**Release: 1**

# Assessment Requirements for AVIM6006 Deliver operational flight management training

## Modification History

Release 1. This is the first release of this unit of competency in the AVI Aviation Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying trainer intervention and assumption of control as required to ensure flight safety
- assessing training delivery against program goals, session plans and training outcomes
- communicating effectively with others
- completing relevant documentation
- confirming trainee role with regard to command status, decision implementation and trainer assumption of control
- designing and delivering training scenarios that:
  - require management of planned and unplanned inflight situations
  - involve knowledge-based solutions
  - are flight management activities that assess and resolve less defined events and include simulated abnormal and emergency operations
- developing a realistic scenario plan with sufficient detail to ensure training outcomes can be achieved without improvisation when airborne
- discussing training session delivery with appropriate personnel to determine effectiveness
- emphasising and reinforcing components of competency during presentation of training sessions
- establishing an environment that simulates a typical civil or military air task/operation
- explaining scenario-based learning to trainee/s
- identifying and correctly using relevant equipment
- identifying typical commercial or military flight operation conditions including normal and abnormal operations
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) procedures and relevant regulations
- interpreting and following operational instructions and prioritise work
- maintaining situational awareness to ensure situations that might jeopardise safety are not

allowed to develop

- modifying activities depending on workplace contingencies, situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- monitoring work activities in terms of planned schedule
- providing constructive feedback to trainee/s on each event that occurred during a flight including analysis of actions and results of decisions
- providing leadership and working collaboratively with others when delivering operational flight management training
- reading, interpreting and following relevant regulations, instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and using required personal protective clothing and equipment conforming to industry and WHS /OHS standards
- sequencing flight scenarios logically, including clear transition and linking of events that provide variety, encourage participation and reinforce competencies
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- appropriate methods of analysis and training planning
- assessment of behaviour
- common problems that may occur when delivering operational flight management training, and appropriate action that should be taken in each case
- common risks that exist when delivering operational flight management training
- human performance and limitations factors relevant to the training tasks
- in an Australian Defence Force context, relevant Defence Orders and Instructions
- lesson planning and development
- opportunities a realistic scenario plan must provide for trainee, to:
  - conduct a flight without assistance
  - independently complete all associated tasks
- preparation of training resources
- principles of adult teaching and learning
- principles of assessment
- psychological factors affecting satisfaction of human needs, defence mechanisms and stress

management

- questioning techniques
- relevant sections of Civil Aviation Safety Regulations (CASRs) and Civil Aviation Orders related to pilot competency standards
- relevant sections of national and state/territory regulatory requirements and codes of practice
- relevant WHS/OHS and environmental procedures and regulations applicable to operational flight management training
- relevant workplace policies and procedures
- self-assessment and evaluation
- training and assessment competency standards
- what trainee is required to do in abnormal and emergency operations:
  - assess situations and make decisions
  - maintain effective communication and interpersonal relationships
  - maintain situational awareness
  - manage threats and errors
  - set priorities and manage tasks.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- acceptable means of simulation assessment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.
