

AURT304031A Install LPG/CNG electrical control equipment

Release: 1

AURT304031A Install LPG/CNG electrical control equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the competence required to install LPG/CNG electrical control equipment.
-----------------	---

Application of the Unit

Application of the unit	The unit includes identification and confirmation of work requirement, preparation for work, installation of LPG/CNG electrical control equipment, testing of installed equipment and completion of work finalisation processes, including clean-up and documentation.
	Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment. Work is carried out in accordance with award provisions.

Licensing/Regulatory Information

Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent
	with the evidence guide.

Approved Page 3 of 11

Elements and Performance Criteria

EI	LEMENT	PERFORMANCE CRITERIA
1.	Prepare to install LPG/ CNG electrical	1.1.Nature and scope of work requirements are identified and confirmed
	control equipment	1.2.OH&S requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work
		1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced
		1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared
		1.5. Technical and/or calibration requirements for installation are sourced and support equipment is identified and prepared
		1.6. Warnings in relation to working with gas systems are observed
2.	Carry out installation	2.1.Methods for installation are implemented in accordance with workplace procedures and manufacturer/component supplier specifications
		2.2. Adjustments made during installations are in accordance with manufacturer/component supplier specifications
3.	Conduct tests and analyse results	3.1.Methods for system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications
		3.2. Test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance
		3.3.Results are documented with evidence and supporting information and recommendation(s) made
		3.4.Report is processed in accordance with workplace procedures
4.	Prepare vehicle for	4.1.Installation documentation is completed
	use or storage	4.2. Final inspection is made to ensure safety features are in place
		4.3. Final inspection is made to ensure work is to workplace expectations
		4.4. Vehicle is cleaned for use or storage to workplace expectations
		4.5.Job card is processed in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to installing gas system electrical control
 equipment, including the use of specialist tooling, measuring equipment,
 computerised technology and communication devices and the
 documenting/recording of results

Required knowledge

A working knowledge of:

- OH&S and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with gas equipment
- operating principles of LPG/CNG systems controls and their relationship to each other
- electrical control equipment installation procedures
- test procedures

Approved Page 5 of 11

REQUIRED SKILLS AND KNOWLEDGE

- enterprise quality procedures
- work organisation and planning processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Juidennes for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this	It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:
unit	 observing safety procedures and requirements communicating effectively with others involved in or affected by the work selecting methods and techniques appropriate to the circumstances completing preparatory activity in a systematic manner conducting installation and testing in accordance with workplace and manufacturer/component supplier requirements interpreting and recording test results installing LPG/CNG electrical control equipment and associated components within workplace timeframes vehicle presentation to customer in compliance with workplace requirements
Context of, and specific resources for assessment	Application of competence is to be assessed in the workplace or simulated worksite
	Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints
	Assessment is to comply with regulatory requirements, including Australian and Gas Industry Standards
	The following resources should be made available:
	 workplace location or simulated workplace material relevant to installing gas system electrical control equipment equipment, hand and power tooling appropriate to installing gas system electrical control equipment activities covering mandatory task requirements specifications and work instructions
Method of assessment	Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Approved Page 7 of 11

EVIDENCE GUIDE	
	Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge
	Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies
	Assessment may be applied under project related conditions and require evidence of process
	Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
	It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements
	Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OH&S	OH&S requirements are to be in accordance with legislation/regulations/codes of practice and
	enterprise safety policies and procedures. This
	may include protective clothing and equipment,
	use of tooling and equipment, workplace
	environment and safety, handling of material, use

Approved Page 8 of 11

RANGE STATEMENT	
	of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
Emergency procedures	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
Environmental requirements	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
Tooling and equipment	Tooling and equipment may include hand tooling, meters, gauges and load testing and gas testing devices
Materials	Materials may include spare parts and cleaning materials
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific

Approved Page 9 of 11

RANGE STATEMENT	
	instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information/documents	 Sources of information/documents may include: verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches safe work procedures related to installing as system electrical control equipment regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules engineer's design specifications and instructions organisation work specifications and requirements instructions issued by authorised enterprise or external persons
	Australian Standards
