes of practice • Written-Off Vehicles Register (WOVR) managed by each State and Territory.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURVLA001 Identify and report vehicle claim fraud indicators

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- assess vehicles to identify and report indicators of vehicle claim fraud, including a minimum of two of the following:
  - staged vehicle accidents
  - manufactured damage
  - damage inconsistent to claim report
- complete an assessment report relating to each claim.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- principles of fraud investigation
- procedures for identifying and reporting fraud indicators
- types of fraud indicators, including:
  - accidents in an industrial area late at night
  - claim report inconsistent with vehicle damage
  - consistent colour transfer
  - consistent striation or scratching of a car
  - damage consistent with weather conditions, such as rain, snow and sleet
  - damage to trim
  - forced entry
  - locks tampered with
  - manufactured damage
  - no independent witnesses
  - no police report

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - no signs of towing or tow truck driver
  - staged accidents
  - vehicle has a low value
- technical knowledge of motor vehicle mechanical, electrical, surface and structural damage and faults
- general insurance industry knowledge, including relevant sections of:
  - contract and insurance law
  - Insurance Contracts Act
  - Motor Vehicle Insurance and Repair Industry Code of Conduct
  - state or territory Fair Trading Act
- methods for sourcing manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory laws, regulations and standards relating to identifying and reporting vehicle claim fraud indicators, including:
  - commercial-in-confidence practices
  - Competition and Consumer Act
  - copyright law
  - environmental regulations
  - intellectual property
  - personal legal liability
  - Privacy Act
  - Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to identifying and reporting vehicle claim fraud indicators, including:
  - recording and reporting procedures
  - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have assessed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of damaged vehicles, including damage consistent with fraudulent activity
- computer hardware and software, calculators and general office equipment
- fraudulent vehicle claim details and documentation
- industry codes of practice and other relevant documents

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- internet access
- workplace procedures.

AURVNA001 Provide vehicle loss assessments and identify repair requirements

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to provide a vehicle loss assessment and identify repair requirements. It involves determining vehicle damage and repair action and cost, preparing an assessment report, and completing post-assessment documentation.

The unit applies to those undertaking a vehicle loss assessment and identifying repair requirements of a damaged vehicle in the loss assessment environment. Loss assessments may relate to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Unit Sector

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for vehicle assessment	1.1 ***Assessment information*** is gathered 1.2 Assessment information is reviewed and interpreted 1.3 ***Materials, resources and safety equipment*** are located and

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	checked for safe use
2. Inspect vehicle	2.1 Vehicle assessment process is determined and followed 2.2 Vehicle to be inspected is located 2.3 ***Safety requirements*** are read and complied with 2.4 Vehicle is inspected in line with insurance claim requirements and workplace policies and procedures 2.5 Preferred dismantling and inspection methods are determined that conform to workplace policies and procedures and vehicle manufacturer, component supplier, and legal requirements 2.6 Dismantling and inspection methods are negotiated and agreed with the repair estimator in a fair and transparent manner 2.7 Damage and faults to vehicle system and component are determined 2.8 Required outsourcing to specialist services is determined
3. Determine vehicle repair action	3.1 Preferred repair method for vehicle system and components is selected that conforms to workplace policies and procedures and vehicle manufacturer, component supplier, and legal requirements 3.2 Preferred repair methods for paint, trim and accessories are selected that conform to workplace policies and procedures and vehicle manufacturer, component supplier, and legal requirements 3.3 Job procedures are determined that use exchanged or recycled parts as appropriate 3.4 Repair methods are communicated and agreed to with repairer and/or specialist services 3.5 Estimated cost of repairs is calculated 3.6 ***Settlement action*** is decided and agreed to with repairer and/or specialist services
4. Prepare assessment report	4.1 Repairs are authorised where assess and authorise instructions are included in assessment information 4.2 Where assess without prejudice is included in assessment information a settlement amount is determined and documented 4.3 ***Recommendations*** are documented as required by industry and organisation 4.4 Assessment report is completed, including either authorised estimated cost of repairs or settlement amount
5. Complete post-assessment administration	5.1 Assessment report is submitted according to workplace policies and procedures 5.2 Repairer invoice is compared against authorised cost estimate 5.3 Discrepancies between invoice and authorised costs are

ELEMENTS	PERFORMANCE CRITERIA
	investigated where applicable following industry codes and legislative requirements 5.4 Payment of invoice is validated where the invoice and authorised costs are confirmed

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	• interpret assessment information • interpret technical information and specifications • analyse information relating to insurance claims and inspection requirements • understand safety procedures.
Writing skills to:	• use common industry terminology when completing vehicle assessment reports.
Oral communication skills to:	• engage with repairers and specialist providers • negotiate settlement action • obtain vehicle assessment information from others • report work outcomes and problems.
Numeracy skills to:	• calculate cost estimates • interpret technical measurements.

Digital literacy skills to:	• use communication devices and computerised equipment to:
	  • determine current values and costs
	  • prepare vehicle assessment reports
	  • search and gather supporting material, including digital images.

Planning and organising skills to:	• identify and avoid planning and scheduling problems.
Problem-solving skills to:	• identify technical and procedural problems and resolve within scope of own role • prevent time and material wastage.
Technology skills to:	• take digital images.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Assessment information must include:	• assessment notification detailing:
	  • claims handler
	  • driver details
	  • incident details
	  • insurance policy details where applicable
	  • report items
	  • vehicle details
	  • vehicle inspection details, including assess without prejudice or assess and authorise
	  • vehicle location
	  • vehicle owner details
	• digital images
	• quote for repairs.

Materials, resources and safety equipment must include:	• digital camera • electronic or paper-based information and reports • internet connection • personal computer, laptop or tablet • maps • personal protective equipment (PPE) kit.
Safety requirements must include:	• ensuring safe location of vehicle to be inspected • following workplace safety procedures • identifying potential safety hazards.
Settlement action must include one or more of the following:	• cash settlement • repair • total loss.
Recommendations must include one or more of the following:	• additional labour • additional parts • approved or denied report items • in-house specialist repair services • sublet specialist repair services.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURVNA001 Provide vehicle loss assessments and identify repair requirements

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- provide vehicle loss assessment and identify repair requirements on a minimum of two occasions, which involve:
  - one vehicle with paint damage
  - a further vehicle with mechanical damage
- prepare and submit vehicle assessment report relating to the above assessments.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle mechanical, electrical, paint, panel and structural:
  - extensive damage, which is damage that affects the safety and roadworthiness of a vehicle and includes:
    - body panel damage
    - bolt-on vehicle component damage
    - mechanical component damage
    - structural component damage
    - structural damage
    - welded or bonded key structural components, such as chassis rails damage
  - faults
  - dismantling and repair methods
  - minor damage, which is damage that does not affect the safety and roadworthiness of a vehicle and includes:
    - bumper bar graze
    - hail damage
    - panel damage

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- types of specialist services, including:
  - air conditioning
  - automotive glaziers
  - battery electric vehicle (BEV)
  - brake systems
  - cooling systems
  - electrical and electronic systems
  - hybrids
  - liquid petroleum gas (LPG)
  - suspension and wheel alignments
  - transmission
  - trimming
- methods for sourcing current retail costs of vehicles and vehicle components and materials
- vehicle inspection and damage assessment procedures and methodologies, including repair set-up and dismantling procedures
- current assessing and quoting methodologies
- relevant automotive websites to locate information on current best practice and future trends in vehicle loss assessment
- general insurance industry knowledge, including relevant sections of:
  - contract and insurance law
  - Insurance Contracts Act
  - Motor Vehicle Insurance and Repair Industry Code of Conduct
  - state or territory Fair Trading Act
- methods for sourcing original equipment manufacturer (OEM) or authorised agencies' repair procedures and component supplier specifications, workshop manuals and repair guides
- applicable commonwealth, state or territory laws, regulations and standards relating to inspecting vehicles and determining vehicle damage, including:
  - commercial-in-confidence practices
  - environmental regulations
  - intellectual property
  - personal legal liability
  - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to inspecting vehicles and determining vehicle damage, including:
  - recording and reporting procedures
  - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have assessed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of operational vehicles with both minor and extensive vehicle damage
- relevant information, including OEM or authorised agencies' repair specifications, workshop manuals and repair guides
- relevant materials, resources and safety equipment, including digital camera, paperwork and personal protective equipment kit
- relevant safety materials, including workplace safety procedures
- vehicle assessment information, including assessment notification, digital images and quote.

AURVNA002 Provide vehicle total loss assessments

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to provide a vehicle total loss assessment. It involves determining vehicle damage and repair action and cost, calculating prior accident and salvage values, and completing post-assessment documentation.

The unit applies to those undertaking a total loss assessment of a damaged vehicle in the loss assessment environment. Loss assessment may relate to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- provide a vehicle total loss assessment on a minimum of two occasions, on different damaged vehicles
- complete and submit Written-Off Vehicles Register (WOVR) information and vehicle assessment report.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle mechanical, electrical, paint, panel and structural:
  - minor and extensive damage and faults
  - dismantling and repair methods
  - transferred damage and individual vehicle design
- methods for sourcing current retail costs of vehicles and vehicle components and materials
- vehicle inspection and damage assessment procedures and methodologies, including repair set-up and dismantling procedures
- current assessing and quoting methodologies, including total loss calculation
- relevant automotive websites to locate information on current best practice and future trends in vehicle loss assessment
- general insurance industry knowledge, including relevant sections of:
  - Insurance Contracts Act
  - state or territory Fair Trading Act
  - Motor Vehicle Insurance and Repair Industry Code of Conduct
  - contract and insurance law
- methods for sourcing manufacturer and component supplier specifications, including workshop manuals and repair guides

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- applicable commonwealth, state or territory laws, regulations and standards relating to inspecting vehicles and determining vehicle damage, including:
  - commercial-in-confidence practices
  - Competition and Consumer Act
  - copyright law
  - intellectual property
  - personal legal liability
  - WOVR legislation
  - Workplace Health and Safety Act or Occupational Health and Safety Act
  - environmental regulations
- workplace policies and procedures relating to vehicle inspection and determining vehicle damage, including:
  - recording and reporting procedures
  - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have assessed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of operational vehicles with both minor and extensive vehicle damage
- relevant information:
  - original equipment manufacturer (OEM)
  - recognised agency information
  - design specification
  - repair procedures
  - body repair manuals
- relevant materials, resources and safety equipment, including digital camera, paperwork and personal protective equipment kit
- relevant safety materials, including workplace safety procedures
- vehicle assessment information, including assessment notification, digital images and quote.

AURVNA003 Review vehicle repair quotations

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to review a vehicle repair quotation. It involves reviewing cost and time requirements in the repairer's quote to ensure that they accurately represent the repair method to reinstate the vehicle to pre-damage condition, and to determine that the repair cost is fair and reasonable. It also involves ensuring that quotation figures are accurate and completing the required documentation.

The unit applies to those reviewing a body repair shop quotation to repair a damaged vehicle in the loss assessment environment. Vehicles to be repaired may include light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for work	1.1 ***Quotation*** and workplace policies and procedures are located 1.2 Quotation information and supporting documents are collected

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
2. Review time requirements	2.1 Viable repair time requirements are estimated 2.2 Turn-around time for subcontracted specialist services is estimated 2.3 Total time for ***repair work*** is estimated 2.4 Time requirement estimations are documented
3. Review part requirements	3.1 Viability of replacement parts compared to repair is determined while meeting quality standards, ***legal requirements***, ***safety requirements***, and workplace practices 3.2 Relevance of identified parts for the repair is checked 3.3 Potential variations to the original parts costing is determined 3.4 Cost of parts and consumables is estimated using industry and workplace pricing standards 3.5 Findings relating to parts are documented
4. Review subcontract specialist services work	4.1 Nature and scope of subcontract testing, service and repair work are determined 4.2 Completed subcontracted repair work is checked 4.3 Potential variations to subcontract work costing are identified 4.4 Cost of subcontract testing, service and repair work is estimated using industry and workplace pricing standards 4.5 Subcontract testing, parts, service and repair work requirements are documented
5. Agree on quotation with repairer	5.1 Time requirements and costs are negotiated and agreed with repairer in a fair and transparent manner 5.2 Quotation adjustments are made if required 5.3 Quotation is agreed and finalised 5.4 Authorisation to proceed with the repair is provided as required to reinstate the vehicle to pre-damage condition following workplace policies and procedures
6. Finalise quotation review	6.1 Findings are documented using workplace-approved quotation format 6.2 Findings and repair authorisation documentation are reported to appropriate persons as required by workplace policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description

Reading skills to:	• review a vehicle repair quotation to:
	  • interpret technical information
	  • research information
	  • understand common industry terminology
	  • understand manufacturer and component specifications.

Oral communication skills to:	• discuss and finalise quotation with repairer • discuss quotation with supervisor, subcontractors and customers • report work outcomes and problems.
Numeracy skills to:	• estimate costs, time requirements and subcontract work.
Digital literacy skills to:	• access repair and time data • document and review quotation results.
Problem-solving skills to:	• identify technical and procedural problems • prevent time and material wastage problems.
Teamwork skills to:	• work effectively and cooperatively with others to optimise workflow and productivity.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Quotations must include:	• customer details • labour cost estimates • replacement parts required and their cost • subcontracted or specialist work • vehicle details • work to be performed.
Repair work must include:	• all vehicle damage, including minor and extensive damage.
Legal requirements are to be in accordance with applicable commonwealth, state, or territory legislation, regulations, certification requirements and codes of practice, and must include:	• environmental regulations • intellectual property.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Safety requirements are to be in accordance with applicable commonwealth, state or territory Workplace Health and Safety Act or Occupational Health and Safety Act and must include:	• ensuring safe location of vehicle to be inspected • following workplace safety procedures • identifying potential safety hazards.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURVNA003 Review vehicle repair quotations

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- review a minimum of two vehicle repair quotations for vehicle repair jobs, one relating to minor damage, the other to extensive damage.
- for each quotation:
  - agreeing on a final quotation with repairer
  - completing a vehicle assessment report.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle mechanical, electrical, paint, panel and structural:
  - extensive damage, which is damage that affects the safety and roadworthiness of a vehicle and includes:
    - body panel damage
    - bolt-on vehicle component damage
    - mechanical component damage
    - structural component damage
    - structural damage
    - welded or bonded key structural components, such as chassis rails damage
  - faults
  - dismantling and repair methods
  - minor damage, which is damage that does not affect the safety and roadworthiness of a vehicle and includes:
    - bumper bar graze
    - hail damage
    - panel damage

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- types of specialist services, including:
  - air conditioning
  - automotive glaziers
  - battery electric vehicle (BEV)
  - brake systems
  - cooling systems
  - electrical and electronic systems
  - hybrids
  - liquid petroleum gas (LPG)
  - suspension and wheel alignments
  - transmission
  - trimming
- basic principles of estimating and costing
- methods for sourcing current retail costs of vehicles and vehicle components and materials
- current assessing and quoting methodologies
- relevant automotive websites to locate information on current best practice and future trends in the vehicle loss assessment environment
- general insurance industry knowledge, including relevant sections of:
  - contract and insurance law
  - Insurance Contracts Act
  - Motor Vehicle Insurance and Repair Industry Code of Conduct
  - state or territory fair Trading Act
- applicable commonwealth, state or territory laws, regulations and standards relating to reviewing a vehicle repair quotation, including:
  - commercial-in-confidence practices
  - environmental regulations
  - intellectual property
  - personal legal liability
  - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to reviewing a vehicle repair quotation, including:
  - recording and reporting procedures
  - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Where assessment of competency includes third party evidence, individuals must provide evidence that links them to the vehicle repair quotes that they have reviewed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- a range of motor vehicles with both minor and extensive damage
- relevant information:
  - original equipment manufacturer (OEM)
  - recognised agency information
  - design specification
  - repair procedures
  - body repair manuals
- relevant materials, resources and safety equipment, including digital camera, paperwork and personal protective equipment kit
- relevant safety materials, including workplace safety procedures
- vehicle assessment information, including assessment notification, digital images and quotes
- Repair Times manuals.

AURVNA004 Apply insurance industry knowledge to vehicle loss assessments

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to apply insurance industry knowledge to vehicle loss assessment. It involves using insurance industry terminology and trends; and applying policy, Acts and regulations to ensure the correct conduct of a vehicle loss assessment. .

It applies to those applying insurance industry knowledge to a vehicle loss assessment in the loss assessment environment. Loss assessment may relate to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Develop and apply an understanding of the insurance industry	1.1 Sources of information on the structure and functions of the insurance industry are identified and accessed according to workplace policies and procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Broad structures of the insurance industry and their relationship with each other are identified and appropriately applied to day-to-day work 1.3 Insurance industry ***terminology and vocabulary*** are used in the correct context 1.4 ***Trends and technology*** in the insurance industry are monitored on an ongoing basis to inform personal work practices 1.5 Insurance organisation-specific policies, procedures and processes are identified, clarified where necessary, and applied
2. Develop and apply an understanding of government Acts and regulations relevant to the insurance industry	2.1 Statutory insurance industry ***principles, obligations and compliance requirements*** of a loss assessor are interpreted and complied with 2.2 ***Reporting requirements*** and procedures are identified 2.3 Requirements under privacy law are identified, clarified where necessary, and complied with
3. Develop and apply an understanding of loss assessment processes	3.1 Knowledge of ***loss assessment processes, procedures and policy*** is interpreted 3.2 ***Condition of vehicle*** compared to incident description is analysed to determine incident-related damage 3.3 Conflict resolution principles are applied 3.4 Statutory insurance industry principles, obligations and compliance requirements, and their relationship to identified vehicle damage are interpreted, clarified where necessary, and applied 3.5 Automotive industry technical knowledge and experience are applied to determine accuracy of vehicle damage estimate to return the vehicle to pre-damage condition that conforms to manufacturer guidelines and industry standards

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	• apply loss assessment processes, procedures and policies • interpret and apply statutory insurance industry principles, obligations and compliance requirements • understand broad insurance industry structure, functions and relationships

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	• apply organisation-specific policies, procedures and processes.
Writing skills to:	• use common industry terminology • compile reports, including vehicle assessment reports and Written-Off Vehicles Register (WOVR) information • complete templates and proformas.
Oral Communication skills to:	• use insurance industry terminology and vocabulary • engage with repairers and specialist providers • engage with vehicle owners.
Numeracy skills to:	• interpret technical measurements • determine accuracy of vehicle damage estimate.
Digital Literacy skills to:	• access insurance industry information.
Problem Solving skills to:	• clarify policy and privacy law discrepancies • compare and analyse condition of vehicle to incident description to determine incident-related damage.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Terminology and vocabulary must include:	• agreed value
	• assessments
	• certificates of insurance
	• claims
	• depreciation
	• excess
	• indemnity
	• market value
	• misrepresentation
	• mitigation
	• no claim:
	  • bonus
	  • discount
	  • rating
	• non-disclosure
	• policy book
	• pool of funds

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• premium • pre-accident condition • product disclosure statement (PDS) • reinsurance • renewals • subrogation • underwriting • unreasonable or capricious grounds.

Trends and technology must include the following:	• digital imaging
	• electronic-based researching and reporting
	• personal electronic devices, such as:
	  • laptop
	  • mobile phone
	  • tablet.

Principles, obligations and compliance requirements must include:	• Australian Prudential Regulatory Authority (APRA) regulations
	• Financial Services Reform (FSR) Act
	• General Insurance Code of Practice
	• Insurance Contracts Act, including:
	  • duty of disclosure
	  • utmost good faith
	• intellectual property principles and practice
	• Motor Vehicle Insurance and Repair Industry Code of Conduct
	• Commercial-In-Confidence practices
	• Competition and Consumer Act
	• privacy law
	• commonwealth, state or territory regulatory requirements
	• statutory changes to the criteria of the national WOVR.

Reporting requirements must include the following:	• assessment report • WOVR information for total loss assessment.
Loss assessment processes, procedures and policy must include at least three of the following:	• assessment report • WOVR • fraud indicator report • vehicle condition report.
Condition of vehicle must include the following:	• direction of impact (DOI) appropriate to incident description • old and inconsistent damage • pre-accident condition and potential contributing factors.

Assessment Requirements for AURVNA004 Apply insurance industry knowledge to vehicle loss assessments

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- apply insurance industry knowledge to vehicle loss assessment on a minimum of two occasions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- current assessing and quoting methodologies
- relevant automotive websites to locate current best practice and future trends information
- general insurance industry knowledge, including relevant sections of:
  - Commercial-In-Confidence practices
  - contract and insurance law
  - Insurance Contracts Act
  - intellectual property
  - Motor Vehicle Insurance and Repair Industry Code of Conduct
  - personal legal liability
  - State or Territory Fair Trading Act
- applicable commonwealth, state or territory laws, regulations and standards relating to vehicle loss assessment, including:
  - environmental regulations
  - intellectual property
  - legislation
  - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace processes, policies and procedures relating to vehicle loss assessment and reporting requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third party evidence, individuals must provide evidence that links them to the vehicles that they have assessed, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- relevant documentation, including incident description, applicable codes, acts, legislation, regulations and insurance industry policies
- relevant materials, resources and safety equipment, including digital camera, paperwork and personal protective equipment (PPE) kit.

AURVNA005 Inspect quality of vehicle repair work

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to inspect vehicle repair work to ensure that it is being undertaken as agreed by the insurer and repairer.

The unit applies to those involved in inspecting the technical quality of repair work in the vehicle loss assessment environment, at the request of either the customer or the repairer.

Repair work may be to light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Competency Field

Vehicle Body

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for vehicle inspection	1.1 Vehicle information is accessed and reviewed 1.2 Vehicle to be inspected is identified and checked against vehicle information 1.3 Appropriate ***vehicle inspection method*** is determined 1.4 Materials and equipment required to conduct vehicle inspection

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	are identified and prepared
2. Inspect vehicle	2.1 Original equipment manufacturer (OEM) or authorised agencies and ***component specifications*** are interpreted and applied 2.2 Vehicle is inspected to determine that repair has been undertaken to an acceptable industry standard in line with compliance requirements 2.3 Safety and workplace procedures are interpreted and complied with 2.4 Vehicle inspection personal protective equipment (PPE) is used 2.5 Repair faults are identified 2.6 Faults requiring ***rectification action*** are decided and repair work plan is prepared
3. Authorise further action	3.1 Repair faults and recommended repair methods are discussed with current or new repairer 3.2 Cost and quotation variations are agreed with current or new repairer 3.3 Corrective work process is authorised with current or new repairer
4. Complete work processes	4.1 Actions undertaken are documented as required under the relevant code of practice 4.2 Vehicle inspection report is completed and provided to appropriate person 4.3 Reports are processed as required by workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• identify workplace procedures relating to inspecting repair quality.
Reading skills to:	• interpret OEM or authorised agencies' repair procedures • interpret vehicle technical information and specifications, including vehicle inspection reports.
Oral communication skills to:	• communicate with customers, repairers and insurance organisations • confirm inspection requirements • question and listen to others regarding repair work • reach agreement on cost and quotation variations.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Numeracy skills to:	• interpret vehicle specifications • interpret pre- and post-repair measurements • identify OEM or authorised agencies' recommended repair measurements • identify cost variations.
Digital literacy skills to:	• interpret vehicle repair and diagnostic data • use communication devices and computerised equipment to document and report results.
Planning and organising skills to:	• coordinate communication between customer, repairers and insurance organisation.
Technology skills to:	• use electronic devices to inspect the quality of mechanical, body and paint repair work • use electronic vehicle repair measuring systems.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Vehicle inspection method must include at least one of the following:	• physically checking and inspecting damage to vehicle and components • referring to reports, publications and OEM or authorised agencies' specifications • using digital images of damage to vehicle and components.
Component specifications must include at least one of the following:	• vehicle design specifications and drawings • repair instructions and procedures • component replacement instructions and procedures.
Rectification action must include one or more of the following:	• repairing the vehicle at the original repairer • repairing the vehicle at a new repairer and seeking recovery from the original repairer • declaring the vehicle a total loss and disposing of the vehicle at auction • declaring the vehicle a total loss and selling vehicle in its present condition back to the original repairer.

Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect vehicle repair work on a minimum of two occasions, where:
  - one repair involves rectification action undertaken at the original repairer
  - the other repair involves rectification action undertaken at a new repairer**.**

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- type and use of personal protection equipment (PPE) required when inspecting repair work
- types of rectification action and process, including:
  - repairing the vehicle at original repairer
  - repairing the vehicle at a new repairer and seeking recovery from the original repairer
  - declaring the vehicle a total loss and disposing of the vehicle at auction
  - declaring the vehicle a total loss and selling the vehicle in its present condition back to the original repairer
- motor vehicle mechanical, electrical, paint, panel and structural repairs, including:
  - damage and faults
  - dismantling and repair methods
- current assessing and quoting methodologies
- vehicle inspection and damage assessment procedures and methodologies, including repair set-up and dismantling procedures
- general insurance industry knowledge, including relevant sections of:
  - contract and insurance law
  - Insurance Contracts Act
  - Motor Vehicle Insurance and Repair Industry Code of Conduct

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - state or territory Fair Trading Act
- methods for sourcing original equipment manufacturer (OEM) or authorised agencies' repair procedures and component supplier specifications, workshop manuals and repair guides
- applicable commonwealth, state or territory laws, regulations and standards relating to inspecting quality of vehicle repair work, including:
  - commercial-in-confidence practices
  - environmental regulations
  - intellectual property
  - personal legal liability
  - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace procedures relating to inspecting the quality of vehicle repair work, including:
  - recording and reporting procedures
  - use of digital images.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have inspected, e.g. reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace location or simulated workplace
- a range of vehicles with both satisfactory and unsatisfactory repair work
- relevant materials, resources and safety equipment, including digital camera, paperwork and PPE kit
- relevant information, including OEM or authorised agencies' repair specifications, workshop manuals and repair guides
- vehicle details.

AURVNA006 Identify and value vehicle salvage

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to identify and value vehicle and component salvage. It involves inspecting a vehicle to identify and cost saleable items.

The unit applies to those identifying and valuing saleable salvage and components on a damaged vehicle in the loss assessment environment. Vehicles and components may include light vehicles, commercial vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Unit Sector

Loss Assessment and Repair Quoting

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare for work	1.1 Work instructions are used to determine job requirements 1.2 Vehicle to be inspected is located 1.3 ***Workplace policies and procedures***, ***legal requirements***, and ***component specifications*** are read and interpreted 1.4 Workplace requirements, ***safety requirements*** and ***workplace***

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	environmental practices and policies are identified 1.5 Safety equipment and tooling equipment are selected and checked 1.6 ***Vehicle inspection methods*** are determined to minimise waste material and components
2. Inspect vehicle to identify saleable systems and components	2.1 Vehicle systems and components are dismantled and inspected without causing damage 2.2 Serviceable vehicle systems and components are identified 2.3 Saleable ***vehicle salvage***, or vehicle systems and components, are determined and documented following legal requirements
3. Determine vehicle and component retail price	3.1 Value of identified saleable salvage, or vehicle systems and components is determined 3.2 ***Category of vehicle salvage*** is determined 3.3 Retail price of each saleable system and component is estimated 3.4 Details of total loss vehicle are reported to the relevant statutory body according to workplace policies and procedures
4. Clean up work area	4.1 Reusable material is collected and stored 4.2 Waste and scrap are removed according to workplace policies and procedures 4.3 Equipment and work area are cleaned and inspected to serviceable condition according to workplace procedures 4.4 Faults in unsaleable equipment are determined and tagged according to workplace policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	• interpret manufacturer specifications • analyse information relating to workplace policies and procedures • understand common industry terminology, plans and safety procedures and follow Written-Off Vehicles Register (WOVR) requirements.
Writing skills to:	• report on vehicle salvage saleable items and their value.
Numeracy skills to:	• use sources of information to work out value of saleable items,

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
	correctly entering data into salvage report • decide and check on estimation of retail prices.
Digital literacy skills to:	• use computerised technology and communications devices to research and report on vehicle salvage saleable items and their value.
Planning and organising skills to:	• identify and avoid planning and scheduling problems.
Problem-solving skills to:	• avoid time and material wastage • identify technical and procedural problems.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Workplace policies and procedures must include:	• recording and reporting procedures • safe work procedures.
Legal requirements are to be in accordance with applicable commonwealth, state, or territory legislation, regulations, certification requirements and codes of practice, and must include:	• environmental regulations • intellectual property.
Component specifications must include at least one of the following:	• vehicle design specifications and drawings • repair instructions and procedures • component replacement instructions and procedures • inspecting vehicles for saleable components.
Safety requirements are to be in accordance with applicable commonwealth, state or territory Workplace Health and Safety Act or Occupational Health and Safety Act and must include:	• ensuring safe location of vehicle to be inspected • following workplace safety procedures • identifying potential safety hazards.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Workplace environmental practices must include:	• managing clean-up • managing waste • minimising dust and noise.
Vehicle inspection methods must include at least one of the following:	• aural, visual and operational checking of damage to vehicle and components • visually examining digital images of damage to vehicle and components.
Vehicle salvage must include at least one of the following:	• bumper bar • saleable items as listed on the policy • tow bar • vehicle components • vehicle system.
Category of vehicle salvage must include at least one of the following:	• repairable write-off • statutory write-off.

Unit Mapping Information

No equivalent unit.

Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria and foundation skills:

- identify and value vehicle salvage on a minimum of two occasions, including:
  - accurately calculating vehicle salvage value
  - correctly identifying vehicle salvage category.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- motor vehicle mechanical, electrical, paint, panel and structural:
  - dismantling and repair methods
  - loss recovery methods and costs
  - inspection methods and procedures
- general insurance industry knowledge, including relevant sections of:
  - contract and insurance law
  - Insurance Contracts Act
  - Motor Vehicle Insurance and Repair Industry Code of Conduct
  - state or territory Fair Trading Act
- methods for sourcing original equipment manufacturer (OEM) or authorised agencies' repair procedures, and component supplier specifications, workshop manuals and repair guides
- methods for sourcing current retail costs of vehicles, vehicle components and materials
- methods for accessing independent sources with the required skills to value vehicle salvage
- salvage disposal contractors and auction houses
- applicable commonwealth, state or territory laws, regulations and standards relating to identifying vehicle salvage saleable items and determining their value, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - commercial-in-confidence practices
  - environmental regulations
  - intellectual property
  - personal legal liability
  - applicable Workplace Health and Safety Act or Occupational Health and Safety Act
- workplace policies and procedures relating to identifying vehicle salvage saleable items and determining their value, including:
  - recording and reporting procedures
  - work organisation and planning processes.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle salvage that they have valued, e.g. assessment reports.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- work instructions
- a range of total loss vehicles
- computer hardware and software, calculators and general office equipment
- internet access.

2. Develop and apply an understanding of automotive body knowledge	2.1 Knowledge of operating principles of ***vehicle structure*** is developed 2.2 knowledge of operating principles of vehicle ***supplementary restraint systems*** (SRS***)*** is developed 2.3 Knowledge of operating principles of ***vehicle body repair procedures*** is developed 2.4 Knowledge of vehicle structure, SRS and body repair procedures is applied to loss assessment processes, procedures and policies 2.5 Bodywork damage is identified
3. Develop and apply an understanding of advanced specialist vehicle information	3.1 Knowledge of ***specific vehicle types*** is developed, clarified where necessary, and applied to loss assessment processes, procedures and policies 3.2 Knowledge of ***latest technology*** relating to automotive paint and bodywork is developed, clarified where necessary, and applied to loss assessment processes, procedures and policies 3.3 ***Research techniques*** and advanced specialist vehicle knowledge are employed in order to identify vehicle damage

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• source information on loss assessment processes, procedures and policies.
Reading skills to:	• research and interpret automotive paintwork, body, and advanced specialist vehicle information.

Oral communication skills to:	• discuss with repairers and specialist providers problems relating to:
	  • latest automotive technology
	  • specific vehicle types
	  • vehicle body
	  • vehicle paintwork.

Numeracy skills to:	• interpret technical measurements in order to determine extent of damage.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Digital literacy skills to:	• use communication devices and computerised equipment to research advanced specialist vehicle information.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Paint preparation and application must include:	• colour matching
	• paint film thickness gauge
	• paint code list
	• paint mixing
	• masking
	• surface preparation, including:
	  • sanding
	  • degreasing.

Paint products must include:	• acrylic enamel • air dry enamel • clear over base (COB) • multi-layer • pearls • polyurethane • primers and fillers • special effects • two-pack paint • waterborne paint.
Colour matching techniques must include at least one of the following:	• eye • formula • colour cards • colour spectrometer.
Vehicle structure must include:	• alloys • collision energy management • composite materials • foams structural and non-structural • glass components • metals • plastics • vehicle structural integrity and component interrelationship.
Supplementary restraint	• airbag systems, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

systems must include:	• console • curtain • dash • knee • pillar • seat • side • steering wheel • seat belt tensioners • sensors, actuators and control modules.
Vehicle body repair procedures must include:	• alignment systems • panel repair, including the application of filler • measuring systems • methods and types of: • bonding • fastening • riveting • welding.
Specific vehicle types must include at least one of the following:	• agricultural and plant equipment • heavy vehicles • commercial vehicles • light vehicles • motorcycles • recreational vehicles.
Latest technology must include:	• alloy steel technology • aluminium technology • composite materials • electrical and electronic systems • high strength steels • painting preparation and procedures.
Research techniques must include:	• internet • reference material, including: • original equipment manufacturer (OEM) or authorised agency repair guides • paint code list • repair guides • subject matter experts.

AURVTA001 Prepare vehicles for customer use

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to clean and detail vehicles and components before customer delivery. It involves preparing for the task, selecting and using cleaning products, materials, and cleaning tools and equipment, and completing workplace processes and documentation.

It applies to those working in the automotive detailing industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	checked for quality 1.3 Safety data sheets (SDS) are located and interpreted 1.4 Quantities of ***cleaning materials*** are calculated and prepared from workplace instructions 1.5 Hazards associated with the work are identified and risks are managed 1.6 Cleaning tools and equipment, including personal protective equipment (PPE), are identified and inspected for serviceability 1.7 Work area is prepared and work is planned to minimise waste and manage time efficiently
2. Clean and detail vehicle for delivery	2.1 Vehicle and components are selected and checked 2.2 Vehicle and components are cleaned and detailed according to workplace procedures and ***safety and environmental requirements***, and without causing damage to vehicle or components
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills	• clarify instructions and procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
to:	
Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate required cleaning materials and mixing ratios.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Cleaning methods must include:	• hand cleaning • machine assisted cleaning.
Cleaning materials must include:	• paint polishes and protection agents • glass cleaning products • upholstery and leather cleaning products • carpet cleaning products.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using SDS for cleaning products
	  • using tools and equipment
	  • handling and storing cleaning products
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials and cleaning chemicals.

Assessment Requirements for AURVTA001 Prepare vehicles for customer use

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- prepare three different vehicles for customer use, cleaning each vehicle's:
  - exterior
  - interior, including:
    - seats
    - carpets
    - door trims
    - dash and steering wheel.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to preparing vehicles for customer use, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for cleaning products
  - using tools and equipment
  - handling and storing cleaning products
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and cleaning chemicals
- type and use of cleaning materials, including:
  - vehicle washing liquid
  - polishes and glazes

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - window cleaners
- type and operation of cleaning equipment, including:
  - high pressure washer
  - vacuum cleaner
- procedures and requirements for protecting vehicle and components when preparing vehicles for use, including electrical wiring and electrical connections
- procedures for final inspection of vehicle to ensure it is ready for customer use.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have prepared for customer use, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- SDS for cleaning products
- three different vehicles that require cleaning and detailing
- PPE required to clean vehicles
- cleaning materials to prepare vehicle for customer use
- tools, equipment and materials appropriate for preparing vehicles for customer use.

AURVTA002 Remove and replace vehicle supplementary restraint systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and replace vehicle supplementary restraint system (SRS) units and assemblies. It involves preparing for the task, selecting and using specialist tools and equipment to deactivate, remove and replace SRS components, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTA002 Remove and replace vehicle supplementary restraint systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- deactivate, remove and replace supplementary restraint systems (SRS) on two different vehicles, in which the work must involve two of the following:
  - steering wheel airbag
  - dash panelling airbag
  - side curtain airbag
  - seat belt pre-tensioners.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and replacing vehicle SRS, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - manually handling SRS systems and components
  - using hand tools and equipment
- types and operation of SRS components, including:
  - airbag systems, including:
    - steering wheel airbag
    - dash panelling airbag
    - side curtain airbag
  - seat belt pre-tensioners
- replacement procedures for SRS components, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - deactivation
  - removal
  - installation
  - resetting
  - inspection
- procedures for protecting vehicle when removing and replacing SRS
- procedures for final inspection of fitted SRS, including compliance with:
  - original equipment manufacturer (OEM) specifications
  - authorised agency instructions and specifications.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to vehicles where they have removed and replaced SRS, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required to remove and replace SRS components
- OEM or authorised agency instructions and specifications
- OEM-approved materials required to remove and replace SRS components
- two different vehicles requiring SRS replacement
- tools, equipment and materials appropriate for removing and replacing vehicle SRS.

AURVTA003 Inspect vehicle paint, trim and accessories and recommend repair procedures

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to inspect vehicle paint, trim and accessories and make recommendations regarding suitable repair or replacement procedures. It involves preparing for the task, inspecting the technical quality of repair work, recommending repair and rectification options, completing a written report at the request of either the customer or the repairer, and completing workplace processes and other documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for vehicle inspection	1.1 Job requirements are determined from workplace instructions 1.2 Vehicle component specifications are sourced and interpreted from original equipment manufacturer (OEM) or authorised agency and workplace procedures 1.3 Vehicle to be inspected is located, checked and confirmed against vehicle information in workplace instructions 1.4 ***Inspection methods*** are determined and most appropriate option for vehicle and job requirement is selected 1.5 Hazards associated with the work are identified and risks are managed 1.6 Materials and equipment required to conduct inspection are sourced and prepared
2. Inspect vehicle paint, trim and accessories	2.1 Vehicle paint, trim and accessories are inspected to determine damage or faults following workplace procedures and ***safety requirements*** 2.2 Vehicle inspection is completed without causing damage to vehicle or components 2.3 Inspection findings are recorded accurately according to workplace procedures
3. Complete work processes	3.1 Repair options and rectification action are determined and noted in workplace documentation 3.2 Final report identifying repair requirements, including in-house and sublet requirements and recommended repair methods, is prepared according to workplace procedures 3.3 Final report is checked for accuracy and completeness and submitted for processing according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately complete inspection and rectification reports outlining repair recommendations, and parts and material required.
Oral communication skills to:	• clarify instructions and ask questions to gather information • convey inspection findings and repair recommendations.
Numeracy skills to:	• interpret repair and vehicle specifications correctly using metric and imperial systems of measurement • compare measurements of parts and components to determine compliance with specifications • interpret specialised measuring equipment and calibrate equipment scales.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use business technology, including cameras, to complete reporting tasks.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Inspection method must include:	• visual checking • measuring.

Safety requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using personal protective equipment (PPE)
	  • using hand tools and lifting equipment.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and recommend repair procedures for two different vehicles covering:
  - vehicle paint
  - vehicle trim
  - vehicle accessories.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to inspecting vehicle paint, trim and accessories, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using hand tools and lifting equipment
- original equipment manufacturer (OEM) or authorised agency repair specifications
- inspection and repair procedures for vehicle paint, trim and accessories, including:
  - paint condition, including:
    - damage
    - fading
    - non-matching
  - trim condition, including wear and damage
  - accessories, including damage and improper operation
- workplace repair quality requirements
- post-inspection procedures, including preparation of repair report.

AURVTA005 Clean vehicles

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to clean a vehicle. It requires the learner to plan and prepare the task; clean the vehicle interior, exterior and engine bay; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to clean vehicle	1.1 ***Safety and environmental requirements*** are sourced and interpreted 1.2 ***Vehicle*** to be worked on is identified and manufacturer

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	specifications and workplace procedures for vehicle cleaning are sourced and interpreted 1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.4 ***Tools and equipment*** required for vehicle cleaning are identified according to manufacturer specifications
2. Clean vehicle interior and fittings	2.1 Tools, equipment and materials are selected and checked according to manufacturer specifications and workplace procedures 2.2 Vehicle is prepared prior to cleaning interior and fittings according to safety and environmental requirements 2.3 ***Interior surfaces*** are cleaned and vacuumed using correct cleaning materials and equipment, without causing damage to components, tools or equipment
3. Clean vehicle exterior and fittings	3.1 Tools, equipment and materials are selected and checked according to manufacturer specifications 3.2 Vehicle is prepared prior to cleaning exterior and fittings according to safety and environmental requirements 3.3 Vehicle exterior and fittings are cleaned using correct techniques and without causing damage to components, tools or equipment
4. Clean engine bay	4.1 Tools, equipment and materials are selected and checked according to manufacturer specifications and workplace procedures 4.2 Vehicle is prepared prior to cleaning engine bay according to safety and environmental requirements 4.3 Electronic components and electrical connections are protected from water ingress 4.4 Engine bay is cleaned without causing damage to components, tools or equipment
5. Complete work processes	5.1 Final inspection is made to ensure work is to workplace standards and vehicle is presented ready for use or storage according to workplace procedures 5.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 5.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported where necessary 5.4 Problems with cleaning equipment or tools are reported according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	5.5 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures for cleaning a vehicle • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate ratios and amounts of cleaning products.
Planning and organising skills to:	• plan own work requirements and prioritise actions to complete the vehicle cleaning task.
Self-management skills to:	• recognise own limitations when selecting and using tools and equipment and seek timely advice.
Problem-solving skills to:	• identify potential or actual hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	• set up and operate equipment and tools required to clean a vehicle.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
	  • use of personal protective equipment, including safety glasses, ear protection, gloves and safety footwear
	  • applying procedures for preventing waste water from entering storm water systems.

Vehicle must include one or more of the following:	• passenger motor vehicle • light commercial • heavy vehicle • motor cycle • constructed vehicle.
Tools and equipment must include:	• hoses and washing equipment • chemicals and cleaning solutions • polishing equipment.
Interior surfaces must include:	• cloth • glass • leather.

Unit Mapping Information

No equivalent unit.

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria and foundation skills:

- safely and correctly clean a minimum of two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
  - personal protective equipment, including safety glasses, gloves, ear protection and safety footwear
  - operation of equipment and tools, including pressurised hoses
  - safety data sheets (SDS) and types, use and location of cleaning products
  - procedures for preventing waste water from entering storm water system
  - disposal of chemicals, oil and rubbish
- identification and location of vehicle components, including:
  - engine bay
  - engine electrical components
  - interior and exterior fittings
- types of vehicle body finishes
- vehicle cleaning procedures, including:
  - types, application and use of vehicle cleaning areas and vehicle bays
  - types, application and use of cleaning equipment and materials
  - component protection procedures, including:
    - protection of engine bay air intake and electrical and electronic components
    - protection of body electrical components
  - vehicle interior, exterior, fitting and engine bay cleaning procedures
  - cloth and leather interior surfaces cleaning procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - chrome and polished alloy wheels cleaning procedures
- clean-up and maintenance requirements for vehicle cleaning area.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have cleaned, e.g. job card.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- personal protective equipment appropriate to the workplace
- a minimum of two different vehicles with cloth, glass and leather interior components, requiring cleaning
- vehicle cleaning tools, equipment and materials, including:
  - hoses and washing equipment
  - chemicals and cleaning solutions
  - polishing equipment
- vehicle cleaning area.

AURVTG006 Apply vehicle window tinting

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare various glass surfaces of vehicles and apply window tinting material. It involves preparing for the task, selecting and using specialist tools and equipment, producing templates according to window size and shape, cutting tint film, installing tint film on glass surface according to workplace procedures, cleaning and finishing window, and completing workplace processes and documentation.

It applies to those working in the automotive glazing service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for window tinting	1.1 Job requirements are determined from workplace instructions 1.2 Information is accessed and interpreted from window tinting manufacturer specifications, workplace procedures, and relevant safety data sheets (SDS) 1.3 Work is planned to minimise waste and use time efficiently 1.4 Vehicles requiring window tint are identified, sourced and inspected to ensure no prior damage and that related accessories are operating correctly 1.5 Window tinting materials are selected and checked for quality 1.6 Hazards associated with the work are identified and risks are managed 1.7 Application ***tools and equipment*** are selected and checked for serviceability 1.8 Vehicle is protected and safely located according to workplace procedures
2. Measure and cut tinting material and templates	2.1 ***Glass surfaces*** are measured accurately in order to prepare templates 2.2 Templates are cut according to workplace procedures and ***safety and environmental requirements*** 2.3 Window tinting materials are cut according to templates and without causing damage to vehicle or components
3. Prepare surfaces and apply window tinting material	3.1 Surface preparation is carried out using approved methods and materials according to window tinting manufacturer specifications 3.2 Window tinting material is applied correctly following window tinting manufacturer specifications, workplace procedures, and ***safety and environmental requirements*** 3.3 Window tint is inspected for faults according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations, related accessories are operating correctly, and vehicle is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report issues, faults and outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to:
	  • calculate quantities of window tint materials
	  • measure and cut templates to specifications
	  • accurately mark and cut tinting film material.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	• determine causes of defects in application.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Tools and equipment must include:	• personal protective equipment (PPE) • measuring equipment • cutting equipment • hand and power tools.
Glass surfaces must include:	• flat fixed glass • curved fixed glass • movable glass.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using tools and equipment
	  • using SDS for window tint film
	  • material handling and storage
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Unit Mapping Information

Equivalent to AURVTG2006 Apply window tinting

Assessment Requirements for AURVTG006 Apply vehicle window tinting

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- apply window tinting film to three different vehicles, including to:
  - flat fixed glass
  - curved fixed glass
  - movable glass.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying vehicle window tinting, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using tools and equipment
  - using safety data sheets (SDS) for window tint film
  - material handling and storage
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- methods and techniques for window tinting, including:
  - tinting materials, including:
    - regulations
    - types
  - measuring windows and producing templates appropriate to window size and shape
  - measuring and cutting tint film

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - glass surface preparation procedures, including removal of damaged tint
  - application methods and techniques for:
    - flat fixed glass
    - curved fixed glass
    - movable glass
  - window tinting material storage procedures
- procedures for protecting vehicle and components during window tinting work
- procedures for final inspection of applied window tinting.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle window tinting they have applied, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive glazing workplace, off-site workplace location or simulated workplace
- SDS for window tint film
- workplace instructions
- PPE required to cut and apply window tinting
- three different vehicles requiring window tinting to be fitted to the glass specified in the performance evidence
- window tinting film
- tools, equipment and materials appropriate for applying vehicle window tinting.

AURVTG007 Clean vehicle glass surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare and clean vehicles' internal and external glass surfaces to remove visible dirt and grime. It involves preparing for the task, selecting and using cleaning products, cleaning glass surfaces to workplace standards, and completing workplace processes and documentation.

It applies to those working in the automotive detailing industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Glazing

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for glass cleaning	1.1 Job requirements are determined from workplace instructions 1.2 ***Glass cleaning materials and equipment*** are selected and prepared

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	according to manufacturer instructions and workplace procedures 1.3 Safety data sheets (SDS) for glass cleaning fluids and materials are sourced and interpreted 1.4 Vehicle is inspected to ensure there is no prior damage 1.5 Work is planned to minimise waste and use time efficiently 1.6 Work area is prepared to allow cleaning activities to take place according to workplace procedures 1.7 Hazards associated with the work are identified and risks are managed 1.8 Vehicle is protected and safely located according to workplace procedures
2. Carry out glass cleaning activities	2.1 Glass cleaning procedures are carried out using approved materials, methods and equipment according to workplace procedures and ***safety and environmental requirements*** 2.2 Glass cleaning fluids are applied without causing damage to vehicle or components 2.3 Glass cleaning fluids are removed using lint-free cloths or paper towelling 2.4 Glass surfaces are finished according to workplace procedures and quality standards
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectation and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report issues, faults and outcomes.
Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division to determine mixing ratios of cleaning solutions.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Glass cleaning materials and equipment must include:	• personal protective equipment (PPE) • lint-free cleaning cloths or paper towelling • glass cleaning fluids • chamois.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using tools and equipment
	  • using SDS for cleaning products
	  • handling and storing cleaning material
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials and cleaning chemicals.

AURVTG008 Cut and process vehicle and machinery flat laminated glass

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to measure, mark, cut and process flat laminated glass for installation into vehicles and machinery. It involves preparing for the task, selecting and using specialist tools and equipment, producing templates according to size, cutting flat laminated glass and finishing glass edges to given specifications, and completing workplace processes and documentation.

It applies to those working in the automotive glazing service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- mark, cut, process and finish two different flat laminated glass sections, including:
  - one arris finish
  - one bevel edge.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to cutting and processing vehicle and machinery flat laminated glass, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using tools and equipment
  - using safety data sheets (SDS) for laminated glass
  - material handling and storage
- environmental requirements, including procedures for trapping, storing and disposing of waste material
- methods and procedures for cutting and processing flat laminated glass, including:
  - manufacturer technical information and specifications
  - template and pattern fabrication
  - different template materials
  - measuring and marking out procedures
  - glass handling and storage processes
  - glass cutting methods and techniques

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - use of glass cutting and arrising equipment
  - type and use of specialist tools and equipment
  - workplace glass cutting quality standards
  - cleaning materials and techniques
- procedures for final inspection of cut flat laminated glass.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the flat laminated glass that they prepared and cut, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive glazing workplace, off-site workplace location or simulated workplace
- workplace instructions
- SDS for laminated glass
- template and pattern specifications
- PPE required to cut laminated glass
- template materials
- flat laminated glass sheets as specified in the performance evidence
- tools and equipment appropriate for cutting and processing flat laminated glass.

AURVTK001 Use and maintain vehicle body repair hand tools

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to select, use and maintain body repair hand tools in an automotive body repair workplace. It involves preparing for the task, identifying and using tools according to their operating procedures and maintenance requirements, and completing workplace processes and documentation.

It applies to those working in the automotive body service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Tools and Equipment

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Select and use body repair hand tools	1.1 Job requirements are determined from workplace instructions 1.2 Tools are selected to meet job requirements

Assessment Requirements for AURVTK001 Use and maintain vehicle body repair hand tools

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- use and maintain body repair hand tools to complete three different minor vehicle body repairs.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to using and maintaining vehicle body repair hand tools, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using vehicle body repair hand tools
- types, characteristics, uses and limitations of vehicle body repair hand tools, including:
  - application and operation
  - hazards and control measures
  - manufacturer specifications relating to operating procedures and maintenance requirements for the tools
- procedures for selecting tools
- procedures for identifying and tagging faulty tools
- basic maintenance and storage procedures for tools.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the use and maintenance of body repair tools in an automotive repair workplace, e.g. equipment maintenance program.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- body repair hand tools to use and maintain
- PPE applicable to the tools
- vehicles, components or materials that require the use of tools specified in the performance evidence
- material relevant to maintaining body repair hand tools, including:
  - tool operating instructions and manuals
  - relevant tool adjusting or calibration equipment
  - tagging material.

AURVTN001 Remove and tag vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify and tag a range of vehicle body components. It involves preparing for the work, removing and tagging body components by title, job number and application, and completing workplace processes and documentation.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive body repair industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and tag vehicle body components	1.1 Task instruction is interpreted and vehicle to be worked on is identified 1.2 Body component information is sourced and interpreted 1.3 Potential hazards and risks associated with task are identified and reported to workplace supervisor 1.4 Tools and equipment are selected and checked for serviceability
2. Remove components	2.1 Body components for removal are identified 2.2 Components are removed according to manufacturer specifications, workplace procedures, and ***safety and environmental requirements***, and without causing damage to components or systems 2.3 Removed components are inspected and findings recorded according to workplace procedures
3. Tag components	3.1 Tagging procedures are identified 3.2 Removed components are legibly ***tagged*** without causing damage and according to workplace procedures 3.3 Tagged components are stored according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets task instruction and workplace standards 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Reading skills to:	• interpret key information from manufacturer specifications, safety requirements and workplace procedures relating to body components.
Writing skills to:	• legibly and accurately fill out tags and workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• interpret numerical information in task instructions and part numbers.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for selecting and using personal protective equipment (PPE) • environmental requirements, including procedures for trapping, storing and disposing of waste produced during the body component removal process.
Tagged must include**:**	• component title • component condition • job number.

Assessment Requirements for AURVTN001 Remove and tag vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and tag two of the following vehicle body components by title and application:
  - bumper bar
  - grille
  - door
  - door glass and handles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and tagging vehicle body components, including procedures for selecting and using personal protective equipment (PPE)
- environmental requirements, including procedures for trapping, storing and disposing of waste produced during the body component removal process
- identification and basic function of body components to be removed and tagged, including:
  - frames
  - bumper bars
  - grilles
  - doors
  - door glass and handles
- body component removal procedures
- body component tagging and storage procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle body components that they have removed and tagged, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- vehicle with body components for removal as specified in the performance evidence
- tools, equipment and material appropriate for removing and tagging vehicle body components.

AURVTN003 Remove and store vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to perform pre-repair activities by removing and storing vehicle body components. It involves preparing for the task, selecting and using specialist tools and equipment, following workplace instructions in removing, tagging and storing body components as part of pre-repair requirements, and completing workplace processes and documentation.

It applies to those working in the automotive body service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

store vehicle body components	1.2 Workplace procedures and recommended procedures and specifications are sourced and interpreted from original equipment manufacturer (OEM) or authorised agency 1.3 Hazards associated with the work are identified and risks are managed 1.4 ***Tools and equipment***, including personal protective equipment (PPE), are selected and checked for serviceability 1.5 Work is planned to minimise waste according to workplace procedures
2. Remove, tag and store components	2.1 Vehicle components are removed according to specifications of OEM or authorised agency 2.2 Components are tagged and stored according to workplace procedures and without causing damage to system or components 2.3 Additional parts required to complete repair are identified, listed and reported
3. Clean components prior to repair and storage	3.1 Vehicle components are cleaned using recommended cleaning methods and materials according to ***safety and environmental requirements*** 3.2 Vehicle components are inspected for damage and repaired according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and components are presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate specifications and relevant information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures
Numeracy skills to:	• count vehicle body components and use basic mathematical operations including addition and subtraction, to compare and reconcile records of components.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools and equipment must include:	• hand and power tools • safety stands, jacks and lifting equipment • storage tabs and racks.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • manually handling and storing vehicle body components
	  • using tools and equipment
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTN003 Remove and store vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and store vehicle body components, accessories and parts on three different vehicles prior to their repair.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and storing vehicle body components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - manually handling and storing vehicle body components
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) or authorised agency procedures for removing and storing vehicle body components
- vehicle body component removal and storage methods and techniques, including:
  - types and use of tools and equipment
  - pre-repair work inspections
  - removal and storage practices
  - component tagging methods
  - procedures for protecting vehicle and components during removal and storage.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle body components that they have removed and stored, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required for pre-repairs
- three different vehicles with body components requiring removal and storage
- vehicle protection covers
- tools, equipment and material appropriate for removing and storing vehicle body components.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate specifications and relevant information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report issues, defects and outcomes.
Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate adhesive ratio requirements • identify measurements, location and tolerances of adhesive attached components.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	• identify defects and potential problems associated with removing and replacing adhesive attached components.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Adhesive attached components must include:	• protector mouldings • badges • transfers • decals • attachment clips.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using manual handling and storage techniques
	  • using tools and equipment

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• handling and storing adhesives • environmental requirements, including procedures for trapping, storing and disposing of waste materials.
Application must include:	• attaching mouldings using two-way adhesive tape • attaching transfers and decals following product replacement instructions.
Product specification must include:	• type • method • application • thickness.

AURVTN006 Remove and replace mechanical units during vehicle repair

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and replace mechanical units and assemblies to facilitate vehicle body repair activities. It involves preparing for the task, selecting and using specialist tools and equipment, removing and replacing mechanical units according to original equipment manufacturer (OEM) procedures and workplace procedures, and completing workplace processes and documentation.

It applies to those working in the automotive body service and repair industry.

Assistance from licensed persons must be sought in relation to air conditioning, liquefied petroleum gas (LPG), or other alternative fuel systems and components.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN006 Remove and replace mechanical units during vehicle repair

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace three of the following mechanical units on two different vehicles:
  - suspension parts and components
  - steering parts and components
  - final drive assembly
  - engine cross member or cradle
  - exhaust system
  - radiator.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and replacing mechanical units during vehicle repair, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - manual handling and storage techniques
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and vehicle fluids released during process
- types and layout of hard copy and electronic service and repair manuals, including from:
  - original equipment manufacturer (OEM)
  - component supplier
- removal and replacement procedures for mechanical units, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - correct use of tools, materials and safety equipment
    - removal and replacement methods and techniques
    - brake system fluids and bleeding processes, including anti-lock braking (ABS) systems
- types and functions of mechanical units, including:
    - suspension parts and components
    - steering parts and components
    - final drive assembly
    - engine cross member and cradle
    - exhaust system
    - radiator
- licence requirements associated with removal procedures, including:
    - air conditioning requirements
    - liquefied petroleum gas (LPG) requirements
- procedures for final inspection of fitted mechanical units.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the mechanical units and assemblies that they have removed and replaced during vehicle repair, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- OEM specifications for mechanical units
- two different vehicles requiring the mechanical units specified in the performance evidence to be removed and replaced
- tools, equipment and materials appropriate for removing and replacing mechanical units, including required PPE.

3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and salvageable components are presented ready for sale 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate specifications and relevant information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report issues or outcomes.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Numeracy skills to:	• identify salvageable component part numbers • interpret salvageable component labels and part lists • use basic mathematical operations, including addition, subtraction, to calculate and record quantities of components and parts accurately.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools and equipment must include**:**	• hand and power tools • safety equipment, including personal protective equipment (PPE).
Removal processes must include**:**	• inspecting vehicle components • deciding on salvageable components and items • using removal techniques suitable for salvageable components and items.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • manually handling and storing vehicle components
	  • using tools and equipment
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials and vehicle fluids released during the process.

Assessment Requirements for AURVTN007 Remove and clean salvageable vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, clean and prepare salvageable components for sale from three different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and cleaning salvageable vehicle components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - manually handling and storing vehicle components
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and vehicle fluids released during the process
- types, location and content of hard copy and electronic manufacturer service and repair manuals
- techniques and methods for removing salvageable components, including:
  - removal, cleaning and presentation methods and techniques
  - component cleaning materials
  - procedures for inspecting components
  - procedures for preparing and labelling components for sale
- cleaning methods, materials and equipment required to prepare components.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle components they have salvaged, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer service and repair manuals
- three different vehicles with salvageable components for removal
- tools, equipment and materials appropriate for removing salvageable components, including:
  - component labels
  - component cleaning materials
  - required PPE.

AURVTN008 Clean vehicle body and door openings

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to wash vehicle body exteriors and clean door, hatch and boot openings. It involves preparing for the task, selecting and using cleaning equipment, cleaning and finishing products according to workplace instructions, and completing workplace processes and documentation.

It applies to those working in the automotive detailing industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to clean vehicle body and door openings	1.1 Job requirements are determined from workplace instructions 1.2 Vehicle manufacturer’s recommended cleaning methods,

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	workplace procedures, and cleaning material safety data sheets (SDS) are sourced and interpreted 1.3 Cleaning products are selected and inspected for quality and suitability 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment, including personal protective equipment (PPE), are identified and inspected for serviceability 1.6 Work is planned to identify cleaning methods, minimise waste, and prevent damage to vehicle
2. Wash and clean vehicle	2.1 Vehicle body exterior is washed and cleaned according to workplace procedures and customer requirements 2.2 Vehicle openings, bonnet surrounds, and sill panels are washed and cleaned according to workplace procedures and customer requirements 2.3 Equipment and cleaning and protection products are used according to vehicle manufacturer recommendations, workplace procedures, and ***safety and environmental requirements*** 2.4 Washing and cleaning are completed according to workplace procedures and environmental requirements, and without causing damage to vehicle electrical and fuel components
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report issues or outcomes.
Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate ratios for dilution rates.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using tools and equipment
	  • using SDS for cleaning products
	  • handling and storing cleaning material
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials and cleaning chemicals.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance, range of conditions and foundation skills:

- install a sunroof to a vehicle.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to installing vehicle sunroofs, including procedures for:
  - selecting and using personal protecting equipment (PPE)
  - manually handling sunroofs
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- sunroof installation methods and techniques, including:
  - tools, equipment and materials to install vehicle sunroof
  - identifying sunroof specifications and fitting location
  - measuring and marking procedures prior to cutting vehicle roof and installing the sunroof
  - template fabrication techniques
  - panel and trim cutting procedures
  - panel reinforcing methods
- procedures for protecting vehicle and components when installing sunroofs
- procedures for final inspection and testing of fitted vehicle sunroof.

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
thermoplastic body panels and components	1.2 Original equipment manufacturer (OEM) or authorised agency's specifications for ***thermoplastic panel and component repairs*** and relevant safety data sheets (SDS) are sourced and interpreted 1.3 Repair method is selected, and materials are checked for quality and prepared 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment, including personal protective equipment (PPE), are identified and checked for serviceability 1.6 Work area is prepared and work is planned to minimise waste and use time efficiently
2. Carry out repair activities	2.1 Suitable thermoplastic welding, fusion techniques and adhesives, including adhesion promoter where applicable, are used to repair thermoplastic body panels and components according to ***safety and environmental requirements*** 2.2 Body filler that is formulated for the repaired thermoplastic is selected and used 2.3 Repairs are completed to pre-paint condition according to specifications of OEM or authorised agency and workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and thermoplastic body panels are presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	**Description**
Learning skills to:	• locate specifications and relevant information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report issues or outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division, to calculate ratios for dilution rates.to:
	  • calculate repair material quantities
	  • measure surface area
	• take accurate measurements using measuring equipment.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist thermoplastic panel repair tools and measuring equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Thermoplastic panel and component repairs must include:	• splits • tears • dents.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using SDS for thermoplastics
	  • manually handling body panels and components
	  • using tools and equipment, including dust and fume collection equipment
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTN017 Repair vehicle thermoplastic body panels and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair vehicle thermoplastic body panels on four different vehicles, including:
  - two vehicle exterior thermoplastic panel components with a tear or dent
  - one thermoplastic panel component incorporating a flange and contour with a split of 100 mm
  - one interior or ornamental plastic trim component with a split, tear or dent.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle thermoplastic body panels and components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for thermoplastics
  - manually handling body panels and components
  - using tools and equipment, including dust and fume collection equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) or authorised agency repair specifications specific to the vehicles specified in the performance evidence
- thermoplastic repair procedures and techniques, including:
  - plastic material types
  - plastic repair tools and equipment

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - plastic welding
  - plastic adhesives
  - repair quality requirements
- procedures and requirements for protecting vehicle and components during thermoplastic repair work
- procedures for final inspection of completed thermoplastic repairs.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle thermoplastic components that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace location or simulated workplace
- workplace instructions
- SDS for thermoplastics
- OEM or authorised agency repair specifications
- thermoplastic components specified in the performance evidence requiring repair
- tools, equipment and materials appropriate for repairing vehicle thermoplastic body panels and components, including required PPE.

AURVTN018 Repair and replace vehicle structural damage

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair the structural damage of vehicle body components using straightening and replacement techniques. It involves preparing for the task, selecting and using specialist tools and equipment, fitting, aligning and welding structural sections, finishing repairs to pre-paint condition, undertaking a final inspection of body repair work, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

AURVTN021 Repair vehicle body components using lead wiping

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out lead wiping and lead filling repairs to damaged vehicle body components. It involves preparing for the task, selecting and using specialist tools and lead wiping equipment, cleaning and tinning metal surfaces, heating and applying lead and lead wiping to complete repairs, finishing repairs to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- complete a lead wiping repair on two different vehicle body components, including repairing one dent of a minimum size of 100 mm x 50 mm x 2 mm in depth.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle body components using lead wiping, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for lead and tinning paste materials
  - handling and storing fluxes and lead
  - using lead wiping tools and equipment
- environmental requirements, including procedures for:
  - storing fluxes and lead
  - trapping, storing and disposing of waste lead materials
- lead wiping methods and techniques, including:
  - use of lead wiping equipment and application tools
  - lead wiping materials
  - metal tinning processes
  - cleaning repaired area to prevent corrosion
- procedures for protecting vehicle and components during lead wiping repair work
- procedures for final inspection of lead wiped repair.

Assessment Requirements for AURVTN022 Repair vehicle body misalignment

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- repair vehicle body misalignment, including two of the following sections:
  - vehicle front chassis section
  - rear panels and floor section
  - side sill and pillar section.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing vehicle body misalignment, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - manually handling measuring equipment
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) or authorised agency's recommended repair procedures for removing, replacing and realigning vehicle bodies
- following vehicle design characteristics and their implications for repair and realignment methods:
  - mono
  - unitised
  - chassis
  - space frame

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- types of misalignment damage, including:
  - under and upper body damage
  - sway
  - sag
  - twist
  - kick-up and kick-down
  - mash and diamond
- methods and techniques for identifying misalignment damage, including:
  - visual, mechanical and physical checking
  - use of measuring and alignment equipment
- repair techniques, including:
  - panel beating, welding, mechanical fastening, riveting, removing and aligning vehicle body sections
  - correct use of tools and equipment, including hydraulic or pneumatic repair equipment
  - digital and non-digital measuring equipment and dedicated jigs
  - welding techniques
  - hydraulic reforming
- procedures for final inspection of vehicle body misalignment repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle misalignments that they have repaired, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

1. Prepare to repair adhesive bonded structural damage	1.1 Job requirements are determined from workplace instructions 1.2 Original equipment manufacturer (OEM) or authorised agency's recommended bonding and repair procedures are accessed and interpreted 1.3 Adhesive specifications and application instructions, including safety data sheets (SDS), and bonding materials are selected and prepared 1.4 Hazards associated with the work are identified and risks are managed 1.5 Adhesive application ***tools and equipment*** and personal protective equipment (PPE) are selected and checked for serviceability 1.6 Work is planned to identify adhesive bonding methods, minimise waste, and use time efficiently
2. Remove and replace bonded sections	2.1 Replacement panels and components are checked against vehicle specifications and for quality 2.2 Bonded panels and structures are removed according to OEM procedures and without causing damage to system or components 2.3 Bonded panels and structures are repaired according to OEM procedures and stored until required 2.4 Bonded panels and structures are refitted using approved bonding methods, adhesives, materials and equipment according to OEM or authorised agency specifications, and ***safety and environmental requirements*** 2.5 Sealants are selected and applied according to OEM or authorised agency's specifications and workplace procedures 2.6 Bonded panels and structures are cleaned without causing damage to systems or components
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and manufacturer specifications, and bonded vehicle panels and structures are presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate specifications and relevant information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report issues or outcomes.

Numeracy skills to:	• read tape measure and take accurate measurements
	• use basic mathematical operations, including addition, subtraction, multiplication and division, to:
	  • estimate surface area according to bonding instructions
	  • estimate adhesive curing times
	  • calculate quantities of required materials
	• interpret adhesive code, type and grade.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	• identify quality issues and potential problems associated with repair of adhesive bonded structural damage.
Technology skills to:	• use specialist removal and installation equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools and equipment must include**:**	• adhesive application equipment • hand tool and securing clamps.
Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: • selecting and using PPE

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• using SDS for adhesives • manually handling vehicle panels • storing adhesives • using tools and equipment • environmental requirements, including procedures for trapping, storing and disposing of waste materials and adhesives.

