AURTTX3006 Repair transmissions (hydrostatic)

Release 1

AURTTX3006 Repair transmissions (hydrostatic)

Modification History

Release	Comment
Release 1	Replaces AURT308166A Repair transmissions (hydrostatic) Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the repair, removal and replacement of hydrostatic transmissions for heavy vehicle, plant or outdoor power equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing and analysis of systems, removal, repair and replacement of hydrostatic transmissions and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to carry out repairs to hydrostatic transmission	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for repair are sourced and support equipment is identified and prepared
2. Test hydrostatic transmission and analyse results	2.1. Methods for system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is processed in accordance with workplace procedures
3. Remove, repair and replace hydrostatic transmission	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Repairs and adjustments to transmission components are carried out in accordance with manufacturer/component supplier specifications for methods and equipment 3.3. Hydrostatic transmission is repaired without causing damage to any component or system 3.4. Workplace documentation is completed and dealt with relevant to repair, remove and replace outcomes 3.5. Transmission system repair and removal/replacement activities are carried out according to industry regulations/ guidelines, WHS legislation, legislation and enterprise procedures/policies
4. Prepare vehicle/ equipment for customer use	4.1. Repair schedule documentation is completed 4.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Final inspection is made to ensure work is to workplace expectations</p> <p>4.4. Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>4.5. Job card is processed in accordance with workplace procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organisational skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use workplace technology related to repair, removal and replacement of hydrostatic transmissions and/or associated components, including the use of measuring equipment, electronics, computerised technology and communication devices and the documenting/recording of results

Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- identification of application, purpose and operation
- identification of component parts to include, physical, fluid, gases and heat generated
- types and layout of service/repair manuals (hard copy and electronic)
- repair procedures
- component evaluation
- system testing procedures

REQUIRED SKILLS AND KNOWLEDGE

- manual handling techniques
- enterprise quality procedures
- work organisation and planning processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of application, purpose and operation
- applying full repair sequence, as per the Range Statement, to a faulty transmission relative to the qualification being sought
- completing repair of transmission and associated components within workplace timeframes
- vehicle/equipment presentation to customer in compliance with workplace requirements

Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of hydrostatic transmissions
- equipment, hand and power tooling appropriate to repair of hydrostatic transmissions
- activities covering mandatory task requirements
- specifications and work instructions

Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy

EVIDENCE GUIDE

of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hydrostatic transmissions	Hydrostatic transmissions are those with variable and fixed displacement motors and pumps and closed or replenishing systems
Variables	Variables may include radial piston, axial pistons, vane, rotor and gear type pumps and motors
Repair methods and sequence	Repair methods and sequence are to include isolation of fault(s), dismantling of components/parts, inspection and evaluation, repair and replacement of parts, assembly and completion of operational tests and records
Faults	Faults may include excessive internal leaking, abnormal noises and worn components
WHS	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors

RANGE STATEMENT	
Emergency procedures	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
Environmental requirements	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
Tooling and equipment	Tooling and equipment may include hand tooling, power tooling, hydraulic pressure gauges, hydraulic test bench, hydraulic flow meters, precision measuring equipment, hydraulic lubricants and dispensing equipment
Materials	Materials may include hydraulic fluids, spare parts and cleaning materials
Communications	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information/documents	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to repairing hydrostatic transmissions and/or associated components • regulatory/legislative requirements pertaining

RANGE STATEMENT

	<p>to automotive industry, including Australian Design Rules</p> <ul style="list-style-type: none">• engineer's design specifications and instructions• organisation work specifications and requirements• instructions issued by authorised enterprise or external persons• Australian Standards
