AVIY5035A Perform VHF omni-directional radio range (VOR) instrument approach

Revision Number: 1
AVIY5035A Perform VHF omni-directional radio range (VOR) instrument approach

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to conduct an instrument approach using the VOR approach procedure. This includes beginning with a descent from a route Minimum Safe Altitude (MSA) or Lowest Safe Altitude (LSALT) in compliance with any altitude restrictions on a prescribed track to the Minimum Descent Altitude (MDA) applicable to the aircraft category; and conducting a published missed approach. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA); relevant airspace control requirements and Instrument Flight Rules (IFR); and aircraft control principles, regulations, safety codes, protocols and procedures required to perform VHF omni-directional radio range (VOR) instrument approach as part of commercial aircraft activities. Use for ADF Aviation is to be in accordance with relevant Defence Orders and Instructions and applicable CASA compliance. Operations are conducted across a variety of operational contexts within the Australian aviation industry. Work is performed under limited supervision. This unit of competency is packaged at AQF V.

Licensing/Regulatory Information
Not applicable.
Pre-Requisites
Not applicable.

Employability Skills Information

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Select approach and determine applicable minima | 1.1 Instrument Approach and Landing (IAL) chart for the VHF omni-directional radio range (VOR) approach to be flown is selected  
1.2 IAL chart is reviewed and briefed in relation to directing entry to the approach; maintaining minimum altitude (LSALT or MSA) prior to approach entry; maintaining tracks, distances, timing and descent limitation for the approach  
1.3 Fuel availability and latest divert time procedures are enacted if required |
| 2 Monitor aid signal integrity | 2.1 VOR to be used for the selected approach is tuned and identified  
2.2 Warning flags and Course Deviation Indicators (CDI) indications are monitored throughout the approach to ensure signal integrity |
| 3 Conduct initial approach | 3.1 Altimeter is set to the appropriate QNH  
3.2 Inbound track at or above route MSA or LSALT is maintained in accordance with AIP, using the VOR |
| 4 Conduct holding pattern | 4.1 Holding pattern at or above LSALT or MSA is entered in accordance with the specified sector entry  
4.2 Holding pattern is performed in accordance with AIP, using the VOR |
| 5 Conduct instrument approach procedure | 5.1 Instrument approach is conducted in accordance with tolerances specified in AIP, using the VOR  
5.2 Landing runway is identified  
5.3 After establishing visual reference, a visual circling or runway approach is conducted for a landing on the selected runway, in accordance with AIP |
| 6 Conduct missed approach procedure | 6.1 Conditions requiring a missed approach are recognised and missed approach is initiated  
6.2 Aircraft is manoeuvred to Missed Approach Point (MAPt)  
6.3 Missed approach procedure is conducted in accordance with the IAL chart  
6.4 Obstacle clearance in IMC/simulated IMC is maintained |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- VOR or VOR/DME instrument approach procedures and limitations
- Sector entry join procedures for entering the holding pattern of the VOR or VOR/DME approach
- Tracking tolerance and altitude limitations for flying the published DME arc of the VOR or VOR/DME approach procedure
- Procedure for joining the circuit from a VOR or VOR/DME approach procedure
- Minimum obstacle clearance criteria during a VOR or VOR/DME approach procedure/missed approach procedure
- Missed approach procedure for an VOR or VOR/DME approach
- Radio procedures during a VOR or VOR/DME approach
- Loss of radio communication during a VOR or VOR/DME approach procedure
- Abnormal operations and/or emergencies procedures during a VOR or VOR/DME approach, including navigation aid failure
- Explain which navigation aid provides track guidance for a LLZ approach
- Explain what the full scale range on the CDI for a LLZ is
- Explain how to configure the CDI to achieve command guidance prior to conducting a back course LLZ
- Steps involved in planning the work activities
- Procedures for adjusting controls to optimise the operation of the equipment
- Procedures to be followed in the event of an emergency
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Procedures for managing and controlling hazardous situations when carrying out work activities
- Sources of information on differences in equipment and related standard operating and servicing procedures

Required skills:

- Interpret VOR or VOR/DME instrument approach procedure chart
- Determine VOR or VOR/DME approach procedure applicable minima for aircraft
- Determine conditions permitting descent below minima
- Perform systematic scan techniques
REQUIRED KNOWLEDGE AND SKILLS

- Configure the CDI to achieve command guidance prior to conducting a back course LLZ
- Communicate effectively with others when performing a VOR or VOR/DME instrument approach
- Read and interpret instructions, regulations, procedures and other information relevant to a VOR or VOR/DME instrument approach
- Interpret and follow operational instructions and prioritise workload
- Complete documentation related to a VOR or VOR/DME instrument approach
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when performing a VOR or VOR/DME instrument approach
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when performing a VOR or VOR/DME instrument approach in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when performing a VOR or VOR/DME instrument approach
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during a VOR or VOR/DME instrument approach
- Monitor and anticipate operational problems and hazards and take appropriate action
- Monitor work activities in terms of planned schedule
- Modify activities dependent on differing workplace contingencies, situations and environments
- Work systematically with required attention to detail without injury to self others, or damage to goods or equipment
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Implement OH&S procedures and relevant regulations
- Identify and correctly use equipment required to perform a VOR or VOR/DME instrument approach
Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Tasks may be undertaken in:
- IMC
- VMC with simulated IMC conditions

Performance may be demonstrated in:
- single engine aircraft
- multi engine aircraft
- synthetic training device approved by the appropriate authority
- variable air traffic conditions
- variable weather conditions
- variable flight situations
- abnormal situations
- classes of airspace as designated by the Civil Aviation Safety Authority

Aircraft may include:
- fixed wing
- helicopter
- other commercial or military aircraft

Crew may include:
- single pilot
- multi crew

Instruments may be:
- flight instruments suitable for instrument flight
- head up display suitable for instrument flight

Limitations may be imposed by:
- local noise abatement requirements and curfews
- airspace endorsements

Classes of airspace may be:
- as designated by the regulator
- restricted and danger areas
- military control zones
- Air Defence Identification Zones

Conditions may include:
- a method of simulating IMC
- simulated icing conditions
- moderate turbulence
- simulated hazardous weather
- Autopilot/Flight Director
- FMS/other NAV system
- simulation of emergency and abnormal procedures

VOR approach aid combinations may include:
- VOR only
- VOR/Distance Measuring Equipment (DME)
- VOR/Localizer (LLZ)
- VOR/DME/LLZ
RANGE STATEMENT

Navigation aids may include:

- VOR (VHF Omni-directional Radio Range)
- DME (Distance Measuring Equipment)
- LLZ (Localizer)
- FMS (Flight Management Systems)
- Moving Map Displays

Dependent on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- standard operating procedures

Information/documents may include:

- relevant sections of Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- Flight Manual/Pilot's Operating Handbook (POH)
- Manual of Standards - Pilot Licensing (MOS-PL)
- Aeronautical Information Publication (AIP)
- En Route Supplement Australia (ERSA)
- charts
- operations manuals
- approved checklists
- workplace procedures and instructions and job specification
- induction and training materials
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant Civil Aviation Safety Regulations and Civil Aviation Orders
- in Defence context, relevant Defence Orders and Instructions
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Performance includes tolerances specified in either of:

- relevant licence and aircraft rating requirements of the Civil Aviation Safety Authority (CASA) such as:
  - Manual of Standards
  - relevant Defence documentation such as:
  - Defence Orders and Instructions
  - approved curricula and training documentation
Unit Sector(s)
Not applicable.