Assessment Requirements for AURVTN023 Repair adhesive bonded structural damage on vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and replace bonded panels on two different vehicles, in which the work must include two of the following:
  - door skins
  - vehicle turret
  - quarter panel
  - boot floor section
- use the following bonding methods and securing techniques during above work:
  - welding and bonding
  - rivet or screwing and bonding.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to repairing adhesive bonded structural damage on vehicles, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for adhesives
  - manual handling vehicle panels
  - storing adhesives
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and adhesives

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- original equipment manufacturer (OEM) or authorised agency's recommended bonding procedures
- location and types of structural foams
- types of adhesives and their application methods and techniques
- removal and replacement techniques for bonded panels
- types of adhesive bonding methods
- securing techniques, including:
  - welding and bonding
  - rivet or screwing and bonding
- procedures for protecting vehicle and components when removing and replacing adhesive bonded panels
- procedures for final inspection of bonded structural repair.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to vehicle structural damage that they have repaired using adhesive bonding, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- OEM or authorised agency repair procedures
- PPE required to remove and replace adhesive bonded panels and structures
- SDS for adhesives
- vehicle specifications
- two different vehicles or frames with bonded panels requiring repair
- adhesives
- cleaning agents and materials
- tools, equipment and materials appropriate for repairing adhesive bonded panels.

AURVTN025 Repair corroded vehicle body panels and components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair vehicle body panels and components that have been damaged by corrosion. It involves preparing for the task, selecting and using specialist tools and equipment, removing corroded damage, fabricating replacement components, fitting and welding vehicle body components, finishing repairs to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate specifications and relevant information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • discuss work that could potentially disturb trim or electrical, mechanical or air conditioning systems • clearly report issues or outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate:
	  • fitting measurements and tolerances
	  • quantities of required materials.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes • prepare vehicle, work area and replacement sections.
Problem solving skills to:	• identify quality issues and potential problems associated with repairing corroded vehicle body components.
Technology skills to:	• use specialist removal and repair equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools and equipment must include:	• personal protective equipment (PPE) • specialist hand tools • basic panel forming equipment • specialist welding equipment.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • manually handling corroded vehicle body components
	  • using tools and equipment
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

AURVTN028 Identify and repair high strength steel vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to locate, identify and repair high strength steel (HSS) vehicle components, including advanced and ultra-high strength steel. It involves preparing for the task, selecting and using specialist tools and equipment, confirming recommended repair procedure from original equipment manufacturer (OEM) or authorised agency, selecting repair procedures and recommended welding method, removing and replacing HSS components, finishing HSS repairs to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Locate OEM or authorised agency repair procedures	1.1 Job requirements are determined from workplace instructions 1.2 ***OEM or authorised agency repair procedures*** are sourced, interpreted and incorporated into planning process 1.3 Hazards associated with the work are identified and risks are managed 1.4 Recommended repair tools and equipment and personal protective equipment (PPE) are selected and checked for serviceability 1.5 Work is planned to identify required HSS repair methods, minimise waste, and use time efficiently
2. Repair or replace HSS components	2.1 Sections not subject to repair are protected, using approved methods and equipment 2.2 HSS sections to be replaced are identified and removed using OEM or authorised agency recommended removal methods and equipment, workplace procedures, and ***safety and environmental requirements*** 2.3 Damaged surfaces are restored to a condition suitable for fitting replacement HSS components 2.4 Vehicle measuring or jigging equipment is used to position replacement HSS component correctly according to OEM or authorised agency specifications 2.5 OEM or authorised agency's surface coatings is protected or reapplied 2.6 Replacement HSS components are aligned and secured within OEM or authorised agency's tolerances
3. Weld HSS components	3.1 Recommended welding equipment for HSS is located and checked for correct operation 3.2 Sample welds are conducted using recommended welding techniques, inspected, and destruction tested for defects according to workplace instructions 3.3 HSS components are refitted using recommended repair methods, materials and equipment, and without causing damage to other systems or components 3.4 Grinding procedures are followed according to OEM or authorised agency and weld material specifications
4. Complete work	4.1 Repairs to HSS components are finished to pre-paint condition

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- identify and repair high strength steel (HSS) components to pre-paint condition on three different damaged vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to identifying and repairing HSS vehicle components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - manually handling vehicle components
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- original equipment manufacturer (OEM) or authorised agency's:
  - vehicle specifications and measurements
  - approved repair procedures and quality processes
- HSS repair, replacement and welding methods and procedures, including:
  - HSS recommended tools and equipment, including welding equipment
  - types and location of HSS components
  - pre-repair destruction testing of welds on similar material
  - body and panel alignment
  - bonding, riveting and welding
- procedures for protecting vehicle and components during repair work

AURVTN029 Set up and operate universal vehicle measuring systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to set up and use a universal measuring system to measure vehicle chassis misalignment at pre- and post-repair intervals. It involves preparing for the task, selecting and using specialist tools and equipment, setting measuring equipment, measuring vehicle upper and underbody in three dimensions, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTN029 Set up and operate universal vehicle measuring systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- set up and operate a universal measuring system on two occasions to take three-dimensional measurements (length, width and height) of upper and underbody on two vehicles with different types of chassis, including checking for the following types of damage:
  - diamond
  - twist
  - kick-up and kick-down.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to setting up and operating universal vehicle measuring systems, including procedures for:
  - following universal measuring equipment safety requirements
  - selecting and using personal protective equipment (PPE)
  - manual handling techniques
- vehicle designs, including:
  - mono chassis
  - space frame
- types of vehicle chassis misalignment damage, including:
  - diamond
  - twist

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - kick-up and kick-down
  - sag
  - mash and sway damage
- original equipment manufacturer (OEM) or authorised agency's specifications, including pre- and post-repair measurement intervals
- procedures for final inspection of set-up and operation of a universal measuring system.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles that they have measured and repaired using a universal measuring system, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- OEM or authorised agency specifications and measurements
- PPE required to set up and operate a universal vehicle measuring system
- universal vehicle measuring system
- universal vehicle measuring system operating instructions
- two vehicles with different chassis types requiring pre- and post-repair measuring of the misalignment damage specified in the performance evidence
- tools, equipment and materials appropriate for setting up and operating universal vehicle measuring systems.

AURVTN030 Service air compressors and air lines

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to service air compressors, pressure regulators, water traps, filters and air lines. It involves cleaning and replacing filters, making necessary adjustments, and completing workplace processes and documentation as part of the day-to-day maintenance of the system.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

	and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools, equipment and materials are selected and checked for serviceability
2. Service air compressor and tank	2.1 ***Service*** and adjustments of air compressor and tank are carried out according to manufacturer specifications, workplace procedures, and ***safety and environmental requirements***, and without causing damage to system or components 2.2 ***Post-service testing*** is carried out according to workplace procedures
3. Service pressure regulator, filter and air line	3.1 Service and adjustments of pressure regulator, filter and air line are carried out according to manufacturer specifications, workplace procedures, and safety and environmental requirements, and without causing damage to system or components 3.2 Post-service testing is carried out according to workplace procedures
4. Complete work processes	4.1 Final inspection is made to ensure work is to workplace expectations and air compressor system is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 4.3 Tools and equipment are checked and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate air compressor system information efficiently.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Writing skills to:	• legibly and accurately fill out workplace documentation when reporting inspection findings, making recommendations, and recording parts and material used.
Oral communication skills to:	• clarify instructions • report inspection findings and make repair recommendations.
Numeracy skills to:	• use mathematical process, including addition and subtraction, to check and measure components and pressures and compare them to manufacturer specifications • understand measuring and test equipment divisions.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Service must include:	• fluids and lubricating oil • compressor filters • water traps and filters • adjustments and operational testing • visual inspections • completing service records.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using personal protective equipment(PPE)
	  • working with stored energy, compressed air, and rotating shafts, belts and pulleys
	• environmental requirements, including procedures for trapping, storing and disposing of air compressor oils and fluids.

Post-service testing must include:	• compressor cut-out pressure • minimising unintended air loss • automatic timing switch adjustment.

Assessment Requirements for AURVTN030 Service air compressors and air lines

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- inspect and service two different air compressor systems, in which the work must involve the following system components:
  - air compressor motor
  - air compressor tank
  - drive system
  - pressure regulator
  - water trap and filters
  - air lines and fittings.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to servicing air compressors and air lines, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - working with stored energy, compressed air, and rotating shafts, belts and pulleys
- environmental requirements, including procedures for trapping, storing and disposing of air compressor oils and fluids
- types of air compressors and principles of operation, including:
  - single stage reciprocating compressors
  - rotary screw compressors
- identification, function and operation of air compressor system and components specified in the performance evidence

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- types and applications of air compressor lubricants
- procedures for final inspection of air compressors and air lines, including:
  - compressor cut-out pressure
  - minimising unintended air loss
  - automatic timing switch adjustment.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the air compressor systems that they have serviced, e.g. service orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- manufacturer air compressor specifications
- two different air compressor systems and components requiring service
- tools, equipment and materials appropriate for servicing air compressors and air lines.

AURVTN031 Carry out vehicle sectional repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out vehicle sectional repairs and replace components, including structural and non-structural vehicle components. It involves preparing for the task, selecting and using specialist tools and equipment, selecting repair methods, removing damaged components, repairing damaged sections, replacing and aligning new or repaired components, welding and finishing to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to carry out sectional repairs	1.1 Job requirements are determined from workplace instructions 1.2 Original equipment manufacturer (OEM) or authorised agency's specifications for joining methods are accessed and interpreted 1.3 Materials for repair are selected and inspected for quality 1.4 Hazards associated with the work are identified and risks are managed 1.5 ***Tools and equipment*** are identified and checked for serviceability 1.6 Work is planned to identify sectional repair methods, minimise waste, and use time efficiently
2. Perform sectional repairs	2.1 Measurements are taken prior to repairs according to workplace procedures 2.2 Damaged sections are removed according to approved ***repair methods*** and equipment, ***safety and environmental requirements*** 2.3 Damaged surfaces are restored to a condition suitable for fitting new sections 2.4 Replacement sections are aligned, secured and welded according to OEM or authorised agency's specifications 2.5 Sectional repairs are completed without causing damage to other vehicle components or systems 2.6 Post-repair measurements are taken according to workplace procedures and compared with OEM or authorised agency's specifications, and further corrective action is taken where non-compliance is identified
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and manufacturer specifications, and repaired vehicle is presented ready for painting 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate specifications and relevant information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate:
	  • OEM or authorised agency's measurements
	  • set approved welders
	  • set electronic alignment and repair measuring equipment.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist repair equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools and equipment must include**:**	• personal protective equipment (PPE) • hand tools and equipment • specialist measuring and alignment equipment • OEM or authorised agency's recommended welding equipment.
Repair methods must include**:**	• OEM or authorised agency's recommended procedures • removal of damaged components • repair, replacement and alignment of components • underbody measurements to OEM or authorised agency's specifications • alignment or jigging systems

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• sectional repairs • approved welding equipment and processes • pre- and post-repair measurements according to workplace procedures.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • manually handling vehicle components
	  • using tools and equipment
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials from repair process.

Assessment Requirements for AURVTN031 Carry out vehicle sectional repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- complete sectional repairs on three different damaged vehicles, where each sectional repair must involve two of the following:
  - body pillar
  - body rail
  - sill panel
  - quarter panel.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out vehicle sectional repairs, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - manually handling vehicle components
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials from repair process
- original equipment manufacturer (OEM) or authorised agency's specifications and repair information, including:
  - OEM-approved bonding and riveting
  - sectional repair procedures
  - OEM-recommended procedures
  - removal of damaged components

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - repair, replacement and alignment of components
    - underbody measurements to OEM or authorised agency specifications
    - alignment or jigging systems
    - approved welding equipment and processes
    - pre- and post-repair measurements according to workplace procedures
- procedures for identifying structural and non-structural components, including:
    - body pillars
    - body rails
    - sill panels
    - quarter panels
- types of steels and their repair characteristics
- techniques and procedures for carrying out sectional repairs, including:
    - types of repair tools and equipment and their operating procedures
    - use of structural foam
    - use of weld-through primer
    - alignment methods, techniques and procedures
    - approved welding and attachment procedures
    - bonding, riveting and sealant methods and procedures
- procedures for protecting vehicle and components during repair work
- procedures for final inspection of completed sectional repairs.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle sectional repairs they have completed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- workplace instructions
- OEM or authorised agency's specifications and procedures
- vehicle specifications
- PPE required to carry out sectional repairs
- three different damaged vehicles requiring the sectional repairs specified in the performance evidence
- replacement sectional components
- tools, equipment and materials appropriate for carrying out vehicle sectional repairs.

AURVTN035 Apply original equipment manufacturer repair procedures during vehicle repairs

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to locate and apply original equipment manufacturer (OEM) or authorised agency's recommended repair procedures during vehicle or component repair work. It involves preparing for the task, inspecting the vehicle damage, and identifying repair requirements according to OEM or authorised agency's specifications, developing a repair plan, and completing workplace processes and documentation.

It applies to those working in the automotive body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

AURVTN039 Set up body alignment equipment on vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to set up body alignment equipment on a vehicle. It involves planning and preparing for the task, measuring the vehicle, selecting and using tools and equipment, setting up alignment equipment on the vehicle, and maintaining the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry. The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to set up vehicle body alignment equipment	1.1 Task instructions are interpreted and vehicle to be worked on is identified 1.2 Manufacturer specifications and workplace procedures for aligning vehicle are sourced and interpreted 1.3 ***Safety requirements*** are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor
2. Set up vehicle body alignment equipment	2.1 Vehicle body is measured according to manufacturer specifications, workplace procedures and safety requirements 2.2 Body alignment equipment and tools required for aligning body vehicle are identified and checked for serviceability 2.3 Body alignment equipment is attached to vehicle according to manufacturer specifications, workplace procedures and safety requirements
3. Complete work processes	3.1 Final inspection is made to ensure work meets task instruction and workplace standards, and vehicle is presented ready for use or further process according to workplace procedures 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 3.3 Tools and equipment are checked and stored according to workplace procedures, or tagged and reported as required 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of vehicle body alignment information and procedures.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description

Reading skills to:	• select and interpret key information from:
	  • manufacturer literature, safety requirements and workplace procedures for aligning a vehicle body
	  • environmental requirements and workplace procedures to ensure a clean and safe work site.

Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division, to measure vehicle body alignment and panel gaps.
Technology skills to:	• set up and operate equipment and tools required to realign vehicle bodies.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Assessment Requirements for AURVTN041 Remove and realign vehicle body panels

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and realign the following two different vehicle body panels:
  - one vehicle mud guard
  - one vehicle door.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and realigning vehicle body panels, including procedures for:
  - selecting and using personal protective equipment (PPE), including safety glasses, ear protection and safety footwear
  - using hand tools
- types and construction of vehicle body panels
- body panel removal, dismantling, assembly and replacement procedures
- body panel measurement and alignment procedures.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment must include direct observation.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the body panels that they have removed and realigned, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- PPE for removing and realigning vehicle body panels
- two different vehicle body panels as specified in the performance evidence requiring removal and realignment
- tools, equipment and materials appropriate for removing and realigning vehicle body panels.

AURVTN042 Dismantle vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to dismantle vehicle components according to workplace procedures. It involves preparing for the task, selecting and using tools and equipment, including personal protective equipment (PPE), cleaning, labelling and storing recycled components, and completing workplace processes and documentation.

It applies to those working in the automotive parts recycling industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Body

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for work	1.1 Job requirements are determined from workplace instructions 1.2 ***Safety and environmental requirements*** and workplace

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	procedures are sourced and interpreted 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment, including PPE, are sourced and checked for serviceability
2. Carry out dismantling activities	2.1 Vehicle components to be dismantled are identified 2.2 Components are dismantled according to original equipment manufacturer (OEM) specifications, workplace procedures, and safety and environmental requirements 2.3 Removed components are cleaned and legibly labelled without causing damage and according to workplace procedures 2.4 Labelled components are stored according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Numeracy skills to:	• interpret part numbers and numerical information in task instructions.
Planning and organising	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
skills to:	workplace timeframes.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • manually handling and storing vehicle components
	  • using tools and equipment
	• environmental requirements, including procedures for trapping, storing and disposing of vehicle fluids, gas and other waste materials released during the dismantling process.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for AURVTN042 Dismantle vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- dismantle, clean and tag five of the following vehicle units in line with workplace procedures:
  - engine and cooling system
  - suspension system
  - steering system
  - final drive assembly
  - exhaust system
  - body panels.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to dismantling vehicle components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - manually handling and storing vehicle components
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of vehicle fluids, gas and other waste materials released during the dismantling process
- dismantling procedures, including:
  - original equipment manufacturer (OEM) specifications
  - procedures for removing salvageable vehicle components
- workplace procedures and products for cleaning vehicle component

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- workplace procedures for labelling and storing vehicle components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle components that they have dismantled, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- vehicle manufacturer service and repair manuals
- PPE required to salvage vehicle components
- vehicles with salvageable components as specified in the performance evidence requiring removal
- tools, equipment and materials appropriate for removing salvageable vehicle components.

AURVTP002 Mask vehicle panels and components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to apply masking materials in preparation for vehicle and component refinishing. It involves preparing for the task, selecting and using tools and equipment, selecting masking materials appropriate to the vehicle or component, masking off surrounding panels and components before refinishing activities, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical – Paint

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to mask vehicle	1.1 Job requirements are determined from workplace instructions

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
panels and components	1.2 Masking ***materials*** and ***methods*** are selected according to workplace instructions 1.3 Hazards associated with the work are identified and risks are managed 1.4 Masking ***tools and equipment*** and personal protective equipment (PPE) are identified and checked for serviceability 1.5 Work is planned to minimise waste and use time efficiently
2. Carry out masking activities	2.1 Vehicle surfaces and ***components*** that require masking are identified, cleaned or removed 2.2 Masking activities are carried out according to workplace procedures and ***safety and environmental requirements***, and without causing damage to vehicle surfaces and components
3. Complete work processes	3.1 Final inspection is made to ensure work is to workplace expectations and component is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected 3.3 Tools and equipment are checked and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.
Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate quantities of masking materials.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist masking tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Materials must include**:**	• polyvinyl chloride (PVC) • door aperture and trim masking tapes • masking papers, mediums and templates.
Methods must include**:**	• reverse masking techniques • half-masking techniques • hard-line and soft-line edge masking techniques • masking for blend out • spraying.
Tools and equipment must include**:**	• cutting blades and scalpels • masking machines.
Components must include:	• in situ doors • mud guards • boot lids • bonnets • plastic components • glass sections.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using tools and equipment
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTP002 Mask vehicle panels and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- mask the following vehicle panels:
  - complete vehicle front end
  - complete vehicle rear end
  - complete vehicle side
- during above work, mask the following components in situ:
  - doors
  - mud guards
  - boot lid
  - bonnet
  - plastic components
  - glass sections.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to masking vehicle panels and components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- types and use of masking materials, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - polyvinyl chloride (PVC)
  - door aperture and trim masking tapes
  - masking papers, mediums and templates
- masking methods and techniques to reproduce original equipment manufacturer (OEM) paint aesthetics and finish, including operation of masking equipment
- procedures for protecting vehicle and components when masking vehicle panels
- procedures for final inspection of vehicle masking requirements.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the masking work they have carried out on vehicles, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE for masking processes
- masking materials
- vehicle parts specified in the performance evidence requiring masking
- tools, equipment and materials appropriate for masking vehicle panels and components.

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to apply rust prevention and sound deadening materials	1.1 Job requirements are determined from workplace instructions 1.2 ***Application information*** is accessed and interpreted 1.3 ***Materials*** are calculated, selected and inspected for quality 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.6 Work is planned to identify rust prevention methods, minimise waste, and avoid damage to vehicle
2. Prepare surfaces	2.1 Surfaces are cleaned according to workplace procedures and ***safety and environmental requirements*** 2.2 Surfaces are prepared for material application process without causing damage to components or systems
3. Apply materials	3.1 Vehicle components requiring the application of rust prevention and sound deadening materials are identified and prepared 3.2 Materials are applied according to manufacturer specifications and recommended ***application methods*** 3.3 Special treatments or materials are dried using approved methods and equipment
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and vehicle components are presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.
Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division to, calculate surface area and material quantity • use measuring tapes.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist rust prevention and sound deadening tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Application information must include**:**	• workplace procedures • manufacturer specifications • technical data sheets (TDS) • safety data sheets (SDS).
Types of materials must include**:**	• fish oil • wax compounds • joint and seam sealants • sheet, spray-on and brush-on sound deadening • mechanically fastened and adhesive bonded sound deadening pads.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using TDS for sound deadening materials
	  • using SDS for fish oil, sealers and adhesives
	  • handling and storing rust prevention and sound deadening

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	materials • using tools and equipment • environmental requirements, including procedures for trapping, storing and disposing of waste materials.
Application methods must include:	• hand brushing • mixing • spraying • mechanical fastening.

Assessment Requirements for AURVTP005 Apply rust prevention and sound deadening materials to vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- apply five of the following rust prevention and sound deadening materials to different vehicle body components:
  - fish oil
  - wax compounds
  - spray-on sound deadening
  - brush-on sound deadening
  - adhesive bonded sound deadening pads
  - joint and seam sealants.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying rust prevention and sound deadening materials to vehicle body components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using technical data sheets (TDS) for sound deadening materials
  - using safety data sheets (SDS) for fish oil, sealers and adhesives
  - handling and storing rust prevention and sound deadening materials
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- sound deadening material manufacturer specifications

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- types and uses of rust prevention and sound deadening materials
- rust prevention and sound deadening application methods and techniques
- types and uses of rust prevention and sound deadening equipment, including:
  - spray gun
  - heat gun
  - brush applicators
- procedures for protecting vehicle and components when applying rust protection and sound deadening materials
- procedures for final inspection of fitted sound deadening and rust prevention materials.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the rust prevention and sound deadening materials they have applied to vehicle body components, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- TDS for sound deadening materials
- SDS for fish oil, sealers and adhesives
- PPE to apply rust prevention and sound deadening materials
- rust prevention and sound deadening materials
- vehicle body components requiring the application of rust prevention and sound deadening materials specified in the performance evidence
- tools, equipment and materials appropriate for applying rust prevention and sound deadening materials to vehicle body components.

Assessment Requirements for AURVTP006 Apply refinishing primers to vehicle surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- prepare and apply the following refinishing primers according to paint manufacturer specifications on two different vehicle panels or substrates to a minimum area of 300 mm x 200 mm:
  - epoxy
  - acid-based
  - ultraviolet (UV) cured
  - sealant
  - non-sandable
  - adhesion promoters.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying refinishing primers to vehicle surfaces, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using technical data sheets (TDS) and safety data sheets (SDS) for paint primers
  - handling and storing paint materials
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- paint manufacturer specifications
- types and uses of primers specified in the performance evidence

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- surface preparation and primer mixing and application techniques, including:
  - cleaning paint repair areas
  - wet and dry rubbing procedures
  - correct use of positive air feed masks
  - masking techniques
  - primer application methods
  - paint drying methods
- types of abrasives and grading
- types and use of spray painting equipment and maintenance requirements
- procedures for protecting undamaged vehicle and components when applying refinishing primers
- procedures for final inspection of completed primed surface.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle surfaces they have prepared and primed, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- TDS and SDS for primers
- PPE to apply primers for paint repairs
- primers and materials, including:
  - epoxy primer
  - acid-based primer
  - UV cured primer
  - sealant

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - non-sandable
  - adhesion promoters
- two different vehicles or substrates requiring preparation and primer application
- tools, equipment and materials appropriate for preparing vehicle surfaces and mixing and applying primers.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use workplace technology related to preparing a vehicle mechanical and electrical service repair quotation.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Cleaning information must include**:**	• paint safety data sheets (SDS) • manufacturer procedures • workplace procedures.
Materials must include:	• cleaning and polishing agents • polishing tools and equipment.

Safety and environmental requirements must include**:**	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using SDS for cleaning and polishing materials
	  • handling and storing cleaning and polishing materials
	  • using tools and equipment
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Unit Mapping Information

Equivalent to AURVTP2008 Clean and polish vehicle exterior paint

Assessment Requirements for AURVTP008 Clean and polish vehicle paint surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- clean and polish the paint surfaces of three different vehicles, in which the work must involve the use of a polishing buff.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to cleaning and polishing vehicle paint surfaces, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for cleaning and polishing materials
  - handling and storing cleaning and polishing materials
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- types and use of cleaning and polishing buff and materials and their recommended applications
- procedures for final inspection of cleaned and polished vehicle.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle paint surfaces that they have cleaned and polished, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive detailing workplace or simulated workplace
- workplace instructions
- SDS for cleaning and polishing materials
- PPE required to clean and polish vehicle exterior paint surfaces
- cleaning and polishing materials
- three different painted vehicles requiring cleaning and polishing
- tools, equipment and materials appropriate for cleaning and polishing vehicle paint surfaces.

AURVTP018 Rectify vehicle multi-layer and pearl paint faults using two-pack systems

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to rectify multi-layer and pearl paint faults on vehicle body components. It involves preparing for the task, selecting and using specialist tools and equipment, identifying and rectifying paint faults using multi-layer and pearl two-pack paint materials according to manufacturer specifications, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Paint

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to rectify multi-layer and pearl paint fault	1.1 Job requirements are determined from workplace instructions 1.2 ***Paint rectification information*** is accessed and interpreted 1.3 Vehicle paint specifications are identified from workplace instructions and recorded 1.4 Multi-layer and pearl paint ***materials*** are selected and inspected for quality 1.5 Hazards associated with the work are identified and risks are managed 1.6 ***Paint tools and equipment*** and personal protective equipment (PPE) are selected and checked for serviceability 1.7 Work is planned to identify methods for rectifying multi-layer and pearl paint faults, minimise waste, and prevent damage to vehicle
2. Determine paint fault, its cause and rectification requirements	2.1 Cause of paint fault is determined from available information 2.2 Faulty paintwork is visually inspected to determine extent of damage and areas requiring rectification 2.3 Existing paint film build-up is identified and assessed 2.4 Damage to paintwork is assessed from visual comparison with undamaged paintwork 2.5 Fault rectification requirements are determined without causing undue damage to vehicle components or systems
3. Carry out rectification and touch-up activities	3.1 Materials required to restore paintwork to pre-damage condition are determined from paint manufacturer recommended procedures 3.2 Materials are measured, mixed and applied using approved equipment 3.3 Damaged paintwork is rectified and blended with existing paintwork using two-pack system 3.4 Rectification processes are completed according to workplace procedures and ***safety and environmental requirements***, and without causing damage to vehicle components and systems
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and vehicle or component is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace

	procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• identify paint specification codes
	• use basic mathematical operations, including addition, subtraction, multiplication and division to:
	  • calculate and measure quantities of paint and materials
	  • determine ratios for mixing paint
	  • calculate and set paint drying times
	• set spray painting air pressure and spray booth temperatures
	• set paint measuring system.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist tools and equipment, including paint measuring systems.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Paint rectification information must include:	• paint manufacturer specifications • paint technical data sheets (TDS) • paint safety data sheets (SDS) • workplace procedures.
Materials must include:	• solvent base coats and clear coats • water-based materials • paint thinners and hardeners • polishing materials.
Paint tools and equipment must include:	• mixing and tinting systems • spray guns • approved drying equipment • cleaning equipment.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using TDS and SDS for multi-layer and pearl two-pack paint
	  • handling and storing paint materials
	  • using tools and equipment
	  • using approved drying area
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTP018 Rectify vehicle multi-layer and pearl paint faults using two-pack systems

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- rectify multi-layer and pearl paint faults on three different vehicles using two-pack materials, in which the work must involve:
  - blending and clearing a vehicle panel
  - partially blending and fading out blend.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to rectifying vehicle multi-layer and pearl paint faults using two-pack systems, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using technical data sheets (TDS) and safety data sheets (SDS) for multi-layer and pearl two-pack paint
  - handling and storing paint materials
  - using tools and equipment
  - using approved drying area
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- paint manufacturer specifications
- types and features of multi-layer and pearl two-pack materials
- types and use of painting equipment, including:
  - types of spray guns and maintenance requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - spray gun set-up, use and maintenance
  - correct use of positive air feed masks
- paint rectification and touch-up techniques and procedures, including:
  - identifying paint surface faults
  - surface preparation methods
  - paint mixing procedures
  - multi-layer and pearl paint application methods
  - drying methods for multi-layer and pearl paint refinishing materials
- procedures for protecting vehicle and components when rectifying and touching up paint faults
- procedures for final inspection of paint rectification using multi-layer and pearl two-pack systems.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle paintwork they have rectified using multi-layer and pearl two-pack systems, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- TDS and SDS for multi-layer and pearl two-pack paint
- PPE required to rectify multi-layer and pearl two-pack paint materials
- multi-layer and pearl two-pack refinishing materials
- three different vehicles requiring paint rectification using multi-layer and pearl two-pack paint refinishing materials
- tools, equipment and materials appropriate for rectifying and touching up multi-layer and pearl paint faults using two-pack systems.

AURVTP019 Prepare and paint plastic and composite vehicle surfaces

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare and apply refinishing materials to plastic and composite vehicle surfaces. It involves preparing for the task, selecting and using specialist tools and equipment, preparing components, mixing and applying paint materials to plastic or composite components according to paint manufacturer specifications, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Paint

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication and division to:
	  • calculate quantities of refinishing materials
	  • measure and determine ratios for mixing refinishing materials
	• set painting air pressure and drying equipment.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist paint refinishing tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Paint information must include:	• paint manufacturer specifications • paint technical data sheets (TDS) • paint safety data sheets (SDS) • workplace procedures.
Materials must include:	• approved abrasive papers • suitable fillers • two-pack urethane acrylic enamels • metallic two-pack and clear acrylic lacquers • pearl finishes • water-based finishes

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• paint thinners and reducers • cleaning materials • suitable primers • anti-static cleaning agents • flexible additives.
Paint tools and equipment must include:	• spray guns • air pressure regulators and air compressors • approved spray area.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using TDS and SDS for paint materials
	  • handling and storing paint materials
	  • using tools and equipment
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Checking paint finish must include:	• checking colour, texture, depth and gloss • ensuring paint finish is free of defects • ensuring paint finish blends into surrounding surfaces.

Assessment Requirements for AURVTP021 Restore vehicle body exterior paint

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- restore exterior paint on the following vehicle surfaces:
  - bonnet
  - roof
  - boot
  - vehicle side.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to restoring vehicle body exterior paint, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for polishing and cleaning agents
  - handling and storing polishing materials
  - using tools and equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- paint manufacturer specifications
- types of vehicle body exterior finishing faults, including:
  - colour change
  - surface variations
  - rework

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - pitting
- types and features of cleaning, polishing and restoration agents and their recommended applications
- types and use of cleaning and polishing tools and equipment
- cleaning and polishing methods and techniques, including:
    - identifying paint surface faults
    - surface preparation methods
    - applying polishing materials
- procedures for protecting vehicle and components when restoring exterior paint
- procedures for final inspection of restored vehicle exterior paint.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle body exterior paint that they have restored, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required to restore vehicle exterior painted surfaces
- SDS for polishing and cleaning agents
- polishing and cleaning materials required to restore vehicle exterior paintwork
- vehicle painted components specified in the performance evidence requiring restoring and polishing
- tools, equipment and materials appropriate for restoring vehicle body exterior paint.

AURVTP024 Apply clear over base multi-layer and pearl refinishing materials to vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to mix and apply clear over base (COB) multi-layer and pearl refinishing materials to vehicle body components. It involves preparing for the task, selecting and using specialist tools and equipment, identifying paint defects, preparing vehicle surfaces, selecting, mixing and applying refinishing materials according to manufacturer specifications, and completing workplace processes and documentation.

It applies to those working in the automotive paint refinishing repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Paint

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to mix and apply COB multi-layer and pearl refinishing materials	1.1 Job requirements are determined from workplace instructions 1.2 Vehicle paint specifications, technical data sheets (TDS) and paint safety data sheets (SDS) are accessed and interpreted 1.3 ***Refinishing materials*** are selected and inspected for quality 1.4 Hazards associated with the work are identified and risks are managed 1.5 Refinishing ***tools and equipment***, including personal protective equipment (PPE), are selected and checked for serviceability 1.6 Work is planned to identify mixing and application methods for COB multi-layer and pearl paint, minimise waste, prevent damage to vehicle and use time efficiently
2. Mix COB multi-layer and pearl refinishing materials	2.1 Refinishing materials are calculated and mixed according to paint manufacturer specifications, formulas and codes 2.2 Codes and information relevant to job requirement are recorded accurately 2.3 Mixing activities are carried out according to workplace procedures and ***safety and environmental requirements*** 2.4 COB multi-layer and pearl paints are mixed without causing damage to components or systems
3. Apply COB multi-layer and pearl refinishing materials	3.1 Refinishing materials are applied using manufacturer recommended method and intervals according to safety and environmental requirements 3.2 Refinishing materials are dried using approved methods and equipment 3.3 Refinishing techniques are used to ensure painted surface ***meets specifications*** 3.4 Paint surface faults are rectified using compounds, polishes and glazes to blend rectified areas with existing paintwork
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and component is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• interpret paint codes and formulas
	• accurately set and adjust settings for:
	  • spray painting air pressure
	  • paint measuring system
	  • spray booth temperature settings
	• use basic mathematical operations, including addition, subtraction, multiplication and division to, determine ratios, measure and calculate quantities of paint and materials.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Technology skills to:	• use specialist equipment, including:
	  • spray painting equipment
	  • electronic paint measuring and mixing system
	  • computerised drying equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Refinishing materials must	• metallic, pearl two-pack base coat • clear two-pack acrylic enamel

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

include:	• water-based paints • hardeners • paint reducers.
Tools and equipment must include:	• spraying equipment • paint tinting systems • approved spray area • drying equipment • paint measuring system.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using TDS and SDS for COB two-pack paint
	  • handling and storing paint materials
	  • using tools and equipment
	  • using approved drying area
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Meeting specifications must include:	• matching colour, texture, depth and gloss • ensuring paint finish is contaminant-free • ensuring paint finish blends into surrounding surfaces.

Assessment Requirements for AURVTP024 Apply clear over base multi-layer and pearl refinishing materials to vehicle body components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- mix and apply clear over base (COB) multi-layer pearl refinishing materials on three different vehicles, including two of the following vehicle body components:
  - single vehicle panel
  - full vehicle side
  - vehicle front end or rear end.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying clear over base multi-layer and pearl refinishing materials to vehicle body components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using technical data sheets (TDS) and safety data sheets (SDS) for COB two-pack paint
  - handling and storing paint materials
  - using tools and equipment
  - using approved drying area
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- vehicle paint specifications

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- types and application methods for automotive paint, including correct use of positive air feed masks
- mixing and application techniques for COB multi-layer and pearl refinishing materials, including:
  - paint mixing techniques and systems
  - visual colour matching techniques and use of colour test cards
  - paint fault identification and rectification methods for COB multi-layer and pearl refinishing materials
- types and use of paint colour matching equipment, including:
  - set-up and operation of paint mixing system
  - set-up, operation and maintenance of spray guns
  - paint drying equipment
  - paint cleaning materials and equipment
- procedures for protecting vehicles and components when applying refinishing materials
- procedures for final inspection of completed COB multi-layer pearl application.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the COB refinishing materials they have applied to vehicle body components, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- paint and vehicle manufacturer specifications, paint codes
- TDS and SDS for COB multi-layer and pearl refinishing materials
- PPE, including positive air feed masks
- materials to apply COB multi-layer and pearl refinishing materials
- COB refinishing materials

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- three different vehicles or panels requiring painting with COB multi-layer and pearl refinishing materials
- tools, equipment and materials appropriate for mixing and applying COB multi-layer and pearl refinishing materials.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• interpret paint codes and formulas
	• accurately set and adjust settings for:
	  • spray painting air pressure
	  • paint measuring system
	  • spray booth temperature settings
	• use basic mathematical operations, including addition, subtraction, multiplication and division to, determine ratios, measure and calculate quantities of paint and materials.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.

Technology skills to:	• use specialist equipment, including:
	  • spray painting equipment
	  • electronic paint measuring and mixing system
	  • computerised drying equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Refinishing information	• paint manufacturer specifications • paint technical data sheets (TDS)

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

must **include**:	• paint safety data sheets (SDS) • workplace procedures.
Refinishing materials must include:	• water-based solid, metallic and pearl paint materials • water-based paint reducers and hardeners • cleaning materials.
Refinishing tools and equipment must include:	• spaying equipment • paint drying equipment • paint mixing system.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using TDS and SDS for water-based paint
	  • handling and storing paint materials
	  • using tools and equipment
	  • using approved drying area
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Methods must include:	• spraying techniques • drying procedures • detailing.
Meeting specifications must include:	• matching colour, texture, depth and gloss • ensuring paint finish is contaminant-free • ensuring paint finish blends into surrounding surfaces.

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- airbrush basic customised designs on two different vehicle body panels or substrates, in which the work must involve:
  - pictorial reproduction
  - highlighting
  - special effects.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to applying basic airbrush techniques to vehicle body panels, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - handling and storing paint materials
  - using tools and equipment
  - using approved drying area
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- key features of stencils and graphic design techniques used with vehicle substrates
- types and application methods for airbrushing automotive paints and designs, including correct use of positive air feed masks
- airbrushing application techniques, including:
  - types and main parts of airbrush

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - types of masking and stencil mediums
  - types of clear top coat refinishing materials
- types and use of airbrush materials and equipment, including:
  - set-up, operation and maintenance of spray guns
  - airbrush spray gun operation and spraying techniques
  - paint cleaning materials and equipment
  - spray gun cleaning methods
- procedures for protecting vehicle and components when airbrushing
- procedures for final inspection of airbrush application.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of task.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the airbrushing activities that they have carried out on vehicle substrates, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required to apply airbrushing
- clear top coat refinishing materials
- airbrush spray guns and paint materials
- two different vehicle body panels or substrates specified in the performance evidence requiring the application of basic airbrush designs
- airbrush spray guns
- tools, equipment and materials appropriate for applying basic airbrush techniques to vehicle body panels.

Skills	Description
	subtraction, to calculate: • template measurements from drawings and specifications • quantities of required materials.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist wood working tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Wood working tools and equipment must include:	• measuring equipment • hand tools • machine wood working equipment • gluing and screwing equipment.
Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for: • selecting and using PPE • using safety data sheets (SDS) for adhesives • handling and storing wooden components • using tools and equipment • environmental requirements, including procedures for storing and disposing of waste materials and adhesives.

Unit Mapping Information

Equivalent to AURVTS3001 Carry out wood working operations for fabrication

Assessment Requirements for AURVTS001 Fabricate wooden components for vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- fabricate two of the following wooden vehicle components:
  - plugs
  - seat frame
  - door frame
  - timber dash panel.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to fabricating wooden components for vehicles, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for adhesives
  - handling and storing wooden components
  - using tools and equipment
- environmental requirements, including procedures for storing and disposing of waste materials and adhesives
- wood fabrication procedures and techniques, including:
  - types and application of wood working tools and equipment
  - types and features of wood
  - types and application of adhesives
  - measuring techniques

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - patterns and template development
- procedures for final inspection of fabricated wooden component.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the wooden components they have fabricated for vehicles, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required for wood working
- SDS for adhesives
- materials relevant to fabrication of wooden components
- wooden vehicle components specified in the performance evidence requiring fabricating
- tools, equipment and materials appropriate for fabricating wooden components for vehicles.

AURVTS002 Repair wooden components in vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to repair plugs, moulds, frames and flooring in vehicle bodies using wood materials. It involves preparing for the task, selecting and using wood materials and wood working equipment to repair plugs, moulds, frames and flooring components, and completing workplace processes and documentation.

It applies to those working in the automotive service and body repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical – Fabrication

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for work	1.1 Job requirements are determined from workplace instructions 1.2 Materials are selected and inspected for quality

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.3 Hazards associated with the work are identified and risks are managed 1.4 ***Wood working tools and equipment*** and personal protective equipment (PPE) are selected and checked for serviceability 1.5 Work area is prepared and work is planned to identify methods for repairing wooden components, minimise waste, and use time efficiently
2. Carry out repair procedures	2.1 Damaged component identified for repair is removed from vehicle, and damage or fault is assessed 2.2 Repairs to damaged component are carried out using manufacturer approved techniques, repair materials and equipment according to workplace procedures and ***safety and environmental requirements*** 2.3 Repairs to wooden component are completed without causing damage to equipment, machinery or vehicle 2.4 Repaired component is reinstalled and finished according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and component is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate specifications and relevant information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.
Numeracy skills to:	• interpret job specifications and measurements • calculate material quantities.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	• assess damage or faults to wooden components to determine repair method.
Technology skills to:	• use specialist wood working tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Wood working tools and equipment must include:	• measuring equipment • hand tools • machine wood working equipment • adhesive and screwing equipment.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • handling and storing vehicle plugs, moulds, frames and flooring
	  • using tools and equipment
	• environmental requirements, including procedures for storing and disposing of waste materials and adhesives.

Assessment Requirements for AURVTS006 Fabricate automotive and marine trim components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- fabricate three different automotive or marine trim components to specifications, including one seat assembly.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to fabricating automotive and marine trim components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment
- environmental requirements, including procedures for storing and disposing of waste materials
- types, operation and basic maintenance of fabrication equipment
- type of trim materials and their applications
- trim component fabrication methods and techniques, including:
  - material marking out and cutting techniques
  - fastening and assembly methods, including:
    - gluing
    - bonding
    - sewing
    - riveting
    - welding
- procedures for identifying material defects

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- procedures for protecting vehicle or vessel and components during trim work
- procedures for final inspection of fabricated trim component.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the trim components that they have fabricated, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive or marine trimming workplace or simulated workplace
- workplace instructions
- PPE to fabricate trim components
- materials to fabricate trim components
- three different automotive or marine components requiring trim
- tools, equipment and materials appropriate for fabricating trim components.

replace interior trim component	1.2 Original equipment manufacturer (OEM) specifications and workplace procedures are accessed and interpreted 1.3 Interior trim component to be removed and replaced is identified and inspected for damage 1.4 Hazards associated with the work are identified and risks are managed 1.5 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability 1.6 Work is planned to minimise waste and use time efficiently
2. Remove, store and replace trim	2.1 Trim component is removed according to OEM specifications, workplace procedures, and ***safety and environmental requirements***, and without causing damage to vehicle or other components 2.2 Trim component is safely stored in preparation for replacement 2.3 Trim component is replaced according to OEM specifications, workplace procedures, and safety and environmental requirements, and without causing damage to vehicle or other components
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and component is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.
Numeracy skills to:	• identify tool size using metric and imperial systems of measurements.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist removal and installation equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using specialist tools and equipment
	  • manual handling components
	• environmental requirements, including procedures for storing and disposing of waste materials.

Unit Mapping Information

Assessment Requirements for AURVTT003 Remove and replace automotive and marine interior trim components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove, store and replace trim components for three different vehicles or vessels, in which the work must involve:
  - door trims
  - carpets
  - head lining.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and replacing automotive and marine interior trim components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment
  - manual handling components
- environmental requirements, including procedures for storing and disposing of waste materials
- original equipment manufacturer (OEM) specifications for removing and replacing automotive or marine interior trim components
- types and uses of specialist tools and equipment needed to remove and replace interior trim components
- trim component removal and replacement techniques and procedures, including procedures for protecting vehicle or vessel and components

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- procedures for final inspection of automotive or marine interior trim components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles or vessels in which they removed and replaced interior trim, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive or marine trimming workplace or simulated workplace
- workplace instructions
- PPE required to remove and replace vehicle or vessel interior trim components
- OEM specifications and manuals
- three different vehicles or vessels requiring the removal and replacement of interior trim components specified in the performance evidence
- tools, equipment and materials appropriate for removing and replacing automotive and marine interior trim.

AURVTT004 Trim vehicle components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to calculate, mark, cut, sew and attach trim material to vehicle components. It involves preparing for the task, selecting and using specialist tools and equipment, selecting trim materials and checking their quality, developing material patterns, fabricating, assembling and attaching trim to components and checking trim against specifications, and completing workplace processes and documentation.

It applies to those working in the automotive and marine trimming industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Trimming and Upholstery

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for work	1.1 Job requirements are determined from workplace instructions

Assessment Requirements for AURVTT007 Clean plastic trim and fittings of vehicles

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- clean the internal and external plastic trim and fittings of three different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to cleaning plastic trim and fittings of vehicles, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for cleaning products
  - using cleaning equipment
  - handling and storing cleaning products
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- types of vehicle plastic trim and fittings
- cleaning products required for different trims and fittings
- types and use of cleaning equipment
- procedures for final inspection of cleaned vehicle trim and fittings.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle trim and fittings that they have cleaned, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive detailing workplace or simulated workplace
- workplace instructions
- PPE required to clean plastic trim and fittings
- SDS for cleaning products
- cleaning materials
- three different vehicles with plastic trim and fittings requiring cleaning
- cleaning tools, equipment and materials appropriate for cleaning vehicle plastic trim and fittings.

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
	1.3 Cleaning ***materials*** are identified, calculated and prepared according to vehicle manufacturer recommendations 1.4 Hazards associated with the work are identified and risks are managed 1.5 Cleaning tools and equipment, including personal protective equipment (PPE), are identified and inspected for serviceability 1.6 Work is planned to identify methods for cleaning vehicle interior, minimise waste, and use time effectively
2. Undertake cleaning activities	2.1 Interior trim and seats are cleaned according to workplace instructions, customer requirements, and ***safety and environmental requirements*** 2.2 Cleaning and finishing materials and tools are used according to trim and seat fabric type and without causing damage to vehicle or components 2.3 Manual or machine assisted cleaning methods are used according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and vehicle is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills	• clarify instructions and procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
to:	• clearly report issues or outcomes.
Numeracy skills to:	• use basic mathematical operations to calculate cleaning material quantities • measure and mix cleaning fluids using ratios.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist cleaning equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Cleaning information must include:	• manufacturer specifications • safety data sheets (SDS) • workplace procedures.
Materials must include:	• cloths • cleaning products • finishing agents.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using SDS for cleaning products and finishing agents
	  • using tools and equipment
	  • handling and storing cleaning products
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials and cleaning agents.

Assessment Requirements for AURVTT008 Clean vehicle interior trim

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- clean and finish the following interiors of three different vehicles, including:
  - seats
  - carpets
  - mats
  - dash
  - arm rests
  - consoles
  - door trim.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to cleaning vehicle interior trim, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for cleaning products and finishing agents
  - using tools and equipment
  - handling and storing cleaning products
- environmental requirements, including procedures for trapping, storing and disposing of waste materials and cleaning agents
- types of vehicle interior trim and components specified in the performance evidence
- cleaning and finishing products and equipment application methods and techniques

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- procedures for protecting vehicle interiors while cleaning
- procedures for final inspection of cleaned interior.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle interior trim that they have cleaned, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- workplace instructions
- PPE required to clean vehicle interiors
- SDS for cleaning products and finishing agents
- cleaning and finishing materials
- three different vehicles with the interiors specified in the performance evidence requiring cleaning
- tools, equipment and materials appropriate for cleaning vehicle interior trim.

AURVTT009 Remove and replace vehicle and vessel seats and fittings

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to remove and replace seats and fittings of vehicles and vessels according to manufacturer removal and replacement instructions. It involves preparing for the task, selecting and using specialist tools and equipment, storing seats and fittings, and completing workplace processes and documentation.

It applies to those working in the automotive and marine trimming industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle body

Unit Sector

Technical - Trimming and Upholstery

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to remove and	1.1 Job requirements are determined from workplace instructions

Assessment Requirements for AURVTT010 Remove and manufacture or repair vehicle head lining

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove one vehicle head lining, in which the work must involve the following fittings:
  - interior lights
  - sun shields
  - rear vision mirrors
  - door rubbers
- manufacture or repair and then replace the above head lining.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and manufacturing or repairing vehicle head lining, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment
  - manual handling techniques
- environmental requirements, including procedures for storing and disposing of waste materials
- types of head linings and materials
- types and use of tools and equipment required for removing, manufacturing or repairing, and replacing vehicle head lining, including:
  - trimming tools and equipment
  - sewing machines

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- methods and procedures for removing and replacing vehicle head lining, including:
  - electrical disconnection and reconnection
  - removal and installation of fittings, including:
    - interior lights
    - sun shields
    - rear vision mirrors
    - door rubbers
- head lining attachment techniques
- head lining repair or manufacturing methods
- procedures for protecting vehicle and components when removing, manufacturing or repairing, and replacing vehicle head lining
- procedures for final inspection of manufactured or repaired and fitted vehicle head lining.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles where they have removed, manufactured or repaired, and then replaced vehicle head lining, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive trimming workplace or simulated workplace
- workplace instructions
- PPE required to manufacture or repair head lining
- vehicle with head lining requiring replacement or repair
- tools, equipment and materials appropriate for removing, manufacturing or repairing, and then replacing vehicle head lining.

Assessment Requirements for AURVTT013 Fabricate and fit loose and fitted covers to vehicle seats and components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- fabricate and assemble one loose and one fitted cover to the seats of two different vehicles.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to fabricating and fitting loose and fitted covers to vehicle seats and components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment
  - manual handling vehicle components
- environmental requirements, including procedures for storing and disposing of waste materials
- type, use and basic maintenance of tools and equipment
- designs and styles of different types of covers
- types of materials and consumables and their applications, including:
  - fabrics
  - fasteners
  - adhesives
- methods and techniques for fabricating loose and fitted covers, including:
  - material selection
  - planning

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - measuring
  - marking out
  - cutting
  - sewing
- methods and techniques for fitting and fastening loose and fitted covers
- procedures for protecting vehicle and components when fitting covers
- procedures for final inspection of fabricated and fitted covers.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the loose and fitted covers that they have fabricated and fitted, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive or marine trimming workplace or simulated workplace
- workplace instructions
- PPE required to fabricate and fit loose and fitted covers
- materials required to fabricate and fit loose and fitted covers
- two different vehicles requiring seat covers to be fitted
- tools, equipment and materials appropriate for fabricating and fitting loose and fitted covers.

AURVTT014 Fabricate and fit marine covers

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to fabricate and fit covers for different marine applications. It involves preparing for the task, selecting and using specialist tools and equipment, selecting materials and checking their quality, following manufacturer and customer instructions, inspecting final work, and completing workplace processes and documentation.

It applies to those working in the marine trimming industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle body

Unit Sector

Technical - Trimming and Upholstery

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to fabricate	1.1 Job requirements are determined from workplace instructions

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
marine covers	1.2 Materials are selected and inspected for quality, and quantities are calculated 1.3 Hazards associated with the work are identified and risks are managed 1.4 Tools and equipment, including personal protective equipment (PPE), are selected for appropriate ***fabrication methods*** and checked for serviceability 1.5 Work area is prepared and work is planned to minimise waste and use time efficiently
2. Measure, mark out and cut materials	2.1 Templates and specialist tools and equipment are selected and used according to ***safety and environmental requirements*** 2.2 Materials are marked out and cut according to patterns, templates workplace instructions, manufacturer specifications and fitting requirements
3. Fabricate, fit and fasten marine covers	3.1 Marine covers are fabricated and assembled according to job requirements and workplace instructions 3.2 Marine covers are fitted and fastened without causing damage to vehicle or components 3.3 Fitted marine covers are checked for alignment and quality according to job requirements, workplace procedures and manufacturer specifications
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and component is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate:
	  • fitting measurements
	  • quantities of required materials.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Fabrication methods must include:	• measuring, marking out and cutting • machine sewing • reinforcing and edge finishing • fastening, shaping and gluing • assembling and fitting.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using specialist tools and equipment
	  • manually handling marine components
	• environmental requirements, including procedures for storing and disposing of waste materials.

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- fabricate and fit two marine covers to job specifications.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to fabricating and fitting marine covers, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment
  - manually handling marine components
- environmental requirements, including procedures for storing and disposing of waste materials
- type, use and basic maintenance of tools and equipment
- designs and styles of different types of covers
- types of materials and consumables and their applications, including:
  - fabrics
  - fasteners
  - adhesives
- methods and techniques for fabricating marine covers, including:
  - material selection
  - planning
  - measuring
  - marking out

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - cutting
  - sewing
  - making up and assembly
  - fitting and fastening
- methods and techniques for fitting and fastening marine covers
- procedures for protecting vessel and components when fitting covers
- procedures for final inspection of fabricated and fitted marine covers.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the marine covers that they have fabricated and fitted, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- marine trimming workplace or simulated workplace
- workplace instructions
- PPE required to fabricate and fit marine covers
- materials required to fabricate and fit marine covers
- marine vessel or components that require covers to be fabricated and fitted
- tools, equipment and materials appropriate for fabricating and fitting marine covers.

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate:
	  • quantities of required materials
	  • fitting measurements.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist tools and equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Materials must include:	• adhesives • polyvinyl chloride (PVC) • canvas • aluminium or stainless steel tubing • fasteners • bindings and zippers.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using specialist tools and equipment
	  • manual handling components
	• environmental requirements, including procedures for storing and disposing of waste materials.

Assessment Requirements for AURVTT019 Fabricate and install automotive and marine frames, canopies and side curtains

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- fabricate one automotive or marine frame, canopy and side curtain to specifications.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to fabricating and installing automotive and marine frames, canopies and side curtains, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment
  - manual handling components
- environmental requirements, including procedures for storing and disposing of waste materials.
- types of frames, canopies and side curtains, including:
  - materials
  - methods of operation
  - component parts
- type, use and basic maintenance of sewing tools and equipment
- types of materials and consumables and their applications, including:
  - fabrics
  - fasteners
  - adhesives

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- methods and techniques for fabricating and installing frames, canopies and side curtains hoods, including:
  - selecting material
  - planning
  - measuring
  - marking out
  - cutting
  - sewing, including:
    - seams
    - attachments
    - bindings, zippers and pockets
  - using adhesives
  - fabricating and assembling frames, canopies and side curtains
  - fitting and fastening
- quality standards relating to fabricating and installing frames, canopies and side curtains
- procedures for protecting vehicle, vessel and components when installing frames, canopies and side curtains
- procedures for final inspection of fabricated and installed frames, canopies and side curtains.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the frames, canopies and side curtains that they have fabricated and installed, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive or marine trimming workplace or simulated workplace
- workplace instructions
- PPE required to fabricate and install a frame, canopy and side curtain

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- materials to fabricate and install a frame, canopy and side curtain
- automotive or marine vessel or simulated jig requiring frame, canopy and side curtain to be fabricated and installed
- tools, equipment and materials appropriate for fabricating and installing frames, canopies and side curtains.

AURVTT020 Select and use leather in automotive and marine trimming

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to identify, select and use leather in the trimming of automotive and marine components. It involves preparing for the task, selecting and using specialist tools and equipment, checking leather quality, calculating required quantities, matching leather, fabricating and attaching covers and trim to manufacturer and customer instructions, and completing workplace processes and documentation.

It applies to those working in the automotive and marine trimming industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Trimming and Upholstery

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to use leather trimming	1.1 Job requirements are determined from workplace instructions 1.2 Adhesive safety data sheet (SDS) information is accessed and interpreted 1.3 ***Materials*** are selected and inspected for quality, and quantities are calculated 1.4 Hazards associated with the work are identified and risks are managed 1.5 ***Trimming tools and equipment*** and personal protective equipment (PPE) are selected and checked for serviceability 1.6 Work and cutting are planned to minimise waste and use time efficiently
2. Fabricate leather components	2.1 ***Leather features and characteristics*** are checked carefully prior to cutting and are matched against workplace instructions 2.2 Leather pieces are laid and marked out in sequence according to developed cutting plan and ***safety and environmental requirements*** 2.3 Leather pieces are cut according to cutting plan and using predetermined measurements or patterns 2.4 Leather is sewn to produce required range of trimming components
3. Attach leather to vehicle, vessel or component	3.1 Leather component is positioned and checked prior to being attached to ensure correct fit 3.2 Leather is attached using most appropriate method and according to workplace procedures and job requirement
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and component is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to calculate:
	  • fitting measurements in metric and imperial systems
	  • quantities of leather and materials.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Materials must include:	• leather hides • patterns • trimming materials • cleaning materials • adhesives.
Trimming tools and equipment must include:	• sewing machines • trimming hand and power tools.
Leather features and characteristics must include:	• natural markings • colour variation • flexibility

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• corrected grain • quality • wear quality and stress.

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using SDS information relating to adhesives
	  • using specialist tools and equipment
	  • manually handling leather materials
	• environmental requirements, including procedures for storing and disposing of waste materials.

AURVTT021 Select and apply adhesives in automotive and marine service and repair work

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to select and use adhesives with a range of automotive and marine surfaces. It involves preparing for the task, selecting and using tools and equipment, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry. The adhesives include those used with automotive, marine, motorcycle, aircraft or recreational vehicle materials.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

AURVTW001 Carry out manual metal arc welding on components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare and weld components using the manual metal arc welding (MMAW) process. It involves preparing for the task, selecting, setting up and operating MMAW equipment, identifying and selecting welding electrodes appropriate to welding requirements, selecting and using suitable personal protective equipment (PPE), performing welding to required standard and specifications, inspecting weld quality, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Plan and prepare to weld component	1.1 Job requirements are determined from workplace instructions 1.2 Welding electrodes, weld size, type and sequence, and quantity of materials are identified 1.3 Hazards associated with the work are identified and risks are managed 1.4 ***Tools and equipment*** are selected and checked for serviceability 1.5 Work is planned to minimise waste and use time efficiently
2. Weld materials using MMAW	2.1 Welding equipment is set up and used according to workplace procedures and ***safety and environmental requirements*** 2.2 Distortion prevention measures are identified and adjusted as required 2.3 Test runs are conducted according to workplace instructions and quality requirements 2.4 Materials are welded using MMAW process to required specifications
3. Check welds	3.1 Weld quality and specifications are confirmed by non-destructive inspection 3.2 Weld defects are identified, prepared for re-welding as required, and appropriate personnel are notified
4. Complete work processes	4.1 Final inspection is made to ensure work meets workplace expectations and component is presented ready for use 4.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 4.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 4.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.
Numeracy skills to:	• identify and set welding machine settings • identify welding rod specifications.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Problem solving skills to:	• identify weld defects, quality issues and potential problems associated with MMAW process and refer problems to appropriate person.
Technology skills to:	• use specialist MMAW equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools and equipment must include:	• PPE • MMAW equipment • MMAW electrodes and materials • protective screens and fume extraction system.

Safety and environmental requirements must include:	• work health and safety (WHS), and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE when working with MMAW equipment, including approved welding helmet
	  • using specialist welding tools and equipment
	  • using protective screens and fume extraction system
	  • manually handling components and MMAW equipment
	  • identifying and controlling hazards
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTW001 Carry out manual metal arc welding on components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out manual metal arc welding (MMAW), including:
  - three bead runs, 150 mm long
  - three pad welds, 150 mm long
  - three butt welds, 150 mm long
  - three lap welds, 150 mm long.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS), and occupational health and safety (OHS) requirements relating to carrying out manual metal arc welding on components, including procedures for:
  - selecting and using personal protective equipment (PPE) when working with MMAW equipment, including approved welding helmet
  - using specialist welding tools and equipment
  - using protective screens and fume extraction system
  - manually handling components and MMAW equipment
  - identifying and controlling hazards
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- hazards associated with MMAW, including:
  - arc eye and exposure to ultraviolet light
  - metal vapours, welding electrodes and welded components

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - molten metal spatter and fire danger
- distortion control techniques, including:
    - bracing
    - pre-setting
    - tacking
    - bolting
    - clamping
    - jigs and fixtures
- material preparation techniques, including characteristics of different metal types
- procedures for setting up and operating MMAW equipment
    - methods and techniques for MMAW, including:
    - weld specifications
    - basic welding symbols
    - types of welding electrodes and their application
    - protection of vehicle electronics
    - weld inspection
    - identification and rectification of weld defects
- procedures for final inspection and testing of welded components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the MMAW that they have carried out, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required for MMAW
- components to be welded as specified in the performance evidence

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- welding materials and consumables
- MMAW equipment and operating instructions
- tools, equipment and materials appropriate for carrying out MMAW.

AURVTW002 Carry out oxyacetylene brazing of components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out oxyacetylene brazing. It involves preparing for the task, selecting, setting up and operating an oxyacetylene welding plant, setting gas pressures, identifying and adjusting required flame appropriate to brazing requirements, selecting and using suitable personal protective equipment (PPE), performing oxyacetylene brazing to given specifications, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to braze components	1.1 Job requirements are determined from workplace instructions 1.2 Technical information is accessed and interpreted to enable brazing to be performed according to manufacturer specifications 1.3 Hazards associated with the work are identified and risks are managed 1.4 ***Tools and equipment***, including PPE, are selected and checked for serviceability 1.5 Work is planned to identify brazing methods, minimise waste, and use time efficiently
2. Complete brazing procedures	2.1 Oxyacetylene equipment is set up, gauges and working pressures are set, and flames are adjusted according to equipment manufacturer operating procedures and workplace procedures 2.2 Brazing operations are conducted according to job requirements, workplace procedures, and ***safety and environmental requirements*** 2.3 Brazing procedures are completed without causing damage to components or systems
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and component is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skills	Description
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.
Numeracy skills to:	• identify and set oxyacetylene gas working pressures.
Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist oxyacetylene equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Tools and equipment must include:	• oxyacetylene plant • hand tools • approved welding glasses.

Safety and environmental requirements must include:	• work health and safety (WHS), and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using specialist tools and equipment, including approved oxyacetylene brazing glasses
	  • manually handling components and oxyacetylene equipment
	  • identifying and controlling hazards
	• environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Assessment Requirements for AURVTW002 Carry out oxyacetylene brazing of components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out oxyacetylene brazing procedures on the following:
  - butt joint of 1.00 mm steel, 150 mm long
  - fillet joint of 1.00 mm steel, 150 mm long
  - lap joint of 1.6 mm steel, 150 mm long
  - pipe joint of 1.6 mm steel, 50 mm diameter.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS), and occupational health and safety (OHS) requirements relating to carrying out oxyacetylene brazing of components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using specialist tools and equipment, including approved oxyacetylene brazing glasses
  - manually handling components and oxyacetylene equipment
  - identifying and controlling hazards
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- types and application of brazing materials, including fluxes and rods
- use and operation of oxyacetylene plant, including procedures for setting and adjusting pressure and gauges
- oxyacetylene flame identification and applications, including:
  - natural
  - carburising

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - oxidising
- basic maintenance procedures for oxyacetylene equipment
- methods and techniques for oxyacetylene brazing
- procedures for reporting faults and material defects
- procedures for final inspection and testing of brazed components.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the oxyacetylene brazing activities that they have carried out, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required to use oxyacetylene brazing equipment
- components to be brazed as specified in the performance evidence
- brazing equipment, consumables and materials
- oxyacetylene plant
- tools, equipment and materials appropriate for carrying out oxyacetylene brazing.

AURVTW003 Carry out advanced gas metal arc welding on vehicle body sections

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out advanced gas metal arc welding (GMAW) to replace structural and non-structural vehicle body sections during vehicle body repair work. It involves preparing for the task, selecting and using GMAW equipment, setting gas flow pressures and welder settings, operating gas metal arc welder, selecting and using suitable personal protective equipment (PPE), inspecting and testing weld quality, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle body

Unit Sector

Assessment Requirements for AURVTW003 Carry out advanced gas metal arc welding on vehicle body sections

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- use gas metal arc welding (GMAW) equipment to carry out the following welds:
  - three butt welds to 0.8 mm and 1.2 mm panel steel in the following positions:
    - down hand
    - vertical
    - horizontal
  - two lap welds to 0.8 mm and 1.2 mm panel steel in the following positions:
    - vertical
    - horizontal
  - three plug welds to 0.8 mm and 1.2 mm panel steel in the following positions:
    - down hand
    - vertical
    - horizontal
  - two butt welds on dissimilar material thickness 0.8 mm to 1.2 mm panel steel in the following positions:
    - down hand
    - horizontal.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS), and occupational health and safety (OHS) requirements relating to carrying out advanced GMAW on vehicle body sections, including procedures for:
  - selecting and using personal protective equipment (PPE) when working with GMAW equipment, including approved welding helmet
  - using specialist welding tools and equipment
  - using protective screens and fume extraction system
  - manually handling vehicle components and GMAW equipment
  - identifying and controlling hazards
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- GMAW equipment manufacturer operating procedures
- original equipment manufacturer (OEM) or authorised agency welding standards
- material and consumable preparation techniques, including characteristics of different metal types, including high strength steels (HSS)
- procedures for setting up and operating GMAW equipment
- methods and techniques for advanced GMAW, including:
  - GMAW silicone bronze process
  - weld speed
  - weld angle
  - weld distance
  - welding positions
  - welding of dissimilar metal thicknesses
  - distortion control techniques
  - GMAW testing, including:
    - non-destructive inspection
    - destructive testing
  - identification and rectification of weld defects, including:
    - porosity
    - lack of penetration
    - excessive weld build-up
    - excess heat
    - undercut
    - weld distortion
    - heat affected zone
- procedures for safeguarding vehicle electronics during GMAW
- post-weld inspection procedures.

Assessment Requirements for AURVTW005 Carry out spot welding

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out spot welding to three different structural and non-structural vehicle body sections that include 50 spot welds to each
- undertake above work according to original equipment manufacturer (OEM) or authorised agency procedures, and cover different spot weld locations and spot weld sizes.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS), and occupational health and safety (OHS) requirements relating to carrying out spot welding, including procedures for:
  - selecting and using personal protective equipment (PPE) for spot welding, including safety glasses
  - using specialist welding tools and equipment
  - using protective screens
  - manually handling vehicle components and welding equipment
  - identifying and controlling hazards
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- OEM or authorised agency repair guidelines and quality requirements
- types of metals that can be spot welded
- types and operation of spot welding equipment covering:
  - set up
  - operation

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- methods and techniques for spot welding, including spot welding principles:
  - squeeze time
  - weld time
  - hold time
- procedures for destructive testing of spot welds
- types of spot weld defects, including:
  - shunting
  - splashing
  - insufficient heat
- procedures for final inspection of welding work.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicle spot welds that they have carried out, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- OEM or authorised agency repair guidelines
- PPE required for spot welding
- spot welder that meets current industry standard
- spot welding consumables
- materials requiring spot welding
- vehicle body sections or components that require the spot welding specified in the performance evidence
- tools, equipment and materials appropriate for carrying out spot welding.

AURVTW006 Carry out thermoplastic welding on vehicle trim components

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to carry out thermoplastic welding on vehicle trim components. It involves preparing for the task, selecting and using thermoplastic welding equipment, setting equipment temperature, selecting and using suitable personal protective equipment (PPE), completing thermoplastic welds to vehicle manufacturer and customer specifications, finishing weld to pre-paint condition, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold and italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to weld	1.1 Job requirements are determined from workplace instructions 1.2 ***Welding information*** is accessed and interpreted 1.3 Materials for thermoplastic welding are selected and inspected for quality 1.4 Hazards associated with the work are identified and risks are managed 1.5 Thermoplastic welding tools and equipment and PPE are selected and checked for serviceability 1.6 Work is planned to minimise waste and use time efficiently
2. Carry out thermoplastic welding activities	2.1 Work area and fume extraction system are prepared ready for thermoplastic welding 2.2 Thermoplastic welding equipment is set up and adjusted for specific job requirement following vehicle manufacturer specification 2.3 Reinforcement methods are applied to ensure pre-damage strength 2.4 Thermoplastic welding equipment is used according to workplace procedures and ***safety and environmental requirements*** 2.5 Thermoplastic weld is finished to pre-paint condition and completed without causing damage to vehicle or components 2.6 Completed thermoplastic weld is inspected for quality and faults are identified and rectified as required and according to workplace procedures
3. Complete work processes	3.1 Final inspection is made to ensure work meets workplace expectations and component is presented ready for use 3.2 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored 3.3 Tools and equipment are checked, reported if faulty, and stored according to workplace procedures 3.4 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	**Description**
Learning skills to:	• locate appropriate sources of information efficiently.
Writing skills to:	• legibly and accurately fill out workplace documentation.
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes.

