Unit Descriptor

This unit of competency describes the skills and knowledge required to carry out the installation of marine low voltage electronic systems and components, including global positioning systems (GPS), depth sounders, fish finders, communications equipment and radar.

It requires the ability to identify and confirm work requirements, prepare for, install and test marine low voltage electronic systems and components and complete work finalisation processes.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Application of the Unit

This unit applies to individuals who undertake the installation of marine low voltage electronic systems and components in a marine environment.

Licensing/Regulatory Information

Not applicable.
Pre-Requisites

Not applicable.

Employability Skills Information

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work | 1.1. Confirm nature and scope of work to be carried out  
1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work  
1.3. Source installation procedures and relevant workshop manuals and manufacturer information  
1.4. Determine installation method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures  
1.5. Set up work area |
| 2. Install marine electronic systems and components | 2.1. Carry out marine electronic systems and components installation in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices  
2.2. Conduct pre-start checks, make required adjustments and re-test  
2.3. Determine the need for water testing |
| 3. Clean up work area and maintain equipment | 3.1. Make final inspection of electronic systems  
3.2. Clean and inspect equipment and tooling according to workplace requirements  
3.3. Tag unserviceable equipment and faults identified in accordance with workplace requirements  
3.4. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons, as required  
3.5. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the installation and testing of marine electronic systems and components, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and electrical circuit and component installation procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customer, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, procedures for circuit and component testing, major repairs, installation and component replacement, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements to determine electrical circuit and component installation requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

Required knowledge

Required knowledge includes:

- the principles of electronics
- the principles of interference suppression
- procedures for the installation of marine electronic systems and components
- wiring diagram interpretation
- measuring and testing procedures
- manufacturer and component supplier specifications and procedures, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to installing marine electronic systems
- organisational policies and procedures, including quality, reporting and recording procedures, related to installing marine electronic systems
# Evidence Guide

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Assessors must be satisfied that the candidate can competently and consistently:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• observe safety procedures and requirements</td>
<td>• communicate effectively with others involved in or affected by the work</td>
</tr>
<tr>
<td>• select methods and techniques appropriate to the circumstances</td>
<td>• complete preparatory activity in a systematic manner</td>
</tr>
<tr>
<td>• install a range of electronic systems and components to workplace and manufacturer and component supplier requirements, including GPS, depth sounders, fish finders, communications equipment, audiovisual equipment and radar</td>
<td>• test prior to placing in service</td>
</tr>
<tr>
<td>• complete workplace and equipment records and workplace clean-up requirements.</td>
<td></td>
</tr>
</tbody>
</table>

### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - marine electronic systems and components
  - equipment, hand and power tooling appropriate to the installation of marine electronic systems and components
## EVIDENCE GUIDE

<table>
<thead>
<tr>
<th>components</th>
<th>activities covering mandatory task requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>specifications and work instructions.</td>
</tr>
</tbody>
</table>

### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

### Guidance information for assessment

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Electronic systems and components

Electronic systems and components may include:
- GPS
- depth sounders
RANGE STATEMENT

- fish finders
- communications equipment and radar
- audiovisual equipment

**Repair and test**

Repair and rebuild may include:
- on- and off-site repairs
- dismantling and reassembly
- repair and replacement of components
- testing and adjustments

**Low voltage marine electronic systems and components**

Low voltage marine electronic systems and components may include:
- GPS
- depth sounders
- communications equipment
- radar
- inverters
- alarm systems
- digital antenna systems
- television
- remote phone antenna
- coaxial cable appliances

**Final inspection procedures**

Final inspection procedures may include:
- checking operation of electronic system or component
- checking that covers are in place on equipment
- cabling and wiring is securely fastened
- transducers, antennas and receivers are positioned correctly

**Installation methods**

Installation methods may include:
- reading and interpreting wiring diagrams
- wiring, soldering and crimping
- installing components and wiring
- adjustments and post-installation checks
- functional operation testing

**Tooling and equipment**

Tooling and equipment may include:
- specific service and general workshop equipment and tooling
**RANGE STATEMENT**

- measuring equipment
- termination equipment
- analogue and digital meters
- crimping tools
- soldering equipment

**Safe operating procedures**

Safe operating procedures may include:
- operational risk assessment and treatments
- toxic substances
- electrical safety
- machinery movement and operation
- manual and mechanical lifting and shifting
- working in proximity to others

**Information/documents**

Information/documents may include:
- verbal, written and graphical instructions issued by authorised internal and external persons
- parts listing prices and catalogues
- inventory systems
- Repair Times manuals
- material safety data sheets (MSDS)
- diagrams or sketches
- engineer's design specifications and instructions
- manufacturer specifications
- industry codes of practice
- workplace specifications and requirements
- industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)
- Australian standards
- workplace specifications and requirements

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:
- award and enterprise agreements
- industrial relations
- Australian standards
