AURT334708A Carry out reboring and honing of cylinders
AURT334708A Carry out reboring and honing of cylinders

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit covers the competence required to bore and hone cylinders to specific tolerances. |

Application of the Unit

| Application of the unit | The unit includes identification and confirmation of work requirement, preparation for work, reboring and honing of various cylinders and completion of work finalisation processes, including clean-up and documentation. |
| | This unit applies to engine reconditioning and is to cover the reboring and honing of cylinders and barrels. |
| | Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment. |
| | Work is carried out in accordance with award provisions. |

Licensing/Regulatory Information
Not Applicable

Pre-Requisites

| Prerequisite units | |
| | |
| | |
| | |
Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1. Prepare to rebore and hone cylinder</strong></td>
<td></td>
</tr>
<tr>
<td>1.1. Nature and scope of work requirements are identified and confirmed</td>
<td></td>
</tr>
<tr>
<td>1.2. OH&amp;S requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</td>
<td></td>
</tr>
<tr>
<td>1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced</td>
<td></td>
</tr>
<tr>
<td>1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared</td>
<td></td>
</tr>
<tr>
<td>1.5. Technical and/or calibration requirements for boring and honing are sourced and support equipment is identified and prepared</td>
<td></td>
</tr>
<tr>
<td><strong>2. Bore cylinder</strong></td>
<td></td>
</tr>
<tr>
<td>2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications</td>
<td></td>
</tr>
<tr>
<td>2.2. Cylinder bore ridge is removed from cylinder bore</td>
<td></td>
</tr>
<tr>
<td>2.3. Cylinder bore is measured prior to boring to determine stages of cut</td>
<td></td>
</tr>
<tr>
<td>2.4. Cylinder block/barrel is prepared for boring</td>
<td></td>
</tr>
<tr>
<td>2.5. Boring machine is positioned prior to bore</td>
<td></td>
</tr>
<tr>
<td>2.6. Boring is carried out in accordance with enterprise procedures</td>
<td></td>
</tr>
<tr>
<td>2.7. Cylinders are bored without causing damage to any component or system</td>
<td></td>
</tr>
<tr>
<td>2.8. Cylinder bores are checked/measured with instruments to ensure compliance to specifications</td>
<td></td>
</tr>
<tr>
<td>2.9. Boring operations are completed to specifications</td>
<td></td>
</tr>
<tr>
<td>2.10. Boring operations are carried out according to industry regulations/guidelines, OH&amp;S legislation, legislation and enterprise procedures/policies</td>
<td></td>
</tr>
<tr>
<td><strong>3. Hone cylinder</strong></td>
<td></td>
</tr>
<tr>
<td>3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications</td>
<td></td>
</tr>
<tr>
<td>3.2. Cylinder is prepared for honing operation</td>
<td></td>
</tr>
<tr>
<td>3.3. Honing is carried out in accordance with enterprise procedures</td>
<td></td>
</tr>
<tr>
<td>3.4. Cylinders are honed without causing damage to any component or system</td>
<td></td>
</tr>
<tr>
<td>3.5. Components are checked/measured with instruments</td>
<td></td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | to ensure compliance to specifications
3.6. Honing operations are completed
3.7. Honing operations are carried out according to industry regulations/guidelines, OH&S legislation, legislation and enterprise procedures/policies
 | 4. Prepare cylinder block for assembly/storage
4.1. Cylinder block is thoroughly cleaned, including all galleries and surfaces
4.2. Bright surfaces are treated with a protective coating to prevent rust
4.3. Final inspection is made to ensure work is to workplace expectations
4.4. Cylinder block is prepared for assembly or stored to workplace expectations
4.5. Job card is processed in accordance with workplace procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
### REQUIRED SKILLS AND KNOWLEDGE

- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to reboring and honing of cylinders, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

**Required knowledge**

A working knowledge of:

- OH&S regulations/requirements, equipment, material and personal safety requirements
- types, characteristics and limitations of honing and boring machines
- tool sharpening methods
- boring methods and procedures
- honing methods and procedures
- types and application of cleaning/lubricating agents
- Industry Codes of Practice
- Australian Standards
- enterprise quality procedures
- work organisation and planning processes
**Evidence Guide**

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting boring and honing of a multi-cylinder engine in accordance with workplace and manufacturer/component supplier requirements
- completing boring and honing of cylinders within workplace timeframes
- presentation of cylinders are compliance with workplace requirements

### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to reboring and honing of cylinders
- equipment, hand and power tooling appropriate to reboring and honing of cylinders
- activities covering mandatory task requirements
- specifications and work instructions

### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning.
EVIDENCE GUIDE

knowledge
Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies
Assessment may be applied under project related conditions and require evidence of process
Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements
Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

Guidance information for assessment

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Machines
Machines are to include cylinder borers, cylinder honers and ridge removers

Cylinders
Cylinders may include single, multiple and barrel

Reboring and honing methods
Methods are to include:
- measuring
### RANGE STATEMENT

- setting up
- tool sharpening
- machining operations

### OH&S

OH&S requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.

### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.

### Safe operating procedures

Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors.

### Emergency procedures

Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation.

### Environmental requirements

Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.

### Quality requirements

Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.

### Statutory/regulatory authorities

Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
## RANGE STATEMENT

<table>
<thead>
<tr>
<th>Tooling and equipment</th>
<th>Tooling and equipment may include cylinder honing equipment, cylinder boring equipment, ridge remover, hand tooling, power tooling, measuring equipment, lifting equipment, safety equipment and cleaning equipment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Materials</td>
<td>Materials may include rust-proofing and cleaning materials</td>
</tr>
<tr>
<td>Communications</td>
<td>Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</td>
</tr>
</tbody>
</table>
| Information/documents | Sources of information/documents may include:  
  - verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches  
  - safe work procedures related to reboring and honing cylinder blocks  
  - regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules  
  - engineer's design specifications and instructions  
  - organisation work specifications and requirements  
  - instructions issued by authorised enterprise or external persons  
  - Australian Standards |