Numeracy skills to:	• use basic mathematical operations, including addition and subtraction, to:
	  • calculate weld time
	  • calculate thermoplastic welding measurements
	  • mark out thermoplastic weld on trim material
	  • calculate quantities of required materials
	• set and adjust thermoplastic welder settings.

Planning and organising skills to:	• plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed within workplace timeframes.
Technology skills to:	• use specialist thermoplastic welding equipment.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Welding information must include:	• vehicle manufacturer specifications • workplace procedures • thermoplastic safety data sheets (SDS).

Safety and environmental requirements must include:	• work health and safety (WHS) and occupational health and safety (OHS) requirements, including procedures for:
	  • selecting and using PPE
	  • using SDS for thermoplastics
	  • manually handling vehicle components and welding

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	equipment • using tools and equipment • using fume extraction equipment • environmental requirements, including procedures for trapping, storing and disposing of waste materials.

Unit Mapping Information

Equivalent to AURVTW3006 Carry out thermoplastic welding procedures

Assessment Requirements for AURVTW006 Carry out thermoplastic welding on vehicle trim components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out thermoplastic welding procedures on three different vehicle trim components, in which the work must involve:
  - two different types of thermoplastics
  - one weld to a minimum of 50 mm in length.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to carrying out thermoplastic welding on vehicle trim components, including procedures for:
  - selecting and using personal protective equipment (PPE)
  - using safety data sheets (SDS) for thermoplastics
  - manually handling vehicle components and welding equipment
  - using tools and equipment
  - using fume extraction equipment
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- vehicle manufacturer thermoplastic specifications
- type and use of fume extraction systems
- types and characteristics of plastics used in thermoplastic welding
- types and operation of thermoplastic welding equipment, including:
  - set-up

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - operation
- methods and techniques for thermoplastic welding
- procedures for protecting vehicle and components during weld
- procedures for final inspection of thermoplastic weld.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the thermoplastic welding that they have carried out, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- SDS for thermoplastics
- PPE required for thermoplastic welding
- fume extraction systems
- consumables and materials to weld thermoplastic
- three different vehicle trim components specified in the performance evidence requiring thermoplastic welding
- thermoplastic welder
- tools, equipment and materials appropriate for carrying out thermoplastic welding.

AURVTW007 Carry out oxyacetylene thermal heating and cutting on vehicle body sections

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to set up an oxyacetylene plant, follow safety requirements, adjust gauges to recommended working pressures, and conduct thermal heating and cutting. It involves preparing for the task, identifying and adjusting flame appropriate to thermal heating and cutting requirements, selecting and using suitable personal protective equipment (PPE), performing oxyacetylene thermal heating and cutting to given instructions, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

AURVTW009 Carry out basic gas metal arc welding

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the performance outcomes required to prepare and weld components using the gas metal arc welding (GMAW) process. It involves preparing for the task, selecting and using GMAW equipment and personal protective equipment (PPE), setting gas flow pressures and welder settings, inspecting and testing weld quality, and completing workplace processes and documentation.

It applies to those working in the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AURVTW009 Carry out basic gas metal arc welding

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- carry out gas metal arc welding (GMAW) on the following steel sections:
  - three butt welds, 150 mm long
  - three fillet welds, 150 mm long
  - three steel exhaust pipe butt welds.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS), and occupational health and safety (OHS) requirements relating to carrying out basic GMAW, including procedures for:
  - selecting and using personal protective equipment (PPE) when working with GMAW equipment, including approved welding helmet
  - using specialist welding tools and equipment
  - using protective screens and fume extraction system
  - manually handling components and GMAW equipment
  - identifying and controlling hazards
- environmental requirements, including procedures for trapping, storing and disposing of waste materials
- hazards associated with GMAW, including:
  - arc eye and exposure to ultraviolet light
  - molten metal spatter and fire danger
- GMAW principles, including:
  - process of using an electric arc to melt and join metal

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - basic construction and operation of welding gun and wire feed unit
  - types and application of welding wire and shielding gases
  - properties and characteristics of metals to be welded
- types of welds, including:
  - butt welds
  - fillet welds
  - tee joints
  - corner joints
- procedures for protecting vehicle electronics during welding
- GMAW procedures, including:
  - component cleaning and preparation
  - welder current and voltage settings, gas flow rates, wire diameters and wire feed speed
  - wire stick out distance, gun angle between the work pieces and travel angle
- weld testing procedures, including non-destructive testing
- post-weld inspection procedures including, weld defects.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the basic GMAW they have carried out on components, e.g. work orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- PPE required for GMAW, including approved welding helmet
- GMAW welder
- steel sections requiring GMAW as specified in the performance evidence
- tools, equipment and materials appropriate for carrying out basic GMAW.

AURVTW010 Set up and use welding equipment

Modification History

Release	Comment
Release 1	New unit of competency

Application

This unit describes the performance outcomes required to set up and use welding equipment to weld a range of materials. It requires the learner to plan and prepare the task; select and set up the correct welding equipment; weld using different welding techniques; and maintain the work area, tools and equipment.

It applies to those undertaking a Vocational Education and Training in Schools (VETiS) or pre-vocational qualification as preparation to entering the automotive service and repair or automotive manufacturing industry.

The unit is designed for use in a highly supervised context and is not suitable for use in a vocational qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Competency Field

Vehicle Body

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section
1. Prepare to set up and use welding equipment	1.1 ***Safety and environmental requirements*** are sourced and interpreted

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Task instruction is interpreted and welding equipment, tools and materials needed to complete the task are determined 1.3 Manufacturer specifications and workplace procedures for use of welding equipment and associated materials are sourced and interpreted 1.4 Potential hazards and risks associated with task are identified and reported to workplace supervisor
2. Set up welding equipment and materials	2.1 Identified ***welding equipment, tools and materials*** are sourced and checked according to manufacturer specifications, workplace procedures and safety requirements 2.2 ***Welding equipment is set up*** according to manufacturer specifications, workplace procedures and safety requirements 2.3 Materials to be welded are identified and sourced
3. Use welding equipment	3.1 Welding equipment and materials set up for the task are checked prior to use according to manufacturer specifications, workplace procedures and safety requirements 3.2 Welding method and precautions outlined in the task instruction are interpreted and followed 3.3 ***Welding task and demonstration*** are carried out correctly according to manufacturer specifications, workplace procedures and safety requirements
4. Complete work processes	4.1 Final inspection is made to ensure work is completed according to task instruction and workplace standards 4.2 Welding equipment and tools are checked and stored in a condition ready for use according to workplace procedures, or tagged and reported where necessary 4.3 Problems with welding equipment or tools are reported according to workplace procedures 4.4 Work area is cleaned, waste and non-recyclable materials are disposed of, and recyclable material is collected and stored according to environmental requirements and workplace procedures 4.5 Workplace documentation is processed according to workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate appropriate sources of welding information and procedures.
Reading skills to:	• select and interpret key information from manufacturer specifications, safety requirements and workplace procedures to set up and safely operate welding equipment • select and interpret key information from environmental requirements and workplace procedures to ensure a clean and safe work site.
Writing skills to:	• legibly and accurately fill out workplace documentation using correct industry terminology and conventions.
Oral communication skills to:	• participate effectively in verbal exchanges using questioning and active listening to request, clarify and clearly convey information.
Numeracy skills to:	• use basic mathematical operations, including addition, subtraction, multiplication, division to calculate percentages, and to calculate, calibrate and set equipment settings • read and interpret numerical information in welding equipment identification figures.
Planning and organising skills to:	• plan own work and prioritise actions to set up, undertake and complete the welding task.
Self-management skills to:	• recognise own limitations when selecting and using tools and welding equipment and seek timely advice.
Problem-solving skills to:	• identify hazards or potential hazards and take action to minimise risk • refer problems that cannot be readily resolved and seek assistance from workplace supervisor.
Technology skills to:	• set up and operate equipment and tools required to complete the welding task.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Safety and environmental requirements must include:	• information about key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
	  • use of personal protective equipment, including safety glasses and welding helmets, ear protections and safety footwear
	  • use of fume extraction system and welding bay
	  • disposal of welding material and wastes.

Welding equipment, tools and materials must include:	• one of the following welders: • metal arc welder • gas metal arc (MIG) welder • welding bay, curtains and fume extraction • fluxes, gases, welding rods and wire.
Setting up welding equipment must include:	• checking for leaks from gas bottles • checking and adjusting gas pressures • checking gas plant earth straps and clamps.

Welding task and demonstration must include:	• producing the following types of welds:
	  • butt weld
	  • lap weld
	  • bead run

Unit Mapping Information

Modification History

Release	Comment
Release 1	New unit of competency

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standard defined in this unit's elements, performance criteria and foundation skills:

- set up and use welding equipment on at least two occasions.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- key aspects of work health and safety (WHS), occupational health and safety (OHS) and environmental requirements, including:
  - safety data sheets (SDS) and toxic chemicals and gases used and produced in welding
  - potential hazards and risks relating to welding, including fire hazards and ultraviolet skin and eye damage
  - use of personal protective equipment, including safety glasses and welding helmets, ear protections and safety footwear
  - use of fume extraction system and welding bay
  - disposal of welding material and wastes
- types of welding equipment, including:
  - metal arc
  - gas metal arc
- types of fluxes and gases used in welding
- welding equipment set-up procedures
- types and purposes of different welding techniques
- key steps in different welding techniques.

Assessment Conditions

Assessors must satisfy SNR/AQTF assessor requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to welding activities, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application

The following resources must be made available:

- automotive workplace or simulated workplace
- welding equipment and tools, including at least one of the following:
- metal arc welder
- MIG welder
- welding bay, curtains and fume extraction
- fluxes, gases, welding rods and wire.

AURVTW018 Carry out oxyacetylene welding, thermal heating and cutting

Modification History

Release	Comment
Release 1	New unit of competency.

Application

This unit describes the skills and knowledge required to carry out basic welding, thermal heating and cutting operations. It involves preparing for the task, setting up and operating an oxyacetylene plant, setting gas pressures, identifying and adjusting flame appropriate for welding, thermal heating or cutting requirements, selecting and using suitable personal protective equipment (PPE), and completing workplace processes and documentation.

It applies to those working within the automotive service and repair industry.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	Performance Criteria Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for oxyacetylene welding, thermal heating and cutting	1.1 Identify job requirements from workplace instruction 1.2 Obtain and interpret technical information, workplace procedures, national standards and codes of practice, original equipment manufacturer (OEM) or authorised agency standards relating to oxyacetylene welding, thermal heating and cutting 1.3 Identify hazards and environmental issues associated with the work, assess potential risks and implement control measures from workplace health and safety requirements 1.4 Identify tools, equipment and materials required for the job and examine for serviceability

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.5 Plan welding, thermal heating or cutting activity to minimise waste and use time efficiently according to workplace expectations
2. Weld, thermal heat and cut using oxyacetylene plant	2.1 Carry out oxyacetylene gas working pressure adjustment and flame identification and setting according to workplace procedures, workplace health and safety and environmental requirements 2.2 Carry out welding, thermal heating, and cutting activity according to national standards and codes of practice, OEM or authorised agency standards, workplace procedures, workplace health and safety and environmental requirements
3. Complete work processes	3.1 Carry out final inspection to ensure work meets workplace expectations and component is ready for use 3.2 Clear work area and dispose of or recycle materials according to workplace procedures 3.3 Examine and store tools and equipment, ensuring faulty equipment is reported according to workplace procedures 3.4 Complete workplace documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance and are not explicit in the performance criteria.

Skills	Description
Learning skills to:	• locate relevant sources of oxyacetylene welding, thermal heating and cutting information efficiently
Reading skills to:	• read and interpret information and ideas from workplace procedures, documentation, legislation and regulations on safe operating procedures for oxyacetylene welding, thermal heating and cutting
Writing skills to:	• legibly and accurately fill out workplace documentation
Oral communication skills to:	• clarify instructions and procedures • clearly report quality issues and job outcomes
Numeracy skills to:	• identify and set oxyacetylene gas working pressure and gauges
Planning and organising skills to:	• plan own work requirements • prioritise actions to achieve required outcomes • ensure tasks are completed within workplace timeframes

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Technology skills to:	• use specialist oxyacetylene equipment

Assessment Requirements for AURVTW018 Carry out oxyacetylene welding, thermal heating and cutting

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

The candidate must demonstrate they can perform the following according to the standards defined in the elements, performance criteria and foundation skills of this unit.

The candidate must demonstrate using oxyacetylene welding, thermal heating and cutting equipment to carry out welds that safely follow workplace procedures to meet required outcomes. This includes:

- carrying out oxyacetylene welding procedures on:
  - one butt joint, 150 mm long
  - one fillet joint, 150 mm long
  - one lap joint, 150 mm long
  - one exhaust pipe joint
- carrying out a thermal cutting task:
  - a straight cut of 150 mm long
- carrying out one of the following thermal heating tasks:
  - freeing a corroded bolt or fitting
  - freeing a corroded exhaust component.

Knowledge Evidence

The candidate must demonstrate the following knowledge:

Key policies and procedures for carrying out oxyacetylene welding, thermal heating and cutting, including:

- how to locate and interpret the following:
  - original equipment manufacturer (OEM) or authorised agency standards relating to oxyacetylene welding, thermal heating and cutting activity
  - Australian welding Standard AS1554
  - workplace instructions relating to carrying out oxyacetylene welding, thermal heating and cutting activity

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - workplace procedures relating to carrying out oxyacetylene welding, thermal heating and cutting activity
- the following workplace health and safety requirements for carrying out oxyacetylene welding, thermal heating and cutting:
  - selecting and using personal protective equipment (PPE) to use oxyacetylene equipment, including approved oxyacetylene welding glasses
  - using specialist welding, thermal heating and cutting tools and equipment
  - manually handling components and welding, thermal heating and cutting equipment
  - identifying and controlling hazards
- the following environmental requirements for carrying out oxyacetylene welding, thermal heating and cutting:
  - procedures for trapping, storing and disposing of waste materials
- the following procedures for oxyacetylene welding
  - the use and operation of oxyacetylene plant, including setting and adjusting pressure and gauges
  - reporting faults and material defects
  - final inspection
- workplace housekeeping and documentation procedures

Technical information regarding oxyacetylene welding, thermal heating and cutting including:

- the types and characteristics of different metals
- the following oxyacetylene flame identification and adjustment processes:
  - natural
  - carburising
  - oxidising
- the following maintenance requirements of oxyacetylene equipment:
  - checking for oxyacetylene gas leaks from gauges, fittings and hoses
- methods and techniques for thermal heating and cutting
-

Assessment Conditions

The assessment must:

- include access to:
  - an automotive repair workplace or simulated workplace that reflects workplace conditions - where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources
  - repair orders and workplace instructions relating to oxyacetylene welding, thermal heating and cutting activity

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - workplace procedures relating to oxyacetylene welding, thermal heating and cutting activity
  - oxyacetylene welding, thermal heating and cutting equipment operating procedures
  - OEM or authorised agency standards relating to oxyacetylene welding, thermal heating and cutting
  - Australian welding Standard AS1554
  - PPE required to use oxyacetylene welding equipment
  - welding equipment, consumables and materials
  - oxyacetylene plant
  - tools, equipment and materials suitable for carrying out oxyacetylene welding, thermal heating and cutting
- be demonstrated in the workplace or in a simulated environment that reflects workplace conditions
- be conducted in a safe environment
- be assessed in compliance with relevant legislation and regulations; and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstance

Assessor Requirements

Assessors of this unit must:

- satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards
-

BSBCUE405 Survey stakeholders to gather and record information

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to prepare, survey and record relevant and required details of information collected according to organisational, legislative and regulatory requirements.

It applies to individuals who need to solve a defined range of unpredictable problems, analyse and evaluate information from a variety of sources, and who may provide leadership and guidance to others with some limited responsibility for the output of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Stakeholder Relations – Customer Engagement

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Obtain, record and analyse information	1.1 Identify information sources 1.2 Collect and document information according to organisational procedures and legislative and policy requirements 1.3 Collate, sort and analyse information collected in relation to purpose for which it is being obtained

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.4 Ensure contents of recording forms and reports are in line with organisational requirements
2 Take and compile statements	2.1 Take comprehensive statements from sources appropriate to matter being investigated, according to organisational procedures and legislative and policy requirements 2.2 Use active listening when taking accurate statements from people
3 Conduct interviews	3.1 Plan, manage and conduct interviews to gather maximum information relevant to matter being examined 3.2 Treat all interviewees fairly and equitably 3.3 Conduct and record interviews according to legislation, policy and procedures
4 Use information and database systems	4.1 Enter information into database, adhering to data entry security procedures 4.2 Identify and use appropriate sources of information when recording data 4.3 Access and store information according to legislation, policy and procedures
5 Use interview and evidence recording equipment	5.1 Operate recording equipment according to legislation, policy and procedures 5.2 Produce records according to organisational requirements and procedures 5.3 Maintain equipment and usage logs in good order
6 Conduct follow-up activities	6.1 Identify and use communication links within organisation to exchange information 6.2 Assess relevance of information received in terms of its intended purpose 6.3 Dispose of irrelevant information according to legislation, policy and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill	Performance Criteria	Description
Reading	1.4, 4.2, 6.2	• Analyses and reviews a range of texts of varying complexity to determine relevance, accuracy and usefulness
Writing	1.2	• Documents a range of required information using structure, detailed language and format appropriate to purpose
Oral Communication	2.1, 2.2, 3.1, 3.3, 6.1	• Participates effectively in exchanges with others using structure and tone appropriate to gather and exchange information • Uses questioning techniques and active listening to confirm details and clarify responses
Navigate the world of work	1.2, 1.4, 2.1, 3.2, 3.3 4.3, 5.1, 5.2, 6.3	• Takes personal responsibility for adherence to legal/regulatory and organisational requirements when planning and undertaking information collection, review, storage, exchange and disposal
Interact with others	3.1, 3.2, 6.1	• Selects and uses appropriate conventions and protocols when communicating with internal and external stakeholders to build rapport and seek information
Get the work done	1.1, 1.3, 3.1, 4.1-4.3 5.1-5.3, 6.2	• Accepts responsibility for planning, organising and implementing routine and non-routine tasks to manage information collection processes, storage and disposal • Uses systematic, analytical processes to identify and gather relevant information to established criteria • Understands purposes, specific functions and key features of database systems and tools and operates them effectively to complete routine tasks • Uses digital recording technologies and systems safely, legally and ethically when gathering, storing, accessing and sharing information

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Records must be:	• authorised, stored and assessed in line with organisational procedures • clear, audible and presentable.

Assessment Requirements for BSBCUE405 Survey stakeholders to gather and record information

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- source, analyse and record information in compliance with organisational requirements
- use professional interview techniques to conduct and record interviews, including audiotapes and statements if applicable to role, according to relevant statutory, regulatory and legislative requirements
- access, store and dispose of information in compliance with legal and organisational requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify information types and their sources
- outline procedures and security measures for accessing, storing, retrieving and sharing data from databases
- describe rights of individuals in relation to conduct of interviews and compilation of statements
- identify statutory, regulatory and legislative requirements relating to surveying stakeholders
- outline use of evidence and contact recording technology.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the stakeholder relations – customer engagement field of work. This includes access to:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- information and databases for analysis
- relevant legislation, standards and guidelines
- interviewees
- recording equipment.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBCUS501 Manage quality customer service

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify assessment conditions
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to develop strategies to manage organisational systems that ensure products and services are delivered and maintained to standards agreed by the organisation.

It applies to individuals who supervise the provision of quality customer service within an organisation's procedures framework by others. At this level, individuals must exercise considerable discretion and judgement, using a range of problem solving and decision making strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Stakeholder Relations – Customer Service

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Plan to meet internal and external customer	1.1 Investigate, identify, assess, and include the needs of customers in planning processes

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
requirements	1.2 Ensure plans achieve the quality, time and cost specifications agreed with customers
2 Ensure delivery of quality products and services	2.1 Deliver products and services to customer specifications within organisation's business plan 2.2 Monitor team performance to consistently meet the organisation's quality and delivery standards 2.3 Help colleagues overcome difficulties in meeting customer service standards
3 Monitor, adjust and review customer service	3.1 Develop and use strategies to monitor progress in achieving product and/or service targets and standards 3.2 Develop and use strategies to obtain customer feedback to improve the provision of products and services 3.3 Develop, procure and use resources effectively to provide quality products and services to customers 3.4 Make decisions to overcome problems and to adapt customer services, products and service delivery in consultation with appropriate individuals and groups 3.5 Manage records, reports and recommendations within the organisation's systems and processes

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 3.1, 3.2, 3.3, 3.5	• Interprets and analyses textual information from a variety of sources and applies the knowledge that has been gained to evaluate standards for organisation's products and services
Writing	1.2, 3.1, 3.2, 3.3, 3.5	• Produces a range of text types to convey information, requirements or recommendations matching style of writing to purpose and audience
Oral Communication	1.1, 1.2, 2.1, 2.3, 3.2	• Clearly articulates systems and standards in a team environment using language suitable to diverse audiences • Uses listening and questioning techniques to obtain

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		feedback and confirm understanding
Numeracy	1.2	• Interprets and comprehends mathematical information in organisation's business and customer service plans.
Navigate the world of work	2.1, 2.2, 3.1, 3.5	• Recognises and applies organisational protocols and meets expectations associated with own work
Interact with others	1.1, 2.3, 3.4	• Identifies and uses appropriate conventions and protocols when communicating with colleagues and customers • Collaborates with others, taking into account their strengths and experience, to achieve desired outcomes • Provides support in field of expertise to team
Get the work done	1.1, 1.2, 2.1, 2.2, 3.1-3.5	• Develops and implements plans using logical processes and monitors and evaluates progress against stated goals • Accepts responsibility for addressing complex or non-routine difficulties, applying problem solving processes in determining a solution. • Uses digital technology to access, organise and present information in a format that meets requirements

Assessment Requirements for BSBCUS501 Manage quality customer service

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0 Version created to clarify assessment conditions
Release 1	This version first released with Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- develop and manage organisational systems for quality customer service
- develop and review plans, policies and procedures for delivering and monitoring quality customer service
- implement policies and procedures to ensure quality customer service
- solve complex customer complaints and system problems that lead to poor customer service
- monitor and assist teams to meet customer service requirements
- develop, procure and use human and physical resources to support quality customer service delivery.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the legislative and regulatory context of the organisation relevant to customer service
- describe organisational policy and procedures for customer service including handling customer complaints
- identify service standards and best practice models
- summarise public relations and product promotion
- outline techniques for dealing with customers including customers with specific needs

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- explain techniques for solving complaints including the principles and techniques involved in the management and organisation of:
  - customer behaviour
  - customer needs research
  - customer relations
  - ongoing product and/or service quality
  - problem identification and resolution
  - quality customer service delivery
  - record keeping and management methods
  - strategies for monitoring, managing and introducing ways to improve customer service relationships
  - strategies to obtain customer feedback.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- legislation, regulations and codes of practice related to customer service
- business technology
- workplace documentation and resources
- complex customer complaints
- case studies and, where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBFIA303 Process accounts payable and receivable

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes skills and knowledge required to maintain accounts payable and accounts receivable records, including processing payments to creditors and handling overdue accounts receivable.

It applies to individuals employed in a range of work environments supporting the accounting functions and aspects of an enterprise. They may provide administrative support within an enterprise, or may be members of staff who have been delegated accounting responsibilities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Finance – Financial Administration

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Maintain financial journal systems	1.1 Check source documents for accuracy and appropriate authorisation 1.2 Refer errors and discrepancies in source documents for resolution in accordance with organisational policy and procedures 1.3 Enter transactions into cash and credit journal system in accordance with organisational policy and procedures and relevant

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	legislation and compliance requirements 1.4 Total credit journals in accordance with organisational policy and procedures
2 Prepare bank reconciliations	2.1 Check cash journals against bank statements to identify differences 2.2 Update cash journals with relevant data from bank statement/s 2.3 Identify discrepancies and refer to appropriate staff member, organisation or agency 2.4 Total cash journals in accordance with organisational policy and procedures 2.5 Prepare regular reconciliation reports within designated timelines
3 Maintain accounts payable and accounts receivable systems	3.1 Enter transactions into individual accounts payable and accounts receivable in accordance with organisational policy and procedures and accounting requirements 3.2 Prepare schedules of accounts payable and accounts receivable for reconciliation purposes and in accordance with organisational requirements 3.3 Reconcile accounts payable and accounts receivable schedules with journal data or general ledger and in accordance with organisational requirements
4 Process payments for accounts payable	4.1 Reconcile accounts payable statements with accounting records and in accordance with organisational policy and procedures 4.2 Check payment documentation for accuracy of information and discrepancies and rectify errors in accordance with organisational requirements
5 Prepare statements for accounts receivable	5.1 Produce and check accounts receivable statements for accuracy in accordance with organisational policy and procedures 5.2 Rectify discrepancies and statements despatched within designated timelines
6 Follow up outstanding accounts	6.1 Maintain accounts receivable ledger system in accordance with organisational requirements and to reflect current credit situation 6.2 Conduct aged-analysis of accounts receivable to identify outstanding accounts and to determine collection procedures in accordance with organisational requirements 6.3 Report or follow up outstanding accounts in accordance with

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	organisational policy and procedures 6.4 Monitor and review credit terms in accordance with credit policy and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.4, 2.1-2.5, 3.1-3.3, 4.1, 4.2, 5.1, 5.2, 6.1-6.4	• Interprets textual information from a range of sources to confirm all necessary job requirements • Checks documents to identify errors or discrepancies
Writing	1.2-1.4, 2.1-2.5, 3.1-3.3, 4.1, 4.2, 5.2, 6.1-6.4	• Prepares a range of clear documentation using relevant format, grammatical structure and vocabulary suitable to audience
Oral Communication	1.2, 2.3, 6.3	• Uses questioning and listening techniques to clarify information • Explains information clearly using appropriate terminology and tone
Numeracy	1.1-1.4, 2.1-2.5, 3.1-3.3, 4.1, 4.2, 5.1, 5.2, 6.1-6.4	• Uses a limited range of mathematical calculations to reconcile amounts using whole numbers and decimals • Arranges/compares numerical information
Navigate the world of work	1.1-1.4, 2.4, 2.5, 3.1-3.3, 4.1, 4.2, 5.1, 5.2, 6.1-6.4	• Appreciates implications of legal and regulatory responsibilities related to own work
Interact with others	1.2, 2.3, 6.3	• Seeks the appropriate form, channel and mode of communication for a specific purpose relevant to own role • Plays an active role in workgroup discussions, paying some attention to the perspective of others
Get the work done	1.2-1.4, 2.1-2.5, 3.1-3.3, 4.1-4.3, 5.1, 5.2, 6.1-6.4	• Plans a range of routine and non-routine tasks recognising stated goals and aiming to achieve them within specified timeframes • Recognises predictable problems and applies formal problem-solving processes or seeks advice from

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		others, as relevant • Automatically implements standard procedures for routine decisions • Uses digital technologies to access, record, store, organise and compile data and present reports as required

Assessment Requirements for BSBFIA303 Process accounts payable and receivable

Modification History

Release	Comments
Release 1	This version first released with Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- accurately enter data into journal and subsidiary ledger system
- maintain journals and subsidiary ledger systems
- reconcile subsidiary ledger system with journal or general ledger data
- complete all tasks in accordance with legal and organisational responsibilities, within scope of own responsibility.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list key provisions of relevant legislation and regulations, standards and codes of practice that may affect aspects of financial operations
- briefly describe the organisational accounting systems and procedures
- explain how to check for errors or discrepancies
- list and describe tasks that are outside own scope of responsibility.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the financial administration field of work and include access to:

- office equipment and resources
- computer equipment and relevant software
- examples of cash journals, credit journals, accounts payable and accounts receivable subsidiary legers

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- workplace reference materials such procedural manuals and company policy
- case studies and, where possible, real situations..

Assessors must satisfy NVR/AQTF assessor requirements.

BSBFIA401 Prepare financial reports

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes skills and knowledge required to record general journal adjustment entries and to prepare end of period financial reports.

It applies to individuals employed in a range of work environments who are responsible for preparing financial reports. They may be individuals providing administrative support within an enterprise, or they might have responsibility for these tasks in relation to their own workgroup or role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Finance – Financial Administration

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Maintain asset register	1.1 Prepare a register of property, plant and equipment from fixed asset transactions in accordance with legislative and organisational policy and procedures 1.2 Determine method of calculating depreciation in accordance with organisational requirements 1.3 Maintain asset register and associated depreciation schedule in accordance with organisational policy, procedures and accounting

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	requirements
2 Record general journal entries for balance day adjustments	2.1 Record depreciation of non-current assets and disposal of fixed assets in accordance with organisational policy, procedures and accounting requirements 2.2 Adjust expense accounts and revenue accounts for prepayments and accruals 2.3 Record bad and doubtful debts in accordance with organisational policy, procedures and accounting requirements 2.4 Adjust ledger accounts for inventories, if required, and transfer to final accounts
3 Prepare final general ledger accounts	3.1 Make general journal entries for balance day adjustments in general ledger system in accordance with organisational policy, procedures and accounting requirements 3.2 Post revenue and expense account balances to final general ledger accounts system 3.3 Prepare final general ledger accounts to reflect gross and net profits for reporting period
4 Prepare end of period financial reports	4.1 Prepare revenue statement in accordance with organisational requirements to reflect operating profit for reporting period 4.2 Prepare balance sheet to reflect financial position of business at end of reporting period 4.3 Identify and correct, or refer errors for resolution in accordance with organisational policy and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.3, 2.1-2.4, 3.1-3.3, 4.1-4.3	• Identifies and interprets information from organisational policies, procedures and job requirements • Checks documents for errors or discrepancies
Writing	1.1, 1.3, 2.1-2.4,	• Records accurate data using relevant format, structure

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	3.1-3.3, 4.1-4.3	and vocabulary
Oral Communication	4.3	• Explains issues clearly using appropriate industry terminology • Asks questions and listens to responses to clarify understanding
Numeracy	1.1-1.3, 2.1-2.4, 3.1-3.3, 4.1-4.2	• Uses a wide range of mathematical calculations to interpret and arrange/compare numerical information
Navigate the world of work	1.1-1.3, 2.3, 2.4, 3.1, 4.1	• Adheres to industry standards, organisational policies and procedures in the conduct of own work
Interact with others	4.3	• Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role
Get the work done	1.1-1.3, 2.1-2.3, 3.2, 3.3, 4.1-4.3	• Plans and completes tasks according to set guidelines and timelines • Recognises and addresses problems in the context of own work and seeks advice from others, as necessary • Uses digital technologies to access, record, store, organise and compile data as required

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Revenue statement comprises:	• cost of goods sold if applicable • gross profit • operating net profit • unclassified adjusted expenses and revenue
Balance sheet comprises:	• narrative or T format • unclassified assets and liabilities

Assessment Requirements for BSBFIA401 Prepare financial reports

Modification History

Release	Comments
Release 1	This version first released with Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- produce a detailed asset register and depreciation schedule
- accurately record entries for balance day adjustments
- prepare financial reports
- trace and reconcile errors systematically or seek expert advice if required
- apply double-entry principles
- complete all tasks according to organisational policies and industry standards .

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain double-entry bookkeeping principles
- identify general journal and general ledger entries
- list the key provisions of relevant legislation, regulations, standards and codes of practice that may preparation of financial reports
- describe organisational accounting systems
- outline relevant organisational policies, procedures and accounting standards.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the financial administration field of work and include access to:

- office equipment and resources

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- computer equipment and relevant software
- relevant standards
- samples of financial data
- workplace reference materials such procedural manuals and company policy
- case studies and, where possible, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBFIM501 Manage budgets and financial plans

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to undertake financial management within a work team in an organisation. It includes planning and implementing financial management approaches, supporting team members whose role involves aspects of financial operations, monitoring and controlling finances and reviewing and evaluating effectiveness of financial management processes.

It applies to managers in a wide range of organisations and sectors who have responsibility for ensuring that work team financial resources are used effectively and are managed in line with financial objectives of the team and organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Finance - Financial Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Plan financial management approaches	1.1 Access budget/financial plans for the work team 1.2 Clarify budget/financial plans with relevant personnel within the organisation to ensure that documented outcomes are achievable, accurate and comprehensible 1.3 Negotiate any changes required to be made to budget/financial

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	plans with relevant personnel within the organisation 1.4 Prepare contingency plans in the event that initial plans need to be varied
2 Implement financial management approaches	2.1 Disseminate relevant details of the agreed budget/financial plans to team members 2.2 Provide support to ensure that team members can competently perform required roles associated with the management of finances 2.3 Determine and access resources and systems to manage financial management processes within the work team
3 Monitor and control finances	3.1 Implement processes to monitor actual expenditure and to control costs across the work team 3.2 Monitor expenditure and costs on an agreed cyclical basis to identify cost variations and expenditure overruns 3.3 Implement, monitor and modify contingency plans as required to maintain financial objectives 3.4 Report on budget and expenditure in accordance with organisational protocols
4 Review and evaluate financial management processes	4.1 Collect and collate for analysis, data and information on the effectiveness of financial management processes within the work team 4.2 Analyse data and information on the effectiveness of financial management processes within the work team and identify, document and recommend any improvements to existing processes 4.3 Implement and monitor agreed improvements in line with financial objectives of the work team and the organisation

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 2.3, 3.1-3.4, 4.2, 4.3	• Interprets and analyses information to determine activities required

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Writing	1.1, 1.4, 4.1-4.3	• Records information in correct forms and prepares materials which convey detailed and factual content in accordance with internal procedures
Oral Communication	1.2, 1.3, 2.1-2.3	• Presents information about financial issues and requirements to a range of audiences using structure and language to suit the audience • Uses active listening and questioning to clarify information and to confirm understanding
Numeracy	1.1-1.3, 2.1-2.3, 3.1-3.4, 4.1-4.3	• Uses a wide range of mathematical calculations to analyse numeric information in budgets or financial plans
Navigate the world of work	2.2, 3.3, 3.4, 4.3	• Recognises, understands and adheres to organisational requirements in undertaking own work
Interact with others	1.2, 1.3, 2.1, 2.2, 3.1, 2.3, 4.2, 4.3	• Uses a range of strategies to connect, collaborate and cooperate with other work colleagues in activities requiring collective effort and diverse skills and knowledge
Get the work done	1.1, 1.4, 2.3, 3.1-3.4, 4.1-4.3	• Uses logical processes in planning, implementing and evaluating complex tasks and developing alternative strategies in achieving goals and timelines • Uses a range of digital technologies to access, filter, compile, integrate and logically present complex information from multiple sources

Assessment Requirements for BSBFIM501 Manage budgets and financial plans

Modification History

Release	Comments
Release 1	This version first released with Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- use financial skills to work with and interpret budgets, ageing summaries, cash flow, petty cash, Goods and Services Tax (GST), and profit and loss statements
- communicate with relevant people to clarify budget/financial plans, negotiate changes and disseminate information
- prepare, implement and modify financial contingency plans
- monitor expenditure and control costs
- support and monitor team members
- report on budget and expenditure
- review and make recommendations for improvements to financial processes
- meet record keeping requirements for the Australian Taxation Office (ATO) and for auditing purposes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe basic accounting principles
- identify and explain the relevant legislation and current requirements of the Australian Taxation Office, including the Goods and Services Tax (GST)
- explain the key requirements for financiall record keeping and auditing
- describe the principles and techniques involved in managing:
  - budgeting
  - cash flows
  - electronic spreadsheets

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- GST
- ledgers and financial statements
- profit and loss statements.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the financial management field of work and include access to:

- resources and documentation used in the workplace
- workplace policies and procedures
- workplace budgets and financial plans
- business technology
- case studies and, where available, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBFIN401 Report on financial activity

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes skills and knowledge required to prepare financial reports in line with statutory reporting requirements. This includes compiling and analysing financial data.

The unit applies to individuals employed in a range of work environments who are responsible for preparing financial reports. They may be individuals providing administrative support within an organisation, or they might have responsibility for these tasks in relation to their own workgroup or role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Financial Literacy

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Compile and analyse financial data	1.1 Prepare a register of assets from fixed asset transactions according to accounting, legislative and organisational requirements 1.2 Calculate depreciation according to legislative and organisational requirements 1.3 Make, record and disclose asset and liability valuations in compliance with accounting standards 1.4 Refer discrepancies, unusual features or queries to appropriate authority where they cannot be resolved 1.5 Identify and record effects of taxation

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Report general journal entries for balance day adjustments	2.1 Record all general ledger accounts and prepare a trial balance 2.2 Adjust expense accounts and revenue accounts for prepayments and accruals 2.3 Make adjustments in general ledger system to close any discrepancies for balance day adjustments according to organisational policies, procedures and accounting requirements 2.4 Review data for errors and compliance with statutory requirements and organisational procedures, and amend as required
3. Prepare end of period financial reports	3.1 Prepare revenue statement for reporting periods according to organisational requirements 3.2 Prepare a balance sheet to reflect financial position of business at end of reporting period 3.3 Prepare and post revenue and expense account to final general ledger accounts to reflect gross and net profits for reporting period 3.4 Correct or refer errors for resolution according to statutory and ethical requirements and organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	• Establishes criteria and categories for financial management purposes and monitors activities on a regular basis • Uses a wide range of mathematical calculations to interpret and arrange numerical information in order to comply with requirements
Reading	• Compares and analyses information from a range of sources varying in complexity to determine and complete financial requirements • Checks documents for errors or discrepancies
Writing	• Records data using relevant format, structure and vocabulary
Planning and organising	• Applies legislation, industry standards and organisational policies and procedures in the conduct of own work • Uses formal and logical processes to plan and complete tasks, achieving timelines and organisational requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill	Description
Problem solving	• Addresses problems in the context of own work and seeks advice from others, as necessary • Uses analytical skills to identify discrepancies
Technology	• Uses digital technology to access, filter, compile, integrate and logically present complex information from multiple sources

Unit Mapping Information

No equivalent unit. Supersedes but is not equivalent to:

- BSBFIA401 Prepare financial reports
- BSBFIA412 Report on financial activity
- BSBFIA501 Report on finances related to international business
- BSBINT408 Prepare business advice on the taxes and duties for international trade transactions.

Assessment Requirements for BSBFIN401 Report on financial activity

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare a financial report on at least two occasions.

In the course of the above, the candidate must:

- produce a detailed asset register and depreciation schedule
- record entries for balance day adjustments
- use conversion and consolidation procedures including moving averages, standardised variables, trend analysis and unit costs
- apply double-entry principles and accrual accounting.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- double-entry and accrual principles
- provisions of relevant legislation, regulations, standards and codes of practice relevant to financial operations, taxable transactions and reporting requirements
- components of organisational accounting systems
- organisational policies, procedures and accounting standards relating to preparation of financial reports
- organisational financial data, including:
  - budget variances
  - budgets and forecasts
  - cash flow and profit reports
  - balance sheets
  - financial year reports
  - operating statements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - expenditure and receipts
  - profit and loss statements
  - types of assets including property, plant and equipment
  - comparative financial performance
- financial discrepancies including:
  - absence of auditable trail
  - expenditure report mismatches
  - incorrect payments and unreconciled cash flows
- techniques used for financial forecasting and analysis
- options, methods and practices for deductions, benefits and depreciations
- ethical requirements associated with preparing financial reports for corporate entities, including conflict of interest, confidentiality, and disclosure requirements
- industry-standard methods and formats used to present financial data.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- accounting software
- financial reporting legislation, regulations, standards and codes of practice
- samples of financial data, reports and documents
- workplace reference materials including procedural manuals and company policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBFRA403 Manage relationship with franchisor

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required by the franchisee to manage the business relationship with the franchisor.

It applies to individuals who need to develop good working relationships with their franchisor within the Franchising Code of Conduct.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Franchising

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Establish relationship with franchisor	1.1 Identify the franchisor's representative/s or liaison person/s 1.2 Identify communication channels with the franchisor's representative/s or liaison person/s 1.3 Establish schedule of contact with the franchisor's representative/s or liaison person/s 1.4 Hold initial meeting with the franchisor's representative/s or liaison person/s to initiate ongoing relationship 1.5 Ensure participation in the franchisee advisory council meetings

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	and relevant activities
2 Determine services available from franchisor	2.1 Consult with the franchisor's representative/s or liaison person/s to determine range of services available through the franchisor 2.2 Establish schedule for accessing services of the franchisor 2.3 Access services available through the franchisor according to schedule and as needs arise in the course of business operations 2.4 Maintain currency of information relating to services available through the franchisor
3 Implement strategies for meeting franchisee's financial obligations	3.1 Identify franchisee's financial obligations to the franchisor 3.2 Develop and implement strategies and procedures to meet franchisee' financial obligations 3.3 Undertake planning to facilitate ongoing management of franchise
4 Resolve disputes with franchisor	4.1 Identify disputes with the franchisor and enter into negotiations with the franchisor's representative/s or liaison person/s in line with complaints handling procedure as described in the Franchising Code of Conduct 4.2 Seek assistance from third parties or mediators to facilitate resolution of disputes arising with the franchisor and in line with the complaints handling procedure 4.3 Resolve disputes and document courses of agreed action 4.4 Implement agreed courses of action to resolve disputes 4.5 Use lessons learned from disputes to guide future business operations and to facilitate positive relationships with the franchisor

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.2-2.4, 3.1, 3.2, 4.2	• Interprets textual information obtained from a range of sources and determines how content may be applied to individuals and organisational requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Writing	1.3, 2.2, 2.4, 3.2, 4.2, 4.3	• Uses clear, specific and industry-related terminology to complete and update workplace documentation to convey explicit information, requirements and recommendations
Oral Communication	1.3-1.5, 2.1, 2.4, 4.1-4.3, 4.5	• Articulates requirements clearly using language appropriate to audience and environment • Uses active listening and questioning techniques to clarify and confirm understanding
Numeracy	3.1	• Identifies and comprehends relevant mathematical information to manage financial obligations and account for expenditures
Navigate the world of work	2.3, 3.2, 4.1	• Recognises, develops and follows explicit and implicit protocols and meets expectations associated with own role
Interact with others	1.2-1.5, 2.1, 4.1, 4.2	• Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role • Uses a range of strategies to establish a sense of connection with others • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction
Get the work done	1.1-1.3, 2.2-2.4, 3.1- 3.3, 4.1, 4.3-4.5	• Plans, organises and implements tasks required to achieve required outcomes in accordance with franchise arrangement • Applies formal problem solving skills to address issues, seeking expert assistance if required • Identifies some key principles that may be relevant in future situations

Assessment Requirements for BSBFRA403 Manage relationship with franchisor

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- communicate regularly and effectively with the franchisor and/or representatives
- identify and resolve disputes
- conduct financial planning to meet predetermined requirements
- make suggestions for improvements in future work.
- implement processes to manage the relationship between franchisor and self.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain franchise specific obligations as per franchise agreement, specifically financial obligations
- define the roles of others such as mediators/third parties
- explain various problem solving techniques that might be relevant to this specific context.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership – franchising field of work. This includes access to:

- business documentation
- feedback from franchisor
- equipment and resources.

Assessment Requirements for BSBHRM405 Support the recruitment, selection and induction of staff

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- prepare job descriptions
- use job descriptions to support sourcing, selecting and appointing suitable staff
- use different advertising channels to promote vacancies and/or establish a potential talent pool
- consult with managers to gain approvals
- develop selection criteria and interview questions in consultation with relevant personnel
- schedule interviews and advise relevant people of times, dates and venues
- participate in interviews and other selection techniques including assessing candidates against selection criteria to short list them
- obtain referees' reports
- prepare and distribute a selection report including feedback to give unsuccessful candidates
- advise unsuccessful candidates of the results
- secure preferred candidate’s agreement and provide an employment contract
- advise other staff of the successful candidate and arrange induction.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify documentation required for recruitment, selection and induction
- explain human resources life cycle and the place of recruitment and selection
- identify legislation relevant to recruitment, selection and induction of staff
- describe channels and technology to advertise vacancies

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- explain a range of interviewing techniques and other selection processes and their application.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the workforce development – human resource development field of work and include access to:

- workplace policies and procedures
- business technology
- position descriptions
- legislation, regulations, Codes and Standards relevant to staff recruitment, selection and induction
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBHRM413 Support the learning and development of teams and individuals

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to determine individual and team development needs and to facilitate the development of the workgroup.

The unit applies to individuals with a broad knowledge of learning and development who apply their skills in addressing development needs to meet team objectives. They may have responsibility to provide guidance or to delegate aspects of tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical Skills – Human Resources

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Contribute to needs development	1.1 Collect information on performance of team members from relevant sources 1.2 Identify individual and team learning and development needs in line with organisational requirements 1.3 Confirm learning plans meet individual and group training and development needs 1.4 Provide opportunities to individuals to self-evaluate performance and identify areas for improvement
2. Support implementation of	2.1 Develop collaborative learning plans to match skill needs of individuals and groups and match the competency standards

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
learning and development	relevant to the industry 2.2 Ensure learning delivery methods are relevant to the participants 2.3 Identify and coordinate workplace learning opportunities to facilitate individual and team achievement of competencies 2.4 Identify and manage resources and timelines relevant for learning activities according to organisational requirements
3. Monitor and evaluate workplace learning	3.1 Monitor learning plans to improve the efficiency and effectiveness of learning 3.2 Seek feedback from individuals or teams to identify and implement improvements in future learning arrangements 3.3 Assess and record outcomes and performance of individuals and teams to determine the effectiveness of development programs and the extent of additional development support 3.4 Document and maintain records and reports of competency according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	• Uses structured approaches to set goals, monitor progress and adjust learning approaches for self and others • Builds on knowledge and experience to facilitate interaction and learning with others
Reading	• Analyses textual information from a range of sources to identify organisational requirements • Analyses information from a range of sources to evaluate performance
Writing	• Develops materials to suit the requirements of different roles and individuals in the organisation • Maintains records using correct technical and organisational vocabulary
Oral Communication	• Uses vocabulary appropriate to context and to establish a supportive and learning environment • Uses listening and questioning techniques to confirm or show understanding of different perspectives • Selects and uses appropriate conventions and protocols when communicating with co-workers in a range of work contexts

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

SKILL	DESCRIPTION
Self-management	• Recognises and responds to explicit and implicit organisational procedures and protocols • Understands how own role meshes with others and contributes to broader goals
Teamwork	• Recognises the importance of building rapport to establish effective working relationships • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction • Negotiates with others to achieve agreeable outcomes playing an active role in facilitating consensus in potentially contentious situations
Problem solving	• Uses logical planning processes to organise, implement and monitor learning and development needs • Systematically gathers and analyses all relevant information and evaluates options to make informed decisions • Evaluates outcomes of decisions to identify opportunities for improvement

Unit Mapping Information

Supersedes and is equivalent to BSBLED401 Develop teams and individuals.

Supersedes but is not equivalent to:

- BSBFLM311 Support a workplace learning environment
- BSBLED301 Undertake e-learning.

Assessment Requirements for BSBHRM413 Support the learning and development of teams and individuals

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- contribute to, facilitate and monitor learning and development for at least one team and for at least one individual.

In the course of the above, the candidate must:

- collect data on team and individual and team development needs
- collaboratively develop learning plans to match skill needs of individuals and groups
- coordinate learning opportunities
- give and receive feedback during the implementation of learning plans
- monitor and review workplace learning plan implementation plans.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- facilitation techniques to support team development and improvement
- organisational policies, plans and procedures for developing teams
- career paths and competency standards relevant to the industry
- key sources of information relevant to inform development needs
- key features of learning and development methods.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- learning and development plans, policies and procedures.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBHRM505 Manage remuneration and employee benefits

Modification History

Release	Comments
Release 2	This version first released with BSB Business Services Training Package Version 1.1. Version created to correct mapping table information
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to implement an organisation's remuneration and benefit plans. It incorporates all functions associated with remuneration, including packaging, salary benchmarking, market rate reviews, bonuses and the legislative aspects of remuneration and employee benefits.

It applies to individuals who are human resource managers responsible for overseeing an organisation's remuneration process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Workforce Development – Human Resource Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Develop organisation's remuneration strategy	1.1 Analyse strategic and operational plans to determine the scope of remuneration and benefits plans 1.2 Undertake research on current practice, recent developments

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	and legislative parameters for remuneration strategy 1.3 Develop options for consideration by relevant managers 1.4 Present options showing the link to organisational strategic objectives 1.5 Ensure remuneration policies and incentive plans are agreed and recorded 1.6 Ensure organisation is positioned as an employer of choice and regarded as a desirable workplace
2 Implement remuneration strategy	2.1 Research occupational groups to determine those which are industrial agreement based 2.2 Access or undertake market rates surveys regularly to ensure the organisation's required level of competitiveness for particular occupational groups is maintained 2.3 Align remuneration and benefits plans with performance management system 2.4 Ensure employees receive at least their minimum entitlements according to organisational policies and legal requirements 2.5 Ensure salary packages comply with organisational policies and legal requirements, including fringe benefits tax (FBT) and superannuation 2.6 Ensure incentive arrangements, if included, comply with the organisation's remuneration strategy
3 Review and update remuneration strategy	3.1 Consult managers and employees about the effectiveness of the remuneration strategy 3.2 Amend strategy and plans as necessary to meet organisational policies and legal requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.4, 2.1-2.3, 2.5, 2.6, 3.2	• Evaluates and integrates facts and ideas to construct meaning from a range of text types

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Writing	1.2, 1.3, 1.5, 2.2, 2.3. 3.2	• Develops complex material for specific audiences using clear language and appropriate structure to convey explicit information, requirements and recommendations
Oral Communication	1.4, 1.5, 3.1	• Draws on a repertoire of open questioning and active listening skills when consulting others • Uses appropriate terminology and non-verbal features to present information or clarify understanding
Numeracy	1.1, 2.3, 2.4, 2.6,	• Analyses numerical information to determine employee remuneration and benefits according to a clear set of parameters
Navigate the world of work	1.2, 1.4, 1.6, 2.3-2.6, 3.2	• Adheres to relevant organisational policies, procedures and legislative requirements • Considers own role in terms of its contributions to broader goals of the work environment
Interact with others	1.4, 1.5, 3.1	• Uses effective presentation and collaboration skills to show options, negotiate agreement and gain feedback on policies
Get the work done	1.1, 1.3, 2.2, 2.3, 3.2	• Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, taking into account capabilities, efficiencies and effectiveness • Applies systematic and analytical processes to determine appropriate models of remuneration and benefits for particular occupational groups and individuals • Uses evaluation and analysis of feedback to decide on improvements to strategy

Assessment Requirements for BSBHRM505 Manage remuneration and employee benefits

Modification History

Release	Comments
Release 2	This version first released with BSB Business Services Training Package Version 1.1. Version created to correct mapping table information
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- develop remuneration strategies for different occupational groups
- manage remuneration and benefits in accordance with all legislative and ethical requirements and operational policies
- apply awards and agreements to remuneration processes
- apply requirements of the Australian Taxation Office in relation to income tax, superannuation reporting, FBT and bonus payments.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline remuneration principles or models and approaches
- explain the ethical practices relating to remuneration and benefits strategies
- outline various remuneration or employee benefits
- describe ways to position an organisation an 'employer of choice'
- outline award structures for industrial agreements
- summarise organisational policies and procedures affecting remuneration strategies
- identify relevant legislation, regulations and standards that may affect remuneration strategies
- list the requirements of the Australian Taxation Office in relation to:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- income tax
- superannuation reporting
- FBT and bonus payments.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the workforce development – human resource development field of work and include access to:

- an appropriate range of documentation and resources normally used in the workplace
- organisational policies and procedures
- relevant legislation, regulations and codes of practice
- business technology.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBINM202 Handle mail

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to receive and distribute incoming mail, and to collect and despatch outgoing mail.

It applies to individuals who perform a range of routine tasks in the workplace, using a limited range of practical skills and knowledge of mail handling under direct supervision or with limited individual responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Knowledge Management – Information Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Receive and distribute incoming mail	1.1 Ensure incoming mail is checked and registered in accordance with organisational policies and procedures 1.2 Identify titles and locations of company personnel and departments 1.3 Identify and distribute urgent and confidential mail in accordance with organisational requirements 1.4 Sort and deliver mail to nominated person/location in

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	accordance with organisational requirements 1.5 Record and/or report damaged, suspicious or missing items and take appropriate action in accordance with organisational policies and procedures
2 Collect and despatch outgoing mail	2.1 Collect, check and sort outgoing mail to ensure all items are correctly prepared for despatch in accordance with organisational policies and procedures 2.2 Record and process outgoing mail for despatch in accordance with organisational requirements 2.3 Despatch mail to meet designated timelines
3 Organise urgent and same day deliveries	3.1 Evaluate delivery options and select best option 3.2 Prepare items for urgent delivery in accordance with organisational requirements and carrier specifications 3.3 Organise lodgement or pick-up of emergency deliveries and follow up if necessary

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.5, 2.1, 2.2, 3.2, 3.3	• Recognises and interprets textual information to complete tasks according to organisational requirements
Writing	1.5, 2.2, 3.2, 3.3	• Records simple and routine information using an established format and workplace-specific vocabulary
Oral Communication	1.4, 1.5, 3.3	• Uses questions to clarify and confirm instructions, listens to directions and clearly articulates requirements
Numeracy	1.5, 2.1-2.3, 3.2, 3.3	• Recognises basic mathematical data to verify weight, addresses and registered numbers • Performs basic calculations needed to estimate time for a variety of mail despatches
Navigate the world of work	1.1, 1.3-1.5, 2.1, 2.2, 3.2	• Recognises organisational expectations and follows explicit protocols, policies and procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Interact with others	1.4, 1.5	• Identifies and responds effectively to information associated with job role using appropriate language • Follows accepted communication practices and protocols in performance of tasks
Get the work done	1.2-1.5, 2.1-2.3, 3.1-3.3	• Follows clear instructions within defined level of responsibility • Makes low-impact decisions around clearly defined tasks • Responds to predictable routine problems and implements standard procedures or logical solutions • Uses organisational systems to enter and retrieve data

BSBINN502 Build and sustain an innovative work environment

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to create an environment that enables and supports the application of innovative practice focusing on a holistic approach to the integration of innovation across all areas of work practice.

It applies to individuals working in leadership or management roles in any industry or community context. The individual could be employed by the organisation, but may also be an external contractor, the leader of a cross organisation team or of a self-formed team of individuals. The work group could be permanent or temporary in nature.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Creativity and Innovation – Innovation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Lead innovation by example	1.1 Make innovation an integral part of leadership and management activities 1.2 Demonstrate positive reception of ideas from others and provide constructive advice 1.3 Establish and maintain relationships based on mutual respect and trust

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.4 Take considered risks to open up opportunities for innovation 1.5 Regularly evaluate own approaches for consistency with the wider organisational or project context
2 Establish work practices that support innovation	2.1 Consult on and establish working conditions that reflect and encourage innovative practice 2.2 Introduce and maintain workplace procedures that foster innovation and allow for rigorous evaluation of innovative ideas 2.3 Facilitate and participate in collaborative work arrangements to foster innovation 2.4 Build and lead teams to work in ways that maximise opportunities for innovation
3 Promote innovation	3.1 Acknowledge suggestions, improvements and innovations from all colleagues 3.2 Find appropriate ways of celebrating and promoting innovation 3.3 Promote and reinforce the value of innovation according to the vision and objectives of the organisation or project 3.4 Promote and support the evaluation of innovative ideas within the wider organisational or project context
4 Create a physical environment which supports innovation	4.1 Evaluate the impact of the physical environment in relation to innovation 4.2 Collaborate with colleagues about ideas for enhancing the physical work environment before taking action 4.3 Consider potential for supporting innovation when selecting physical resources and equipment 4.4 Design, fit-out and decorate workspaces to encourage creative mindsets, collaborative working and the development of positive workplace relationships
5 Provide learning opportunities	5.1 Pro-actively share relevant information, knowledge and skills with colleagues 5.2 Provide or encourage formal and informal learning opportunities to help develop the skills needed for innovation 5.3 Create opportunities in which individuals can learn from the experience of others

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.5, 2.2, 4.1, 5.1	• Interprets and evaluates information that may deal with complex ideas related to issues both within and outside a given workplace context
Writing	3.3, 3.4, 5.1	• Develops information for others using language to suit the context and audience
Oral Communication	1.2, 2.1, 2.3, 3.1, 3.3, 3.4, 5.1	• Presents ideas and concepts to a range of audiences using structure and language to suit the audience • Uses active listening and questioning to discuss and clarify information and to confirm understanding
Navigate the world of work	1.1, 1.5, 2.1, 2.2, 3.3, 5.1, 5.2	• Takes responsibility for implementing practices and procedures to achieve organisational objectives in innovation according to role requirements • Stays up to date with professional development options to provide relevant information to staff
Interact with others	1.2, 1.3, 2.3, 2.4, 3.1-3.4, 4.2, 5.1, 5.3	• Uses appropriate communication techniques to build rapport and foster strong relationships with co-workers in a range of work contexts • Uses inclusive and collaborative techniques to share, promote and convey complex information about new ideas and systems within the workplace
Get the work done	1.1, 1.4, 1.5, 2.1, 3.2, 3.3, 4.1, 4.3, 4.4, 5.2, 5.3	• Accepts responsibility for planning and implementing tasks and practices to achieve organisational goals, negotiating key aspects with others and taking into account current capabilities and needs • Develops new and innovative ideas through exploration, evaluation, analysis and critical thinking • Facilitates a climate where people feel comfortable suggesting and discussing improvements or new ideas • Uses problem solving processes to identify, assess and respond to challenges and risks around innovation

Assessment Requirements for BSBINN502 Build and sustain an innovative work environment

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to maximise opportunities for innovation by:

- establishing procedures and practices that foster innovation including:
  - collaborative work arrangements
  - building team capacity to contribute to innovation
  - providing formal and informal learning opportunities
  - evaluating ideas
  - celebration and promotion of innovation
  - consultation
  - respectful communications and sharing of ideas and feedback
- reinforcing the value of innovation to the vision and objectives of the organisation,
- model ling behaviour including being receptive to ideas, giving constructive advice, evaluating own work, establishing and maintaining relationships based on mutual respect and trust, taking considered risks that provide opportunities for innovation
- evaluating how the physical environment can be enhanced to support innovation and collaboration and collaborating on ideas to make improvements including in the selection of physical resources and equipment, and the design, fit-out and decoration of the workspaces
- making changes to a workspace that will encourage innovation in at least one of
  - design
  - fit-out
  - decoration.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the concepts and theories of innovation and how these link to innovation in practice
- explain the context for innovation in the workplace including core business values, overall objectives, broader environmental context and the need to ensure the value and benefit of innovative ideas and projects
- discuss the factors and tools that can motivate individuals to use creative thinking and apply innovative work practices
- research the legislative framework that impacts on operations in the relevant workplace context
- explain how different approaches to management and leadership can support or hinder innovation
- discuss typical challenges and barriers to innovation within teams and organisations and ways of overcoming these including rewarding and celebrating innovation, coaching and learning, modelling behaviour and managing the physical environment.
-

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the creativity and innovation and include access to:

- workplace documents
- case studies and, where possible, real situations
- office equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBINS309 Maintain business records

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to maintain the records of a business on an operational basis.

The unit applies to individuals who follow established guidelines and processes to carry out their work. They work under supervision or in consultation with senior staff or system users to support effective information management and governance practices across the organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Technical Skills – Information Services

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Collate business records	1.1 Identify relevant information and records according to organisational policies and procedures 1.2 Organise records in accordance with organisational policies and procedures 1.3 Follow relevant security and access requirements in accordance with organisational policies and procedures
2. Update business or records system	2.1 Record and update information and record description of new records in business or records system according to organisational policies and procedures 2.2 Identify and dispose of relevant records of redundant business

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	activities from current system according to organisational policies and procedures
3. Prepare and distribute reports from the business or records system	3.1 Interpret requests for reports 3.2 Prepare reports from business or records system according to request and organisational security and access procedures 3.3 Distribute reports to relevant stakeholders according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	• Gathers and interprets textual information from different sources to determine how information and records may be applied
Writing	• Uses clear and industry related terminology to document, complete and update workplace information and records
Numeracy	• Recognises and uses numerical systems associated with business or record systems
Self-management	• Takes responsibility for planning and organising own workload to ensure work deadlines are met • Takes responsibility for the outcomes of routine decisions related directly to own role
Technology	• Uses main features and functions of digital tools to maintain business records

Unit Mapping Information

Supersedes and is equivalent to BSBRKG304 Maintain business records.

Supersedes but is not equivalent to BSBRKG305 Review recordkeeping functions.

Assessment Requirements for BSBINS309 Maintain business records

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, organise, update, and distribute four business records in compliance with organisational policies and procedures on at least three separate occasions.

In the course of the above, the candidate must:

- record and update information in an information management system
- describe records.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational policies and procedures regarding the maintenance and security of business records
- organisational requirements of business or records system reports
- key aspects and processes of records management and records management systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documentation and resources relevant to business records.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBLDR402 Lead effective workplace relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit defines skills, knowledge and outcomes required to use leadership to promote team cohesion. It includes motivating, mentoring, coaching and developing the team and forming the bridge between the management of the organisation and team members.

This unit applies to team leaders, supervisors and new or emerging managers where leadership plays a role in developing and maintaining effective workplace relationships. It applies in any industry or community context.

At this level work will normally be carried out within routine and non-routine methods and procedures, which require planning and evaluation and leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership - Leadership

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Collect, analyse and communicate information and ideas	1.1 Collect relevant information from appropriate sources and analyse and share with the work team to improve work performance 1.2 Communicate ideas and information in a manner which is appropriate and sensitive to the cultural and social diversity of the

Assessment Requirements for BSBLDR402 Lead effective workplace relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- access and analyse information to achieve planned outcomes
- apply techniques for resolving problems and conflicts and dealing with poor performance within organisational and legislative requirements
- review and improve workplace outcomes in consultation with relevant personnel
- adjust interpersonal style and communications to respond to cultural and social diversity
- apply relationship management and communication skills with a range of people that:
  - demonstrate integrity, respect, empathy and cultural sensitivity and promote trust
  - forge effective relationships with internal and/or external people and help to maintain these networks
  - encourage participation and foster contribution of and respect for ideas and feedback
  - provide support to colleagues to resolve difficulties.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of how work relationships, and the cultural and social environment, can support or hinder achieving planned outcomes
- explain techniques for developing positive work relationships and building trust and confidence in a team including interpersonal styles, communications, consultation, cultural and social sensitivity, networking
- explain the impact of legislation and organisational policies on workplace relationships
- describe a range of methods and techniques for communicating information and ideas to a range of stakeholders
- outline problems solving methods

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- explain methods to resolve workplace conflict
- explain methods to manage poor work performance
- explain how to monitor, analyse and introduce ways to improve work relationships.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBLDR413 Lead effective workplace relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills, knowledge and outcomes required to use leadership to promote team cohesion. It includes motivating, mentoring, coaching and developing the team and forming the bridge between the management of the organisation and team members.

The unit applies to team leaders, supervisors and new or emerging managers where leadership plays a role in developing and maintaining effective workplace relationships. It applies in any industry or community context. At this level work will normally be carried out within routine and non-routine methods and procedures, which require planning, evaluation, leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Social Competence – Leadership

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to lead workplace relationships	1.1 Identify work team objectives according to organisational strategy 1.2 Collect and analyse information for the achievement of work task 1.3 Share ideas and information with relevant internal and external stakeholders according to work task 1.4 Develop strategy for completion of work task in collaboration with work team

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Lead workplace relationships	2.1 Identify and implement methods to facilitate collaboration to complete work task 2.2 Support colleagues experiencing difficulties fulfilling work requirements 2.3 Manage conflict constructively within the organisation's processes and parameters of own role 2.4 Communicate work progress to relevant internal and external stakeholders
3. Review leadership	3.1 Seek feedback on relationship management for work task from relevant stakeholders 3.2 Analyse feedback on relationship management 3.3 Evaluate personal performance in leading workplace relationships 3.4 Identify areas of improvement for leading workplace relationships future work tasks

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	• Collects, analyses and evaluates textual information from a range of resources to inform improvement strategies
Oral Communication	• Selects or adjusts communication style to maintain effectiveness of interaction and build and maintain engagement consistent with organisational requirements
Initiative and enterprise	• Identifies and follows legislative and organisational requirements relevant to own role
Teamwork	• Selects and uses appropriate conventions and protocols when communicating with diverse stakeholders • Adapts personal communication style to build trust and positive working relationships and to show respect for the opinions, values and particular needs of others • Plays a lead role in situations requiring effective collaboration, demonstrating conflict resolution skills and ability to engage and motivate others
Planning and	• Plans and implements activities and processes to manage and review work performance

Assessment Requirements for BSBLDR413 Lead effective workplace relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- lead effective workplace relationships on at least four occasions with different individuals or groups.

In the course of the above, the candidate must:

- access and analyse information required to achieve planned outcomes
- collaborate with work team to develop and implement a work task strategy
- apply techniques for resolving problems and conflicts, and dealing with poor performance according to organisational and legislative requirements
- monitor and communicate work progress to relevant internal and external stakeholders
- seek and review feedback to improve workplace leadership.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- considerations for communicating information including audience cultural and social diversity
- consultation processes including internal and external sources of consultees
- impacts of relationships, cultural and social environment, in supporting or hindering the achievement of planned outcomes
- techniques for developing positive work relationships and building trust and confidence in a team, including:
  - interpersonal styles
  - communications
  - consultation
  - cultural and social sensitivity
  - networking

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- impact of legislation and organisational policies on workplace relationships
- techniques for communicating information and ideas to a range of stakeholders
- common methods to resolve workplace conflict
- common methods to manage poor work performance
- common methods to monitor, analyse and improve work relationships.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- legislation, regulations, standards and codes relevant to performance evidence
- workplace documentation and resources
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBLED401 Develop teams and individuals

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify assessment requirements
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to determine individual and team development needs and to facilitate the development of the workgroup.

