Unit Descriptor

| Unit descriptor | This unit of competency covers the skills and knowledge required to apply special treatment material, such as rust prevention and sound deadening substances, to vehicle body component parts. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority. |

Application of the Unit

| Application of the unit | The unit includes identification and confirmation of work requirements, preparation for work, preparation of surfaces for rust prevention and sound deadening treatment, application of special treatment materials, and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work | 1.1. Work instructions are used to determine job requirements, including method and material type.  
1.2. Job specifications are read and interpreted.  
1.3. Workplace health and safety (WHS) requirements, including personal protection needs, are observed throughout the work.  
1.4. Materials are selected and inspected for quality.  
1.5. Hand, power tooling and safety equipment are identified and checked for operation.  
1.6. Procedures are determined to minimise waste material.  
1.7. Procedures are identified for maximising energy efficiency while completing the job. |
| 2. Prepare surfaces for rust prevention and sound deadening materials | 2.1. Surfaces are cleaned and dried to enable the rust prevention and sound deadening material to adhere.  
2.2. Surfaces are prepared without causing damage to component or system.  
2.3. Preparation activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies. |
| 3. Apply special treatments and/or materials | 3.1. The environment for the application of special treatments or material conforms to requirements for temperature, extraction of fumes and cleanliness.  
3.2. Special treatments and/or materials are applied as per manufacturer/component supplier recommendations.  
3.3. Special treatments or materials are dried using approved methods and equipment, as necessary.  
3.4. Application is completed without causing damage to component or system.  
3.5. Application of special treatments or materials is completed within established industry guidelines.  
3.6. The finished product meets specifications for mechanical fastening and/or application for coverage depth, and texture, and is contaminant free.  
3.7. Application activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies. |
| 4. Clean up work area and maintain equipment | 4.1. Material that can be reused is collected and stored.  
4.2. Waste material is disposed of and/or stored in accordance with statutory and enterprise regulations. |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for the application of rust prevention and sound deadening materials
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to calculate time, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use workplace technology related to the application of rust prevention and sound deadening materials, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

### Required knowledge

Required knowledge includes:

- WHS regulations/requirements, equipment, material and personal safety requirements
- environmental procedures/material storage and disposal requirements
- material safety data sheets
- protective coatings and their use
- application methods
- brushes and spray guns
- spray gun/heat gun and brush techniques
- paint drying methods
- work organisation and planning processes
- enterprise quality procedures
Evidence Guide

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- observing environmental procedures
- preparing and applying a range of rust prevention and sound deadening materials
- drying rust prevention and sound deadening materials.

Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - material relevant to the application of rust prevention and sound deadening materials
  - equipment, hand and power tooling appropriate to the application of rust prevention and sound deadening materials
  - activities covering mandatory task requirements
  - specifications and work instructions.

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of
**EVIDENCE GUIDE**

<table>
<thead>
<tr>
<th>underpinning knowledge.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</td>
</tr>
<tr>
<td>Assessment may be applied under project-related conditions and require evidence of process.</td>
</tr>
<tr>
<td>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</td>
</tr>
<tr>
<td>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</td>
</tr>
<tr>
<td>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</td>
</tr>
</tbody>
</table>
### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Methods</th>
</tr>
</thead>
<tbody>
<tr>
<td>Methods are to include:</td>
</tr>
<tr>
<td>• spray gun/heat gun techniques</td>
</tr>
<tr>
<td>• drying techniques</td>
</tr>
<tr>
<td>• hand brushing techniques</td>
</tr>
<tr>
<td>• mixing, thinning, matching and spraying techniques</td>
</tr>
<tr>
<td>• mechanical fastening techniques</td>
</tr>
</tbody>
</table>

<table>

</tbody>
</table>
| RANGE STATEMENT | Safe operating procedures | Safe operating procedures are to include, but are not limited to:  
| | | • operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors |
| | Emergency procedures | Emergency procedures related to this unit are to include, but are not limited to:  
| | | • emergency shutdown and stopping of equipment  
| | | • extinguishing fires  
| | | • enterprise first aid requirements  
| | | • worksite evacuation  
| | Environmental requirements | Environmental requirements are to include, but are not limited to:  
| | | • waste management, noise, dust and clean-up management  
| | Quality requirements | Quality requirements are to include, but are not limited to:  
| | | • regulations, including Australian standards  
| | | • internal company quality policies and standards  
| | | • enterprise operations and procedures  
| | Statutory/regulatory authorities | Statutory/regulatory authorities may include:  
| | | • federal, state/territory and local authorities administering Acts, regulations and codes of practice  
| | Tooling and equipment | Tooling and equipment may include:  
| | | • hand tooling  
| | | • power tooling  
| | | • spray guns  
| | | • heat guns  
| | | • air pressure regulators  
| | | • heating and lighting systems  
| | | • safety equipment  
| | | • mixing equipment |
### RANGE STATEMENT

- stirring equipment
- straining/thinning equipment
- hand brushing equipment
- paint pots
- mechanical fastening equipment

### Materials

Materials may include:
- rust prevention and sound deadening materials
- brushes
- cleaning materials

### Communications

Communications are to include, but are not limited to:
- verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers

### Information/documents

Sources of information/documents may include:
- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches
- safe work procedures related to the application of rust prevention and sound deadening materials
- regulatory/legislative requirements pertaining to automotive painting and finishing
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian standards