It applies to individuals with a broad knowledge of learning and development who apply their skills in addressing development needs to meet team objectives. They may have responsibility to provide guidance or to delegate aspects of tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Workforce Development – Learning and Development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine development needs	1.1 Systematically identify and implement learning and development needs in line with organisational requirements 1.2 Ensure that a learning plan to meet individual and group training and development needs is collaboratively developed, agreed to and

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	implemented 1.3 Encourage individuals to self-evaluate performance and identify areas for improvement 1.4 Collect feedback on performance of team members from relevant sources and compare with established team learning needs
2. Develop individuals and teams	2.1 Identify learning and development program goals and objectives, ensuring a match to the specific knowledge and skill requirements of competency standards relevant to the industry 2.2 Ensure that learning delivery methods are appropriate to the learning goals, the learning style of participants, and availability of equipment and resources 2.3 Provide workplace learning opportunities, and coaching and mentoring assistance to facilitate individual and team achievement of competencies 2.4 Create development opportunities that incorporate a range of activities and support materials appropriate to the achievement of identified competencies 2.5 Identify and approve resources and time lines required for learning activities in accordance with organisational requirements
3. Monitor and evaluate workplace learning	3.1 Use feedback from individuals or teams to identify and implement improvements in future learning arrangements 3.2 Assess and record outcomes and performance of individuals/teams to determine the effectiveness of development programs and the extent of additional development support 3.3 Negotiate modifications to learning plans to improve the efficiency and effectiveness of learning 3.4 Document and maintain records and reports of competency according to organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Learning	1.1-1.4, 2.1-2.4, 3.1, 3.3	• Uses structured approaches to set goals, monitor progress and adjust learning approaches for self and others • Builds on knowledge and experience to facilitate interaction and learning with others
Reading	1.1, 1.2, 1.4, 2.1, 2.2, 2.4, 2.5, 3.1-3.4	• Analyses textual information from a range of sources to identify organisational requirements • Analyses information from a range of sources to evaluate performance
Writing	1.1, 1.2, 1.4, 2.1, 2.5, 3.1-3.4	• Develops materials to suit the requirements of different roles and individuals in the organisation • Maintains records using correct technical and organisational vocabulary
Oral Communication	1.2, 1.3, 1.4, 2.3, 3.1, 3.3	• Uses vocabulary appropriate to context and to establish a supportive and learning environment • Uses listening and questioning techniques to confirm or show understanding of different perspectives
Navigate the world of work	1.1, 2.5, 3.4	• Recognises and responds to explicit and implicit organisational procedures and protocols Understands how own role meshes with others and contributes to broader goals
Interact with others	1.2, 1.3, 1.4, 2.2, 2.3, 3.1, 3.3	• Selects and uses appropriate conventions and protocols when communicating with co-workers in a range of work contexts • Recognises the importance of building rapport to establish effective working relationships • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction • Negotiates with others to achieve joint/agreeable outcomes playing an active role in facilitating consensus in potentially contentious situations
Get the work done	1.1, 1.2, 1.4, 2.1, 2.2, 2.3, 2.5, 3.1, 3.2, 3.4	• Uses logical planning processes to organise, implement and monitor learning and development needs • Systematically gathers and analyses all relevant information and evaluates options to make informed decisions • Evaluates outcomes of decisions to identify opportunities for improvement

BSBMGT502 Manage people performance

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to manage the performance of staff who report to them directly. Development of key result areas and key performance indicators and standards, coupled with regular and timely coaching and feedback, provide the basis for performance management.

It applies to individuals who manage people. It covers work allocation and the methods to review performance, reward excellence and provide feedback where there is a need for improvement.

The unit makes the link between performance management and performance development, and reinforces both functions as a key requirement for effective managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Allocate work	1.1 Consult relevant groups and individuals on work to be allocated and resources available

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.2 Develop work plans in accordance with operational plans 1.3 Allocate work in a way that is efficient, cost effective and outcome focussed 1.4 Confirm performance standards, Code of Conduct and work outputs with relevant teams and individuals 1.5 Develop and agree performance indicators with relevant staff prior to commencement of work 1.6 Conduct risk analysis in accordance with the organisational risk management plan and legal requirements
2. Assess performance	2.1 Design performance management and review processes to ensure consistency with organisational objectives and policies 2.2 Train participants in the performance management and review process 2.3 Conduct performance management in accordance with organisational protocols and time lines 2.4 Monitor and evaluate performance on a continuous basis
3. Provide feedback	3.1 Provide informal feedback to staff on a regular basis 3.2 Advise relevant people where there is poor performance and take necessary actions 3.3 Provide on-the-job coaching when necessary to improve performance and to confirm excellence in performance 3.4 Document performance in accordance with the organisational performance management system 3.5 Conduct formal structured feedback sessions as necessary and in accordance with organisational policy
4. Manage follow up	4.1 Write and agree on performance improvement and development plans in accordance with organisational policies 4.2 Seek assistance from human resources specialists, where appropriate 4.3 Reinforce excellence in performance through recognition and continuous feedback 4.4 Monitor and coach individuals with poor performance 4.5 Provide support services where necessary 4.6 Counsel individuals who continue to perform below expectations and implement the disciplinary process if necessary 4.7 Terminate staff in accordance with legal and organisational

Assessment Requirements for BSBMGT502 Manage people performance

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- consult with relevant stakeholders to identify work requirements, performance standards and agreed performance indicators
- develop work plans and allocate work to achieve outcomes efficiently and within organisational and legal requirements
- monitor, evaluate and provide feedback on performance and provide coaching or training, as needed
- reinforce excellence in performance through recognition and continuous feedback
- seek assistance from human resources specialists where appropriate
- keep records and documentation in accordance with the organisational performance management system.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline relevant legislative and regulatory requirements
- outline relevant awards and certified agreements
- explain performance measurement systems utilised within the organisation
- explain unlawful dismissal rules and due process
- describe staff development options and information.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation
- workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBMGT517 Manage operational plan

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to develop and monitor implementation of the operational plan to provide efficient and effective workplace practices within the organisation's productivity and profitability plans.

Management at a strategic level requires systems and procedures to be developed and implemented to facilitate the organisation's operational plan.

This unit applies to individuals who manage the work of others and operate within the parameters of a broader strategic and/or business plan.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Develop operational plan	1.1 Research, analyse and document resource requirements and develop an operational plan in consultation with relevant personnel, colleagues and specialist resource managers 1.2 Develop and/or implement consultation processes as an

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	integral part of the operational planning process 1.3 Ensure the operational plan includes key performance indicators to measure organisational performance 1.4 Develop and implement contingency plans for the operational plan 1.5 Ensure the development and presentation of proposals for resource requirements is supported by a variety of information sources and seek specialist advice as required 1.6 Obtain approval for the plan from relevant parties and explain the plan to relevant work teams
2. Plan and manage resource acquisition	2.1 Develop and implement strategies to ensure that employees are recruited and/or inducted within the organisation's human resources management policies, practices and procedures 2.2 Develop and implement strategies to ensure that physical resources and services are acquired in accordance with the organisation's policies, practices and procedures 2.3 Recognise and incorporate requirements for intellectual property rights and responsibilities in recruitment and acquisition of resources and services
3. Monitor and review operational performance	3.1 Develop, monitor and review performance systems and processes to assess progress in achieving profit and productivity plans and targets 3.2 Analyse and interpret budget and actual financial information to monitor and review profit and productivity performance 3.3 Identify areas of under-performance, recommend solutions and take prompt action to rectify the situation 3.4 Plan and implement systems to ensure that mentoring and coaching are provided to support individuals and teams to effectively, economically and safely use resources 3.5 Negotiate recommendations for variations to operational plans and gain approval from designated persons/groups 3.6 Develop and implement systems to ensure that procedures and records associated with documenting performance are managed in accordance with organisational requirements

Assessment Requirements for BSBMGT517 Manage operational plan

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- develop and implement an operational plan using a variety of information sources and consultation (including using specialist advice if required) which includes:
  - resource requirements
  - key performance indicators
  - monitoring processes
  - contingency plans
- communicate effectively with relevant stakeholders to explain the plan and supporting information, seek approvals, negotiate variations and engage work teams
- develop and implement strategies to achieve the operational plan within the organisation's policies, practices and procedures including:
  - recruiting, inducting and developing personnel
  - acquiring physical resources and services
  - protecting intellectual property
  - making variations to the plan
  - monitoring and documenting performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe models and methods for operational plans
- explain the role of an operational plan in achieving the organisation's objectives
- explain budgeting processes

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- list alternative approaches to developing key performance indicators to meet business objectives
- outline the legislative and regulatory context relevant to the operational plan of the organisation
- outline the organisation's policies, practices and procedures that directly relate to the operational plan.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation and regulations
- workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to prepare electronic advertisements for use in internet, email or facsimile marketing communications, and to evaluate their effectiveness in achieving marketing objectives.

It applies to individuals working in promotional roles who are required to use electronic communications and existing business websites to effectively convey marketing communications and achieve marketing objectives in accordance with marketing or e-marketing plans.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Development – Marketing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare electronic advertisements	1.1 Choose media for electronic advertisements in accordance with the organisation’s marketing (or e-marketing) strategy 1.2 Select multiple marketing channels to optimise marketing effort 1.3 Ensure copy and design elements communicate desired image, features and benefits of products or services, and suit

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	characteristics of chosen media 1.4 Position and size each element of advertisement to achieve balance and focus 1.5 Ensure typeface selections suit product, chosen media and central message of advertisement, and that layout achieves balance in its elements including white space and margins 1.6 Ensure any added sound, animation or graphics enhance content of advertisements and do not distract from message 1.7 Ensure advertisements meet requirements of marketing strategy as well as legal and ethical requirements
2. Use business website as e-marketing tool	2.1 Identify website marketing objectives in organisation's marketing (or e-marketing) strategy and plan 2.2 Ensure website design meets objectives and conveys required image of the business and features and benefits of its products or services 2.3 Ensure website content, site map, navigation buttons, frames and multiple pages are in accordance with marketing strategy and plan 2.4 Ensure website incorporates data recording, contacts and feedback mechanisms to allow evaluation of website as a marketing tool
3. Use e-marketing	3.1 Identify required media vehicles and website hotlinks for electronic advertisements, and negotiate contracts for website development where necessary to meet requirements of the marketing strategy, budget and legal and ethical requirements 3.2 Promote marketing channels to identified target market segments 3.3 Place or disseminate electronic advertisements in accordance with marketing strategy, media contracts, and legal and ethical requirements
4. Monitor and evaluate results of e-marketing	4.1 Monitor transmission of electronic advertisements or other e-marketing products and rectify any errors or omissions 4.2 Develop measures of effectiveness for e-marketing advertisements and monitor effectiveness 4.3 Evaluate effectiveness of e-marketing advertisements against measures of effectiveness and record outcomes in accordance with organisational requirements 4.4 Use outcomes of evaluation activities and other feedback from

ELEMENT	PERFORMANCE CRITERIA
	marketing channels to plan for improvements to e-marketing strategies and products

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 1.7, 2.1-2.4, 3.1-3.3, 4.1-4.4	• Interprets textual information obtained from a range of sources and determines how content may be applied to individuals and to organisational requirements
Writing	1.3, 2.2-2.4, 3.2, 3.3, 4.1-4.4	• Integrates information from a number of sources to develop material that supports the purposes and format of the documentation using suitable grammatical structure and clear, logical language
Oral Communication	3.1, 3.2	• Articulates ideas and requirements clearly and creatively based on techniques appropriate to audience and environment • Elicits the view and opinions of others by listening and questioning
Numeracy	1.4, 1.5, 3.1, 4.2-4.4	• Uses basic mathematical skills to ensure advertisement layout designs are correct • Interprets and analyses statistical information to help design and determine measures of effectiveness
Navigate the world of work	1.1, 1.7, 3.1, 3.3, 4.3	• Appreciates the implications of ethical, legal and regulatory responsibilities related to own work • Adheres to organisational policies and procedures and considers own role in terms of its contribution to broader goals of the work environment
Interact with others	3.2, 3.3	• Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role
Get the work done	1.1-1.7, 2.1-2.4, 3.1, 4.2	• Develops plans to manage tasks with an awareness of how they may contribute to longer term operational and strategic goals • Takes responsibility for the outcomes of routine decisions related directly to own role • Understands the purposes, specific functions and key

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		features of common digital systems and tools and operates them effectively to complete routine tasks • Understands and explicitly applies some basic principles of analytical and lateral thinking • Recognises and takes responsibility for addressing predictable and some less predictable problems in familiar work contexts

Assessment Requirements for BSBMKG412 Conduct e-marketing communications

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- develop electronic advertisement for a product or service using electronic media to convey marketing communications consistent with an organisational marketing strategy and objectives
- monitor and evaluate results of electronic advertisements and marketing.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify key provisions of relevant legislation, codes of practice and national standards that affect marketing operations
- describe industry products and services knowledge
- explain intellectual property requirements
- identify organisational structure, roles and responsibilities
- outline principles of marketing and advertising
- describe software applications used in conducting electronic advertising and marketing.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the business development – marketing field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations.

Business Development – Marketing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan promotional activities	1.1 Identify and assess promotional activities to ensure compatibility with organisational requirements 1.2 Plan and schedule promotional activities according to the marketing needs of the organisation 1.3 Determine overall promotional objectives in consultation with designated individuals and groups 1.4 Ensure that timelines and costs for promotion of activities are

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	realistic and consistent with budget resources 1.5 Develop action plans to provide details of products and services being promoted
2. Coordinate promotional activities	2.1 Ensure personnel and resources to support promotional activities are identified and prepared to facilitate the achievement of promotional goals 2.2 Identify and agree roles and responsibilities for delivery of promotional services and allocate to relevant personnel 2.3 Establish and conduct relationships with targeted groups in a manner which enhances the positive image of the organisation 2.4 Use networks to assist in the implementation of promotional activities
3. Review and report on promotional activities	3.1 Analyse audience feedback and data to determine the impact of the promotional activity on the delivery of products and services 3.2 Assess effectiveness of planning processes to identify possible improvements in future activities 3.3 Collect feedback and provide to personnel and agencies involved in promotional activity 3.4 Analyse costs and time lines to evaluate the benefits accruing from the promotional activities 3.5 Prepare conclusions and recommendations from verifiable evidence and provide constructive advice on future directions of promotional activities

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 3.1	• Interprets, analyses and collates textual information relevant to promotional activities from a range of sources
Writing	1.2, 1.5, 2.3, 3.1, 3.3, 3.5	• Uses clear and specific language to develop formal and informal documents for different audiences in accordance with organisational requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Oral Communication	1.3, 2.3, 3.3, 3.5	• Actively participates in verbal exchanges of ideas and elicits the views and opinions of others by listening and questioning • Uses clear and specific language to clarify, explain and present information relating to the promotional activity
Numeracy	1.4, 1.5, 3.1, 3.3, 3.4, 3.5	• Classifies, analyses and compares numeric information, including costs and timelines, relevant to the promotional activity
Navigate the world of work	1.1	• Adheres to legislative requirements and organisational policies and procedures
Interact with others	1.3, 2.3, 2.4, 3.3, 3.5	• Selects and uses appropriate conventions and protocols with a range of stakeholders to project a professional image while seeking or sharing information • Recognises the importance of building rapport to establish and maintain positive working relationships
Get the work done	1.2, 1.2, 1.4, 1.5, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 3.4, 3.5	• Sequences and schedules complex activities, monitors implementation and manages relevant communication • Uses systematic, analytical processes in complex, non-routine situations, gathering relevant information and identifying and evaluating options against agreed requirements • Evaluates effectiveness of decisions in terms of how well they meet stated goals • Uses a range of digital tools to access data, and to extract, organise, integrate and share relevant information

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify the context for the promotional activities including:
  - relevant legislation/regulations
  - organisation's goals, objectives, systems, policies and procedures
  - budget and timelines
  - marketing needs and, if defined, marketing plans
  - objectives of the promotional activities
- consult with relevant stakeholders to plan promotional activities to meet objectives, budget and timelines
- coordinate promotional activities including:
  - allocation of personnel, roles and responsibilities
  - sourcing other resources and promotional products as appropriate
  - use of networks and relationships
- analyse feedback and data to evaluate the effectiveness of planning processes and promotional activities and make recommendations on future directions of promotional activities.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the legislative and regulatory context of the organisation as relevant to the marketing plan
- outline the planning processes for organising promotional activities

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- explain the organisation's marketing objectives and how they support the overall business objectives
- explain how common promotional activities could be used to support the marketing objectives with reference to
  - advertising
  - client functions
  - employee functions
  - media announcements
  - product launches
  - web pages.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the business development – marketing field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Assessment Requirements for BSBMKG434 Promote products and services

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- Promote at least three products or services.

In the course of the above, the candidate must:

- identify the context for the promotional activities, including:
  - relevant legislation and regulations
  - organisation's goals, objectives, systems, policies and procedures
  - budget and timelines
  - marketing needs and, if defined, marketing plans
  - objectives of the promotional activities
- consult with relevant stakeholders to plan promotional activities to meet objectives, budget and timelines
- coordinate promotional activities including:
  - allocating roles and responsibilities
  - using communication channels to convey responsibilities
  - obtaining relevant resources and promotional products
- analyse feedback and data to evaluate the effectiveness of planning processes and promotional activities and make recommendations on future directions of promotional activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative and regulatory context of the organisation as relevant to promotional activities
- content of action plans, including:
  - task steps

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - costs
  - timeframe
  - resources and responsibilities
- internal and external stakeholders involved in coordinating promotional activities
- planning processes for organising promotional activities
- organisation's marketing objectives and how they support the overall business objectives
- common promotional activities that could be used to support the marketing objectives.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- legislation, regulations, standards and codes for promoting products and services
- workplace documentation and resources for promoting products and services.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBMKG523 Design and develop an integrated marketing communication plan

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to identify and evaluate the range of marketing communication options and media, to design an integrated marketing communication plan, and to develop a marketing communication brief and creative brief reflecting client needs and preferences.

It applies to individuals working in a supervisory or management marketing or advertising role, within a marketing or advertising team or media organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Development – Marketing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine marketing communication requirements	1.1 Confirm marketing communication purpose and objectives with client 1.2 Obtain comprehensive client and product information 1.3 Review outcomes of previous marketing communication with client

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.4 Confirm budget allocation with client
2. Develop marketing communication brief	2.1 Develop brief, ensuring it contains a client profile, purpose statement and objectives reflecting client needs 2.2 State marketing communication objectives in measurable terms and provide specific guidelines on what is to be accomplished by marketing communication 2.3 Define key characteristics, competitive factors and market situation facing product or service 2.4 Include a summary of information on target audience, and legal and ethical constraints
3. Design integrated marketing communication strategy	3.1 Select marketing communication options appropriate for marketing communication brief 3.2 Critically analyse advantages and disadvantages of each marketing communications variable and media vehicles for product or service 3.3 Determine media characteristics matching brief requirements 3.4 Analyse media consumption habits for primary and supplementary marketing media among target audiences 3.5 Evaluate media styles against the brand character of product or service being marketed 3.6 Compare advantages and disadvantages of selecting multiple media in a media plan 3.7 Develop and apply criteria for selecting multiple media combinations
4. Select and recommend media for marketing strategy	4.1 Select media vehicles that match requirements of marketing brief for product or service 4.2 Recommend primary and secondary marketing media that meet target audience preferences 4.3 Ensure recommended media meet the brief, client's requirements, and legal and ethical constraints
5. Develop creative brief	5.1 Identify creative content for chosen media using consumer language in the brief 5.2 Identify pitch or appeal for product or service in the brief that meets client requirements 5.3 Identify supporting information required for consumer understanding of product or service in the brief

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	5.4 Ensure budget for creative work, consistent with overall marketing budget, is contained in the brief 5.5 Incorporate deadline for creative work consistent with overall media schedule in the brief

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.2, 1.3, 2.1-2.4, 3.3-3.7, 5.3	• Accesses information from a range of sources and identifies, interprets and analyses information relevant to marketing activities
Writing	1.1, 1.3, 1.4, 2.1-2.4, 5.1-5.5	• Uses clear, specific and culturally appropriate language to articulate potentially complex ideas, issues and concepts to clients • Uses appropriate formats and structures information logically to present ideas and recommendations to clients
Oral Communication	1.1, 1.3, 1.4	• Actively participates in verbal exchanges by listening and questioning to clarify and confirm information • Uses appropriate language and non-verbal features to clarify, explain and present information on marketing activities
Numeracy	1.4, 2.2, 3.4, 5.4	• Collates and interprets numeric information to analyse trend data, develop targets and prepare budgets for marketing activities
Navigate the world of work	2.4, 4.3	• Considers legal and ethical implications in relation to own role
Get the work done	1.1-1.4, 3.1-3.7, 4.1, 4.2, 5.1-5.5	• Plans, organises and implements tasks to achieve outcomes, with an awareness of client requirements, time and budgetary restraints • Makes decisions by systematically analysing information, identifying and evaluating options against set criteria, and choosing most appropriate option • Evaluates outcomes of decisions to identify opportunities for improvement • Develops new and innovative ideas through

Assessment Requirements for BSBMKG523 Design and develop an integrated marketing communication plan

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- produce an integrated strategic marketing communication plan for presentation to a client, including:
  - purpose statement
  - definition of target audience
  - analysis of product or service
  - legal and ethical constraints
  - marketing communication functions and media vehicles chosen, with rationale for each
  - creative brief for media options
  - schedule for creative work
  - budgetary allocation for each media vehicle.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline economic, social and industry trends relevant to choice of appropriate media options
- analyse industry products or services to recommend appropriate media options
- summarise key provisions of relevant legislation, codes of practice and national standards affecting marketing operations
- explain principles of consumer behaviour and influences on buyer behaviour
- summarise range of marketing communication options for different markets
- describe and contrast range of media vehicles for marketing communication options.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the business development – marketing field of work and include access to:

- office equipment and resources
- relevant legislation, regulations, standards and codes
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBOPS304 Deliver and monitor a service to customers

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to identify customer needs, deliver and monitor customer service and identify improvements in the provision of customer service.

The unit applies to those who apply a broad range of competencies in various work contexts. In this role, individuals often exercise discretion and judgement using appropriate knowledge of customer service. They provide technical advice and support to customers over short or long-term interactions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Competence – Business Operations

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify customer needs	1.1 Identify and clarify customer needs and expectations 1.2 Evaluate customer needs and determine priorities for service delivery according to organisational requirements 1.3 Inform customers about available choices for meeting their needs and assist selection of preferred options 1.4 Identify limitations in addressing customer needs and seek assistance from designated individuals, where required
2. Deliver a service to customers	2.1 Provide service to meet identified customer needs according to organisational and legislative requirements 2.2 Establish and maintain rapport with customers

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3 Manage customer complaints according to organisational and legislative requirements 2.4 Provide assistance and respond to customers with specific needs according to organisational and legislative requirements 2.5 Identify and use available opportunities to promote and enhance services and products to customers
3. Evaluate customer service delivery	3.1 Review customer satisfaction with service delivery using verifiable evidence according to organisational and legislative requirements 3.2 Seek and respond to customer feedback according to organisational policies and procedures 3.3 Identify opportunities to enhance the quality of customer service 3.4 Document recommendations for customer service improvements 3.5 Submit recommendations to relevant personnel according to organisational policies and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Learning	• Identifies and follows up on opportunities to improve work practices and outcomes
Oral communication	• Provides information or advice using structure and language to suit the audience • Asks questions and listens to gain information or confirm understanding
Reading	• Evaluates textual information to determine customer service requirements • Proofreads texts for clarity of meaning and accuracy of grammar and punctuation
Writing	• Completes responses to customer complaints in required format • Prepares reports using sequencing, format and words to communicate recommendations clearly and effectively
Planning and organising	• Complies with organisational policies and procedures relevant to role • Plans and implements systems to gather and organise information

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill	Description
Problem-solving	• Uses problem solving skills to analyse and respond to customer complaints or enquiries
Teamwork	• Selects and uses appropriate communication conventions to establish connections, build rapport, seek information and develop professional working relationships • Adjusts personal communication style in response to the opinions, values and particular needs of others

Unit Mapping Information

Supersedes and is equivalent to BSBCUS301 Deliver and monitor a service to customers.

Supersedes but is not equivalent to:

- BSBCUE309 Develop product and service knowledge for customer engagement operation
- BSBEDU303 Assist with the provision of international education information
- BSBINT303 Organise the importing and exporting of goods
- BSBINT304 Assist in the international transfer of services
- BSBSLS407 Identify and plan sales prospects.

Assessment Requirements for BSBOPS304 Deliver and monitor a service to customers

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deliver a service to at least three different customers, including:
  - using communication skills to establish rapport and build relationships with customers according to organisational requirements
  - identifying customer needs using appropriate questioning and active listening skills
  - providing customer service according to organisational requirements
  - responding to and recording customer feedback and action taken according to organisational standards, policies and procedures
  - producing a report which identifies and recommends ways to improve service delivery.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key provisions of customer service legislation and consumer law
- organisational policies and procedures relating to customer service, including complaints handling
- common forms of verifiable evidence that could be used to review customer satisfaction
- customer service standards and protocols for serving customers, including customers with specific needs.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technology required to gather and provide information and assistance to customers

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- workplace documents, and organisational policies and procedures relating to customer service
- examples of customer complaints and feedback.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBPEF202 Plan and apply time management

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to implement time management processes to organise and complete work tasks. It also addresses skills and knowledge to seek and review feedback for performance improvement regarding time management and use technology appropriate to the task.

The unit applies to individuals working under direct supervision. These individuals apply basic skills and knowledge in a broad range of work settings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Critical Thinking & Problem Solving – Personal Effectiveness

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Organise work schedule	1.1 Discuss and agree on work goals and plans with assistance from relevant personnel 1.2 Identify relationship between own work goals and plans, and organisational goals and plans 1.3 Research time management techniques and strategies 1.4 Plan and prioritise work tasks within allocated timeframes
2. Complete work tasks	2.1 Perform tasks according to designated timelines and instructions 2.2 Seek assistance from colleagues when difficulties arise in achieving allocated tasks

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3 Identify factors affecting work plan 2.4 Communicate progress on work plan to relevant personnel according to organisational policies and procedures
3. Review work performance	3.1 Seek feedback on time management from relevant personnel 3.2 Record changes to time management approach according to task instructions 3.3 Identify and plan opportunities for improvement in discussion with colleagues

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	• Identifies and interprets textual information to determine and adhere to organisational and task requirements
Writing	• Completes required documents using organisational formats
Oral communication	• Uses listening and questioning techniques to seek information and confirm understanding • Participates in verbal interactions using language and features suitable to audience and context
Numeracy	• Interprets numerical information related to timeframes
Enterprise and initiative	• Complies with organisational policies, procedures and standards
Planning and organising	• Prioritises work and completes activities within designated timeframes • Identifies and solves routine problems
Technology	• Selects and uses appropriate digital tools to complete tasks

Unit Mapping Information

Supersedes and is equivalent to BSBWOR202 Organise and complete daily work activities.

Assessment Requirements for BSBPEF202 Plan and apply time management

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and implement at least one time management plan with support of relevant personnel.

In the course of the above, the candidate must:

- complete each work task within specified timeframe, seeking opportunities to use digital tools where applicable
- seek and use feedback from others to monitor and improve work performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- time management techniques and strategies
- features of a time management plan
- organisational standards, policies and procedures relevant to own work role
- relationship between own work goals and plans and organisation's goals and plans
- factors affecting work progress and performance improvement techniques.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to challenges and situations to demonstrate application of performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBPEF301 Organise personal work priorities

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to organise personal work schedules, to monitor and obtain feedback on work performance and to maintain required levels of competence.

The unit applies to individuals who exercise discretion and judgement and apply a broad range of competencies in various work contexts.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Critical Thinking & Problem Solving – Personal Effectiveness

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Organise and complete own work schedule	1.1 Develop work goals and key performance indicators (KPIs) according to task and organisational requirements 1.2 Prioritise workload according to task timeframes 1.3 Identify factors affecting achievement of work objectives 1.4 Develop personal work plans
2. Evaluate own work performance	2.1 Identify variations between expected and actual work performance according to task requirements and KPIs 2.2 Report variations to relevant personnel 2.3 Seek feedback from relevant personnel for solutions to minimise variations in expected and actual work outputs

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.4 Research sources of stress and access appropriate supports according to organisational policies and procedures
3. Coordinate personal skill development and learning	3.1 Identify personal and professional development needs for job role 3.2 Identify opportunities to undertake personal skill development activities in consultation with supervisor 3.3 Access professional development opportunities 3.4 Record professional development undertaken for continuous learning and career development process 3.5 Incorporate feedback into review of further learning needs

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	• Employs a range of approaches and investigative techniques to source the knowledge necessary to arrange personal learning experiences
Reading	• Interprets textual information to determine organisation's procedures, own work performance and objectives
Writing	• Prepares written reports and workplace documents that communicate information clearly and effectively
Oral communication	• Provides and receives feedback using specific and relevant language • Uses listening and questioning techniques to confirm understanding
Numeracy	• Complies with organisational policies, procedures and protocols
Teamwork	• Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role • Proactively collaborates with others to achieve specific goals
Planning and organising	• Plans and organises work commitments to ensure deadlines and objectives are met • Uses formal analytical thinking techniques to recognise and respond to routine problems
Technology	• Uses digital systems and tools to enter, store and monitor information

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Unit Mapping Information

Assessment Requirements for BSBPEF301 Organise personal work priorities

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare and implement a personal work plan.

In the course of the above, the candidate must:

- prepare a work plan according to organisational requirements and work objectives
- use technology to schedule, prioritise and monitor completion of tasks in a work plan
- assess and prioritise own work tasks and address contingencies
- monitor and assess personal performance against job role requirements by seeking feedback from relevant personnel
- identify personal development needs and access, complete and record skill development and learning.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational policies and procedures relevant to work tasks
- goals, objectives and key performance indicators for task within scope of job role
- methods to elicit, analyse and interpret feedback when communicating with other people in the workplace
- content of work plans including:
  - timeframes
  - tasks requirements
  - risks
  - contingencies for identified risks
- types of personal learning and professional development requirements
- principles and techniques of goal setting, measuring performance and time management

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- signs and sources of stress and strategies to deal with stress in the workplace
- methods to identify and prioritise personal learning needs.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- challenges and situations to demonstrate application of performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBPEF402 Develop personal work priorities

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to plan and prioritise own work tasks. It also addresses the skills and knowledge to monitor and obtain feedback on personal work performance.

The unit applies to individuals who are required to design their own work schedules and work plans and to establish priorities for their work. They will typically hold some responsibilities for the work of others and have some autonomy in relation to their own role.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Critical Thinking & Problem Solving – Personal Effectiveness

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan personal work schedule	1.1 Identify task requirements 1.2 Identify own accountabilities in line with task requirements 1.3 Assess barriers for performance of personal accountabilities 1.4 Develop a personal work schedule
2. Implement personal work schedule	2.1 Communicate personal work schedule to relevant personnel 2.2 Monitor own performance according to personal work schedule 2.3 Document variations between expected and actual work performance according to task requirements and communicate to relevant personnel

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
3. Review personal work priorities	3.1 Seek and evaluate feedback from relevant stakeholders on own work performance 3.2 Analyse variations between expected and actual work performance 3.3 Update personal work schedule according to internal and external feedback and changes in circumstances

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	• Develops strategies to reflect on own performance and obtain feedback
Reading	• Identifies and applies textual information from relevant sources to understand organisation's policies and practices
Writing	• Prepares written reports and workplace documentation that communicate complex information clearly and effectively
Numeracy	• Analyses numerical information related work accountabilities
Enterprise and initiative	• Identifies and understands roles and responsibilities in relation to organisational objectives, policies and procedures
Planning and organising	• Plans, organises and implements tasks to meet organisational requirements • Uses the main features and functions of digital technologies and tools to complete work tasks efficiently and effectively

Unit Mapping Information

Supersedes and is equivalent to BSBWOR404 Develop work priorities.

Supersedes but is not equivalent to:

- BSBSMB408 Manage personal, family, cultural and business obligations
- BSBWOR424 Develop a time management plan.

BSBPRO401 Develop product knowledge

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to develop product knowledge in preparation for the sales process.

It applies to individuals who need to solve a defined range of unpredictable problems, analyse and evaluate information from a variety of sources and who may provide leadership and guidance to others with some limited responsibility for the output of others.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Industry Capability – Product Skills and Advice

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Acquire knowledge of products in a specified area	1.1 Identify information sources about products in a specified area and evaluate them for reliability and validity 1.2 Identify product purpose/s and use/s 1.3 Identify key features of the product/s 1.4 Identify product strengths and weaknesses 1.5 Articulate guarantees and warranties and identify service support details

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Convert product knowledge into benefits	2.1 Identify features of the product which have potential buyer appeal 2.2 Present features of the product which have buyer appeal as benefits to the buyer 2.3 Present product benefits within the context of organisational requirements and legislation
3. Evaluate competitors' products	3.1 Use a range of information sources to identify competitors' products 3.2 Compare features, benefits, strengths and weaknesses of competitors' products with own products 3.3 Establish relative standing of the organisation's product with the competitors' product/s and communicate differences to the buyer

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 1.3, 1.4, 2.1, 3.1, 3.2, 3.3	• Identifies, interprets, understands and compares information to monitor and evaluate quality of product and services and check against client requirements
Writing	1.1, 1.5, 2.2, 2.3, 3.2	• Records results of product evaluations to show clear comparisons of features, benefits and weaknesses • Uses clear and specific language to develop documents for different audiences in accordance with organisational requirements
Oral Communication	2.2, 2.3, 1.5, 3.3	• Provides recommendations using language appropriate to the purpose and audience
Numeracy	1.3, 1.4, 3.2, 3.3	• Analyses numerical information to measure, compare and evaluate features
Navigate the world of work	2.3	• Understands and follows organisational policies and procedures and legislative requirement relevant to own role
Get the work	1.1, 3.1, 3.3	• Plans and implements tasks required to achieve required outcomes

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

done		• Analyses information to decide on appropriate recommendations

Assessment Requirements for BSBPRO401 Develop product knowledge

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- use valid and reliable sources to gather information about the organisation's products and competitors' products
- determine buyer needs and present key features and benefits of product to match needs, in accordance with organisational and legislative obligations
- compare competitors' products with own organisation's products and communicate differences to buyer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list sources of information for own organisation's products and competitors' products
- explain why it is important to discuss features, benefits, strengths and weaknesses when describing products
- summarise industry competitors, including products offered and potential buyer markets
- outline organisational policies and procedures, relevant to the sales process
- outline the key provisions of relevant legislation, regulations, standards and codes of practice that are relevant to the sales process.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability – product skills and advice field of work and include access to:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- information sources regarding an organisation's and competitors' products, service or ideas
- office equipment and resources
- relevant organisational policies and procedures
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBPUR402 Negotiate contracts

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to negotiate terms of contracts with suppliers, and prepare and finalise contracts.

It applies to individuals who negotiate contracts as part of a broad purchasing role but are not specialist legal practitioners. They are required to negotiate and formalise complex purchasing arrangements involving significant risk and/or significant expenditure and detailed legal and documentation arrangements and are typically guided by organisational contract negotiation guidelines. They work under minimal supervision of a senior purchasing manager or in consultation with senior management.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Administration – Purchasing and Contracting

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Negotiate terms of contracts with suppliers	1.1 Offer advice and undertake negotiations without prejudice 1.2 Advise suppliers of the organisation’s intent to accept their offers 1.3 Negotiate issues with suppliers 1.4 Determine desired outcomes, negotiation plans and schedules

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	for negotiations 1.5 Undertake negotiations and reach agreements with suppliers in accordance with plans 1.6 Negotiate and document contract requirements to the satisfaction of the organisation and suppliers
2. Prepare contracts	2.1 Draft required contracts using legal expertise if required 2.2 Distribute draft contracts to relevant personnel and suppliers 2.3 Ensure any discrepancies or disagreements are clarified and resolved to the satisfaction of all parties 2.4 Ensure checks of the legality and validity of draft contracts are made 2.5 Obtain approvals to sign contracts
3. Finalise contracts	3.1 Ensure contracts are signed and exchanged between the organisation and suppliers 3.2 Ensure contracts and related documents are stored and safeguarded 3.3 Advise relevant personnel of contract requirements 3.4 Advise unsuccessful suppliers of non-acceptance of offers

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.5, 2.1, 2.4	• Interprets and analyses textual information from a range of sources and identifies relevant key information to assist in the negotiation process
Writing	1.2, 1.6, 2.1, 2.3, 2.5, 3.3, 3.4	• Develops material to convey explicit information and results using clear and detailed language appropriate to audience and context
Oral Communication	1.1-1.3, 1.5, 1.6, 2.5, 3.3	• Uses clear language and suitable features to provide information to a variety of individuals • Uses active listening and questioning techniques to convey and clarify information

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Navigate the world of work	1.5, 1.6, 2.1, 2.4	• Monitors adherence to implicit and explicit organisational procedures and policies • Recognises the implications of legal and regulatory responsibilities related to own work and is beginning to recognise some general legal principles applicable across work contexts
Interact with others	1.1-1.3, 1.5, 1.6, 2.2, 2.3, 2.5, 3.1, 3.3, 3.4	• Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role • Collaborates and negotiates with others as part of familiar routine activities
Get the work done	1.4, 2.2, 2.3, 3.1, 3.2	• Takes responsibility for planning, sequencing and prioritising tasks for efficient and effective outcomes • Implements standard procedures to make routine decisions • Recognises and takes responsibility for addressing predictable problems in familiar work contexts • Understands the importance of secure information in relation to own work

Assessment Requirements for BSBPUR402 Negotiate contracts

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- produce a documented agreement of terms with suppliers
- draft and complete a contract with a supplier for goods and services
- produce a document to inform successful and unsuccessful suppliers.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and provide an overview of key provisions of relevant legislation, codes of practice and national standards that affect purchasing
- outline organisation practices, policies and procedures for purchasing
- explain purchasing and procurement principles for:
  - accountability
  - probity and transparency
  - risk management
  - value for money.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the administration – purchasing and contracting field of work and include access to:

- organisation policies and procedures
- purchasing strategies and relevant purchasing records
- office equipment and supplies

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- case studies and, where possible, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBSLS407 Identify and plan sales prospects

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to identify potential sales prospects by applying prospecting methods, and manage own sales performance by establishing a sales plan, while managing stress, time and sales-related paperwork.

It applies to individuals working in a sales-related position in a small, medium or large enterprise in a wide variety of industries, who identify, collate and follow up sales prospect information to generate leads. Individuals undertaking this unit may be at entry level, or have experience in sales sufficient to provide advice and support about aspects of sales solutions as part of a sales team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Business Development – Sales

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Employ prospecting methods and qualify prospects	1.1 Identify, consider and evaluate strengths and limitations of range of primary and secondary prospecting methods 1.2 Select prospecting methods to match market to which the product or service is targeted 1.3 Target present, previous and new clients through chosen

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	prospecting methods 1.4 Research and establish criteria for qualifying leads according to buyer accessibility, buyer motives, product affordability, purchase authority, legal compliance and return for seller 1.5 Ensure established criteria represent a standard against which buying potential of individuals and groups is gauged
2. Manage prospect information	2.1 Develop and implement system for recording prospect information 2.2 Monitor and evaluate effectiveness of system for recording prospect information 2.3 Refine system for recording prospect information based on evaluation
3. Establish individualised sales plan	3.1 Establish individual sales goals and quotas to focus work activities, based on organisational sales and marketing objectives 3.2 Establish consultation and communication structures with clients and supervisors 3.3 Plan and document individualised sales plan to achieve sales goals and quotas within a work system constructed against clear timeframes 3.4 Monitor and adjust sales plan to established goals and quotas 3.5 Evaluate sales plan and adjust where necessary
4. Complete sales paperwork and reports	4.1 Establish system to collect, record and organise data associated with sales process 4.2 Complete routine reports at regular intervals according to organisational requirements 4.3 Use available technology to facilitate record-keeping and production of sales reports
5. Organise workload effectively	5.1 Establish routines to provide structure for work and to manage workload 5.2 Allocate time for specific work tasks and unanticipated events and activities 5.3 Conduct analysis of time spent on work-related activities and adjust time spent on tasks, if required 5.4 Apply time-management strategies to minimise non-productive sales activities 5.5 Delegate tasks to individuals or sales team members to share

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	workload as appropriate 5.6 Identify and monitor symptoms of stress and seek expert assistance

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.5, 2.1-2.3, 3.1-3.5, 4.1-4.3, 5.1-5.4	• Analyses and evaluates textual information to develop research strategies, integrate facts and ideas and meet organisational requirements
Writing	1.1-1.5, 2.1-2.3, 3.1-3.5, 4.1-4.3, 5.1-5.4	• Creates documents using specific and detailed language to convey explicit information, requirements and recommendations
Oral Communication	1.3, 5.2, 5.5	• Presents information using clear language suited to the audience • Uses listening and questioning skills to check and confirm understanding
Numeracy	1.4-1.5, 3.1, 3.3-3.5, 5.2-5.4	• Applies ratios and percentages and relevant formulae to data to calculate and interpret time durations and establish financial goals
Navigate the world of work	1.4, 3.1, 3.4, 4.2	• Follows explicit and implicit organisational objectives, protocols and legal requirements
Interact with others	1.3, 3.2, 5.5, 5.6	• Tailors communication to achieve purpose, demonstrating a sophisticated understanding of audience needs • Collaborates with others to achieve organisational objectives
Get the work done	1.1, 1.3, 1.4, 2.1, 2.2, 3.3-3.5, 4.1-4.3, 5.1, 5.3-5.6	• Sequences and schedules complex activities of self and others and monitors implementation • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and evaluating options against agreed criteria • Monitor implementation of solutions and reflects on outcomes to identify appropriate action

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		• Develops new and innovative ideas through exploration, analysis and critical thinking • Uses main features and functions of digital tools to complete work tasks and access information

Assessment Requirements for BSBSLS407 Identify and plan sales prospects

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- evaluate and select the use and management of different sales prospecting methods
- develop, monitor and refine a system for recording prospecting methods
- plan, document and monitor individualised sales plan
- establish data collection system
- use appropriate technology
- organise, analyse and delegate workloads to maximise productivity
- identify and monitor symptoms of stress.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe information management strategies used to manage prospect and sales data
- identify key principles associated with self-management
- outline key provisions of relevant legislation, codes of practice and national standards related to the sales environment
- describe prospecting methods used in sales process
- identify principles of buyer motives
- describe strategies and techniques used to prevent and manage stress.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the business development – sales field of work and include access to:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to present sales solutions that respond to specific buying needs of a client, and to use sales processes associated with securing prospect commitment to proceed with a sale.

It also includes attending to post-sales activities that build and strengthen the partnership between a salesperson and client, and enhance the likelihood of future sales.

It applies to individuals working in sales-related positions in a small, medium or large enterprise, in a wide variety of industries, who may provide sales solutions individually, or provide advice and support on aspects of sales solutions to support a sales team.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Unit Sector

Business Development – Sales

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for sales presentation	1.1 Obtain and organise products, ideas and services for use within sales presentation 1.2 Review product information to ensure familiarity with products

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.3 Identify sales tactics, and assess and choose options that meet needs and preferences of the prospect 1.4 Consider variety of sales solutions and prepare to meet buyer needs 1.5 Identify and select sales aids 1.6 Identify alternatives for prospects and assess in relation to anticipated buyer needs
2. Present sales solution	2.1 Use gestures, posture, body language, facial expressions and voice to create a supportive selling environment 2.2 Use listening skills and open-ended questions to identify buyer needs, preferences, motives and objections 2.3 Adjust presentation to match needs and preferences of buyer 2.4 Use persuasive communication techniques to secure buyer interest 2.5 Ensure presentation demonstrates and communicates key features of product and emphasises benefits in relation to identified buyer needs 2.6 Obtain and present proof of benefits through product purchase 2.7 Use sales aids to build buyer understanding of how product aligns with needs
3. Respond to buyer signals	3.1 Identify and assess verbal and non-verbal buying signals 3.2 Use probing to identify source of buyer resistance 3.3 Identify strengths and limitations of buyer resistance strategies 3.4 Select and implement strategy for managing buyer resistance 3.5 Use trial closes strategically during different stages of sales process
4. Negotiate and finalise sale	4.1 Initiate formal close to sales process following one or more trial closes 4.2 Select strategy to close sale, and use supportive and confirming language to support closure 4.3 Negotiate conditions of agreement, outline a summary of agreement to buyer, and confirm buyer's decision 4.4 Provide advice on financing arrangements, if required 4.5 Prepare and complete sales documents, and process and monitor client order

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	4.6 Identify and present cross-selling opportunities to buyer
5. Support post-sale activities	5.1 Ensure contact is made with buyer post-sale to ensure agreed expectations have been met 5.2 Provide technical assistance or advice and assist clients to access appropriate after-sales support 5.3 Use feedback solicitation regarding sales process and product satisfaction 5.4 Address and resolve service problems and difficulties identified through feedback 5.5 Develop and implement client loyalty strategies to secure buyer loyalty and facilitate ongoing contact 5.6 Offer and implement additional sales solutions and benefits to clients when opportunities arise

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.6, 2.7, 4.3-4.6, 5.1-5.6	• Analyses and evaluates textual information to develop research strategies, integrate facts and ideas, and meet organisational requirements
Writing	1.1, 4.5-4.6, 5.1-5.6	• Creates documents using specific and detailed language to convey explicit information, requirements and recommendations
Oral Communication	1.1, 2.1-2.7, 3.1-3.5, 4.1-4.6, 5.1-5.6	• Obtains information by listening and questioning, and • Participates in discussions using detailed, clear and persuasive language to contribute details, express requirements and provide advice
Numeracy	2.6, 4.3-4.5, 5.5	• Identifies, interprets and compares mathematical information in simple and familiar written texts
Interact with others	2.3, 2.4, 3.2-3.4, 4.2, 5.3-5.5	• Uses a range of interpersonal skills to build rapport and establish relationships with others • Tailors communication to achieve purpose, demonstrating a sophisticated understanding of audience needs

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Get the work done	1.1-1.3, 2.1-2.7, 3.2, 3.4, 3.5, 4.1-4.6, 5.1-5.6	• Sequences and schedules complex activities to achieve outcomes in a timely fashion • Uses systematic, analytical processes in complex, non-routine situations, setting goals, designing strategies, gathering relevant information and evaluating options • Uses formal and informal processes to monitor implementation of solutions and reflect on outcomes • Uses main features and functions of digital tools to complete work tasks and access information

Assessment Requirements for BSBSLS408 Present, secure and support sales solutions

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify principles of effective sales presentation
- identify buyer needs and present sales solution
- manage buyer resistance
- finalise a sale
- implement support for post-sale activities.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- demonstrate detailed product knowledge, including product:
  - advantages and disadvantages
  - features
  - service benefits
- identify materials and aids that support presentations
- identify principles for achieving an effective sales presentation mix
- describe statistical methods used to demonstrate sales performance
- describe strategies used to:
  - manage client accounts
  - build client goodwill
  - develop client loyalty.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the business development – sales field of work and include access to:

- office equipment and resources
- support materials for effective presentations
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBSMB406 Manage small business finances

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify intent of unit
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to implement and review financial management strategies on a regular basis.

It applies to individuals who operate a small business that stands alone, or is part of a department within a larger organisation. Individuals in this role interpret financial reports and other numerical data to develop financial management strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Small and Micro Business

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Implement financial plan	1.1 Identify financial information requirements and obtain specialist services, as required, to profitably operate the business in accordance with the business plan 1.2 Produce financial budgets or projections, including cash flow

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	estimates, as required for each forward period, and distribute to relevant people in accordance with legal requirements 1.3 Negotiate, secure and manage business capital to best enable implementation of the business plan and to meet requirements of financial backers 1.4 Develop and maintain strategies to enable adequate financial provision for taxation in accordance with legal requirements 1.5 Develop, monitor and maintain client credit policies, including contingencies for debtors in default, to maximise cash flow 1.6 Select key performance indicators to enable ongoing monitoring of financial performance 1.7 Record and communicate financial procedures to relevant people to facilitate implementation of the business plan
2. Monitor financial performance	2.1 Regularly monitor and report on financial performance targets, and analyse data to establish extent to which the financial plan has been met 2.2 Monitor marketing and operational strategies for their effects on the financial plan 2.3 Calculate and evaluate financial ratios according to own or industry benchmarks 2.4 Assess financial plan to determine whether variations or alternative plans are needed, and change as required

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.4, 2.1, 2.4	• Evaluates complex text to determine legislative, regulatory and workplace documentation
Writing	1.2-1.5, 1.7, 2.1	• Prepares written reports and workplace documentation that communicate complex information clearly and effectively
Oral Communication	1.3, 1.7, 2.1	• Articulates clearly using specific and relevant language suitable to audience to convey requirements, and employs listening and questioning techniques to

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		confirm understanding • Participates in verbal negotiations using tone and language suitable to audience
Numeracy	1.1-1.5, 2.1, 2.3, 2.4	• Interprets numerical information to calculate all relevant financial information
Navigate the world of work	1.2, 1.4	• Appreciates implications of legal and regulatory responsibilities related to own work
Interact with others	1.7, 2.1	• Selects appropriate form, channel and mode of communication for a specific purpose relevant to own role
Get the work done	1.1, 1.2, 1.4-1.6, 2.2, 2.4	• Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer-term operational and strategic goals • Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account • Uses formal and informal processes to monitor implementation of ideas and reflect on outcomes

Assessment Requirements for BSBSMB406 Manage small business finances

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify intent of unit
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- operate the business according to the business plan, including:
  - adhering to legal requirements
  - meeting requirements of financial backers
  - defining strategies for debt collection and contingencies for debtors
  - managing cash flow
  - defining key performance indicators
  - communicating with relevant people
- monitor the business against financial plan and make changes as required.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss benchmarking
- explain financial decision-making relevant to the business
- summarise significant financial indicators
- outline purposes of financial reports
- clarify preparation and interpretation of budget/actual reports
- identify principles for preparing balance sheets and their interpretation
- outline debt collection procedures or strategies

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- characterise principles for preparing profit and loss statements and their interpretation
- discuss stock records and stock control relevant to the business.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- business equipment and resources
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBSMB407 Manage a small team

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify intent of unit
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to select, induct, train and develop staff members to enhance business operations within the parameters of all relevant legislative requirements.

It applies to individuals who operate a small business that stands alone, or is part of a department within a larger organisation. Individuals in this role have a good knowledge of industrial relations and team management and use effective, responsive and supportive communication in workplace interactions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Small and Micro Business

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Develop staffing plan	1.1 Determine staffing requirements to allow the business to run effectively, in accordance with requirements outlined in the

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	business plan 1.2 Identify and compare existing skills of owner/s and staff with business requirements to identify any gaps 1.3 Develop policies and procedures for owner/s and staff, in accordance with the business plan
2. Recruit, induct, train and retain team	2.1 Develop job or position descriptions, competencies required and selection criteria to meet business' needs 2.2 Judge information obtained from each candidate against specified selection criteria, and select according to business needs and legal requirements 2.3 Induct new staff members in accordance with policies and procedures of the business 2.4 Make team members aware of their responsibilities and performance requirements as soon as practicable, and take opportunities to coach team members who are unfamiliar with procedures of the business 2.5 Develop and implement a staff development program and career paths based on requirements of business and staff competencies 2.6 Advertise staff vacancies appropriately in accordance with staffing plan
3. Comply with industrial relations obligations	3.1 Clarify workplace rights and obligations of employers and employees, in accordance with legal requirements and codes of practice 3.2 Counsel staff, if required, in a positive and constructive manner and record outcomes accurately
4. Maintain staff records	4.1 Develop staff records system to provide timely and accurate information, in accordance with confidentiality, legal and taxation requirements 4.2 Monitor and accurately maintain system for recording and retrieving personnel and payroll information, and seek specialist advice where required
5. Manage staff	5.1 Regularly review contribution and skills of self and other team members to ensure performance is in line with agreed performance measures 5.2 Monitor and adjust staffing requirements to respond to any changes in tasks and functions required by the business 5.3 Support and encourage staff, and acknowledge and reward

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	their contribution 5.4 Regularly provide opportunities for staff to discuss work related issues 5.5 Develop contingency plans to cope with unexpected or extreme situations and take appropriate corrective action as required
6. Review team performance	6.1 Develop positive and constructive relationships with and between team members 6.2 Review and update team objectives in support of business goals on a regular basis in consultation with team members 6.3 Identify strengths and weaknesses of team against current and expected work requirements 6.4 Schedule time, on a regular basis, for team members to review work operations to maintain and improve operational efficiency 6.5 Encourage team members to monitor their own performance, suggest improvements and identify professional development needs, in accordance with personal and business requirements 6.6 Monitor and review staff turnover rate

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.3, 2.2, 2.3, 2.5, 2.6, 3.1, 4.1, 5.1, 6.3, 6.5, 6.6	• Evaluates complex text to determine legislative, regulatory and workplace documentation
Writing	1.3, 2.1-2.6, 3.1, 3.2, 4.1, 4.2, 5.5, 6.1-6.3, 6.5	• Prepares written reports and workplace documentation that communicate complex information clearly and effectively
Oral Communication	1.2, 2.2-2.4, 3.1, 3.2, 4.2, 5.3, 5.4, 6.1, 6.2, 6.4, 6.5	• Articulates clearly using specific and relevant language suitable to audience to convey requirements, and employs listening and questioning techniques to confirm understanding • Participates in verbal negotiations and coaching using tone and language suitable to audience

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Numeracy	6.4	• Uses basic mathematical formulas to review staff performances within available work schedules
Navigate the world of work	1.3, 2.2. 3.1, 4.1	• Understands own legal rights and responsibilities and is extending understanding of general legal principles across work contexts • Monitors adherence to organisational policies and procedures and considers own role for its contribution to broader goals of the work environment
Interact with others	2.4, 2.6, 5.3, 6.1, 6.5	• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and taking a leadership role on occasion • Looks for ways of establishing connections and building genuine understanding with a diverse range of people • Actively identifies important communication exchanges, selecting appropriate channels, format, tone and context to suit purpose and audience, and monitors impact
Get the work done	1.1, 1.2, 2.2, 2.3, 2.5, 4.2, 5.1, 5.2, 5.5, 6.3, 6.6	• Uses digital technologies and systems safely, legally and ethically when gathering, storing, accessing and sharing information • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer-term operational and strategic goals • Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account • Uses formal and informal processes to monitor implementation of ideas and reflect on outcomes • Recognises and anticipates an increasing range of familiar problems, their symptoms and causes, actively looking for early warning signs and implementing contingency plans

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify intent of unit
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- use the business plan to:
  - determine staffing requirements
  - coordinate skill-gap training where required
  - develop human resource policies and procedures
- develop job descriptions and selection criteria
- determine induction processes
- implement staff development program
- adhere to legal requirements and codes of practice
- develop staff records system
- conduct ongoing performance measures
- communicate effectively with staff members
- develop contingency plans
- develop strategies to review team performance
- monitor and review staff.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss all government legislative requirements relating to staffing the business operation

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- explain work health and safety (WHS) responsibilities and procedures for managing hazards
- summarise relevant industry awards or enterprise agreements
- outline staff development pathways
- identify training course options for staff development
- summarise staff counselling, grievance and disciplinary procedures
- identify unfair dismissal legislation and procedures.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- business equipment and resources
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBSTR401 Promote innovation in team environments

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to identify and implement ways of promoting innovation within team environments in the workplace.

The unit applies to individuals who are team participants or team leaders responsible for playing a proactive role in demonstrating innovation in a formal or informal team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Critical Thinking and Problem Solving – Business Strategy

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify opportunities to maximise innovation	1.1 Identify team requirements relating innovation 1.2 Determine team dynamic and own relationship with team 1.3 Assist in evaluating team requirements according to workplace policies and procedures 1.4 Assist in identifying team's current ways of working according to team objectives 1.5 Assist in identifying opportunities in areas for innovation 1.6 Assist in creating processes that allow team members to suggest options for innovation and innovative ideas
2. Organise and agree on effective ways of	2.1 Identify ideas for ways of working better

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
working	2.2 Delegate responsibilities across the team, and encourage and reinforce team-based innovation 2.3 Agree and share responsibilities and confirm best use of team strengths and abilities 2.4 Schedule activities that allow time for thinking, challenging and collaboration 2.5 Establish reward and stimulation as an integral part of the team's way of working
3. Support and guide colleagues to promote innovation	3.1 Demonstrate behaviour that supports innovation within team 3.2 Create an environment for staff to proactively share information, knowledge and experiences with other team members 3.3 Dedicate time with team members to challenge and test ideas 3.4 Discuss and explore innovation ideas with other team members
4. Evaluate innovation ideas and promotion	4.1 Identify criteria to review successful innovation in the workplace 4.2 Share innovation successes and examples of successful innovation within own workplace 4.3 Reflect on implemented innovation ideas 4.4 Seek and respond to feedback from relevant stakeholders to generate discussion and identify improvements in promoting innovation 4.5 Discuss with relevant stakeholders the challenges of being innovative 4.6 Document feedback received for improvements in promoting innovation for future activities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	• Interprets and analyses textual information, from a wide range of sources, to identify information relevant to team activities
Writing	• Uses clear language and formats appropriate for the audience to highlight and present specific information
Oral communication	• Actively participates in verbal exchanges of ideas and elicits the views and opinions of team members by listening and questioning • Uses clear language to clarify rules and roles relating to team

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

SKILL	DESCRIPTION
	activities in formal and informal situations
Numeracy	• Interprets numeric information relevant to team activities
Planning and organising	• Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role
Teamwork	• Uses inclusive techniques to initiate, contribute and promote discussion amongst potentially diverse team members • Recognises the importance of establishing and building effective working relationships
Planning and organising	• Plans, sequences and prioritises tasks for efficient and effective outcomes
Problem solving	• Uses problem-solving processes to address less predictable problems, and when appropriate, seeking input from others • Contributes to continuous improvement of current work practices by applying basic principles of analytical and lateral thinking • Reflects on outcomes and further explores own and the team's role in implementing innovation
Initiative and enterprise	• Understands the nature and purpose of own role and how it affects others in the work context

Unit Mapping Information

No equivalent unit. Supersedes but is not equivalent to BSBINN301 Promote innovation in a team environment.

Assessment Requirements for BSBSTR401 Promote innovation in team environments

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- on at least two occasions assist a team to create an innovative team environment.

In the course of the above, the candidate must:

- encourage others to contribute to innovation
- identify ways of working
- implement and communicate improvements
- plan and schedule activities
- reflect on activities, feedback and challenges to identity improvement options
- model open and respectful communications
- contribute to the make-up and rules of the team.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- types of innovation and their benefits
- ways of working, including:
  - working hours
  - working spaces
  - agile working
- workplace policies and procedures
- internal and external factors that contribute to a team becoming and remaining innovative, including:
  - team characteristics
  - role of group dynamics and diversity
  - broader environmental factors

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- activities that can encourage and hinder innovation in a team, including:
  - allocation of time and activities
  - modelling behaviour
  - rewards and recognition
  - communications
  - feedback.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace equipment and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBSTR402 Implement continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to implement continuous improvement of systems and processes of an organisation. It includes using systems and strategies to encourage the team to participate in the process, monitoring and reviewing performance, and identifying opportunities for further improvements.

The unit applies to managers who are responsible for implementing the continuous improvement process to achieve the objectives of the organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Critical Thinking and Problem Solving – Business Strategy

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify and plan for improvement	1.1 Identify relevant stakeholders and establish improvements required 1.2 Identify where new systems and processes could be implemented 1.3 Promote team involvement in decision making processes for team systems and processes 1.4 Communicate and agree on new improvement systems and processes with relevant stakeholders 1.5 Manage reports and recommendations for using systems and processes of the organisation

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.6 Establish risk review processes
2. Monitor implementation of continuous improvement	2.1 Use workplace systems and technology, and monitor team performance according to organisational policies and procedures 2.2 Implement new systems and processes in consultation with relevant stakeholders 2.3 Maintain new system and processes in consultation with relevant stakeholders 2.4 Identify and resolve system and process issues
3. Evaluate implementation of continuous improvement	3.1 Communicate productivity improvements to relevant stakeholders and confirm their understanding 3.2 Seek and respond to feedback from relevant stakeholders on proposed improvement systems and process 3.3 Review improvement systems and process, and make changes, as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	• Evaluates and integrates facts and ideas to construct meaning from a range of text types in order to implement continuous improvement systems and processes
Writing	• Selects vocabulary, grammatical structures and conventions appropriate to text • Researches, plans and prepares continuous improvement documentation for required stakeholders
Oral communication	• Participates in a variety of spoken exchanges with a range of audiences using structure and language to suit the audience
Initiative and enterprise	• Monitors adherence to organisational policies and procedures and considers own role in terms of its contribution to broader goals of the work environment • Recognises the potential of new approaches to enhance work practices and outcomes • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information and identifying and evaluating options against agreed criteria

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

SKILL	DESCRIPTION
Teamwork	• Selects and uses required conventions and protocols when communicating with diverse individuals to seek and share information • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group communication, influencing direction and taking a leadership role on occasion
Self-management	• Evaluates effectiveness of decisions in terms of how well they meet stated goals
Technology	• Uses digital applications to access and filter data, extract, organise, integrate and share required information
Planning and organising	• Takes responsibility for planning and organising own workload to achieve required outcomes

Unit Mapping Information

Supersedes and is equivalent to BSBMGT403 Implement continuous improvement.

Supersedes but is not equivalent to:

- BSBCON401 Work effectively in a business continuity context
- BSBMGT406 Plan and monitor continuous improvement.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement at least one continuous improvement system or process in an organisation or work area.

In the course of the above, the candidate must:

- provide support to enable individuals and teams to participate in decisions, take responsibility, show initiative and implement improvement processes
- communicate effectively to support the implementation of improvements and improvement system and processes
- implement, monitor and update improvement plans, processes and procedures to improve performance
- document performance to identify further opportunities for improvement
- manage records and reports in the systems and procedures of the organisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- continuous improvement systems and processes
- coaching and mentoring needs to support continuous improvement
- change management techniques that support continuous improvement and initiative
- organisation’s systems and data used for benchmarking and monitoring performance for continuous improvement.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

This includes access to:

- workplace documentation and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBTEC201 Use business software applications

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to select and use software and organise electronic information and data.

The unit applies to those who use a limited range of practical skills with a fundamental knowledge of equipment use and the organisation of data in a defined context, under direct supervision or with limited individual responsibility.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital Competence - Technology Use

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Select and prepare to use technology	1.1 Identify task purpose, audience, format and presentation requirements, and clarify with relevant personnel, where required 1.2 Select relevant technology and software applications to achieve requirements of the task 1.3 Adjust workspace, furniture and equipment to suit own ergonomic requirements
2. Input and process information or data	2.1 Identify and open application, according to task and organisational requirements 2.2 Enter information or data into application according to organisational requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3 Ensure information or data is checked and amended according to organisational and task requirements 2.4 Format information or data using appropriate application functions according to organisational and task requirements 2.5 Use relevant help functions to overcome simple issues
3. Finalise and store document	3.1 Review and edit final information or data, and prepare for storage in accordance with organisational and task requirements 3.2 Name and store document and exit application

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	• Recognises and interprets information from familiar sources to determine job role and task requirements
Writing	• Produces and amends files to meet task and organisational requirements • Completes required documentation using organisational formats

Unit Mapping Information

Supersedes and is equivalent to:

- BSBITU211 Produce digital text documents
- BSBITU212 Create and use spreadsheets
- BSBWOR204 Use business technology.

Supersedes but is not equivalent to BSBCUE301 Use multiple information systems.

Assessment Requirements for BSBTEC201 Use business software applications

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select and use at least three business software applications on two occasions each.

In the course of the above, the candidate must:

- select and use technology safely and according to organisational requirements
- identify and address faults according to requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of:
  - organisation's work health and safety requirements relevant to own role
  - organisation's requirements for file naming and storage
  - applications used for organising electronic information and data.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace equipment and resources
- electronic files, information and data
- workplace documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBTWK401 Build and maintain business relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to establish, develop and maintain effective work relationships and networks through relationship building and negotiation skills required by workers. These workers may be within an organisation as well as freelance or contract workers.

The unit applies to individuals with a broad knowledge of networking and negotiation who contribute to creating solutions to unpredictable problems. They may have responsibility for and provide guidance to others.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Social Competence – Teamwork and Relationships

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Establish business relationships	1.1 Identify business development and networking objectives of the organisation and own role 1.2 Determine networking opportunities according to identified objectives and organisational policies and procedures 1.3 Confirm communication channels for information exchange with business contacts 1.4 Engage with business contacts using written and verbal communication to promote business opportunities
2. Maintain business	2.1 Use communication techniques to establish rapport with

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
relationships	business contacts 2.2 Identify barriers to business development opportunities 2.3 Use problem-solving techniques to negotiate solutions to identified situations 2.4 Seek specialist advice in the development of contacts, as required
3. Build and improve business relationships	3.1 Develop strategies to represent and promote organisational interests to contacts 3.2 Participate in formal and informal networks that promote the organisation 3.3 Communicate issues regarding relationships in writing and verbally to organisational personnel 3.4 Seek and respond to feedback from management on the quality of relationships with business contacts

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	• Seeks opportunities to develop and extend expertise and identify areas for professional improvement
Reading	• Sources and analyses information to establish networks that consistently promotes business opportunities
Writing	• Uses appropriate vocabulary, layout and grammatical structure to convey ideas and information
Oral Communication	• Uses persuasive language and appropriate non-verbal features to achieve mutually acceptable outcomes • Uses active listening and questioning techniques to confirm understanding
Initiative and enterprise	• Identifies and adheres to organisational policies and procedures
Teamwork	• Looks for ways to establish connections and build genuine understanding with a diverse range of people • Cultivates relationships with people with the knowledge, skills and influence to get things done or provide support

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

SKILL	DESCRIPTION
Planning and organising	• Takes responsibility for planning, sequencing and implementing tasks required to build and maintain networks • Uses analytical processes to identify problems, gather relevant information, evaluate options and determine solutions

Unit Mapping Information

Supersedes and is equivalent to BSBREL401 Establish networks.

Supersedes but is not equivalent to:

- BSBREL402 Build client relationships and business networks
- BSBREL403 Implement international client relationship strategies
- BSBSMB411 Manage specialist external advisory services.

Assessment Requirements for BSBTWK401 Build and maintain business relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- communicate with others to build and maintain at least two different business relationships.

In the course of the above, the candidate must:

- promote professional business relationship using written and verbal communication techniques
- identify methods to improve business relationships
- participate in formal and informal networking opportunities that promote the business.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- strategies for establishing and maintaining business relationships
- methods of engaging with business contacts including through participation in professional networks and associations
- relevant networks, organisations, agencies, associations or individuals
- principles and techniques needed to negotiate positive outcomes
- organisational policies, plans and procedures relevant to business relationships
- methods for obtaining feedback on business relationships.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documentation and resources

BSBWHS311 Assist with maintaining workplace safety

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to assist with implementing and monitoring an organisation's work health and safety (WHS) policies, procedures and programs as part of a small work team.

The unit applies to individuals who have roles in assisting with maintaining workplace safety in an organisation. Individuals closely monitor aspects of work associated with the safe delivery of products and services, and they contribute to influencing safety in the workplace.

NOTES

1. The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent, and generally either can be used in the workplace. In jurisdictions where *model WHS laws* have not been implemented, registered training organisations (RTOs) are advised to contextualise this unit of competency by referring to existing WHS legislative requirements.

2. The *model WHS laws* include the model WHS Act, model WHS Regulations and model WHS Codes of Practice. See Safe Work Australia for further information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Regulation, Licensing and Risk – Work Health and Safety

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the	*Performance criteria describe the performance needed to*

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	**PERFORMANCE CRITERIA**
essential outcomes.	*demonstrate achievement of the element.*
1. Assist with incorporating WHS policies and procedures into work team processes	1.1 Identify health and safety requirements of work team according to applicable WHS laws 1.2 Assist with explaining organisational WHS policies, procedures, programs and legislative requirements to required personnel 1.3 Assist with explaining hazard identification and risk assessment outcomes to required personnel
2. Contribute to consultative arrangements for managing WHS	2.1 Assist with implementing consultative processes designed to engage work team in managing WHS 2.2 Respond to WHS issues in a timely manner and according to organisational policies and procedures for issue resolution 2.3 Encourage others to participate in arrangements for managing WHS 2.4 Assist in engaging with required personnel to identify and implement improvements in response to WHS feedback
3. Contribute to organisational procedures for providing WHS training	3.1 Identify WHS training needs of the work team and report to relevant stakeholders 3.2 Identify strategies and opportunities for developing work team's WHS competence and report to relevant stakeholders 3.3 Provide assistance to work team members to support the effective development of their WHS competence
4. Participate in identifying hazards, and assessing and controlling risks for the work area	4.1 Identify hazards in the work area and report to relevant stakeholders according to organisational policies and procedures, and WHS legislative requirements 4.2 Assist with implementing processes designed to control risks using the hierarchy of control measures according to organisational procedures and WHS legislative requirements 4.3 Identify and document inadequacies in existing risk control measures according to organisational policies and procedures, the hierarchy of control measures and WHS legislative requirements 4.4 Report inadequacies in existing risk control measures to relevant stakeholders 4.5 Complete and maintain WHS incident records in the work area according to organisational procedures and WHS legislative requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Reading	• Interprets WHS legislative and organisational documentation • Applies appropriate strategies to construct meaning from WHS legislative and organisational documentation
Writing	• Documents WHS information using required format and industry specific vocabulary
Oral communication	• Presents information using language and non-verbal communication appropriate to audience and context • Uses questioning and active listening to confirm understanding
Navigate the world of work	• Follows WHS policies, procedures and legislative requirements relevant to own role • Keeps up to date with changes to WHS laws relevant to own role
Interact with others	• Selects appropriate communication protocols and conventions to provide information to others • Collaborates with others to achieve joint outcomes • Plays an active role in facilitating effective group interaction, influencing direction and taking a leadership role on occasion • Provides feedback to others in forms with which they can engage and respond
Get the work done	• Sequences and schedules activities, monitors implementation and manages relevant communication • Initiates standard procedures when responding to issues raised through consultation • Uses feedback to participate in the identification and implementation of opportunities to improve arrangements for managing WHS issues

Unit Mapping Information

Assessment Requirements for BSBWHS311 Assist with maintaining workplace safety

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- assist with implementing and monitoring at least three different organisational work health and safety (WHS) policies or procedures into a work team's processes.

During the above, the candidate must:

- assist with implementing and monitoring consultation about each policy or procedure according to legislative and organisational requirements
- identify opportunities to encourage work team to contribute to implementing improvements to each policy or procedure based on feedback received through consultation
- complete WHS documentation.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- characteristics and composition of the work team
- procedures related to the following:
  - identifying hazards
  - assessing and controlling risks to health and safety, including the hierarchy of control measures
- organisational WHS policies and procedures, including those relating to:
  - risk management
  - fire
  - emergencies
  - evacuation
  - incident investigation

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - reporting
- relevant legislation, regulations and codes of practice from all levels of government that impact on business operations, including those relating to:
    - WHS and environmental issues
    - equal opportunity
    - industrial relations
    - anti-discrimination
- WHS aspects of other organisational systems and procedures.

Assessment Conditions

Assessment must comply with WHS laws, and WHS legal responsibilities and duty of care required for this unit. It must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities undertaken by individuals carrying out WHS duties in the workplace, and include access to:

- safety processes relevant to the area of work
- organisational policies and procedures, standard operating procedures and plans
- standards, WHS laws and licensing requirements
- opportunities for interaction with others
- workplace equipment and resources required for the performance evidence.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

BSBWHS332X Apply infection prevention and control procedures to own work activities

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 6.1.

Application

This unit describes the skills and knowledge required to undertake work activities in compliance with organisational procedures that prevent and control infection. It involves implementing standard and transmission-based precautions, identifying infection hazards, and assessing and responding to infection risks.

The unit applies to all workers required to undertake their activities in compliance with the infection prevention and control procedures in place in their workplace.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Unit Sector

Cross-Sector – Infection Prevention and Control

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to undertake work activities in a manner that supports infection prevention and control	1.1 Identify job requirements 1.2 Identify organisational infection prevention and control procedures relating to identified job requirements 1.3 Identify infection hazards associated with work activities and environment and assess the risk

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	according to organisational procedures 1.4 Identify and implement infection prevention and control measures relating to identified hazards within scope of own role and responsibilities and according to organisational procedures
2. Undertake work activities in a manner that supports infection prevention and control	2.1 Use resources and equipment according to organisational infection prevention and control procedures and manufacturer specifications 2.2 Clean and maintain own work area according to organisational infection prevention and control procedures 2.3 Respond to infection prevention and control hazards and non-compliance arising in the course of activities, within scope of own role or escalate to required personnel 2.4 Respond to exposure to infection of self or others according to organisational procedures and within required timeframes
3. Finalise work activities according to organisational infection prevention and control requirements	3.1 Maintain and store resources and equipment used in the course of own activities according to organisational infection prevention and control procedures and manufacturer specifications 3.2 Dispose of waste and confine contaminated resources or equipment according to organisational infection prevention and control procedures 3.3 Complete incident reports and convey to required personnel according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	• Explains an infection hazard or non-compliance to required personnel, using suitable words and terms and responding clearly to specific enquiries • Listens to and interprets information relevant to own role in relation to infection prevention and control

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill	Description
Reading	• Interprets information in a range of workplace procedures essential to infection prevention and control in own role
Writing	• Records easy-to-read information relating to workplace hazards and incidents, using words and terms appropriate to audience and purpose
Initiative and enterprise	• Identifies both obvious and less evident hazards to self and others
Problem solving	• Identifies and applies infection prevention and control measures suited to own role and work environment

Unit Mapping Information

No equivalent unit.

Assessment Requirements for BSBWHS332X Apply infection prevention and control procedures to own work activities

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 6.1.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply organisational infection prevention and control procedures to own work activities on at least three different occasions
- identify at least two different infection hazards, assess the risk they pose, and respond to each within scope of own role and responsibilities and according to organisational infection prevention and control procedures.

In the course of the above, the candidate must:

- demonstrate the use of required precautions and control measures, as required for own work activities
- confine at least one resource or piece of equipment that is suspected of being contaminated, according to organisational infection prevention and control procedures
- dispose of waste according to organisational infection prevention and control procedures.
-

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- nature and types of infection-related hazards in own work environment
- chain of infection:
  - source of infectious agent
  - mode of transmission
  - susceptible host and factors that increase susceptibility
- key modes of disease transmission – contact, airborne and droplet:
  - paths of transmission, including direct contact, aerosols and penetrating injuries

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - risk of acquisition
  - sources of infecting microorganisms, including persons who are carriers, in the incubation phase of the disease or those who are acutely ill
- precautions and control measures for infection hazards associated with own role and work activities, including standard and transmission-based precautions:
  - required personal health and hygiene, including:
    - checking and reporting indicators of own ill health
    - respiratory hygiene and cough etiquette
    - hand hygiene: procedures for hand washing and hand rubbing; and situations requiring the use of soap and water or alcohol-based hand rub
    - guidelines on maintaining fingernails and intact skin
    - guidelines on wearing jewellery and watches
    - social distancing measures
- organisational procedures relating to own role and work activities, including for:
  - identifying hazards associated with own work activities and workplace environment, including infection-related hazards
  - assessing risks associated with identified hazards, including determining the likelihood and severity of harm
  - reporting hazards that put self and others at risk, including infection hazards
  - identifying, sourcing and checking the serviceability of PPE required in own role and work activities:
    - eye protection: protective glasses or goggles
    - gloves
    - masks or face shields
    - protective clothing and footwear
  - completing incident reports
- organisational infection prevention and control procedures relating to own role, work activities and physical environment, including for:
  - escalating hazard prevention and control matters outside scope of own role
  - handling, transporting, reprocessing or processing resources and equipment used in the course of own work activities in a manner that:
    - prevents skin and mucous membrane exposure, contamination and transfer of pathogens
    - limits contamination of resources and equipment
    - controls the spread of infection
  - handling and disposing of waste relating to own work activities, including contaminated waste
  - environmental cleaning of own work area, including cleaning and disinfecting surfaces: procedures and specified schedules
  - confining contaminated resources and equipment to designated areas
  - confining workplace records and materials to clean areas
  - responding to exposure to infection of self or others, including to body fluids

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- infection prevention and control protocols required by own work activities:
  - placing appropriate signs when and where appropriate
  - removing spills
  - separating and maintaining clean and contaminated areas
- manufacturer specifications relating to resources and equipment used and maintained in the course of own work activities.
-

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- suitable facilities, equipment and resources, including:
  - organisational infection prevention and control procedures and guidelines
  - PPE suited to work role and job requirements
  - hygiene facilities and equipment relevant to workplace
  - waste disposal equipment suited to waste generated during work activities
  - areas for cleaning.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package release 1.0

Application

This unit describes the skills and knowledge required to implement and monitor an organisation's work health and safety (WHS) policies, procedures and programs in the relevant work area in order to meet legislative requirements.

It applies to individuals with supervisory responsibilities for implementing and monitoring the organisation's WHS policies, procedures and programs in a work area. These individuals have a broad knowledge of WHS policies and contribute well developed skills in creating solutions to unpredictable problems through analysis and evaluation of information from a variety of sources. They provide supervision and guidance to others and have limited responsibility for the output of others.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Regulation, Licensing and Risk – Work Health and Safety

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the	*Performance criteria describe the performance needed to*

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
essential outcomes.	*demonstrate achievement of the element.*
1. Provide information to the work team about WHS policies and procedures	1.1 Accurately explain to the work team relevant provisions of WHS Acts, regulations and codes of practice 1.2 Provide information about the organisation's WHS policies, procedures and programs, and ensure it is readily accessible to, and understandable by the work team 1.3 Regularly provide and clearly explain to the work team information about identified hazards and the outcomes of risk assessment and control
2. Implement and monitor participation arrangements for managing WHS	2.1 Communicate to workplace parties the importance of effective consultation mechanisms in managing health and safety risks in the workplace 2.2 Apply consultation procedures to facilitate participation of the work team in managing work area hazards 2.3 Promptly deal with issues raised through consultation, according to organisational consultation procedures and WHS legislative and regulatory requirements 2.4 Promptly record and communicate to the work team the outcomes of consultation over WHS issues
3. Implement and monitor organisational procedures for providing WHS training	3.1 Identify WHS training needs according to organisational requirements and WHS legislative and regulatory requirements 3.2 Make arrangements to meet WHS training needs of team members in consultation with relevant individuals 3.3 Provide workplace learning opportunities and coaching and mentoring assistance to facilitate team and individual achievement of identified WHS training needs 3.4 Identify and report to management the costs associated with providing training for work team, for inclusion in financial and management plans
4. Implement and monitor organisational procedures and legal requirements for identifying hazards and assessing and controlling risks	4.1 Identify and report on hazards in work area according to WHS policies and procedures and WHS legislative and regulatory requirements 4.2 Promptly action team member hazard reports according to organisational procedures and WHS legislative and regulatory requirements 4.3 Implement procedures to control risks using the hierarchy of control, according to organisational and WHS legislative requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	4.4 Identify and report inadequacies in existing risk controls according to hierarchy of control and WHS legislative requirements 4.5 Monitor outcomes of reports on inadequacies, where appropriate, to ensure a prompt organisational response
5. Implement and monitor organisational procedures for maintaining WHS records for the team	5.1 Accurately complete and maintain WHS records of incidents of occupational injury and disease in work area, according to WHS policies, procedures and legislative requirements 5.2 Use aggregate information and data from work area records to identify hazards and monitor risk control procedures in work area

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.3, 5.2	• Interprets and analyses complex WHS legislative and organisational texts
Writing	1.1-1.3, 2.3, 2.4, 3.1, 3.2, 3.4, 4.1, 4.4, 5.1	• Documents WHS legislative and organisational information using structure, layout and language suitable for audience • Records WHS issues and actions taken according to reporting requirements • Prepares and maintains required records using appropriate structure and vocabulary
Oral communication	1.1-1.3, 2.1, 2.4, 3.2, 3.3, 4.1, 4.4	• Provides WHS legislative and organisational information and advice using structure and language suitable for audience
Numeracy	3.4, 5.2	• Extracts, interprets and comprehends mathematical information in relation to training costs and risk management data
Navigate the world of work	1.1,1.2, 2.3, 3.1, 4.1-4.5, 5.1	• Takes responsibility for adherence to legal and regulatory responsibilities and organisational policies and procedures in relation to WHS • Keeps up to date on changes to WHS legislation or regulations and organisational policies and procedures
Interact with	2.2, 3.2, 3.3	• Selects and uses appropriate conventions and protocols to facilitate consultation or provide feedback

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

others		• Initiates and contributes to facilitating consultative role, responding, explaining, clarifying and expanding on ideas and information as required • Collaborates with others to achieve individual and team outcomes
Get the work done	2.2, 3.2, 3.3, 4.1-4.5, 5.1	• Uses combination of formal, logical planning and intuitive understanding of context to identify relevant information and risks, and identify and evaluate alternative strategies • Uses formal decision-making processes, setting or clarifying goals, gathering information and identifying and evaluating choices against a set of criteria • Recognises and takes responsibility for reporting WHS risk control inadequacies • Uses formal and informal processes to monitor implementations of WHS solutions and reflect on outcomes

Performance Evidence

Evidence of the ability to:

- explain clearly and accurately to work team the relevant work health and safety (WHS) information including:
  - WHS legislative and organisational requirements
  - identified hazards and outcomes of risk assessment and control
- ensure that the team has access to information about WHS policies, procedures and programs in appropriate structure and language
- implement and monitor procedures according to organisational and legislative WHS requirements including:
  - consultation and communications to enable team members to participate in managing WHS risks and hazards
  - identifying WHS training needs and providing learning opportunities, coaching and mentoring as appropriate to needs
  - identifying, reporting and taking action on WHS hazards and risks
  - identifying and reporting inadequacies in existing risk controls and monitoring outcomes to ensure a prompt organisational response
  - reporting on the cost of WHS training
  - keeping WHS records
  - analysing aggregate WHS data to identify hazards and monitor risk control procedures in work area.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

© Commonwealth of Australia, 2025
Mining and Automotive Skills Alliance

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the legal responsibilities and duties of managers, supervisors, persons conducting businesses or undertakings (PCBUs) and workers in relation to WHS risk management in the workplace
- identify key provisions of relevant WHS Acts, regulations and codes of practice that apply to the business and outline how they apply in the work area
- explain organisational policies and procedures relating to hazard identification, risk management, fire, emergency and evacuation, incident investigation and reporting
- explain the importance of effective consultation mechanisms in managing health and safety risks in the workplace
- explain how the hierarchy of control applies in the work area.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced by individuals carrying out work health and safety duties in the workplace and include access to:

- an actual workplace or simulated environment
- workplace equipment and resources
- examples of documents relating to workplace safety, hazard identification and risk assessment
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBWHS411 Implement and monitor WHS policies, procedures and programs

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to implement and monitor an organisation's work health and safety (WHS) policies, procedures and programs in the relevant work area in order to meet legislative requirements.

The unit applies to those with supervisory responsibilities in a work area who have a broad knowledge of WHS policies and contribute well-developed skills in creating solutions to problems through analysis and evaluation of information from a variety of sources. They provide supervision and guidance to others and have limited responsibility for the output of others.

NOTES

1. The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent, and generally either can be used in the workplace. In jurisdictions where *model WHS laws* have not been implemented, registered training organisations (RTOs) are advised to contextualise this unit of competency by referring to existing WHS legislative requirements.

2. The *model WHS laws* include the model WHS Act, model WHS Regulations and model WHS Codes of Practice. See Safe Work Australia for further information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Provide information to work team about WHS policies and procedures	1.1 Identify and communicate relevant provisions about WHS laws to work team 1.2 Provide information about organisation's WHS policies, procedures and programs, and ensure it is readily accessible to work team 1.3 Communicate information about identified hazards and outcomes of risk assessment and control to work team
2. Implement and monitor work team consultative arrangements for managing WHS	2.1 Communicate importance of consultation mechanisms in managing WHS risks to work team 2.2 Apply consultation mechanisms to facilitate work team participation in managing work area hazards, according to organisational policies and procedures 2.3 Contribute to managing issues raised through consultation mechanisms, according to organisational consultation procedures and WHS legislative requirements 2.4 Communicate outcomes of consultation about WHS issues to work team
3. Implement and monitor organisational procedures for providing WHS training to work team	3.1 Identify and document team WHS training needs according to organisational requirements and WHS laws 3.2 Make arrangements to meet WHS training needs of team members in consultation with relevant stakeholders 3.3 Provide workplace learning opportunities to facilitate team and individual achievement of identified WHS training needs
4. Implement and monitor organisational procedures and legal requirements for identifying hazards, and assessing and controlling risks	4.1 Identify and report on hazards in work area according to organisational policies and procedures, and WHS legislative requirements 4.2 Contribute to managing and implementing hazard reports according to organisational policies and procedures, and WHS legislative requirements 4.3 Implement procedures to control risks using the hierarchy of control measures according to organisational policies and procedures, and WHS legislative requirements 4.4 Identify and report inadequacies in existing risk controls according to the hierarchy of control measures, and WHS legislative requirements 4.5 Monitor outcomes of reports on inadequacies, as required, to ensure prompt organisational response

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENTS	PERFORMANCE CRITERIA
5. Implement and monitor organisational procedures for maintaining WHS records	5.1 Complete and maintain WHS incident records of occupational injury and disease in work area according to organisational policies and procedures, and WHS legislative requirements 5.2 Use aggregate information and data from work area records to meet organisational recordkeeping requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	• Interprets and analyses WHS laws and organisational texts
Writing	• Documents organisational WHS policies, procedures and programs according to WHS laws, using structure, layout and language suitable for audience • Records WHS issues and actions taken according to reporting requirements • Prepares and maintains required records using appropriate structure and vocabulary
Oral communication	• Provides WHS organisational information and advice using structure and language suitable for audience • Uses questioning and active listening to clarify understanding
Navigate the world of work	• Adheres to legal and regulatory responsibilities, and organisational policies and procedures in relation to own WHS role and responsibilities • Keeps up to date on changes to WHS laws, and related organisational policies and procedures relevant to own role
Interact with others	• Selects and uses appropriate conventions and protocols to facilitate consultation and provide feedback • Initiates and contributes to facilitating consultative role: responding, explaining, clarifying and expanding on ideas and information as required • Collaborates with others to achieve individual team member and team outcomes
Get the work done	• Uses combination of logical planning and intuitive understanding of context to identify relevant information and risks, and to identify and evaluate alternative strategies • Uses decision-making processes: sets and clarifies goals, gathers

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill	Description
	information, and identifies and evaluates choices against a set of criteria • Takes responsibility for reporting WHS risk control inadequacies • Uses processes to monitor implementation of WHS organisational procedures

Unit Mapping Information

Supersedes and is equivalent to BSBWHS401 Implement and monitor WHS policies, procedures and programs to meet legislative requirements.

Assessment Requirements for BSBWHS411 Implement and monitor WHS policies, procedures and programs

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- implement and monitor the work health and safety (WHS) policies, procedures and programs for one work area in an organisation.

During the above, the candidate must:

- explain relevant WHS information clearly and accurately to work team
- provide work team with access to WHS policies, procedures and programs in appropriate structure and language
- implement and monitor procedures, according to WHS legislative and organisational requirements, for:
  - consultation on and communication about WHS hazards and risks
  - WHS training needs and learning opportunities
  - WHS records
  - using WHS aggregate data relating to hazards and risk control.

Knowledge Evidence

The candidate must demonstrate the knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- key provisions of commonwealth and state/territory WHS laws that apply to the business, and procedures for their application in the work area
- organisational policies and procedures for:
  - consulting during WHS issue management
  - identifying hazards and managing risks, including using aggregate information and work area data
  - incident response, investigation and reporting

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- legal responsibilities and duties of managers, supervisors, persons conducting a business or undertaking (PCBUs) and workers in relation to WHS risk management in the workplace
- procedures for assessing implications of near misses in relation to incidents, injuries and illnesses in the work area
- effective consultation mechanisms in managing health and safety risks in the workplace
- features of effective workplace learning opportunities, including coaching and mentoring assistance that facilitates team and individual achievement of WHS training needs
- key principles and components of the hierarchy of control measures
- procedures for applying the hierarchy of control measures in own work area.

Assessment Conditions

Assessment must comply with WHS laws, legal responsibilities and duty of care required for this unit. It must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities undertaken by individuals carrying out WHS duties in the workplace, and must include access to:

- actual workplace or simulated environment
- workplace equipment and resources
- examples of documents about workplace safety, hazard identification and risk assessment
- WHS laws and organisational documentation required to demonstrate the performance evidence
- opportunities for interaction with others.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

BSBWHS501 Ensure a safe workplace

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to establish, maintain and evaluate the organisation's work health and safety (WHS) policies, procedures and programs in the relevant work area, according to WHS legislative requirements. It takes a systems approach and addresses compliance with relevant legislative requirements.

This unit applies to managers working in a range of contexts who have, or are likely to have responsibility for WHS as part of their broader management role. It is relevant for people with obligations under WHS legislation, for example persons conducting a business or undertaking (PCBUs) or officers, as defined by relevant legislation.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Regulation, Licensing and Risk – Work Health and Safety

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
1 Establish a WHS management system in a work area	1.1 Locate, adapt, adopt and communicate WHS policies that clearly define the organisation's commitment to complying with WHS legislation 1.2 Identify duty holders and define WHS responsibilities for all workplace personnel in the work area according to WHS legislation, policies, procedures and programs 1.3 Identify and approve financial and human resources required by the WHS management system (WHSMS)
2 Establish and maintain effective and compliant participation arrangements for managing WHS in a work area	2.1 Work with workers and their representatives to set up and maintain participation arrangements according to relevant WHS legislation 2.2 Appropriately resolve issues raised through participation and consultation arrangements according to relevant WHS legislation 2.3 Promptly provide information about the outcomes of participation and consultation to workers and ensure it is easy for them to access and understand
3 Establish and maintain procedures for effectively identifying hazards, and assessing and controlling risks in a work area	3.1 Develop procedures for ongoing hazard identification, and assessment and control of associated risks 3.2 Include hazard identification at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created by the proposed changes and existing hazards are controlled 3.3 Develop and maintain procedures for selecting and implementing risk controls according to the hierarchy of control and WHS legislative requirements 3.4 Identify inadequacies in existing risk controls according to the hierarchy of control and WHS legislative requirements, and promptly provide resources to enable implementation of new measures 3.5 Identify requirements for expert WHS advice, and request this advice as required
4 Evaluate and maintain a work area WHS management system	4.1 Develop and provide a WHS induction and training program for all workers in a work area as part of the organisation's training program 4.2 Use a system for WHS record keeping to allow identification of patterns of occupational injury and disease in the organisation, and to maintain a record of WHS decisions made, including reasons for the decision 4.3 Measure and evaluate the WHSMS in line with the

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	organisation's quality systems framework 4.4 Develop and implement improvements to the WHSMS to achieve organisational WHS objectives 4.5 Ensure compliance with the WHS legislative framework to achieve, as a minimum, WHS legal requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 4.2, 4.3, 4.5	• Organises, evaluates and critiques ideas and information from WHS legislation, policies, procedures and programs
Writing	1.1, 2.3, 3.2, 3.5, 4.1, 4.2	• Produces WHS policies, procedures and programs • using appropriate vocabulary, grammatical structure and conventions to produce • Records WHS decisions according to organisational requirements
Oral communication	1.1, 2.1, 2.2, 2.3	• Presents and seeks information from others using structure and language suitable for the audience • Provides information on resolution of WHS issues varying level of technical vocabulary to suit audience
Numeracy	1.3	• Selects from, and applies, an expanding range of mathematical and problem solving strategies in identifying financial and human resources required
Navigate the world of work	1.1, 1.2, 2.1, 2.2, 3.3, 3.4, 4.5	• Monitors adherence to legal and regulatory rights and responsibilities for self and others in relation to WHS • Takes responsibility for developing, implementing and reviewing policies, procedures and processes in accordance with organisational and legislative requirements
Interact with others	1.1, 2.1, 2.3, 3.5	• Plays a lead role in situations requiring effective collaboration demonstrating the ability to guide discussions and negotiate agreeable outcomes • Provides feedback to others in forms they can

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		understand and use
Get the work done	1.1, 1.3, 2.1, 2.2, 2.3, 3.2, 3.3, 3.4, 3.5, 4.1, 4.2 4.3, 4.4, 4.5	• Develops plans or processes to manage relatively complex, WHS management tasks with an awareness of how they contribute to operational and strategic goals • Uses systematic, analytical processes, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria • Considers whether, and how, others should be involved, using consultative or collaborative processes as an integral part of the decision-making process • Uses digital systems and tools to enter, store and retrieve relevant information

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

WHS legislation must include:	• applicable Commonwealth and state or territory WHS Acts, regulations and codes of practice.

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- establish, implement, maintain and evaluate a work health and safety (WHS) management system for a work area of an organisation in accordance with WHS legislation including policies, procedures and record keeping
- ensure organisational WHS compliance
- establish, implement, maintain and evaluate effective and compliant participation arrangements for managing WHS including identifying duty holders, identifying and approving the required resources and developing and implementing a training program
- establish, implement, maintain and evaluate procedures for effectively identifying hazards, and assessing and controlling risks using the hierarchy of risk control
- provide information and complete documentation for a WHS management system
- identify requirements for and request expert WHS advice.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and detail relevant WHS Acts, regulations and codes of practice
- specify relevant WHS organisational policies, procedures, programs and practices
- explain hazard identification and risk-management processes
- describe the hierarchy of risk control and how it is applied in the workplace
- specify in-house and WHS legislative reporting requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced by individuals carrying out work health and safety duties in the workplace and include access to:

- organisational WHS policies and procedures
- WHS legislation, regulations and codes of practice
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Assessment Requirements for BSBWOR204 Use business technology

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- select and use technology safely and according to organisational requirements
- access, retrieve and store required data
- demonstrate basic maintenance on a range of equipment using manuals or help-files
- identify and address faults according to requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the organisation's work health and safety requirements
- outline the organisation's requirements for file naming and storage
- explain why regular back-ups of data are done
- list 'routine maintenance' tasks
- summarise the procedure for addressing equipment faults.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability – workplace effectiveness field of work and include access to:

- office equipment and resources
- electronic files and data
- workplace documentation and equipment manuals
- case studies and, where possible, real situations

BSBWOR404 Develop work priorities

Modification History

Release	Comments
Release 2	This version first released with BSB Business Services Training Package Version 1.1. Version created to correct mapping table information
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to monitor and obtain feedback on own work performance and access learning opportunities for professional development.

This unit applies to individuals who are required to design their own work schedules and work plans and to establish priorities for their work. They will typically hold some responsibilities for the work of others and have some autonomy in relation to their own role.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Industry Capability – Workplace Effectiveness

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and complete own work schedule	1.1 Prepare workgroup plans which reflect consideration of resources, client needs and workgroup targets 1.2 Analyse and incorporate work objectives and priorities into personal schedules and responsibilities

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.3 Identify factors affecting the achievement of work objectives and establish contingencies and incorporate them into work plans 1.4 Efficiently and effectively use business technology to manage and monitor planning completion and scheduling of tasks
2. Monitor own work performance	2.1 Identify and analyse personal performance through self-assessment and feedback from others on the achievement of work objectives 2.2 Seek and evaluate feedback on performance from colleagues and clients in the context of individual and group requirements 2.3 Routinely identify and report on variations in the quality of service and performance in accordance with organisational requirements
3. Co-ordinate professional development	3.1 Assess personal knowledge and skills against organisational benchmarks to determine development needs and priorities 3.2 Research and identify sources and plan for opportunities for improvement in consultation with colleagues 3.3 Use feedback to identify and develop ways to improve competence within available opportunities 3.4 Identify, access and complete professional development activities to assist career development 3.5 Store and maintain records and documents relating to achievements and assessments in accordance with organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Learning	3.1, 3.2, 3.3, 3.4	• Develops strategies to reflect on own performance, obtain feedback, and plan and source professional development opportunities
Reading	1.2, 2.1, 2.3, 3.1, 3.5	• Recognises and interprets textual information from relevant sources to understand organisation's policies and practices

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Writing	1.1, 1.3, 2.2, 2.3, 3.2, 3.5	• Prepares written reports and workplace documentation that communicate complex information clearly and effectively
Oral Communication	2.2, 2.3, 3.2	• Provides or seeks information using language suitable to audience and context • Employs listening and questioning techniques to confirm understanding
Numeracy	1.1, 1.2, 1.3	• Interprets numerical information related to budgets and timeframes
Navigate the world of work	1.2, 2.1, 2.3, 3.1, 3.5	• Identifies and understands roles and responsibilities in relation to organisational objectives, policies and procedures
Interact with others	2.2, 2.3, 3.2	• Selects and uses appropriate practices when communicating with internal and external stakeholders to seek or share information • Establishes and builds rapport and relationships with others to foster a culture of trust and honesty in communications
Get the work done	1.1-1.4, 2.3, 3.1, 3.2, 3.4, 3.5	• Plans, organises and implements tasks to meet organisational requirements • Systematically gathers and analyses information and evaluates options in order to anticipate potential problems and develop contingency plans • Uses the main features and functions of digital technologies and tools to complete work tasks efficiently and effectively

BSBWOR501 Manage personal work priorities and professional development

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to create systems and process to organise information and prioritise tasks.

It applies to individuals working in managerial positions who have excellent organisational skills. The work ethic of individuals in this role has a significant impact on the work culture and patterns of behaviour of others as managers at this level are role models in their work environment.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Industry Capability – Workplace Effectiveness

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Establish personal work goals	1.1 Serve as a positive role model in the workplace through personal work planning 1.2 Ensure personal work goals, plans and activities reflect the organisation's plans, and own responsibilities and accountabilities 1.3 Measure and maintain personal performance in varying work conditions, work contexts and when contingencies occur

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Set and meet own work priorities	2.1 Take initiative to prioritise and facilitate competing demands to achieve personal, team and organisational goals and objectives 2.2 Use technology efficiently and effectively to manage work priorities and commitments 2.3 Maintain appropriate work-life balance, and ensure stress is effectively managed and health is attended to
3. Develop and maintain professional competence	3.1 Assess personal knowledge and skills against competency standards to determine development needs, priorities and plans 3.2 Seek feedback from employees, clients and colleagues and use this feedback to identify and develop ways to improve competence 3.3 Identify, evaluate, select and use development opportunities suitable to personal learning style/s to develop competence 3.4 Participate in networks to enhance personal knowledge, skills and work relationships 3.5 Identify and develop new skills to achieve and maintain a competitive edge

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Learning	3.1, 3.2, 3.3, 3.4, 3.5	• Investigates and uses a range of strategies to develop personal competence
Reading	1.2, 3.1, 3.2	• Analyses and interprets textual information from organisational policies and practices or feedback to inform personal development planning
Writing	3.2	• Uses feedback to prepare reports that summarise ways to improve competence
Oral Communication	3.2	• Uses active listening and questioning to seek and receive feedback
Navigate the world of work	1.2, 2.1	• Understands how own role contributes to broader organisational goals • Considers organisational protocols when planning own career development

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Interact with others	1.1, 3.2, 3.4	• Selects and uses appropriate conventions and protocols when communicating with diverse stakeholders • Uses interpersonal skills to establish and build positive working relationships with others
Get the work done	1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 3.1	• Plans and prioritises tasks in order to meet deadlines, manage role responsibilities and to manage own personal welfare • Identifies and uses appropriate technology to improve work efficiency

Assessment Requirements for BSBWOR501 Manage personal work priorities and professional development

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- use business technology to create and use systems and processes to organise and prioritise tasks and commitments
- measure and maintain personal work performance including assessing competency against competency standards and seeking feedback
- maintain an appropriate work-life balance to manage personal health and stress
- participate in networks
- develop a personal development plan which includes career objectives and an action plan
- develop new skills.

Note: if a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain principles and techniques involved in the management and organisation of:
  - performance measurement
  - personal behaviour, self-awareness and personality traits identification
  - a personal development plan
  - personal goal setting
  - time
- discuss management development opportunities and options for self
- describe methods for achieving a healthy work-life balance
- outline organisation’s policies, plans and procedures
- explain types of learning style/s and how they relate to the individual
- describe types of work methods and practices that can improve personal performance.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability - workplace effectiveness field of work and include access to:

- workplace equipment and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBWOR502 Lead and manage team effectiveness

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to lead teams in the workplace and to actively engage with the management of the organisation.

It applies to individuals working at a managerial level who facilitate work teams and build a positive culture within their work teams. At this level, work will normally be carried out using complex and diverse methods and procedures requiring the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Industry Capability – Workplace Effectiveness

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Establish team performance plan	1.1 Consult team members to establish a common understanding of team purpose, roles, responsibilities and accountabilities in accordance with organisational goals, plans and objectives 1.2 Develop performance plans to establish expected outcomes, outputs, key performance indicators (KPIs) and goals for work team 1.3 Support team members in meeting expected performance

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	outcomes
2. Develop and facilitate team cohesion	2.1 Develop strategies to ensure team members have input into planning, decision making and operational aspects of work team 2.2 Develop policies and procedures to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities 2.3 Provide feedback to team members to encourage, value and reward individual and team efforts and contributions 2.4 Develop processes to ensure that issues, concerns and problems identified by team members are recognised and addressed
3. Facilitate teamwork	3.1 Encourage team members and individuals to participate in and to take responsibility for team activities, including communication processes 3.2 Support the team in identifying and resolving work performance problems 3.3 Ensure own contribution to work team serves as a role model for others and enhances the organisation's image for all stakeholders
4. Liaise with stakeholders	4.1 Establish and maintain open communication processes with all stakeholders 4.2 Communicate information from line manager/management to the team 4.3 Communicate unresolved issues, concerns and problems raised by team members and follow-up with line manager/management and other relevant stakeholders 4.4 Evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Reading	1.1, 4.4	• Analyses and interprets textual information from the organisation's policies, goals and objectives to establish team goals or to determine corrective action
Writing	1.2, 2.1, 2.2, 2.4, 4.2, 4.3, 4.4	• Prepares written reports and workplace documentation that communicate complex information clearly and effectively
Oral Communication	1.1, 2.3, 3.1, 4.1, 4.2, 4.3	• Engages in discussions or provides information using appropriate vocabulary and non-verbal features • Uses listening and questioning techniques to confirm understanding and to engage the audience
Navigate the world of work	1.1, 2.1, 2.2, 3.3	• Understands how own role contributes to broader organisational goals • Modifies or develops policies and procedures to achieve organisational goals
Interact with others	1.1, 1.3, 2.2, 2.3, 3.1, 3.2, 4.2, 4.3	• Selects and uses appropriate conventions and protocols when communicating with diverse stakeholders • Uses interpersonal skills to gain trust and confidence of team and provides feedback to others in forms that they can understand and use • Adapts personal communication style to build positive working relationships and to show respect for the opinions, values and particular needs of others • Plays a lead role in situations requiring effective collaboration, demonstrating high level conflict resolution skills and ability to engage and motivate others
Get the work done	1.2, 2.1, 2.2, 2.4, 3.2, 4.1, 4.3, 4.4	• Develops, implements and monitors plans and processes to ensure team effectiveness • Monitors and actively supports processes and development activities to ensure the team is focused on work outcomes • Plans for unexpected outcomes and implements creative responses to overcome challenges

Assessment Requirements for BSBWOR502 Lead and manage team effectiveness

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- use leadership techniques and strategies to facilitate team cohesion and work outcomes including:
  - encouraging and fostering shared understanding of purpose, roles and responsibilities
  - identifying and resolving problems
  - providing feedback to encourage, value and reward others
  - modelling desired behaviour and practices
- develop policies and procedures to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities
- establish processes to address issues and resolve performance issues
- support team to meet expected performance outcomes including providing formal and informal learning opportunities as needed
- develop performance plans with key performance indicators (KPIs), outputs and goals for individuals or the team which incorporate input from stakeholders
- communicate effectively with a range of stakeholders about team performance plans and team performance
- facilitate two-way flow of information between team and management relevant to team performance
- evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders.

Note: if a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how group dynamics can support or hinder team performance

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- outline strategies that can support team cohesion, participation and performance
- explain strategies for gaining consensus
- explain issue resolution strategies.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability - workplace effectiveness field of work and include access to:

- workplace documents
- case studies and, where possible, real situations
- office equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBXTW301 Work in a team

Modification History

Release	Comments
Release 2	This version first released with BSB Business Services Training Package Version 5.0. Version created to rectify typographical error
Release 1	This version first released with BSB Business Services Training Package Version 4.0.

Application

This unit describes the skills and knowledge required to work effectively as part of permanent or project based teams in a workplace within an industry.

This unit applies to a wide range of workers, but has a specific focus on the teamwork skills required for workers with limited responsibility for others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cross Sector Skill

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify individual work tasks within a team	1.1 Identify own responsibilities according to organisational policies and procedures 1.2 Identify own role and task requirements within team 1.3 Articulate team structure and roles of other team members 1.4 Plan and prioritise own tasks according to given time frames and

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	team requirements
2. Contribute effectively to team goals	2.1 Identify team goals and own responsibilities relevant to achieving team goals 2.2 Contribute ideas and information in team planning discussions 2.3 Share knowledge and skills with team members to enable effective teamwork and seek or offer support as required
3. Work effectively with team members	3.1 Communicate clearly and respectfully with team members, considering the needs of those from diverse backgrounds and roles 3.2 Collaborate effectively with team members, including those who are working remotely on workplace issues 3.3 Seek and provide assistance and feedback to team members where appropriate
4. Communicate effectively with team leaders	4.1 Receive and confirm understanding of task instructions or directions 4.2 Communicate personal commitments in a timely manner 4.3 Identify and report any issues preventing the completion of workplace tasks, according to organisational requirements 4.4 Seek and act upon feedback to improve personal performance and/or behaviour

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	**Description**
Interact with others	• Uses appropriate communication practices when communicating with others • Cooperates and collaborates with team members
Get the work done	• Plans and implements routine tasks and workload making limited decisions on sequencing, timing and collaboration, seeking assistance in setting priorities • Uses digital technology to find, record or communicate information

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Requirements for BSBXTW301 Work in a team

Modification History

Release	Comments
Release 2	This version first released with BSB Business Services Training Package Version 5.0. Version created to rectify typographical error
Release 1	This version first released with BSB Business Services Training Package Version 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria, and foundation skills of this unit, including on at least one occasion, evidence of the ability to:

- identify individual and team roles and responsibilities
- plan assigned tasks according to priorities and deadlines, and in accordance with organisational requirements
- contribute to achievement of team goals
- share knowledge, ideas and problems with team members
- act on feedback in a constructive manner
- collaborate with a remote team member on a workplace issue.
-

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organisational requirements relevant to working in a workplace team:
  - workplace policies
  - codes of conduct
  - organisational reputation and culture
- typical compositions of workplace teams, and the roles and responsibilities of team members within organisations
- techniques for giving and receiving feedback in a constructive manner
- methods to support team members
- key principles of cross-cultural communication and communication with individuals with special needs or disabilities

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- methods and tools to work with others remotely:
  - collaboration via phone or mobile
  - collaboration via video conference
  - collaboration via other digital tools or software
- issues that may impact team performance and outcomes
- techniques to collaborate effectively with those working remotely.
-

Assessment Conditions

Mandatory conditions for assessment include:

- A safe working or simulated environment

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

CSCORG003 Prepare reports

Modification History

Release	Comments
1	This unit was released in CSC Correctional Services Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to CSCORG301A Prepare reports. • PC wording revised in all Elements • PC 2.4 removed

Application

This unit describes the skills required to identify organisational reporting needs and collect, check and record information using available technology.

This unit applies to those working in a range of generalist and specialist roles within a range of occupational areas. For this reason this unit may be significantly customised, particularly in the assessment of knowledge, based on different organisational, sector and location requirements.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to, particularly those related to reporting.

Those undertaking this unit consistently work independently and as part of a coordinated team while drawing upon support from a range of familiar resources. They would undertake complex tasks in a moderate range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Organisational administration and management

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

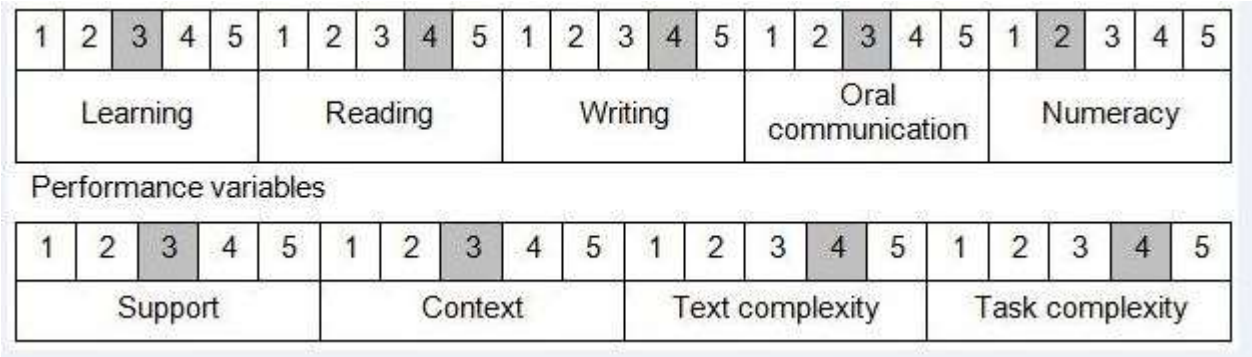
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Identify reporting needs	1.1 Identify the reasons and requirements for recording and reporting. 1.2 Adjust written communication to suit audience and situation.
2. Collect and check information	2.1 Collect information and sort it in logical order according to the nature of the report. 2.2 Check the information with a range of authorities and confirm its accuracy, relevance and status. 2.3 Check whether more information is needed and gather it from a range of sources where appropriate.
3. Record information	3.1 Record and report information in the required format, style, structure and timeframe. 3.2 Ensure that any conclusions drawn and recommendations match the report information. 3.3 Use technology available in the workplace to store and retrieve data. 3.4 Ensure that all written material complies with legislative requirements and organisational policies and procedures.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ACSF levels indicative of performance:



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide http://www.govskills.com.au/guides/correctional-services/foundation-skills-guide on the GSA website.

Unit Mapping Information

Supersedes and is equivalent to CSCORG301A Prepare reports.

Assessment Requirements for CSCORG003 Prepare reports

Modification History

Release	Comments
1	These Assessment Requirements were released in CSC Correctional Services Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements revised

Please refer to the advice in the CSC Assessment Guide.

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least two occasions.

- reading and interpreting documents containing the required information
- recording complete, accurate, clear and objective information
- recognising the urgency and high risk components of specific reports
- handling and storing information securely and safely

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- organisation's policies and procedures related to report writing
- basic written communication techniques
- security of information, confidentiality and right to information
- discriminative language
- technical and professional language used in the work environment
- an awareness of legislation and statutory obligations of reporting in own state or territory justice system, including legal requirements of own role

Assessment Conditions

Valid assessment of this unit requires a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when reading and writing routine workplace reports, including coping with difficulties, irregularities and changes to routine.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

This unit has been identified by industry as suitable for holistic assessment with:

- CSCORG002 Communicate effectively
- CSCSAS001 Maintain security
- CSCSAS010 Conduct searches
- CSCTRA001 Maintain security during escort

Refer to advice in the CSC Assessment Guide http://www.govskills.com.au/guides/correctional-services/assessment-guide.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

FDFPPL3003A Support and mentor individuals and groups

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to model appropriate work practices, provide feedback to groups and individuals and facilitate group processes.

Application of the Unit

Application of the unit	This unit applies to support provided to a team or work group. A person competent in this unit may or may not have formal responsibility for managing others.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Support others in the work area	1.1. Individuals are mentored to meet work requirements 1.2. Performance that is inappropriate is identified and corrective action taken 1.3. Feedback on performance is provided
2. Facilitate group processes	2.1. Purpose of group process is identified 2.2. Meeting procedures required to achieve an agreed outcome are determined and applied 2.3. Group members are engaged in the process 2.4. Clear outcomes are reached in a timely manner

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Ability to: • model behaviour consistent with company policies and procedures • identify behaviour or performance that is unacceptable • structure interventions and feedback to clearly convey required standard of performance • apply appropriate explanation, demonstration, questioning and active listening techniques when interacting with others

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- provide feedback appropriate to the audience requirements
- recognise and respond appropriately to difference and diversity in the workplace
- provide and/or arrange opportunities to develop/practice appropriate skills
- plan group processes, including clearly identifying the purpose of the discussion or meeting, confirming the appropriate people are available and planning a basic outline of the approach and/or agenda
- facilitate meetings, including confirming with group members the purpose of the discussion or meeting, engaging people in discussion and assisting the group to reach an agreed outcome within the allotted timeframe
- record meeting outcomes
- follow up group processes, including identifying actions required to follow up outcomes of a discussion or meeting
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- company policies and procedures as they apply to the work area, including areas covered by legislation, such as sexual harassment, equal employment opportunity (EEO)/affirmative action, anti-discrimination, racial vilification and workplace bullying, occupational health and safety (OHS), food safety and environmental management
- industry awards and enterprise agreements to develop an awareness of the main issues covered as they affect day-to-day work arrangements
- systems and programs in the workplace to support development and mentoring of others
- relevant resources to support mentoring role and responsibilities
- techniques for structuring and explaining work-related information to meet the needs of people in the work area
- interpersonal skills, including appropriate questioning, listening and feedback techniques
- training/assessment arrangements in the workplace and related responsibilities
- boundaries of responsibility and related procedures for feedback, counselling and disciplinary procedures
- formal arrangements and responsibilities for consulting others relating to work role
- meeting procedures and recording requirements as relevant in the workplace

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: • model behaviour and performance consistent with company policy and procedures • support others in their behaviour and performance • provide feedback on performance and take corrective action on inappropriate behaviours • plan and organise group meetings or activities to engage participation • support group meetings to gain clear outcomes.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: • advice on workplace policies, codes of practice and procedures • opportunities to interact with others using typical workplace communication processes • typical group forums, such as structured group discussions, committee meetings and work groups • workplace systems and procedures for consultation, feedback, counselling and discipline • advice on conditions of employment and entitlements • information systems, including recording and retrieval systems.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role. Examples could be: • FDFOP2005A Work in a socially diverse environment • FDFPPL3004A Lead work teams and groups.
Guidance information for	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

EVIDENCE GUIDE	
assessment	a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Policies and procedures	Work is carried out in accordance with company policies, procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Mentoring and feedback arrangements	Mentoring and feedback arrangements may be: • formal or informal
Corrective action	Corrective action may include: • reporting an incident to a more senior person as appropriate
Group processes	Group processes may include: • formal meeting procedures and informal discussions • group meetings
Communication systems	Communication systems reflect the culture of the workplace and the workforce. This may include: • communicating with people from diverse cultural backgrounds and with people with limited English language and literacy skills
Meeting procedures	Meeting procedures include: • developing an agenda • seeking input • recording actions arising and working towards

FNSASIC302 Develop, present and negotiate client solutions

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to provide advice on deposit products, non-cash payment facilities and general insurance products

It applies to individuals with excellent communication skills who are authorised as Australian Securities and Investments Commission (ASIC) registered Australian financial services licence (AFSL) holders to provide advice about products and services at ASIC Tier 2 level.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Unit Sector

ASIC units

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Develop appropriate strategies and solutions	1.1 Determine appropriate strategy to provide for identified needs and outcomes by analysing products and client risk profile, and conducting assessment of client needs 1.2 Conduct relevant research, analysis and product modelling, and draft appropriate solution, plan, policy or transaction for presentation to client demonstrating understanding of ASIC identified generic and specialist knowledge relevant to products

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	being offered
2. Present appropriate strategies and solutions to client	2.1 Explain and discuss proposed transaction with client in clear and unambiguous way, demonstrating product knowledge appropriate for service or product offered 2.2 Ensure that relevant details, terms and conditions of product or service are reinforced to client with impacts and possible risks of solution disclosed in clear and concise manner 2.3 Provide client with written supporting documentation and guide client through key aspects of documentation
3. Negotiate financial plan, policy or transaction with client	3.1 Discuss and clarify any concerns or issues client has regarding proposed plan, policy or transaction 3.2 Seek confirmation to ensure that client understands proposed plan, policy or transaction
4. Coordinate implementation of agreed plan, policy or transaction	4.1 Gain client's formal agreement to proposed plan, policy or transaction 4.2 Clearly explain and confirm that client understands associated fees, cost structures and timeframes for execution and processing
5. Complete and maintain necessary documentation	5.1 Ensure that proposal and all other statutory and transactional documents are completed and signed off by client 5.2 Confirm that signed agreement and all copies of appropriate documentation are exchanged
6. Provide ongoing service where requested by client	6.1 Ensure that type and form of ongoing service, including reporting on performance and review of plan, policy or transaction, is understood by client 6.2 Clearly explain fees and costs for any ongoing and specifically defined services and ensure client understands these expenses 6.3 Provide ongoing services as required

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Reading	1.2	• Recognises and analyses information from relevant sources to safeguard client needs and ensure currency of product and service
Writing	1.1, 1.2, 2.3, 3.2, 4.2, 5.1, 5.2, 6.1-6.3	• Uses clear, specific and industry related terminology to complete and update workplace documentation
Oral Communication	2.1-2.3, 3.1, 3.2, 4.2, 5.2, 6.1-6.3	• Clearly articulates requirements using language appropriate to the audience and environment • Confirms the understanding of others through active listening and questioning
Numeracy	4.2, 6.2	• Interprets and uses financial product information and analyses numerical data within spreadsheets and database
Navigate the world of work	1.2 , 5.1	• Develops knowledge of legislation and regulations relevant to current role • Takes responsibility for providing advisory services and documentation that comply with legal and organisational requirements
Interact with others	2.1-2.3, 4.1, 4.2, 6.1, 6.2	• Selects and uses appropriate conventions and protocols when communicating with clients to build rapport, seek or share information, negotiate agreement and maintain service relationship • Adapts personal communication style to show respect for the values, beliefs and cultural expectations of others
Get the work done	1.1, 1.2, 2.3, 5.1, 5.2, 6.3	• Takes responsibility for the sequence and priority of tasks within own workload to achieve effective and compliant outcomes for all stakeholders • Uses analytical processes to determine appropriate solutions that meet client needs • Uses familiar digital tools and systems to complete job tasks

Assessment Requirements for FNSASIC302 Develop, present and negotiate client solutions

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- interpret and comply with industry regulations and codes of practice including, for insurance products, the required approval or authority to accept the transfer of risk
- explain the characteristics, benefits and impacts of financial products and services to clients
- present appropriate financial products and services to clients and successfully negotiate a plan, policy or transaction.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must satisfy the knowledge requirements relevant to the products and activities in which advice is given.

For general insurance, deposit products and non-cash payments and relevant first home saver account products the individual must:

- explain the legal environment including disclosure and compliance covering:
  - role of the representative or adviser
  - relevant legal principles including the Corporations Act, Financial Services Reform Act (FSRA), Competition and Consumer Act, Insurance Contracts Act and Australian Securities and Investments Commission (ASIC) Act
  - relationship between ethics and regulatory requirements including good faith, utmost good faith, full disclosure of remuneration and fees, and any other conflicts of interest which may influence the adviser’s recommendation
- name relevant industry codes of practice and conduct

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- identify complaints resolution procedures (internal and external)
- outline relevant ASIC regulatory guidelines.

For general insurance the individual must:

- summarise the characteristics and participants of Australian insurance markets and the roles played by intermediaries, and identify insurance products including:
  - definition of an insurance product
  - conditions, exclusions and level of coverage of risk transfer products
  - types of insurance products
  - pricing of risk products
- identify taxation issues relating to insurance products
- explain advisory functions including:
- role of the representative, broker or adviser
  - participants in the insurance advisory services market
  - range of services provided
  - profile and financial information of the client
  - appropriateness of a risk assessment
- summarise the specific product knowledge for the general insurance products in which advice is given including:
  - standard cover (and deviations)
  - policy wordings
  - taxes and charges
  - insurance claims
  - premium rating and risk selection
  - reporting
  - product development
  - underwriting.

For deposit products and non-cash payment facilities the individual must:

- name the types of deposit products and non-cash payment products
- summarise the product characteristics.

For first home saver accounts the individual must:

- name the types of first home saver account products including the range of accounts, associated risks and alternative products
- summarise the product characteristics – eligibility and withdrawal, and government conditions
- explain the taxation issues relating to first home saver accounts.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the financial services and products advice field of work and include access to:

- common office equipment, technology, software and consumable
- financial services product information.

Assessors must satisfy NVR/AQTF assessor requirements

FNSPIM410 Collect, assess and use information

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Training Package Version 1.0.

Application

This unit describes the skills and knowledge involved in obtaining information from various sources, analysing and interpreting the information to draw useful conclusions and provide advice to customers or management.

It applies to individuals who work independently and in teams using specialised knowledge, systematic approaches and research skills to complete requirements.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Unit Sector

Personal injury management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Clarify the requirements for information	1.1 Clarify scope and purpose for which the information is required 1.2 Determine timelines for collection and presentation of information
2. Collect and organise information and data	2.1 Identify relevant sources of information and data 2.2 Obtain information and data and appropriately record in

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	accordance with legislative requirements 2.3 Check information and data to confirm that it is accurate, up to date and comprehensive 2.4 Organise information and data for ease of use
3. Analyse and draw conclusions	3.1 Interpret and analyse information and data 3.2 Determine and discuss significance of information and data with appropriate personnel 3.3 Ascertain conclusions based on information and data
4. Present information in appropriate format	4.1 Present information in an appropriate format and in accordance with organisation procedures 4.2 Evaluate completeness and accuracy of the information and data and ensure the conclusions are justified 4.3 Ensure the deadline for presentation of the information is met

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 2.1, 2.2, 2.3, 3.1, 4.2	• Interprets analyses and evaluates information from a range of sources and consolidates information relevant to requirements
Writing	1.1, 2.2, 2.4, 3.2, 3.3, 4.1	• Accurately records information from investigations using formats appropriate for purpose • Uses language, concepts and terminology appropriate to audience to convey, clarify and present explicit information and requirements
Oral Communication	1.1, 3.2	• Participates in verbal exchanges using active listening and questioning and to determine and confirm information • Presents data/information using language, tone and pace appropriate for the audience and purpose
Numeracy	1.2, 2.3, 2.4, 3.1, 4.2	• Performs basic mathematical calculations to determine accuracy of data to achieve required outcomes • Organises and interprets numerical data from a range

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		of sources • Develops timelines for collection and presentation of information
Navigate the world of work	2.2, 4.1	• Operates according to legal responsibilities and recognises and responds to set protocols
Get the work done	1.1, 1.2, 2.1, 2.2, 2.4, 3.2, 3.3, 4.1, 4.3	• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effectiveness • Uses the main features and functions of digital tools to complete work tasks

Assessment Requirements for FNSPIM410 Collect, assess and use information

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- clarify requirements for collection of information
- collect and organise information
- analyse information and draw conclusions
- present information in appropriate formats
- use organisational technology.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- compare and contrast investigation methods
- describe the key types and sources of information to access
- describe the key features of relevant:
  - organisational policy and procedures
  - organisational products and services
  - information and communications technology
  - legislative reporting requirements.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the personal injury management field of work and include access to:

- office equipment, technology, software and consumables

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- organisational records, policy and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

HLTAID003 Provide first aid

Modification History

Release	Comments
Release 6	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 5	Updated mapping information. Changes to assessment requirements. Equivalent outcome.
Release 4	Updated mapping information. Equivalent outcome.
Release 3	Updated mapping information.
Release 2	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to elements and performance criteria, changes to scope of unit. New evidence requirements for assessment. Removal of prerequisite unit.

Application

This unit describes the skills and knowledge required to provide a first aid response to a casualty. The unit applies to all workers who may be required to provide a first aid response in a range of situations, including community and workplace settings.

Specific licensing /regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Respond to an emergency situation	1.1 Recognise an emergency situation 1.2 Identify, assess and manage immediate hazards to health and safety of self and others 1.3 Assess the casualty and recognise the need for first aid response 1.4 Assess the situation and seek assistance from emergency response services
2. Apply appropriate first aid procedures	2.1 Perform cardiopulmonary resuscitation (CPR) in accordance with Australian Resuscitation Council (ARC) guidelines 2.2 Provide first aid in accordance with established first aid principles 2.3 Display respectful behaviour towards casualty 2.4 Obtain consent from casualty where possible 2.5 Use available resources and equipment to make the casualty as comfortable as possible 2.6 Operate first aid equipment according to manufacturer's instructions 2.7 Monitor the casualty's condition and respond in accordance with first aid principles
3. Communicate details of the incident	3.1 Accurately convey incident details to emergency response services 3.2 Report details of incident to workplace supervisor as appropriate 3.3 Maintain confidentiality of records and information in line with statutory and/or organisational policies

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
4. Evaluate the incident and own performance	4.1 Recognise the possible psychological impacts on self and other rescuers involved in critical incidents 4.2 Participate in debriefing to address individual needs

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to elements and performance criteria, changes to scope of unit. New evidence requirements for assessment. Removal of prerequisite unit.

Performance Evidence

e candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be evidence that the candidate has completed the following tasks in line with state/territory regulations, first aid codes of practice, Australian Resuscitation Council (ARC) guidelines and workplace procedures:

- Followed DRSABCD in line with ARC guidelines, including:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - performed at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
  - performed at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
  - responded appropriately in the event of regurgitation or vomiting
  - managed the unconscious breathing casualty
  - followed single rescue procedure, including the demonstration of a rotation of operators with minimal interruptions to compressions
  - followed the prompts of an Automated External Defibrillator (AED)
- Responded to at least two simulated first aid scenarios contextualised to the candidate's workplace/community setting, including:
  - conducted a visual and verbal assessment of the casualty
  - demonstrated safe manual handling techniques
  - post-incident debrief and evaluation
  - provided an accurate verbal or written report of the incident
- Applied first aid procedures for the following:
  - allergic reaction
  - anaphylaxis
  - bleeding control
  - choking and airway obstruction
  - envenomation, using pressure immobilisation
  - fractures, sprains and strains, using arm slings, roller bandages or other appropriate immobilisation techniques
  - respiratory distress, including asthma
  - shock

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- State/Territory regulations, first aid codes of practice and workplace procedures including:
  - ARC Guidelines relevant to provision of CPR and first aid
  - safe work practices to minimise risks and potential hazards
  - infection control principles and procedures, including use of standard precautions
  - requirements for currency of skill and knowledge
- legal, workplace and community considerations including:
  - awareness of potential need for stress-management techniques and available support following an emergency situation
  - duty of care requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - respectful behaviour towards a casualty
  - own skills and limitations
  - consent
  - privacy and confidentiality requirements
  - importance of debriefing
- considerations when providing first aid including:
  - airway obstruction due to body position
  - appropriate duration and cessation of CPR
  - appropriate use of an AED
  - chain of survival
  - standard precautions
  - how to conduct a visual and verbal assessment of the casualty
- principles and procedures for first aid management of the following scenarios:
  - abdominal injuries
  - allergic reaction
  - anaphylaxis
  - basic care of a wound
  - bleeding control
  - burns
  - cardiac conditions, including chest pain
  - choking and airway obstruction
  - crush injuries
  - diabetes
  - dislocations
  - drowning
  - envenomation
  - environmental impact, including hypothermia, hyperthermia, dehydration and heat stroke
  - eye and ear injuries
  - fractures
  - febrile convulsions
  - head, neck and spinal injuries
  - minor skin injuries
  - needle stick injuries
  - poisoning and toxic substances
  - respiratory distress, including asthma
  - seizures, including epilepsy
  - shock
  - soft tissue injuries, including strains and, sprains
  - stroke

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - unconsciousness
- basic anatomy and physiology relating to:
  - how to recognise a person is not breathing normally
  - chest
  - response/consciousness
  - upper airway and effect of positional change
  - considerations in provision of first aid for specified conditions

Assessment Conditions

Skills must be demonstrated working individually in an environment that provides realistic in-depth, industry-validated scenarios and simulations to assess candidates' skills and knowledge.

Assessment resources must include:

- adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
- adrenaline auto-injector training device
- AED training device
- placebo bronchodilator and spacer device
- roller bandages
- triangular bandages
- workplace First Aid kit
- workplace injury, trauma and/or illness record, or other appropriate workplace incident report form for written reports
- wound dressings

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessor requirements

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTAID011 Provide First Aid

Modification History

Not applicable.

Application

This unit describes the skills and knowledge required to provide a first aid response to a casualty in line with first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies.

The unit applies to all persons who may be required to provide a first aid response in a range of situations, including community and workplace settings.

Specific licensing/regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Respond to an emergency situation.	1.1. Recognise and assess an emergency situation. 1.2. Ensure safety for self, bystanders and casualty. 1.3. Assess the casualty and recognise the need for first aid response. 1.4. Seek assistance from emergency services.
2. Apply appropriate first aid procedures.	2.1. Perform cardiopulmonary resuscitation (CPR) in accordance ARC guidelines. 2.2. Provide first aid in accordance with established first aid principles. 2.3. Display respectful behaviour towards casualty. 2.4. Obtain consent from casualty where possible. 2.5. Use available resources and equipment to make the casualty as comfortable as possible. 2.6. Operate first aid equipment according to manufacturers' instructions. 2.7. Monitor the casualty's condition and respond in accordance with first aid principles.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

3. Communicate details of the incident.	3.1. Accurately convey incident details to emergency services. 3.2. Report details of incident in line with appropriate workplace or site procedures. 3.3. Complete applicable workplace or site documentation, including incident report form. 3.4. Maintain privacy and confidentiality of information in line with statutory or organisational policies.
4. Review the incident.	4.1. Recognise the possible psychological impacts on self and other rescuers and seek help when required. 4.2. Contribute to a review of the first aid response as required.

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and not equivalent to HLTAID003 Provide first aid

Assessment Requirements for HLTAID011 Provide First Aid

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the workplace or community setting.

There must be evidence that the candidate has completed the following tasks in line with State/Territory regulations, first aid codes of practice, first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies and workplace or site procedures:

- managed, in line with ARC guidelines, the unconscious, breathing casualty including appropriate positioning to reduce the risk of airway compromise
- managed, in line with ARC guidelines, the unconscious, non-breathing adult, including:
  - performing at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
  - following the prompts of an automated external defibrillator (AED) to deliver at least one shock
  - demonstrating a rotation of single rescuer operators with minimal interruptions to compressions
  - responding appropriately in the event of regurgitation or vomiting
- managed, in line with ARC guidelines, the unconscious, non-breathing infant, including:
  - performing at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
- managed casualties, with the following:
  - anaphylaxis
  - asthma
  - non-life-threatening bleeding
  - choking
  - envenomation, using pressure immobilisation
  - fractures, dislocations, sprains and strains, using appropriate immobilisation techniques
  - minor wound cleaning and dressing
  - nosebleed
  - shock

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- responded to at least one simulated first aid incident contextualised to the candidate's workplace or community setting, where the candidate has no knowledge of the casualty's condition prior to starting treatment, including:
  - identifying the casualty's illness or injury through history, signs and symptoms
  - using personal protective equipment (PPE) as required
  - providing appropriate first aid treatment
  - conveying incident details to emergency services or advising casualty on any required post incident action
  - providing an accurate verbal and written report of the incident
  - reviewing the incident.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- guidelines and procedures including:
  - ARC guidelines relevant to the provision of first aid
  - first aid guidelines from Australian national peak clinical bodies
  - potential incident hazards and risk minimisation processes when providing first aid
  - infection control procedures, including use of standard precautions and resuscitation barrier devices
  - requirements for currency of skill and knowledge
  - first aid codes of practice
  - appropriate workplace or site procedures relevant to the provision of first aid
  - contents of first aid kits
- legal, workplace and community considerations including:
  - duty of care requirements
  - own skills and limitations
  - consent and how it relates to the conscious and unconscious casualty
  - privacy and confidentiality requirements
  - awareness of potential need for stress management techniques and available support for rescuers
- considerations when providing CPR, including:
  - upper airway and effect of positional change
  - appropriate duration and cessation of CPR
  - appropriate use of an AED
  - safety and maintenance procedures for an AED
  - chain of survival
  - how to access emergency services
- techniques for providing CPR to adults, children and infants including:
  - how to recognise that a casualty is unconscious and not breathing normally

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - rate, ratio and depth of compressions and ventilations
  - correct hand positioning for compressions
  - basic anatomy, physiology and the differences between adults, children and infants relating to CPR
- signs, symptoms and management of the following conditions and injuries:
  - allergic reaction
  - anaphylaxis
  - asthma
  - non-life-threatening and life-threatening bleeding
  - burns
  - cardiac conditions, including chest pain
  - choking
  - diabetes
  - drowning
  - envenomation - all current treatments
  - eye injuries
  - fractures, dislocations, strains and sprains
  - head, neck and spinal injuries
  - hypothermia
  - hyperthermia
  - minor wounds
  - nose-bleed
  - poisoning
  - seizures
  - shock
  - sharps injuries
  - stroke.

Assessment Conditions

Each candidate to demonstrate skills in an environment that provides realistic in-depth, scenarios and simulations to assess candidates' skills and knowledge.

Due to the nature of this type of training, it is acceptable for the performance evidence to be collected in a simulated environment.

Compression and ventilation skills must be demonstrated on resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures.

Assessment must ensure access to:

- adult and infant resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures
- adrenaline auto-injector training device

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- AED training devices
- workplace first aid kit
- placebo bronchodilator and spacer device
- different types of wound dressings and bandages
- blankets and items to treat for shock
- personal protective equipment (PPE)
- workplace injury, trauma or illness record, or other applicable workplace or site incident report form.

Simulated assessment environments must simulate real-life situations where these skills and knowledge would be performed, with all the relevant equipment and resources of that workplace or community environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors and must hold this unit or demonstrate equivalent skills and knowledge to that contained within this unit.

ICTWEB201 Use social media tools for collaboration and engagement

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to establish a social networking presence, using social media tools and applications. It includes the requirement to review, compare, and use different types of social networking tools and applications.

It applies to information and communications technology (ICT) personnel who need to develop a social networking web presence for a small or large office environment, using social media tools and applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Describe the different types of social media tools and applications	1.1 Explain the characteristics of the term ‘social media’ 1.2 Identify different types of social-media tools and applications 1.3 Illustrate some of the issues associated with the use of social media tools and applications

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
2. Compare different types of social media tools and applications	2.1 Select one social media type to review 2.2 Review the most popular tools, and applications, within that social media type 2.3 Itemise the benefits across a range of the most popular tools and applications 2.4 Select the most appropriate social media tool or application
3. Set up and use, popular social media tools and applications	3.1 Identify the social media tools and applications available for possible implementation 3.2 Initiate the preferred social media tools, and applications, for use 3.3 Establish the social media interface, using text and file content 3.4 Initiate social networking interaction 3.5 Test and evaluate tools, and applications, for ease of use 3.6 Present the findings

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.2, 2.2	• Extract the relevant information from technical and organisational documents
Writing	1.1, 2.2, 2.3, 3.3, 3.4, 3.6	• Develop the content in a manner that supports and conveys information, using the appropriate structures and specialised language
Navigate the world of work	1.3	• Understands legal and ethical responsibilities, regarding the use of social media tools
Get the work done	2.1, 2.2, 2.4, 3.1, 3.2, 3.5, 3.6	• Makes routine decisions and implements standard procedures for routine tasks • Understands the purposes, specific functions, and the key features of common digital systems and tools, and operates them effectively to complete routine tasks

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Requirements for ICTWEB201 Use social media tools for collaboration and engagement

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify different types of social media tools and applications, and the issues associated with their use
- access the internet, set up a social networking presence and upload and link a wide variety of files
- use and evaluate social media tools and applications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list basic technical terminology in relation to social networking, social media applications, and tools
- outline basic methods of uploading images, text files, portable document format (PDF) files, audio files, video files, and link the associated files
- state the features, and functions, of social media applications
- list import and export software functions
- explain how to link documents
- explain the process of tagging, in order to facilitate collaborative folksonomy
- list social media applications and procedures, for connecting to social networking sites
- identify and describe, input and output devices
- describe, and use, really simple syndication (RSS) feeds to connect a social network.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the website technologies field of work, and include access to:

- a personal computer (PC) and printer
- the internet
- social-media tools and applications
- online instructional documents.

Assessors must satisfy NVR/AQTF assessor requirements.

MEM05004 Perform routine oxy fuel gas welding

Modification History

Release 1. Supersedes and is equivalent to MEM05004C Perform routine oxy acetylene welding

Application

This unit of competency defines the skills and knowledge required to prepare materials and perform routine oxy fuel gas welding of mild/low carbon steel and cast iron where the welding is not required to meet an Australian Standard or equivalent.

Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements MEM05055 Weld using oxy fuel gas welding process should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Competency Field

Fabrication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Prepare equipment for welding**	2.1	Check condition of gas handling equipment
		2.2	Assemble and set up fuel gas welding equipment according to SOPs
		2.3	Determine and set gas pressures
		2.4	Select consumables
3	**Prepare materials for welding**	3.1	Identify location of welds in accordance with job specifications
		3.2	Clean and prepare materials ready for welding
4	**Perform routine welding using oxy fuel gas**	4.1	Weld materials to job requirements
		4.2	Clean welds according to SOPs

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Fuel gases include one (1) or more of the following:	• acetylene • liquefied petroleum gas (LPG) • hydrogen
Materials include one (1) or more of the following:	• mild/low carbon steel • cast iron
Consumables include one (1) or more of the following:	• filler rods • fluxes
Welds include the following:	• butt • fillet
Preparation includes one (1) or more of the following:	• preheating • setting up jigs • fixtures • clamps • joint preparation
Fuel gas welding equipment includes the following:	• gas cylinders • hoses • blowpipes • tips and nozzles • regulators • flashback arrestors

Assessment Requirements for MEM05004 Perform routine oxy fuel gas welding

Modification History

Release 1. Supersedes and is equivalent to MEM05004C Perform routine oxy acetylene welding

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- cleaning and preparing materials for welding
- setting up:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors
- selecting settings and consumables
- butt and fillet weld materials to comply with specifications
- cleaning welds according to SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- preparatory requirements
- equipment and equipment settings
- purpose of, and setting up requirements, of:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- fuel gas properties and applications
- weld characteristics.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing routine oxy fuel gas welding at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05006 Perform brazing and/or silver soldering

Modification History

Release 1. Supersedes and is equivalent to MEM05006C Perform brazing and/or silver soldering

Application

This unit of competency defines the skills and knowledge required to perform brazing (including braze welding) and/or silver soldering and includes the preparation of materials and equipment and the inspection of the completed work.

It applies to silver soldering and brazing using all grades of silver solder and braze.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required see unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Prepare heating equipment**	2.1	Select the correct process to meet the job specifications
		2.2	Ensure heating equipment is in safe working condition
		2.3	Assemble heating equipment and set up according to SOPs
		2.4	Determine and set gas pressures
3	**Prepare materials**	3.1	Select and prepare consumables
		3.2	Prepare materials using appropriate tools and techniques
		3.3	Assemble/align materials to meet specifications
		3.4	Identify distortion prevention measures and take appropriate action
		3.5	Undertake test run and verify
4	**Braze and/or silver solder**	4.1	Preheat materials as required
		4.2	Apply consumables using appropriate techniques

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	4.3	Apply jointing material in appropriate quantities
	4.4	Anneal material where required
5 **Inspect joints**	5.1	Remove excess jointing materials
	5.2	Inspect joints and report/record inspection results according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include one (1) or more of the following:
- ferrous
- non-ferrous

Fuel gases include one (1) or more of the following:
- acetylene
- liquefied petroleum gas (LPG)
- hydrogen

Heating equipment includes the following:
- gas cylinders
- hoses
- blowpipes
- tips and nozzles
- regulators

Assessment Requirements for MEM05006 Perform brazing and/or silver soldering

Modification History

Release 1. Supersedes and is equivalent to MEM05006C Perform brazing and/or silver soldering

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- checking condition of equipment
- setting up:
  - gas cylinders
  - hoses
  - blowpipes
  - tips and nozzles
  - regulators
  - flashback arrestors
- preparing to braze and/or silver solder by assembling/aligning materials in an appropriate manner and applying distortion prevention methods to meet specifications
- applying consumables and brazing and/or silver soldering ferrous and non-ferrous materials
- annealing material using appropriate techniques
- inspecting joints and removing excess jointing materials and recording the results.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- potential equipment faults
- reasons for selecting specific methods of assembly/alignment
- procedures for minimising distortion of the materials being brazed/braze welded/silver soldered
- procedures for assembling and setting up the specific heating equipment and reasons for selection
- reasons for selecting specific consumables

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- procedures for preheating the materials to be joined and precautions to be observed
- conducting test runs
- procedures for normalising the temperature of jointed materials and the consequences of inappropriate techniques
- typical applications of brazing/braze welding and silver soldering processes
- procedures for removing excess jointing material
- effects of the use of inappropriate techniques and quantities of jointing material on the performance of the jointed materials
- procedures for inspecting brazed/braze welded/silver soldered joints.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing brazing and or silver soldering at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM05007 Perform manual heating and thermal cutting

Modification History

Release 1. Supersedes and is equivalent to MEM05007C Perform manual heating and thermal cutting

Application

This unit of competency defines the skills and knowledge required to perform manual heating, thermal cutting and gouging including the assembly and disassembly and operation of the equipment on a range of materials.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

MEM07005 Perform general machining

Modification History

Release 1. Supersedes and is equivalent to MEM07005C Perform general machining

Application

This unit of competency has been developed for Engineering Tradesperson – Mechanical apprenticeship training and the recognition of trade-level skills in non-computer numerical controlled (CNC) machining of ferrous and non-ferrous materials.

Where high level production machining applications are undertaken unit MEM07041 Perform production machining should be selected.

Where set-up and operation of electro-discharge machines (EDM) is required unit MEM07014 Perform electro-discharge machining (EDM) operations should also be selected.

Where machining is undertaken without undertaking any set up, including mounting of tools, setting of speeds, feeds and other operational parameters unit MEM07024 Operate and monitor machine and process and unit MEM07025 Perform advanced machine and process operation, should be selected as appropriate.

Where the selection and use of precision measurement is required unit MEM12003 Perform precision mechanical measurement should also be selected.

Where substantial marking out is required unit MEM12006 Mark off/out (general engineering) should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Weight: 8

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006	Plan work activities
MEM16006	Organise and communicate information
MEM18001	Use hand tools

Competency Field

Machine and process operations

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Determine sequence of operations**	2.1	Determine sequence of operations to meet job specifications
		2.2	Select appropriate material and establish datum, as required

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

3	**Select and mount tools**	3.1	Select appropriate tools for job, sharpen and shape, as required
		3.2	Mount and position tools to meet requirements
4	**Perform machining operations**	4.1	Transfer dimensions to determine machining parameters
		4.2	Set machining parameters to meet job requirements and maximise tool life
		4.3	Ensure work is securely held to avoid damage to product, and meet safety requirements
		4.4	Perform machining to produce product to meet specifications
		4.5	Carry out routine maintenance and adjustments, as required
5	**Check components**	5.1	Check components for compliance with specifications
		5.2	Rectify non-compliant product in accordance with SOPs as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MEM07005 Perform general machining

Modification History

Release 1. Supersedes and is equivalent to MEM07005C Perform general machining

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning a job including identifying job requirements from drawings, instructions or specifications and a sequence of operations
- identifying any required tooling, measuring equipment and accessories
- selecting and mounting required tooling
- selecting material and marking out, as required
- performing machining to meet specifications
- checking machined components for conformance to specifications and identifying adjustments to be made to settings/tooling
- rectifying non-compliant components
- carrying out routine maintenance and adjustments, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- reasons for selecting the chosen sequence of operations
- methods of work holding for machining operations
- transferring dimensions, including establishing datum points/lines
- geometry of cutting tools for a range of materials and applications
- reasons for maintaining properly sharpened cutting tools
- principles underpinning machining operations
- selection of feeds and speeds to suit a range of materials and operations
- methods of mounting a range of cutting tools
- safety precautions associated with clamping materials, guards and shields
- tolerances and limits of size
- machine adjustment, lubrication and cleaning
- measurement techniques, tools and devices

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- tools, techniques and equipment for checking components for conformance to specifications and rectifying non-compliant components.

Assessment Conditions

- Assessors must:
  - *have vocational competency in performing general machining at least to the level being assessed with relevant industry knowledge and experience*
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Assessment must include evidence of 320 hours of workplace practice associated with the skills of this unit in a functioning workplace.
- All aspects of competent application of the unit must be addressed including prerequisite competency units and associated workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge assessment may be either verbal or written but must adequately reflect the knowledge requirements of the unit and its prerequisites in a functioning workplace.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM09002 Interpret technical drawing

Modification History

Release 1. Supersedes and is equivalent to MEM09002B Interpret technical drawing

Application

This unit of competency defines the skills and knowledge required to interpret technical drawings.

Technical drawings may utilise perspective, exploded views or hidden view techniques and may include symbol glossaries. Drawings are provided to AS 1100 Technical drawing or AS 1102 Graphical symbols and their equivalents from the full range of engineering disciplines.

Where any technical drawing, sketch, chart, diagram is only used as a technique for communication, then this unit does not apply: unit MEM12023 Perform engineering measurements or unit MEM16006 Organise and communicate information should be selected as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM12023	Perform engineering measurements
MEM12024	Perform computations
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Drawing, drafting and design

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1.	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Identify job requirements from specifications, job sheets or associated work instructions
2.	**Interpret technical drawing**	2.1 Check drawing and version and validate against job requirements
		2.2 Recognise components and assemblies or objects
		2.3 Identify dimensions, instructions and material requirements
		2.4 Recognise symbols used in the drawing
		2.5 Compile list of required materials

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Drawing interpretation includes recognising the following:	• relationship between the views contained in the drawing • objects • units of measurement

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- dimensions of the key features
- symbols

Unit Mapping Information

Release 1. Supersedes and is equivalent to MEM09002B Interpret technical drawing

Assessment Requirements for MEM09002 Interpret technical drawing

Modification History

Release 1. Supersedes and is equivalent to MEM09002B Interpret technical drawing

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting, checking and validating technical drawing against job requirements or equipment
- interpreting technical drawing through recognition of components, assemblies, objects and symbols
- identifying dimensions
- applying drawing conventions appropriate to engineering discipline
- compiling a materials list.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- application of AS 1100 Technical drawing or AS 1102 Graphical symbols
- conventions used in technical drawings
- correct interpretation of instructions contained in drawings
- materials from which drawing object(s) are made and their features and manufacturing and assembly requirements.

Assessment Conditions

- Assessors must:
  - have vocational competency in interpreting technical drawings at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11011 Undertake manual handling

Modification History

Release 1. Supersedes and is equivalent to MEM11011B Undertake manual handling

Application

This unit of competency defines the skills and knowledge required to lift and move materials manually and/or using basic manual handling equipment in a wide range of environments.

Maximum manual lifting weight is limited to Safe Work Australia recommendations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Materials handling

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Lift materials manually**	2.1	Determine material weight correctly utilising most appropriate technique, and assess risks associated with lifting
		2.2	Undertake lifting techniques to Safe Work Australia recommended procedures and having regard to types of movement, methods, storage, height and position
3	**Move/shift materials manually**	3.1	Select appropriate equipment, as required
		3.2	Place material safely and securely on moving equipment
		3.3	Relocate material ensuring safety of personnel and security of material
		3.4	Unload material and place in a safe and secure manner

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Material weight includes	• determined using scales

Assessment Requirements for MEM11011 Undertake manual handling

Modification History

Release 1. Supersedes and is equivalent to MEM11011B Undertake manual handling

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- assessing the risks associated with lifting materials manually and determining the most appropriate technique
- selecting and using the appropriate equipment to move/shift materials ensuring safety of personnel and security of material.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- manual handling techniques, including individual or team lifting
- appropriate equipment associated with move/shift materials
- hazards of incorrect procedures
- Safe Work Australia standards for manual handling.

Assessment Conditions

- Assessors must:
  - have vocational competency in undertaking manual handling at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

MEM12023 Perform engineering measurements

Modification History

Release 1. Supersedes and is equivalent to MEM12023A Perform engineering measurements

Application

This unit of competency defines the skills and knowledge required to perform measurements requiring straightforward use of mechanical measuring devices which incorporate visual inspections representing units of measurement and associated calculations in a range of manufacturing, engineering and related environments. Measurements may be expressed in metric or imperial units.

Electrical/electronic devices used are those not requiring the connection or disconnection of circuitry.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **5**

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify job requirements from specifications, sketches, job sheets or work instructions
2	**Select appropriate device or equipment**	2.1	Determine measurement requirements from specifications
		2.2	Select appropriate device or equipment to achieve required outcome according to SOPs
3	**Obtain measurements using a range of measuring devices**	3.1	Use correct and appropriate measuring technique
		3.2	Obtain measurements accurately in a safe and effective manner
		3.3	Determine or verify dimensions using calculations, as required
4	**Maintain measuring devices**	4.1	Undertake routine care and storage of devices to manufacturers' specifications or SOPs
		4.2	Make routine adjustments to devices to maintain device accuracy
5	**Communicate measurements as required**	5.1	Record measurements accurately, as required
		5.2	Prepare freehand sketch which depicts required information, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Specifications include one (1) or more of the following:	• drawings • sketches • job instructions • schematics • diagrams • reference manuals
Measuring devices include one (1) or more of the following:	• protractors • combination squares • set squares • dial indicators • thermometers • tapes • rules • micrometres • vernier-scaled measuring equipment
Calculations include one (1) or more of the following:	• addition • subtraction • multiplication • division • fractions • decimals **Note:** Calculations may be made using a calculator
Routine adjustments	• validating the device using simple zeroing or scale adjustment

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

include the following:

Measurements include one (1) or more of the following:	• length • squareness • flatness • angle • roundness • clearances • any other measurements that can be read off analogue, digital or other measuring device
Information includes one (1) or more of the following:	• dimensions • instructions • base line • datum points

Assessment Requirements for MEM12023 Perform engineering measurements

Modification History

Release 1. Supersedes and is equivalent to MEM12023A Perform engineering measurements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting measurement requirements from specifications
- selecting appropriate measuring device or equipment to achieve the required outcome
- obtaining measurements in a safe and effective manner and recording measurements, including preparing a freehand sketch which depicts required information, as required
- performing calculations to determine or verify dimensions
- storing and maintaining measuring devices including routine adjustments according to manufacturer's specifications or SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- correct application of a range of measuring devices
- correct and appropriate measuring technique for a range of measuring devices
- calculations, including addition, subtraction, multiplication, division, fractions and decimals
- manufacturer's or SOPs for handling and storing a range of measuring devices
- appropriate procedures for adjusting and zeroing a range of measuring devices, including scale adjustment
- appropriate methods of communicating measurements by drawings.

Assessment Conditions

- Assessors must:
  - have vocational competency in performing engineering measurements at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM12024 Perform computations

Modification History

Release 1. Supersedes and is equivalent to MEM12024A Perform computations

Application

This unit of competency defines the skills and knowledge required to estimate approximate answers to arithmetical problems, carry out calculations involving percentages and proportions, and determine simple ratios and averages.

It also covers producing and interpreting simple charts and graphs in manufacturing, engineering or related environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **3**

Pre-requisite Unit

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
		requirements at all times
	1.3	Identify job requirements from specifications, sketches, job sheets or work instructions
	1.4	Establish required calculation outcomes from job instructions
	1.5	Determine required calculation method to suit the application, including selection of relevant arithmetic operations and/or formulae
	1.6	Estimate expected results, including rounding off, as appropriate
2 **Perform calculations**	2.1	Apply calculation method
	2.2	Obtain answer and check against estimation to ensure it is correct
3 **Produce charts and graphs from given information**	3.1	Transpose data to produce charts or graphs
	3.2	Ensure charts or graphs reflect data on which they are based to meet specifications

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for MEM12024 Perform computations

Modification History

Release 1. Supersedes and is equivalent to MEM12024A Perform computations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- obtaining and interpreting data from job instructions and relevant sources to establish required outcomes
- determining the appropriate calculation method to suit the application
- performing calculations and confirming answer/s
- producing and interpreting simple charts and graphs from given data.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- formulae applicable to the determination of perimeter, area and volume of simple geometric shapes and the reasons for using dimensions with the same units
- techniques and procedures for rounding off figures when estimating approximate answers
- features and use of mixed numbers, decimals, fractions and whole numbers
- procedures for carrying out calculations involving fractions and using each of the four basic rules of addition, subtraction, multiplication and division
- concept of percentage and procedures to be followed in converting a decimal and fraction to a percentage
- concepts and calculations of ratio and proportion
- scales applicable to the axes of the graphs or charts
- types of charts and/or graphs used in the individual's field of work
- upper and lower limits of acceptability applicable to data entered on a graph or chart
- trends indicated by the slope or gradient of a graph
- action to be taken when given trends occur or set limits are approached on graphs or charts
- procedures for drawing 'lines of best fit'
- trends indicated by the graphs or charts drawn.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

- Assessors must:
  - have vocational competency in performing computations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM13015 Work safely and effectively in manufacturing and engineering

Modification History

Release 1. New unit. Supersedes and not equivelant to MEM13014A Apply principles of occupational health and safety in the work environment, MEM14004A Plan to undertake a routine task, MEM15002A Apply quality systems, MEM15024A Apply quality procedures, MEM16007A Work with others in a manufacturing, engineering or related environment.

Application

This unit of competency defines the skills and knowledge required to work effectively in manufacturing and engineering work situations, including planning routine work and participating in and following work health and safety (WHS) procedures. The unit applies to working either individually or in a team situation and includes contributing to work-related group activities in a manufacturing or engineering workplace.

This unit covers WHS skills associated with carrying out routine operational activities safely and in compliance with legislative and regulatory requirements.

The unit covers the skills associated with participation in quality systems, communication and cooperation with others. The unit applies to workplaces with informal or formal quality management and improvement systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Competency Field

Work health and safety

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Identify goals, objectives and task requirements and clarify with appropriate persons, where required
		1.2	Prioritise task requirements
2	**Review and modify plan**	2.1	Adjust timelines, priorities and other planning components to respond to contingencies, as necessary
		2.2	Re-examine results of work activity against the plan and identify possible improvements to future performance of work tasks
3	**Work effectively with others in the workplace**	3.1	Identify own role and responsibilities and relationship to other employees, including employees performing related/interdependent activities
		3.2	Identify supervisors and other sources of advice and assistance for own work
		3.3	Apply effective interpersonal skills to interact with others and contribute to activities and objectives
		3.4	Review and modify own work progress to complement the work of others
		3.5	Report own work progress to supervisors and where required to fellow employees using standard operating procedures (SOPs)
4	**Follow safe work practices**	4.1	Check for and identify hazards in the work area before and during work
		4.2	Follow procedures for avoiding or controlling hazards already identified in instructions, signage or other workplace communication
		4.3	Identify and report risks and hazards not covered by procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		4.4	Select, use and maintain relevant personal protective equipment (PPE) by procedures, as required
		4.5	Recognise emergency situations and take appropriate initial emergency action
		4.6	Follow procedures for responding to emergencies
		4.7	Report incidents, injuries and other WHS non-conformances according to procedures
5	**Work within a quality system**	5.1	Follow instructions and procedures and perform duties in accordance with standard operating procedures or quality system requirements
		5.2	Ensure conformance of product and process to specifications
		5.3	Report defects and non-conformance to specifications according to procedures
		5.4	Participate in process improvement procedures, where required
6	**Participate in workplace health and safety procedures**	6.1	Identify workplace health and safety policies and procedures relevant to own work and work area
		6.2	Identify relevant WHS managers and representatives for own work area
		6.3	Provide input to minimise hazards in work area in line with organisation WHS procedures and participative arrangements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Quality systems include one (1) or more of the following

- quality planning
- quality assurance
- quality control
- quality improvement procedures and processes

Task requirements include one (1) or more of the following:

- timeframe
- quality requirements
- outcome and performance requirements
- job history
- checks
- reporting requirements
- tools and equipment
- materials and parts
- supporting documents

Specifications include one (1) or more of the following:

- task lists
- instructions
- manufacturer manuals
- diagrams and schematics
- sketches
- parts lists
- SOPs

Planning includes one (1) or more of the following:

- preparing a plan to complete the task
- organising task into manageable steps including appropriate order and timing
- monitoring the progress of processes related to own responsibilities
- applying relevant WHS instructions
- collecting, sorting, recording results of work
- seeking advice and guidance on setting priorities and timeframes

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- seeking feedback from supervisor, trainer or mentor

Unit Mapping Information

Assessment Requirements for MEM13015 Work safely and effectively in manufacturing and engineering

Modification History

Release 1. New unit. Supersedes and not equivelant to MEM13014A Apply principles of occupational health and safety in the work environment, MEM14004A Plan to undertake a routine task, MEM15002A Apply quality systems, MEM15024A Apply quality procedures, MEM16007A Work with others in a manufacturing, engineering or related environment.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and avoiding or controlling hazards
- reporting hazards, incidents, injuries and other work health and safety (WHS) non-conformances following SOPs
- recognising and responding to emergencies following SOPs
- identifying and obtaining, instructions and information on job requirements, including one or more of the following:
  - verbal or written job instructions
  - specifications
  - SOPs
  - charts
  - lists
- identifying and responding to contingencies, including:
  - equipment breakdowns
  - non-conforming components
  - safety hazards
- recording information into proforma workplace documents, including:
  - production tally forms
  - quality control forms
  - safety incident forms
- performing assigned tasks and checking outcome of own work for conformance to specifications
- identifying own responsibilities within the workplace quality system
- giving and receiving feedback on own and group work
- seeking assistance from supervisors and mentors.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use and application of personal protective equipment
- basic quality system terminology and concept, including:
  - quality assurance
  - quality control
  - quality improvement
- procedures to be followed in performing own work
- objectives, requirements and specifications to which the individual's work is to comply
- costs and consequences of poor quality
- effective interpersonal skills:
  - effective listening
  - basic speaking skills
  - use of workplace terminology and jargon
  - giving and receiving feedback
  - checking and clarifying task-related information
  - verbal, visual and written instructions
  - appropriate modes and methods of communication
- barriers to effective communication
- sources of technical expertise/assistance
- hazards and control measures associated with workplace activities.

Assessment Conditions

- Assessors must:
  - have vocational competency in working safely and effectively in manufacturing and engineering at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM14006 Plan work activities

Modification History

Release 1. Supersedes and is equivalent to MEM14005A Plan a complete activity

Application

This unit of competency covers the skills and knowledge required to plan familiar work activities, whilst following established procedures and work health and safety (WHS) policies and procedures of the organisation.

Planning is undertaken by the individual performing the work. Individual plan components may require modification and prioritising to meet job requirements or to respond to unforeseen circumstances.

Where computations are required to be performed unit MEM12024 Perform computations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **4**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Planning

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Identify outcomes and objectives and clarify with appropriate persons
		1.3	Obtain and clarify relevant specifications and procedures
		1.4	Identify and prioritise individual components of the plan
		1.5	Select and use planning tools and techniques according to the requirements of the work
		1.6	Check the plan for accuracy and relevancy to job requirements
2	**Modify plan components**	2.1	Modify the plan components, as necessary, to respond to unforeseen developments
		2.2	Review the outcome of the work activity and, where necessary, identify future improvements to the plan
3	**Follow WHS requirements**	3.1	Comply with WHS requirements at all times
		3.2	Identify WHS hazards and risks and implement appropriate risk control measures in accordance with SOPs
		3.3	Select, use and maintain appropriate personal protective equipment (PPE) in accordance with SOPs
		3.4	Raise WHS issues with designated personnel in accordance with SOPs
		3.5	Report WHS related actions and incidents according to SOPs

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Plan components include one (1) or more of the following:	• resources • tools and equipment • materials and parts • overall timeframe • job history • quality requirements • criteria for acceptable completion • checks and tests • outcome and performance requirements • WHS requirements
Specifications include one (1) or more of the following:	• task lists • instructions • manufacturer manuals • diagrams and schematics • technical drawings and sketches • parts lists • computer records
Planning techniques and tools include one (1) or more of the following:	• scheduling • time management • brainstorming • setting goals and defined outcomes • prioritising • review and evaluation strategies
Risk control measures	• eliminate the hazard

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

include one (1) or more of the following:

- substitute the hazard with a safer alternative
- isolate the hazard
- use engineering controls to reduce the risk
- use training to reduce the risk
- use PPE

Assessment Requirements for MEM14006 Plan work activities

Modification History

Release 1. Supersedes and is equivalent to MEM14005A Plan a complete activity

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- planning a work activity using appropriate planning tools and techniques whilst following established procedures, including work health and safety (WHS) requirements
- checking the plan to ensure accuracy and conformance and modifying the plan components, as necessary, to overcome any unforeseen difficulties or developments
- identifying hazards and implementing appropriate risk control measures and procedures
- selecting, using and maintaining relevant personal protective equipment (PPE)
- evaluating the effectiveness of risk controls measures
- providing proforma WHS reports in accordance with SOPs, as required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of PPE
- relevant specifications
- sources of advice relating to the objectives, requirements and specifications
- timeframe for activity completion
- quality requirements of the product or service
- techniques and reasons for prioritising of each step in a plan
- modifications that can be made to the plan to respond to unforeseen developments
- risk control measures
- reporting requirements for accidents, incidents and other non-conformances with WHS procedures.

Assessment Conditions

- Assessors must:
  - have vocational competency in planning work activities in a manufacturing and engineering environment at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Application

This unit of competency covers the skills and knowledge required to access, organise and communicate information related to production, maintenance or associated processes or tasks that apply in manufacturing, engineering or related environments.

For accessing and recording of data requiring system knowledge and judgement, Unit MEM16008 Interact with computing technology should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015 Work safely and effectively in manufacturing and engineering

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Access information**	1.1	Determine information requirements of tasks and access relevant information from a range of sources
		1.2	Recognise and use workplace terminology correctly

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Organise and analyse information**	2.1	Interpret information and organise in accordance with work requirements
		2.2	Determine relevance and implications for immediate work requirements
3	**Communicate organised information using established workplace methods**	3.1	Identify purpose of communication and appropriate communication method
		3.2	Communicate information using established workplace methods

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range of sources include using one (1) or more of the following:

- job instructions
- specifications
- standard operating procedures (SOPs)
- charts
- lists
- documents
- computer data
- drawings
- sketches
- tables

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- technical manuals and/or charts
- other applicable reference material

Determining relevance of information includes one (1) or more of the following:

- checking relevance of information to own work
- selecting task relevant information from a larger document or from a diagram
- preparing an opinion based on analysis of simple facts
- expressing an opinion on the cause of faults

Workplace terminology refers to one (1) or more of the following:

- equipment
- processes
- workplace areas
- staff
- procedures

Established workplace methods include using one (1) or more of the following:

- proforma reports
- data entry
- verbal
- drawings

Purpose of communication includes one (1) or more of the following:

- simple incident/non-conformance report
- maintenance request
- production records
- material usage records
- work records
- other standard workplace records

Assessment Requirements for MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- accessing and recording relevant information from a range of sources
- recognising and using workplace appropriate terminology
- reading, interpreting and following information in workplace documentation
- checking and clarifying information
- organising, categorising and sequencing information
- communicating using appropriate methods and procedures for a variety of situations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- types of information relevant to the workplace and required tasks
- terminology used in the workplace relevant to own work
- available sources of information
- information analysis techniques appropriate to tasks and position
- methods of categorising and organising information including correct sequencing of information
- methods of recording and communicating information.

Assessment Conditions

- Assessors must:
  - have vocational competency in organising and communicating information at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM18001 Use hand tools

Modification History

Release 1. Supersedes and is equivalent to MEM18001C Use hand tools

Application

This unit of competency defines the skills and knowledge required to use a range of hand tools for a variety of general engineering applications.

This unit should not be selected if the hand tool is dedicated to a single operation or machine or when a machine-specific/customised tool is used.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measuring equipment is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of power tools/hand held operations is required unit MEM18002 Use power tools/hand held operations should also be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Competency Field

Maintenance and diagnostics

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Use hand tools for general engineering applications**	2.1	Select hand tools appropriate to the task requirements
		2.2	Use hand tools to produce outcomes that meet job specifications
		2.3	Identify unsafe or faulty tools and mark for repair according to designated procedures before, during and after use
		2.4	Undertake routine maintenance of tools using engineering principles, tools, equipment and procedures
		2.5	Store hand tools safely in appropriate location according to procedures and manufacturers' recommendations

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Hand tools include one (1) or more of the following:	• hacksaws • hammers • punches • screwdrivers • sockets • wrenches • scrapers • chisels • gouges • wood planes • files of all cross-sectional shapes and types • hand held taps and dies
Applications include one (1) or more of the following:	• adjusting • dismantling • assembling and finishing of items or components • finishing, cutting, scraping of metallic and non-metallic material to size and shape • tapping/retapping and threading/rethreading new/damaged threads
Drawings include one (1) or more of the following:	• drawings and sketches not covered by AS 1100 Technical drawing or AS 1102 Graphical symbols for electrotechnical documentation, and their equivalents • work specifications that include graphic representations that do not require interpretation
Job specifications include one (1) or more of the following:	• finish • tension • size • shape
Routine maintenance includes one (1) or more of the following:	• cleaning • lubricating • tightening • simple tool repairs • adjustments

Assessment Requirements for MEM18001 Use hand tools

Modification History

Release 1. Supersedes and is equivalent to MEM18001C Use hand tools

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting and using hand tools to produce the desired outcome to job specifications
- following designated procedures for dealing with unsafe or faulty tools
- undertaking routine maintenance and cleaning of hand tools, including storage.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- features and applications of different hand tools used in a general engineering context, including hacksaws, hammers, punches, screwdrivers, sockets, wrenches, scrapers, chisels, gouges, wood planes and files of all cross-sectional shapes and sizes
- common faults and/or defects in hand tools
- procedures for marking unsafe or faulty tools for repair
- routine maintenance requirements for a range of hand tools, including lubricating, tightening, simple tool repairs and adjustments using engineering principles and relevant equipment
- storage location and procedures for a range of hand tools.

Assessment Conditions

- Assessors must:
  - have vocational competency in using hand tools at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Use power tools for general engineering applications**	2.1	Select power tools appropriate to the task requirements
		2.2	Use power tools for a determined sequence of operations to produce desired outcomes to job specifications
		2.3	Identify unsafe or faulty tools and mark for repair before, during and after use according to SOPs
		2.4	Undertake operational maintenance of tools according to principles, techniques and SOPs
		2.5	Store power tools safely in appropriate location according to manufacturers' recommendations and SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Power tools include one (1) or more of the following:	• electric or pneumatic/hydraulic drills • grinders • jigsaws • nibblers • cutting saws • sanders • planers • routers • pedestal drills • pedestal grinders
Power tool operations include one (1) or more of the following:	• clamping • alignments • adjustments
Applications include one (1) or more of the following:	• loosening and fastening items or components • shaping, finishing, cutting, grinding of metallic and non-metallic materials and/or tool bits to size and shape
Drawings include one (1) or more of the following:	• drawings and sketches not covered by AS 1100 Technical drawing or AS 1102 Graphical symbols for electrotechnical documentation, and their equivalents • work specifications that include graphic representations that do not require interpretation
Clamping includes one (1) or more of the following:	• multigrips • vices • jigs and fixtures • clamps
Job specifications include one (1) or more of the following:	• finish • size • shape
Operational maintenance includes one (1) or more of the following:	• cleaning • lubricating • tightening

Assessment Requirements for MEM18002 Use power tools/hand held operations

Modification History

Release 1. Supersedes and is equivalent to MEM18002B Use power tools/hand held operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- selecting and using a range of hand held and fixed power tools for a variety of general engineering applications
- following designated procedures for dealing with unsafe or faulty power tools
- undertaking routine maintenance and cleaning of power tools, including storage.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- features and application of different power tools
- clamping/securing methods
- adjustments/alignments to a range of power tools
- common faults and/or defects in power tools
- procedures for marking unsafe or faulty power tools for repair
- routine maintenance requirements and cleaning of a range of power tools
- storage location and procedures of a range of power tools.

Assessment Conditions

- Assessors must:
  - have vocational competency in using power tools/hand held operations at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM24001B Perform basic penetrant testing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing basic penetrant testing procedures in a range of industrial applications.

Application of the Unit

Application of the unit	This unit applies to basic penetrant testing techniques on fabrications, structures and components across a wide range of industries and restricted to basic visible dye and/or process penetrant line methods. The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operator instructions. Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures. Penetrant testing is performed on critical component or structural zones. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits and must be stored and used in accordance with safe work practices. This unit should not be selected when Unit MEM24002B

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	(Perform penetrant testing) has already been selected. Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected. **Band**: **A** **Unit Weight**: **2**

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic penetrant testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform basic penetrant testing	2.1. Nominated test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standard operating procedures. 2.3. Test media is selected and applied in accordance with workplace practices and specifications. 2.4. Penetrant test is carried out in accordance with relevant work instructions and OH&S requirements. 2.5. Penetrant testing equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of penetrant test(s)	3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures. 3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • preparing inspection areas • identifying discontinuities • applying procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• applying test media • applying principles of penetrant testing techniques • identifying defects • reading and interpreting routine information on written job instructions, specifications and standard operating procedures. • following oral instructions • entering routine and familiar information onto proformas and standard workplace forms
Required knowledge
Look for evidence that confirms knowledge of: • cleaning and preparation processes • precleaning methods and their areas of use - solvents, vapour degrease, etching, detergents, paint removers, mechanical methods • consequences of incorrect preparation • procedures and OH&S requirements in relation to the preparation process • basic concepts and principles of NDT; general terms, purpose of NDT and areas of application of NDT • scope and basic description of test • general properties of penetrants - penetrability, removability, visibility • emulsifier types • developer types • use of standard test panels • established inspection procedures and techniques • types of discontinuities and their consequences • procedure for carrying out penetrant testing • penetrant application • dwell times • penetrant removal • developer application • dry powder • development time • factors affecting indications • non-relevant indications • post-cleaning methods and their areas of use • basic maintenance and storage procedures for testing equipment • OH&S requirements including storage requirements • definition of a defect and common basic defects • methods/procedures for reporting test results

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform basic penetrant testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic penetrant testing or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures,

Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Preparation processes	Surface cleaning and drying
Obvious discontinuities	Observed changes in material homogeneity
Reported	Accurate identification of location and size of discontinuities

MEM27004 Maintain and repair engine lubrication systems

Modification History

Release 1. Supersedes and is equivalent to MEM18028B Maintain engine lubrication systems

Application

This unit of competency defines the skills and knowledge required to assess lubrication system operations and repair or replace faulty components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM09002	Interpret technical drawing
MEM11011	Undertake manual handling
MEM12023	Perform engineering measurements
MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information
MEM18001	Use hand tools
MEM18002	Use power tools/hand held operations
MEM18055	Dismantle, replace and assemble engineering components

Competency Field

Fixed and mobile plant

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Assess lubrication system operation**	2.1	Identify lubrication system and lubricant specifications prior to any testing
		2.2	Undertake system checks safely and to prescribed procedures
		2.3	Assess lubrication system operation, including condition and appropriateness of lubricant fluid, integrity of lubrication system and condition of components
		2.4	Determine flows, pressures and temperatures and record
		2.5	Identify leaks and any sources of contamination
		2.6	Isolate faults to component level using test equipment and determine appropriate corrective action
		2.7	Evaluate results of spectrographic or laboratory analysis and make recommendations regarding adjustments to future maintenance activities
		2.8	Assess auxiliary lubrication systems for correct operation
3	**Rectify faulty components**	3.1	Determine component wear and clearances using appropriate test equipment and manufacturer recommendations
		3.2	Select replacement components using manufacturers' data

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.3 Remove components and refit to engine
	3.4 Make final adjustments that bring system in line with specifications
	3.5 Record test and rectification activities
	3.6 Ensure engine is free of lubricant leaks after rectification work is carried out

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Faults include one (1) or more of the following:	• low or high pressure • low or high temperature • contamination • excessive or too little consumption/flow • leaks • use of incorrect lubricant
Test equipment includes one (1) or more of the following:	• pressure/temperature gauges • flow meters
Adjustments include setting one (1) or more of the following valves	• bypass • regulating • relief

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

to specified pressures or flows:

Assessment Requirements for MEM27004 Maintain and repair engine lubrication systems

Modification History

Release 1. Supersedes and is equivalent to MEM18028B Maintain engine lubrication systems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications, charts, lists, drawings and service documents prior to any testing on engine lubrication systems
- conducting operational checks of engine lubrication system and determining and recording oil flows, pressures and temperature using appropriate test equipment
- identifying faults of engine lubrication system and determining corrective action
- obtaining and interpreting the results of lubricating oil tests and making recommendations to future maintenance activities
- checking auxiliary lubrication systems for correct operation in accordance with specifications
- undertaking calculations and numerical operations for maintaining engine lubrication systems
- checking lubrication system components for wear and clearances using appropriate test equipment to manufacturer specifications
- removing/refitting and adjusting lubrication system components and make final adjustments to bring system in line with specifications
- recording/reporting test and work activities.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- operation of the lubrication system and procedures for testing/checking lubrication
- tests to be undertaken and equipment and techniques to be used to determine oil flows, pressures and temperatures
- procedures for:
  - recording lubrication system test results
  - analysing lubricating oil samples and reasons that apply

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - removing/replacing lubrication system components
    - adjusting lubrication systems
    - recording test and repair activities
    - checking lubrication systems for leaks
- specifications of the lubrication system components and appropriate corrective action for faulty components
- characteristics of lubricants and application of a variety of lubricants
- likely causes of a range of out of specification test results and appropriate corrective action to be taken
- implications of out of specification test results on maintenance schedules and requirements
- reasons for installing auxiliary lubrication systems on diesel plant and equipment
- operation of the auxiliary lubrication system
- measuring equipment/techniques used to determine lubrication system component wear and clearances.

Assessment Conditions

- Assessors must:
    - have vocational competency in maintaining engine lubrication systems at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use concepts of arithmetic in the solution of engineering problems	1.1. Units of physical quantities are converted to facilitate engineering calculations. 1.2. Calculations are performed to solve problems involving rational and irrational numbers. 1.3. Scientific notation is used to represent numbers. 1.4. Calculations are checked for reasonableness using estimating and approximating techniques.
2. Solve engineering problems involving algebraic expressions with one independent variable	2.1. Algebraic expressions are manipulated using mathematical operations in their correct order.
3. Use two-dimensional geometry to solve practical problems	3.1. Angles expressed in degrees are correctly converted to radians and vice versa. 3.2. The perimeter, area, length and angles of a range of two-dimensional figures are correctly calculated. 3.3. The volume and surface area of complex figures are correctly calculated. 3.4. Points identified in terms of cartesian coordinates can be converted to polar coordinates and vice versa.
4. Use trigonometry to solve practical	4.1. Basic trigonometry functions are used to calculate the lengths of the sides of right-angled triangles.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
problems	4.2. Inverse trigonometry functions are used to determine angles in a right-angled triangle given the lengths of two sides. 4.3. The sine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given one side and two angles. 4.4. The cosine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given two sides and one angle.
5. Graph linear functions	5.1. Linear functions are solved graphically and equations of straight lines are determined from the slope and one point, or two points. 5.2. Two linear functions are solved simultaneously both algebraically and geometrically. 5.3. The length and mid point of a line segment are determined.
6. Solve quadratic equations	6.1. Quadratic equations are solved. 6.2. Simultaneous linear and quadratic equations are solved.
7. Perform basic statistical calculations	7.1. Mean, median and mode are calculated from given data. 7.2. Standard deviation is calculated and interpreted employing graphical representation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

Look for evidence that confirms skills in:
• using and applying mathematical formulas:
  • logical thinking
  • problem solving
  • calculating
  • applying statistics

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
• using computer numerical methods • drawing graphs
Required knowledge
Look for evidence that confirms knowledge of: • transposing and evaluating formulae • polynomials • straight line coordinate geometry • introduction to indices • introduction to trigonometry • circular functions • trigonometry of oblique triangles • trigonometric identities • introduction to functions and their graphs

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply mathematical skills and knowledge to simple engineering applications. Evidence from tasks and projects should/may be used to complement and demonstrate integration of competency.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

EVIDENCE GUIDE	
	workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying mathematical concepts to engineering applications, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Concepts of mathematics	Include arithmetic, algebraic expressions with one independent variable, two-dimensional geometry, trigonometry, linear functions, basic quadratic functions, basic statistical methods

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

RANGE STATEMENT	
Correct order	Refers to the correct procedure when expanding brackets, factorising algebraic expressions, factorising quadratic expressions, simplifying algebraic fractions, transposing formulae, solving simple one variable equations, finding the quotient and remainder given a linear division
Complex figures	May include cones, pyramids, spheres, frustums and intersections of figures singularly or in combination

MSFGG3039 Manually move glass

Modification History

Release 1. Supersedes and is not equivalent to MSFGG2005 Apply basic glass handling, and, MSFGG3001 Store and handle glass.

Application

This unit describes the skills and knowledge required to plan for and move sheets of glass by hand, both individually and as part of a team. Movement of glass may be within a glass workplace or between the workplace and another site.

This unit applies to glass processing workers and glaziers working in accordance with established procedures.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

N/A

Unit Sector

Glass and Glazing

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for glass handling	1.1 Read instructions and identify the type and quantity of glass to be relocated 1.2 Identify and follow work health and safety requirements using all required personal protective equipment throughout the work 1.3 Identify sheet glass to be moved and estimate or calculate weight, shape, points of balance, and dimensions 1.4 Identify risks to self, others, material and equipment arising from required lifting, load carrying, set down or movement of glass 1.5 Identify the need for equipment or team lifting based on nature of

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	glass and level of risk
2. Plan glass movement	2.1 Identify destination for glass and determine routes to be followed 2.2 Compare required clearances to available space and make any required adjustments 2.3 Plan process for relocating glass, and include contingency measures for potential difficulties 2.4 Check proposed process against advisory standards and workplace procedures for compliance
3. Relocate glass	3.1 Check glass for imperfections and damage prior to movement 3.2 Lift, lower and carry glass, in accordance with approved local work health and safety codes and workplace procedures 3.3 Coordinate team lifting tasks in accordance with approved local work health and safety codes and workplace procedures 3.4 Follow planned process and route and relocate glass without damage to material, personnel or equipment 3.5 Attach required labels and store glass in accordance with workplace procedures ensuring there are no projections 3.6 Check relocation against work requirements, and report any differences
4. Complete work	4.1 Clean, maintain and store handling equipment in accordance with workplace procedures 4.2 Accurately complete required workplace documentation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for MSFGG3039 Manually move glass

Modification History

Release 1. Supersedes and is not equivalent to MSFGG2005 Apply basic glass handling, and, MSFGG3001 Store and handle glass.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- completed each of the following in accordance with all safety and manual handling procedures on at least 1 occasion:
  - individual movement of annealed equal to or above 1.2 m^2
  - individual movement of laminated glass equal to or above 1.2 m^2
  - team movement of annealed glass equal to or above 4.5 m^2
  - team movement of laminated glass equal to or above 4.5 m^2
- moved glass in the following contexts:
  - loading and unloading of trucks
  - between trolleys and work benches.
  -

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- key information from work health and safety regulations relating to manual tasks and national code of practice:
  - role and responsibilities of the employer and employees in relation to manual handling safety
  - manual handling techniques that support safe work practice:
    - preparing the load
    - preparing the environment
    - using the stronger muscles in the legs where possible, rather than spinal muscles
    - maintaining a neutral spine when lifting and carrying
    - using two hands to lift or carry
    - keeping the load close to the body and centre of gravity
    - avoiding lifting objects above shoulder height
    - minimising repetitive movements
    - positions not held for long periods of time
    - avoiding twisting by repositioning feet while turning

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- mathematical procedures for calculation of glass weight
- glass manual handling:
  - quality, characteristics and behaviour of glass sheet when lifted and moved
  - risks and hazards
  - workplace safety system requirements
  - work flow requirements
  - principles and techniques of freefalling glass
  - the types of problems that may occur and how to avoid and respond
  - specific considerations when:
    - loading and unloading trucks
    - moving between trolleys and/or stillages, work benches and racks
- types, uses and limitations of tools and equipment used to support manual handling of glass
- features of glass sheet storage systems
- processes and communication protocols for team lifting
- workplace documentation requirements for glass movement.
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources:
  - glass storage and handling area
  - trolleys and/or stillages
  - work benches
  - racks
  - glass sheet to be relocated
  - safety and personal protective equipment
  - work orders
  - workplace procedures.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSFUP3001 Apply traditional foundations to upholstered furniture

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers applying traditional upholstery foundations to upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Plan operation	1.1	Work order or instructions are used to confirm type of traditional furniture foundations to be applied
		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Attaching methods are identified and fitting sequence is determined
		1.4	Suitable work area is selected and prepared
		1.5	Tools and hardware for the application of the foundation are selected and checked for safe operation

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		1.6	Traditional foundation components are selected as required
2	Prepare and attach traditional foundation	2.1	Mounting points are measured and marked on the frame, as required
		2.2	Traditional foundation is positioned and appropriate fasteners are used to secure it to the item
		2.3	Appropriate fasteners are used to secure the traditional foundation, as required
		2.4	The applied foundation is inspected for fit, finish and quality with those requiring reworking/refitting being tagged for further reprocessing or recycling/disposal in accordance with workplace practices
		2.5	Process is monitored and conditions which may affect quality standards are noted
		2.6	Variations to normal activities are reported in accordance workplace procedures
		2.7	Authorised changes in standard operating procedures and work order or instructions are implemented
3	Complete work	3.1	Workplace documentation, including stock usage, is completed in accordance with workplace procedures
		3.2	Faulty and/or defective equipment is tagged and reported in accordance with workplace procedures
		3.3	Waste and scrap are removed in accordance with workplace procedures
		3.4	Tools and equipment used are cleaned, inspected for serviceable condition and stored appropriately in accordance with workplace procedures
		3.5	Equipment is maintained and work area is cleaned in accordance with workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:

- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
- work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- work requires individuals to demonstrate some discretion, judgement and problem solving

Tools and equipment include:

- tape measure
- web strainer
- scissors
- upholstery hammer
- tack lifter
- staple gun
- pincers
- long-nose pliers

Materials include:

- webbing
- coil springs
- flock
- wadding
- coconut fibre
- bridle
- bridle ties
- solid timber base
- padded frames
- hard edge
- hessian

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	• calico • lacing twine • mattress twine

Personal protective equipment includes:	• that prescribed under legislation, regulations and enterprise policies and practices:
	  • safety glasses/goggle
	  • hair nets
	  • ear muffs/plugs
	  • gloves
	  • footwear and protective clothing

Information and procedures include:	• workplace procedures relating to the use of tools and equipment • work instructions, including job sheets, cutting lists, plans, drawings and designs • workplace procedures relating to reporting and communication • manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP3001B Apply traditional foundations to upholstered furniture.

Assessment Requirements for MSFUP3001 Apply traditional foundations to upholstered furniture

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment and products
  - maintain required production output and product quality
- Interlace and turn back jute webbing, tie off and lace up coil springs, fit hessian bridles (loose and/or deep), coconut fibre, wadding and a stitched edge (one blind, one top) in a minimum of two (2) items of traditional upholstered furniture
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work flow in relation to furniture production and refurbishment
- Features of range of traditional foundation types and fittings
- Materials and techniques used in the application of traditional foundations to upholstered furniture
- Materials used in the application of traditional foundations
- Identification of equipment, processes and procedures required for the application of traditional foundations to upholstered furniture

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
  - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
  - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to furniture frames and traditional fittings, such as webbing stock, coil springs, padding materials, and a work order.

MSMENV272 Participate in environmentally sustainable work practices

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed. Duplication between Performance Evidence and Performance Criteria removed. Assessment conditions updated.

Release 1. Supersedes and is equivalent to MSAENV272B Participate in environmentally sustainable work practices.

Application

This unit describes the skills and knowledge required to comply with environmental regulations, identify environment issues and minimise the risks of negative impact on work and carry out improvements in own work area.

This unit applies to operators and team members who are required to follow procedures to work in an environmentally sustainable manner.

This unit applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office and warehouse. This unit will need to be contextualised for the industry sector, organisation and section.

This unit applies to an individual working alone or as part of a team and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify current resource use and environmental issues	1.1 Identify workplace environmental and resource efficiency issues 1.2 Identify resources used in own work role 1.3 Confirm current usage of resources
2. Comply with environmental regulations	2.1 Read and follow environmental policies and procedures to ensure compliance with federal, state/territory and local government laws, by-laws, regulations and mandated codes of practice, and codes and standards that the organisation applies voluntarily 2.2 Ask questions and seek clarification relating to environmental work requirements 2.3 Identify incidents, including breaches or potential breaches of environmental regulations and occurrences outside of standard procedures and report to appropriate personnel 2.4 Report environmental incidents using workplace forms and procedures
3. Seek opportunities to improve environmental practices and resource efficiency	3.1 Follow workplace procedures to improve environmental practices and resource efficiency 3.2 Make suggestions for improvements to environmental workplace practices and work plans

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MSMENV272 Participate in environmentally sustainable work practices

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed. Duplication between Performance Evidence and Performance Criteria removed. Assessment conditions updated.

Release 1. Supersedes and is equivalent to MSAENV272B Participate in environmentally sustainable work practices.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- followed environmental policies and identified potential breaches of environmental regulations and suggested improvements within the limit of own authority.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- environmental sustainability issues relevant to organisation
- resource use and impact of inefficiencies associated with own work role
- environmental and resource efficiency policies and procedures for own work role
- environmental regulations and guidelines and their impact on own work role
- the environmental issues, hazards and risks associated with own work role
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - environmental regulations, guidelines and procedures
  - workplace incident reporting procedures and forms.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSMENV472 Implement and monitor environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV472B Implement and monitor environmentally sustainable work practices

Application

This unit of competency covers the skills and knowledge required to effectively analyse the workplace in relation to environmentally sustainable work practices, and to implement improvements and monitor their effectiveness.

This unit of competency applies to those who have responsibility for a specific area of work or who lead a work group or team. It addresses the knowledge, processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools.

It includes identifying areas for improvement, developing plans to make improvements, and implementing and monitoring improvements in environmental performance.

This unit of competency applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office and warehouse. This unit will need to be appropriately contextualised as it is applied across an organisation and across different industry sectors.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

HSE

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Investigate current practices in relation to resource usage**	1.1	Identify environmental regulations applying to the enterprise
		1.2	Assess procedures for assessing compliance with environmental regulations
		1.3	Collect information on environmental and resource efficiency systems and procedures and provide to the work group, as required
		1.4	Measure and record current resource usage by members of the work group
		1.5	Analyse and record current purchasing strategies
		1.6	Analyse current work processes to access information and data, and assist in identifying areas for improvement
2	**Set targets for improvements**	2.1	Seek input from stakeholders, key personnel and specialists
		2.2	Access external sources of information and data as required
		2.3	Evaluate alternative solutions to workplace environmental issues
		2.4	Set efficiency targets
3	**Implement performance**	3.1	Source and use techniques/tools to assist in achieving targets

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	improvement strategies	3.2	Apply continuous improvement strategies to own work area of responsibility, and communicate ideas and possible solutions to the work group and management
		3.3	Integrate environmental and resource efficiency improvement plans for own work group with other operational activities and implement them
		3.4	Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon them where appropriate
		3.5	Implement costing strategies to fully value environmental assets
4	**Monitor performance**	4.1	Document outcomes and communicate reports on targets to key personnel and stakeholders
		4.2	Evaluate strategies and environmental performance, including breaches or potential breaches of regulations and occurrences outside of standard procedure which may lead to lower environmental performance
		4.3	Set new targets and investigate and apply new tools and strategies
		4.4	Promote successful strategies and reward participants where possible

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- *ISO 14001:2015 Environmental management systems*

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Assessment Requirements for MSMENV472 Implement and monitor environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV472B Implement and monitor environmentally sustainable work practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- investigate/analyse resource usage
- evaluate improvement alternatives and set targets
- implement improvements within the limit of own authority
- monitor the performance of improvements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- relevant environmental and resource efficiency issues, specific to industry practices, including:
  - contribution to climate change and other macro threats that can arise from materials and work processes used
  - regulated environmental issues
  - issues relevant to licencing conditions
- best practice environmental approaches relevant to own area of responsibility
- methods for measuring and calculating resource usage.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - will typically include the use of appropriate tools, equipment and documents

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
    - walk-throughs
    - pilot plant operation
    - demonstration of skills
    - industry based case studies/scenarios
    - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMENV672 Develop workplace policy and procedures for environmental sustainability

Modification History

Release 1. Supersedes and is equivalent to MSAENV672B Develop workplace policy and procedures for environmental sustainability

Application

This unit of competency covers the skills and knowledge required to develop and implement a workplace sustainability policy, including the modification of the policy to suit changed circumstances.

This unit of competency applies to team leaders/supervisors/managers who are required to develop approaches to environmental sustainability within workplaces, including the development and implementation of policy.

It includes communicating with relevant stakeholders, developing and monitoring sustainability policies and reviewing and improving sustainability policies.

This unit of competency applies to all sectors of the manufacturing industry. It may also be applied to all sections of an organisation, including the office and warehouse. This unit will need to be appropriately contextualised as it is applied across an organisation and across different industry sectors.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Develop workplace sustainability policy	1.1	Define the scope of sustainability policy
		1.2	Identify and consult with stakeholders during the policy development process
		1.3	Review the environmental sustainability strategies relevant to all stages of work covered by the policy
		1.4	Make recommendations for policy options based on likely effectiveness, timeframes and cost
		1.5	Develop policy that reflects the organisation's commitment to sustainability as an integral part of the business planning, and as a business opportunity
		1.6	Agree upon appropriate methods of implementation
2	Communicate the policy	2.1	Promote the policy, including its expected outcome to key stakeholders
		2.2	Inform those involved in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned
3	Implement the policy	3.1	Develop and communicate procedures to help implement the policy
		3.2	Employ strategies for implementation of policy in resource efficiency
		3.3	Establish recording systems for tracking changes in sustainability approaches and assign responsibilities
4	Review policy	4.1	Record outcomes and provide feedback to key personnel

Assessment Requirements for MSMENV672 Develop workplace policy and procedures for environmental sustainability

Modification History

Release 1. Supersedes and is equivalent to MSAENV672B Develop workplace policy and procedures for environmental sustainability

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- scope and develop an integrated sustainability policy and procedure within an enterprise
- raise awareness among stakeholders and those involved in implementing the policy of expected outcomes
- develop a workable implementation strategy
- ensure policy implementation is monitored, reviewed and modified where

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- relevant policy development and implementation processes and practices
- principles, practices and available tools and techniques of sustainability management relevant to the particular industry context.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP390 Use structured problem-solving tools

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed.

Release 1. Supersedes and is equivalent to MSAPMSUP390A Use structured problem-solving tools.

Application

This unit describes the skills and knowledge required to use structured process improvement tools to solve process and other problems. It describes the broad application of in-depth and rigorous structured problem-solving techniques to identify opportunities for improvement.

This unit applies to experienced operators, team leaders, supervisors or people in similar roles who are required to identify improvements and/or solve problems beyond those associated directly with the process unit and/or equipment.

This unit applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all work environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MSMSUP390 Use structured problem-solving tools

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed.

Release 1. Supersedes and is equivalent to MSAPMSUP390A Use structured problem-solving tools.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- identified at least 1 problem
- analysed problem using at least 1 analysis tool drawn from each of 2 different groups of tools (basic, visual, process, business and organisation specific)
- selected the preferred solution
- developed and used an implementation plan, that includes:
  - specific, measurable, achievable, relevant, timed (SMART) objectives
  - resource requirements
  - methods for reaching objectives
  - timelines
  - methods of checking and adjusting adherence to plan
- communicated effectively with other personnel.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- relevant organisation procedures
- risks, risk assessment and controls relevant to problem being analysed
- targets and measures for output and quality
- types and application of problem-solving tools and analytical techniques
- relevant equipment and operational processes.
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies, as well as, using suitable facilities, equipment and resources.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS403086 Improve cost factors in work practices

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Application

This unit describes the skills and knowledge required by an individual to evaluate the product or process outcomes of a team or work group in terms of their cost components and to be able to determine, in general terms, the cost impacts of alternative actions. This includes the efficient organisation of own work, and that of others in a work area or within a team, and the improvement of throughput and cycle times.

This applies to team members who will be required to problem solve, show initiative, plan, organise and manage own output and development. Decisions are made within the scope of the authority of the individual and other employees in the area or team and according to procedures.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Assessment Requirements for MSS403086 Improve cost factors in work practices

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- identified and analysed cost factors in work practices and made recommendations to improve costs on at least 1 occasion.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- cost components of products made
- costs concepts, including expense/capital, income and cost benefit ratios
- major cost contributors to product (including energy, materials and inputs, labour and distribution)
- difference between internally and externally controlled costs
- difference between overhead, capital, expense, labour and other consumables.
- causes of cost variances.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions, contingencies, facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS) requirements at all times
		1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		1.4	Identify job requirements from customer requirements, specifications, drawings, job sheets or work instructions
2	**Design or modify existing model**	2.1	Set up workstation in accordance with specifications and workplace procedures
		2.2	Design components to conform with model, using computer-aided design (CAD) or manual technique with reference to all relevant operations
		2.3	Select materials, trims and colours
		2.4	Produce models from appropriate materials to specifications
		2.5	Ensure ongoing liaison occurs with relevant departments in workplace to ensure workability and marketability of design and availability of materials and resources, including workforce skills
3	**Produce prototype**	3.1	Modify or design existing model to translate design concept into 3-D
		3.2	Coordinate making of prototype using sample patterns, relevant designed components and all relevant manufacturing processes
4	**Test prototype**	4.1	Liaise with other relevant departments in relation to practicality of design and cost of production, and predicted commercial success
		4.2	Review prototype with customer specifications and customer, as appropriate
		4.3	Make corrections, as necessary
		4.4	Make samples for marketing or testing
5	**Produce patterns**	5.1	Create standard or master pattern from the mean form
		5.2	Dissect standard to produce all working patterns, making adjustments for enterprise procedures and materials used

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

to create patterns

5.3 Derive patterns from the master pattern allowing for adjustments, as required

5.4 Prepare and store documentation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, industry codes and standards, awards, agreements and conditions of employment
- SOPs
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- WHS practices

Leather products include one or more of the following:

- clothing
- bags
- accessories
- saddles and saddlery components

Australian Standards

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

include:

WHS practices

WHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- PPE
- safe materials handling
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other WHS practices relevant to the job and enterprise

Assessment Requirements for MSTLG3001 Make a prototype

Modification History

Release 1. Supersedes and is equivalent to LMTLG3001A Make a prototype

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices, industry codes and standards
- planning and coordinating complicated designs, that consist of at least four (4) components, and prototype operations in line with specifications, customer requirements and work deadlines
- preparing equipment and work prior to commencing operations
- using computer-aided design (CAD) or manual techniques to design components to conform with model
- selecting appropriate materials
- liaising with other relevant departments to determine practicality of design, cost of production and predicted commercial success
- producing prototypes for at least two (2) different products, using appropriate manufacturing processes over the full range of operations
- reviewing prototype with customer specifications and customer
- making samples for marketing and testing and correcting, as necessary
- producing working patterns for at least two (2) different leather products.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- manufacturing focus of the enterprise
- manufacturing capacity, skill capacity, and tool or equipment base of workplace
- materials and properties and their reaction to manufacturing processes
- pattern design and prototype construction
- CAD and manual techniques used in the design phase
- quality standards and handling procedures
- work health and safety (WHS) and environmental aspects of relevant processes
- relevant federal and state or territory legislative or regulatory requirements
- recording and reporting procedures.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

- Assessors must:
  - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
  - have vocational competency in making a prototype, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2002 Cut, bend and shape metal

Modification History

Release 1. Supersedes and is equivalent to LMTTF2017A Cut, bend and shape metal

Application

This unit of competency covers the skills and knowledge required to cut prescribed lengths of metal bar stock and to bend the lengths into various shapes by hand or with the aid of formers.

Work may involve interaction with other people in the workplace, including supervisors and production personnel. Work may be conducted in a variety of environments, such as operational indoor or outdoor workplaces and hazardous or exposed conditions

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Determine job requirements**	1.1 Follow standard operating procedures (SOPs)
		1.2 Comply with work health and safety (WHS)

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

			requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare for cutting, bending and shaping metal**	2.1	Read and interpret workplace procedures and instructions
		2.2	Establish safe working environment
		2.3	Obtain specifications of material to be used and shape to be formed
		2.4	Plan sequence of task operations and calculate required length of material
		2.5	Select appropriate section material to meet specification, and choose suitable length of material stock for cutting to minimise waste
		2.6	Move material to be cut to work area
		2.7	Prepare appropriate hand and power tools
3	**Prepare for cutting process**	3.1	Mark out cutting points on material and select appropriate cutting equipment
		3.2	Check area to ensure equipment doesn’t become entangled or damaged during operation
		3.3	Secure material to prevent movement
4	**Cut material and informally check product**	4.1	Use safety equipment in accordance with WHS requirements when using cutting equipment
		4.2	Select and install appropriate consumables as to manufacturers requirements
		4.3	Set and operate equipment in accordance with accepted industry and WHS practices

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		4.4	Cut material to correct length and remove burrs or rough edges by brushing, grinding or filing
		4.5	Inspect cut sections to verify that their size and condition meets specifications and relevant workplace and industry quality standards
5	**Prepare for forming process**	5.1	Plan sequence of forming operations and select appropriate forming equipment
		5.2	Check forming equipment for damage or operating defects
		5.3	Select and set appropriate formers
6	**Form material and informally check product**	6.1	Place metal section in former and secure, as necessary
		6.2	Heat metal section to facilitate bending, as necessary
		6.3	Hot or cold bend the metal section around formers or hand form to required specification
		6.4	Descale or otherwise finish formed product after forming
		6.5	Inspect formed product to verify that it meets specifications and relevant workplace and industry quality standards
7	**Maintain work area and equipment**	7.1	Clean work area and stow tools and electrical equipment away safely
		7.2	Comply with environmental regulations to reuse, recycle or dispose of materials as required
		7.3	Clean and maintain cutting and forming equipment in accordance with workplace requirements and manufacturer specifications
		7.4	Perform programmed maintenance which is within the operator’s area of responsibility
		7.5	Inform supervisor of any abnormal conditions needing maintenance or repair

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:	• requirements prescribed by legislation, awards, agreements and conditions of employment • SOPs • work instructions • oral, written and visual communication • quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output • housekeeping • tasks related to environmental protection, waste disposal, pollution control and recycling • WHS practices
Australian Standards include:	• the relevant industry or Australian Standards that are current at the time this unit is being undertaken
Hand tools include one or more of the following:	• hammers • punches • vices • clamps • jigs • formers • hand drills • hacksaws • files • tongs

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- wire brushes plus gloves
- goggles and other safety equipment

Power tools include one or more of the following:

- power hacksaws
- portable electric drills
- portable sanders and wire brushes
- guillotine
- abrasive disk cutting equipment
- gas cutting equipment

WHS practices

WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following:

- manual handling techniques
- SOPs
- PPE
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices

Assessment Requirements for MSTTF2002 Cut, bend and shape metal

Modification History

Release 1. Supersedes and is equivalent to LMTTF2017A Cut, bend and shape metal

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- complying with all relevant safety requirements applicable to the safe use of cutting and bending equipment
- interpreting work orders
- interpreting equipment and materials specifications and instructions needed for the cutting and forming processes
- setting up cutting and forming equipment
- performing cutting process using at least three (3) different tools or equipment according to workplace procedures, on at least three (3) different products
- performing forming processes according to workplace procedures on at least three (3) products
- inspecting completed work to assess quality
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- documenting and communicating work related information including reporting faults and other problems
- applying workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- specific work health and safety (WHS) requirements associated with cutting and heating equipment
- common metals and basic sections used in fabrication work
- metal cutting processes
- metal grinding and dressing processes
- metal forming processes

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- the range of cutting and forming equipment, hand tools and power tools used in cutting and forming processes and their appropriateness for particular applications
- power sources, such as single phase, three phase and weather-protected outlets
- operating principles of tools and equipment used in cutting, dressing and forming metals, including abrasive cutting wheels, gas equipment, grinding wheels, guillotines and power hacksaws
- hazards associated with powered machinery and gas equipment
- materials and equipment specifications
- environmental requirements of relevant industry and workplace procedures
- general housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
  - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
  - have vocational competency in cutting, bending and shaping metal, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF2012 Stitch by hand

Modification History

Release 1. Supersedes and is equivalent to LMTTF2012A Stitch by hand

Application

This unit of competency covers the skills and knowledge required to stitch canvas and sail products by hand.

The unit of competency applies to standard stitching of damaged seams, gussets, reinforcements, general repairs or modifications, and new work. Work may be conducted in a variety of environments, such as operational indoor or outdoor workplaces or on site.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

			requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare to stitch by hand**	2.1	Read and interpret workplace procedures and instructions and organise work to maximise safety and productivity
		2.2	Clear and clean work area and establish safe working environment
		2.3	Seek assistance to move and position work piece, if necessary
		2.4	Seek advice on appropriate thread to be used with regard to thread material, diameter of thread, tensile strength and colour
		2.5	Seek advice regarding appropriate needle to suit type of thread, type of stitch and material to be sewn
		2.6	Check condition of needle to ensure it is sharp, clean and free from rust and dirt
3	**Perform hand stitching**	3.1	Lay out material on working table or other suitable surface or support in situ in preparation for stitching process
		3.2	Choose appropriate type of stitch to suit the particular application
		3.3	Start stitching properly and perform hand stitching according to specifications
		3.4	Tie off last stitch, cut thread and inspect finished work to ensure it conforms to specification
4	**Check quality and finalise work**	4.1	Inspect completed work to verify that it meets job specifications and relevant workplace and industry quality standards

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

4.2	Identify and mark any areas in need of re-work or rectification, perform re-work or arrange appropriate action
4.3	Label or tag completed product and complete any necessary documentation in accordance with workplace procedures
4.4	Store needles and threads in a dry and safe place and dispose of worn or damaged needles in accordance with manufacturer recommendations and workplace procedures
4.5	Clean work area and place tools back in storage

MSTTF2015 Install products on and off site

Modification History

Release 1. Supersedes and is equivalent to LMTTF2016A Install products on and off site

Application

This unit of competency covers the skills and knowledge required to install canvas and sail products both on site and off site.

The unit of competency applies to the installation, operation and maintenance of canvas and sail products and equipment both on and off site. Work may be conducted in a variety of environments, such as operational indoor, outdoor workplaces or on site

Work may require independence, discretion, judgement and acceptance of responsibility for overall work outcomes. Work may involve planning and coordination of tasks and processes, interaction with other enterprise personnel, enterprise clients, manufacturer representatives and other external personnel.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, drawings, job sheets or work instructions
2	**Prepare for installation**	2.1	Read and interpret workplace procedures and instructions, including interpreting drawings and technical information to guide installation
		2.2	Plan task operation sequence, identify suitable electrical power outlets and equipment to work above ground, as required
		2.3	Arrange additional assistance, if required
		2.4	Select and prepare appropriate tools and prepare site
3	**Prepare to work above ground**	3.1	Select, secure and adequately support ladders or other devices, such as steps or bosun's chair, as required for the tasks
		3.2	Erect appropriate barriers and signs when working overhead
		3.3	Obtain assistance, as necessary, when working above the ground or deck
4	**Fit products**	4.1	Use appropriate marking tools and measuring equipment to mark out fitting positions
		4.2	Check products to be installed to ensure they meet specifications and are fit for their intended purpose

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

		4.3	Use appropriate ladders or other devices to gain height advantage
		4.4	Sequence all operations according to specifications and workplace procedures ,as required, to complete a normal installation
		4.5	Apply appropriate WHS precautions and environmental practices during all phases of the installation
		4.6	Work in cooperation with other team members, as required, to fit products
5	**Inspect and check quality**	5.1	Inspect completed work to verify that the products and installation work meet job specifications and relevant workplace and industry quality standards
		5.2	Check that installation is correct, and that products fit and operate correctly
		5.3	Determine if any re-work or rectification is required, undertake re-work or take other appropriate action
6	**Provide customer information and finalise work**	6.1	Supply customer with information on how to use product, as required
		6.2	Demonstrate product to customer and answer questions within scope of own responsibility
		6.3	Clean work area, clean and return tools to safe storage, and perform normal basic maintenance, in accordance with workplace procedures
		6.4	Clean and stow away ladders, bosun's chair or other equipment
		6.5	Complete project documentation and obtain customer signature, if required

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Assessment Requirements for MSTTF2015 Install products on and off site

Modification History

Release 1. Supersedes and is equivalent to LMTTF2016A Install products on and off site

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- complying with all relevant safety requirements, including safe use of ladders, bosun's chair, load hoisting equipment and electrical equipment
- interpreting work orders, drawings and installation instructions
- complying with product and equipment specifications during installation
- performing normal installation and setting of products and equipment on at least two (2) occasions
- using relevant hand and power tools safely
- inspecting and testing operation of installed products and equipment
- specifying any rectification necessary
- performing normal operator maintenance of work area to enable work to be conducted safely and efficiently
- communicating effectively with client on installation process and product operation
- demonstrating products to customer, answering questions, completing project documentation and obtaining customer signature, if required, according to workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- electrical and general workplace hazards and means of identifying them
- operating principles of products and associated equipment to be installed
- the range of hand tools, power tools, measuring devices and other equipment used in the installation process, and their operating principles and appropriateness for particular applications
- power sources, such as single phase, three phase and weather-protected outlets
- format of product and equipment specifications

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- setting and adjustment principles and processes for products and equipment being installed
- typical problems of products and associated equipment and their rectification procedures
- relevant product quality standards for products and equipment installed
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures, including use of equipment for working aloft
- general housekeeping policies and procedures
- mathematical processes used in the installation and checking processes
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
  - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
  - have vocational competency in installing products on and off site, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

MSTTF3002 Gain customer acceptance of service proposal

Modification History

Release 1. Supersedes and is equivalent to LMTTF3002A Gain customer acceptance of service proposal

Application

This unit of competency covers the skills and knowledge required to gain customer acceptance of a proposal to provide a product and service.

The unit of competency applies to establishing and documenting a proposal to meet customer requirements and obtaining agreement for work to proceed. Interaction with the customer is usually performed individually but may involve collaborative approach with other personnel from the operator's workplace.

Work may be conducted in a variety of environments, such as operational indoor, outdoor workplaces or on site.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Textile fabrication

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Develop customer proposal**	1.1	Review documentation to confirm all required information is available
		1.2	Establish customer requirements and determine products, processes and service for customer
		1.3	Identify alternatives and determine material and production costs
		1.4	Calculate costs for proposed service
		1.5	Assess timing, costs and service against customer requirements
		1.6	Develop proposal and document for customer
2	**Present proposal to customer**	2.1	Contact customer and present proposal in person, or by using digital technology or by other arranged means
		2.2	Provide customer with detailed information regarding products, processes and alternative solutions, which could satisfy customer requirements
		2.3	Discuss features and benefits of proposal with the customer
3	**Seek customer acceptance**	3.1	Respond to any customer concerns, seek customer approval and acceptance, and confirm agreement
		3.2	Identify any required changes to the proposal and modify proposal accordingly
		3.3	Obtain customer acceptance
4	**Confirm service to be provided**	4.1	Confirm customer address and contact details
		4.2	Establish agreement with the customer and obtain signature

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

4.3 Confirm time, product and service to be provided and arrange delivery

4.4 Provide duplicate of proposal and agreement to customer for future reference

4.5 Obtain deposit, where applicable, or arrange other payment from customer

4.6 Provide customer receipt and record form of payment

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Workplace procedures include one or more of the following:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures (SOPs)
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling
- work health and safety (WHS) practices

Australian Standards include:

- the relevant industry or Australian Standards that are current at the time this unit is being undertaken

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Documentation includes one or more of the following:	• sketches, diagrams and maps • dimensions and measurements • documentation on customer requirements
Customer requirements include one or more of the following:	• types of materials • types of products and equipment • operating principles and mechanisms • costs • timelines • colours • size, dimensions and shape • delivery and installation dates • installation procedure to be followed
WHS practices	WHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and include one or more of the following: • manual handling techniques • SOPs • personal protective equipment (PPE) • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • environmental practices

Assessment Requirements for MSTTF3002 Gain customer acceptance of service proposal

Modification History

Release 1. Supersedes and is equivalent to LMTTF3002A Gain customer acceptance of service proposal

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least three occasions and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- applying relevant standards
- establishing customer requirements and determining products, processes and services for customer, on at least three (3) occasions
- calculating costs and identifying details of proposed products and services
- providing customer with detailed proposal in person, or electronically or other appropriate method
- answering customer queries to clarify or amend proposal if required
- developing written proposal for customer approval, incorporating all required details, including costs, products and services and timeframe
- establishing agreement with the customer and obtaining signature and deposit or arranging other payment
- completing required documentation for customer and own workplace according workplace procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- relevant Australian Standards
- workplace documentation and procedures for establishing agreements to provide services
- hazards associated with working at heights
- range of products and services offered by the enterprise
- principles of operating products and equipment
- types of materials and their applications
- limitations of canvas and other materials used
- types of strengthening and fastenings
- service life of different materials
- instruments and techniques for measuring

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- mathematical processes
- mathematical formulas for area and volume
- labour rates and approximate costs of products and materials
- power sources such as single phase, three phase, and weather protected outlets
- work health and safety (WHS) and environmental requirements of relevant industry and workplace procedures
- general industry housekeeping policies and procedures
- WHS practices, including hazard identification and control measures
- quality practices
- workplace procedures
- practices for documenting agreements and recording and reporting provision of products and services.

Assessment Conditions

- Assessors must:
  - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
  - have vocational competency in gaining customer acceptance of service proposal, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.

PMBPROD336 Inspect heavy off-the-road tyres

Modification History

Release 1. Supersedes and is equivalent to PMBPROD336A Inspect heavy off-the-road tyres

Application

This unit of competency covers the skills and knowledge required to inspect heavy off-the-road tyres. It applies to tyres defined by AS 4457.2-2008 Earth-moving machinery - Off-the-road wheels, rims and tyres - Maintenance and repair - Tyres (or its replacement) or similar tyres.

This unit of competency applies to operators who are required to plan the work, complete paperwork, determine reparability of the tyre, communicate with customers and solve problems within area of responsibility.

This unit of competency applies to an operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

1	**Prepare for inspection**	1.1	Complete initial documentation for tyre
		1.2	Raise all relevant paperwork as required
		1.3	Clean tyre ready for inspection
		1.4	Position tyre securely for inspection
2	**Inspect tyre**	2.1	Identify injuries to tyre both internally and externally
		2.2	Investigate injuries for extent and nature
		2.3	Identify injuries/tyres which are irreparable
		2.4	Determine injuries which should be repaired
		2.5	Mark areas requiring repair
		2.6	Categorise injuries to standard
		2.7	Determine overall reparability of the tyre
3	**Finalise inspection**	3.1	Complete any required internal paperwork
		3.2	Prepare customer quotation as required
		3.3	Communicate with customer in accordance with procedures
		3.4	Make arrangements for tyre to be repaired, scrapped or returned as required
4	**Anticipate and solve problems**	4.1	Recognise a problem or a potential problem
		4.2	Determine problems needing priority action
		4.3	Refer problems outside area of responsibility to appropriate person, with possible causes
		4.4	Seek information and assistance as required to solve problems
		4.5	Solve problems within area of responsibility

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

4.6 Follow through items initiated until final resolution has occurred

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- AS 4457.2-2008 Earth-moving machinery - Off-the-road wheels, rims and tyres - Maintenance and repair – Tyres, or its replacement
- other Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment

Tools and equipment include:

- inspection equipment, including one or more of:
  - NDI scanning equipment
  - nail hole detector
  - high pressure tester
  - x-ray
  - ultrasound
- ancillary equipment that is integral to the process.

Additional tools and equipment will be selected as required from:

- hand tools used in this process
- power tools used in this process
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Problems

Routine and non-routine problems must be resolved.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- variations in quality
- emergency situations
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Routine problems are predictable and have known solutions and include one or more of:

- equipment malfunctions
- hidden damage
- broken chords
- cord body fabric damage
- variations in materials.

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMBPROD336A Inspect heavy off-the-road tyres

Assessment Requirements for PMBPROD336 Inspect heavy off-the-road tyres

Modification History

Release 1. Supersedes and is equivalent to PMBPROD336A Inspect heavy off-the-road tyres

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret procedures, job specifications, material labels and safety data sheets (SDS)
- distinguish between:
  - injuries which do not need repair and should be returned to the customer to be used as is
  - injuries which should be repaired
  - injuries which are beyond repair and require tyre to be scrapped
- determine injuries to tyres, including:
  - cuts, abrasion, splits, cracks and crazing
  - separations within the structure
  - deformities both surface and internal
  - penetrations into and through the casing/carcass
  - hidden injuries
- plan the inspection process and sequence tasks
- select and set up inspection equipment and materials to meet specifications
- start up and operate the equipment
- maintain output and product quality using appropriate instruments, controls, test information and readings
- safely shut down equipment in normal and abnormal circumstances
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- apply waste management procedures
- recognise early warning signs of equipment/processes needing attention or with potential problems
- distinguish between causes of problems, including:
  - operational problems
  - instrument failure/malfunction
  - electrical failure/malfunction
  - mechanical failure/malfunction

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - wrong readings
  - equipment design deficiencies
  - materials properties
  - process variables
  - raw material variations/contamination
  - process abnormalities
  - procedural errors
- recognise and prioritise problems requiring action
- resolve routine and non-routine problems
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate independently and to solve routine and non-routine problems, including knowledge of:

- function and operating principles of inspection equipment, machine components and ancillary equipment
- types and application of inspection methods/processes
- heavy off-the-road tyre construction
- radial and bias ply construction
- common injuries to heavy off-the-road tyres and their indicators
- common hidden injuries and their indicators, including
  - cuts
  - oxidation
  - separations
- types of injuries which do not need repairing, injuries which are reparable and injuries which either individually or in the sum should not be repaired
- methods of identifying lug/position identification
- impact of significantly faulty tyres falsely passing inspection
- factors which may affect inspection output or product quality and appropriate remedies
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- In all plants it may be appropriate to assess this unit concurrently with units such as:
  - teamwork
  - communication.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of an appropriate industrial item of equipment requiring demonstration of operation, start and stop procedures and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on the job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

RIICOM201D Communicate in the workplace

Modification History

Release	Comment
1	This unit replaces RIICOM201A Communicate in the workplace
2	Editorial corrections.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to communicate in the workplace within the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

1 Plan and prepare for workplace communication using equipment and systems	1.1 Access, interpret and apply communication site documentation and ensure the work activity is compliant 1.2 Identify and access communication equipment and system components 1.3 Establish and maintain communication with others 1.4 Access and apply communication equipment and systems safety procedures
2 Communicate using communication equipment and systems	2.1 Identify and select the most appropriate method of communication 2.2 Use communication equipment and systems 2.3 Acknowledge and respond to communication 2.4 Take, confirm and pass messages on promptly to the others 2.5 Pass communications in a clear and concise manner

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	2.6 Follow safety procedures, including the passing of reports and observance of local communications and emergency procedures 2.7 Identify and report faults in communication equipment
3 Carry out face-to-face routine communication	3.1 Speak clearly and listen carefully to promote understanding 3.2 Ask questions of the audience and confirm meaning of information 3.3 Maintain communication processes with others to assist flow of work activities 3.4 Use site approved signalling methods to convey information 3.5 Participate in discussion to obtain information and clarify meaning 3.6 Communicate cooperatively and effectively with others
4 Complete written documentation	4.1 Complete written documentation clearly, concisely and on time 4.2 Use approved documents 4.3 Pass on written information to others

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIICOM201D Communicate in the workplace

Modification History

Release	Comment
1	This unit replaces RIICOM201A Communicate in the workplace
2	Editorial corrections.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of communicating in the work place that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - identifying communication strategies and systems
  - operating communications systems and equipment to convey meaning to others
  - communicating clearly and promptly to others to convey information and make meaning
  - listening carefully to instructions and information
  - participating in group discussions and engage with group members respectfully
  - asking questions to clarify meaning
  - communicating concisely both written and verbally
  - interpreting other communications such as flags, lights, signs, bells and whistles
  - identifying and reporting communication faults and deficiencies
  - using approved and preparing written documentation that communicates meaning to others

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Knowledge Evidence

The candidate must demonstrate knowledge of communicating in the workplace through:

- relevant standards and site procedures
- worksite communication system components, applications and limitations
- procedures and safety requirements of communication equipment and systems
- common faults in communication equipment/systems
- emergency communication procedures
- record maintenance

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment; and,
- simulation may be used for assessment of this Unit of Competency where it does not compromise the quality of assessment outcomes and provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills;
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal	1	1 Year

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Mining, Extractive (Quarrying) and Civil Construction	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIHAN301E Operate elevating work platform

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.

Application

This unit describes the skills and knowledge required to operate an elevating work platform at any height.

This unit applies to those working in operational roles.

The work required in this unit relates to the National Standard for High Risk Work but this unit does not provide the licence. Licensing, legislative, regulatory or certification requirements that may apply to this unit can vary between states, territories and industry sectors, and must be sourced prior to applying this unit.

This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIIHAN308F Load and Unload Plant or equivalent.

Unit Sector

Coal mining

Metalliferous mining

Drilling

Extractive

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare for operating an elevating work platform	1.1 Access, interpret and apply elevating work platforms documentation for allocated job and ensure work activity is compliant with site policies and procedures to perform the work as planned

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.2 Obtain, interpret, clarify and confirm work requirements 1.3 Confirm hazards, environmental issues, and risks, and implement required control measures according to site risk management plans and processes 1.4 Select and wear personal protective equipment required for work activities 1.5 Obtain and interpret emergency procedures for elevating work platform in preparation for emergencies and incidents 1.6 Coordinate and communicate planned activities with others at the site prior to commencing work activity
2. Operate elevating work platform in line with established requirements to complete work activity	2.1 Carry out pre-start and post-start inspections and checks in line with Australian Standards and workplace procedures 2.2 Identify faults or defects and report within scope of own responsibility and according to workplace procedures 2.3 Apply site specific requirements for relocating the elevating work platform to work site 2.4 Stabilise or position elevating work platform according to work site conditions and requirements 2.5 Ensure work site is clear of personnel and other potential hazards 2.6 Place any tools and equipment required to perform work activity into bucket or platform according to workplace procedures 2.7 Operate elevating work platform within performance capabilities of brand and model of elevating work platform 2.8 Use manufacturer approved safety devices fitted to the machine in line with workplace procedures where applicable 2.9 Respond accordingly to monitoring systems and alarms according to workplace procedures 2.10 Monitor hazards and risks and ensure safety of self, other personnel, plant and equipment 2.11 Complete work activity and shut-down equipment in line with work requirements and workplace procedures
3. Conduct housekeeping activities	3.1 Clear work area and dispose, reuse or recycle materials 3.2 Move the elevating work platform to a safe space, applying site specific workplace procedures and requirements 3.3 Check, clean, maintain and store elevating work platform, tools and equipment according to workplace procedures 3.4 Complete and file documentation, and distribute according to workplace requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description
Reading	• Identifies and interprets relevant information and ideas from workplace procedures, documentation, safety alerts, legislation and regulations
Numeracy	• Identifies and comprehends relevant mathematical information in required to determine equipment operating capacities

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
RIIHAN301E Operate elevating work platform (Release 1)	RIIHAN301D Operate elevating work platform (Release 3)	Minor updates to all sections to reflect operator's role.	Equivalent unit

Links

Assessment Requirements for RIIHAN301E Operate elevating work platform

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of operating an elevating work platform that safely, effectively and efficiently follows legislative requirements and workplace procedures to carry out work activity on at least two occasions. This includes:

- planning and preparing for operating elevating work platforms
- selecting and using the required plant, tools and equipment to perform work activity
- identifying site requirements for emergencies at heights
- stabilising or positioning elevating work platform
- using manufacturer approved safety devices fitted to the machine
- moving the elevating work platform to and from work site
- inspecting work platform and identifying faults
- reviewing machine maintenance logbook records
- checking, cleaning, maintaining and storing elevating work platform, tools and equipment

In the course of the above work, the candidate must also:

- locate and apply required documentation, policies and procedures
- select and wear personal protective equipment required for work activities
- monitor and manage equipment performance using indicators and alarms
- use a range of communication techniques and equipment essential to the safe completion of work instructions
- meet written and verbal reporting requirements and procedures associated with operating an elevating work platform

Knowledge Evidence

The candidate must demonstrate the following knowledge to effectively complete the tasks outlined in the elements and performance criteria of this unit.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Key policies, procedures and relevant standards for operating an elevating work platform as described in the performance evidence above, including those relating to:

- National Standard for high risk work
- safe work practices
- operating manuals for elevating work platform
- site personnel and operational safety requirements
- elevating work platform operational procedures
- hazard, incident and emergency identification and implementation of control measures, including the risk of overhead crushes, and distance from power lines
- disposal of hazardous materials

Key site information, including:

- suitability of ground conditions, terrain and structure surfaces
- environmental requirements and constraints related to elevating work platforms

Key features associated with performance of an elevating work platform, including:

- types of elevating work platforms, their characteristics, technical capabilities and limitations

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below.

The assessment must:

- include access to:
  - elevating work platform
  - personal protective equipment required for the activities described in the performance evidence
- be conducted in a safe environment
- be assessed in the context of this sector's work environment
- be assessed in compliance with relevant legislation and regulations and using policies, procedures, and processes directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided, and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit) and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed.

Industry sector	**AQF indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years
Drilling, Coal Mining, Extractive (Quarrying),	3-6	3 Years

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Industry sector	**AQF indicator level*** **	**Required assessor or industry subject matter expert experience**
Metalliferous Mining and Civil Infrastructure		
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors, assessor and/or industry subject matter expert experience should be in line with industry standards for the sector in which it is being assessed and, where no industry standard is specified, should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

***While a Unit of Competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIQUA201D Maintain and monitor site quality standards

Modification History

Release	Comment
1	This unit replaces RIIQUA201A Maintain and monitor site quality standards
2	Editorial corrections
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to maintain and monitor site quality standards in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles.

No licensing or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

1 Plan, prepare for quality work outcomes	1.1 Access, interpret and apply quality standards and ensure the work activity is compliant 1.2 Identify and agree on performance indicators for own work 1.3 Plan and prepare for work to achieve quality standards 1.4 Complete work within time, quality, cost and productivity parameters
2 Apply quality systems to own work	2.1 Carry out work to meet quality standards 2.2 Adjust performance indicators to meet changing circumstances that affect quality standard requirements 2.3 Suggest procedure improvements to others for continuous improvement quality standards 2.4 Take corrective actions to improve work outcomes 2.5 Complete quality documentation

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

3 Monitor and report quality standards	3.1 Monitor quality of outputs and identify non-compliance 3.2 Prepare written records of quality outputs and report non-compliance 3.3 Monitor work processes, report incidents apply local risk control processes to minimise quality non-compliance 3.4 Communicate variation to quality outputs and standards to others

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIQUA201D Maintain and monitor site quality standards

Modification History

Release	Comment
1	This unit replaces RIIQUA201A Maintain and monitor site quality standards
2	Editorial corrections
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant legislation, documentation, policies and procedures
- demonstrates completion of the monitoring and maintenance of site quality standards that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - organising work activities to comply with site quality standards
  - identifies and agrees on performance indicators
  - completes work within set parameters
  - recommends and communicates continuous improvements to quality standards
  - processes quality written documentation
  - monitors work processes, reports incidents and applies local risk processes

Knowledge Evidence

The candidate must demonstrate knowledge of maintaining and monitoring site quality standards through:

- accessing, interpreting and applying the organisation and site requirements and procedures
- work healthy and safety
- maintaining the standards for site/enterprise quality systems and processes

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- performing work planning processes
- technical and operational capability and limitations of resources and workplace equipment being used
- applying reporting procedures

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert	

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIRIS201D Conduct local risk control

Modification History

Release	Comment
1	This unit replaces RIIRIS201B Conduct local risk control
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to conduct local risk control in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

1 Plan and prepare for risk control	1.1 Access, interpret and apply risk management documentation and ensure the work activity is compliant 1.2 Inspect work area conditions to identify potential hazards 1.3 Apply risk management procedures to deal with recognised hazards 1.4 Recognise the type and scope of unresolved hazards and their likely impact
2 Assess and identify unacceptable risk	2.1 Assess and determine consequence of an event 2.2 Consider and determine likelihood of the event 2.3 Identify criteria for the acceptability/unacceptability of the risk 2.4 Assess risk against criteria to identify if it warrants 'unacceptable risk' status and action 2.5 Effectively communicate and clarify the decision to others
3 Identify, assess and	3.1 Identify and consider all possible risk treatment options

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

implement risk treatments	3.2 Identify options by preliminary analysis and consideration of options 3.3 Analyse options, including resource requirements 3.4 Select most appropriate and effective course of action 3.5 Plan and prepare the course of action in detail and acquire/obtain required resources and approval 3.6 Implement the approved risk treatment 3.7 Review risk management processes
4 Complete records and reports	4.1 Effectively communicate accurate information to others on the course of action and implementation 4.2 Complete written records and reports for hazards and actions from personal risk assessment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIRIS201D Conduct local risk control

Modification History

Release	Comment
1	This unit replaces RIIRIS201B Conduct local risk control
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locate and apply relevant documentation, policies and procedures
- works effectively with others to undertake and complete conducting of local risk control including:
  - communicating clearly and concisely with others to receive and clarify treatment information
  - communicating clearly and concisely the likelihood and consequence of an identified risk
- demonstrates completion of conducting local risk control that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - identifying 'unacceptable risk' using the acceptability/unacceptability criteria
  - working with others to determine risk controls
  - assessing and determining consequence and likelihood of potential risk
  - controlling risk by selecting and implementing most appropriate treatment
  - reporting written information about risk assessment and treatment implementation

Knowledge Evidence

The candidate must demonstrate knowledge in conducting local risk control through:

- accessing, interpreting and applying the organisation and site requirements and procedures for:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - organisation risk management policy, procedure requirements
  - conducting worksite risk management procedures
  - conducting and maintaining worksite communication, reporting and recording procedures
- identifying and assessing hazards, risks, acceptability of risks and controls
- reading, preparing and using worksite safety systems information

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive	3-6	3 Years

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

(Quarrying)		
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIRIS301D Apply risk management processes

Modification History

Release	Comment
1	This unit replaces RIIRIS301B Apply risk management processes.
2	Performance Evidence and Knowledge Evidence replaced with correct information.
3	Performance Evidence and Knowledge Evidence amended.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to apply risk management processes in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational or supervisory roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Elements and Performance Criteria

1. Plan and prepare for risk management	1.1 Access, interpret and apply risk management documentation and ensure the work activity is compliant 1.2 Inspect and analyse work area conditions regularly and systematically to identify potential hazards 1.3 Access, interpret and apply existing procedures to control identified hazards 1.4 Identify hazards not controlled by existing procedures 1.5 Recognise the type and scope of unresolved hazards and their likely impact
2. Assess and identify unacceptable risk	2.1 Consider and determine the likelihood of an event 2.2 Evaluate and determine the consequence of the event

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	2.3 Consider and determine the risk level (likelihood and consequence combined) 2.4 Identify or source the criteria for determining the acceptability/unacceptability of the risk 2.5 Evaluate the risk and identify 'unacceptable risk' status
3. Review risk management documentation	3.1 Monitor and review working instructions 3.2 Seek authority and approval to amend in writing the working instructions 3.3 Seek authority and approval to action amendments to the working instructions
4. Identify and recommend controls	4.1 Identify the range of controls which may eliminate or minimise the risk 4.2 Conduct a detailed analysis of feasible options including the identification of resource requirements 4.3 Select the most appropriate control for dealing with the situation
5. Contribute to the implementation of controls	5.1 Write up the risk management plans selected control in detail, including resource requirements 5.2 Gain authorisation for selected control 5.3 Document and review controls for the job 5.4 Apply procedures to control recognised hazards 5.5 Communicate information on the control and its implementation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIRIS301D Apply risk management processes

Modification History

Release	Comment
1	This unit replaces RIIRIS301B Apply risk management processes.
2	Performance Evidence and Knowledge Evidence replaced with correct information.
3	Performance Evidence and Knowledge Evidence amended.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- obtains and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of risk management processes including:
  - applying relevant operational information
  - applying common industrial terminology
- works effectively with others to undertake and complete the application of risk management processes that meets all the required outcomes, including:
  - complying with written and verbal reporting requirements and procedures
  - communicating clearly and concisely with others to receive and clarify work instructions
  - communicating clearly and concisely with others to coordinate work activities
  - engaging co-workers, employers and supervisors in the risk management processes
- demonstrates completion of the application of risk management processes that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - applying planning and organising skills to the risk management processes
  - identifying or sourcing criteria to determine unacceptable risk

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- identifying and recognising type and scope of hazards and their impact
- assessing and determining the consequence, likelihood and level of potential risk
- identifying unacceptable risk using the acceptable/unacceptable criteria
- assessing options for appropriate controls and implementing accordingly
- identifying and obtaining required resources
- preparing and maintaining written records and report requirements
- reviewing risk management documentation
- identifying and recommending controls
- contributing to the implementation of controls

Knowledge Evidence

The candidate must demonstrate knowledge of the following when applying the risk management process:

- WHS legislation and regulations
- appropriate resources and infrastructure context and language
- topics or subject areas which are target for assessment and treatment
- site risk management systems and their application
- conventions and requirements for written communications including report writing
- problem solving techniques

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.

RIIWHS201D Work safely and follow WHS policies and procedures

Modification History

Release	Comment
1	The unit replaces RIIOHS201A Work safely and follow OHS policies and procedures.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.
5	Editorial correction of a typo to Performance Evidence. No new content.

Application

This unit describes a participant's skills and knowledge required to work safely and follow WHS policies and procedures in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1. Access and apply site safety procedures	1.1 Access, interpret and apply work health and safety procedures and ensure the work activity is compliant 1.2 Carry out isolation of energy sources and immobilisation of potential energy sources

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.3 Locate destinations by interpreting and applying site plans, transport rules and signage 1.4 Identify, act on, and report breaches in site safety
2. Apply personal safety measures	2.1 Select and wear personal protective equipment 2.2 Establish and maintain a clean and tidy safe working area 2.3 Obtain permits and clearances before specialised work is carried out 2.4 Apply safe manual handling procedures 2.5 Identify and apply site procedures for conducting high-risk activities
3. Apply operational safety measures	3.1 Recognise and respond to alarms 3.2 Identify and clarify responsibility in responding to emergency situations 3.3 Apply basic fire fighting techniques 3.4 Identify emergency escape route(s) and procedures
4. Maintain personal wellbeing	4.1 Identify risks to personal wellbeing and recognise preventative strategies 4.2 Identify, act on, and report situations which may endanger others 4.3 Access and explain verbally or in writing the requirements for fitness for duty 4.4 Comply with all work health and safety policies including smoking, alcohol and drug use
5. Identify and report incidents	5.1 Recognise and communicate incident and injury statistics 5.2 Report and prepare written records of incidents and injuries 5.3 Contribute to and participate in incident investigations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIWHS201D Work safely and follow WHS policies and procedures

Modification History

Release	Comment
1	The unit replaces RIIOHS201A Work safely and follow OHS policies and procedures.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.
5	Editorial correction of a typo to Performance Evidence. No new content.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of working safely and following WHS policies and procedures that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - sourcing, interpreting, clarifying and applying site safety information
  - listening carefully to health and safety instructions and information
  - responding to and clarifying information and directions
  - carrying out work instructions that complies with WHS policies and procedures
  - selecting, wearing and caring for personal protective equipment for all activities that require personal protective equipment
  - applying safe lifting and manual handling techniques
  - identify and report on WHS issues to appropriate personnel
  - recognising and following procedure to respond to alarms
  - completing workplace reporting procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Knowledge Evidence

The candidate must possess knowledge of work safely and follow WHS policies and procedures through:

- determining equipment safety requirements
- identifying personal protective equipment
- follows hazardous substances procedures and handling techniques
- location of safety data sheets (SDS) information and their application
- adhering to isolation procedures
- identifying lifting techniques, including for both manual and automated lifting
- locating and complying with WHS procedures
- application of site safety requirements and procedures
- participating in procedures for workplace management of others (e.g. consultation, safety representatives, committees, dispute resolution)
- determining potential of biological effects (e.g. circadian rhythms, sleep, alertness, fatigue, stress, effects of heat stress and hypothermia)
- details of site drug and alcohol policy
- locating and using emergency equipment

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,

RIIWHS204D Work safely at heights

Modification History

Release	Comments
1	This unit replaces RIIOHS204A Work safely at heights.
2	Formatting corrections.
3	Inserted Application information.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to work safety at heights in the Resources and Infrastructure Industries.

This unit it appropriate for those working in operational roles where they are required to perform work at heights.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1. Identify work requirements	1.1 Access, interpret and apply height safety procedures and ensure the work activity is compliant 1.2 Inspect site to determine layout and physical condition, condition of structures, prevailing weather conditions, equipment requirements and potential hazards

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.3 Adhere to WHS requirements 1.4 Identify, select and check safety equipment for serviceability 1.5 Identify, manage and report potential risks and hazards
2. Identify work procedures and instructions	2.1 Consult with authorised personnel to select materials, tools and equipment and check for serviceability 2.2 Select, wear and care for personal protective equipment 2.3 Inspect/install fall protection and perimeter protection equipment 2.4 Identify approved methods of moving tools and equipment to work area and minimise potential hazards associated with tools at heights 2.5 Ensure safety system has been installed correctly 2.6 Select and install appropriate signs and barricades
3. Access and install equipment	3.1 Consult with authorised personnel to ensure anchor fall protection and associated equipment is correctly fitted and adjusted 3.2 Ensure all required equipment is installed 3.3 Use recommended methods to access work area for people, tools and equipment 3.4 Locate tools and materials to eliminate or minimise the risk of items being knocked down
4. Perform work at heights	4.1 Check access from ground to work area and ensure it is safe 4.2 Keep fall equipment in place and adjusted appropriately for movement during work 4.3 Undertake manual handling of materials and equipment 4.4 Locate materials and equipment ensuring that they are safely secured and distributed 4.5 Check safety system periodically for compliance 4.6 Monitor risk control measures to ensure that they are effective and appropriate 4.7 Reassess risk control measures, as required, in accordance with changed work practices and/or site conditions and undertake alterations
5. Clean up work area	5.1 Consult with authorised personnel to ensure safety system is dismantled and removed 5.2 Clear work area and dispose of or recycle materials 5.3 Clean, check, maintain and store tools and equipment

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIWHS204D Work safely at heights

Modification History

Release	Comments
1	This unit replaces RIIOHS204A Work safely at heights.
2	Formatting corrections.
3	Inserted Application information.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of working safely at heights that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - accessing, interpreting and applying technical and safety information for working at heights
  - assessing hazards and risk associated with working at heights and implement control methods
  - selecting wearing and caring for personal protective equipment
  - identifying required safety systems including fall protection and associated equipment
  - checking that fitting, adjusting and anchoring of fall protection and associated equipment is correct
  - performing work safely at heights

Knowledge Evidence

The candidate must demonstrate knowledge of the following when working safely at heights:

- names and functions of equipment, components and materials

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- complying with equipment manufacturer's instructions and specifications
- safe shifting and handling of tools and materials
- adhering to statutory and regulatory authority requirements
- the nature of work undertaken at heights
- complying with heights safety systems
- the processes of providing for safe working practices
- using safety equipment/systems and considerations to facilitate working safely at heights
- complying with safe work methods

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIWHS301D Conduct safety and health investigations

Modification History

Release	Comment
1	The unit replaces RIIOHS301A Conduct safety and health investigations.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.
5	Editorial correction to Performance Evidence. No new content.

Application

This unit describes a participant's skills and knowledge required to conduct safety and health investigations in the Resources and Infrastructure Industries.

This unit is appropriate for those working in technical specialist roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1 Determine the objectives	1.1 Access, interpret and apply safety and health investigation procedures and documentation and ensure the work activity is compliant 1.2 Determine the scope of the investigation. Ensure pre- and post-incident timeframe is consistent with all requirements 1.3 Determine the proposed investigation objectives from an

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	analysis of the available information and factors 1.4 Test the proposed objectives and clarify the scope of the investigation 1.5 Ensure the final objectives and scope of the investigation will be achievable within available resources and authority constraints
2 Gather information	2.1 Maintain site security and integrity of evidence in accordance with all requirements 2.2 Plan and prepare for the systematic collection of information 2.3 Schedule information collection and completion to ensure minimum backtracking or repeat actions 2.4 Ensure methods used to collect and examine information, including interviewing and recording, meet all requirements 2.5 Collect, test and organise all appropriate information
3 Evaluate information	3.1 Assess and evaluate information for validity and reliability and organise as evidence to aid decision making 3.2 Undertake further research where information is unclear or inadequate, and rectify 3.3 Analyse the evidence to determine the cause(s) of the incident 3.4 Draw conclusion(s) based on agreed standard 3.5 Ensure the findings address the established factual objectives
4 Identify courses of action	4.1 Frame options for the courses of action 4.2 Ensure options are provided in a form which meets the audience requirements, can be easily understood and enables the selection of the most appropriate course of action 4.3 Ensure the course of action selected will resolve the issues and reduce the probability of recurrence 4.4 Ensure the selected course of action can be implemented in accordance with all requirements
5 Prepare and present investigation reports	5.1 Prepare investigation reports 5.2 Present written and graphical reports clearly and concisely in a format which can be readily understood 5.3 Present the reports to the required audience 5.4 Review the investigation process and pass recommendations for process changes and improvements to the appropriate authority

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIWHS301D Conduct safety and health investigations

Modification History

Release	Comment
1	The unit replaces RIIOHS301A Conduct safety and health investigations.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.
5	Editorial correction to Performance Evidence. No new content.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant legislation, documentation, policies and procedures
- demonstrates completion of conducting safety and health investigations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - determining objective and authority of the investigation
  - planning and organising activity to gather evidence
  - undertaking research to gather evidence
  - engaging others in the investigation process
  - questioning and actively listening to those involved in the investigation
  - correctly collecting and maintaining the integrity of evidence
  - identifying and/or confirming the linkages between factors and outcomes, causes and effects and direct/indirect causal relationships
  - drawing conclusions and identifying appropriate course of action to resolve issue
  - writing clearly, concisely and effectively report investigation outcomes and presenting the outcomes to others

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Knowledge Evidence

The candidate must demonstrate knowledge of conducting safety and health investigations:

- topic or subject area which is the target for the investigation
- theory of safety and health investigative research and analysis
- symptoms and possible immediate effects of post-traumatic stress in an investigation situation
- appropriate Industry context
- site procedures and conventions related to safety and health investigations
- site risk management processes and their applications
- conventions and requirements for written communications, including report writing

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

SIRRINV001 Receive and handle retail stock

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to receive and store retail stock. It requires the ability to check stock quality and quantity against order requirements; store or present stock correctly; and maintain cleanliness of stock-handling areas.

This unit applies to all retail sectors and business sizes from large format stores to small independents. It applies to frontline personnel who have limited autonomy and work under close supervision and guidance of others in frontline operational roles. However; in smaller retail businesses, senior personnel also undertake this function.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Inventory

Unit Sector

Retail

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Maintain stock handling and storage	1.1.Maintain cleanliness of stock handling and storage areas. 1.2.Ensure correct environmental conditions for storage of

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

areas.	perishable and other stock to prevent loss or damage as required. 1.3. Remove and dispose of waste to minimise safety risks and environmental impacts. 1.4. Report hazards and potential hazards to relevant personnel to minimise safety risks.
2. Accept stock delivery.	2.1. Check incoming stock quantities against order documentation. 2.2. Inspect incoming stock quality, and accurately report quality issues or damage to relevant personnel. 2.3. Record stock delivery, and report discrepancies with orders as required. 2.4. Unpack and handle stock according to manufacturer instructions and safe manual handing techniques to avoid personal health risk and stock damage. 2.5. Store or display stock promptly in designated location.
3. Replenish stock levels.	3.1. Rotate, replenish and present stock according to organisational requirements for stock levels. 3.2. Record stock waste or shrinkage according to organisational procedures. 3.3. Maintain optimal stock levels on retail shop floor.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

Reading skills to:	• interpret:
	  • plain English documents that outline organisational policies and procedures for stock control
	  • basic order and delivery documentation and stock labels.

Numeracy skills to:	• calculate stock levels.
Planning and organising skills to:	• complete stock control activities in a logical and time efficient sequence.
Technology skills to:	• use stock control technology to aid stock control processes.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for SIRRINV001 Receive and handle retail stock

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- follow organisational policies and procedures, safe work practices and manufacturer instructions to perform each of the following stock control procedures:
  - receive and process incoming stock
  - store retail stock
  - maintain retail stock levels
  - maintain stock delivery records
- follow organisational stock control policies and procedures to process stock in each of the following situations:
  - stock quality is poor
  - stock quantity errors
  - incorrect stock is delivered
- maintain stock handling and storage areas, according to organisational policies and procedures, when completing the above stock control activities.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in the elements and performance criteria of this unit:

- principles of stock control procedures:
  - rotation and replenishment
  - product life cycle
- organisational stock control policies and procedures for:
  - receiving stock from suppliers
  - recording incoming stock
  - recording and reporting stock discrepancies and quality issues
  - recording stock waste and shrinkage
  - stock quality standards
  - unpacking, storage and display of stock
  - damaged or missing stock

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- key features of retail products that relate to handling and storage:
  - handling techniques to minimise damage
  - general care
  - optimum storage conditions
  - features of damaged or spoiled stock
  - correct disposal methods
- safe manual handing techniques for moving and storing retail stock
- relevant legislation and standards relevant to receiving and storing retail stock.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure use of:

- manufacturer instructions for stock handling and storage
- organisational policies and procedures for stock handling and control
- retail stock display areas
- range of retail stock
- stock control documentation
  - delivery dockets
  - orders
  - reporting documentation
- stock receiving bay or area
- stock storage areas
- assessment activities that allow the individual to:
  - work within commercial speed, timing and productivity
  - manage tasks and contingencies in the context of the job role.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SIRRINV002 Control stock

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to process stock orders, maintain stock levels, minimise stock losses, manage stocktakes and maintain all documents that relate to the administration of any type of stock.

This unit applies to individuals responsible for stock control. They work within organisational systems and procedures, but make decisions about stock administration and may have responsibility for others.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Inventory

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Monitor stock receipt and dispatch.	1.1. Implement organisational policies and procedures for receipt, dispatch and secure storage of stock. 1.2. Allocate tasks and monitor staff to ensure organisational procedures are followed, and documentation is completed

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	correctly. 1.3. Confirm that stock quantity and quality inspections on receipt meet organisational standards. 1.4. Act on variations to quantity and quality of delivered stock. 1.5. Supervise safe stock handling and storage.
2. Maintain stock records.	2.1. Monitor stock and maintain stock at required levels. 2.2. Maintain, monitor and adjust stock reorder cycles as required. 2.3. Provide clear information to team members about individual stock recording responsibilities. 2.4. Maintain stock storage and movement records. 2.5. Record and report stock discrepancies. 2.6. Monitor stock performance and identify and report fast and slow-selling items.
3. Process and follow up orders.	3.1. Process and raise stock orders according to organisational procedures. 3.2. Monitor delivery of stock to ensure agreed deadlines and inventory requirements are met. 3.3. Liaise with suppliers to ensure continuity of supply. 3.4. Resolve routine supply problems or refer to appropriate personnel for action. 3.5. Distribute stock within the organisation according to required allocations. 3.6. Handle routine supply problems or refer to management as required by store policy.
4. Minimise stock losses.	4.1. Regularly check storage of stock and ensure its protection. 4.2. Identify, record and report stock losses. 4.3. Identify avoidable losses and establish reasons for them. 4.4. Recommend solutions and implement procedures to prevent future losses.
5. Coordinate stocktake or cyclical count.	5.1. Explain procedures for stocktake and cyclical counts to team members. 5.2. Allocate stocktaking tasks to individual team members ensuring effective use of staff resources to complete task. 5.3. Provide team members with clear directions for performance of each task. 5.4. Produce accurate reports for management on stocktake data, including discrepancies.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret supplier purchasing agreements, purchase orders, records of incoming stock and organisational policies and procedures for stock control.

Numeracy skills to:	• calculate:
	  • supplier costs and complex order costs
	  • complex details of stock on hand and stock losses and produce complex numerically-based reports
	• reconcile incoming stock and invoices against purchase orders.

Technology skills to:	• use business technology for inventory management.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for SIRRINV002 Control stock

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- maintain and order stock across one stock cycle according to organisational procedures using all of the following stock processes:
  - receipt
  - dispatch
  - ordering
  - stock level monitoring
  - records maintenance
- produce three different stock control reports
- organise and coordinate one stocktake or cyclical count
- provide clear and correct information to team members involved in stock control processes.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - receipt and dispatch of goods, including inspection for quantity and quality
  - stock ordering and reordering
  - stock replenishment
  - stock rotation
  - reporting of stock discrepancies, damage and loss
  - safe transport, handling and storage of goods
  - stock control
  - stocktaking and cyclical counts
  - pricing, labelling and packaging
  - stock security
- key aspects of legislation and codes of practice relevant to stock control:
  - Australian Consumer Law
  - Work Health and Safety (WHS)

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - manual handling
  - licensing for mechanical movement of stock
- principles of stock control:
  - rotation and replenishment
  - product life cycle
- impact of business planning and sales forecasts on stock control
- types of stock control systems used in the sector
- reasons for stock loss and damage and methods to control these and protect stock.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- current plain English regulatory documents distributed by government regulators outlining key aspects of legislation and codes of practice relevant to stock control as listed in Knowledge Evidence
- a computerised stock control system
- stock for use in stock control activities
- organisational policies and procedures for stock control
- team members; these can be:
  - individuals in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SIRRMER003 Coordinate visual merchandising activities

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to coordinate store visual merchandising activities and ensure adherence to organisational standards, policies and procedures for the display of merchandise.

It applies to individuals working in frontline roles in a diverse range of retail industry sectors and business contexts that display retail products for sale. They operate with independence and under limited supervision and guidance from others, and within established organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Coordinate visual merchandise requirements.	1.1. Access and interpret organisational visual merchandising guidelines, and policies and procedures. 1.2. Communicate visual merchandising standards and display

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	requirements to team members. 1.3. Plan appropriate timing for producing and dismantling visual merchandise displays. 1.4. Communicate roles and responsibilities for visual merchandising to team members. 1.5. Plan and coordinate promotional and special event displays as directed by management.
2. Supervise visual merchandise activities.	2.1. Supervise construction and maintenance of displays to achieve balance and visual impact. 2.2. Ensure display information accurately depicts product or service being promoted. 2.3. Ensure displays are completed with minimum disruption to customer service and traffic flow. 2.4. Ensure displays meet organisational standards and visual merchandise guidelines. 2.5. Regularly monitor replenishment of merchandise and rotation of stock and take action to ensure optimal stock levels as required.
3. Review impact of visual merchandise activities.	3.1. Evaluate promotions or special event displays and determine impact on sales results. 3.2. Report on visual merchandising activities to relevant personnel and make suggestions for improvements as required.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Problem solving skills to:	• overcome difficulties relevant to the display of merchandise.

Assessment Requirements for SIRRMER003 Coordinate visual merchandising activities

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- follow merchandising display guidelines, and organisational policies and procedures to coordinate visual merchandise activities for two of the following:
  - an existing merchandise range
  - a new merchandise range
  - a seasonal merchandise range
  - a promotional event
  - discounted merchandise
- for each of the above visual merchandising activities:
  - communicate requirements with team members
  - monitor visual merchandising displays and standards
- report on the effectiveness of the above merchandising activities.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - merchandise labelling and pricing
  - required stock levels
  - merchandise rotation and replenishment
- organisational visual merchandise standards and guidelines and their application to visual merchandising activities
- key aspects of relevant industry codes of practice, legislation and statutory requirements for coordinating merchandise presentation:
  - Australian Consumer Law
  - Work Health and Safety (WHS)
- objectives and use of visual merchandise displays
- interpretation of scaled versions of store design, layout and fixture placements
- techniques for creating effective visual merchandise displays:
  - types of displays and their impact

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - display location
    - display lighting
    - display signage
- fundamental elements and principles of visual design and their use in the display and merchandise of products
- commercial impact of incorrect pricing both favourable and unfavourable:
    - customer complaints
    - profitability
- safe work practices for displaying merchandise with particular emphasis on:
    - safe use of equipment
    - safe manual handling techniques for bending, lifting and shifting heavy items
- product knowledge relevant to visual merchandise activities:
    - price
    - features
    - benefits.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- retail merchandise
- display areas
- retail display equipment and props
- product labels and price tickets
- ticketing and pricing equipment
- relevant documentation:
    - organisational visual merchandise display guidelines
    - organisational policies and procedures for:
        - merchandise labelling and pricing
        - required stock levels
        - merchandise rotation and replenishment
    - relevant industry codes of practice, legislation and statutory requirements for coordinating merchandise presentation:
        - Australian Consumer Law
        - Work Health and Safety (WHS)
- team members; these can be:
    - individuals in an industry workplace, or

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Assessment Requirements for SIRRRTF001 Balance and secure point-of-sale terminal

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- consistently apply organisational policies and procedures to:
  - balance a register or terminal on three occasions with complete accuracy
  - reconcile three different sets of takings comprising both cash and non-cash with complete accuracy
  - identify and resolve three different types of balancing discrepancies
  - process three different types of takings according to organisational policies and procedures.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- role and importance of the balancing process
- techniques for identifying and resolving discrepancies
- functions and procedures for operating point-of-sale equipment:
  - opening and closing
  - balancing
  - clearance of terminal and transference of tender
  - recording takings
  - consumables required by system
  - security
- cash handling procedures:
  - counting cash
  - handling cash floats
  - change required, denominations of change and tendering change
  - security
- organisational policies and procedures for non-cash transactions:
  - credit cards
  - EFTPOS

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - vouchers
- organisational policies and procedures for:
  - exchanges
  - refunds
  - lay-by
  - cash handling
  - cash float
  - operation of point-of-sale equipment
  - register or terminal balance
  - security of cash and non cash transactions.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- organisational policies and procedures related to point-of-sale
- point-of-sale equipment and consumables
- financial transaction documentation for non-cash sales
- cash
- assessment activities that allow the individual to work with commercial speed, timing and productivity.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Engage customers.	1.1. Greet customers in a polite and friendly manner within designated response times and make them a priority over other workplace duties.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.2. Clearly communicate with customers using appropriate verbal and non-verbal communication.
	1.3. Adapt communication style to appropriately communicate with customers from diverse backgrounds.
2. Assist customers.	2.1. Identify and act on opportunities to assist customers and be available to assist customers when needed.
	2.2. Question and actively listen to customers to determine their needs.
	2.3. Resolve routine customer problems according to individual responsibility level and organisational policies and procedures.
	2.4. Address general customer enquiries and provide accurate information in a clear and courteous manner.
3. Contribute to a service culture.	3.1. Act in line with organisational service standards to ensure quality customer service.
	3.2. Show interest in customer's needs and maintain a welcoming customer environment free of complacency.
	3.3. Seek assistance from relevant personnel when customer's needs are beyond scope of own responsibility.
	3.4. Identify and take opportunities to improve customer service standards.
	3.5. Refer customer service issues and feedback to relevant personnel for action.

Assessment Requirements for SIRXCEG001 Engage the customer

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- contribute to a customer service culture by providing customer service, in line with organisational service standards, across four different customer interactions
- for the above four customer interactions, individually or cumulatively involve:
  - customers from diverse backgrounds
  - resolution of two routine customer problems
  - provision of accurate information to address two general customer enquiries
  - referral of unresolved customer enquiry
  - use of effective communication techniques and positive body language.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational service standards and procedures for:
  - designated customer service response times
  - interacting with customers
  - solving routine customer problems
  - providing information to customers
- basic principles for achieving positive customer service
- verbal and non-verbal communication
- techniques for effective communication:
  - open and closed questioning
  - paraphrasing
  - effective listening
  - voice tonality and volume
- body language and its role in customer service
- effective communication strategies for interacting with customers of diverse backgrounds
- commercial impact of:
  - positive customer service
  - poor customer service

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- organisational information and sources of information to assist customer with customer enquiries.

Assessment Conditions

Skills must be demonstrated in a services industry environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- relevant documentation:
  - organisational service standards and procedures for:
    - designated customer service response times
    - interacting with customers
    - solving routine customer problems
    - providing information to customers
- customers from a diverse range of backgrounds; these can be:
  - individuals in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Assessment Requirements for SIRXRSK002 Maintain store security

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- maintain store security over three different work shifts by:
  - monitoring adherence to organisational security policies and procedures
  - responding to two occurrences of non-adherence to security policies and procedures
  - communicating security policies and procedures to one team member
  - ensuring security equipment is utilised and in correct working order
  - reporting on opportunities for improved store security.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - use of security equipment
  - suspicious customer behaviour
  - suspicious team member behaviour
  - armed robbery
  - cash and non-cash security
  - merchandise security
  - theft
  - responding to security breaches
  - reporting security risks and breeches
  - surveillance of merchandise
  - personal security
  - general store security
  - team members' security training
  - security for opening and closing premises
  - reporting problems and faults
  - security of visitors, sales representatives, contractors and vendors
  - security risks likely to endanger customers or team members

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- legislation as relevant to store security and own level of responsibility:
  - privacy laws
  - Australian Consumer Law
  - reporting procedures
- impacts of security breaches on individuals and organisation:
  - emotional distress
  - financial loss
  - commercial impacts
- common security risks within the retail workplace and techniques to:
  - identify risk
  - minimise risk
- types of store alarms and security systems used in industry.

Assessment Conditions

Skills must be demonstrated in a services industry environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- relevant equipment:
  - alarm systems
  - surveillance equipment
  - point-of-sale equipment
  - communication equipment
- relevant documentation:
  - current plain English regulatory documents distributed by government regulators legislation as relevant to store security and own level of responsibility as listed in Knowledge Evidence
  - organisational policies and procedures as listed in the Knowledge Evidence
- customers and team members; these can be:
  - individuals in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

1. Facilitate team awareness of work health and safety.	1.1. Communicate relevant work health and safety legislation, and organisational policies and procedures to team members. 1.2. Make all current work health and safety information readily accessible to staff. 1.3. Demonstrate adherence to work health and safety to reinforce information. 1.4. Regularly provide team members with information on identified hazards and risk control procedures
2. Involve team members in work health and safety matters.	2.1. Provide opportunities for team members to consult and contribute to work health and safety issues and practices. 2.2. Resolve issues raised by team members promptly or refer to relevant personnel.
3. Maintain a safe work environment.	3.1. Monitor team adherence to work health and safety requirements, and arrange work health and safety training as required. 3.2. Implement organisational policies and procedures for identifying, preventing and reporting potential hazards. 3.3. Take prompt action to address non-compliance with procedures and safe work practices. 3.4. Investigate unsafe or hazardous events, identify causes, and report inadequacies in risk control measures or resource allocation for risk control to relevant personnel.
4. Maintain work health and safety records.	4.1. Complete and maintain work health and safety records according to organisational policies and procedures and legislative requirements. 4.2. Use information from records to identify hazards and monitor risk control procedures. 4.3. Provide feedback to relevant personnel on workplace health and safety and areas for improvement.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret unfamiliar and complex materials describing regulatory requirements for work health and safety management and organisational policies and procedures.
Writing skills to:	• report on work health and safety practices, including recommendations for change and complete accurate records for

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- implement and monitor adherence to workplace health and safety requirements across three different work periods by:
  - identifying non-compliance and tasking appropriate action
  - providing feedback to team members relevant to work health and safety
  - coordinating a work health and safety consultative processes
  - monitor the effectiveness of the work health and safety procedures:
    - required adjustments
    - team member training needs
  - demonstrating correct procedure for applying work health and safety to a work activity
- follow organisational policies and procedures to conduct a work health and safety investigation of one unsafe situation or hazardous event
- complete all required documentation and reporting for the above work health and safety situation or event.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - manual handling and safe lifting
  - emergency procedures including fire, flood and cyclone
  - unsafe or hazardous goods
  - handling and storage
  - waste disposal
  - bomb threat procedures
  - store evacuation
  - accidents, sickness and injury
  - dangerous customers
  - recall and contamination
- relevant Work Health and Safety (WHS) legislation and codes of practice

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- hierarchy of risk control
- use of personal protective equipment
- location of nearest first aid assistant or facility
- manual handling and safe lifting techniques
- possible fire and safety hazards
- communication techniques to clearly communicate work health and safety information
- reporting procedures for incidents and hazards
- use of safety alarms, fire extinguishers and emergency exits.

Assessment Conditions

Skills must be demonstrated in:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- relevant work health and safety equipment
- relevant documentation:
  - Work Health and Safety (WHS) legislation
  - organisational policies and procedures for work health and safety
  - incident reporting forms
  - WHS records
- team members; these can be:

SITXMPR006 Obtain and manage sponsorship

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to obtain and manage sponsorship for a business activity, product, service or event. It requires the ability to determine sponsorship requirements, source and negotiate with potential sponsors and manage sponsorship arrangements.

The unit applies to any tourism, travel, hospitality or event sector where sponsorship is sought to support business or community activities. Sponsorship may relate to a one-off activity, such as an event, or to ongoing operations, such as sponsorship of a particular service.

It applies to senior coordinators and managers who operate independently, have responsibility for others and are responsible for making a range of financial and operational decisions. They may work under the overall guidance of event organising committees.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

outcomes.	demonstrate achievement of the element.
1. Determine sponsorship requirements and opportunities.	1.1. Identify sponsorship requirements in consultation with colleagues. 1.2. Develop targets for sponsorship based on financial parameters of activity. 1.3. Identify items, activities or projects to be sponsored to meet organisational needs. 1.4. Identify potential sponsors based on potential sponsor appeal, nature of the activity and previous approaches.
2. Source sponsorship.	2.1. Develop sponsorship materials in a clear, concise and professional format to include a full breakdown of costs and benefits. 2.2. Distribute and present sponsorship materials according to agreed targets. 2.3. Undertake follow up promotion and negotiation with potential sponsors. 2.4. Discuss and negotiate additional opportunities with sponsor. 2.5. Make written sponsor contracts or agreements to include full details of commitments made by both parties.
3. Service sponsors.	3.1. Brief colleagues on details of sponsorship arrangements. 3.2. Organise activities according to sponsorship agreement, ensuring all agreements are honoured. 3.3. Monitor and evaluate activities and make required adjustments. 3.4. Provide and request feedback from sponsor. 3.5. Identify and action opportunities to enhance value of involvement for sponsors and benefits for the organisation. 3.6. Maintain and distribute accurate and current sponsorship documentation throughout the process. 3.7. Liaise and follow-up with sponsor to initiate future cooperative approaches.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Reading skills to:	• read and interpret details of the business activities or projects to be sponsored and complex sponsorship contracts or agreements.
Writing skills to:	• prepare sponsorship materials and agreements expressing complex business ideas and proposals.
Oral communication skills to:	• liaise with sponsors and manage their participation.
Numeracy skills to:	• evaluate budgets and interrogate or use financial data to inform sponsorship activities.
Problem-solving skills to:	• evaluate a potential sponsor's best fit with the business activities or projects • monitor activities, identify sponsorship servicing deficiencies, and make required adjustments.
Initiative and enterprise skills to:	• identify and action opportunities to obtain sponsorship.
Technology skills to:	• design effective sponsorship materials and proposals.

Assessment Requirements for SITXMPR006 Obtain and manage sponsorship

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- determine sponsorship requirements for at least two business activities, products, services or events, and obtain sponsorship
- develop clear, concise and professional proposals for the above business activities, products, services or events, including:
  - electronic presentation
  - printed promotional material
- monitor and manage the above sponsorship arrangements for the period of the sponsorship contract
- follow organisational practices and protocols when managing sponsorship activities
- demonstrate effective communication and negotiation with sponsors.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- particular industry sector and business type:
  - business activities or events which would appeal to sponsors
  - potential sponsorship opportunities and sources of finance
- protocols for sponsor contact and accessing sponsorship opportunities
- packages that can be offered to sponsors
- formats for and inclusions of sponsorship proposals
- sponsorship documentation:
  - activity reports or schedules
  - contracts
  - feedback documentation
  - financial records
- features of sponsorship contracts and agreements:
  - legal requirements to supply services as contracted and ramifications of failure to comply
  - sponsor reporting expectations and requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Skills must be demonstrated in an operational tourism, travel, hospitality or events business with which a sponsor can be involved. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- computers, printers and software packages to design effective sponsorship proposals
- current commercial sponsorship contract templates
- sponsors to allow the individual to communicate, negotiate and manage sponsorship arrangements; these can be:
  - those in an industry workplace who are assisted by the individual during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

TAEDEL301 Provide work skill instruction

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Application

This unit describes the skills and knowledge required to conduct individual and group instruction, demonstrate work skills and assess the success of training and one's own training performance, using existing learning resources in a safe and comfortable learning environment.

It emphasises the training as being driven by the work process and context, and applies to a person working under supervision as a work skill instructor in a wide range of settings not restricted to training organisations,

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Delivery and facilitation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Organise instruction and demonstration	1.1 Gather information about learner characteristics and learning needs 1.2 Confirm a safe learning environment 1.3 Gather and check instruction, demonstration objectives, and seek assistance if required 1.4 Access and review relevant learning resources and learning

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	materials for suitability and relevance, and seek assistance to interpret the contextual application 1.5 Organise access to necessary equipment or physical resources required for instruction and demonstration 1.6 Notify learners of details regarding the implementation of the learning program and/or delivery plan
2. Conduct instruction and demonstration	2.1 Use interpersonal skills with learners to establish a safe and comfortable learning environment 2.2 Follow the learning program and/or delivery plan to cover all learning objectives 2.3 Brief learners on any workplace health and safety (WHS) procedures and requirements prior to, and during, training 2.4 Use delivery techniques to structure, pace and enhance learning 2.5 Apply coaching techniques to assist learning 2.6 Use communication skills to provide information, instruct learners and demonstrate relevant work skills 2.7 Provide opportunities for practice during instruction and through work activities 2.8 Provide and discuss feedback on learner performance to support learning
3. Check training performance	3.1 Use measures to ensure learners are acquiring, and can use, new technical and generic skills and knowledge 3.2 Monitor learner progress and outcomes in consultation with the learner 3.3 Review relationship between the trainer/coach and the learner, and adjust to suit learner needs
4. Review personal training performance	4.1 Reflect upon personal performance in providing instruction and demonstration, and document strategies for improvement 4.2 Maintain, store and secure learner records, according to organisational and legal requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill	Performance Criteria	Description
Learning	4.1	• Reflects on practice to improve
Reading	1.1, 1.3, 1.4, 2.2	• Sources and interprets processes and procedures, learning resources and information relevant to providing a work instruction and delivery
Writing	1.4, 1.6, 2.3, 2.6, 2.8, 3.2, 4.1, 4.2	• Accurately maintains learner records and documentation appropriate to the learning context and audience
Oral Communication	1.1, 1.6, 2.3, 2.4, 2.6	• Uses appropriate communication strategies to engage, build rapport, provide instruction, monitor progress and provide feedback to individuals or groups
Interact with others	1.2, 1.3, 2.1, 2.5, 2.8, 3.2	• Recognises the importance of consultation and negotiation while collaborating to confirm strategy and achieve required outcomes • Asks questions in order to clarify understanding, and to provide and seek feedback • Builds rapport to establish effective working relationships and to achieve effective outcomes
Get the work done	1.1-1.6, 2.1-2.8, 3.1-3.3, 4.1, 4.2	• Organises and completes work according to defined requirements, taking responsibility for some decisions and sequencing tasks to achieve efficient outcomes • Identifies and responds to potential risks, problems and opportunities for improvement and considers options for different approaches

Assessment Requirements for TAEDEL301 Provide work skill instruction

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- carrying out a minimum of three training sessions, involving demonstrating and instructing particular work skills for at least two different individuals or small groups, with each session addressing:
  - different learning objectives
  - a range of delivery techniques and effective communication skills appropriate to the audience.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- learner characteristics and needs
- the content and requirements of the relevant learning program, and/or the delivery plan
- the sources and availability of relevant learning resources and learning materials
- the content of relevant learning resources and learning materials
- training techniques that enhance learning, and when to use them
- introductory knowledge of learning principles and learning styles
- key workplace health and safety (WHS) issues in the learning environment, including:
  - roles and responsibilities of key personnel
  - responsibilities of learners
  - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency procedures
  - risk controls for the specific learning environment.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Conditions must be typical of those experienced in the training and assessment environment and include access to any necessary workplace documents.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

TAEDEL404 Mentor in the workplace

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Application

This unit describes the skills and knowledge required to establish and develop a professional mentoring relationship with an individual in a workplace.

It applies to workplace supervisors or other work colleagues who work under limited supervision and who have responsibility for mentoring one or more individuals in the workplace. This may include, but is not limited to, those who mentor an apprentice or trainee employed by, or undertaking a work placement within, an organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Delivery and facilitation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Develop a mentoring plan	1.1 Identify scope and boundaries of the mentoring relationship according to organisational procedures 1.2 Document mentoring plan in accordance with organisational requirements 1.3 Establish ground rules and negotiate realistic expectations 1.4 Establish and maintain confidentiality of the relationship in

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	accordance with legislation, policy and procedures
2. Facilitate mentoring relationship	2.1 Develop learner's confidence, self-esteem, respect and trust in the mentoring relationship 2.2 Share personal experiences and knowledge with the person being mentored according to agreed objectives 2.3 Support the person being mentored to develop and use skills in problem solving and decision making 2.4 Use personal and professional networks to assist the person being mentored 2.5 Provide information, and guidance to enhance engagement in the workplace 2.6 Use techniques for resolving differences without damaging the relationship, and obtain assistance according to organisational policy and procedures
3. Monitor mentoring relationship	3.1 Provide planning assistance and guidance as requested by the person being mentored in a form and style to suit their requirements 3.2 Provide feedback to the person being mentored on progress towards achieving the expectations and goals of the mentoring process 3.3 Recognise and discuss changes in the mentoring relationship with appropriate stakeholders 3.4 Negotiate and manage closure of the mentoring arrangement once objectives have been met
4. Evaluate effectiveness of mentoring	4.1 Establish and discuss benefits gained from the mentoring process 4.2 Reflect on and articulate the personal benefits gained from providing mentoring 4.3 Identify and report the outcomes of the mentoring arrangement and the benefits to the organisation according to organisational policy and procedures to improve the mentoring system or program

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill	Performance Criteria	Description
Reading	1.1, 1.4	• Sources and interprets texts relevant to mentoring context, including organisational policies and learner information
Writing	1.1, 1.3, 2.5, 3.1, 3.2, 4.3	• Develops content and documents information relevant to mentoring plan
Oral Communication	2.4, 3.3, 4.1, 4.2, 4.3	• Uses appropriate communication techniques to build rapport, trust, engagement and provide guidance and feedback
Navigate the world of work	1.1, 1.4, 2.6, 4.3	• Follows legislative requirements, organisational protocols, policies and procedures in workplace mentoring
Interact with others	1.2, 2.1-2.3, 2.5, 2.6, 3.1, 3.2, 3.4	• Builds rapport using collaboration with others to achieve joint outcomes and effective interaction • Provides mentoring and role modelling to achieve agreed outcomes • Cooperates and consults with others to clarify understanding and seek feedback
Get the work done	1.1-1.4, 2.1-2.6, 3.1-3.4, 4.1-4.3	• Plans, organises and completes work according to defined requirements taking responsibility for decisions and sequencing tasks to achieve efficient outcomes • Identifies and responds to problems, considering options for different approaches

Assessment Requirements for TAEDEL404 Mentor in the workplace

Modification History

Release	Comments
Release1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, including:

- preparing a mentoring plan between the mentor and mentee that sets out clear objectives for a mentoring relationship that will last at least one year
- facilitating at least three mentoring sessions
- documenting information on sessions, including comments and notes from both mentor and mentee.
-

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relevant policy, legislation, codes of practice and national standards likely to impact on the provision of workplace mentoring, including training contracts and responsibilities of employer, registered training organisation (RTO) and funding body where they exist
- mentoring methodologies and strategies
- learning theories in relation to mentoring
- strategies for working with a mentee including encouraging self reflection, confidence and the building of rapport
- acceptable behaviour in the mentoring relationship
- equal employment opportunity, equity and diversity principles
- how a mentor can support the mentee's employer to meet its WHS obligations for the mentee.
-

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Conditions must be typical of those experienced in the training and assessment environment and include access to:

- documentation of any existing training plan or contract if applicable to the mentoring relationship.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

TLIA2012 Pick and process orders

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to pick and process orders in accordance with relevant codes, regulations and workplace requirements within the transport and logistics industry.

It includes identifying workplace order picking processes, policies and procedures; picking and despatching orders; and recording stock levels.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify workplace order picking processes, policies	1.1 Workplace procedures for order picking and related workplace documentation are interpreted
	1.2 Stock allocation and location systems are identified and

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	and procedures		located
		1.3	Appropriate manual handling equipment is selected in accordance with work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace procedures
2	**Pick and despatch an order**	2.1	Work requirements are planned and appropriate equipment and documentation is assembled
		2.2	Warehouse zones where required products are stored, are identified and located
		2.3	Pick path is established
		2.4	Appropriate pallet/s for orders are selected and stacked to minimise stock damage and to maximise stability, as required
		2.5	Products are selected and consolidated
		2.6	Products/pallets are located in despatch areas
		2.7	Products are assembled to meet workplace schedules
		2.8	Orders are consolidated, secured, arranged and placed in storage zones in accordance with schedules
3	**Record stock levels**	3.1	Storage areas are checked and stocks are noted for replenishment in accordance with workplace procedures
		3.2	Workplace records are completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIA2012 Pick and process orders

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when picking and processing orders
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when picking and processing orders
- completing documentation related to picking and processing orders
- estimating the size, shape and special requirements of goods/loads
- identifying relevant stock and goods coding and labelling, including Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading, interpreting, and following instructions, procedures, signs and labels relevant to picking and processing orders
- selecting and using relevant equipment and communications technology when picking and processing orders
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- documentation and record requirements when picking and processing an order
- equipment used during picking and processing operations and the precautions and procedures to be followed in its use
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for picking and processing orders
- problems that may occur when picking and processing an order and appropriate action that can be taken to resolve these problems
- regulations relevant to picking and processing orders, including relevant bond, quarantine or other legislative requirements
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- workplace procedures and policies for picking and processing orders.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

TLIA2020 Replenish stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to replenish stock in accordance with workplace requirements as part of work activities undertaken within the transport and logistics industry.

It includes applying product knowledge to participate in stock rotation activities, interpreting and filling replenishment requests, and completing all required stock replenishment tasks.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Participate in stock rotation activities	1.1 Stock levels are counted against appropriate documentation
	1.2 Stock levels are recorded and reported
	1.3 Stocks are replenished, adjusted or rotated in accordance with

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	workplace procedures
	1.4 Stock re-ordering processes are activated when appropriate
	1.5 Routine and non-routine problems with products or storage systems are reported in accordance with workplace procedures
2 Interpret and fill replenishment request	2.1 Order request documentation is interpreted
	2.2 Product/s in order are noted and workplace location/s are identified
	2.3 Workplace and product knowledge is used to plan sequence of work
	2.4 Appropriate materials handling equipment is selected in accordance with workplace procedures and timeframes, and work health and safety (WHS)/occupational health and safety (OHS) regulations
	2.5 Required schedules for order movement and despatch or storage are identified
3 Complete stock replenishment	3.1 Products are sorted, assembled and consolidated in the appropriate storage areas
	3.2 Work is checked in accordance with company procedures
	3.3 Documentation and records are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

- completing documentation related to replenishing stock
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in stock and equipment in accordance with standard operating procedures
- reading, interpreting and following instructions, procedures and labels relevant to replenishing stock
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant communications, computing and office equipment when replenishing stock
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian codes and regulations relevant to replenishing stock
- computer records and documentation requirements for replenishing stock
- focus of operation of work systems, equipment, management and site operating systems for replenishing stock
- housekeeping standards and procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- principles of operation and functions of stock control systems
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- workplace procedures and policies for replenishing stock.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIA3039 Receive and store stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to receive and store stock for a workplace store in an enterprise/organisation in a transport, logistics, production, hospitality, retail or other relevant industry sector, in compliance with relevant codes of practice, regulations and workplace procedures.

Work must be carried out for receiving and storing stock in a workplace store. It specifically covers taking delivery of stock, storing, rotating and maintaining stock received, and completing documentation.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

essential outcomes.	demonstrate achievement of the element.
1 Take delivery of stock	1.1 Incoming stock is accurately checked against orders and delivery documentation in accordance with workplace procedures
	1.2 Variations are accurately identified, recorded and communicated to appropriate person
	1.3 Items are inspected for damage, quality, use-by dates, breakages and discrepancies, and records are made in accordance with workplace policy
2 Store stock	2.1 Hazards are identified, risks are assessed and control measures are implemented
	2.2 Stock is promptly and safely transported to appropriate storage area without damage
	2.3 Stock is stored in appropriate location within area and in accordance with workplace security procedures
	2.4 Appropriate personal protective equipment is correctly used during receival and storage operations
	2.5 Stock levels are accurately recorded in accordance with workplace procedures
	2.6 Stock is labelled in accordance with workplace procedures
3 Rotate and maintain stock	3.1 Stock is rotated as required in accordance with workplace policy
	3.2 Stock is moved using appropriate equipment in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements, relevant regulations and workplace procedures
	3.3 Quality of stock is checked and reported
	3.4 Appropriate action is taken where stock quality is identified as outside specified standards
	3.5 Stock is placed in storage or disposed of in accordance with workplace policy

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

4 Complete documentation	4.1 Required documentation procedures and processes are confirmed
	4.2 Records and documentation are completed legibly and proofread
	4.3 Records and documentation are processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA3039A Receive and store stock.

Assessment Requirements for TLIA3039 Receive and store stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting relevant instructions, procedures and labels
- selecting and using relevant communications and computing equipment
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- contacts and sources of information and documentation needed when receiving and storing stock
- customer service policies and procedures
- interpretation of workplace specifications and orders for supplies
- principles of stock control
- problems that may occur when receiving and storing stock and appropriate action that can be taken to resolve these problems
- procedures for operating electronic communications equipment
- protocols and procedures for liaising with supplier representatives, drivers and colleagues using appropriate technology

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- purpose and procedures for using relevant personal protective equipment
- relevant codes of practice and legislative requirements (for example dangerous goods regulations, health and hygiene regulations)
- relevant WHS/OHS and environmental procedures and regulations
- safe lifting and handling procedures
- site layout
- stock control documentation and systems used in workplace stores
- stock security systems
- systems for completing relevant records and documentation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIA4005 Check and evaluate records and documentation

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to check and evaluate records and documentation in accordance with regulatory and workplace requirements, as part of work activities within the transport and logistics industry.

It includes checking documentation, and analysing and evaluating records.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check documentation	**1.1** Documentation, regulatory and workplace requirements are confirmed

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.2	Documentation is checked to ensure compliance with regulatory and workplace requirements
	1.2	Documentation is checked regularly and personnel responsible for documentation are advised of deadlines
	1.3	Appropriate systems are used to ensure maintenance of records complies with regulatory and workplace requirements
2 Analyse and evaluate records	**2.1**	Records are analysed to identify unexpected deviations from plans or possible future problems with plant and/or equipment
	2.2	Advice is provided to appropriate personnel when problems are identified
	2.3	Security of records and documentation is maintained at all times and access is granted to authorised personnel in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to TLIA4005A Check and evaluate records and documentation.

Assessment Requirements for TLIA4005 Check and evaluate records and documentation

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when checking and evaluating transport documentation
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings, and emergency information panels
- identifying, selecting and using relevant equipment, processes and procedures when checking and evaluating documentation for local and/or international transport of cargo and containers
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures and labels
- receiving, acknowledging and sending messages with available communications equipment
- reporting and/or rectifying identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- working collaboratively with others when checking and evaluating transport documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international standards, codes and regulations relevant to local and international cargo/container transport documentation requirements, including the ADG and IMDG Codes
- cargo marking and numbering systems
- operational work systems, equipment, management and site operating systems for checking

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

and evaluating cargo/container transport documentation
- problems that may occur when checking and evaluating documentation, and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- site layout, loading/unloading plans and sequence sheets
- types of cargo, containers and transport modes and their documentation requirements
- workplace procedures and policies for checking and evaluating documentation for local and/or international transport of cargo and containers.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals.

TLIA5058 Manage facility and inventory requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

his unit involves the skills and knowledge required to manage a facility and its inventory requirements, in various contexts within the transport and logistics industry.

It includes identifying space, safety and security requirements; developing a documentation system; designing storage zones and evaluating facility utilisation.

This unit generally applies to those who provide leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify space requirements	1.1 Organisational medium-term and long-term storage needs are assessed to facilitate planning, in accordance with the enterprise business plan and legislative requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.2 Product type, picking frequencies, value, fragility, weight, handling characteristics, quantity and holding periods are assessed to consider type and amount of storage
	1.3 Facility is assessed to determine stock holding and handling requirements for each inventory item
	1.4 Volume requirements are calculated to ensure ongoing stock holding needs are met
	1.5 Total space requirement is calculated and used to formulate a space utilisation plan
2 Identify safety and security requirements	2.1 Assessment is made of risks to ensure maximum safety and security for personnel, stock and facilities
	2.2 Storage handling security and incident/emergency procedures for each class or type of product are identified and documented
	2.3 Fire prevention and firefighting systems are identified in accordance with building code regulations and storage material requirements
	2.4 Evacuation plan is developed in accordance with the enterprise safety program
3 Develop and implement documentation system	3.1 System for recording and tracing stock location, receival, throughput and despatch is developed and implemented to enable reporting, quality assurance and financial requirements to be met
	3.2 System for recording communication with carriers, customers and employees is developed and implemented to assess operational effectiveness and to provide data for system improvement
4 Design storage zones	4.1 Space requirements and equipment operation are accurately assessed to facilitate warehouse zone planning
	4.2 Assessment is made of the facility to enable the most effective use of available space
	4.3 Positioning of storage areas, bays, work stations and the like is undertaken in accordance with planning process data
	4.4 Provision for maintenance and cleaning is catered for
5 Evaluate facility	5.1 Continual system of review is used involving regular checks to ensure storage areas and systems are functioning at

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

utilisation	optimum levels
	5.2 Receiving and despatching systems are assessed to ensure they provide efficient operations
	5.3 Storage and handling systems are assessed to ensure they provide ease of access and comply with ergonomic principles
	5.4 Product handling and storage process are assessed to ensure minimisation of product damage, contamination and stock losses
	5.5 Flexibility of facility layout to meet changing storage and handling requirements is maintained
	5.6 Appropriate reporting systems are established and used to capture and maintain data to design improved facilities and systems

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA5058A Manage facility and inventory requirements.

Assessment Requirements for TLIA5058 Manage facility and inventory requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when managing facility and inventory requirements
- developing and implementing contingency plans
- prioritising work and coordinating the work of others
- providing leadership to others when managing facilities and inventory requirements
- reading and interpreting plans, diagrams, regulations, codes of practice and other documentation relevant to managing facilities and inventory requirements
- reporting and/or rectifying identified problems promptly
- selecting and applying appropriate technology, information systems and procedures when managing facility and inventory requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- enterprise business policies and plans including procedures for facility operations
- operational warehouse systems, resources, management and workplace operating systems
- principles, purpose and location of controls, monitoring devices and systems
- procedures for managing and controlling hazardous situations when carrying out work activities, particularly those that relate to storing materials

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- procedures for operating electronic communications equipment
- relevant sections of national and state/territory regulatory requirements and codes of practice, including applicable facility fire safety and building regulations
- requirements for completing relevant documentation
- selection and appropriate application of technology, information systems and procedures
- throughput and storage requirements for specific types of inventory.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLID1001 Shift materials safely using manual handling methods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to shift loads safely using manual handling methods. Work must be carried out in compliance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations concerning the manual handling and movement of loads.

It includes assessing the risks associated with relocating the load, planning the relocation process and carrying out the relocation in accordance with the plan.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Assess risks associated with	1.1 Products, goods or materials to be relocated are identified and assessed to determine appropriate relocation method

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

relocating load	1.2	Storage locations are determined and potential routes to be followed are identified
	1.3	Effect of load relocation on original load base is predicted
	1.4	Points of balance are estimated
	1.5	Required clearances are compared to available space and adjustments are made to moving loads to reflect required clearance
	1.6	Effects of moving contents, which may be loose, liquid, dangerous or hazardous, are considered
	1.7	Risks in potential routes are considered
	1.8	Risks to self are identified arising from the required lifting, load carrying, set down or movement of the goods
	1.9	Manual handling procedures for lifting, lowering and carrying, pushing and pulling are identified
	1.10	Team lifting processes are considered when moving loads
	1.11	Appropriate personal protective equipment is determined
	1.12	Size to weight ratio of items to be manually handled are identified
2 Plan load relocation	2.1	Relocation of the load is planned, consistent with the code of practice for manual handling and in accordance with the risk assessment
	2.2	Process for relocating load is proposed including predicting and planning for potential difficulties
	2.3	Proposed process is checked for compliance with code of practice and workplace procedures
3 Relocate load	3.1	Actions for lifting, lowering and carrying, pulling and pushing a load are in accordance with workplace procedures and WHS/OHS requirements
	3.2	Applications appropriate for team relocation of load are identified
	3.3	Team lifting tasks are coordinated
	3.4	Planned process and route are followed

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

3.5 Relocated materials are set down without damage to goods, personnel or equipment and are checked for stability

3.6 Relocation is checked to see it meets work requirements and variance/s are reported

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID1001A Shift materials safely using manual handling methods.

Assessment Requirements for TLID1001 Shift materials safely using manual handling methods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate risks that may exist when manually lifting and handling materials and goods
- applying relevant legislation and workplace procedures
- communicating effectively with others when manually lifting and handling materials and goods
- implementing contingency plans when manually lifting and handling, materials and goods
- interpreting and following operational instructions and prioritising work
- interpreting manual handling risks
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in loads and materials in accordance with standard operating procedures
- reading and interpreting instructions, procedures and information relevant to the manual lifting and handling of materials and goods
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using correct manual handling practices
- working collaboratively with others when manually lifting and handling materials and goods
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards and procedures
- relevant WHS/OHS procedures and guidelines concerning the manual lifting and movement of loads
- risks when manually lifting and handling materials and goods, and related precautions to control the risk, including:
- controlled actions on a movement during lifting
- distance over which load is to be shifted
- frequency of shifting operations
- load on the spine during lifting
- postures and positions during lifting
- rotation and side movement of the spine during lifting
- time allowed for shifting the load
- type, weight and position of the load
- work layout
- site layout and obstacles
- workplace procedures and policies for manual handling.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice

TLID2004 Load and unload goods/cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to load and unload goods and cargo in accordance with relevant state/territory roads and traffic authority regulations/permit requirements.

It includes loading and unloading goods and cargo, securing and protecting a load and completing all required documentation.

Work is performed under general supervision within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

1	**Load and unload goods/cargo**	1.1 Load characteristics are identified and taken into account when determining appropriate loading and unloading workplace procedures
		1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3 Dangerous or hazardous goods are identified and handled in accordance with the current Australian Dangerous Goods (ADG) Code and other relevant regulations/permit requirements
		1.4 Load is packed/unpacked to make safe and effective use of available spaces
		1.5 Goods/cargo are loaded in accordance with relevant mass and loading regulations and workplace procedures
		1.6 Lifting aids and appliances are selected and used to aid loading procedures in accordance with workplace procedures and safety legislation
		1.7 Unloading activities are conducted in a safe and efficient manner taking into account suitable locations, stowage, safe use of equipment and balance of remaining load
		1.8 Goods requiring special handling and/or documentation are identified and workplace procedures are followed
		1.9 Relocated material is restacked appropriate for transport method, safe height, weight loading, size and crushability of goods
2	**Secure and protect load**	2.1 Load distribution is checked to ensure it is even, legal and within safe working capacity
		2.2 Load is checked to ensure dangerous goods and hazardous substances are appropriately segregated in accordance with current ADG Code
		2.3 Load is secured using correct load restraint and protection equipment for different loads, carrying and storage conditions
		2.4 Load is protected in accordance with legal and workplace safety requirements
3	**Complete**	3.1 Load is inspected and checked for security to travel, in accordance with relevant regulations/permit requirements

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

documentation		and current ADG Code, as required
	3.2	All required goods documentation is completed in accordance with workplace requirements including current ADG Code, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLID2004 Load and unload goods/cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying required action to minimise, control or eliminate identified hazards
- completing relevant documentation
- estimating load size, shape and special requirements and taking appropriate action
- identifying containers and goods coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels, and taking appropriate action
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in cargo and equipment in accordance with operating procedures
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- reading and interpreting relevant instructions, procedures, information, signs and labels
- applying relevant legislation and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- chain of responsibility workplace procedures
- housekeeping workplace procedures
- national load restraint guidelines
- problems that may arise when loading and unloading goods and cargo and actions that should be taken to prevent or solve these problems
- relevant Australian and international regulations and codes of practice for handling and transporting dangerous goods and hazardous substances
- relevant Australian Standards and regulations including state/territory mass and loading regulations
- risks when loading and unloading goods/cargo and related precautions to control risk
- safe work methods for securing load
- security awareness requirements when loading and unloading vehicles and in particular recognising, isolating and reporting suspicious cargo and goods
- site layout and obstacles
- WHS/OHS procedures and guidelines concerning the lifting and movement of loads
- workplace procedures and policies for loading and unloading goods/cargo.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, national Load Restraint Guide (LRG), codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in

TLID2013 Move materials mechanically using automated equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to move materials mechanically using automated equipment such as automatic guided vehicles, tow motors, low level order pickers, conveyor systems and mechanised pallet movers.

It includes selecting appropriate mechanical moving equipment, moving materials/goods in accordance with operational requirements, checking condition of materials/goods and completing all required documentation.

Work must be carried out in compliance with relevant work health and safety (WHS)/occupational health and safety (OHS) regulations concerning moving materials mechanically using automated equipment.

Work is performed under limited or minimum supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Select load moving equipment	1.1 Mechanised handling equipment, route to be taken and procedures to be used are selected appropriate to goods characteristics
	1.2 Dangerous goods and hazardous materials are identified and handled in accordance with codes of practice, WHS/OHS requirements and workplace procedures
2 Move goods	2.1 Hazards are identified, risks are assessed and control measures are implemented
	2.2 Goods are moved using selected materials handling equipment in accordance with WHS/OHS regulations, manufacturer instructions and workplace procedures
	2.3 Problems moving goods and materials using automated equipment are identified and reported in accordance with workplace procedures
3 Check goods and complete documentation	3.1 Relocated goods are inspected for possible damage during transit/movement and appropriate action is taken
	3.2 Appropriate documentation is completed to track moved goods in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Unit Mapping Information

This unit replaces and is equivalent to TLID2013A Move materials mechanically using automated equipment.

Assessment Requirements for TLID2013 Move materials mechanically using automated equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes during work activities
- communicating effectively with others
- ensuring servicing of automated equipment in terms of maintenance schedule and standard operating procedures
- implementing contingency plans
- monitoring and prioritising work activities in terms of planned schedule
- monitoring performance of automated equipment and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for using automated equipment to move materials mechanically
- problems that may occur and appropriate action that can be taken to resolve these problems
- purpose, characteristics, capabilities, requirements and limitations of automated materials moving equipment
- relevant regulations, workplace procedures and policies for using automated equipment to move materials mechanically
- relevant WHS/OHS and environmental protection procedures and guidelines
- risks when using automated equipment to move materials and related precautions to control the risks
- site layout and obstacles.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID3011 Conduct specialised forklift operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a forklift with specialised attachments or all-terrain equipment, in accordance with relevant state/territory high risk work licence requirements and regulations, in a variety of operational contexts.

It includes checking attachments and worksite for suitability, selecting type of forklift and accessories for required workplace task, shifting load and completing work in accordance with operational requirements.

Specialised operation of a forklift is performed under some supervision, generally within a team environment. It involves the application of equipment operation principles and procedures to maintain the safety and specialised operation of a forklift

A person who operates a forklift must hold a high risk work licence.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Check attachments and worksite for suitability**	1.1 Suitable work area is selected for operations
		1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3 Work area is checked for overhead obstructions and proximity to service delivery lines
		1.4 Barriers or warning signs are erected in areas subject to passing traffic
		1.5 Attachments and platforms are securely fixed to carriage or tines
		1.6 Personnel support platforms are inspected to ensure accordance with relevant Australian Standard/s
2	**Select type of forklift and accessories for required workplace task**	2.1 Special equipment, accessories or attachments are identified to match load characteristics and work requirements
		2.2 Appropriate specialised equipment is selected
		2.3 Existing attachments are removed and stored in accordance with workplace procedures
		2.4 Specialised equipment is fitted in accordance with manufacturer instructions and workplace procedures
		2.5 Designated staff are notified about specialist operations
3	**Shift load and complete work**	3.1 Equipment is operated within safe working limits and to maximise efficiency of operations
		3.2 Load is lifted, carried and set down in accordance with workplace and manufacturer procedures, and regulatory requirements
		3.3 Documentation is completed damage or faults to goods or equipment are reported to appropriate personnel
		3.4 Specialist equipment and forklift are returned to appropriate storage/parking area

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID3011A Conduct specialised forklift operations.

Assessment Requirements for TLID3011 Conduct specialised forklift operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- checking and replenishing fluids and carrying out lubrication processes during work activities
- checking forklift compliance plate for safe weight limits
- communicating effectively with others
- completing relevant documentation
- identifying points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment performance
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe operating strategies
- forklift controls, instruments and indicators, and their use
- handling procedures for forklifts involved in specialised operations
- high risk work licence workplace requirements
- operating hazards, and related defensive driving and hazard control techniques
- pre-operational checks carried out on forklift and accessories, and related action
- procedures to be followed in an operational emergency
- relevant duty of care requirements for specialised operation of a forklift
- relevant WHS/OHS and environmental procedures and regulations
- safe weight limits
- site layout and obstacles
- types of forklift accessories and ancillary equipment, their purposes and procedures for their use
- workplace operating procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIL4005 Apply conflict/grievance resolution strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply conflict or grievance resolution strategies to resolve issues that may occur in the course of work.

It includes identifying potential conflict situations, implementing appropriate conflict resolution strategies and using effective interpersonal skills.

Work is performed under minimum supervision with general guidance on progress and outcomes. Work involves discretion and judgement for self and others when managing and resolving conflict or grievances internal and external to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify potential conflict situations	1.1 Signs and stages of conflict or grievance are recognised
	1.2 Possible causes of conflict or grievance are identified

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

2 Implement conflict resolution strategies	2.1 Factors and issues relevant to conflict or grievance are clarified
	2.2 Strategies for dealing with conflict or grievance are developed
	2.3 Options for resolving the conflict or grievance are presented that enable constructive responses to be negotiated and established relationships to continue
	2.4 Strategies are implemented to resolve the source of conflict
	2.5 Outcomes of the process are monitored to ensure objectives continue to be met
3 Use effective interpersonal skills	3.1 Effective verbal and non-verbal communication is used during negotiations, including body language, questioning, language style, active listening and reflection
	3.2 Feedback is given assertively and received non-defensively during negotiations
	3.3 Shared understanding is created through written communications

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL4005A Apply conflict/grievance resolution strategies.

Assessment Requirements for TLIL4005 Apply conflict/grievance resolution strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying interpersonal skills
- applying relevant legislation and workplace procedures
- communicating effectively with others when applying conflict and grievance resolution strategies
- completing relevant documentation
- gathering, recording and conveying simple and routine work-related information
- identifying existing and potential conflict or grievances
- interpreting and following operational instructions and prioritising work
- negotiating effectively with others when applying conflict and grievance resolution strategies
- participating in small informal work groups
- reading and interpreting relevant instructions, procedures, information and signs
- responding appropriately to cultural preferences in the workplace, including modes of behaviour and interactions with others
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks
- working collaboratively with others when applying conflict and grievance resolution strategies
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- options for constructive responses to typical conflict/grievance situations
- relevant regulation and code requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) policies and procedures
- relevant workplace business marketing policies and practices, including requirements for maintaining security and confidentiality
- signs, stages and possible causes of conflict in the workplace
- typical problems that can occur when applying conflict or grievance resolution strategies and related appropriate action that can be taken
- workplace protocols and procedures for identifying and resolving conflict or grievances.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is a release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other attachments that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck High Risk Work Licence (HRWL).

This unit requires a person operating a forklift truck to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1** Task requirements are identified from work orders or equivalent and confirmed with relevant people and site inspection is conducted in accordance with workplace procedures
	1.2 Work area operating surface is assessed to determine suitability for operational use of forklift truck in accordance with workplace procedures
	1.3 Suitability of forklift truck and attachment working load limit (WLL) is determined for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4 Working area is inspected and appropriate paths for operating the forklift truck and moving and placing load/s in work area are assessed and managed in accordance with workplace procedures
	1.5 Hazard and risk control measures are identified and reported to relevant person/s in accordance with workplace procedures
	1.6 Traffic management plan implementation is confirmed in accordance with workplace procedures
	1.7 Appropriate communication procedures are identified with relevant people in accordance with workplace procedures
	1.8 All work is confirmed to ensure coverage of work/task requirements for the relevant work area is in accordance with workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

2 Prepare for work/task	**2.1**	Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with safe work procedures
	2.2	Weather and work environmental conditions are assessed to determine any impact on forklift truck operations in accordance with manufacturer requirements and safe work procedures
	2.3	Risk control measures for hazards identified are checked for implementation in accordance with safe work procedures
	2.4	Forklift truck is accessed in a safe manner in accordance with manufacturer requirements and workplace procedures
	2.5	Forklift truck logbook is checked in accordance with manufacturer, regulatory requirements and safe work procedures
	2.6	Pre-start checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer requirements
	2.7	Forklift truck is set up correctly with any relevant attachments as per work plan in accordance with relevant manufacturer requirements including data plate and safe work procedures
	2.8	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
	2.9	Hazard and risk control measures are checked for implementation and communicated to people in the work area in accordance with safe work procedures
3 Perform work/task	**3.1**	Weight and positioning of load is assessed to ensure compliance with forklift truck data plate requirements and in accordance with safe work procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	3.2	Forklift truck is operated safely in accordance with manufacturer requirements and safe work procedures
	3.3	Loads are monitored constantly when lifting, moving, lowering and placing to ensure stability of load and avoidance of hazards in accordance with safe work procedures
	3.4	Unplanned and unsafe situations are responded to in accordance with safe work procedures
	3.5	Loads are picked up, transported and placed using all forklift truck movements in accordance with safe work procedures
	3.6	Forklift truck is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
4 Pack Up	**4.1**	Forklift truck shutdown procedures are carried out in accordance with manufacturer requirements and safe work procedures
	4.2	Forklift truck is secured to prevent unauthorised access/use in accordance with safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2001 Licence to operate a forklift truck

Assessment Requirements for TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying safe operating procedures for a forklift truck including:
  - maintaining safe operating speed
  - travelling with load lowered to an appropriate height for the terrain, operating surface and visibility in relation to direction of travel
- applying relevant forklift truck manufacturer requirements and data plate information and approved modifications to attachments fitted are in accordance with manufacturer requirements
- carrying out pre-start checks, including visual inspection which must include:
  - battery charge as required by manufacturer requirements
  - checking and interpreting data plate/s are relevant to the attachment and the forklift truck
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - document evidence of damage
  - engine / mechanical fluid level checks including fuel as required by manufacturer requirements
  - ensuring availability of correct forklift truck logbook and updating records as required
  - ensuring forklift truck tynes or other attachment/s are securely fitted
  - ensuring seat and mirrors are adjusted appropriately and seat belt is functional
  - fluid leaks
  - lights are working effectively
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - wheels and tyres for damage/correct inflation if applicable
- conducting and applying risk and hazard assessment strategies including:
  - insufficient lighting
  - other specific hazards including dangerous goods
  - overhead hazards and fixed structures, roof beams and doorways
  - restricted and poorly ventilated areas

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - surface suitability based on forklift truck and task requirements
  - the risk of collision with people, moving plant and fixed structures
  - weather conditions
- complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation, regulations safe work and workplace procedures
- conducting operational checks, which must ensure:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions operated to maximum extension and ensuring attachment (if fitted) movements and control functions are smooth and comply with operating requirements
  - hazard warning systems (e.g. reversing beepers, lights and horns) are functional
  - recording and maintaining accurate information relating to forklift truck operations
  - safety devices as fitted
  - start-up is in accordance with manufacturer requirements
  - steering, transmission and brake functions comply with operating requirements
  - there are no unusual noises
- confirming and following traffic management plan procedures relevant to their role in the work area
- conducting relevant procedures for refuelling and isolating fuel/power source as per manufacturer requirements using appropriate PPE
- determining relevant lifting attachment to perform work/task
- determining lift requirements including:
  - positioning of unusually balanced/shaped loads
  - centre of gravity
  - dynamic nature of load
  - tyne/attachment positioning
  - weight
- ensuring risk control measures within the work area are effective as per workplace procedures
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various environmental conditions
- maintaining communication with other workplace personnel through using worksite procedures including:
  - audible and visual warning devices
  - signage
  - two-way radio
  - verbal instructions
  - written instructions
- maintaining three points of contact whilst accessing and egressing forklift truck and ensuring

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

rungs / steps are free of hazards
- operating and monitoring safe forklift truck operations using minimum 250kg dynamic and non-dynamic loads that include:
  - aligning tynes/attachment to load
  - carrying out a lift to 75% of the maximum height
  - conducting trial lift to ensure forklift truck and load are stable, and load is safe to move
  - correctly using horns and mirrors in workplace
  - correctly positioning and using an observer to assist when operating with a load that may restrict vision or be placed out of vision of the operator
  - driving applicable to conditions and moving loads safely
  - driving a forklift truck safely with load in forward and reverse, while maintaining visibility through an obstacle course including:
    - an 'S' bend with a minimum 90 degrees left and right turn
    - ensuring load/s remains stable through pick up, transport and placement
    - forklift truck speed is appropriate to load and surroundings
    - lowering dynamic and non-dynamic loads to appropriate height for travel in forward and reverse
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely at various heights within a compliant racking system
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely into/onto an elevated, flat, stable area
  - tilting mast (or forks if applicable) to ensure balance of load
  - using gluts/dunnage appropriately and lowering load safely
  - using tilt and side shift (where fitted) safely to manoeuvre dynamic and non-dynamic loads into allocated space
- reporting to relevant person/s on site risk control measures that are not in place or are deficient
- setting up an exclusion zone
- securely parking forklift truck and isolating in appropriate position including:
  - minimising possible access by unauthorised person/s
  - tynes/attachment lowered to required position in accordance with manufacturer requirements
  - park brake applied
  - switching off, isolating fuel/power source and removing key according to workplace procedures
- shutting down a forklift truck in accordance with manufacturer requirements and workplace procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck
- communication procedures including:
  - audible and visual warning devices
  - hand signals
  - questioning techniques
  - signage
  - traffic warning systems
  - two-way radio
  - written instructions
- forklift truck characteristics and capabilities, manufacturer requirements and instructions for any attachments
- impact of the following on the operation of the forklift truck including:
  - failure/loss of control including brakes and steering
  - failure of equipment during forklift truck operations
  - forklift truck instability causes including:
    - deterioration of ground condition
    - overloading
    - pick up and placement of load
    - irregular loads
  - operating on ramps and uneven surfaces and in restricted spaces
  - use of forklift truck data plate and attachment data plate and appropriate methodology to determine weight of a load is appropriate for forklift truck and any attachment if fitted including the estimation or determination from:
    - labels on the actual load
    - markings on the actual load
    - paperwork such as consignment notes, running sheets and weighbridge dockets
    - weighing a carton and calculating load
- manufacturer requirements, instructions and operator's manual
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions including:
  - wind
  - lightning
  - water/ice impacted surface/ground
  - rain
  - extreme heat
  - Ultra violet (UV) exposure
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including:
  - lock out and tag out procedures
- relevant procedures for refuelling and recharging forklift truck using appropriate PPE

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

including:

- gas bottle
- connecting battery to charger and disconnecting battery from charger and reconnecting to forklift truck
- refuelling

- procedures for recording, reporting and maintaining workplace records and information
- risk assessment process including hierarchy of control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- safe use and compliance of different types of attachments including:
  - bale clamps
  - carpet spike for carpet rolls
  - drum carrier
  - jib attachment
  - paper roll clamps
  - personnel work platforms
  - rotators
  - slippers/fork extensions on tynes
- suitability and lifting capability of the attachment to be used
- shut down procedures for a forklift truck in accordance with manufacturer requirements
- traffic management plan procedures and requirements
- typical routine problems encountered operating a forklift truck and associated equipment, and adjustments required for correction
- workplace procedures including work plan which may be verbal, documented/written, or electronically generated
- work area operating surface suitability including issues with:
  - backfilled ground
  - bitumen (damaged, cracked)
  - concrete (damaged, cracked)
  - hard compacted soil
  - potholes
  - railway tracks
  - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
  - soft soils
  - trench covers
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety

and Health (OSH) requirements, safe work and workplace procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe/serviceable condition in accordance with manufacturer requirements
- associated equipment for forklift truck operations
- suitable dynamic and non-dynamic loads
- suitable compliant racking system
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
  - approved codes of practice and relevant guidance material
  - relevant Australian technical standards
  - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable)

TLILIC0005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor changes and re-ordering of Performance Evidence
- Minor re-ordering of Knowledge Evidence
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to safely operate a boom-type Elevating Work Platform (EWP) where the length of the boom is 11 metres or more in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a Risk Work Licence (HRWL) to operate this plant.

Boom-type elevating work platform means a telescoping device, hinged device, or articulated device, or any combination of these, used to support a platform on which personnel, equipment and materials may be elevated.

A person performing this work is required to hold a boom-type elevating work platform HRWL.

This unit requires a person operating an EWP to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up.

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1** Task requirements are identified from work orders or equivalent and confirmed with relevant people and a site inspection is completed in accordance with workplace procedures
	1.2 Work area ground/operating surface is assessed to determine suitability for operational use of EWP in accordance with manufacturer requirements and workplace procedures
	1.3 EWP capabilities are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4 Appropriate paths for operating the EWP and moving in work area are assessed and determined in accordance with workplace procedures
	1.5 Relevant hazard and risk control measures are applied and advised to relevant person/s in accordance with workplace procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	1.6	Traffic management plan implementation is confirmed in accordance with workplace procedures
	1.7	Appropriate communication procedures are identified, with relevant people in accordance with workplace procedures
	1.8	All work is confirmed to ensure coverage of work/task requirements for the relevant work area in accordance with workplace procedures
2 Prepare for work/task	**2.1**	Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with workplace procedures
	2.2	Risk control measures for hazards identified are checked for implementation in accordance with workplace procedures
	2.3	Safety equipment including Personal Protective Equipment (PPE) are inspected, fitted correctly and used in accordance with manufacturer requirements and safe work procedures
	2.4	EWP is accessed in a safe manner in accordance with manufacturer requirements and safe work procedures
	2.5	Pre-start EWP checks are carried out in accordance with manufacturers requirements and safe work procedures
	2.6	EWP is started and is checked for any abnormal noises in accordance safe work procedures
	2.7	EWP is positioned correctly as per work plan in work area in accordance with relevant manufacturer requirements and safe work procedures
	2.8	EWP is stabilised appropriately in accordance with the workplan, relevant manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	2.9	Operational checks from base controls are carried out in accordance with relevant manufacturer requirements and safe work procedures
	2.10	All platform controls are located, identified and tested in accordance with manufacturer requirements and safe work procedures
	2.11	All damage and defects are reported and appropriate action is taken to rectify in accordance with manufacturer requirements and safe work procedures
	2.12	EWP logbook is inspected and is correct for the EWP, is completed and signed in accordance with manufacturer requirements and safe work procedures
	2.13	Weather and work environmental conditions are assessed to determine any impact on EWP operation and positioning as per workplan in accordance with manufacturer requirements and safe work procedures
3 Perform work/task	**3.1**	Relevant hazard prevention/control measures identified are checked for implementation in accordance with safe work procedures
	3.2	EWP is safely located at point of work in work area in accordance with safe work procedures
	3.3	EWP platform is positioned for work tasks and stability and all operations are monitored constantly in accordance with safe work procedures
	3.4	Work gear and tools are stowed and secured in accordance with safe work procedures
	3.5	EWP is operated using all movements in accordance with safe work procedures and manufacturer requirements
	3.6	Unplanned and unsafe situations are responded to in accordance with safe work procedures

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

	3.7	All communication signals are correctly interpreted and followed whilst EWP is operated in accordance with safe work procedures
	3.8	EWP platform is accessed and egressed in accordance with safe work procedures and manufacturer requirements
	3.9	EWP is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
4 Pack up	**4.1**	Post-operational EWP checks are carried out in accordance with manufacturer requirements and safe work procedures
	4.2	EWP boom is retracted, lowered, stowed and secured in accordance with manufacturer requirements and safe work procedures
	4.3	Safety equipment and PPE is disconnected from platform in accordance with safe work procedures
	4.4	Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures
	4.5	Outriggers and/or stabilisers, plates or packing if fitted are stowed and secured in accordance and with manufacturer requirements and safe work procedures
	4.6	EWP is shut down in accordance with manufacturer requirements and safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Assessment Requirements for TLILIC0005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor changes and re-ordering of Performance Evidence
- Minor re-ordering of Knowledge Evidence
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- advising relevant person/s on site in relation to any hazards and risk elimination/control strategies
- applying safe operating procedures for an Elevating Work Platform (EWP) including all functions within the safe working rated capacity including:
  - boom/s as low as possible and fully retracted whilst travelling (self propelled EWP only)
  - boom/s in line with EWP where practical whilst travelling (self propelled EWP only)
  - EWP stability
  - gently accelerating and braking to minimise boom/s swing (self propelled EWP only)
  - maintaining safe operating speed in relation to the work condition
  - travelling with work platform raised to an appropriate height for the terrain and visibility in relation to direction of travel (self propelled EWP only and in accordance with manufacturers specifications)
- applying emergency procedures
- applying traffic management plan procedures relevant to their role in the work area
- carrying out operational checks on EWP including:
  - testing of all EWP safety devices
  - all controls are located, identified and tested for functionality from the base controls and platform controls
  - hazard warning systems including travel beepers and lights are functional
  - start-up is in accordance with manufacturer requirements
  - steering, transmission and brake functions comply with operating requirements (self

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

propelled EWP only)
    - there are no unusual noises
- carrying out pre-start checks, including visual inspection which must include:
    - battery fluid level as required by manufacturer requirements
    - checking compliance plate is relevant to the load/s being used on the EWP
    - engine / mechanical fluid level checks as required by manufacturer requirements
    - ensuring availability of correct logbook and updating records as required
    - ensuring EWP platform and attachment/s fitted in platform are secured
    - evidence of damage
    - fluid leaks
    - lights are working effectively (where fitted)
    - safety equipment checks
    - signage and labels to ensure they are visible and legible
    - structural weaknesses including paint separation or stressed welds
    - wheels and tyres for damage/correct inflation if applicable
- checking compliance plate and load chart for reach requirements and load suitability
- clarifying workplan and checking understanding
- complying with Commonwealth, State and/or Territory work health and safety (WHS)/occupational health and safety (OHS)/occupational safety and health (OSH) legislation and regulations
- controlling and operating a boom type elevating work platform ensuring movements and control functions are safe, smooth and comply with operating requirements including:
    - any combination of the movement of the extending boom used to support a platform on which personnel, equipment and materials are elevated to perform the work task/s
    - avoidance of ground depressions
    - correctly using observer guidance of work platform, main chassis and extending boom
    - demonstrating the safe operation of an EWP in forward and reverse, while maintaining visibility (where applicable)
    - driving (where applicable) applicable to conditions and moving platform and load/s safely
    - ensuring warning devices are functioning correctly
    - interpreting directional arrows correctly on platform controls during forward, reverse, left and right
    - lowering boom to its resting position
    - monitoring platform, main chassis and extending boom movement constantly ensuring safe work procedures are followed
    - raising platform and slewing within manufacturer requirements
    - raising platform to its full extent or 75% of the maximum height capacity (whichever is greater)
    - stability of the EWP and the work platform
    - manoeuvring and positioning the platform to perform work task/s safely whilst at its full extent or a minimum height of 75% of the maximum capacity (whichever is greater)

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- conducting and applying hazard identification and risk elimination or minimisation strategies including:
    - barricades and controls to prevent the risk of collision with people, moving vehicles and fixed structures
    - environmental conditions including:
        - wind
        - lightning
        - water impacted ground
        - rain
        - extreme heat
        - Ultra Violet (UV) exposure
    - ground conditions (surface and slopes) and assessing work area operating surface suitability based on machine and task requirements
    - overhead hazards including electric lines and service pipes
    - personal protective equipment (PPE)
    - restricted areas and crush points from work platform and external surroundings
    - safety related tags on electrical switches/isolators that have an impact on point of work of EWP operator
    - sufficient lighting
    - suitable area for set-up, positioning and safely operating EWP
    - suitable firm and stable operating surface
    - use of safety observer
- entering work platform correctly including:
    - lowering platform safely and stably to appropriate height to access safely
    - clipping on of fall restraint/arrest device
    - accessing platform safely
- exiting work platform correctly including:
    - lowering platform safely and stably to appropriate height to egress safely
    - unclipping of fall restraint/arrest device
    - exiting platform safely
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- inspecting and using relevant safety equipment, including:
    - anchor point/s
    - emergency retrieval system from base controls and platform controls where fitted
    - energy absorber/s
    - lanyard/s
    - safety harness/es
- interpreting and confirming relevant documentation, workplace instructions, safety information and emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various work environmental conditions

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

- maintaining communication with other workplace personnel using appropriate workplace procedures including procedures to ensure all movements are conveyed clearly and succinctly including:
  - 2-way radio
  - audible and visual warning devices
  - making and interpreting hand signals
  - questioning to confirm understanding
  - signage
  - written instructions
- recording and maintaining accurate information relating to EWP operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- stabilising procedures for an EWP including:
  - checking levels
  - removing obstacles and obstructions
  - deploying and retracting outriggers (if fitted)
  - establishing correct size plates for packing (if required)
- shutting down a boom type EWP in accordance with manufacturer requirements and workplace procedures
- using and interpreting EWP manufacturer requirements and data, including compliance plate and load chart, to enable correct EWP selection for task including:
  - boom
  - platform
  - weight including outrigger load or wheel load.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and industry standards, codes of practice and guidelines to safely operate an EWP (boom length 11 metres or more) including:
  - nominal reach, measured horizontally from centre point of rotation to outer edge of platform in its most extended position
  - vertical distance from floor of platform to surface supporting elevating work platform with platform at its maximum height
- appropriate mathematical calculations to estimate loads ensuring EWP is not overloaded
- appropriate workplace communication procedures including:
  - 2-way radio
  - audible and visual warning devices
  - questioning techniques
  - signage
  - hand signals

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

    - traffic warning systems
    - written instructions
- compliance with permit condition requirements including:
    - from electrical supply authority
    - if operating on roads or footpaths
- EWP characteristics and capabilities, manufacturer requirements and instructions
- hazards including:
    - all ground and /or operating surface hazards
    - traffic including pedestrians, vehicles, other mobile plant and building structures
    - overhead hazards including electric lines, service pipes, doorways, roof beams, and lights
    - obstacles or obstructions
    - insufficient lighting
    - other relevant hazards
- identification and avoidance of person/s potential crush or entrapment points
- identification and avoidance of potential contact with overhead electrical conductor's
- identification and avoidance of potential contact with structures near work platform/boom or chassis
- impact of the following on the operation of the EWP including:
    - failure/loss of control including brakes and steering
    - failure of equipment including hydraulic system
    - EWP and platform instability due to:
        - deterioration of ground/operating surface condition
        - gradient of operating surface
        - overloading
        - poor load placement
        - irregular loads
    - emergency procedures and safety equipment, including the use of:
        - safety harness/es
        - energy absorbers
        - lanyard/s
        - anchor point/s
        - emergency retrieval systems
- lock out and tag out procedures
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions
- procedures for recording, reporting and maintaining workplace records and information
- relevant manufacturer requirements and instructions
- relevant procedures for refuelling/recharging EWP using appropriate PPE
- risk assessment process including hierarchy of control:
    - elimination

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations
- procedures for shutting down a boom type EWP in accordance with manufacturer requirements
- relevant documentation requirements
- suitability and lifting capability of the EWP to be used
- traffic management plan procedures and requirements
- typical routine problems encountered operating a EWP and adjustments required for correction
- wind speed factors that affect stability of EWP as per manufacturer requirements
- work area operating surface suitability including issues with:
  - backfilled ground
  - bitumen (damaged, cracked)
  - concrete (damaged, cracked)
  - hard compacted soil
  - potholes
  - railway tracks
  - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
  - soft soils
  - trench covers
- work health and safety (WHS)/occupational health and safety (OHS)/occupational safety and health (OSH) and codes of practice requirements for boom type elevating work platforms
- work plan which may be verbal, documented/written, or electronically generated

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

conditions.

- Simulators must not be used in the assessment of this unit of competency

Resources for assessment must include access to:

- appropriate boom-type elevating work platform (boom length 11 metres or more) in a safe/serviceable condition in accordance with manufacturer requirements
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
  - approved codes of practice and relevant guidance material
  - relevant Australian technical standards
  - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

AURSS00026 Percussive Drill Maintenance and Advanced Systems Diagnosis Skill Set

Modification History

Release	Comment
Release 1	New skill set.
Release 2	Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for technicians to diagnose and repair hydraulic and electronic over hydraulic system faults on machines associated with percussive drilling rigs in the mining industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of one of the following:

- Certificate III in Automotive Mechanical or Automotive Electrical Qualification
- Certificate III in Engineering - Mechanical or Electrical/Electronic Qualification
- Certificate III in Electrotechnology Electrician or Electrical Fitting Qualification

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **3 units of competency** must be completed.

Units

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURKTR001	Diagnose and repair electronic over hydraulic control systems
AURTTA013	Diagnose and repair hydraulic systems
AURTTA026	Diagnose complex faults in electronic over hydraulic systems

Target Group

The skill set targets tradespeople and final year apprentices working as automotive mechanical/electrical technicians, engineering mechanical/electrical/electronic technicians or electrotechnology electrician/electrical fitters.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of those required to diagnose and repair hydraulic and electronic over hydraulic control system faults on machines associated with percussive drilling in the mining industry.

Custom Content Section

Not applicable.

AURSS00027 Automotive CNG Installation, Service and Repair Skill Set

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS00004 Automotive CNG Installation, Service and Repair Skill Set. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for installing, servicing and repairing automotive CNG systems in the automotive retail, service and repair industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of one of the following:

- AUR30316Certificate III in Automotive Electrical Technology or equivalent
- AUR30416 Certificate III in Agricultural Mechanical Technology or equivalent
- AUR30616 Certificate III in Light Vehicle Mechanical Technology or equivalent
- AUR31116 Certificate III in Heavy Commercial Vehicle Mechanical Technology or equivalent
- AUR31216 Certificate III in Mobile Plant Technology or equivalent
- AUR31716 Certificate III in Forklift Technology, or equivalent
- AUR31916 Certificate III in Elevating Work Platform Technology or equivalent

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill Set Requirements

A total of **3 units of competency** must be completed.

Units	
AURTTL001	Inspect and service CNG fuel systems
AURTTL002	Diagnose and repair CNG fuel systems
AURTTL003	Install CNG fuel systems

Target Group

The skill set targets automotive mechanical and electrical technicians who require the skills and knowledge to install, service and repair CNG systems and components in an automotive workplace.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive mechanical and electrical technicians required to install, service and repair automotive CNG systems.

Custom Content Section

AURSS00028 Automotive CNG Service and Repair Skill Set

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS00005 Automotive CNG Service and Repair Skill Set. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for servicing and repairing automotive CNG systems in the automotive retail, service and repair industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of one of the following:

- AUR30316 Certificate III in Automotive Electrical Technology or equivalent
- AUR30416 Certificate III in Agricultural Mechanical Technology or equivalent
- AUR30616 Certificate III in Light Vehicle Mechanical Technology or equivalent
- AUR31116 Certificate III in Heavy Commercial Vehicle Mechanical Technology or equivalent
- AUR31216 Certificate III in Mobile Plant Technology or equivalent
- AUR31716 Certificate III in Forklift Technology or equivalent
- AUR31916 Certificate III in Elevating Work Platform Technology or equivalent

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **2 units of competency** must be completed.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURTTL001	Inspect and service CNG fuel systems
AURTTL002	Diagnose and repair CNG fuel systems

Target Group

The skill set targets automotive mechanical and electrical technicians who require the skills and knowledge to service and repair CNG systems and components in an automotive workplace.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive mechanical and electrical technicians required to service and repair automotive CNG systems.

AURSS00029 Automotive Electrical Skill Set for Light Vehicle Technicians

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS00006 Automotive Electrical Skill Set for Light Vehicle Technicians. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for light vehicle mechanical technicians to diagnose and repair electrical faults in contemporary vehicles in the automotive retail, service and repair industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of the following:

- AUR30616 Certificate III in Light Vehicle Mechanical Technology qualification or equivalent.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **11 units of competency** must be completed.

Units

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURETK002	Use and maintain electrical test equipment in an automotive workplace
AURETR006	Solder electrical wiring and circuits
AURETR007	Apply knowledge of automotive electrical circuits and wiring systems
AURETR009	Install vehicle lighting and wiring systems
AURETR010	Repair wiring harnesses and looms
AURETR011	Install basic ancillary electrical systems and components
AURETR016	Read and apply vehicle wiring schematics and drawings
AURETR024	Diagnose and repair compression ignition engine management systems
AURETR028	Diagnose and repair instruments and warning systems
AURETR032	Diagnose and repair automotive electrical systems
AURETR043	Diagnose and repair electronic body management systems

Target Group

The skill set targets automotive light vehicle mechanical technicians who require the skills and knowledge to enable them to diagnose and repair electrical faults in contemporary vehicles in an automotive workplace.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive light vehicle mechanical technicians required to diagnose and repair electrical faults in contemporary vehicles.

AURSS00030 Automotive LNG Installation, Service and Repair Skill Set

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS00007 Automotive LNG Installation, Service and Repair Skill Set. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for installing, servicing and repairing automotive LNG systems in the automotive retail, service and repair industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of one of the following:

- AUR30316 Certificate III in Automotive Electrical Technology or equivalent
- AUR30416 Certificate III in Agricultural Mechanical Technology or equivalent
- AUR30616 Certificate III in Light Vehicle Mechanical Technology or equivalent
- AUR31116 Certificate III in Heavy Commercial Vehicle Mechanical Technology or equivalent
- AUR31216 Certificate III in Mobile Plant Technology or equivalent
- AUR31716 Certificate III in Forklift Technology or equivalent
- AUR31916 Certificate III in Elevating Work Platform Technology or equivalent

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill Set Requirements

A total of **3 units of competency** must be completed.

Units	
AURTTL004	Inspect and service LNG fuel systems
AURTTL005	Diagnose and repair LNG fuel systems
AURTTL006	Install LNG fuel systems

Target Group

The skill set targets automotive mechanical and electrical technicians who require the skills and knowledge to install, service and repair LNG systems and components in an automotive workplace.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive mechanical and electrical technicians required to install, service and repair automotive LNG systems.

AURSS00034 Battery Electric Vehicle Diagnosis and Repair Skill Set

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS000011 Battery Electric Vehicle Diagnosis and Repair Skill Set. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for diagnosing and repairing battery electric vehicle (BEV) systems and components in the automotive retail, service and repair industry.

Pathways Information

The skill set may only be undertaken in addition to one of the following:

- AUR30316 Certificate III in Automotive Electrical Technology or equivalent
- AUR30616 Certificate III in Light Vehicle Mechanical Technology or equivalent

or as part of the following:

- AUR40216 Certificate IV in Automotive Mechanical Diagnosis or equivalent
- AUR40616 Certificate IV in Automotive Electrical Technology or equivalent

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **5 units of competency** must be completed.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURETH004	Diagnose and repair traction motor speed control systems in battery electric vehicles
AURETH005	Diagnose and repair high voltage traction motors in battery electric vehicles
AURETH006	Diagnose and repair auxiliary motors and associated components in battery electric vehicles
AURETH008	Diagnose and repair HVAC and rechargeable energy storage cooling systems in battery electric vehicles
AURETH009	Diagnose and repair DC to DC converters in battery electric vehicles

Target Group

The skill set targets automotive mechanical and electrical technicians who require the skills and knowledge to diagnose and repair BEV systems and components in an automotive workplace.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive mechanical and electrical technicians required to diagnose and repair battery electric vehicle systems and components.

AURSS00035 Battery Electric Vehicle Inspection and Servicing Skill Set

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS000012 Battery Electric Vehicle Inspection and Servicing Skill Set. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for inspecting and servicing battery electric vehicle (BEV) systems and components in the automotive retail, service and repair industry.

Pathways Information

The skill set may only be undertaken in addition to one of the following:

- AUR30316 Certificate III in Automotive Electrical Technology or equivalent
- AUR30616 Certificate III in Light Vehicle Mechanical Technology or equivalent

or as part of one of the following:

- AUR40216 Certificate IV in Automotive Mechanical Diagnosis or equivalent
- AUR40616 Certificate IV in Automotive Electrical Technology or equivalent.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **4 units of competency** must be completed.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURETH001	Depower and reinitialise battery electric vehicles
AURETH002	Service and maintain battery electric vehicles
AURETH003	Diagnose and repair high voltage rechargeable energy storage systems in battery electric vehicles
AURETH007	Diagnose and repair system instrumentation and safety interlocks in battery electric vehicles

Target Group

The skill set targets automotive mechanical and electrical technicians who require the skills and knowledge to inspect and service BEV systems and components in an automotive workplace.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive mechanical and electrical technicians required to inspect and service battery electric vehicle systems and components.

AURSS00036 Heavy Commercial Vehicle Skill Set for Light Vehicle Technicians

Modification History

Release	Comment
Release 2	Replacement of superseded unit
Release 1	New skill set. Equivalent to AURSS000013 Heavy Commercial Vehicle Skill Set for Light Vehicle Technicians. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for light vehicle mechanical technicians to diagnose and repair heavy commercial vehicles in the road transport industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of :

- AUR30616 Certificate III in Light Vehicle Mechanical Technology or equivalent.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **12 units of competency** must be completed.

Units

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURETR022	Diagnose and repair vehicle dynamic control systems
AURETR024	Diagnose and repair compression ignition engine management systems
AURHTB001	Diagnose and repair heavy vehicle air braking systems
AURHTD002	Diagnose and repair heavy commercial vehicle steering systems
AURHTD003	Diagnose and repair heavy commercial vehicle suspension systems
AURHTE002	Diagnose and repair heavy vehicle compression ignition engines
AURHTQ003	Diagnose and repair heavy vehicle drive shafts
AURHTX001	Diagnose and repair heavy vehicle manual transmissions
AURHTZ001	Diagnose and repair heavy vehicle emission control systems
AURTTA006	Inspect and service hydraulic systems
AURTTF002	Inspect and service diesel fuel injection systems
AURTTF005	Diagnose and repair engine forced-induction systems

Target Group

The skill set targets automotive light vehicle mechanical technicians who require the skills and knowledge to enable them to diagnose and repair heavy commercial vehicles in the road transport industry.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive light vehicle mechanical technicians required to diagnose and repair heavy commercial vehicles in the road transport industry.

This skill set involves licensing, legislative, regulatory or certification requirements.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill Set Requirements

A total of **3 units of competency** must be completed.

Units	
AURETU003	Service air conditioning and HVAC systems
AURETU004	Diagnose and repair air conditioning and HVAC systems
AURETU005	Retrofit and modify air conditioning and HVAC systems

Target Group

The skill set targets automotive mechanical and electrical technicians who require the skills and knowledge to service, diagnose and repair, and retrofit and modify automotive air conditioning and HVAC systems in an automotive workplace.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive mechanical and electrical technicians required to service, diagnose and repair, and retrofit and modify automotive air conditioning and HVAC systems.

AURSS00045 Vehicle Refrigerant Recovery Skill Set

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS000022 Vehicle Refrigerant Recovery Skill Set. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for recovering air conditioning refrigerants from vehicles in the automotive retail, service and repair industry.

Pathways Information

The skill set may be undertaken in addition to or as part of an automotive qualification or as a stand alone skill set.

Licensing/Regulatory Information

This skill set involves licensing, legislative, regulatory or certification requirements.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **1 units of competency** must be completed.

Units	
AURETU002	Recover vehicle refrigerants

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Target Group

This skill set targets persons working in an automotive parts dismantler/parts recycler workplace or those working in the automotive industry that require the skills and knowledge to recover vehicle refrigerants from end of life vehicles in an automotive workplace.

Suggested words for Statement of Attainment

This unit of competency is drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of those employed within an automotive parts dismantler/parts recycler/vehicle wrecking yard.

AURSS00046 Advanced Body Repair Skill Set

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS000023 Advanced Body Repair Skill Set. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for body repair technicians to conduct advanced body repairs in the automotive body repair industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of the following:

- AUR32116 Certificate III in Automotive Body Repair Technology or equivalent

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **6 units of competency** must be completed.

Units	
AURETH011	Depower and reinitialise hybrid electric vehicles
AURVTA002	Remove and replace vehicle supplementary restraint systems
AURVTN023	Repair adhesive bonded structural damage on vehicles

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURVTN028	Identify and repair high strength steel vehicle components
AURVTN029	Set up and operate universal vehicle measuring systems
AURVTN035	Apply original equipment manufacturer repair procedures during vehicle repairs

Target Group

The skill set targets automotive body repair technicians who require the skills and knowledge to conduct advanced body repairs.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive body repair technicians required to conduct advanced repairs.

AURSS00047 Advanced Body Repair Welding Skill Set

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS000024 Advanced Body Repair Welding Skill Set. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for body repair technicians to conduct advanced body repair welding in the automotive body repair industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of the following:

- AUR32116 Certificate III in Automotive Body Repair Technology or equivalent.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **3 units of competency** must be completed.

Units	
AURTTA020	Apply heat induction processes
AURVTW003	Carry out advanced gas metal arc welding on vehicle body sections

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURVTW005	Carry out spot welding

Target Group

The skill set targets automotive body repair technicians who require the skills and knowledge to conduct advanced body repair welding.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive body repair technicians required to conduct advanced body repair welding.

AURSS00048 Advanced Vehicle Refinishing Skill Set

Modification History

Release	Comment
Release 1	New skill set. Equivalent to AURSS000025 Advanced Vehicle Refinishing Skill Set. Skill set structure unchanged. Units upgraded to reflect new standards for Training Packages.

Description

This is a skill set covering the fundamental requirements for automotive refinishing technicians to conduct advanced refinishing activities in the automotive body repair industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of the following:

- AUR32416 Certificate III in Automotive Refinishing Technology or equivalent

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **5 units of competency** must be completed.

Units	
AURETH011	Depower and reinitialise hybrid electric vehicles
AURVTN035	Apply original equipment manufacturer repair procedures during vehicle repairs

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURVTP018	Rectify vehicle multi-layer and pearl paint faults using two-pack systems
AURVTP024	Apply clear over base multi-layer and pearl refinishing materials to vehicle body components
AURVTP025	Apply water-based refinishing materials to vehicle bodies and substrates

Target Group

The skill set targets automotive refinishing technicians who require the skills and knowledge to conduct advanced refinishing activities.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive refinishing technicians required to conduct advanced refinishing activities.

AURSS00049 Vehicle Climate Control and HVAC Diagnostic Specialist Skill Set

Modification History

Release	Comment
Release 1	New skill set.

Description

This is a skill set covering the requirements for advanced diagnosis of vehicle climate control, heating ventilation and air conditioning (HVAC) systems and rechargeable energy storage systems (RESS) cooling systems in battery electric vehicles (BEVs) in the automotive retail, service and repair industry.

Pathways Information

The skill set may only be undertaken in addition to or as part of the following:

- AUR20216 Certificate II in Automotive Air Conditioning Technology or equivalent and the trainee must hold of a current ARC Refrigerant Handling License (RHL).

Licensing/Regulatory Information

This skill set involves licencing, legislative, regulatory or certification requirements.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

A total of **4 units of competency** must be completed.

Units

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURETA006	Analyse and evaluate electrical and electronic faults in air conditioning and HVAC systems
AURETH008	Diagnose and repair HVAC and rechargeable energy storage cooling systems in battery electric vehicles
AURETR020	Diagnose and repair network electronic control systems
AURETU006	Diagnose complex faults in air conditioning and HVAC systems

Target Group

The skill set targets automotive mechanical and electrical technicians who require the skills and knowledge to carry out the advanced diagnosis of automotive air conditioning, climate control and HVAC systems and RESS cooling systems of BEVs in an automotive workplace.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive mechanical and electrical technicians required to carry out the advanced diagnosis of vehicle climate control, heating ventilation and air conditioning (HVAC) systems and rechargeable energy storage systems (RESS) cooling systems in battery electric vehicles.

AURSS00050 Vehicle Body Repair Estimator Skill Set

Modification History

Release	Comment
Release 1	New skill set.

Description

This is a skill set covering the fundamental requirements for vehicle body repair estimators operating in the automotive body repair industry.

Pathways Information

Entry to this skill set is limited to those who:

Have completed one of the following Certificate III qualifications:

- AUR32116 Certificate III in Automotive Body Repair Technology or equivalent
- AUR32216 Certificate III in Automotive Glazing Technology or equivalent
- AUR32416 Certificate III in Automotive Refinishing Technology or equivalent
- AUR30616 Certificate III in Light Vehicle Mechanical Technology or equivalent
- AUR30316 Certificate III in Automotive Electrical Technology or equivalent

Or

Have five years equivalent relevant full time workplace experience in a motor trade or as an estimator.

Licensing/Regulatory Information

No licencing, legislative or certificate requirements apply to this skill set at the time of publication.

Skill Set Requirements

A total of 3 units of competency must be completed.

Units	
AURAMA005	Manage complex customer issues in an automotive workplace

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

AURANN011	Estimate and quote automotive body repairs
AURVTN035	Apply original equipment manufacturer repair procedures during vehicle repairs

Target Group

The skill set targets light vehicle and heavy vehicle body repair technicians who require the skills and knowledge to undertake vehicle body repair estimates.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of vehicle body repair estimators required to prepare estimates and quotes.

AURSS00051 Marine Transition Skill Set

Modification History

Release	Comment
Release 1	New skill set.

Description

This is a skill set covering the fundamental skills required for automotive mechanical technicians to transition to work in the marine retail, service and repair sector. The skill set builds on the skills and capabilities an automotive mechanical technician already has and provides individuals with core skills in marine retail, service and repair.

Pathways Information

The skill set may only be undertaken in addition to:

- AUR30416 Certificate III in Agricultural Mechanical Technology or equivalent
- AUR30316 Certificate III in Automotive Electrical Technology or equivalent
- AUR30916 Certificate III in Heavy Commercial Vehicle Mechanical Technology or equivalent
- AUR30816 Certificate III in Motorcycle Mechanical Technology or equivalent
- AUR30616 Certificate III in Light Vehicle Mechanical Technology or equivalent
- AUR31416 Certificate III in Automotive Diesel Fuel Technology or equivalent
- AUR31216 Certificate III in Mobile Plant Technology or equivalent
- AUR31516 Certificate III in Automotive Drivetrain Technology or equivalent
- AUR31316 Certificate III in Automotive Engine Reconditioning or equivalent
- AUR31816 Certificate III in Heavy Commercial Trailer Technology or equivalent
- AUR31616 Certificate III in Automotive Drivetrain Technology or equivalent
- AUR31716 Certificate III in Forklift Technology or equivalent
- AUR30916 Certificate III in Motor Sport Technology or equivalent

Licensing/Regulatory Information

No licencing, legislative or certificate requirements apply to this skill set at the time of publication.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Skill Set Requirements

A total of 6 **units of competency** must be completed.

Units	
AURRTC001	Diagnose and repair marine exhaust and cooling systems
AURRTE002	Inspect and service marine outboard engines
AURRTE008	Install marine engines, controls and instruments
AURRTR006	Diagnose and repair marine electrical systems
AURRTX003	Diagnose and repair marine outboard and stern drive transmissions
AURRTX004	Diagnose and repair marine inboard transmissions

Target Group

The skill set targets automotive mechanical technicians who are seeking to transition into marine retail, service and repair occupations, and require the skills and knowledge to apply their automotive skills to marine specific activities.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive mechanical technicians transitioning into occupations in the marine retail, service and repair sector.

AURSS00052 Light Vehicle Wheel Alignment Skill Set

Modification History

Code and title current version	Code and title previous version	Comments	Equivalence status
AURSS00052 Light Vehicle Wheel Alignment Skill Set (Release 1)	Not applicable	New skill set	No equivalent skill set

Description

This is a skill set covering the fundamental requirements for performing wheel alignment on light vehicles.

Pathways Information

This skill set may only be undertaken in addition to or as part of the following:

- AUR21916 Certificate II in Automotive Tyre Servicing Technology, AUR30616 Certificate III in Light Vehicle Mechanical Technology, AUR32518 Certificate III in Automotive Underbody Technology or equivalent, including:
  - AURLTJ011 Select light vehicle tyres and wheels for specific applications
  - AURLTJ002 Remove, inspect, repair and refit light vehicle tyres and tubes
  - AURLTJ013 Remove, inspect and refit light vehicle wheel and tyre assemblies
  -

Licensing/Regulatory Information

Licensing, legislative or certificate requirements may apply to this skill set at the time of publication.

Skill Set Requirements

A total of **4 units of competency** must be completed.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Units	
AURLTD006	Carry out light vehicle wheel alignment operations
AURTTD002	Inspect and service steering systems
AURTTD004	Inspect and service suspension systems
AURTTJ011	Balance wheels and tyres

Target Group

The skill set targets learners who require the skills and knowledge to undertake wheel alignment on light vehicles.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of workers required to perform wheel alignment on light vehicles.

AURSS00054 Light Vehicle Automatic Driveline Technology Skill Set

Modification History

Release	Comments
Release 1	This version first released with AUR Automotive Retail, Service and Repair Training Package Version 6.0

Description

This skill set addresses the skills and knowledge required to perform a range of tasks on light vehicle automatic drivelines in the automotive retail, service and repair industry.

This skill set may only be undertaken in addition to, or as part of any Certificate III or higher in AUR Automotive Retail, Service and Repair Training Package.

Pathways Information

The units in this skill set provide credit towards:

- AUR31120 Certificate III in Heavy Commercial Vehicle Mechanical Technology
- AUR30920 Certificate III in Motor sport Technology
- AUR30620 Certificate III in Light Vehicle Mechanical Technology
- AUR30320 Certificate III in Automotive Electrical Technology
- AUR40320 Certificate IV in Motor Sport Technology
- AUR40820 Certificate IV in Automotive Mechanical Overhauling
- any other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

AURETR144 Diagnose and repair integrated engine and transmission management systems

AURLTX102 Diagnose and repair light vehicle automatic transmissions

AURTTX009 Overhaul automatic transmissions

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Target Group

This skill set is for individuals who interact with light vehicle automatic drivelines in the automotive retail, service and repair industry.

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of workers required to perform a range of tasks on light vehicle automatic drivelines.

AURSS00062 Electric Bicycles Skill Set

Modification History

Release	Comments
Release 1	This version first released with AUR Automotive Retail, Service and Repair Training Package Version 6.0

Description

This skill set addresses the skills and knowledge required to service and repair electric bicycles in the automotive retail, service and repair industry.

Pathways Information

The units in this skill set provide credit towards:

- AUR20320 Certificate II in Bicycle Mechanical Technology
- AUR30220 Certificate III in Bicycle Workshop Operations
- any other qualifications that allow for selection of these units.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set.

Skill set users should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

AURBTR101 Inspect and service electric power-assisted bicycles

AURBTR103 Retrofit electric drivetrain systems to bicycles

AURBTR104 Diagnose and repair electric bicycles

Target Group

The skill set is for automotive mechanical and electrical technicians who require the skills and knowledge to service and repair electric bicycles in the automotive retail, service and repair industry.

© Commonwealth of Australia, 2025 Mining and Automotive Skills Alliance

Suggested words for Statement of Attainment

These units of competency are drawn from the AUR Automotive Retail, Service and Repair Training Package and meet the needs of automotive mechanical and electrical technicians required to service and repair automotive electric bicycles.
